About this document

This document describes the Internet Protocol (IP) messages that occur in z/OS Communications Server. The information in this document supports both IPv6 and IPv4. Unless explicitly noted, information describes IPv4 networking protocol. IPv6 support is qualified within the text.

For information about how to set up, initialize, and customize your Transmission Control Protocol/Internet Protocol (TCP/IP) services system, see the z/OS Communications Server: IP Configuration Reference, the z/OS Communications Server: IP Configuration Guide and the z/OS Communications Server: IP Programmer's Guide and Reference. For information about how to use the applications on your TCP/IP system, see z/OS Communications Server: IP User's Guide and Commands.

This document refers to Communications Server data sets by their default SMP/E distribution library name. Your installation might, however, have different names for these data sets where allowed by SMP/E, your installation personnel, or administration staff. For instance, this document refers to samples in SEZAINST library as simply in SEZAINST. Your installation might choose a data set name of SYS1.SEZAINST, CS390.SEZAINST or other high level qualifiers for the data set name.

Who should read this document

This document assists TCP/IP operators, system programmers, and users to:
• Analyze a problem
• Classify the problem as a specific type
• Describe the problem to the IBM® Software Support Center

Familiarity with TCP/IP concepts and terms is assumed.

How this document is organized

The messages are listed in alphanumeric order by message ID. For each message ID, the books contains the text and a description of the message. This book contains the following chapters:

• Chapter 1, “EZA0xxxx messages,” on page 1 contains messages in the EZA0xxxx range.
• Chapter 2, “EZA1xxxx messages,” on page 23 contains messages in the EZA1xxxx range.
• Chapter 3, “EZA2xxxx messages,” on page 53 contains messages in the EZA2xxxx range.
• Chapter 4, “EZA3xxxx messages,” on page 173 contains messages in the EZA3xxxx range.
• Chapter 5, “EZA4xxxx messages,” on page 195 contains messages in the EZA4xxxx range.
• Chapter 6, “EZA5xxxx messages,” on page 271 contains messages in the EZA5xxxx range.
• Chapter 7, “EZA6xxxx messages,” on page 415 contains messages in the EZA6xxxx range.
How to use this document

To use this document, you should be familiar with z/OS TCP/IP Services and the TCP/IP suite of protocols.

Determining whether a publication is current

As needed, IBM updates its publications with new and changed information. For a given publication, updates to the hardcopy and associated BookManager® softcopy are usually available at the same time. Sometimes, however, the updates to hardcopy and softcopy are available at different times. The following information describes how to determine if you are looking at the most current copy of a publication:

• At the end of a publication’s order number there is a dash followed by two digits, often referred to as the dash level. A publication with a higher dash level is more current than one with a lower dash level. For example, in the publication order number GC28-1747-07, the dash level 07 means that the publication is more current than previous levels, such as 05 or 04.
• If a hardcopy publication and a softcopy publication have the same dash level, it is possible that the softcopy publication is more current than the hardcopy publication. Check the dates shown in the Summary of Changes. The softcopy publication might have a more recently dated Summary of Changes than the hardcopy publication.
• To compare softcopy publications, you can check the last two characters of the publication’s file name (also called the book name). The higher the number, the more recent the publication. Also, next to the publication titles in the CD-ROM booklet and the readme files, there is an asterisk (*) that indicates whether a publication is new or changed.

How to contact IBM service

For immediate assistance, visit this Web site: http://www.software.ibm.com/network/commserver/support/
Most problems can be resolved at this Web site, where you can submit questions and problem reports electronically, as well as access a variety of diagnosis information.

For telephone assistance in problem diagnosis and resolution (in the United States or Puerto Rico), call the IBM Software Support Center anytime (1-800-IBM-SERV). You will receive a return call within 8 business hours (Monday – Friday, 8:00 a.m. – 5:00 p.m., local customer time).

Outside the United States or Puerto Rico, contact your local IBM representative or your authorized IBM supplier.

If you would like to provide feedback on this publication, see "Communicating Your Comments to IBM" on page 683.

Conventions and terminology that are used in this document

Commands in this book that can be used in both TSO and z/OS UNIX® environments use the following conventions:

- When describing how to use the command in a TSO environment, the command is presented in uppercase (for example, NETSTAT).
- When describing how to use the command in a z/OS UNIX environment, the command is presented in bold lowercase (for example, netstat).
- When referring to the command in a general way in text, the command is presented with an initial capital letter (for example, Netstat).

All of the exit routines described in this document are installation-wide exit routines. You will see the installation-wide exit routines also called installation-wide exits, exit routines, and exits throughout this document.

The TPF logon manager, although shipped with VTAM®, is an application program. Therefore, the logon manager is documented separately from VTAM.

Samples used in this book might not be updated for each release. Evaluate a sample carefully before applying it to your system.

For definitions of the terms and abbreviations that are used in this document, you can view the latest IBM terminology at the IBM Terminology Web site.

Clarification of notes

Information traditionally qualified as Notes is further qualified as follows:

- **Note**: Supplemental detail
- **Tip**: Offers shortcuts or alternative ways of performing an action; a hint
- **Guideline**: Customary way to perform a procedure
- **Rule**: Something you must do; limitations on your actions
- **Restriction**: Indicates certain conditions are not supported; limitations on a product or facility
- **Requirement**: Dependencies, prerequisites
Prerequisite and related information

z/OS Communications Server function is described in the z/OS Communications Server library. Descriptions of those documents are listed in “Bibliography” on page 679, in the back of this document.

Required information

Before using this product, you should be familiar with TCP/IP, VTAM, MVS®, and UNIX System Services.

Softcopy information

Softcopy publications are available in the following collections.

<table>
<thead>
<tr>
<th>Titles</th>
<th>Order Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS V1R11 Collection</td>
<td>SK3T-4269</td>
<td>This is the CD collection shipped with the z/OS product. It includes the libraries for z/OS V1R11, in both BookManager and PDF formats.</td>
</tr>
<tr>
<td>z/OS Software Products Collection</td>
<td>SK3T-4270</td>
<td>This CD includes, in both BookManager and PDF formats, the libraries of z/OS software products that run on z/OS but are not elements and features, as well as the Getting Started with Parallel Sysplex® bookshelf.</td>
</tr>
<tr>
<td>z/OS V1R11 and Software Products DVD Collection</td>
<td>SK3T-4271</td>
<td>This collection includes the libraries of z/OS (the element and feature libraries) and the libraries for z/OS software products in both BookManager and PDF format. This collection combines SK3T-4269 and SK3T-4270.</td>
</tr>
<tr>
<td>z/OS Licensed Product Library</td>
<td>SK3T-4307</td>
<td>This CD includes the licensed documents in both BookManager and PDF format.</td>
</tr>
<tr>
<td>IBM System z® Redbooks Collection</td>
<td>SK3T-7876</td>
<td>The Redbooks® selected for this CD series are taken from the IBM Redbooks inventory of over 800 books. All the Redbooks that are of interest to the zSeries® platform professional are identified by their authors and are included in this collection. The zSeries subject areas range from e-business application development and enablement to hardware, networking, Linux®, solutions, security, parallel sysplex, and many others.</td>
</tr>
</tbody>
</table>

Other documents

For information about z/OS products, refer to z/OS Information Roadmap (SA22-7500). The Roadmap describes what level of documents are supplied with each release of z/OS Communications Server, as well as describing each z/OS publication.

Relevant RFCs are listed in an appendix of the IP documents. Architectural specifications for the SNA protocol are listed in an appendix of the SNA documents.

The following table lists documents that might be helpful to readers.
# Title | Number
---|---
SNA Formats | GA27-3136
TCP/IP Tutorial and Technical Overview | GG24-3376
Understanding LDAP | SG24-4986
z/OS Cryptographic Services System SSL Programming | SC24-5901
z/OS Integrated Security Services LDAP Server Administration and Use | SC24-5923
z/OS JES2 Initialization and Tuning Guide | SA22-7532
z/OS Problem Management | G325-2564
z/OS MVS Diagnosis: Reference | GA22-7588
z/OS MVS Diagnosis: Tools and Service Aids | GA22-7589
z/OS MVS Using the Subsystem Interface | SA22-7642
z/OS Program Directory | GI10-0670
z/OS UNIX System Services Command Reference | SA22-7802
z/OS UNIX System Services Planning | GA22-7800
z/OS UNIX System Services Programming: Assembler Callable Services Reference | SA22-7803
z/OS UNIX System Services User’s Guide | SA22-7801
z/OS XL C/C++ Run-Time Library Reference | SA22-7821
System z10, System z9 and zSeries OSA-Express Customer’s Guide and Reference | SA22-7935

## Redbooks

The following Redbooks might help you as you implement z/OS Communications Server.

<table>

The z/OS Basic Skills Information Center

The z/OS Basic Skills Information Center is a Web-based information resource intended to help users learn the basic concepts of z/OS, the operating system that runs most of the IBM mainframe computers in use today. The Information Center is designed to introduce a new generation of Information Technology professionals to basic concepts and help them prepare for a career as a z/OS professional, such as a z/OS system programmer.

Specifically, the z/OS Basic Skills Information Center is intended to achieve the following objectives:
- Provide basic education and information about z/OS without charge
- Shorten the time it takes for people to become productive on the mainframe
- Make it easier for new people to learn z/OS

To access the z/OS Basic Skills Information Center, open your Web browser to the following Web site, which is available to all users (no login required):

http://publib.boulder.ibm.com/infocenter/zoslnctr/v1r7/index.jsp
Using LookAt to look up message explanations

LookAt is an online facility that lets you look up explanations for most of the IBM messages you encounter, as well as for some system abends and codes. Using LookAt to find information is faster than a conventional search because in most cases LookAt goes directly to the message explanation.

You can use LookAt from these locations to find IBM message explanations for z/OS elements and features, z/VM®, z/VSE™, and Clusters for AIX® and Linux:

- The Internet. You can access IBM message explanations directly from the LookAt Web site at [www.ibm.com/systems/z/os/zos/bkserv/lookat/](http://www.ibm.com/systems/z/os/zos/bkserv/lookat/)
- Your z/OS TSO/E host system. You can install code on your z/OS systems to access IBM message explanations using LookAt from a TSO/E command line (for example: TSO/E prompt, ISPF, or z/OS UNIX System Services).
- Your Microsoft® Windows® workstation. You can install LookAt directly from the z/OS Collection (SK3T-4269) or the z/OS and Software Products DVD Collection (SK3T-4271) and use it from the resulting Windows graphical user interface (GUI). The command prompt (also known as the DOS > command line) version can still be used from the directory in which you install the Windows version of LookAt.
- Your wireless handheld device. You can use the LookAt Mobile Edition from [www.ibm.com/systems/z/os/zos/bkserv/lookat/lookatm.html](http://www.ibm.com/systems/z/os/zos/bkserv/lookat/lookatm.html) with a handheld device that has wireless access and an Internet browser.

You can obtain code to install LookAt on your host system or Microsoft Windows workstation from:

- A CD in the z/OS Collection (SK3T-4269).
- The z/OS and Software Products DVD Collection (SK3T-4271).
- The LookAt Web site (click Download and then select the platform, release, collection, and location that suit your needs). More information is available in the LOOKAT.ME files available during the download process.

How to send your comments

Your feedback is important in helping to provide the most accurate and high-quality information. If you have any comments about this document or any other z/OS Communications Server documentation, do one of the following:

- Go to the z/OS contact page at [http://www.ibm.com/systems/z/os/zos/webqs.html](http://www.ibm.com/systems/z/os/zos/webqs.html) You can enter and submit your comments in the form provided at this Web site.
- Send your comments by e-mail to comsvrcf@us.ibm.com. Be sure to include the name of the document, the part number of the document, the version of z/OS Communications Server, and, if applicable, the specific location of the text that you are commenting on (for example, a section number, a page number or a table number).
Summary of changes

Summary of changes
for SC31-8783-10
z/OS Version 1 Release 11

This document contains information previously presented in SC31-8783-09, which supports z/OS Version 1 Release 10.

This document has been enabled to use the LookAt message help tool.

The message format has been updated and new fields have been added. Most new messages contain the new information.

New information

- EZA1719I
- EZA1720I
- EZA1722I
- EZA1725I
- EZA1726I
- EZA1733I
- EZA1734I
- EZA1739I
- EZA2192I
- EZA2193I
- EZA2194I
- EZA2403I
- EZA4434I
- EZA4435E
- EZA4436I
- EZA4437I
- EZA4438I
- EZA4439I
- EZA4440I
- EZA4442I

This document contains terminology, maintenance, and editorial changes. Technical changes or additions to the text and illustrations are indicated by a vertical line to the left of the change.

You might notice changes in the style and structure of some content in this document—for example, headings that use uppercase for the first letter of initial words only, and procedures that have a different look and format. The changes are ongoing improvements to the consistency and retrievability of information in our documents.
Summary of changes
for SC31-8783-09
z/OS Version 1 Release 10

This document contains information previously presented in SC31-8783-08, which supports z/OS Version 1 Release 9.

This document has been enabled to use the LookAt message help tool.

The message format has been updated and new fields have been added. Most new messages contain the new information.

New information
• EZA4814I

Changed information
• EZA4726I

This document contains terminology, maintenance, and editorial changes. Technical changes or additions to the text and illustrations are indicated by a vertical line to the left of the change.

You might notice changes in the style and structure of some content in this document—for example, headings that use uppercase for the first letter of initial words only, and procedures that have a different look and format. The changes are ongoing improvements to the consistency and retrievability of information in our documents.

Summary of changes
for SC31-8783-08
z/OS Version 1 Release 9

This document contains information previously presented in SC31-8783-07, which supports z/OS Version 1 Release 8.

The information in this document includes descriptions of support for both IPv4 and IPv6 networking protocols. Unless explicitly noted, descriptions of IP protocol support concern IPv4. IPv6 support is qualified within the text.

This document has been enabled to use the LookAt message help tool.

The message format has been updated and new fields have been added. Most new messages contain the new information.

Deleted information

- The APPC Application Suite is removed from the z/OS V1R9 Communications Server product and therefore documentation describing APPC Application Suite support has been deleted.

This document contains terminology, maintenance, and editorial changes. Technical changes or additions to the text and illustrations are indicated by a vertical line to the left of the change.

You might notice changes in the style and structure of some content in this document—for example, headings that use uppercase for the first letter of initial words only, and procedures that have a different look and format. The changes are ongoing improvements to the consistency and retrievability of information in our documents.
Chapter 1. EZA0xxxx messages

EZA0519E   Unable to read dataset *dataset*, rc=rc
Explanation: TCPIP could not read the data set. The data set name is indicated along with a return code reason. There might be an earlier message that explains the error.
rc should be one of the following return codes. If rc is not one of the following return codes, then an unexpected return code was encountered.

1   Data set is empty
8   System error trying to obtain format 1 DSCB
12  Data set is migrated
16  Volume is not mounted
20  Volume is not direct access
24  Data set is VSAM
28  Invalid data set organization (DSORG) or record format (RECFM)

System action: MAKESITE halts. TCPIP continues.
Operator response: Check that correct access to the indicated data set is available before continuing. If rc is an unexpected return code, contact the System Programmer.
System programmer response: If rc is an unexpected return code, contact the IBM Support Center with the message.
Module: CMMAKSI
Procedure Name: StartUp

EZA0521W   Warning: line *number* truncated to *number* characters
Explanation: A line has been truncated because it is longer than the MaxLine constant. The MaxLine constant is the maximum number of characters that can be specified on a single entry line. Comments are ignored when determining the length of a line.
System action: TCPIP continues.
Operator response: If this truncation condition is unacceptable, correct the error before continuing. All entries to the HOSTS.LOCAL data set should be specified on a single line of up to a maximum of 512 characters per line. See z/OS Communications Server: IP Configuration Reference for more information.
System programmer response: No action is needed.
Module: CMMAKSI
Procedure Name: GetLine

EZA0522E   Line *line*: bad address syntax
Explanation: An incorrect IP address was found in the input data set. The program procedure found a value different from the required IP address in dotted decimal notation.
System action: TCPIP continues.
Operator response: Correct the error identified on the indicated line and continue.
System programmer response: No action is needed.
Module: CMMAKSI
Procedure Name: GetAddress
EZA0523E • EZA0527W

EZA0523E  Line number: only number fields
Explanation:  The indicated number of field terminators was less than the required minimum of three for the
indicated line number in the input data set.
System action:  TCPIP continues.
Operator response:  Correct the error identified on the indicated line and continue.
System programmer response:  No action is needed.
Module:  CMMAKSI
Procedure Name:  ParseLine

EZA0524E  Line number: no type specified
Explanation:  The indicated line number in the input data set had a null type field.
System action:  TCPIP continues.
Operator response:  Correct the error identified on the indicated line and continue.
System programmer response:  No action is needed.
Module:  CMMAKSI
Procedure Name:  ParseLine

EZA0525E  Line number: unknown type type
Explanation:  The indicated line number in the input data set was not null and did not contain HOST, GATEWAY, or
NET in the type field.
System action:  TCPIP continues.
Operator response:  Correct the error identified on the indicated line and continue.
System programmer response:  No action is needed.
Module:  CMMAKSI
Procedure Name:  ParseLine

EZA0526E  Line number: no address specified
Explanation:  The indicated line number in the input data set did not contain a valid address.
System action:  TCPIP continues.
Operator response:  Correct the error identified on the indicated line and continue.
System programmer response:  No action is needed.
Module:  CMMAKSI
Procedure Name:  ParseLine

EZA0527W  Warning: line number has too many addresses; only the first address will be stored.
Explanation:  The data set contained more addresses than the number allowed by the indicated
MAXsiteAddresses variable.
System action:  TCPIP continues.
Operator response:  Correct the error identified in the indicated line of the HOSTS.LOCAL data set and continue.
See z/OS Communications Server: IP Configuration Reference for more information.
System programmer response:  No action is needed.
Module:  CMMAKSI
**EZA0528E** Line number: no name field

**Explanation:** The indicated line number in the input data set did not contain a name field.

**System action:** TCPIP continues.

**Operator response:** Correct the error identified on the indicated line and continue.

**System programmer response:** No action is needed.

**Module:** CMMAKSI

**Procedure Name:** ParseLine

---

**EZA0529W** Warning: line number has too many names; only the first name will be stored.

**Explanation:** The indicated line number in the input data set contained more names than the number allowed by the indicated \texttt{hbound(names)} variable.

**System action:** TCPIP continues.

**Operator response:** Correct the error identified in the indicated line and continue.

**System programmer response:** No action is needed.

**Module:** CMMAKSI

**Procedure Name:** ParseLine

---

**EZA0530E** Line number: hash table overflow

**Explanation:** Data contained in the indicated line number of the input data set caused a hash table overflow because the \texttt{SiteTableSize} variable was exceeded. The size of the table entries is specified in the \texttt{userid.HOSTS.LOCAL} or the \texttt{HOSTS.LOCAL} data set. This message is followed by another message indicating that this is an irrecoverable error condition.

**System action:** TCPIP continues.

**Operator response:** Correct the error identified on the indicated line of the \texttt{HOSTS.LOCAL} data set and continue.

The maximum length for a host entry allowed in the HOST tables is 24 characters. However, the name server does not have maximum character length. If the error persists, contact the IBM Software Support Center.

**System programmer response:** No action is needed.

**Module:** CMMAKSI

**Procedure Name:** LookUp

---

**EZA0531I** H value, Tries number, Pos address, address, K value

---

**EZA0532I** Index@address, address, K address

**Explanation:** These messages provide additional information values after a table overflow has occurred. These messages are written to an output file and are displayed with EZA0530E.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** See EZA0530E for more information.

**Module:** CMMAKSI

**Procedure Name:** LookUp
**EZA0533S • EZA0537W**

**EZA0533S  **** Fatal error: MakeSite aborted**

**Explanation:** This message follows EZA0530E which explains the specific cause of the error.

**System action:** MAKESITE halts. TCPIP continues.

**Operator response:** Correct the error identified in the indicated line and continue. The maximum length for a host allowed in the HOST tables is 24 characters. However, the name server does not have maximum character length. If the error persists, contact the IBM Software Support Center.

**System programmer response:** No action is needed.

**Module:** CMMAKSI

**Procedure Name:** LookUp

---

**EZA0534W  Warning: name1 agrees with name2 in the first CMSword_limit characters**

**Explanation:** This message indicates a possible PseudoDuplicate name condition. This message is issued only if the WarnMe flag has been set to true with the WARN option. PseudoDuplicate indicates that the first displayed number of characters of the first host name are the same as the first number of characters of the second host name.

**System action:** TCPIP continues.

**Operator response:** If this condition is unacceptable, correct the error in the HOSTS.LOCAL data set before continuing.

**System programmer response:** No action is needed.

**Module:** CMMAKSI

**Procedure Name:** LookUp

---

**EZA0535E  Address hash table overflow on host**

**Explanation:** The procedure MergeNames, which takes host names from the old HOST data set and adds them to the new HOST data set, was not successful because the.AddrTableSize variable was exceeded for the host address hash table. This message is displayed with EZA0538W.

**System action:** TCPIP continues.

**Operator response:** Correct the error identified on the indicated line and continue. The maximum length for a host allowed in the HOST tables is 24 characters. If the error persists, contact the IBM Software Support Center.

**System programmer response:** No action is needed.

**Module:** CMMAKSI

**Procedure Name:** LookUp

---

**EZA0537W  Warning name lost: name**

**Explanation:** The indicated host name was lost during the generation of the user_id.HOSTS.SITEINFO and the user_id.HOSTS.ADDRINFO data sets because the length of the host name was longer than the field specified. The maximum length for a host allowed in the HOST tables is 24 characters. This message is issued only if the WarnMe flag has been set to true with the WARN option.

**System action:** TCPIP continues.

**Operator response:** Reenter the host name in the HOSTNAME parameter of the HOSTS.LOCAL data set and restart the process. See z/OS Communications Server: IP Configuration Reference for more information.

**System programmer response:** No action is needed.

**Module:** CMMAKSI

**Procedure Name:** ProcessAdr
EZA0538W  Warning name lost: name

Explanation: The indicated name was lost during program processing. This message is issued only if the WarnMe flag has been set to true with the WARN option. This message is displayed with EZA0535.

System action: TCPIP continues.

Operator response: See message number EZA0535W for information.

System programmer response: No action is needed.

