1.0 Introduction

This program directory is intended for system programmers who are responsible for program installation and maintenance. It contains information about the material and procedures associated with the installation of IBM 64-bit SDK for z/OS, Java Technology Edition, V7.0.0. This publication refers to IBM 64-bit SDK for z/OS, Java Technology Edition, V7.0.0 as IBM 64-bit SDK for z/OS, V7.

The Program Directory contains the following sections:

- **2.0, “Program Materials” on page 3** identifies the basic and optional program materials and documentation for IBM 64-bit SDK for z/OS, V7.
- **3.0, “Program Support” on page 5** describes the IBM support available for IBM 64-bit SDK for z/OS, V7.
- **4.0, “Program and Service Level Information” on page 7** lists the APARs (program level) and PTFs (service level) that have been incorporated into IBM 64-bit SDK for z/OS, V7.
- **5.0, “Installation Requirements and Considerations” on page 9** identifies the resources and considerations that are required for installing and using IBM 64-bit SDK for z/OS, V7.
- **6.0, “Installation Instructions” on page 17** provides detailed installation instructions for IBM 64-bit SDK for z/OS, V7. It also describes the procedures for activating the functions of IBM 64-bit SDK for z/OS, V7, or refers to appropriate publications.

Before installing IBM 64-bit SDK for z/OS, V7, read the **CBPDO Memo To Users** and the **CBPDO Memo To Users Extension** that are supplied with this program in softcopy format and this Program Directory; then keep them for future reference. Section **3.2, “Preventive Service Planning” on page 5** tells you how to find any updates to the information and procedures in this Program Directory.

IBM 64-bit SDK for z/OS, V7 is supplied in a Custom-Built Product Delivery Offering (CBPDO, 5751-CS3). The CBPDO tape for your order includes this program directory in softcopy format. All service and HOLDDATA for IBM 64-bit SDK for z/OS, V7 are included on the CBPDO tape.

Do not use this program directory if you install IBM 64-bit SDK for z/OS, V7 with a SystemPac or ServerPac. When you use these offerings, use the jobs and documentation supplied with the offering. This program directory can point you to specific sections of it as required.

1.1 IBM 64-bit SDK for z/OS, V7 Description

The IBM 64-bit SDK for z/OS, Java Technology Edition, V7.0.0 product is IBM's port of Oracle's Java Software Development Kit (SDK) to the z/OS zSeries platform. The IBM 64-bit SDK for z/OS, Java Technology Edition, V7.0.0 product at the SDK 7 level is certified as a fully compliant Java product. IBM has successfully executed the Java Certification Kit (JCK) provided by Oracle.
The IBM 64-bit SDK for z/OS, Java Technology Edition, V7.0.0 is operational within the z/OS Version 1 Release 10 operating system or later. It provides a Java execution environment equivalent to that available on any other server platform.

For more information about the IBM 64-bit SDK for z/OS, Java Technology Edition, V7.0.0 product, as well as general information about Java, visit our web site at:

1.2 IBM 64-bit SDK for z/OS, V7 FMIDs

IBM 64-bit SDK for z/OS, V7 consists of the following FMID:

HJVB700
2.0 Program Materials

An IBM program is identified by a program number. The program number for IBM 64-bit SDK for z/OS, V7 is 5655-W44.

Basic Machine-Readable Materials are materials that are supplied under the base license and feature numbers, and are required for the use of the product. Optional Machine-Readable Materials are orderable under separate feature numbers, and are not required for the product to function.

The program announcement material describes the features supported by IBM 64-bit SDK for z/OS, V7. Ask your IBM representative for this information if you have not already received a copy.

2.1 Basic Machine-Readable Material

The distribution medium for this program is magnetic tape or downloadable files. This program is in SMP/E RELFILE format and is installed by using SMP/E. See 6.0, “Installation Instructions” on page 17 for more information about how to install the program.