Module: CMMAKSI

Procedure Name: MergeNames

EZA0539I  Merge A into B:

Explanation: The operation performed a merge between the new address of A and existing addresses of B to form a current index.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMMAKSI

Procedure Name: MainProg

EZA0540I  A =

Explanation: This message precedes the display of new addresses to be added to the current index.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMMAKSI

Procedure Name: MainProg

EZA0542I  B =

Explanation: This message displays the old addresses that are currently present in the index. The address information from A will be merged with the addresses of B to produce a current data set index.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMMAKSI

Procedure Name: MainProg

EZA0543I  Computing tables ...

Explanation: The site tables are now being executed for the MAKESITE program.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMMAKSI

Procedure Name: MainProg
EZA0544I  Merged current into Index index = name.
Explanation:  This message gives the current Index number and the name of the index.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  CMMAKSI
Procedure Name:  MainProg

EZA0545I  Line line: the name 'names' is a duplicate.
Explanation:  This message displays the addresses contained in the site table that are duplicate entries. The line number indicates the destination of the duplicate name.
System action:  TCPIP continues.
Operator response:  To correct the problem, edit the HOST.LOCAL data set. Discard any duplicate names and reissue MAKESITE.
System programmer response:  No action is needed.
Module:  CMMAKSI
Procedure Name:  MainProg

EZA0546I  Merged Index index = name into Current
Explanation:  The current index number and name are to be added to the current index.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  CMMAKSI
Procedure Name:  MainProg

EZA0547I  Writing out datasetname
Explanation:  The MAKESITE program is generating the data set name specified in the message text. For more information see z/OS Communications Server: IP Configuration Reference
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  CMMAKSI
Procedure Name:  MainProg

EZA0548I  Writing out datasetname
Explanation:  The MAKESITE program is formatting information to the data set specified in the message text.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  CMMAKSI
Procedure Name:  MainProg
%STATISTICS

Explanation: This message is a header for the specific statistics to follow. This message will be followed by a series of messages indicating the HOSTS.LOCAL, HOSTS.SITEINFO, and HOSTS.ADDRINFO data sets.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMMASKI

Procedure Name: DumpStatistics

Dataset: datasetname

Explanation: This message header is followed by statistics describing the data set specified in the message text.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMMASKI

Procedure Name: DumpStatistics

Total lines: lines

Explanation: This message indicates the total number of lines in the HOSTS.LOCAL data set.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMMASKI

Procedure Name: DumpStatistics

Bad lines: (skipped) duplicates

Explanation: This message shows the number of lines that are not added to the HOSTS.LOCAL data set, because these lines are either duplicates or not readable.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMMASKI

Procedure Name: DumpStatistics

Duplicate names: duplicates

Explanation: This message indicates the number of address names conflicting with address names that exist in the data set.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMMASKI

Procedure Name: DumpStatistics
EZA0554I  Conflicts in first 8 letters: duplicates
Explanation: If conflicts or duplicates occur in the first 8 letters, this message will be displayed.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMMASKI
Procedure Name: DumpStatistics

EZA0555I  total networks, total gateways, total hosts
Explanation: This message shows how many networks, gateways, and hosts are defined in your HOSTS.LOCAL data set.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMMASKI
Procedure Name: DumpStatistics

EZA0556I  Dataset: name
Explanation: This header message will be followed by other messages with specific details concerning the data set name specified in the message text.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMMASKI
Procedure Name: DumpStatistics

EZA0557I  % Table Size: size.
EZA0558I  % Total Entries: entries.
EZA0559I  % Distinct Names: names.
EZA0560I  Collisions: collisions.
EZA0561I  Average probes/name: 1.0 + collisions/namesfound.
Explanation: These messages are displayed when the MAKESITE command is invoked. Each title states the HOSTS.SITEINFO data set required in your HOSTS.SITEINFO data set.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMMASKI
Procedure Name: DumpStatistics
System action: TCPIP continues.
Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMMASKI

Procedure Name: DumpStatistics

EZA0562I Dataset: FullDataSetName

EZA0563I Table Size: AddrTableSize

EZA0564I Total entries: AddrInserts

EZA0565I Collisions: AddrCollisions

EZA0566I Names dropped: AddrNamesLost

Explanation: Message EZA0562I is followed by other messages with specific details concerning the data set name specified in the message text. Each message provides an indication of the setting for your HOSTS.ADDRINFO data set.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMMASKI

Procedure Name: DumpStatistics

EZA0567I MVS TCP/IP Makesite

Explanation: This message identifies the operating system and the application.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMMASKI

Procedure Name: DumpStatistics

EZA0568W Size of SITE table exceeds the capacity of MAKESITE.

EZA0569W Maximum size of SITE table: number

EZA0570W Computed SITE table size: size.

Explanation: The size of the HOSTS.SITEINFO must be within the range of the MAKESITE program. Each entry should be specified on a single line of no more than 512 characters. The sizes of the tables currently in the HOSTS.SITEINFO data sets are shown. For more information on the HOSTS.LOCAL data set, see the [OS Communications Server: IP Configuration Guide](https://www.ibm.com). 

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMMASKI

Procedure Name: StartUp
EZA0571W  Size of Addr table exceeds the capacity of MAKESITE.

EZA0572W  Maximum size of ADDR table: number

EZA0573W  Computed ADDR table size: size

Explanation: The size of the HOSTS.ADDINFO must be within the range of the MAKESITE program. Each entry should be specified on a single line of no more than 512 characters. The sizes of the tables currently in the HOSTS.ADDINFO data sets are shown.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMMASKI
Procedure Name: StartUp

EZA0574E  MAKESITE Terminating Abnormally.

Explanation: Data contained in the SITE table or the ADDR table exceeded the capacity of the MAKESITE program and caused an error.

System action: MAKESITE halts.
Operator response: Edit the HOSTS.LOCAL data set. Once you have access, edit the data set line number and name correctly and within range of the MAKESITE program. For more information on MAKESITE see z/OS Communications Server: IP Configuration Reference.
System programmer response: No action is needed.
Module: CMMASKI
Procedure Name: DumpStatistics

EZA0575I  MakeSite Parameters passed - parameters.

Explanation: This message shows the parameters passed by the MAKESITE program. If the parameters are not correct, an error message will follow this message.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMMASKI
Procedure Name: StartUp

EZA0576E  MakeSite Parameter ERROR - error.

Explanation: The parameter you have selected was not recognized by the MAKESITE program. error is the unrecognized parameter.

System action: TCPIP continues.
Operator response: MAKESITE does not allow continuation lines; entries should be made on a single line of no more than 512 characters. Reissue the command using a valid parameter. For more information on MAKESITE parameters see z/OS Communications Server: IP Configuration Reference.
System programmer response: No action is needed.
Module: CMMASKI
Procedure Name: ParmExtract
**EZA0578E**  Output data set file allocation ERROR: dataset

**Explanation:** The allocation of the HOSTS.SITEINFO data set failed. The following causes are typical causes of this failure:

- An existing data set cannot be opened for modification because another user has it allocated.
- A new data set cannot be allocated because there is not sufficient space on the volume.
- The user does not have the authority to create the data set.

**System action:** MAKESITE halts.

**Operator response:** Notify the system programmer to correct the error.

**System programmer response:** Ensure that another user does not have the HOSTS.SITEINFO data set open for modification and that there is space available on the volume to create or expand the HOSTS.SITEINFO data set. Also ensure that the user has sufficient authority to access or create the HOSTS.SITEINFO data set.

**Module:** CMMASKI  
**Procedure Name:** StartUp

---

**EZA0579E**  Proceed Flag is OFF --HALT--.

**Explanation:** This message will display if the data set specified in message EZA0578E is incorrect. This causes the procedure to discontinue until the error is corrected.

**System action:** MAKESITE halts.

**Operator response:** Make sure the syntax of the data set is correctly specified and MAKESITE is able to read the HOSTS.LOCAL data set.

**System programmer response:** No action is needed.

**Module:** CMMASKI  
**Procedure Name:** getstate

---

**EZA0580I**  Proceed Flag is ON -- Using default attributes.

**Explanation:** This message indicates the procedure has continued and default attributes are being initialized. For more information about MAKESITE, see [z/OS Communications Server: IP Configuration Reference](#).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMMASKI  
**Procedure Name:** StartUp

---

**EZA0581I**  testname

**Explanation:** Indicates the gateway, host, or net name for which a TESTSITE command was entered.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMTSITE  
**Procedure Name:** PrintSite
EZA0591I  Name:

Explanation:  Prompts you to enter the gateway, host, or net name for which you need to enter the TESTSITE command.

System action:  The TESTSITE program waits for your input. TCPIP continues.

Operator response:  Enter the gateway, host, or net name to be verified.

System programmer response:  No action is needed.

Module:  CMTSITE

Procedure Name:  DoIt

---

EZA0592I  No host named host

Explanation:  There are no HOST entries for the specified name in the HOSTS.ADDRINFO and user_id.v3r1.HOSTS.SITEINFO data sets.

System action:  TCPIP continues and prompts the user for the next name.

Operator response:  Correct the HOSTS.LOCAL data set and rebuild the HOSTS.ADDRINFO and user_id.v3r1.HOSTS.SITEINFO data sets with MAKESITE, as necessary.

System programmer response:  No action is needed.

Module:  CMTSITE

Procedure Name:  DoIt

---

EZA0593I  No gateway named gateway

Explanation:  There are no GATEWAY entries for the specified name in the HOSTS.ADDRINFO and user_id.v3r1.HOSTS.SITEINFO data sets.

System action:  TCPIP continues and prompts the user for the next name.

Operator response:  Correct the HOSTS.LOCAL data set and rebuild the HOSTS.ADDRINFO and user_id.v3r1.HOSTS.SITEINFO data sets with MAKESITE, as necessary.

System programmer response:  No action is needed.

Module:  CMTSITE

Procedure Name:  DoIt

---

EZA0594I  No net named net

Explanation:  There are no NET entries for the specified name in the HOSTS.ADDRINFO and user_id.HOSTS.SITEINFO data sets.

System action:  TCPIP continues and prompts the user for the next name.

Operator response:  Correct the HOSTS.LOCAL data set and rebuild the HOSTS.ADDRINFO and user_id.HOSTS.SITEINFO data sets with MAKESITE, as necessary.

System programmer response:  No action is needed.

Module:  CMTSITE

Procedure Name:  DoIt

---

EZA0595I  MVS TCP/IP Testsite.

Explanation:  Indicates that TESTSITE has been invoked. This is the first message displayed after issuing the TESTSITE command.

System action:  TCPIP continues.

Operator response:  No action is needed.
System programmer response: No action is needed.
Module: CMTSITE
Procedure Name: TestSiteInfo

EZA0596I Testsie checks site names against HOST.SITEINFO

EZA0597I Prompting for each name until told ‘quit’ For each

EZA0598I name, Testsie describes the corresponding internet

type (HOST, GATEWAY, NET) and internet addresses.

Explanation: This group of messages is displayed after each site name you enter has been verified against the names found in HOSTS.SITEINFO. These messages are continually displayed until you issue a QUIT command.

System action: TESTSITE continues. TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMTSITE
Procedure Name: TestSiteInfo

EZA0599I To quit, type ‘quit’.

Explanation: The Testsie utility received a response to its prompt for a site name (see messages EZA0596I - EZA0599I) that was not valid. The only other valid response, other than a site name, is ‘quit’.

System action: TCPIP continues.
Operator response: If you need to quit, enter QUIT and press ENTER.
System programmer response: No action is needed.
Module: CMTSITE
Procedure Name: TestSiteInfo

EZA0600I Error obtaining Userid.

Explanation: The user ID entered was not found.

System action: TCPIP is unsuccessful.
Operator response: Reissue the user ID, make sure it is correct.
System programmer response: No action is needed.
Module: HOMETEST
Procedure Name: Test

EZA0601E Error obtaining Userid.

Explanation: The user ID entered was not found.

System action: TCPIP is unsuccessful.
Operator response: Reissue the user ID, make sure it is correct.
System programmer response: No action is needed.
Module: HOMETEST
Procedure Name: Test

EZA0602I TCP Host Name is: MVSA.TCP.RALEIGH.IBM.COM

Explanation: This message indicates the name of the TCP host.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: HOMETEST
Procedure Name: Test
EZA0604E Cannot use TCP/IP: errmsg (msgnum)
Explanation: TCPIP is not available because of the indicated reason.
errmsg is the text of the message that describes the error.
msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmgnu.
System action: TCPIP halts.
Operator response: Determine the nature of the error, correct it, and try again.
System programmer response: Respond as indicated by the message EZAmgnu.
Module: HOMETEST
Procedure Name: Test

EZA0605I Using name server to resolve: MVSA.TCP.RALEIGH.IBM.COM
Explanation: This message indicates that the program is using a blank.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: HOMETEST
Procedure Name: Test

EZA0609E Error: Found no IP addresses corresponding to TCP Host Name: name
Explanation: The indicated TCP host name could not be resolved because there are no corresponding IP addresses.
System action: The program continues.
Operator response: Correct the HOSTNAME variable in the TCPIP.DATA data set or the records in the name server or sites tables, and rerun HOMETEST. See z/OS Communications Server: IP Configuration Guide for more information on TCPIP.DATA data set.
System programmer response: No action is needed.
Module: HOMETEST
Procedure Name: Test

EZA0610E name
Explanation: This message appears with message EZA0609E and indicates that no addresses were found for the entered host name.
System action: TCPIP is unsuccessful.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: HOMETEST
Procedure Name: Test

EZA0611I The following IP addresses correspond to TCP Host Name: name
Explanation: This message gives a list of Internet Protocol addresses that correspond to the TCP Host Name. These addresses are checked against the HOME list and defined in the hlq.PROFILE.TCPIP data set Host Name.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: HOMETEST
Procedure Name: Test

EZA0612I
list
Explanation: This message displays with EZA0611I producing a list of the IP addresses that correspond to the TCP Host Name.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: HOMETEST
Procedure Name: Test

EZA0614I
The following IP addresses are the HOME IP addresses defined in the hlq.PROFILE.TCPIP data set.
Explanation: The internet protocol addresses corresponding to your site HOSTNAME are checked against the HOME list and defined in the hlq.PROFILE.TCPIP data set. A warning message is issued if any addresses are missing from the HOME list.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: HomeTest
Procedure Name: Test

EZA0615I
list
Explanation: This message displays with EZA0614I providing a list of the HOME addresses defined in the hlq.PROFILE.TCPIP data set.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: HOMETEST
Procedure Name: Test

EZA0617E
Error: address is not in the HOME List
Explanation: The indicated IP address could not be found in the HOME list in hlq.PROFILE.TCPIP data set.
System action: The program continues.
Operator response: Correct the IP address in the HOME list in the hlq.PROFILE.TCPIP data set, the name server, or the site tables, and rerun HOMETEST. See z/OS Communications Server: IP Configuration Guide for more information on hlq.PROFILE.TCPIP data set.
Module: HOMETEST
Procedure Name: Test
EZA0618I  All IP addresses for name are in the HOME list!
Explanation:  This message indicates that all the internet protocol addresses were found in the HOME list.
System action:  TCPIP continues processing.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  HOMETEST
Procedure Name:  Test

EZA0619I  Running IBM MVS TCP/IP V3R1 TCP/IP Configuration Tester
Explanation:  This message indicates the version and level of the data set being tested on the TCPIP system with the HOMETEST statement.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  HOMETEST
Procedure Name:  HomeTest

EZA0621I  The FTP configuration parameter file used will be data set.
Explanation:  The initial FTP configuration parameters used during operation of TCPIP are from the indicated source data set. This can be the SYSFTPD DD statement, the configuration data set, or an error message.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  HOMETEST
Procedure Name:  Test

EZA0622I  Hometest was successful - all Tests Passed!
Explanation:  All of the configuration data sets have passed the configuration tests.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  HOMETEST
Procedure Name:  Test

EZA0623W  Warning: no TCP/IP system parameter file was available for use.
Explanation:  The TCPIP.DATA data set is not found.
System action:  HOMETEST ends. Other error messages may occur with this one.
Operator response:  Contact the system programmer.
System programmer response:  Specify a TCPIP.DATA data set for TCP/IP. For more information, see z/OS Communications Server: IP Configuration Reference.
Module:  HOMETEST
Procedure Name:  Test
**EZA0624I**  * * * Hometest failed - configuration error * * *

**EZA0625I**  Please correct your TCP/IP configuration and run this program again.

**Explanation:**  These messages appear together to show that there is a configuration error and requests that the error be fixed, and the HOMETEST command reissued.

**System action:**  HOMETEST halts. TCPIP continues.

**Operator response:**  Correct the error in the configuration data set and rerun the program. For more information, see [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/servers/eserver/zseries/zos/bkserv/).

**System programmer response:**  No action is needed.

**Module:**  HOMETEST  
**Procedure Name:**  HomeTest

---

**EZA0626E**  InitEmulation failed, try again with ECMODE ON

**Explanation:**  This message is displayed when there is an error in the input data.

**System action:**  TCPIP is unsuccessful.

**Operator response:**  Turn on ECMODE and reissue the HOMETEST command.

**System programmer response:**  No action is needed.

**Module:**  HOMETEST  
**Procedure Name:**  Test

---

**EZA0627E**  Error: Name resolution via Nameserver was unsuccessful.

**Explanation:**  The TCP host name could not be resolved using the name server for the indicated reason.

**System action:**  The program continues.

**Operator response:**  Determine why HOMETEST cannot communicate with the name server, and rerun HOMETEST.

**System programmer response:**  No action is needed.

**Module:**  HOMETEST  
**Procedure Name:**  Test

---

**EZA0628E**  Reason: errmsg (msgnum)

**Explanation:**  This message indicates that the HOMETEST command was unsuccessful.  

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

**System action:**  TCPIP is unsuccessful.

**Operator response:**  No action is needed.

**System programmer response:**  Respond as indicated by the message EZAmsgnum.

**Module:**  HOMETEST  
**Procedure Name:**  Test
EZA0644E  Input contains wrong number of bytes: “input record”

Explanation:  The CONVXLAT command specified an SBCS input data set that contained a data error in the specified line. The line did not contain 16 valid hexadecimal codes.

System action:  The program halts. An invalid output data set is produced.

Operator response:  Reenter the command specifying a valid data set for the InputDsname parameter. Make sure the data set contains valid SBCS translation tables. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables using CONVXLAT.

System programmer response:  No action is needed.

Module:  CMCONVXL PASCAL

Procedure Name:  DoOneTable

---

EZA0646E  Output data set DSORG=PO. Execution is HALTed

Explanation:  The output file submitted for the CONVXLAT command is a partitioned data set. The CONVXLAT command will not delete a partitioned data set.

System action:  The command is not executed. TCPIP continues.

Operator response:  Resubmit the CONVXLAT command with a valid output file. For more information about the CONVXLAT command, see z/OS Communications Server: IP User’s Guide and Commands.

System programmer response:  Assist the user as necessary.

Module:  CMCONVXL

Procedure Name:  DoIt

---

EZA0647E  Output dataset is invalid. Execution is HALTed

Explanation:  The output data set specified for the CONVXLAT command was incorrect.

System action:  The command is not executed. TCPIP continues.

Operator response:  Resubmit the CONVXLAT command with a valid output file. For more information about the CONVXLAT command, see z/OS Communications Server: IP User’s Guide and Commands.

System programmer response:  Assist the user as necessary.

Module:  CMCONVXL

Procedure Name:  DoIt

---

EZA0649E  Output dataset not found. Cannot allocate PDS.

Explanation:  The output data set for the CONVXLAT command did not exist when the CODEFILE option was used. The CONVXLAT program is unable to allocate the partitioned data set required for generation of the codefiles.

System action:  The program halts. No output data set is produced.

Operator response:  For more information about the error, contact the system programmer.

System programmer response:  Make sure that the output data set for the codefiles is a correctly allocated partitioned data set. See z/OS Communications Server: IP Configuration Reference for more information about allocating a PDS for CONVXLAT codefile generation.

Module:  CMCONVXL PASCAL

Procedure Name:  DoIt
**EZA0650W**  **EZA0653W**

**EZA0650W**  **DBCS code is defined more than once - code_index. Continuing ...**

Explanation: The error occurred during processing of DBCS translation data from the input data set. A DBCS code index was defined more than once.

System action: The program continues. The DBCS code defined more than once will have the value first assigned to it in the input data set.

Operator response: For more information, contact the system programmer.

System programmer response: Make sure that all DBCS codes in the data set are defined only once. See [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/SSDIPS_fibrm希望自己能自动生成超链接) for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module: CMCONVXL PASCAL

Procedure Name: DoDbcsBinFile, DoCodeFiles

---

**EZA0651W**  **DBCS code index - code_index - out of order. Continuing ...**

Explanation: The error occurred during processing of DBCS translation data from the input data set. A DBCS code index was found that was numerically less than the previous code index. The output data set may contain unpredictable results and should not be used.

System action: The program continues.

Operator response: For more information, contact the system programmer.

System programmer response: Make sure that all DBCS codes in the data set are defined in numerical order from the lowest value to the highest. See [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/SSDIPS_fibrm希望自己能自动生成超链接) for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module: CMCONVXL PASCAL

Procedure Name: DoDbcsBinFile, DoCodeFiles

---

**EZA0652I**  **Current code set is - code_file**

Explanation: This message is displayed when the CODEFILE option of CONVXLAT is used. It indicates which codefile is currently being generated.

System action: The program continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMCONVXL PASCAL

Procedure Name: DoCodeFiles

---

**EZA0653W**  **SBCS code is defined more than once - code_index. Continuing ...**

Explanation: The error occurred during processing of SBCS translation data from the input data set. An SBCS code index was defined more than once. This SBCS code index will have the value first assigned to it in the input data set.

System action: The program continues.

Operator response: For more information, contact the system programmer.

System programmer response: Make sure that all SBCS codes in the data set are defined only once. See [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/SSDIPS_fibrm希望自己能自动生成超链接) for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module: CMCONVXL PASCAL

Procedure Name: DoDbcsBinFile, DoCodeFiles
EZA0654W  SBCS code index - out of order. Continuing ...

Explanation: The error occurred during processing of SBCS translation data from the input data set. An SBCS code index was found that was numerically less than the previous code index. The output data set will contain unpredictable results and should not be used.

System action: The program continues.

Operator response: For more information, contact the system programmer.

System programmer response: Make sure that all SBCS codes in the data set are defined in numerical order from the lowest value to the highest. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module: CMCONVXL PASCAL

Procedure Name: DoDbcsBinFile, DoCodeFiles

EZA0655E  No SBCS input data in input dataset dataset

Explanation: The input data set contained only DBCS code point mappings and did not contain the associated SBCS data. The output data set will not be complete and should not be used.

System action: The program halts.

Operator response: For more information, contact the system programmer.

System programmer response: Make sure that the input data set contains appropriate SBCS code point mappings. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module: CMCONVXL PASCAL

Procedure Name: DoDbcsBinFile, DoCodeFiles

EZA0656E  Empty input dataset dataset

Explanation: The input data set existed but contained no data. The output data set will be empty.

System action: The program halts.

Operator response: For more information, contact the system programmer.

System programmer response: Make sure that the input data set contains the appropriate translation table data. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module: CMCONVXL PASCAL

Procedure Name: DoDbcsBinFile, DoCodeFiles

EZA0657E  Error in first line of translation data: input_record

Explanation: The first line of translation data in the input data set was in error. This error may be caused by an incorrect number of translation data columns or by incorrect (for example, too long, too short, not hex data and so on) data in the columns. The first line of data must contain correct and complete data for processing to continue. The output data set will be empty.

System action: The program halts.

Operator response: For more information, contact the system programmer.

System programmer response: Make sure that the input data set contains the appropriate translation data in the first line of uncommented data. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module: CMCONVXL PASCAL

Procedure Name: DoDbcsBinFile, DoCodeFiles
EZA0658E  Error in DBCS input line: input_record

Explanation: An error was found processing a line of DBCS translation data from the input data set. Incorrect data was found in one of the columns of the input line. The output data set will contain invalid data and should not be used.

System action: The program halts.

Operator response: For more information, contact the system programmer.

System programmer response: Make sure that the input data set contains valid translation data in all DBCS data lines. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module: CMCONVXL PASCAL

Procedure Name: DoDbcsBinFile, DoCodeFiles

EZA0659E  Error in SBCS input line: input_record

Explanation: An error was found processing a line of SBCS translation data from the input data set. Incorrect data was found in one of the columns of the input line. The output data set will contain invalid data and should not be used.

System action: The program halts.

Operator response: For more information, contact the system programmer.

System programmer response: Make sure that the input data set contains valid translation data in all SBCS data lines. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module: CMCONVXL PASCAL

Procedure Name: DoDbcsBinFile, DoCodeFiles

EZA0660E  Output file is not a PS dataset

Explanation: The output file specified for the CONVXLAT command was not a sequential data set. The files are not translated.

System action: TCPIP continues.

Operator response: Resubmit the CONVXLAT command specifying a sequential data set for the output file.

System programmer response: Assist the user as necessary.

Module: CMCONVXL

Procedure Name: GetParameters

EZA0661E  Error in SBCS input data. Incorrect number of code point mappings.

Explanation: The input data set for the CONVXLAT command did not contain 256 single byte code point mappings. An output data set is produced but is not valid.

System action: The program halts.

Operator response: For more information about the error, contact the system programmer.

System programmer response: The SBCS translation data must contain exactly 256 code point mappings when using CONVXLAT options KANJI, HANGEUL or TCHINESE. Make sure that the input data set has the correct number of single byte code point mappings. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module: CMCONVXL PASCAL
Chapter 2. EZA1xxxx messages

EZA1450I IBM FTP version
Explanation: This message indicates which version of File Transfer Protocol (FTP) is running on the system.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCY

EZA1451E Cannot load translate table specified by TRANSLATE parameter name
Explanation: The FTP client was started with the TRANSLATE name or -t name parameter on the FTP command.
FTP used the name specified to search for a data set containing binary translate tables, but was unable to find a usable data set.
System action: FTP Client exits.
Operator response: Notify the system programmer of the error.
System programmer response: Reissue the FTP command with the TRACE or -d parameter to enable tracing which will display the results of each attempt in the search order. Respond to the error indicated.
Module: EZAFTPNX

EZA1456I Connect to ?
Explanation: This is a prompt for the user to enter the name or IP address of the host system he wishes to connect to. Port number is optional.
System action: Processing continues.
Operator response: Enter host name or IP address.
System programmer response: No action is needed.
Module: EZAFTPCY

EZA1457I You must first issue the ‘OPEN’ command
Explanation: The OPEN subcommand must be issued to establish a connection to the other host’s FTP server.
System action: FTP continues.
Operator response: Issue the OPEN subcommand with a host name. See the z/OS Communications Server: IP User’s Guide and Commands for information about the open subcommand.
System programmer response: No action is needed.
Module: EZAFTPCL, EZAFTPPC

EZA1458I You must first issue the ‘USER’ command
Explanation: The USER subcommand must be issued to identify you to the other host after opening a connection. Your password on the other host can also be specified on the USER subcommand.
System action: FTP continues.
Operator response: Issue the USER subcommand with your logon name on the other host. See the z/OS Communications Server: IP User’s Guide and Commands for information about the user subcommand.
System programmer response: No action is needed.
**EZA1459I • EZA1471E**

**EZA1459I**  NAME host user

Explanation: This is a prompt for the user ID on the target host system.

System action: None.

Operator response: Type the user ID for the target system or press enter to use the same user ID that you are using on the client system.

System programmer response: No action is needed.

Module: EZAFTPCZ

**EZA1460I**  Command:

Explanation: The system is prompting you to enter a command.

System action: The system waits for you to enter a command.

Operator response: Enter the command you want to process.

System programmer response: No action is needed.

Module: EZAFTPCU

**EZA1464I**  Missing parm after TRANSLATE

Explanation: A nonstandard translation table name (*data set name*) must be specified on the FTP command TRANslate parameter. FTP uses the translation table in the *user_id.data set name.TCPXLBIN* rather than the standard translation table provided with TCPIP for MVS.

System action: FTP continues.

Operator response: Specify the data set name of the translate table you want to take precedence.

System programmer response: No action is needed.

Module: EZAFTPCY

**EZA1465I**  FTP: tcp parameter requires an address space name.

Explanation: When the TCP parameter is specified on the FTP command, an address space name must be specified.

System action: FTP terminates.

Operator response: Specify an address space name on the TCP parameter of the FTP command.

System programmer response: No action is needed.

Module: EZAFTPCY

**EZA1466I**  FTP: using *name*

Explanation: FTP is using the tcpip stack named *name*. If neither the -p nor the (TCP start parameter was used to specify a tcpip stack name, this stack name came from TCPIPJOBNAME in TCPIP.DATA.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCY

**EZA1471E**  Open of INPUT data set failed

Explanation: The FTP Client attempted to open the data set allocated to the INPUT or SYSIN DD statement and encountered an error.

System action: The FTP Client terminates.
Operator response: Correct the error with the data set.
System programmer response: No action is needed.
Module: EZAFTPCY

---

**EZA1472I**  **Ambiguous (command)**

**Explanation:** FTP encountered a command during processing that is ambiguous. The command is displayed in the message.

**System action:** FTP continues.

**Operator response:** Enter a valid command.

**System programmer response:** No action is needed.

**Module:** EZAFTPCY

---

**EZA1473W**  **LRECL lrecl is incompatible with RECFM recfm**

**Explanation:** The LRECL value is incompatible with the RECFM. This value might have come from FTP.DATA, as the result of a LOCSITE command, or from MVS as a default.

- **lrecl** is the length of the record.
- **recfm** is the Record format.

**System action:** The file transfer ends.

**Operator response:** Enter a correct value using LOCSITE LRECL=value. See the [z/OS Communications Server: IP User's Guide and Commands](https://www.ibm.com/support/knowledgecenter/SSEQ3G_2.2.0/com.ibm.zos.v2r2.mk2ref.pdf) for information about transferring data using the File Transfer Protocol.

**System programmer response:** Update the FTP.DATA file. See the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/SSEQ3G_2.2.0/com.ibm.zos.v2r2.mk2ref.pdf) and to the [z/OS Communications Server: IP User's Guide and Commands](https://www.ibm.com/support/knowledgecenter/SSEQ3G_2.2.0/com.ibm.zos.v2r2.mk2ref.pdf) for information about the parameters of the FTP.DATA file.

**Module:** EZAFTPCG

**Procedure Name:** RECVDATA()

---

**EZA1475I**  **Connection with foreignhost terminated**

**Explanation:** The connection to the foreign host is closed.

**System action:** FTP Client halts.

**Operator response:** Reestablish a connection with the foreign host's FTP server by using the OPEN subcommand.

**System programmer response:** No action is needed.

**Module:** EZAFTPSC

---

**EZA1478I**  **GetReply returns replycode**

**Explanation:** This message indicates the reply code from the specified host (control connection).

**System action:** FTP continues.

**Operator response:** If an error occurred in the connection process, the reply code indicates the error. Correct the error according to the reply code. Otherwise, no action is necessary.

**System programmer response:** No action is needed.

---

**EZA1479I**  **File transfer might be incomplete - Last record received without EOL sequence**

**Explanation:** The user requested a file from the server. The FTP client was receiving the file while ENCODING was set to MBCS. The server sent the file without appending `<CRLF>`, the FTP end of line (EOL) sequence, to the last record. The FTP client configured MBREQUIRELASTEOL TRUE, so the client considers this to be an error. The file transfer might not be complete.
Examples:
EZA1460I Command:
locsite mbrequirelasteol
EZA1460I Command:
get /tmp/test8.txt 'user1.test8.txt'
EZA1701I >>> PORT 9,42,105,36,4,42
200 Port request OK.
EZA1701I >>> RETR /tmp/trash/test8.txt
125 Sending data set /tmp/trash/test8.txt
EZA1490I Error writing to data set
EZA1479I File transfer might be incomplete - Last record received without EOL sequence
>>>ABOR
426 Connection closed; transfer aborted.
226 Abort successful.
EZA2108I Confidence=Low for GET of USER1.TEST8.TXT
EZA1460I Command:

System action: The FTP client sends an ABOR command to the server. The FTP client continues.

Operator response: No action needed.

User response: Inspect the file to determine if the transfer was complete. If the transfer is not complete, contact the system programmer.

System programmer response: If the sender of the file was not a z/OS CS FTP server, consult the vendor of that product for more information. If the vendor indicates that the last record does not include an EOL marker, use the LOCStie subcommand with the NOMBREQUIRELASTEOL parameter set to change the MBREQUIRELASTEOL setting, then get the file again. If the problem continues, contact the vendor.

If the sender of the file was a z/OS CS FTP server, the transfer is incomplete. z/OS FTP appends an EOL marker to the final file record of multibyte files unless you have overridden the sender’s EOL marker using the server’s MBSENDEOL configuration option. Use the stat subcommand to query the server’s MBSENDEOL setting. If MBSENDEOL is not CRLF, use the site subcommand with the MBSENDEOL=CRLF parameter set to change the server’s MBSENDEOL setting, then get the file again. If MBSENDEOL is CRLF, save the output from the stat subcommand and the LOCStat subcommand, and contact the IBM support center.

See the information about the MBREQUIRELASTEOL and MBSENDEOL configuration options in z/OS Communications Server: IP Configuration Reference. See the information about using the stat, site, LOCStat, or LOCStie subcommands in z/OS Communications Server: IP User’s Guide and Commands.

For z/OS FTP products, see the information about support for MBCS languages in z/OS Communications Server: IP User’s Guide and Commands for information about configuring z/OS FTP for multibyte transfers. For other FTP implementations, consult your vendor for more information.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: FTP
Module: Not applicable.
Routing code: Not applicable.
Descriptor code: Not applicable.

EZA1480I Invalid argument string

Explanation: The program detected a single quotation mark inside the argument string. This is not valid.

System action: FTP continues.

Operator response: Correct the argument string by removing the single quotation mark from within the string.

System programmer response: No action is needed.
EZA1481I  Cannot find closing quote in command string
Explanation:  The program cannot find the quotation mark at the end of the command string.
System action:  FTP continues
Operator response:  Correct the command string by adding a single quotation mark at the end of the command string.
System programmer response:  No action is needed.
Module:  EZAFTCP, EZAFTPCG

EZA1485I  number bytes transferred - interval second interval rate num_transferred_interval KB/sec - Overall transfer rate num_transferred_overall KB/sec
Explanation:  This message indicates the total number of bytes of binary data transferred to or from the FTP client along with the current rate of transfer.
number is the total number of bytes transferred since the transfer started.
interval is the length of the measured transfer interval in seconds. This rate is set using LOCSITE PROGRESS or the PROGRESS statement in the FTP.DATA file.
um_transferred_interval is the number of KBs (KB equals 1000 bytes) transferred per second in this interval.
um_transferred_overall is the number of KBs (KB equals 1000 bytes) transferred per second since the transfer started.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPMR

EZA1489I  Cannot allocate buffer space
Explanation:  The FTP client attempted to allocate a work buffer and failed. Buffer requirements are moderate so this is unlikely.
System action:  The program ends abnormally.
Operator response:  Increase REGION below the line to 2M.
System programmer response:  No action is needed.
Module:  EZAFTPCY

EZA1490I  Error writing to data set
Explanation:  Data could not be written to the data set. FTP frees the buffer space.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCG

EZA1491I  Cannot find end of record character in data stream.
Explanation:  FTP cannot find an end of record character in the data it is transmitting. FTP issues this message and message EZA1492I and frees the data buffer.
System action:  FTP continues.
Operator response:  See the response for message EZA1492I.
System programmer response:  See the response for message EZA1492I.
**EZA1492I**  Maximum record length supported in EBCDIC/ASCII mode is 64K

**Explanation:** FTP could not find an end of record character in the data it is transmitting. The maximum length for an EBCDIC or ASCII mode transmission is 64 KB. FTP does not write the whole buffer and moves any remaining data to the beginning of the buffer. FTP starts getting data at the beginning of the free space in the buffer.

**System action:** FTP continues.

**Operator response:** Make sure the appropriate end of record character is in the data to be transmitted.

**System programmer response:** No action is needed.

---

**EZA1534I**  *** Control connection with ForeignHost dies.

**Explanation:** The connection to the other host no longer exists.

**System action:** The local host waits for the other host to close the connection and then closes the local host end of the connection.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPSC

---

**EZA1542I**  Usage: usage

**Explanation:** This is a brief description of the usage of an FTP subcommand.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

---

**EZA1543I**  Please type a longer prefix of the command name

**Explanation:** The command prefix you entered is not complete enough to distinguish it from other commands.

**System action:** The system waits for your response.

**Operator response:** Enter more characters of the command and resubmit the request.

**System programmer response:** No action is needed.

**Module:** EZAFTPPC

---

**EZA1544I**  TSO Command

**Explanation:** This message indicates the TSO command that is being processed by FTP.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

---

**EZA1550E**  You are already connected to host

**Explanation:** You are already connected to the host name you specified, host.

**System action:** Open command processing terminates.

**Operator response:** Quit or close the current FTP session before attempting to begin a new session.

**System programmer response:** No action is needed.

**Module:** EZAFTPCZ
EZA1551I Unknown host: host

Explanation: The host name you have requested a connection to is not a valid host name or is not known to TCPIP.

System action: TCPIP allows you to specify another host name and will attempt to establish a connection using that host name.

Operator response: There are several possible causes. The name may have been entered incorrectly. The name server may not be responding. The resolver may not be querying the correct name server.

System programmer response: Ensure that the host name is accessible via a name server, or defined in HOSTS.SITEINFO and HOSTS.ADDRINFO. See the z/OS Communications Server: IP Configuration Guide for information on domain name systems or HOSTS.SITEINFO and HOSTS.ADDRINFO data sets.

Module: EZAFTPSC

EZA1552I Nonnumeric port designation: portname

Explanation: The port was specified with the nonnumeric value indicated in this message.

System action: TCPIP allows you to specify another port name and will attempt to establish a connection using that port name.

Operator response: Specify a numeric port name. Valid numeric port names are 16 bits long. The well-known port number for FTP is 21; this is the default.

System programmer response: No action is needed.

EZA1553E Invalid port number. Open fails.

Explanation: The Open command cannot continue because a specified port number is less than 0 or too large. Port numbers can be a maximum of 16 bits long. The specified number, indicated in this message, exceeds this maximum.

Operator response: Specify a port name with a maximum length of 16 bits.

System action: Open command processing terminates.

System programmer response: No action is needed.

Module: EZAFTPCC

EZA1554I FTP Connecting to: name name port number

Explanation: FTP client is attempting to connect to specified host system.

System action: No action is needed.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPSC

EZA1559I Internal debug options disabled

Explanation: Internal debug options are not set on. The flag, DebugFlag, has been set so that no debugging options are active and no extra debugging commands are allowed.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL
EZA1560I • EZA1571I

EZA1560I  Internal debug options enabled
Explanation: The internal debug options are set on. The flag, DebugFlag, has been set so that debugging options are active and extra debugging commands are allowed. Additionally, tracing is active.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

EZA1567I  Unknown command: name
Explanation: FTP does not recognize the command specified.
System action: FTP continues.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA1568I  You must first connect to some foreign server
Explanation: You must be connected to a remote host before using this HELP command.
System action: FTP continues.
Operator response: Establish a connection to a remote host by issuing the FTP command. z/OS Communications Server: IP User’s Guide and Commands describes the FTP command.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA1569I  {} encloses optional parameters; | separates choices:
Explanation: In the response information for the HELP ALL command, braces enclose optional parameters, and a vertical bar separates choices in the command syntax.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA1570I  use purpose
Explanation: This is a more detailed description of the use of an FTP subcommand. This is the subcommand syntax, usage, and explanation of the subcommand.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA1571I  Usage: value
Explanation: The specified FTP subcommand is no longer valid. The message also tells which subcommand to use in its place.
System action: FTP continues.

Operator response: Specify the indicated subcommand.
System programmer response: No action is needed.
Module: EZAFTPCL

---

EZA1572I purpose

Explanation: This message is issued in response to an incorrectly specified FTP subcommand. It indicates how to get more information about the indicated subcommand.
System action: FTP continues.
Operator response: Specify the indicated HELP command for syntax information about the subcommand you issued.
System programmer response: No action is needed.
Module: EZAFTPCL

---

EZA1573I * This command can only be used when ‘debug’ has been turned on

Explanation: The command for which you have requested help may only be used when the debug facility is active.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

---

EZA1574I Usage : value

Explanation: This is a brief description of the usage of an FTP subcommand.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

---

EZA1575I purpose

Explanation: This message provides a more detailed description of the use of an FTP subcommand.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

---

EZA1576I User-FTP understands these commands

Explanation: This message is concatenated to message EZA1577I which lists the valid FTP commands.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
**EZA1577I • EZA1584I**

---

**EZA1577I  command**

**Explanation:** This message indicates the FTP commands that are valid for use in the FTP environment.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

---

**EZA1578I  Specify a command by any unambiguous prefix**

**Module:** EZAFTPCL

---

**EZA1579I  Specify a local data set by qualifier.qualifier... with optional member as (member). Enclose fully qualified names in quotes**

**Module:** EZAFTPCL

---

**EZA1580I  member as (member). Enclose fully qualified names in quotes**

**Module:** EZAFTPCL

---

**EZA1581I  For information about a particular command, say ‘HELP command’**

**Explanation:** These messages provide information about how to specify FTP commands and how to request help for commands using the HELP command. These are issued in response to a HELP request.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

---

**EZA1582I  The foreign server has this help:**

**Explanation:** This message precedes the help information from the remote host. FTP receives the help information from the remote host and displays it to you.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

---

**EZA1583I  Note: no password was requested**

**Explanation:** The remote host does not require a password to log on.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

---

**EZA1584I  Note: no account was requested**

**Explanation:** The remote host does not require account information before you can access files on it. Some hosts do require account information.

**System action:** FTP continues.

**Operator response:** No action is needed.
System programmer response: No action is needed.

EZA1585I leaving dologin
Explanation: The DoLogin routine has completed processing. This message is issued when tracing is turned on.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

EZA1598I Maximum record length supported is 64K
Explanation: The character string being transmitted in binary format exceeds the maximum of 65 535 bytes. FTP sets a return code to indicate that the transfer was not successful.
System action: FTP continues.
Operator response: Ensure that the maximum record length of the data you are transmitting is no more than 65 535 bytes and attempt the transfer again.
System programmer response: No action is needed.

EZA1599I File delimiter is value
Explanation: The indicated value is the file delimiter in use by the FTP client. If the current working directory is a z/OS UNIX file system directory, the delimiter is a forward slash (/); otherwise, the delimiter is a period (.).
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA1600I Trace: trace, Send Port: port
Explanation: This message is issued in response to the LOCSTAT subcommand. The trace value indicates whether the TRACE setting is true or false. True indicates that tracing is set on. The port value indicates whether the SENDPORT setting is true or false. True indicates that automatic sending of the PORT command will take place.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA1601I Send Site with Put command: value
Explanation: This message is issued in response to the LOCSTAT subcommand. The value specified indicates whether the SENDSITE value is set to true or false. True indicates that FTP will send a SITE command that contains record format information for the file or data set when you issue the PUT or MPUT subcommand.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK
EZA1602I • EZA1609I

EZA1602I  Connected to host, Port: port, logged in
Explanation:  This message is issued in response to the LOCSTAT subcommand. The host is the remote host to which you are connected. The port is the port number of the remote host.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA1603I  Connected to host, Port: port, not logged in
Explanation:  This message is issued in response to the LOCSTAT subcommand. The host is the remote host to which you are connected. The port is the port number of the remote host.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA1605I  Local Port: port
Explanation:  This message is issued in response to the LOCSTAT subcommand. The indicated port is the port number of the local host.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA1606I  Data type: format, Transfer mode: mode, Structure: structure
Explanation:  This message is issued in response to the LOCSTAT subcommand. It indicates the FTP data type (ASCII, EBCDIC, image or DBCS), the transfer mode (stream, block, or compressed), and the structure (file or record).
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA1609I  Usage of PORT command is OFF
Explanation:  The PORT command has been toggled off. The SENDPORT subcommand is used to toggle the PORT command on and off. FTP does not send PORT commands for data transfer when you disable PORT commands by toggling off the function.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCL
EZA1610I  Usage of PORT command is ON

**Explanation:** The PORT command has been toggled on. The SENDPORT subcommand is used to toggle the PORT command off and on. By default, the SENDPORT subcommand is turned on when you start the system. Each time you use the SENDPORT subcommand, the PORT command is turned alternately on and off. FTP uses a PORT command, by default, when establishing a connection for each data transfer. FTP does not send PORT commands for data transfer when you disable PORT commands by toggling off the function.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

---

EZA1611I  Usage of SITE command with PUT is OFF

**Explanation:** The SENDSITE command setting is false, or toggled off. When SENDSITE is off, the automatic sending of SITE commands is off. This means that when you issue the PUT command, FTP will not automatically send a SITE command containing record format information for the file or data set.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

---

EZA1612I  Usage of SITE command with PUT is ON

**Explanation:** The SENDSITE command setting is true, or toggled on. When SENDSITE is on, the automatic sending of SITE commands is on. This means that when you issue the PUT command, FTP automatically sends a SITE command containing record format information for the file or data set.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

---

EZA1613I  Internal debug tracing disabled

**Explanation:** Debug tracing has been turned off. When the DEBUG subcommand is issued, debug tracing is toggled on or off.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

---

EZA1614I  Internal debug tracing enabled

**Explanation:** Debug tracing has been turned on. When the DEBUG subcommand is on, FTP displays each command that is sent to the remote host and the response that is received from the remote host.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.
EZA1615I • EZA1619I

EZA1615I  Debug tracing not available
Explanation: The FTP debug tracing facility is not available. The DEBUG option is off. DEBUG is off by default, unless the TRACE parameter was specified on the FTP command.
System action: FTP continues.
Operator response: Issue the DEBUG subcommand to toggle on the debug option.
System programmer response: No action is needed.