You can find information about the physical tape for the basic machine-readable materials for IBM 64-bit SDK for z/OS, V7 in the CBPDO Memo To Users Extension.

2.2 Optional Machine-Readable Material

No optional machine-readable materials are provided for IBM 64-bit SDK for z/OS, V7.

2.3 Program Publications

The following sections identify the basic and optional publications for IBM 64-bit SDK for z/OS, V7.

2.3.1 Basic Program Publications

No basic publications are provided for IBM 64-bit SDK for z/OS, V7. Information about the IBM 64-bit SDK for z/OS, V7 product is available at our web site

2.3.2 Optional Program Publications

No optional publications are provided for IBM 64-bit SDK for z/OS, V7.
2.4 Program Source Materials

No program source materials or viewable program listings are provided for IBM 64-bit SDK for z/OS, V7.

2.5 Publications Useful During Installation

You might want to use the publications listed in Figure 1 during the installation of IBM 64-bit SDK for z/OS, V7. To order copies, contact your IBM representative or visit the IBM Publications Center at http://www-05.ibm.com/e-business/linkweb/publications/servlet/pbi.wss

3.0 Program Support

This section describes the IBM support available for IBM 64-bit SDK for z/OS, V7.

3.1 Program Services

Contact your IBM representative for specific information about available program services.

3.2 Preventive Service Planning

Before you install IBM 64-bit SDK for z/OS, V7, make sure that you have reviewed the current Preventive Service Planning (PSP) information. The PSP Buckets maintain current lists (which have been identified since the package was created) of any recommended or required service for the installation of this package. This service includes software PSP information that contains HIPER and required PTFs against the base release.

Although SW, HW, and functional PSP Buckets might have overlap, review all that apply to this package to ensure that you identify all the known service that is required for your installation of this package.

If you obtained IBM 64-bit SDK for z/OS, V7 as part of a CBPDO, HOLDDATA is included.

If the CBPDO for IBM 64-bit SDK for z/OS, V7 is older than two weeks old by the time you install the product materials, you should obtain the latest PSP Bucket information by going to the following Web site:

You can also use S/390 SoftwareXcel or contact the IBM Support Center to obtain the latest PSP Bucket information.

For program support, access the Software Support Web site at http://www-01.ibm.com/software/support/.

PSP Buckets are identified by UPGRADEs, which specify product levels; and SUBSETs, which specify the FMIDs for a product level. The UPGRADE and SUBSET values for IBM 64-bit SDK for z/OS, V7 are shown as follows:

<table>
<thead>
<tr>
<th>UPGRADE</th>
<th>SUBSET</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>JAVAOS390</td>
<td>HJVB700</td>
<td>IBM 64-bit SDK for z/OS, V7</td>
</tr>
</tbody>
</table>
3.3 Statement of Support Procedures

Report any problems which you feel might be an error in the product materials to your IBM Support Center. You may be asked to gather and submit additional diagnostics to assist the IBM Support Center in their analysis.

Figure 3 on page 6 identifies the component IDs (COMPID) for IBM 64-bit SDK for z/OS, V7.

<table>
<thead>
<tr>

</table>
4.0 Program and Service Level Information

This section identifies the program and relevant service levels of IBM 64-bit SDK for z/OS, V7. The program level refers to the APAR fixes that have been incorporated into the program. The service level refers to the PTFs that have been incorporated into the program.

4.1 Program Level Information

The following APAR fixes against previous releases of IBM 64-bit SDK for z/OS, V7 have been incorporated into this release. They are listed by FMID.

- FMID HJVB700
  - PM40894
  - PM40895

4.2 Service Level Information

No PTFs against this release of IBM 64-bit SDK for z/OS, V7 have been incorporated into the product tape.

It is highly recommended that you frequently check the IBM 64-bit SDK for z/OS, V7 PSP Bucket for HIPER and SPECIAL Attention PTFs against all FMIDs that you must install.
5.0 Installation Requirements and Considerations

The following sections identify the system requirements for installing and activating IBM 64-bit SDK for z/OS, V7. The following terminology is used:

- **Driving system**: the system used to install the program; where SMP/E executes.
  The program might have specific operating system or product level requirements for using processes, such as binder or assembly utilities during the installation.