EZA1616I  Aborting connection
Explanation: The data transfer is being ended. The data connection is closing. An FTP reply code 226 is returned indicating that the data connection is closing, and the requested file action was successful. If an FTP reply code 426 is also returned, it indicates that the connection is closed, and that the transfer ended abnormally and was not successful.
System action: FTP continues.
Operator response: If the data transfer was not successful, reestablish the control connection and attempt the data transfer again.
System programmer response: No action is needed.

EZA1617I  number bytes transferred in number seconds. Transfer rate value Kbytes/sec.
Explanation: This message indicates the number of bytes transferred and the rate of transfer for a data transfer to or from the other host.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCG, EZAFTPCP

EZA1618I  Unknown command 'command'
Explanation: The command you entered is not known to FTP. This message is concatenated to message EZA1619I.
System action: FTP continues.
Operator response: Enter a valid FTP command or subcommand. See message EZA1619I for more information. See /OS Communications Server: IP User’s Guide and Commands for the syntax and descriptions of FTP commands and subcommands.
System programmer response: No action is needed.
Module: EZAFTPPC

EZA1619I  For a list of the available commands, say HELP
Explanation: This message instructs you to use the FTP HELP facility to get information about valid FTP commands.
System action: FTP continues.
Operator response: Use the FTP HELP facility by entering HELP, to find information about the command or subcommand you want to use. Enter a valid FTP command or subcommand. See /OS Communications Server: IP User’s Guide and Commands for the syntax and descriptions of FTP commands and subcommands.
System programmer response: No action is needed.
Module: EZAFTPPC
**EZA1624W  Local file file not found**

**Explanation:** The FTP client was unable to locate the indicated local data set. This indicates that either the data set name was incorrect or the data set no longer exists.

**System action:** FTP continues.

**Operator response:** Check the syntax and resubmit the last command. If the data set was specified correctly, use the LS command to list the local data sets to make sure the data set exists. For more information about the LS command, see the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/knowledgecenter/SSECG2_7.2.1/com.ibm.net收益_zos.security.ftp.doc/).  

**System programmer response:** No action is needed.  
**Module:** EZAFTPCG

---

**EZA1625I  Store unique is OFF**

**Explanation:** The SUNIQUE subcommand is off. When SUNIQUE is off, FTP uses a store command (STOR) with the PUT and MPUT subcommands to store files on the remote host. When STOR is used, the remote host will overwrite an existing data set or file, if you try to store a data set or file with the same name.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

---

**EZA1626I  Store unique is ON**

**Explanation:** The SUNIQUE subcommand is on. When SUNIQUE is on, FTP uses a store unique command (STOU) with the PUT and MPUT subcommands and prevents you from overwriting or erasing the existing data set or file on the remote host if you attempt to store a data set or file with the same name. The created foreign data set or file is stored with a unique name. FTP sends the name of the created remote data set or file to the local host, where the data set or file name is displayed on your terminal.

**System action:** FTP continues.

**Operator response:** Make a note of the unique name that FTP returns to your terminal for the created data set or file.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

---

**EZA1636I  *** I can't open a data-transfer connection:**

**Explanation:** FTP cannot establish a data connection. The system displays the specific condition that prevented the connection from being established. FTP closes the socket that was acquired for this connection.

**System action:** FTP will exit, if the exit parameter has been specified.

**Operator response:** Reissue the FTP command to reestablish the data connection.

**System programmer response:** No action is needed.

**Module:** EZAFTPCG, EZAFTPCP

---

**EZA1638I  Store unique will send name**

**Explanation:** A name parameter will be included when the store unique command (STOU) is sent to the server.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL
EZA1639I • EZA1682W

EZA1639I  Store unique will not send name
Explanation: A name parameter will not be included when the store unique command (STOU) is sent to the server.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA1643I  Data set dsname was not replaced.
Explanation: The specified data set was not replaced during data transfer. A local file already exists. If you want to replace the local file, specify GET with the (REPLACE option.
System action: FTP continues.
Operator response: If you want to replace the local file with the file that is being transferred, specify the GET command with the (REPLACE option.
System programmer response: No action is needed.
Module: EZAFTPCG

EZA1645I  LRECL lrecl is invalid for RECFM recfm
Explanation: After processing the LOCSITE LRECL=lrecl command, the client cross checked the new values of the RECFM and LRECL variables and found them to be set to a combination that is invalid for the MVS operating system.
System action: The LRECL value is changed to the nearest value that is compatible with the record format. This message should be followed by EZA2791I, indicating the new value of the LRECL.
Operator response: If the new value for the LRECL is acceptable, no action is necessary, otherwise change the RECFM and LRECL to valid values.
System programmer response: Use LOCSITE to set the correct values for RECFM or LRECL. See z/OS DFSMS Using Data Sets for information about selecting valid values for BLOCKSIZE, LRECL, and RECFM.
Module: EZAFTPMK
Procedure Name: SiteCheck®

EZA1680W  Member names must be specified with partitioned data sets
Explanation: A file member was specified incorrectly. File members must be specified using partitioned data sets such as the PROFILE.TCPIP data set. The file set is not accepted.
System action: FTP continues.
Operator response: Correct the syntax and resubmit the command.
System programmer response: No action is needed.
Module: EZAFTPCG, EZAFTPCP

EZA1681W  Local file already exists
Module: EZAFTPCG

EZA1682W  To replace it, use the command with the (REPLACE option
Explanation: This message indicates that a file to be transferred has the same name as a local file. The file is not transferred.
System action: FTP continues.
Rename the local file and resubmit the command, or resubmit the command with the (REPLACE option, as shown in the following example:

```
get filename (Replace
```

System programmer response: No action is needed.

Module: EZAFTPCG

---

**EZA1684W**  Local file not found

Explanation: A local file that was to be transferred was not found. The file is not transferred.

System action: FTP continues.

Operator response: Correct the file name and resubmit the command. If the error persists, check the local directory using the LS command to make sure the file exists. For more information about the LS command, see the z/OS Communications Server: IP User’s Guide and Commands.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

---

**EZA1685W**  Invalid local file identifier

Explanation: A local file that was to be transferred has an incorrect file identifier. The file is not transferred.

System action: FTP continues.

Operator response: Correct the file identifier and resubmit the command.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

---

**EZA1686W**  Invalid character in local file identifier

Explanation: A local file that was to be transferred was submitted with an incorrect character in the file identifier. The file is not transferred.

System action: FTP continues.

Operator response: Resubmit the command with the correct file identifier.

System programmer response: No action is needed.

---

**EZA1687W**  Failure attempting to store a member of a partitioned data set

Explanation: FTP was unable to store a member of a partitioned data set because the name was typed incorrectly or because the member no longer exists. The file is not transferred.

System action: FTP continues.

Operator response: Check to make sure that the member is still in storage. If the member is still in storage, resubmit the command with the correct name.

System programmer response: No action is needed.

---

**EZA1690W**  Failure attempting to close the local data set

Explanation: FTP was unable to close the local data set because the data set name was given incorrectly or the data set no longer exists.

System action: FTP continues.

Operator response: Check to make sure the data set exists. If so, resubmit the command with the correct data set name.

System programmer response: No action is needed.
EZA1691I srestart not supported for structure structure

Explanation: An srestart subcommand was issued to restart a file transfer, but the structure setting is not file. structure is the current structure setting.

System action: FTP stops processing srestart and prompts for another subcommand.

Operator response: If file structure was in effect during the original file transfer, use the structure file subcommand to change the structure to file and issue srestart again. If file structure was not in effect during the original file transfer, you cannot use srestart to restart the file transfer.

System programmer response: No action is needed.

Module: EBAFTPCB
Procedure Name: srestart()

EZA1692I srestart not supported for mode mode

Explanation: An srestart subcommand was issued to restart a file transfer, but the current mode is not valid for srestart. Only stream mode is valid for srestart.

mode is the current mode.

System action: FTP stops processing srestart and prompts for another subcommand.

Operator response: If stream mode was in effect during the original file transfer, issue the mode stream subcommand to change the mode to stream and issue srestart again. If stream mode was not in effect during the original file transfer, you cannot use srestart to restart the file transfer.

System programmer response: No action is needed.

Module: EBAFTPCB
Procedure Name: srestart()

EZA1693I srestart not supported for filetype type

Explanation: An srestart subcommand was issued to restart a file transfer, but the current filetype is not valid for srestart. Only filetype=SEQ is valid for srestart.

type is the current filetype setting.

System action: FTP stops processing srestart and prompts for another subcommand.

Operator response: If the filetype SEQ was in effect during the original file transfer, issue the site filetype=SEQ subcommand to change the filetype to SEQ and issue srestart again. If filetype SEQ was not in effect during the original file transfer, you cannot use srestart to restart the file transfer.

System programmer response: No action is needed.

Module: EZAFTPCB
Procedure Name: srestart()

EZA1694I srestart not supported for option sunique

Explanation: An srestart subcommand was issued to restart a file transfer, but the sunique (store-unique) option is in effect.

System action: FTP stops processing srestart and prompts for another subcommand.

Operator response: Use the get or put subcommands instead of srestart to transfer the file.

System programmer response: No action is needed.

Module: EZAFTPCB
Procedure Name:  srestart()

**EZA1695I**  srestart not supported for data type *type*

**Explanation:** An *srestart* subcommand was issued to restart a file transfer, but the current data type is not valid for *srestart*. Valid data types for *srestart* are I (binary), A (ASCII), and E (EBCDIC).

*type* is the current data transfer type as described in the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com)

**System action:** FTP stops processing *srestart* and prompts for another subcommand.

**Operator response:** Set the data type to the data type in effect during the original file transfer, then issue *srestart* again. If the data type in effect during the original file transfer is not valid for *srestart*, you cannot use *srestart* to restart the file transfer. You must use the *get* or *put* subcommands to transfer the file.

**System programmer response:** No action is needed.

Module:  EZAFTPCB

Procedure Name:  srestart()

**EZA1696I**  srestart option failed - issue subcommand

**Explanation:** An *srestart* subcommand was issued to restart a file transfer, but ftp could not restart file transfer.

*option* is the option specified on the *srestart* subcommand.

*subcommand* is the subcommand suggested by FTP to transfer the file.

**System action:** FTP stops processing *srestart* and prompts for another subcommand.

**Operator response:** Issue the *subcommand* to transfer the file.

**System programmer response:** If the FTP trace was active, you can check the FTP trace output for error messages related to *srestart* option. See the following publications for more information about the FTP trace:

- [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com)
- [z/OS Communications Server: IP Configuration Guide](https://www.ibm.com)
- [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com)
- [z/OS Communications Server: IP Diagnosis Guide](https://www.ibm.com)

Module:  EZAFTPCB

Procedure Name:  srestart()

**EZA1698I**  srestart failed - SIZE response is not valid

**Explanation:** An *srestart* subcommand was issued to resume a file transfer from the client to the FTP server. The client sent a SIZE command to the server to determine how many bytes had already been transferred. The SIZE response returned by the server is not valid, possibly because it points past the end of the client file. The client could not complete the request.

**System action:** FTP stops processing the current subcommand and prompts for the next subcommand.

**Operator response:** Report the error to the system programmer.

**System programmer response:** Verify that the source and destination files have not changed since the original file transfer was interrupted, and that the *srestart* subcommand was valid for restarting the file transfer. See the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com) for information about the *srestart* subcommand. If the files have not changed, and *srestart* was used correctly, report the error to the administrator of the FTP server.

Module:  EZAFTPCP

Procedure Name:  hfs_sndFile()
SRESTART { put localfile [remotefile] | get remotefile [localfile]}

Explanation: This message displays the correct format for the srestart subcommand, which is used to restart a stream mode file transfer. See the z/OS Communications Server: IP User’s Guide and Commands for more information about the srestart command.

System action: None.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

Procedure Name: usage()

restart a stream mode file transfer

Explanation: This message displays the purpose of the srestart subcommand. See the z/OS Communications Server: IP User’s Guide and Commands for more information about the srestart command.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

Procedure Name: dohelp()

>>>  

Explanation: This message precedes echoes such as PASS ******** and ACCT ******** to acknowledge user-submitted data.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Transmission mode mode not implemented for type B.

Explanation: The data type B (double Byte) is not supported while in block or compress transmission mode.

System action: FTP continues.

Operator response: Either change to mode s (stream) or change the data type to EBCDIC and reissue the command.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

subcommand not supported for UNIXFILETYPE=FIFO

Explanation: A subcommand was issued to restart a file transfer to or from a file in the client z/OS UNIX file system, but the value currently configured for the UNIXFILETYPE parameter is not valid for the subcommand. Only UNIXFILETYPE FILE is valid for a subcommand when the local file is a z/OS UNIX file.

See the information about the UNIXFILETYPE statement in z/OS Communications Server: IP Configuration Reference and the LOCSIte subcommand in z/OS Communications Server: IP User’s Guide and Commands for information about the UNIXFILETYPE configuration option.

In the message text:

subcommand

The subcommand that you entered to restart a file transfer.

Examples:
EZA1719I srestart not supported for UNIXFILETYPE=FIFO
EZA1696I srestart get failed - issue get
EZA1460I Command:

System action:  FTP stops processing the subcommand specified by the subcommand value and prompts you to enter another subcommand.

Operator response:  Not applicable.

User response:  If UNIXFILETYPE FILE was configured during the original file transfer, you can issue the LOCSIte subcommand to change the UNIXFILETYPE value back to FILE and issue the specified subcommand again or you can start the interrupted file transfer from the beginning.

If UNIXFILETYPE FIFO was configured during the original file transfer, you cannot resume the interrupted file transfer with a REStart or SRestart subcommand. See the information about restarting a failed data transfer in z/OS Communications Server: IP User's Guide and Commands.

System programmer response:  None.

Problem determination:  Not applicable.

Source:  z/OS Communications Server TCP/IP: FTP

Module:  ezaftpcb

Routing code:  10

Descriptor code:  12

Automation:  Not applicable for automation.

----------------------------------------------------------------------------------

EZA1720I REPLC option not allowed for UNIXFILETYPE=FIFO

Explanation:  You entered a get or mget subcommand, specifying the REPLACE option and a z/OS UNIX local file when UNIXFILETYPE= FIFO was configured. The REPLACE option is not valid for z/OS UNIX files when UNIXFILETYPE=FIFO is configured. If the local file is a z/OS UNIX named pipe, you cannot overwrite the contents of the named pipe. Writing into a named pipe always appends to the contents of the named pipe.

Examples:
EZA1460I Command:
get /etc/hosts /tmp/trash/x rep
EZA1720I REPLC option not allowed for UNIXFILETYPE=FIFO
EZA1460I Command:

System action:  FTP stops processing the current subcommand and prompts you to enter another subcommand.

Operator response:  Not applicable.

User response:  If the local file is a z/OS UNIX regular file, issue the LOCSIte subcommand with the UNIXFILETYPE=FILE parameter. Then issue the original subcommand again.

If the local file is a z/OS UNIX named pipe, issue the subcommand without the REPLACE parameter. The incoming data will be appended to the contents of the named pipe.

System programmer response:  None.

Problem determination:  To determine whether a z/OS UNIX file is a regular file or a named pipe, use the z/OS UNIX ls command. See the information about the long output format in z/OS UNIX System Services Command.

Reference

Source:  z/OS Communications Server TCP/IP: FTP

Module:  ezaftpcg.c

Routing code:  10

Descriptor code:  12

Automation:  Not applicable for automation.
EZA1721W  Server not responding, closing connection.

Explanation:  The FTP client is closing the connection to the FTP server because the server is not responding.

System action:  FTP continues.

Operator response:  Notify the system programmer of the error.

System programmer response:  Use the Ping command to make sure that the server is accessible to the system. If the server is accessible, check to make sure it is executing FTP properly. See the z/OS Communications Server: IP System Administrator’s Commands for more information about the Ping command.

EZA1722I  UNIXFILETYPE=FIFO requires FILETYPE=SEQ

Explanation:  You attempted to transfer to or from a file in the z/OS UNIX file system when UNIXFILETYPE=FIFO was configured. The current FILETYPE value is not SEQ. This combination of values is not supported.

Examples:

Command:
get /etc/hosts /tmp/x
UNIXFILETYPE=FIFO requires FILETYPE=SEQ
Command:

System action:  FTP stops processing the current subcommand, and prompts you to enter the next subcommand.

Operator response:  None.

User response:  Do one of the following to set a valid combination of parameters.

- If the local file is a z/OS UNIX regular file, issue the LOCSIte subcommand with the UNIXFILETYPE=FILE parameter to change the UNIXFILETYPE value.
- If the local file is a z/OS UNIX named pipe, issue the LOCSIte subcommand with the FILETYPE=SEQ parameter to change FILETYPE.

Then reissue the file transfer subcommand.

System programmer response:  None.

Problem determination:  To determine whether a z/OS UNIX file is a regular file or a named pipe, use the z/OS UNIX Is command. See the information about the long output format in z/OS UNIX System Services Command Reference.

Source:  z/OS Communications Server TCP/IP: FTP

Module:  ezaftpcg.c, ezaftpcp.c

Routing code:  10

Descriptor code:  12

Automation:  Not applicable.

EZA1725I  subcommand fails -- localFile is not a named pipe

Explanation:  The subcommand that you issued specified a file in the client z/OS UNIX file system as the local file. The local file is not a z/OS UNIX named pipe, and UNIXFILETYPE=FIFO is configured. A local file in the z/OS UNIX file system must be a named pipe when UNIXFILETYPE=FIFO is configured.

For more information about the UNIXFILETYPE configuration option, see the following sources:

- The UNIXFILETYPE statement in z/OS Communications Server: IP Configuration Reference
- The LOCSIte subcommand in z/OS Communications Server: IP User’s Guide and Commands
- The information about using z/OS UNIX System Services named pipes in z/OS Communications Server: IP User’s Guide and Commands

In the message text:

subcommand

The subcommand that failed.
localFile

The local file in the client’s z/OS UNIX file system.

Examples:
EZA1460I Command:
locsite unixfiletype=fifo
EZA1460I Command:
put /etc/hosts
EZA1725I put fails -- /etc/hosts is not a named pipe
EZA1726I local file must be a named pipe when UNIXFILETYPE=FIFO
EZA1460I Command:
EZA1460I Command:
get /etc/hosts
EZA1725I Get fails -- /etc/hosts is not a named pipe
EZA1726I local file must be a named pipe when UNIXFILETYPE=FIFO
EZA1460I Command:

System action: FTP stops processing subcommand, and prompts you to enter the next subcommand.

Operator response: None.

User response: If you intended to specify a named pipe, do one of the following:
- Reissue the subcommand with a z/OS UNIX named pipe specified as the local file.
- If the subcommand is get or mget, reissue the subcommand and specify a name that does not yet exist in the z/OS UNIX file system.

If you did not intend to specify a named pipe, issue the LOCSite subcommand with the UNIXFILETYPE=FILE parameter. Then issue the subcommand again.

System programmer response: None.

Problem determination: To determine whether a z/OS UNIX file is a regular file or a named pipe, use the z/OS UNIX Is command.

To create a named pipe, use the z/OS UNIX mkfifo or mknode command.

See the information about the long output format in z/OS UNIX System Services Command Reference.

Source: z/OS Communications Server TCP/IP: FTP
Module: ezaftpcg
Routing code: 10
Descriptor code: 12
Automation: Not applicable.

EZA1726I local file must be a named pipe when UNIXFILETYPE=FIFO

Explanation: You issued a subcommand that specified a file in the z/OS UNIX file system as the local file. The local file is not a named pipe. The local file must be a named pipe when UNIXFILETYPE=FIFO is configured.

This message is preceded by message EZA1725I, which identifies the subcommand that you issued and the local file that you specified.

Examples:
locsite unixfiletype=fifo
EZA1460I Command:
put /etc/hosts
EZA1725I put fails -- /etc/hosts is not a named pipe
EZA1726I local file must be a named pipe when UNIXFILETYPE=FIFO
EZA1460I Command:

System action: The FTP client stops processing the current subcommand, and prompts you to enter the next subcommand.

Operator response: None.
EZA1733I

User response: See message “EZA1725I” on page 44 or more information.

System programmer response: None.

Problem determination: See message “EZA1725I” on page 44 for more information.

Source: z/OS Communications Server TCP/IP: FTP

Module: ezaftpcg, ezaftpcp.

Routing code: 10

Descriptor code: 12

Automation: None.

EZA1733I waiting up to seconds seconds for process process to open localNamedPipe

Explanation: You issued a subcommand that specified a z/OS UNIX named pipe as the local file. The FTP client must wait for another process to open the named pipe before it can continue processing.

In the message text:

seconds
The number of seconds that the FTP client will wait for another process to open the named pipe. You can use the FIFOOPENTIME configuration option to change this value.

process
Indicates whether the other process must open the named pipe for writing or reading. Valid values are:

read
FTP expects another process to open the named pipe for reading.

write
FTP expects another process to open the named pipe for writing

localNamedPipe
The z/OS UNIX named pipe that you specified. See the information about using z/OS UNIX System Services named pipes in z/OS Communications Server: IP User’s Guide and Commands.

Examples: In the first example, the user set the UNIXFILETYPE configuration option to FIFO and the FIFOOPENTIME configuration option to 30. The user issued a PUT subcommand that specified the /tmp/sample.fifo named pipe. FTP waited for another process to open the named pipe for writing. When another process opened the named pipe, FTP was able to continue processing the PUT subcommand.

EZA1460I Command:
locsite unixfiletype=fifo fifoopentime=30
EZA1460I Command:
put /tmp/sample.fifo
EZA1733I waiting up to 30 seconds for write process to open /tmp/sample.fifo
EZA1701I >>> PORT 9,42,105,36,4,10
200 Port request OK.
EZA1701I >>> STOR sample.fifo
125 Storing data in the Null directory (*dev.null).
250 Transfer completed successfully.
EZA1617I 787 bytes transferred in 1.260 seconds. Transfer rate 0.62 Kbytes/sec.
EZA1460I Command:

In this example, the user entered a PUTF subcommand that specified the /tmp/sample.fifo named pipe. FTP waited for 30 seconds for another process to open the named pipe for writing. No other process opened the named pipe. FTP issued message EZA1734I to indicate that it stopped waiting.

EZA1460I Command:
put /tmp/sample.fifo
EZA1733I waiting up to 30 seconds for write process to open /tmp/sample.fifo
EZA1734I timer expired waiting for write process to open /tmp/sample.fifo
EZA1460I Command:

System action: The FTP client waits up to the number of seconds specified by the seconds value for another process to open the named pipe. If another process opens the named pipe as expected, FTP continues processing the current
subcommand. If another process does not open the named pipe within the time specified, FTP issues message EZA1734I and stops processing the current subcommand.

**Operator response:** None.

**User response:** None.

**System programmer response:** Start the process that will read from or write the named pipe.

**Problem determination:** See the user response.

**Source:** z/OS Communications Server TCP/IP: FTP

**Module:** ezaftpcc,g, ezaftpcc,p

**Routing code:** 10

**Descriptor code:** 12

**Automation:** Not applicable.

---

**EZA1734I timer expired waiting for process process to open localFile**

**Explanation:** The FTP client tried to open a named pipe in the z/OS UNIX file system. The client waited for the number of seconds specified by the FIFOOPENTIME configuration option. The FIFOOPENTIME time limit expired before another process opened the named pipe.

In the message text:

- **process**
  - Indicates whether FTP was waiting for another process to open the named pipe for writing or reading. Valid values are:
    - **read**
      - FTP was trying to open the named pipe for writing as part of an inbound file transfer. The FTP client cannot write to a named pipe until another process on the client host opens the named pipe for reading.
    - **write**
      - FTP was trying to open the named pipe for reading as part of an outbound file transfer. The FTP client cannot read from a named pipe until another process on the client host opens the named pipe for writing.

- **localFile**
  - The name of the named pipe.

Message EZA1733I precedes this message, and indicates how long the FTP client waits for another process to open a named pipe.

See information about the UNIXFILETYPE (FTP client and server) statement and the FIFOOPENTIME (FTP client and server) statement in z/OS Communications Server: IP Configuration Reference.

**Examples:**

- EZA14601 Command:
  - get /etc/hosts /tmp/sample.fifo
  - EZA1733I waiting up to 30 seconds for read process to open /tmp/sample.fifo
  - EZA1734I timer expired waiting for read process to open /tmp/sample.fifo
  - EZA114601 Command:

- put /tmp/sample.fifo
  - EZA1733I waiting up to 30 seconds for write process to open /tmp/sample.fifo
  - EZA1734I timer expired waiting for write process to open /tmp/sample.fifo
  - EZA114601 Command:

**System action:** FTP stops processing the current subcommand, and prompts for another subcommand.

**Operator response:** None.

**User response:** Perform the following steps:

1. Consider increasing the FIFOOPENTIME configured value before attempting the file transfer again.
   a. Inspect message EZA1733I to determine the FIFOOPENTIME configured value.
b. Issue the LOCSIte subcommand with the FIFOOPEN TIME parameter to specify a larger value.

See the information about the LOCSIte subcommand in z/OS Communications Server: IP User's Guide and Commands for information about the FIFOOPENTIME configuration option.

2. Start the file transfer again. If restarting the file transfer does not solve the problem, notify the System Programmer.

System programmer response: Start a process at the FTP client host:

- When the process value is write, start the process that will write to the named pipe.
- When the process value is read, start the process that will read from the named pipe.

After you start the process, attempt the file transfer again.

Problem determination: None.

---

**EZA1735I** Std Return Code = rc, Error Code = cc

**Explanation:** FTP has ended with an error only because the user has specified EXIT as a start parameter. Normally FTP would continue.

rc is the standard return code. rc is in the format yyyy, where

yy the subcommand code, which is a number from 0 to 99.

xxx This is the last reply code received from the FTP server. If a subcommand failed before a reply was received from the server, this value is 000.

cc is the client error code set by the FTP client.

**System action:** The FTP client ends.

**Operator response:** To determine the cause of the error, see z/OS Communications Server: IP User's Guide and Commands for information about FTP return codes, including subcommand codes, client error codes, and reply codes.

**System programmer response:** No action is needed.

**Module:** EZAFPCX

---

**EZA1736I** Argument

**Explanation:** FTP is echoing valid arguments from user-submitted data or indicating a QUIT command was generated by unexpected end of file.

**System action:** FTP continues when echoing valid arguments or terminates when unexpected end of file is encountered.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFPCU

**Module:** EZAFPCX

---

**EZA1737E** Command input too long.

**Explanation:** The FTP command input line exceeds the expected length.

**System action:** FTP bypasses the command and continues.
**Operator response:** Correct the input command stream.

**System programmer response:** No action is needed.

**Module:** EZAFTPcu

---

**EZA1739I**

Subcommand failed - timer expired while reading from named pipe

**Explanation:** While the FTP client was sending data from the named pipe to the FTP server, it tried to read from a named pipe in the client z/OS UNIX file system. The client waited for the number of seconds specified by the FIFOIOTIME configured value for the read to complete. One reason for this timeout is that the process that is writing to the named pipe stopped writing data without closing the named pipe.

Any data that was sent from the client to the server before the timer expired has been permanently removed from the named pipe.

See the following sources:

- The information about the FIFOIOTIME (FTP client and server) statement in [z/OS Communications Server: IP Configuration Reference](#).
- The information about the LOCSite subcommand in [z/OS Communications Server: IP User’s Guide and Commands](#).
- The information about using z/OS UNIX System Services named pipes in [z/OS Communications Server: IP User’s Guide and Commands](#).

In the message text:

- **subcommand**
  
  The subcommand that failed because FTP could not read from the named pipe.

**Examples:**

| put /tmp/samplefifo
EZA1733I waiting up to 60 seconds for write process to open /tmp/samplefifo
EZA1701I >>> PORT 9,42,105,36,4,36
200 Port request OK.
EZA1701I >>> STOR sample.fifo
125 Storing data set
/u/user1/sample.fifo

| EZA1739I put failed -- timer expired while reading from named pipe
250 Transfer completed successfully.
EZA1460I Command:

| EZA1460I Command:
appe /tmp/samplefifo /u/user1/sample.fifo
EZA1733I waiting up to 60 seconds for write process to open /tmp/sample fifo
EZA1701I >>> PORT 9,42,105,36,4,42
200 Port request OK.
EZA1701I >>> APPE /u/user1/sample.fifo
125 Appending to data set /u/user1/sample.fifo
EZA1739I append failed -- timer expired while reading from named pipe
250 Transfer completed successfully.
EZA1460I Command:

| System action: FTP stops processing the current subcommand, and prompts for the next subcommand.

| Operator response: None.

| User response: Report the problem to the system programmer.

| System programmer response: Perform the following steps:
  1. Consider increasing the FIFOIOTIME configured value.
     a. Use the LOCSTat subcommand and specify the FIFOIOTIME parameter to query the current FIFOIOTIME value.
     b. Use the LOCSite subcommand and specify the FIFOIOTIME parameter to increase the FIFOIOTIME value.
If you anticipate long idle periods, consider increasing local timers to prevent connection timeouts. See the
information about the DATACCTIME (FTP client) statement, the FTPKEEPALIVE (FTP client and server)
statement, and the DATAKEEPALIVE (FTP client and server) statement in z/OS Communications Server: IP
Configuration Reference for more information about FTP client timers.

2. Determine why the process that writes to the named pipe stopped writing data, but did not close the named
pipe.

3. Reissue the subcommand. Any data that was sent from the client to the server before the timer expired has been
removed from the named pipe. You must take this into consideration before repeating the file transfer.

Problem determination: See the system programmer response.

EZA1764W  FTP: ExitCode 'code' is out of range.
Explanation: The ExitCode is out of range. The correct range is from 0 to 4095.
System action: FTP halts.
Operator response: Correct the value specified for the EXIT= start parameter.
System programmer response: No action is needed.
Module: EZAFTPCY

EZA1767I  Source IP address address is not valid
Explanation: The address specified on the -s parameter of the FTP command is not valid. The address must be a
valid IPv4 or IPv6 address and cannot be INADDR_ANY, IN6ADDR_ANY, or an IPv4-mapped IPv6 address.
In the message text:

address
  The IP address specified for the -s parameter on the FTP command.

Examples:
EZA1767I Source IP address 0.0.0.0 is not valid
System action: The FTP command fails.
Operator response: No action is needed.
User response: Reissue the FTP command specifying a valid source IP address.
System programmer response: No action is needed.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: FTP
Module: EZAFTPCY
Routing code: 10
Descriptor code: 12

EZA1768I  Timeout 'timeout' out of range. Must be between 15 and 86400. Default used.
Explanation: The timeout value specified is not in the valid range of 15 - 86400. The default timeout value is used
instead.
System action: FTP continues.
**EZA1770I** Source IP address is missing

**Explanation:** The `-s` parameter was specified on the FTP command but the IP address was omitted.

**Examples:**

**EZA1770I** Source IP address is missing

**System action:** The FTP command fails.

**Operator response:** No action is needed.

**User response:** Reissue the FTP command, specifying a valid source IP address. See the information about the FTP command in [z/OS Communications Server: IP User’s Guide and Commands](https://publib.boulder.ibm.com/infocenter/zos/v2r2/index.jsp?topic=%25zOS%25%25%2520Communications%2520Server%2520IP%2520User%07%2527s%2520Guide%2520and%2520Commands).

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCY

---

**EZA1784E** Data to be written exceeds maximum file LRECL; source ASCII file probably lacks record delimiters.

**Explanation:** This message is issued when an FTP GET subcommand converts an ASCII format source file to an EBCDIC format destination file if the number of bytes waiting to be written to the disk exceeds the maximum supported logical record length (LRECL), and the NOWRAPPrecord parameter was specified for the LOCSITE command, preventing the client from automatically wrapping longer than allowable records to the next line. The file transfer is not completed. No data is written to disk.

**System action:** If FTP was invoked with the EXIT option, the session is ended with return code 16150. Otherwise, FTP continues and waits for the next user command.

**Operator response:** If necessary, restart FTP. Before attempting to transfer the file again, submit the LOCSITE command, specifying the WRAPPrecord parameter, allowing the FTP client to wrap longer than allowable records onto a new line, then resubmit the GET command.

**System programmer response:** No action is needed.

---

**EZA1787W** Not authorized to access requested local file.

**Explanation:** The user is not authorized to access the requested local file. Access can be granted by the file owner. Otherwise, the file cannot be accessed.

**System action:** FTP continues.
EZA1788I • EZA1865I

Operator response: Contact the administrator for the file and request access.
System programmer response: No action is needed.
Module: EZAFTPCG, EZAFTPCP

EZA1788I ACCOUNT
Explanation: This is a prompt for accounting information from the target host system.
System action: None.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCZ

EZA1865I Command not Supported. Translation Table not Loaded.
Explanation: A valid FTP client TYPE subcommand was entered to change the current transfer type, but the DBCS translation table required for that transfer type is not loaded. The current FTP transfer type is unchanged.
System action: The program continues.
Operator response: Consult the system programmer.
System programmer response: Configure a valid DBCS binary translate table data set in the search order hierarchy for the required DBCS translation table, and specify LOADDBCSTABLES in TCPIP.DATA for the required DBCS translation table. See z/OS Communications Server: IP Configuration Reference for more information about the loading and customizing of DBCS translation tables.

Explanation: No local directory name has been specified.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: EZAFTPCL

EZA2070I Invalid local directory name entered - Too large.
Explanation: The length of the local directory name is larger than the field specified. The directory name cannot be more than 8 characters in length.
System action: FTP continues.
Operator response: Enter the command with correct syntax and try it again. See the z/OS Communications Server: IP User’s Guide and Commands for more information.
System programmer response: No action is needed.

Module: EZAFTPCL

EZA2071I Mismatched quotes on directory name “name”
Explanation: You entered a subcommand with name as the directory name parameter. The syntax used in the directory name parameter is incorrect.
System action: FTP continues.
Operator response: Enter the subcommand with the correct syntax and try it again. To override the existing directory rather than append a qualifier to that directory, enclose the qualifier in single quotation marks. For example: LCD ‘FTP.FILES’. See the z/OS Communications Server: IP User’s Guide and Commands for more information.
System programmer response: No action is needed.

Module: EZAFTPCL
EZA2072I  Final directory name is too large.

Explanation:  The directory name is larger than the field specified. The directory name cannot be more than 8 characters in length.

System action: FTP continues.

Operator response: Enter the command with the correct syntax and try it again. See the z/OS Communications Server: IP User’s Guide and Commands for more information.

System programmer response: No action is needed.

EZA2073I  A qualifier in pathname begins with an invalid character.

Explanation: You entered a subcommand with the pathname parameter pathname. The pathname specified in the subcommand is incorrect.

System action: FTP continues.

Operator response: Enter the subcommand with a valid pathname and try it again.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2076I  Directory is already null. ".." operand ignored.

Explanation: An attempt was made to back up one directory level, when the local directory is already null. The local directory remains the null directory.

System action: FTP continues.

Operator response: None

System programmer response: None

Module: EZAFTPCD

EZA2080I  Data sets will be allocated on volume

Explanation: This message displays the list of volumes on which new data sets will be allocated during an FTP session.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2081I  Local directory name set to partitioned data set directory

Explanation: The name of the local directory in the partitioned data set. A partitioned data set (PDS) is a data set in direct access storage that is divided into partitions called members, each of which can contain a program, part of a program, or data.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCD, EZAFTPCL
EZA2082I  Local directory name set to directory.
Explanation:  This message displays the name of the local directory.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCD

EZA2083I  Local directory set to null string.
Explanation:  No local directory has been specified. The local directory field has been set to null. A null string is a
character or bit string with a length of 0.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCD

EZA2090I  directory is a migrated data set and Noautorecall is specified. Local directory name not changed.
Explanation:  The directory specified is a migrated data set. A migrated data set is a data set that has been moved
from one hierarchy of storage to another. The local directory name is not changed. See the z/OS Communications
Server: IP User’s Guide and Commands for more information about the LCD - Changing the Working Level Qualifier -
subcommand.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCD

EZA2091I  Error recalling directory. Local directory name is not changed.
Explanation:  The directory name specified could not be recalled. The directory name remains unchanged.
System action:  FTP continues.
Operator response:  Enter the command with the correct syntax and try it again. See the z/OS Communications Server,
IP User’s Guide and Commands for more information.
System programmer response:  No action is needed.
Module:  EZAFTPCD

EZA2092I  directory is on a direct access volume that is not mounted and Noautomount is specified.
Explanation:  The local directory remains unchanged because the directory name specified was not found in the
mounted direct access volume. The NOAUTOMount parameter can be specified in the SITE or LOCSITE
subcommands. NOAUTOMount prevents automatic mounting of direct access volumes.
System action:  FTP continues.
Operator response:  Enter the command with the correct syntax and try it again. See the z/OS Communications Server,
IP User’s Guide and Commands for more information.
System programmer response:  No action is needed.
Module:  EZAFTPCD
EZA2093I  Error mounting volume for directory. Local directory name is not changed.

Explanation: An unexpected condition occurred in trying to mount the direct access volume for the directory name specified. The local directory name remains unchanged.

System action: FTP continues.

Operator response: Enter the command with the correct syntax and try it again. See the z/OS Communications Server: IP User's Guide and Commands for more information about the LCD subcommand.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2097I  No automatic recall of migrated data sets.

Explanation: No automatic recall has been specified for migrated data sets. The NOAUTORECALL parameter can be specified in the SITE and LOCSITE subcommand. NOAUTORECALL prevents automatic recall of a migrated hierarchical storage manager (HSM) data set. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2098I  Automatic recall of migrated data sets.

Explanation: The AUTORECALL parameter has been specified. The AUTORECALL permits automatic recall of migrated hierarchical storage manager (HSM) data sets. This parameter is specified in the SITE and LOCSITE subcommand.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2099I  No automatic mount of direct access volumes.

Explanation: No automatic mount of direct access volumes has been specified. The NOAUTOMOUNT parameter can be specified in the SITE or LOCSITE subcommands. NOAUTOMOUNT prevents automatic mounting of direct access volumes. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2100I  Automatic mount of direct access volumes.

Explanation: Automatic mount of direct access volumes has been specified. The AUTOMOUNT parameter can be specified in the SITE or LOCSITE subcommands. AUTOMOUNT permits automatic mounting of direct access volumes. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK
EZA2101I  Data set mode. (Do not treat each qualifier as a directory.)

Explanation: The DATASETMODE option has been specified for the SITE or LOCSITE subcommand. DATASETMODE specifies that all the data set qualifiers below the current directory are treated as entries in the directory. See the [z/OS Communications Server: IP User’s Guide and Commands](http://www.ibm.com) for more information.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2102I  Directory mode. (Treat each qualifier as a directory.)

Explanation: Directory mode has been specified. The directory mode is declared in the Directordir_mode parameter of the SITE and LOCSITE subcommands. This parameter specifies that only the data set qualifier immediately below the current directory is treated as an entry in the directory. In directory mode, this qualifier is only used by the MPUT, MGET, LS, and DIR subcommands. See the [z/OS Communications Server: IP User’s Guide and Commands](http://www.ibm.com) for more information.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2103I  FileType is SEQ (Sequential - the default).

Explanation: This message is displayed when you issue a LOCSTAT command.

EZA2104I  UTF-8 encoding is used on the control connection

Explanation: This message indicates UTF-8 encoding is used on the control connection for this session.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

Procedure Name: LOCSTAT

EZA2105I  FileType is SQL (Query to perform).

Explanation: This message is displayed when you issue a LOCSTAT command.

EZA2106I  srestart option not supported for MVS data sets

Explanation: An srestart subcommand was entered to restart a file transfer involving an MVS data set. The srestart option is not supported for MVS data sets.

option is the srestart subcommand option entered.

System action: FTP stops processing the current subcommand, and prompts for the next subcommand.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCE

Procedure Name: srestart_get(), srestart_put()
EZA2107I  option option is not supported for a proxy subcommand

Explanation: You entered a proxy subcommand that is valid for proxy sessions, but you included a subcommand option that is not supported for proxy sessions.

option is the option that is not supported.

System action: The FTP client rejects the subcommand. Processing continues.

Operator response: Either issue the proxy subcommand without the option, or log in to the proxy server as your primary session and issue the subcommand as a primary session command.

System programmer response: No action is needed.

Module:  ezaftpcr

Procedure Name:  mkdir()

EZA2108I  Confidence=confidence_level for action of name

Explanation: This message is issued to report the level of confidence the FTP client has in the successful completion of a data transfer when CHKCONFIDENCE TRUE is specified or defaulted in the client’s FTP.DATA data set.

confidence_level is the level of confidence that the FTP client has in the completion of the transfer. Values for confidence_level are:

High  While successful completion of the transfer cannot be guaranteed, the FTP client detected no reason to doubt the successful completion of the transfer.

NoEOF  The FTP client detected a missing EOF marker in a STRU R or MODE B or C inbound file. This level is not reported when another problem is detected.

Low  The FTP client detected a problem with completion of the transfer such as failure of the server to respond after the transfer or another reported error. Low overrides NoEOF if both conditions are present.

action is the action taken on the file or data set. Values for action are:

APPEND  File or data set is being appended by the FTP client.

GET  File or data set is being retrieved by the FTP client.

MGET  Files or data sets are being retrieved by the FTP client.

MPUT  Files or data sets are being sent by the FTP client.

PUT  File or data set is being sent by the FTP client.

RESTART (OF GET)  Retrieval of file or data set by FTP client restarted.

RESTART (OF PUT)  Sending of file or data set by FTP client restarted.

SRESTART GET  Stream mode retrieval of file or data set by FTP client restarted.

SRESTART PUT  Stream mode sending of file or data set by FTP client restarted.

name is the name of the file or data set being transferred

System action:  FTP continues.

Operator response:  Check to see whether the transfer completed successfully and retry if necessary.

System programmer response:  No action is needed.

Module:  EZAFTPCG, EZAFTCP

Procedure Name:  hfs_rcvFile, mvs_rcvFile, sndFile
EZA2109I Confidence level of data transfers is checked and reported

Explanation: This message is issued in response to the LOCSTAT subcommand when CHKCONFIDENCE TRUE is coded in the client's FTP.DATA. It means that the confidence level in the successful completion of transfers from or to the FTP client will be determined and reported in message EZA2108I.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: EZAFTPCL
Procedure Name: locstat

EZA2110I Confidence level of data transfers is neither checked nor reported

Explanation: This message is issued in response to the LOCSTAT subcommand when CHKCONFIDENCE FALSE is coded in the client's FTP.DATA. This means that the confidence level in successful completion of data transfers will not be determined or reported. This does not disable error reporting.

System action: FTP continues.
Operator response: If you want to activate confidence checking and reporting, see the information about the CHKCONFIDENCE statement in z/OS Communications Server: IP Configuration Reference for information about coding the CHKCONFIDENCE statement in FTP.DATA.
System programmer response: No action is needed.

Module: EZAFTPCL

EZA2111I Outbound SBCS ASCII data uses lt_chars line terminator

Explanation: This message is issued in response to the LOCSTAT subcommand. Each line of single-byte data being transferred to the server and translated to ASCII in the FTP client will use the displayed line terminator. This value is determined by the LOCSITE SBSENDEOL parameter or the SBSENDEOL FTP.DATA statement.

lt_chars is the line terminator that will be used. Values for lt_chars are:

CRLF Single-byte data translated to ASCII will use the combination of a carriage return (x'0D') and line feed (x'0A') to terminate each line. This is the default and the standard line terminator defined by RFC 959. The z/OS server and client can receive ASCII data only in this format.
CR Single-byte data translated to ASCII will use a carriage return (x'0D') only to terminate each line.
LF Single-byte data translated to ASCII will use a line feed (x'0A') only to terminate each line.
no Single-byte data translated to ASCII will use no line terminator characters.