- **Target system**: the system on which the program is configured and run.
  The program might have specific product level requirements, such as needing access to the library of another product for link-edits. These requirements, either mandatory or optional, might directly affect the element during the installation or in its basic or enhanced operation.

In many cases, you can use a system as both a driving system and a target system. However, you can make a separate IPL-able clone of the running system to use as a target system. The clone must include copies of all system libraries that SMP/E updates, copies of the SMP/E CSI data sets that describe the system libraries, and your PARMLIB and PROCLIB.

Use separate driving and target systems in the following situations:

- When you install a new level of a product that is already installed, the new level of the product will replace the old one. By installing the new level onto a separate target system, you can test the new level and keep the old one in production at the same time.

- When you install a product that shares libraries or load modules with other products, the installation can disrupt the other products. By installing the product onto a separate target system, you can assess these impacts without disrupting your production system.

5.1 Driving System Requirements

This section describes the environment of the driving system that is required to install IBM 64-bit SDK for z/OS, V7.

5.1.1 Machine Requirements

The driving system can run in any hardware environment that supports the required software.

5.1.2 Programming Requirements
8.2 Target System Requirements

This section describes the environment of the target system that is required to install and use IBM 64-bit SDK for z/OS, V7.

IBM 64-bit SDK for z/OS, V7 installs in the z/OS (Z038) SREL.

5.2.1 Machine Requirements

The target system can run in any hardware environment that supports the required software.

5.2.2 Programming Requirements

5.2.2.1 Installation Requisites: Installation requisites identify products that are required by and must be present on the system or products that are not required by but should be present on the system for the successful installation of this product.

Mandatory installation requisites identify products that are required on the system for the successful installation of this product. These products are specified as PREs or REQs.
**Note:** Installation may require migration to new z/OS releases to be service supported. See [http://www-03.ibm.com/systems/z/os/zos/support/zos_eos_dates.html](http://www-03.ibm.com/systems/z/os/zos/support/zos_eos_dates.html).

Conditional installation requisites identify products that are *not* required for successful installation of this product but can resolve such things as certain warning messages at installation time. These products are specified as IF REQs.

IBM 64-bit SDK for z/OS, V7 has no conditional installation requisites.

### 5.2.2.2 Operational Requisites:

Operational requisites are products that are required by and *must* be present on the system or products that are not required by but *should* be present on the system for this product to operate all or part of its functions.

Mandatory operational requisites identify products that are required for this product to operate its basic functions. These products are specified as PREs or REQs.

**Figure 6. Target System Mandatory Operational Requisites**

<table>
<thead>
<tr>
<th>Program Number</th>
<th>Product Name and Minimum VRM/Service Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>5694-A01</td>
<td>z/OS V1.10.00 or higher with PTFs UA43248 and UA46879</td>
</tr>
<tr>
<td>5694-A01</td>
<td>z/OS V1.11.00 or higher with PTF UA16880</td>
</tr>
</tbody>
</table>

Conditional operational requisites identify products that are *not* required for this product to operate its basic functions but are required at run time for this product to operate specific functions. These products are specified as IF REQs.

IBM 64-bit SDK for z/OS, V7 has no conditional operational requisites.

### 5.2.2.3 Tolerance/Coexistence Requisites:

Tolerance/coexistence requisites identify products that must be present on sharing systems. These systems can be other systems in a multisystem environment (not necessarily sysplex), a shared DASD environment (such as test and production), or systems that reuse the same DASD environment at different time intervals.

IBM 64-bit SDK for z/OS, V7 has no tolerance/coexistence requisites.
5.2.2.4 Incompatibility (Negative) Requisites: Negative requisites identify products that must not be installed on the same system as this product.