System action: FTP continues.
Operator response: If it is necessary to change the lt_chars setting, use the LOCSITE subcommand with the SBSENDEOL parameter, or code an SBSENDEOL statement in FTP.DATA.
System programmer response: No action is needed.

Module: EZAFTPCL
Procedure Name: locstat

EZA2112I Outbound MBCS ASCII data uses lt_chars line terminator

Explanation: This message is issued in response to the LOCSTAT subcommand. Each line of multi-byte data being transferred to the server and translated to ASCII in the FTP client will use the displayed line terminator. This value is determined by the LOCSITE MBSENDEOL parameter or the MBSENDEOL FTP.DATA statement.

lt_chars is the line terminator that will be used. Values for lt_chars are:

CRLF Multi-byte data translated to ASCII will use the combination of a carriage return (x'0D') and line feed

(x'0A') to terminate each line. This is the default and the standard line terminator defined by RFC 959. The
z/OS server and client can receive ASCII data only in this format.

CR Multi-byte data translated to ASCII will use a carriage return (x'0D') only to terminate each line.
LF Multi-byte data translated to ASCII will use a line feed (x'0A') only to terminate each line.
no Multi-byte data translated to ASCII will use no line terminator characters.

System action: FTP continues.
Operator response: Change the setting, if necessary, using the LOCSITE MBSENDEOL parameter or the
MBSENDEOL FTP.DATA statement.
System programmer response: No action is needed.
Module: EZAFTPCCL
Procedure Name: locstat

EZA2117I Client SBSENDEOL must be CRLF for stream mode restart of put

Explanation: This message is displayed when the SRESTART PUT subcommand is issued while SBSENDEOL is not
set to CRLF. The client cannot reliably restart a PUT operation unless the SBSENDEOL setting was CRLF during the
interrupted PUT or APPEND subcommand. Therefore, SRESTART PUT is disabled for the remainder of this FTP
login session. See the information about the SBSENDEOL statement in the [z/OS Communications Server: IP
Configuration Reference] for more information about SBSENDEOL settings.

System action: The FTP client stops processing the SRESTART PUT subcommand.
Operator response: The file transfer must be started again from the beginning. If you continue to experience this
error, report the error to the system programmer.
System programmer response: Most servers do not require an SBSENDEOL setting other than the default, CRLF. If
SBSENDEOL is coded as a different value in FTP.DATA or you use the LOCSITE subcommand to set the value to
anything other than CRLF, users will not be able to issue an SRESTART PUT command to restart a file transfer in
stream mode. If your users require the alternate SBSENDEOL value for only certain servers, specify SBSENDEOL
CRLF in the client FTP.DATA data set and instruct the users to issue the LOCSITE SBSENDEOL subcommand only
after logging in to those servers to allow the users to restart outbound stream mode file transfers to the servers that
do not require the alternate SBSENDEOL value.

Consider whether block or compressed mode file transfers would be appropriate for your installation. Block and
compressed mode transfers can be restarted if you initiated checkpointing before the file transfer. See the information

Module: EZAFTPCB
Procedure Name: None.

EZA2118I SRESTART failed - file transferred while SBSENDEOL not CRLF

Explanation: You issued an SRESTART PUT subcommand to resume a stream mode, type ASCII, SBCS file transfer.
Previously, while Mode was Stream, Type was ASCII, Encoding was SBCS, and SBSENDEOL was a value other than
CRLF, you sent or tried to send a file with a PUT, MPUT, or APPEND subcommand. The FTP client disabled the
SRESTART subcommand for the rest of the session because stream mode file transfers are not reliable under
these conditions.

System action: The FTP client prompts for another subcommand.
Operator response: Issue the PUT subcommand to send the file again. If this error occurs often, contact the System
Programmer.
System programmer response: For file transfers to servers that do not require an alternate SBSENDEOL value, code
the default SBSENDEOL value to be CRLF, and instruct the users to issue the LOCSITE subcommand to change the
value only after logging into those servers that support alternate SBSENDEOL values for inbound mode stream, type
ASCII file transfers. For file transfers to servers that do require an alternate SBSENDEOL value, do not attempt to
SRESTART (stream mode restart) Type ASCII outbound transfers.

See the information about the SBSENDEOL statement in the [z/OS Communications Server: IP Configuration Reference] for
more information about the SBSENDEOL, Mode, Type, and Encoding configuration options. See the information about the LOCSITE subcommand, the SRESTART subcommand, and the PUT subcommand in z/OS Communications Server: IP User's Guide and Commands.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2145I  RDW's from VB/VBS files are discarded.
Explanation: Variable record descriptors (RDW) are discarded from variable-length blocked records and variable-length blocked spanned records. The RDW information can be specified in the NORDW parameter of the SITE or LOCSITE subcommand. This parameter specifies that variable record descriptors (RDWs) are discarded during FTP transmission of variable record length / blocked records (VB) or variable record length / blocked records / spanned records (VBS) data sets in other than block mode.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK
EZA2146I • EZA2150I

EZA2146I  RDW’s from VB/VBS files are retained as part of data.

Explanation:  The variable record descriptors (RDW) parameter has been declared for the SITE and LOCSITE subcommand. This parameter specifies that RDWs are treated as if they were part of the record and not discarded during FTP transmission of variable record length / blocked records (VB) or variable record length / blocked records / spanned records (VBS) data sets in other than block mode.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPCK

EZA2147I  Retention period is days

Explanation:  The number of days that a newly allocated data set will be retained. The retention period can be specified in the RETPD=nnn parameter of the SITE or LOCSITE subcommands. This parameter specifies the number of days that a newly allocated data set should be retained. This value is used to calculate the expiration date associated with the data set.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPCK

EZA2148I  DB2 subsystem name is name

Explanation:  The name of the DB2 subsystem. The DB2 subsystem is specified in the DB2=db2_name parameter of the SITE or LOCSITE subcommands.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPCK

EZA2149I  SQL output sent in SPREADsheet format.

Explanation:  The output generated is sent in spreadsheet format for this SQL file type. This output format is specified in the SPread parameter of the SITE or LOCSITE subcommands.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPCK

EZA2150I  SQL output sent in report (NOSPREAD) format.

Explanation:  The output generated is not in spreadsheet format for this SQL file type. This information is specified in the NOSPread parameter of the SITE or LOCSITE subcommands. This parameter indicates that the output is not in spreadsheet format when the file type is SQL.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPCK
**EZA2151I**  SQLCOL (column headings) use *name*

**Explanation:** The SQLCol parameter has been specified in the SITE or LOCSITE subcommands. The SQLCol=*type* parameter indicates the column headings of the output file. The following list describes each type:

<table>
<thead>
<tr>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Names</td>
<td>Names are the column headings. The labels are ignored. This is the hard-coded default.</td>
</tr>
<tr>
<td>Labels</td>
<td>Uses the labels of the SQL table columns. If any of the columns do not have labels, the corresponding column heading in the output file is given a heading of <em>COLnnn</em>.</td>
</tr>
<tr>
<td>Any</td>
<td>The label is the first choice for column heading, but if there is no label, the name becomes the column heading.</td>
</tr>
</tbody>
</table>

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

```
**Explanation:** You entered the FTP client LOCSItc subcommand and specified the QDISK parameter to display space statistics for one or more volumes. This message is part of a group of messages that is displayed to report space statistics. One EZA2194I message is displayed for each volume that you requested.

In the message text:

- **volume_serial**
  - The volume serial number of a volume on the FTP client host.
- **percent_free**
  - The percent of free space on the volume that is identified by the `volume_serial` value.
- **free_cylinders**
  - The number of free cylinders on the volume that is identified by the `volume_serial` value.
- **free_tracks**
  - The number of free tracks on the volume that is identified by the `volume_serial` value.
- **l_cylinders**
  - The number of cylinders in the largest free extent on the volume that is identified by the `volume_serial` value.
- **l_tracks**
  - The number of tracks in the largest free extent on the volume that is identified by the `volume_serial` value.
- **free_extents**
  - The number of free extents on the volume that is identified by the `volume_serial` value.
- **use_attribute**
  - The use attribute of the volume that is identified by the `volume_serial` value.

**Examples:**

**EZA1460I Command:**
```
locsite qdisk=a72aaa

**Module:** ezaftpmk()

**Routing code:** 10

**Descriptor code:** 12

**Automation:** Not applicable for automation.
EZA2216W  SQLCOL parameter (value) is not valid.

Explanation:  The value submitted for the SQLCOL parameter, which is used to determine the column headings of the output file, was not valid. Valid values for the SQLCOL parameter are:

<table>
<thead>
<tr>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Names</td>
<td>Uses the names of the DB2 SQL table columns. The labels are ignored.</td>
</tr>
<tr>
<td>Labels</td>
<td>Uses the labels of the SQL table columns. If any of the columns do not have labels, the corresponding column heading in the output file is given a heading of COUlnnn.</td>
</tr>
<tr>
<td>Any</td>
<td>The label of the DB2 SQL table column is the first choice for column heading in the output file. If there is no label, the column name is used.</td>
</tr>
</tbody>
</table>

System action:  The SQLCOL parameter is ignored. FTP continues.

Operator response:  Resubmit the SITE command with a valid value for the SQLCOL parameter. For more information about the SITE command, see the z/OS Communications Server: IP User's Guide and Commands.

System programmer response:  No action is needed.

Module:  EZAFTPCK

EZA2224I  LANGUAGE [language [-subtag]]

Explanation:  This message displays the correct format for the LANGUAGE subcommand. Use the LANGUAGE subcommand to set the language for FTP replies. For more information about the LANGUAGE subcommand, see the z/OS Communications Server: IP User's Guide and Commands.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPCL

Procedure Name:  usage()

EZA2225I  request server replies in another language, or reset language to the default

Explanation:  This message displays the purpose of the FEATURE subcommand. For more information about the FEATURE subcommand, see the z/OS Communications Server: IP User's Guide and Commands.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPCL

Procedure Name:  usage()
EZA2227I  subcommand rejected. UTF-8 translation table is not available

Explanation: FTP could not process the current subcommand because the UTF-8 translation table is required to complete the command. The UTF-8 translation table is not available to FTP.

System action: FTP stops processing the current subcommand and prompts the user for the next subcommand.

Operator response: Contact the system programmer with the error.

System programmer response: Verify that the National Language Resources component of z/OS Language Environment® is installed, and that all data sets and files pertinent to UCS-2 and UTF-8 conversion are installed. See the z/OS XL C/C++ Programming Guide.

Module: EZAFTPCR
Procedure Name: lang()

EZA2228I  subcommand not available - client is not configured for UTF-8 encoding

Explanation: FTP cannot process the current subcommand because the subcommand is not valid unless the FTP client is configured for UTF-8 encoding.

System action: FTP stops processing the current subcommand and prompts for the next subcommand.

Operator response: Contact the system programmer with the error message.

System programmer response: Determine whether UTF-8 encoding is appropriate for your installation. If you want UTF-8 encoding, code EXTENSIONS UTF8 in the client’s FTPDATA. See the z/OS Communications Server: IP Configuration Reference for more information about the EXTENSIONS statement.

Module: ezaftpcr
Procedure Name: lang()

EZA2229I  UTF-8 encoding has been disabled for this client.

Explanation: The user issued a LANGUAGE subcommand. The client is not allowed to send a LANG command to the server unless it supports UTF-8 encoding of the control connection. The user had earlier issued an FTP client LOCSITE CTRLCONN or LOCSITE CCXLATE subcommand, which caused UTF-8 encoding for the control connection to be disabled.

System action: The LANGUAGE subcommand is ignored. FTP continues processing.

Operator response: If you want to use the language subcommand, exit the FTP client program and start the client again, without issuing LOCSITE subcommands to specify a code page for the control connection. If you want the FTP client to use a specific code page for the control connection, you cannot issue the LANGUAGE subcommand.

System programmer response: No action is needed.

Module: ezaftpcr
Procedure Name: language()

EZA2230I  Error allocating storage for catalog search

Explanation: The command was entered to list MVS files. FTP was unable to get the necessary storage for the catalog list.

System action: Command processing ends. FTP continues with the next command.

Operator response: Retry the command. If the problem persists, contact the system programmer.

System programmer response: Allocate additional storage for the address space.

Module: EZAFTPMR.
Procedure Name: PSLIST
EZA2231I The SOCKS server rejected the connection to ip_address with reply_field

Explanation: The FTP client attempted to connect to an FTP server. The client is configured to access the FTP server using a SOCKS server. The SOCKS server will not allow the client to connect to the requested FTP server.

ip_address is the IP address of the requested FTP server.

reply_field is a decimal value describing why the SOCKS server rejected the connect request. When SOCKS V4 protocols are in use, the value is the CD field, or result code, from the CONNECT reply as defined in the document SOCKS: A protocol for TCP proxy across firewalls by Ying-Da Lee. The following is an excerpt from that document listing the possible return codes and explanations.

91 The request rejected or failed.
92 The request rejected because SOCKS server cannot connect to identd on the client.
93 The request rejected because the client program and identd report different user IDs.

When SOCKS V5 protocols are in use, the value is the REP field, or reply value, from the CONNECT reply as defined in RFC 1928. See Appendix C, “Related protocol specifications,” on page 649 for information about accessing RFCs.

System action: FTP stops trying to connect to the indicated IP address through the SOCKS server.

Operator response: Contact the system programmer with the error message.

System programmer response: You can obtain more detailed information about why the SOCKS server rejected the connection by using the FTP client debug and dump subcommands to activate tracing, and attempting the connection again.

SOCKS V4 or SOCKS V5 protocols are specified in the file or data set indicated by the SOCKSCONFIGFILE statement in FTP.DATA.

For the SOCKS V5 protocol, the reply value is one of the following:

2 The SOCKS server is configured to reject attempts to connect to the FTP server. Follow the procedure for SOCKS V4 protocol and CD field 91.

all other reply values
Contact the administrator of the SOCKS server with the error.

For the SOCKS V4 protocol, the CD field is one of the following:

91 A probable cause is that the SOCKS server is configured to reject attempts to connect to the FTP server. If you want to allow the FTP client to connect to the target FTP server, either ask the administrator of the configured SOCKS server to allow connections to the FTP server, or change the FTP client SOCKS configuration. You can configure the client to use a different SOCKS server, or you can configure the client to connect to the FTP server without using a SOCKS server.

92, 93 The SOCKS server requires inetd authentication but inetd authentication is not supported by the FTP client. Change the FTP client SOCKS configuration to use a SOCKS server that does not require identd authentication, or ask the administrator of the SOCKS server to allow the connection without identd authentication.

See the z/OS Communications Server: IP Configuration Guide and the z/OS Communications Server: IP Configuration Reference for information about configuring the FTP client to use SOCKS servers.

Module: ezaftpsc

Procedure Name: connectV4(), connectV5().

EZA2232I SOCKS server rejected authentication method method

Explanation: The FTP client tried to connect to an FTP server via a SOCKS server using SOCKS V5 protocols. The SOCKS server rejected the authentication method requested by the client.

method is a hexadecimal value representing the authentication method requested by the FTP client. The values for method are defined in RFC 1928. A value of zero signifies NO AUTHENTICATION REQUIRED. See Appendix C.
EZA2233I

“Related protocol specifications,” on page 649 for information about accessing RFCs.

**System action:** The FTP client stops trying to connect to the FTP server through the SOCKS server.

**Operator response:** Contact the system programmer with the error message.

**System programmer response:** The probable explanation for the rejection is that the SOCKS server does not allow the requested authentication method.

If you want to allow the FTP client to connect to the target FTP server, either ask the administrator of the configured SOCKS server to allow the requested authentication method, or change the FTP client SOCKS configuration. You can configure the client to use a different SOCKS server, or you can configure the client to connect to the FTP server without using a SOCKS server. See the [z/OS Communications Server: IP Configuration Guide](https://www.ibm.com/support/knowledgecenter/en/szawa/topic/com.ibm.zos.v2r11.kix.zowsmb0/zowsmb0_ftpconfig.html) and the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/en/szawa/topic/com.ibm.zos.v2r11.kix.zowsmb0/zowsmb0_ftppckup.html) for information about configuring the FTP client to use SOCKS servers.

**Module:** ezafpsc

**Procedure Name:** method()

---

EZA2233I The SOCKS server rejected the BIND to ip_address with reply_field

**Explanation:** The FTP client tried to establish a data connection to the FTP server through a SOCKS server. The SOCKS server rejected a SOCKS BIND request from the client.

*ip_address* is the address of the FTP server

*reply_field* is a decimal value describing why the SOCKS server rejected the BIND request. When SOCKS V4 protocols are in use, the value is the CD field, or result code, from the BIND reply as defined in the document SOCKS: A protocol for TCP proxy across firewall by Ying-Da Lee. The following is an excerpt from that document listing the possible return codes and explanations.

- **91** The request rejected or failed.
- **92** The request rejected because SOCKS server cannot connect to identd on the client.
- **93** The request rejected because the client program and identd report different user IDs.

When SOCKS V5 protocols are in use, the value is the REP field, or reply value, from the BIND reply as defined in RFC 1928. See Appendix C, “Related protocol specifications,” on page 649 for information about accessing RFCs.

**System action:** FTP stops trying to access the FTP server through the SOCKS server.

**Operator response:** Contact the system programmer with the error.

**System programmer response:** You can get more information about why the SOCKS server rejected the BIND request by using the dump and debug subcommands while attempting the connection. See the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/knowledgecenter/en/szawa/topic/com.ibm.zos.v2r11.kix.zowsmb0/zowsmb0_perf.html) for information about the dump and debug subcommands.

SOCKS V4 or SOCKS V5 protocols are specified in the file or data set indicated by the SOCKSCONFIGFILE statement in FTP:DATA.

For the SOCKS V5 protocol, the reply value is one of the following:

- **2** The SOCKS server has been configured to reject connections to the target IP address. Follow the procedure for SOCKS V4 protocol and CD field 91.

*all other reply values*

Contact the administrator of the SOCKS server with the error.

For the SOCKS V4 protocol, the CD field is one of the following:

- **91** A possible explanation is that the SOCKS server is configured to reject connections to the target IP address. If you want to allow the FTP client to connect to the target FTP server, either ask the administrator of the configured SOCKS server to allow connections to the FTP server, or change the FTP client SOCKS configuration. You can configure the client to use a different SOCKS server, or you can configure the client to connect to the FTP server without using a SOCKS server. It is also possible that a general SOCKS server failure occurred. Contact the administrator of the SOCKS server with the error.

- **92, 93** The SOCKS server requires inetd authentication but inetd authentication is not supported by the FTP client.
Change the FTP client SOCKS configuration to use a SOCKS server that does not require identd authentication, or ask the administrator of the SOCKS server to allow the connection without identd authentication.

See the z/OS Communications Server: IP Configuration Guide and the z/OS Communications Server: IP Configuration Reference for information about configuring the FTP client to use SOCKS servers.

Module: ezafpse

Procedure Name: bindV4(), bindV5()

EZA2243I Partitioned data set may not be created within a partitioned data set.

Explanation: A partitioned data set (PDS) cannot be created within an existing partitioned data set. To create a PDS on the local host, the LMKDIR subcommand is used. A PDS is created with either the fully qualified name or FTP appends the current working directory as the first part of the name.

System action: FTP continues.

Operator response: Enter the command with the correct syntax and try it again. See the z/OS Communications Server: IP User’s Guide and Commands for more information.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2244I Data set name already exists.

Explanation: The data set name specified in the directory parameter of the MKDIR subcommand already exists.

System action: FTP continues.

Operator response: Check for the correct directory name to be created. See the z/OS Communications Server: IP User’s Guide and Commands for more information.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2245I data set name created.

Explanation: The data set name specified in the LMKDIR subcommand has been created. The LMKDIR creates a partitioned data set (PDS) on the local host.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2247I Volume number is not mounted and NoAutoMount specified.

Explanation: The data set name specified in the LMKDIR subcommand is in a volume that is not mounted. NOAUTOMount has been specified in the SITE or LOCSITE subcommand. The NOAUTOMount parameter prevents automatic mounting of data sets on volumes that are not mounted.

System action: FTP continues.

Operator response: Specify AUTOMount in the SITE and LOCSITE subcommand to permit automatic mounting of data sets on volumes that are not mounted. See the z/OS Communications Server: IP User’s Guide and Commands for more information.

System programmer response: No action is needed.

Module: EZAFTPCD
EZA2250I  data set name is a VSAM data set. DCBDsn parameter ignored.

Explanation: The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The name specified in DCBDsn is a Virtual Storage Access Method (VSAM) data set.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCD, EZAFTPGU

EZA2251I  data set name is not a valid file. DCBDsn parameter ignored.

Explanation: The data set name specified in the DCBDsn parameter is incorrect. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

System action: FTP continues.

Operator response: Check for the correct data set name and try the command again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response: No action is needed.

EZA2252I  data set name does not exist. DCBDsn parameter ignored.

Explanation: The data set name specified in the DCBDsn parameter was not found. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

System action: FTP continues.

Operator response: Check for the correct data set name and reissue the command. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response: No action is needed.

Module: EZAFTPCD, EZAFTPGU

EZA2253I  Error recalling data set name. DCBDsn parameter ignored.

Explanation: The File Transfer Protocol (FTP) was unsuccessful in accessing the data set name specified in the DCBDsn parameter. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

System action: FTP continues.

Operator response: Check for the correct data set name and issue the DCBDsn parameter again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response: No action is needed.

Module: EZAFTPCD, EZAFTPGU

EZA2254I  data set name is migrated data set and Noautorecall is specified.

Explanation: The data set name specified in the DCBDsn parameter is a migrated data set. A migrated data set is a data set that has been moved from one hierarchy of storage to another. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

System action: FTP continues.

Operator response: Check for the correct data set name and issue the command again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response: No action is needed.

Module: EZAFTPGU
EZA2255I  Error mounting volume for data set name.  DCBDsn parameter ignored.

Explanation:  The File Transfer Protocol (FTP) was unsuccessful in mounting the volume where the data set name specified in the DCBDsn parameter is located. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

System action:  FTP continues.

Operator response:  Check for the correct volume serial number in the VOLume parameter of the SITE and LOCSITE subcommand, correct the data set name, and issue the command again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response:  No action is needed.

Module:  EZAFTPCD, EZAFTPGU

EZA2256I  data set name is on a direct access volume that is not mounted and Noautomount is specified.

Explanation:  The data set name specified in the DCBDsn parameter is located on a volume that has not been mounted. Noautomount has been specified. The NOAUTOMount parameter prevents automatic mounting of data sets on volumes that are not mounted. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

System action:  FTP continues.