5.2.3 DASD Storage Requirements

IBM 64-bit SDK for z/OS, V7 libraries can reside on all supported DASD types.

Figure 7 lists the total space that is required for each type of library.

<table>
<thead>
<tr>
<th>Library Type</th>
<th>Total Space Required in 3390 Trks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Target</td>
<td>14</td>
</tr>
<tr>
<td>Distribution</td>
<td>4215</td>
</tr>
<tr>
<td>HFS or zFS</td>
<td>11243</td>
</tr>
</tbody>
</table>

Notes:

1. For non-RECFM U data sets, IBM recommends using system-determined block sizes for efficient DASD utilization. For RECFM U data sets, IBM recommends using a block size of 32760, which is most efficient from the performance and DASD utilization perspective.

2. Abbreviations used for data set types are shown as follows:

   **U** Unique data set, allocated by this product and used by only this product. This table provides all the required information to determine the correct storage for this data set. You do not need to refer to other tables or program directories for the data set size.

   **S** Shared data set, allocated by this product and used by this product and other products. To determine the correct storage needed for this data set, add the storage size given in this table to those given in other tables (perhaps in other program directories). If the data set already exists, it must have enough free space to accommodate the storage size given in this table.

   **E** Existing shared data set, used by this product and other products. This data set is not allocated by this product. To determine the correct storage for this data set, add the storage size given in this table to those given in other tables (perhaps in other program directories). If the data set already exists, it must have enough free space to accommodate the storage size given in this table.

If you currently have a previous release of this product installed in these libraries, the installation of this release will delete the old release and reclaim the space that was used by the old release and any service that had been installed. You can determine whether these libraries have enough space by deleting the old release with a dummy function, compressing the libraries, and comparing the space requirements with the free space in the libraries.

For more information about the names and sizes of the required data sets, see 6.1.5, “Allocate SMP/E Target and Distribution Libraries” on page 18. 
3. Abbreviations used for the file system path type are as follows:

- **N**: New path, created by this product.
- **X**: Path created by this product, but may already exist from a previous release.
- **P**: Previously existing path, created by another product.

4. All target and distribution libraries listed have the following attributes:
   - The default name of the data set may be changed.
   - The default block size of the data set may be changed.
   - The data set may be merged with another data set that has equivalent characteristics.
   - The data set may be either a PDS or a PDSE.

5. All target libraries listed have the following attributes:
   - These data sets can be SMS-managed, but they are not required to be SMS-managed.
   - These data sets are not required to reside on the IPL volume.
   - The values in the "Member Type" column are not necessarily the actual SMP/E element types that are identified in the SMPMCS.

6. All target libraries that are listed and contain load modules have the following attributes:
   - These data sets can be in the LPA, but they are not required to be in the LPA.
   - These data sets can be in the LNKLST.
   - These data sets are not required to be APF-authorized.

The following figures describe the target and distribution libraries and file system paths required to install IBM 64-bit SDK for z/OS, V7. The storage requirements of IBM 64-bit SDK for z/OS, V7 must be added to the storage required by other programs having data in the same library or path.

**Note:** The data in these tables should be used when determining which libraries can be merged into common data sets. In addition, since some ALIAS names may not be unique, ensure that no naming conflicts will be introduced before merging libraries.

| Figure 8. Storage Requirements for IBM 64-bit SDK for z/OS, V7 Target Libraries |
|------------------------------------------|----------------|----------------|----------------|----------------|
| **Library DDNAME** | **Member Type** | **Target Volume** | **Member Type** | **Target Volume** | **Member Type** | **Target Volume** | **Member Type** | **Target Volume** | **Member Type** | **Target Volume** |
| PROCLIB | PROC | TVOL1 | E | PDS | FB | 80 | 2 | 2 |
| SAJVSMP1 | Sample | TVOL2 | S | PDS | FB | 80 | 2 | 2 |
| SAMPLIB | Sample | TVOL2 | E | PDS | FB | 80 | 2 | 2 |
| SIEALNKE | LMOD | TVOL1 | E | PDSE | U | 0 | 8 | - |
Note: If you are installing into a zone other than the z/OS zone, you will need to allocate separate libraries for PROCLIB, SAMPLIB, SIEALNKE, APROCLIB, ASAMPLIB, and AIEALNKE. You will need to define new DDDEFs for these libraries also. You can model the libraries and DDDEFs after the ones in the z/OS zone.

5.3 FMIDs Deleted

No FMIDs are deleted by this product.

5.4 Special Considerations

IBM 64-bit SDK for z/OS, V7 has no special considerations for the target system.

For service installation, please be aware that service installs may replace all files in the Java HFS or zFS directory. Before installing service, ensure any modified files are saved.

Examples:

- The JCE Unlimited Strength Jurisdiction Policy files may need to be copied from the /demo/jce/policy-files/unrestricted directory to the /lib/security directory to change to unrestricted mode of use.
• The `java.security` and `java.policy` files in the `/lib/security` directory may need to be restored or updated after the installation of service if modifications have been made.
6.0 Installation Instructions

This chapter describes the installation method and the step-by-step procedures to install and to activate the functions of IBM 64-bit SDK for z/OS, V7.

Please note the following:

- If you want to install IBM 64-bit SDK for z/OS, V7 into its own SMP/E environment, consult the SMP/E manuals for instructions on creating and initializing the SMPCSI and the SMP/E control data sets.
- You can use the sample jobs that are provided to perform part or all of the installation tasks. The SMP/E jobs assume that all DDDEF entries that are required for SMP/E execution have been defined in appropriate zones.
- You can use the SMP/E dialogs instead of the sample jobs to accomplish the SMP/E installation steps.

6.1 Installing IBM 64-bit SDK for z/OS, V7

6.1.1 SMP/E Considerations for Installing IBM 64-bit SDK for z/OS, V7

Use the SMP/E RECEIVE, APPLY, and ACCEPT commands to install this release of IBM 64-bit SDK for z/OS, V7.

6.1.2 SMP/E Options Subentry Values

The recommended values for certain SMP/E CSI subentries are shown in Figure 11. Using values lower than the recommended values can result in failures in the installation. DSSPACE is a subentry in the GLOBAL options entry. PEMAX is a subentry of the GENERAL entry in the GLOBAL options entry. See the SMP/E manuals for instructions on updating the global zone.

<table>
<thead>
<tr>
<th>Subentry</th>
<th>Value</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>DSSPACE</td>
<td>800,500,100</td>
<td></td>
</tr>
<tr>
<td>PEMAX</td>
<td>SMP/E Default</td>
<td>IBM recommends using the SMP/E default for PEMAX.</td>
</tr>
</tbody>
</table>

6.1.3 Sample Jobs

The following sample installation jobs are provided as part of the product to help you install IBM 64-bit SDK for z/OS, V7:
You can access the sample installation jobs by performing an SMP/E RECEIVE and then copying the jobs from the relfiles to a work data set for editing and submission. See Figure 12 on page 17 to find the appropriate relfile data set.

### 6.1.4 Perform SMP/E RECEIVE

If you have obtained IBM 64-bit SDK for z/OS, V7 as part of a CBPDO, use the RCVPDO job in the CBPDO RIMLIB data set to receive the IBM 64-bit SDK for z/OS, V7 FMIDs, service, and HOLDDATA that are included on the CBPDO tape. For more information, see the documentation that is included in the CBPDO.

### 6.1.5 Allocate SMP/E Target and Distribution Libraries

Edit and submit sample job AJVJALC to allocate the SMP/E target and distribution libraries for IBM 64-bit SDK for z/OS, V7. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

### 6.1.6 Allocate File system Paths

Mount the file system data set of the target system on the driving system when you run the sample AJVJMKD job because the job will create paths in the file system.