Operator response:  Specify AUTOMount in the SITE and LOCSITE subcommands to permit automatic mounting of data sets on volumes that are not mounted. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response:  No action is needed.

Module:  EZAFTPCD, EZAFTPGU

EZA2257I  data set name is not on a direct access volume.  DCBDsn parameter ignored.

Explanation:  The data set name specified in the DCBDsn parameter is not located on a direct access volume. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

System action:  FTP continues.

Operator response:  Check for the correct volume serial number in the VOLume parameter of the SITE and LOCSITE subcommand, correct the data set name, and issue the command again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response:  No action is needed.

Module:  EZAFTPCD, EZAFTPGU

EZA2258I  Error locating file data set name.  DCBDsn parameter ignored.

Explanation:  The File Transfer Protocol (FTP) was unsuccessful in locating the data set name specified in the DCBDsn parameter. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

System action:  FTP continues.

Operator response:  Check for correct command syntax and data set name and issue the command again. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response:  No action is needed.

Module:  EZAFTPCD, EZAFTPGU
EZA2269I  Lrecl=X Recfm=VBS BLKSIZE=size

Explanation: The record format and block size of a data set specified in the RECfm=format and BLocksize=nnn parameters of the SITE and LOCSITE subcommands. VBS indicates variable record length and blocked and spanned records. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

EZA2270I  Lrecl=X Recfm=VS BLKSIZE=size

Explanation: The record format and block size of a data set specified in the RECfm=format and BLocksize=nnn parameters of the SITE and LOCSITE subcommands. VS indicates variable record length and spanned records. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

EZA2279W  BLOCKSIZE and LRecl must be equal for recfm data sets. BLOCKSIZE set to value.

Explanation: The LOCSITE subcommand was entered with one or more of the LRecl, RECFm, and BLOCKSIZE parameters, and the resulting parameter values caused a mismatch between the LRecl, RECFm, and BLOCKSIZE parameters. The Record Format, recfm, requires that LRecl and BLOCKSIZE be equal, but the values for BLOCKSIZE and LRecl were not the same.

System action: The BLOCKSIZE parameter is set to value.
Operator response: If necessary, reissue the LOCSITE subcommand with a valid LRecl, RECFm, and BLOCKSIZE combination. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2280W  BLOCKSIZE must be a multiple of LRecl for recfm data sets. BLOCKSIZE set to value.

Explanation: The LOCSITE subcommand was entered with one or more of the LRECL, RECFM, and BLOCKSIZE parameters, and the resulting parameter values caused a mismatch between the LRECL, RECFM, and BLOCKSIZE parameters. The Record Format, recfm, requires that BLOCKSIZE be a multiple of LRecl, but it was not.

System action: The BLOCKSIZE parameter is set to value.
Operator response: If necessary, reissue the LOCSITE subcommand with a valid LRecl, RECFm, and BLOCKSIZE combination. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2281W  BLOCKSIZE must be four larger than LRecl for recfm data sets. LRecl set to value.

Explanation: The LOCSITE subcommand was entered with one or more of the LRecl, RECFm, and BLOCKSIZE parameters, and the resulting parameter values caused a mismatch between the LRecl, RECFm, and BLOCKSIZE parameters. The Record Format, recfm, requires that BLOCKSIZE be at least 4 more than LRecl, but the value specified for LRecl would not allow BLOCKSIZE to be four more than LRecl and still be within its valid range of values.

System action: The LRecl parameter is set to value.
Operator response: If necessary, reissue the LOCSITE subcommand with a valid LRecl, RECFm, and BLOCKSIZe combination. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2282W  BLOCKSIZe must be four larger than LRecl for recfm data sets. LRecl set to value. BLOCKSIZe set to value.

Explanation: The LOCSITE subcommand was entered with one or more of the LRecl, RECFm, and BLOCKSIZe parameters, and the resulting parameter values caused a mismatch between the LRecl, RECFm, and BLOCKSIZe parameters. The Record Format, recfm, requires that BLOCKSIZe be at least four more than LRecl, but the value specified for LRecl would not allow BLOCKSIZe to be four more than LRecl and still be within the valid range of values.

System action: The BLOCKSIZe parameter is set to value.

Operator response: If necessary, reissue the LOCSITE subcommand with a valid LRecl, RECFm, and BLOCKSIZe combination. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2283W  BLOCKSIZe must be four larger than LRecl for recfm data sets. LRecl set to value. BLOCKSIZe set to value.

Explanation: The LOCSITE subcommand was entered with one or more of the LRecl, RECFm, and BLOCKSIZe parameters, and the resulting parameter values caused a mismatch between the LRecl, RECFm, and BLOCKSIZe parameters. The Record Format, recfm, requires that BLOCKSIZe be at least 4 more than LRECL, but the value of BLOCKSIZe did not meet this criteria.

System action: The BLOCKSIZe parameter is set to value.

Operator response: If necessary, reissue the LOCSITE subcommand with a valid LRecl, RECFm, and BLOCKSIZe combination. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2294I  value

Explanation: The value of the output buffer. This buffer contains characters in ASCII form that are being read from the File Transfer Protocol (FTP) connection.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

EZA2294I  Proxy connected through SOCKS server at IP_address

Explanation: The user issued a LOCSTat FTP subcommand to display client status. The client has a proxy session established with an FTP server through a SOCKS server.

For a connection through a SOCKS server, the FTP client always connects to port 1080 of the SOCKS server’s IP_address instead of connecting to the IP address and port number of the FTP server; the SOCKS server relays data...
between the FTP client and the FTP server. The IP address and port number of the FTP proxy server are also displayed by the LOCStat subcommand.

*IP_address* is the IP address of the SOCKS server.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** ezaftpcl

**Procedure Name:** locstat()

---

**EZA2295I** Partitioned data sets will be created in extended format

**Explanation:** This message is issued when a valid value has been specified and the PDSTYPE is PDSE. The PDSTYPE statement in FTP.DATA, and the PDSTYPE parameter of the LOCSIte subcommand, are described in [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/mysite).

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

**Procedure Name:** locstat()

---

**EZA2300I** Command ended because the CPU time limit was exceeded

**Explanation:** The FTP client was processing a command when the process was stopped either by the z/OS UNIX shell command kill -s SIGXCPU or because the CPU time limit (MAXCPUTIME in BPXPRMnn or CPUTIMEMAX in the user OMVS segment) was exceeded.

**System action:** The FTP client ends.

**Operator response:** Contact the system programmer.

**System programmer response:** If the process was stopped because the CPU time limit was exceeded, check the MAXCPUTIME statement in the BPXPRMnn member or the CPUTIMEMAX statement in the OMVS segment of the user. See the information about the MAXCPUTIME statement in [z/OS UNIX System Services Planning](https://www.ibm.com/mysite) and the BPXPRMxx member in [z/OS MVS Initialization and Tuning Reference](https://www.ibm.com/mysite).

**Module:** EZAFTPCK

**Procedure Name:** pgmxcpuc

---

**EZA2301E** Cannot open FTP.DATA specified by the -f parameter *filename*

**Explanation:** The FTP client was started with the -f *filename* parameter on the FTP command. FTP tried to open that file or data set but could not.

In the message text:

*filename*

The name of the FTP.DATA file or data set.

**Examples:**

EZA2301E Cannot open FTP.DATA specified by -f parameter /u/user79/not.there

**System action:** The FTP client exits.

**Operator response:** No action is needed.

**User response:** Specify a valid file or data set name and start the FTP client.

**System programmer response:** No action is needed.
Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: FTP

Module: EZAFTPCY

Routing code: 1

Descriptor code: 2

EZA2320I temp is a migrated data set and Noautorecall is specified.

Explanation: The named file was sent with AUTORECALL set to false. This prevents automatic recall of the migrated Hierarchical Storage Manager (HSM) data sets.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

EZA2321I Error recalling temp (rc=value)

Explanation: The file displayed cannot be recalled.

System action: FTP rejects the current subcommand. Processing continues.

Operator response: Reissue the command. If the problem persists, contact the system programmer.

System programmer response: Additional messages might be issued by your hierarchical storage manager (HSM) product. See the documentation for that product to interpret those messages.

Module: EZAFTPCG, EZAFTPCP

EZA2322I temp is on a direct access volume that is not mounted and Noautomount is specified.

Explanation: The value for the FTP AUTOMOUNT parameter is set to NOAUTOMOUNT, preventing automatic mounting of volumes. The data set temp is on a volume that has not been mounted.

System action: FTP rejects the current subcommand. Processing continues.

Operator response: If possible, issue the LOCSite subcommand to change the automount setting. Otherwise, ask the system programmer to mount the volume containing name. Issue the subcommand again. See z/OS Communications Server: IP User’s Guide and Commands for information about the LOCSite subcommand.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

EZA2323I Error mounting volume for temp

Explanation: FTP is unable to mount the volume for the data set temp.

System action: FTP rejects the current subcommand. Processing continues.

Operator response: Issue the subcommand again. If the problem persists, contact the system programmer with the error.

System programmer response: Determine why the requested volume cannot be mounted to the MVS system.

Module: EZAFTPCD, EZAFTPCG, EZAFTPCP

EZA2326I Error allocating data set name

Explanation: The data set name displayed is not valid.

System action: FTP continues.

Operator response: Check the DCBDSN statement in the hlq.FTP.DATA data set and verify that the data set name is
correct. For more information on the DSBDSN, see the z/OS Communications Server: IP User's Guide and Commands.

System programmer response: FTP continues.
Module: EZAFTPCD

EZA2329I  No files match the pattern name
Explanation: There are no files or data sets that match the pattern.
System action: FTP continues.
Operator response: Retry the command with the correct pattern.
System programmer response: No action is needed.
Module: EZAFTPMR

EZA2331I  "name" contains an asterisk ("*") but it is not the last character.
Explanation: The data set name is not valid.
System action: FTP continues.
Operator response: Check the z/OS Communications Server: IP User's Guide and Commands for information on naming requirements of data sets. Retry the command with the correct name.
System programmer response: No action is needed.

EZA2332I  Patterns ("%" and "**") may only be specified in the last qualifier when in directory mode.
Explanation: DIRECTORYMODE specifies that only the data set qualifier immediately below the current directory is treated as an entry in the directory. Since you are not in DIRECTORYMODE, pattern matching cannot be used.
System action: FTP continues.
Operator response: If you would like to use pattern matching, switch to DIRECTORYMODE. Check the z/OS Communications Server: IP User's Guide and Commands for information on setting FTP parameters.
System programmer response: No action is needed.

EZA2333I  ** must be preceded and followed by a period or blank
Explanation: The LIST (DIR) or NLST (LS) command was entered with the ** global file-name character in the pathname, but the ** was either not preceded by or not followed by a period (.) or blank. The ** character is used to replace zero or more complete qualifiers in the name.
System action: FTP continues.
System programmer response: No action is needed.

EZA2337I  temp is not a valid file.
Explanation: The file displayed is not valid.
System action: FTP continues.
Operator response: Reissue the command with a valid file name.
System programmer response: No action is needed.
Module: EZAFTPCG, EZAFTPCP
EZA2338I  temp is not a partitioned data set.
Explanation: The name displayed is not a partitioned data set.
System action: FTP continues.
Operator response: Reissue the command with the correct data set name. For more information on partitioned and sequential data sets, check the z/OS Communications Server: IP User’s Guide and Commands.
System programmer response: No action is needed.
Module: EZAFTPCG, EZAFTPCP

EZA2339I  temp is a non–existent partitioned data set. Use LMKDIR to create it.
Explanation: The data set name displayed does not exist. Create the data set using LMKDIR.
System action: FTP continues.
Operator response: To create a partitioned data set, type LMKDIR followed by the data set name. Naming requirements for a PDS are as follows:
• No part of the name can start with a number.
• No part of the name can be more than 8 characters in length.
• Each part of the name is separated by a period.
• If single quotation marks are not used when specifying the PDS name, FTP appends the current working directory as the first part of the name.
For more information on naming conventions for partitioned data sets, see the z/OS Communications Server: IP User’s Guide and Commands.
System programmer response: FTP continues.
Module: EZAFTPCG

EZA2340I  temp is a VSAM data set. VSAM is not supported.
Explanation: The data set name displayed is a Virtual Storage Access Method (VSAM) data set. VSAM data sets are not supported by TCP/IP.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCG, EZAFTPCP

EZA2358W  Unrecognized option ‘parameter=operator’ on locsite command.
Explanation: The LOCSITE subcommand was entered with the option parameter, but parameter was not a valid LOCSITE subcommand parameter.
System action: The parameter is ignored. FTP continues.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2359W  Operand required on parm option. Option ignored.
Explanation: The option parm appeared on a LOCSITE subcommand without an operand. The option is ignored.
System action: FTP continues.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2360W  Operand not allowed on parm option. Option ignored.

Explanation: The parameter parm appeared on a LOCSITE subcommand in incorrect format. No operand is allowed for this parameter. The parameter is ignored.

System action: FTP continues.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2370W  DCbdsn already specified. "parameter=value" ignored.

Explanation: DCbdsn parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

System action: parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.

Operator response: If you wish to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2372W  LRecl parameter already specified. "parameter=value" ignored.

Explanation: LRecl parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

System action: parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.

Operator response: If you wish to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2373W  LRecl parameter (value) is not numeric.

Explanation: The LOCSITE command was specified with the LRecl parameter, but the value, value, specified for the LRecl parameter was not a numeric value.

System action: The LRecl parameter is ignored.

System programmer response: No action is needed.
Module: EZAFTPCK

EZA2374W PRImary parameter already specified. “parameter=value” ignored.

Explanation: PRImary parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

System action: parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.

Operator response: If you wish to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2375W PRImary parameter (value) is not numeric.

Explanation: The LOCSITE command was specified with the PRImary parameter, but the value, value, specified for the PRImary parameter was not a numeric value.

System action: The PRImary parameter is ignored.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2376W SECondary parameter already specified. 'parameter=value' ignored.

Explanation: SECondary parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

System action: parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.

Operator response: If you wish to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2377W SECondary parameter (value) is not numeric.

Explanation: The LOCSITE command was specified with the SECondary parameter, but the value, value, specified for the SECondary parameter was not a numeric value.

System action: The SECondary parameter is ignored.

System programmer response: No action is needed.

Module: EZAFTPCK
EZA2378W • EZA2383W

EZA2378W  VOLume parameter already specified. "parameter=value" ignored.
Explanation:  VOLume parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.
System action:  parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.
Operator response:  If you wish to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.
System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA2379W  value is not a valid VOLume parameter.
Explanation:  The LOCSITE command was specified with the VOLume parameter, but the value, value, specified for the VOLume parameter was not a valid value. The parameter may not be more than 6 characters.
System action:  The VOLume parameter is ignored.
System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA2380W  RECFm parameter already specified. "parameter=value" ignored.
Explanation:  RECFm parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.
System action:  parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.
Operator response:  If you wish to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.
System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA2381W  RECFm parameter (value) is not valid.
Explanation:  The LOCSITE command was specified with the RECFm parameter, but value, specified for the RECFm parameter, was not a valid value.
System action:  The RECFm parameter is ignored.
System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA2383W  BLOCKS1ze parameter already specified. "parameter=value" ignored.
Explanation:  BLOCKS1ze parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.
**EZA2384W**  
**BLOCKSize parameter** *(value)* **is not numeric.**  
**Explanation:** The LOCSITE command was specified with the BLOCKSize parameter, but the value, *value*, specified for the BLOCKSize parameter was not a numeric value.

**System action:** The SECondary parameter is ignored.

**Operator response:** Reissue the command with a valid value. See the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/docview/mm020107) or [z/OS Communications Server: IP Configuration Guide](https://www.ibm.com/support/docview/mm020128) for information on FTP in general and to [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/docview/mm020107) for information on the parameters of the LOCSITE subcommand.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

**EZA2385W**  
**DIRectory parameter already specified. “parameter=value” ignored.**  
**Explanation:** DIRectory parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

**System action:** *parameter* is set to the value specified the first time the parameter was encountered. The *value* specified for this occurrence of *parameter* is ignored.

**Operator response:** If you wish to change the parameter value to the value specified by *parameter=value*, reissue the LOCSITE command with *parameter=value* as the only occurrence of the parameter on the LOCSITE command.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

**EZA2386W**  
**Directory parameter** *(value)* **is not numeric.**  
**Explanation:** The LOCSITE command was specified with the DIRECTORY parameter, but the value, *value*, specified for the DIRECTORY parameter was not a numeric value.

**System action:** The DIRECTORY parameter is ignored.

**Operator response:** Reissue the command with a valid value. See the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/docview/mm020107) or [z/OS Communications Server: IP Configuration Guide](https://www.ibm.com/support/docview/mm020128) for information on FTP in general and to [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/docview/mm020107) for information on the parameters of the LOCSITE subcommand.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

**EZA2388W**  
**value** **is not a valid Qdisk parameter.**  
**Explanation:** The LOCSITE command was specified with the Qdisk parameter, but the value, *value*, specified for the Qdisk parameter was not a valid value. The parameter may not be more than 6 characters.

**System action:** The Qdisk parameter is ignored.

**Operator response:** Reissue the command with a valid value. See the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/docview/mm020107) or [z/OS Communications Server: IP Configuration Guide](https://www.ibm.com/support/docview/mm020128) for information on FTP in general and to [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/docview/mm020107) for information on the parameters of the LOCSITE subcommand.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK
**EZA2394I • EZA2398W**

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

**EZA2394I** Invalid format data set name "name". DCBDSN parameter ignored.

**Explanation:** The data set name displayed is not valid, and therefore is ignored.

**System action:** FTP continues.

**Operator response:** The DCBDSN parameter specifies the name of the data set to be used as a model for allocation of new data sets. Reissue the command with the correct data set name. For more information on DCBDSN, see the "z/OS Communications Server: IP User’s Guide and Commands".

**System programmer response:** No action is needed.

**Module:** EZAFTPCK, EZAFTPGU

---

**EZA2395W** LRecl must be between 0 and 32760. LRecl parameter ignored.

**Explanation:** The record size should be between 0 and 32760. The default is 256.

**System action:** FTP continues.

**Operator response:** Reissue the LOCSITE LRecl command with a record size between 0 and 32760.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

**EZA2396W** BLOCKS1ze must be between 0 and 32760. BLOCKS1ze parameter ignored.

**Explanation:** The block size of a data set should be between 0 and 32760. The default is 6233.

**System action:** FTP continues.

**Operator response:** Reissue the LOCSITE BLOCKS1ze command with a block size between 0 and 32760.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

**EZA2397W** Unit parameter already specified. parameter ignored.

**Explanation:** The unit name specifying the unit type for allocation of data sets has already been set. The unit name displayed is ignored.

**System action:** FTP continues.

**Operator response:** To change the unit type, specify the unit name in the hlq.FTP.DATA data set. The unit name parameter can be used to specify either direct access or tape device types.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

**EZA2398W** parameter is not a valid unit parameter.

**Explanation:** The unit parameter is not valid.

**System action:** FTP continues.

**Operator response:** Reissue the unit name command with the correct parameter.

**System programmer response:** FTP continues.

**Module:** EZAFTPCK
EZA2399W  FILEtype parameter already specified. “parameter=value” ignored.

Explanation:  The LOCSIte subcommand was entered with the filetype parameter more than once. The file type displayed is ignored.

System action:  FTP continues.

Operator response:  Issue another LOCSIte subcommand to change the data set filetype. Specify the filetype value you want to use on the filetype parameter. See the z/OS Communications Server: IP User’s Guide and Commands for more information about the LOCSIte subcommand and the filetype parameter. The default file type is SEQ.

System programmer response:  No action is needed.

Module:  EZAFTPCK

EZA2400W  FileType parameter parameter is not valid.

Explanation:  The file type displayed is not a valid file type for a data set.

System action:  FTP continues.

Operator response:  Reissue the FILETYPE command with a valid file type. The default is SEQ (sequential data set). See message EZA2399 for a list of valid file types.

System programmer response:  No action is needed.

Module:  EZAFTPCK, EZAFTPEP

EZA2403I  Using control connection address ipaddr for data connection

Explanation:  The client sent a PASV command to the server to establish a data connection. By default, an FTP client connects to the IP address and port number specified in the PASV reply to complete the data connection. However, because PASSIVEIGNOREADDR is set to TRUE, the FTP client ignores the IP address in the PASV reply. The FTP client will connect to the port number specified in the PASV reply, at the IP address it used to log into the server, to complete the data connection.

In the message text:

ipaddr

The IP address that the FTP client used when it logged in to the FTP server.

Examples:

Command:
put /etc/hosts
>>> PASV
227 Entering Passive Mode (129,42,17,103,19,136)
EZA2403I Using control connection address 9.155.11.97 for data connection
>>> STOR hosts
125 Storing data in the Null directory (*dev.null).
250 Transfer completed successfully.
41 bytes transferred in 0.005 seconds. Transfer rate 8.20 Kbytes/sec.
Command:

System action:  The FTP client ignores the IP address in the PASV reply from the server and connects to the same address that it used to log in to the server.

Operator response:  Not applicable

User response:  No response is necessary if you intend for the FTP client to use the same IP address for the data connection that it used to log in to the FTP Server. If you want the client to use the IP address specified in the PASV reply, configure PASSIVEIGNOREADDR FALSE by modifying the client FTP.DATA file, or by issuing the LOCSIte subcommand with the NOPASSIVEIGNOREADDR parameter.

See the information about the PASSIVEIGNOREADDR (FTP client) statement in z/OS Communications Server: IP Configuration Reference. See the information about the LOCSIte subcommand in z/OS Communications Server: IP User’s Guide and Commands.

System programmer response:  Not Applicable
Problem determination: Not Applicable
Source: z/OS Communications Server TCP/IP: FTP
Module: EZAFTPSC
Routing code: *
Descriptor code: *
Automation: Not applicable for automation.

EZA2406W MGmtclass parameter already specified. “parameter=value” ignored.
Explanation: The MGmtclass parameter has already been specified. The parameter displayed is ignored.
System action: FTP continues.
Operator response: The Storage Management System (SMS) has been used to set certain defaults for the hlq.FTP.DATA data set. The defaults for space and RECFM are set by MGmtclass. The values for these parameters take precedence over any values you specify using the individual storage attributes parameter with the LOCSITE command or the hlq.FTP.DATA data class. To change any of the parameters, see your systems administrator.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2407W Mgmtclass parameter parameter is not valid.
Explanation: The MGmtclass parameter displayed is not valid.
System action: FTP continues.
Operator response: The Storage Management System (SMS) has been used to set certain defaults for the hlq.FTP.DATA data set. The defaults for space and RECFM are set by MGmtclass. The values for these parameters take precedence over any values you specify using the individual storage attributes parameter with the LOCSITE command or the hlq.FTP.DATA data class. To change any of the parameters, see your systems administrator.
System programmer response: No action is needed.