Before you run the sample job to create the paths in the file system, ensure that OMVS is active on the driving system, and that the file system of the target system is mounted to the driving system. If you install IBM 64-bit SDK for z/OS, V7 into a zFS file system, zFS must be active on the driving system.

If you plan to install IBM 64-bit SDK for z/OS, V7 into a new file system, create the mountpoint and mount the new file system to the driving system. For IBM 64-bit SDK for z/OS, V7, the recommended mountpoint is `usr/lpp/java/J7.0_64`.

If your installation is using an HFS, edit and submit sample job AJVJHFS to allocate the file system for IBM 64-bit SDK for z/OS, V7. Consult the instructions in the sample job for more information.

---

**Figure 12. Sample Installation Jobs**

<table>
<thead>
<tr>
<th>Job Name</th>

</tr>
</tbody>
</table>
If your installation is using an zFS, edit and submit sample job AJVJZFS to allocate the file system for IBM 64-bit SDK for z/OS, V7. Consult the instructions in the sample job for more information.

If you create a new file system for this product, consider updating the BPXPRMxx PARMLIB member to mount the new file system at IPL time. This action can be helpful if an IPL occurs before the installation is completed.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

### 6.1.7 Create DDDEF Entries

Edit and submit sample job AJVJDDD to create DDDEF entries for the SMP/E target and distribution libraries for IBM 64-bit SDK for z/OS, V7. Consult the instructions in the sample job for more information.

**Expected Return Codes and Messages:** You will receive a return code of 0 if this job runs correctly.

### 6.1.8 Perform SMP/E APPLY

1. Perform an SMP/E APPLY CHECK for IBM 64-bit SDK for z/OS, V7.

   HOLDDATA introduces ERROR HOLDs against FMIDs for HIPER APARs. Before the installation, ensure that you have the latest HOLDDATA, which is available through several different portals, including http://service.software.ibm.com/holddata/390holddata.html. Install the FMIDs regardless of the status of unresolved HIPERs. However, do not deploy the software until the unresolved HIPERs are analyzed to determine applicability.

   To receive the full benefit of the SMP/E Causer SYSMOD Summary Report, do **not** bypass the PRE, ID, REQ, and IFREQ on the APPLY CHECK. This is because the SMP/E root cause analysis identifies the cause only of errors and not of warnings (SMP/E treats bypassed PRE, ID, REQ, and IFREQ conditions as warnings, instead of errors).

   Here is a sample to install FMIDs when ++HOLDs for HIPERs exist for the FMIDs that you install:

   a. To ensure that all recommended and critical service is installed with the FMIDs, if you have received the latest HOLDDATA, add the FIXCAT operand to the APPLY command as shown below.

   b. SMP/E V3.5 or higher:

      ```
      APPLY S(fmidx,fmidx,...) 
      FORFMD(fmid,fmid,...) 
      SOURCEID(RSU=) 
      FIXCAT(IBM.ProductInstall-RequiredService) 
      GROUPEXTEND .
      ```

   Some HIPER APARs might not have PTFs available yet. You have to analyze the symptom flags to determine if you want to bypass the specific ERROR HOLDs and continue the installation of the FMIDs.
This method requires more initial research, but can provide resolution for all HIPERs that have fixes available and are not in a PE chain. Unresolved PEs or HIPERs might still exist and require the use of BYPASS.

c. To install the FMIDs without regard for the HIPERs, you can add a BYPASS(HOLDCLASS(HIPER)) operand to the APPLY command. In this way, you can install FMIDs even though HIPER ERROR HOLDS against them still exist. Only the HIPER ERROR HOLDS are bypassed. After the FMIDs are installed, run the SMP/E REPORT ERRSYSMODS command to identify missing HIPER maintenance.

```
APPLY S(fmid,fmid,...)
FORFMID(fmid,fmid,...)
SOURCEID(RSU/c5197)
GROUPEXTEND
BYPASS(HOLDCLASS(HIPER)).

..any other parameters documented in the program directory
```

This method is the quicker of the two, but requires subsequent review of the REPORT ERRSYSMODS to investigate any HIPERs. If you have received the latest HOLDDATA, you can also choose to run REPORT MISSINGFIX for Fix Category IBM.ProductInstall-RequiredService to investigate missing recommended service.

If you bypass HOLDS during the installation of the FMIDs because PTFs are not yet available, you can be notified when the PTFs are available by using the APAR Status Tracking (AST) function of ServiceLink or the APAR Tracking function of ResourceLink.

2. After you take actions that are indicated by the APPLY CHECK, remove the CHECK operand and run the job again to perform the APPLY.

Figure 13 shows a sample job that you can use to perform an SMP/E APPLY CHECK for IBM 64-bit SDK for z/OS, V7.

```
//AJVAPLY JOB <job parameters>
//STEP1 EXEC PGM=GIMSMP,REGION=/zerodotM,TIME=NOLIMIT
//SMPCSI DD DSN=csiname,DISP=SHR
//SMPCNTL DD *

SET BOUNDARY(targetzone)
APPLY CHECK XZREQ
FORFMID (HJVB7/zerodot/zerodot)
SELECT (HJVB700)
GROUPEXTEND(NOAPARS,NouserMODS)
FIXCAT(IBM.ProductInstall-RequiredService)
BYPASS(HOLDSYSTEM,
  HOLDUSER,HOLDCLASS(UCLREL,ERREL,HIPER))  .
/*
```

Figure 13. Sample SMP/E APPLY Job
**Required Updates**

1. Update the job parameters.
2. Replace csiname on the SMPCSI DD statement with your CSI name.
3. Replace targetzone with your target zone name.

**Note:** The GROUPEXTEND operand indicates that SMP/E applies all requisite SYSMODs. The requisite SYSMODs might be applicable to other functions.

**Expected Return Codes and Messages from APPLY CHECK:** You will receive a return code of 0 if this job runs correctly.

**Expected Return Codes and Messages from APPLY:** You will receive a return code of 0 if this job runs correctly.

### 6.1.9 Perform SMP/E ACCEPT

Perform an SMP/E ACCEPT CHECK for IBM 64-bit SDK for z/OS, V7.

To receive the full benefit of the SMP/E Causer SYSMOD Summary Report, do *not* bypass the PRE, ID, REQ, and IFREQ on the ACCEPT CHECK. This is because the SMP/E root cause analysis identifies the cause of only *errors* but not *warnings* (SMP/E treats bypassed PRE, ID, REQ, and IFREQ conditions as warnings rather than errors).

Before you use SMP/E to load new distribution libraries, it is recommended that you set the ACCJCLIN indicator in the distribution zone. In this way, you can save the entries that that are produced from JCLIN in the distribution zone whenever a SYSMOD that contains inline JCLIN is accepted. For more information about the ACCJCLIN indicator, see the description of inline JCLIN in the SMP/E manuals.

After you take actions that are indicated by the ACCEPT CHECK, remove the CHECK operand and run the job again to perform the ACCEPT.
//AJVACPT JOB <job parameters>
//STEP1 EXEC PGM=GIMSMP,REGION=0M,TIME=NOLIMIT
//SMPCSI DD DSN=csiname,DISP=SHR
//SMPCNTL DD *
  SET BOUNDARY(dlibzone).
  ACCEPT CHECK XZREQ
  FORFMID (HJVB700)
  SELECT (HJVB700)
  GROUPEXTEND(NOAPARS,NOUSERMODS)
  FIXCAT(IBM.ProductInstall-RequiredService)
  BYPASS(HOLDSYSTEM,
         HOLDUSER,HOLDCLASS (UCLREL,ERREL,HIKER)) .
/*

Figure 14. Sample SMP/E ACCEPT Job

Required Updates
1. Update the job parameters.
2. Replace csiname on the SMPCSI DD statement with your CSI name.
3. Replace dlibzone with your distribution zone name.

Note: The GROUPEXTEND operand indicates that SMP/E accepts all requisite SYSMODs. The requisite SYSMODs might be applicable to other functions.

Expected Return Codes and Messages from ACCEPT CHECK: You will receive a return code of 0 if this job runs correctly.

If PTFs that contain replacement modules are accepted, SMP/E ACCEPT processing will link-edits or binds the modules into the distribution libraries. During this processing, the Linkage Editor or Binder might issue messages that indicate unresolved external references, which will result in a return code of 4 during the ACCEPT phase. You can ignore these messages, because the distribution libraries are not executable and the unresolved external references do not affect the executable system libraries.

Expected Return Codes and Messages from ACCEPT: You will receive a return code of 0 if this job runs correctly.

6.1.10 Run REPORT CROSSZONE

The SMP/E REPORT CROSSZONE command identifies requisites for products that are installed in separate zones. This command also creates APPLY and ACCEPT commands in the SMPPUNCH data set. You can use the APPLY and ACCEPT commands to install those cross-zone requisites that the SMP/E REPORT CROSSZONE command identifies.
After you install IBM 64-bit SDK for z/OS, V7, it is recommended that you run REPORT CROSSZONE against the new or updated target and distribution zones. REPORT CROSSZONE requires a global zone with ZONEINDEX entries that describe all the target and distribution libraries to be reported on.

For more information about REPORT CROSSZONE, see the SMP/E manuals.

### 6.2 Activating IBM 64-bit SDK for z/OS, V7

IBM 64-bit SDK for z/OS, V7 is fully operational after the SMP/E installation is completed. You do not have to do further customization to activate this function.
7.0 Notices

References in this document to IBM products, programs, or services do not imply that IBM intends to make these available in all countries in which IBM operates. Any reference to an IBM product, program, or service is not intended to state or imply that only IBM's product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe on any of IBM's intellectual property rights may be used instead of the IBM product, program, or service. Evaluation and verification of operation in conjunction with other products, except those expressly designated by IBM, is the user's responsibility.

APAR numbers are provided in this document to assist in locating PTFs that may be required. Ongoing problem reporting may result in additional APARs being created. Therefore, the APAR lists in this document may not be complete. To obtain current service recommendations and to identify current product service requirements, always contact the IBM Customer Support Center or use S/390 SoftwareXcel to obtain the current "PSP Bucket".

IBM may have patents or pending patent applications covering subject matter in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to the

Communicating Your Comments to IBM

IBM 64-bit SDK for z/OS, Java Technology Edition, V7.0.0 V7.0.0
z/OS V1.10 or higher

Publication No. GI11-9829-00

If you especially like or dislike anything about this book, please use one of the methods listed below to send your comments to IBM. Whichever method you choose, make sure you send your name, address, and telephone number if you would like a reply.

Feel free to comment on specific errors or omissions, accuracy, organization, subject matter, or completeness of this book. However, the comments you send should pertain to only the information in this manual and the way in which the information is presented. To request additional publications, or to ask questions or make comments about the functions of IBM products or systems, you should talk to your IBM representative or to your IBM authorized remarketer.

When you send comments to IBM, you grant IBM a nonexclusive right to use or distribute your comments in any way it believes appropriate without incurring any obligation to you.

If you are mailing a reader's comment form (RCF) from a country other than the United States, you can give the RCF to the local IBM branch office or IBM representative for postage-paid mailing.

- If you prefer to send comments by mail, use the RCF at the back of this book.
- If you prefer to send comments by FAX, use this number:
  - FAX: (International Access Code)+1+845+433-2856
- If you prefer to send comments electronically, use the following e-mail address:
  - mhvrdfs@us.ibm.com

Make sure to include the following in your note:

- Title and publication number of this book
- Page number or topic to which your comment applies

 Optionally, if you include your telephone number, we will be able to respond to your comments by phone.