EZA2408W STOrclass parameter already specified. “parameter=value” ignored.
Explanation: The STOrclass parameter has already been specified. The parameter displayed is ignored.
System action: FTP continues.
Operator response: The Storage Management System (SMS) has been used to set certain defaults for the hlq.FTP.DATA data set. The defaults for unit and DCBDSN are set by STOrclass. The values for these parameters take precedence over any values you specify using the individual storage attributes parameter with the LOCSITE command or the hlq.FTP.DATA data class. To change any of the parameters, see your systems administrator.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2409W STORclass parameter (parameter) is not valid.
Explanation: The STORclass parameter displayed is not valid.
System action: FTP continues.
Operator response: The Storage Management System (SMS) has been used to set certain defaults for the hlq.FTP.DATA data set. The defaults for unit and DCBDSN are set by STORclass. The values for these parameters take precedence over any values you specify using the individual storage attributes parameter with the LOCSITE command or the hlq.FTP.DATA data class. To change any of the parameters, see your systems administrator.
System programmer response: No action is needed.
EZA2410W  DATAClass parameter already specified. “parameter=value” ignored.

Explanation:  The DATAClass parameter has already been specified. The parameter displayed is ignored.

System action:  FTP continues.

Operator response:  The Storage Management System (SMS) has been used to set certain defaults for the hlq.FTP.DATA data set. The defaults for space, RECFM, BLKSIZE, and LRECL are set by DATACLASS. The values for these parameters take precedence over any values you specify using the individual storage attributes parameter with the LOCSITE command or the hlq.FTP.DATA data class. To change any of the parameters, see your systems administrator.

System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA2411W  DATAClass parameter parameter is not valid.

Explanation:  The DATAClass parameter displayed is not valid.

System action:  FTP continues.

Operator response:  The Storage Management System (SMS) has been used to set certain defaults for the hlq.FTP.DATA data set. The defaults for space, RECFM, BLKSIZE, and LRECL are set by DATACLASS. The values for these parameters take precedence over any values you specify using the individual storage attributes parameter with the LOCSITE command or the hlq.FTP.DATA data class. To change any of the parameters, see your systems administrator.

System programmer response:  No action is needed.

EZA2412W  NoRDW already specified. RDW ignored.

Explanation:  RDW (record descriptor word) has been set to false and therefore, discarded during FTP transmission of VB (variable blocked) or VBS (variable blocked spanned) data sets in other than block mode.

System action:  FTP continues.

Operator response:  Set RDW to true in the hlq.FTP.DATA data set if you do not want the RDW to be discarded.

System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA2413W  RDW already specified. NoRdw ignored.

Explanation:  Setting RDW to true specifies that the record descriptor words are treated as if they were part of the record and not discarded during FTP transmission of VB (variable block) or VBS (variable blocked spanned) data sets in other than block mode. RDW information is stored in binary. Transfer files in binary mode to avoid translation problems that can occur if you transfer this binary field in EBCDIC or ASCII.

System action:  FTP continues.

Operator response:  To discard RDW during FTP transmission, set RDW to false in the hlq.FTP.DATA data set.

System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA2414W  RETpd parameter already specified. “parameter=value” ignored.

Explanation:  The RETpd parameter has already been set, therefore, the parameter displayed is ignored.

System action:  FTP continues.

Operator response:  The RETpd parameter for MVS specifies the number of days that a newly allocated data set should be retained. The maximum is 9999.

System programmer response:  No action is needed.
Module: EZAFTPCK

EZA2415W  RETpd parameter (value) is not valid.
Explanation: The RETpd parameter displayed is not valid.
System action: FTP continues.
Operator response: The RETpd parameter for MVS specifies the number of days that a newly allocated data set should be retained. The maximum is 9999. Reissue the parameter with a valid numeric.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2416W  DB2 parameter (db2name) is more than 4 characters.
Explanation: The db2name specified for the DB2 parameter on an FTP LOCSITE command is too long.
System action: The DB2 parameter is ignored. FTP continues.
Operator response: Correct the name of the DB2 subsystem, and issued the LOCSITE command again.
System programmer response: None
Module: EZAFTPCK

EZA2417W  READTAPEFormat value is not supported - READTAPEFormat ignored
Explanation: The value specified for the READTAPEFormat parameter on a LOCSITE command is not supported. Valid values are F (for Fixed), V (for Variable), S (for Spanned), X (for Lrecl X), or blank (unspecified).
System action: The READTAPEFormat parameter is ignored. FTP continues.
Operator response: Change value to one of the supported formats.
System programmer response: No action is needed.
Module: EZAFTPCK
Procedure Name: locsite

EZA2421W  NORESTGet already specified. RESTGet ignored.
Explanation: NORESTGet cmd was follow by a RESTGet cmd within the same LOCSITE request.
System action: FTP continues.
Operator response: If the setting is not what you want, reissue the LOCSITE command with the correct values.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2422W  RESTGet already specified. NORESTGet ignored.
Explanation: RESTGet cmd was follow by a NORESTGet cmd within the same LOCSITE request.
System action: FTP continues.
Operator response: If the setting is not what you want, reissue the LOCSITE command with the correct values.
System programmer response: No action is needed.
Module: EZAFTPCK
EZA2423W  CHKPTPREFIX value must be Home, Local or Userid.
Explanation: While processing the FTP.DATA file, the server encountered an incorrect CHKPTPREFIX parameter. The valid values for the CHKPTPREFIX parameter are:
- Home
- Local
- Userid

System action: The line containing the error is ignored. Processing of the FTP.DATA file continues with the next line in the file.
Operator response: Contact the System programmer with the error message to have the FTP.DATA file corrected.
System programmer response: Correct the CHKPTPREFIX parameter in the FTP.DATA file.
Module: EZAFTPSM
Procedure Name: read_ftpdata()

EZA2424W  CHKptint parameter (parameter) is not valid
Explanation: The value specified for the CHKptint parameter of the LOCSITE command contained non-numeric characters.

System action: FTP continues.
Operator response: Reissue the LOCSITE command with valid values.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2428I  CHKPTPrefix uses value to determine the HLQ of the FTP.CHECKPOINT file
Explanation: This is the result of a LOCSTAT command.
One of three possible valid values for CHKPTPREFIX:
- Home  The TSO prefix or the z/OS UNIX file system path
- Userid  The FTP user ID
- Local  The current directory from the LCD command

System action: None.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat()

EZA2477I  Secure port port_number does not allow the subcommand_name subcommand
Explanation: The user entered an FTP subcommand while the FTP client was connected to the secure port. The secure port is the port number defined by the TLSPORT statement in the client’s FTP.DATA file. FTP connections to the secure port are implicitly secured. The subcommand is not valid for TLS-secured sessions that are implicitly secured by connecting to the server using the TLSPORT port.

In the message text:

port_number
- The port number configured with the TLSPORT statement in the client’s FTP.DATA file, or the default TLSPORT number when no TLSPORT statement was coded in FTP.DATA.

subcommand_name
- The subcommand that the user entered.

Examples: In this example, assume that no TLSPORT statement is coded in the client’s FTP.DATA file, but that the
client has connected to the FTP server at port 990, the default value for the TLSPORT statement.

The user enters the ccc subcommand in response to the FTP client prompt:

Command: ccc
EZA2477I Secure port 990 does not allow the ccc subcommand.

System action: The subcommand is ignored.
Operator response: No action is needed.
User response: Contact the system programmer.

System programmer response: If the subcommand is necessary on a TLS-secured session, do not connect to the TLSPORT. Instead, perform the steps for customizing the FTP client for TLS in z/OS Communications Server: IP Configuration Guide to secure the session for TLS without using the TLSPORT. See the information about the TLSPORT FTP client and server in z/OS Communications Server: IP Configuration Reference for more information about the TLSPORT statement. See the z/OS Communications Server: IP User's Guide and Commands for more information about subcommands.

Problem determination: See the system programmer response.
Source: z/OS Communications Server TCP/IP: FTP
Module: Not applicable.
Routing code: 10
Descriptor code: 12

EZA2491I Compressed mode implemented with type EBCDIC only.
Explanation: Compressed file transfers are implemented in EBCDIC format only.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

EZA2494I Checkpoint interval is interval
Explanation: The interval for generating checkpoint markers is displayed.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2500W No valid checkpoint data available
Explanation: A RESTART command was issued, but there is no valid checkpoint data available.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCB

EZA2501W Restart requires EBCDIC data type
Explanation: A RESTART command was issued, but the representation type is not EBCDIC.
System action: FTP continues.
Operator response: Change the representation type to EBCDIC and reissue the RESTART command.
System programmer response: No action is needed.
Module: EZAFTPCB

EZA2502W  Restart requires Block or Compressed transfer mode
Explanation: A RESTART command was issued, but the transfer mode is not block or compressed.
System action: FTP continues.
Operator response: Change the transfer mode to block or compressed and reissue the RESTART command.
System programmer response: No action is needed.
Module: EZAFTPCB

EZA2508E  Block or Compressed Mode requires Type E (EBCDIC)
Explanation: Block or compressed mode file transfer requires a transfer type of EBCDIC. No other transfer type is supported for block or compressed mode file transfer.
System action: No files are transferred.
Operator response: Use the TYPE command to change the transfer type to E (EBCDIC), or the MODE command to change the mode to stream. For more information about these commands, see the z/OS Communications Server: IP User's Guide and Commands.
System programmer response: No action is needed.
Module: EZAFTPCG, EZAFTPCP

EZA2509I  number megabytes transferred - interval second interval rate num_transferred_interval KB/sec - Overall transfer rate num_transferred_overall KB/sec
Explanation: This message indicates the total number of bytes of binary data transferred to or from the FTP client and the current rate of transfer.

number is the total number of megabytes transferred since the transfer started. Megabyte is defined as 1024*1024 bytes.
interval is the length of the measured transfer interval in seconds. This rate is set using LOCSITE PROGRESS or the PROGRESS statement in the FTP.DATA file.
num_transferred_interval is the number of KBs (KB equals 1000 bytes) transferred per second in this interval.
num_transferred_overall is the number of KBs (KB equals 1000 bytes) transferred per second since the transfer started.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPMR

EZA2511I  Checkpoint data set will be opened for GET
Explanation: The message is issued in response to a LOCSTAT subcommand to indicate that a checkpoint data set will be opened for all GET subcommands if type is E and mode is B or C.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCCL

Procedure Name: locstat
EZA2512I  Checkpoint data set will not be opened for GET

Explanation:  The message is issued in response to a LOCSTAT subcommand to indicate that a checkpoint data set will not be opened for any GET subcommands.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPCL

Procedure Name:  locstat

EZA2515W  NOTRUNCate already specified.  TRUNCate ignored.

Explanation:  A LOCSITE command was issued with both NOTRUNCATE and TRUNCATE options specified. Only the first option is accepted.

System action:  None.

Operator response:  Reenter the LOCSITE command to change the option.

System programmer response:  No action is needed.

Module:  EZAFTPCK

Procedure Name:  locsite()

EZA2516I  Truncated records will be treated as an error and

Explanation:  This message is issued as the result of the LOCSTAT command when NOTRUNCATE is set. If a record is discovered that is longer than LRECL and NOWRAPRECORD is set, an error will be returned and the file transfer will fail.

System action:  None.

Operator response:  If this is not the intended result, issue the LOCSITE TRUNCate command.

System programmer response:  No action is needed.

Module:  EZAFTPCL

Procedure Name:  locstat()

EZA2517I  the file transfer will fail.

Explanation:  This message is issued as the result of the LOCSTAT command when NOTRUNCATE is set. If a record is discovered that is longer than LRECL and NOWRAPRECORD is set, an error will be returned and the file transfer will fail.

System action:  None.

Operator response:  If this is not the intended result, issue the locsite TRUNCate command.

System programmer response:  No action is needed.

Module:  EZAFTPCL

Procedure Name:  locstat()

EZA2518I  Records on input tape are unspecified format

Explanation:  This message is part of the LOCSTAT output. It means that no value has been specified for READTAPEFormat and the record format for an input tape will not be known until the data set is opened.

System action:  FTP continues.

Operator response:  No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat

---

**EZA2519I**  Records on input tape are fixed format

Explanation: This message is part of the LOCSTAT output. It means that a value of F was specified for READTAPEFormat and the record format for an input tape is expected to be fixed. This value must be consistent with the tape label when the data set is opened.

System action: FTP continues
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat

---

**EZA2520I**  Records on input tape are variable format

Explanation: This message is part of the LOCSTAT output. It means that a value of V was specified for READTAPEFormat and the record format for an input tape is expected to be variable. This value must be consistent with the tape label when the data set is opened.

System action: FTP continues
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat

---

**EZA2521I**  Records on input tape are spanned format

Explanation: This message is part of the LOCSTAT output. It means that a value of S was specified for READTAPEFormat and the record format for an input tape is expected to be spanned. This value must be consistent with the tape label when the data set is opened.

System action: FTP continues
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat

---

**EZA2522I**  Records on input tape are lrecl X format

Explanation: This message is part of the LOCSTAT output. It means that a value of X was specified for READTAPEFormat and the record format for an input tape is expected to be lrecl X. This value must be consistent with the tape label when the data set is opened.

System action: FTP continues
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat
EZA2523E  READTAPEFormat value is value but input tape is format

Explanation:  A put was issued for a data set on tape and a non-blank value was specified for READTAPEFormat. The READTAPEFormat specification does not match the tape label.

value can be one of the following:
F  Format was to be fixed
V  Format was to be variable
S  Format was to be spanned
X  Format was to be lrecl X

If value is X, format is:
   lrecl nnnnn — tape label shows logical record length nnnnn

If value is F, V, or S, format is:
   lrecl X — tape label shows lrecl X format

System action:  The request is rejected. FTP continues.

Operator response:  Either specify the matching READTAPEFormat or change it to unspecified and retry the request. See the z/OS Communications Server: IP User’s Guide and Commands for the description of the LOCSITE command for guidelines on using READTAPEFormat.

System programmer response:  No action is needed.

Module:  EZAFTPCP

Procedure Name:  sndFile

EZA2524E  READTAPEFormat value is value but input tape is spanned

Explanation:  A put was issued for a data set on tape and a non-blank value was specified for READTAPEFormat. The READTAPEFormat specification does not match the tape label.

value is one of the following:
F  Format was to be fixed
V  Format was to be variable

System action:  The request is rejected. FTP continues.

Operator response:  Either specify the matching READTAPEFormat or change it to unspecified and retry the request. See the z/OS Communications Server: IP User’s Guide and Commands for the description of the LOCSITE command for guidelines on using READTAPEFormat.

System programmer response:  No action is needed.

Module:  EZAFTPCP

Procedure Name:  sndFile

EZA2525E  READTAPEFormat value is value but input tape is not spanned

Explanation:  A put was issued for a data set on tape and a non-blank value was specified for READTAPEFormat. The READTAPEFormat specification does not match the tape label.

value is one of the following:
S  Format was to be spanned

System action:  The request is rejected. FTP continues.

Operator response:  Either specify the matching READTAPEFormat or change it to unspecified and retry the request. See the z/OS Communications Server: IP User’s Guide and Commands for the description of the LOCSITE command for guidelines on using READTAPEFormat.
System programmer response: No action is needed.
Module: EZAFTPMP
Procedure Name: sndFile

EZA2526E  READTAPEFormat value is value but input tape is format format

Explanation: A put was issued for a data set on tape and a non-blank value was specified for READTAPEFormat. The READTAPEFormat specification does not match the tape label.

value can be one of the following:
F  Format was to be fixed
V  Format was to be variable

format is the record format string determined from the tape label, such as VB, FBA, etc.

System action: The request is rejected. FTP continues.

Operator response: Either specify the matching READTAPEFormat or change it to unspecified and retry the request. See the z/OS Communications Server: IP User’s Guide and Commands for the description of the LOCSITE command for guidelines on using READTAPEFormat.

System programmer response: No action is needed.
Module: EZAFTPMP
Procedure Name: sndFile

EZA2527W  TRUNcate already specified. NOTRUNcate ignored.

Explanation: Both the TRUNCATE and NOTRUNCATE options have been entered on a LOCSITE command. Only the first option is accepted.

System action: None.

Operator response: Reenter the LOCSITE command to change the option.

System programmer response: No action is needed.
Module: EZAFTPCK
Procedure Name: locsite()

EZA2529I  Truncated records will not be treated as an error.

Explanation: This message will be issued as the result of the LOCSTAT command when the TRUNCATE option is set. The WRAPRECORD option controls whether records are truncated or wrapped into the next record. The file transfer continues.

System action: None.

Operator response: If this is not the intended result, issue the LOCSITE NOTRUNCate command.

System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat()

EZA2530I  Record format: format, Blocksize: size

Explanation: This message displays the record format that will be used when a new data set is created. It also displays the block size that will be used.

System action: FTP continues.

Operator response: No action is needed.
EZA2531I • EZA2535I

System programmer response: No action is needed.
Module: EZAFTPCK

EZA2531I  Record format: format.
Explanation: This message displays the record format that will be used when a new data set is created.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2532I  Record format: format, Lrecl: X
Explanation: This message displays the record format that will be used when a new data set is created. It also displays the logical record length X that indicates that records may exceed 32768 bytes.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2533I  Record format: format, Lrecl: length
Explanation: This message displays the record format that will be used when a new data set is created. It also displays the logical record length.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2534I  Record format: format, Lrecl: X, Blocksize: size
Explanation: This message displays the record format that will be used when a new data set is created. It also displays the logical record length X that indicates that records may exceed 32768 bytes and the block size.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2535I  Record format: format, Lrecl: length, Blocksize: size
Explanation: This message displays the record format that will be used when a new data set is created. It also displays the logical record length and block size.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK
EZA2536I  

Number Mbytes transferred in number seconds. Transfer rate value Kbytes/sec.  

Explanation: This message indicates the number of bytes transferred and the rate of transfer for a data transfer to or from the other host. If the number of bytes transferred is less than a Gigabyte, message EZA1617I is displayed.  

Note: For smaller files (less than 360 KB), the reported time (and calculated rate) value reflects the amount of time to transfer the file to the TCP transport layer more than it reflects the network rates.  

System action: FTP continues.  
Operator response: No action is needed.  
System programmer response: No action is needed.  
Module: EZAFTPCG, EZAFTPCP  

EZA2537E  

File transfer failed. File contains records that are longer than the LRECL of the new file.  

Explanation: Options NOTRUNCATE and NOWRAPRECORD are set. The file being transferred contains records that are longer than the LRECL of the new file.  

System action: The transfer is ended. FTP continues.  
Operator response: Increase the value of LRECL for the new file or change the LOCSITE options.  
System programmer response: No action is needed.  
Module: EZAFTPCG  
Procedure Name: rcvfile()  

EZA2541I  

Wildcards not allowed in PDS name  

Explanation: The command was issued requesting members of a partitioned data. The name of the PDS contained one or more global file-name characters * or %. When listing members of a PDS, global file-name characters are allowed only in the member name, not in the PDS name.  

System action: The command is rejected.  
Operator response: Correct the data set name and reissue the request.  
System programmer response: No action is needed.  
Module: EZAFTPMR  

EZA2542I  

command fails: path name. User not authorized  

Explanation: The command was issued for members of a partitioned data set, but the requested data set was protected by a security system such as RACF®, and the user was not authorized to read the data set.  

System action: The command is rejected.  
Operator response: Contact the owner of the data set for authorization to read the data set.  
System programmer response: No action is needed.  
Module: EZAFTPMR  

EZA2543I  

Error recalling data set data_set  

Explanation: The command requested members of a partitioned data set. The PDS was migrated and needed to be recalled to read the PDS directory. FTP attempted to recall the data set, but was unable to successfully recall the data set.  

System action: The command is rejected.  
Operator response: Reissue the command. If the problem persists, contact the system programmer.  
System programmer response: Determine why the data set cannot be recalled and correct the problem.
EZA2544I  Data set dsname is migrated and NoAutoRecall is specified.

Explanation: A command was issued to process a data set, but the data set is migrated and FTP is currently in NoAutoRecall mode.

System action: The command is rejected.

Operator response: Issue the LOCSITE AUTORECALL command to allow the data set to be recalled, and then reissue the FTP command.

System programmer response: No action is needed.

Module: EZAFTPMR

EZA2545I  Error mounting volume containing data set dsname

Explanation: The volume containing the requested data set was not mounted to the FTP system. FTP attempted to have the volume mounted, but was unable to get the volume mounted.

System action: The command is rejected.

Operator response: Reissue the command. If the problem persists, contact the system programmer.

System programmer response: Determine why the requested volume cannot be mounted to the MVS system.

Module: EZAFTPMR

EZA2546I  Volume containing dsname is not mounted and NoAutoMount specified.

Explanation: The command requested MVS data set dsname, but the volume containing dsname was not mounted to the system and FTP was currently in No Automount mode.

System action: The command is rejected.

Operator response: If possible, issue the LOCSITE AUTOMOUNT command to allow the volume containing the data set to be automatically mounted; otherwise, contact the system operator to mount the volume to the system. Then reissue the command.

System programmer response: No action is needed.

Module: EZAFTPMR

EZA2547I  Partitioned data set 'path name' does not exist.

Explanation: The command requested that members of a partitioned data set be listed, but the requested data set could not be found.

System action: The command is rejected.

Operator response: Verify that the PDS name was entered correctly.

System programmer response: No action is needed.

Module: EZAFTPMR

EZA2548I  'data_set(member)' requests members but data_set is not a partitioned data set.

Explanation: The command was entered using the MVS syntax data_set(member), which indicates that members of the PDS data_set are to be listed; however, data_set is not a partitioned data set.

System action: The command is rejected.

Operator response: Verify that the correct data set name was entered. Reissue the command with the correct data set name.

System programmer response: No action is needed.
**EZA2549I**  *Error opening data_set_name*

**Explanation:** The command requested members of a PDS, but FTP was unable to open the PDS to read the directory. This can be a temporary problem, for example the data set is currently in use, or it can be a permanent error with the data set.

**System action:** The command is rejected.

**Operator response:** Reissue the command. If the problem persists, contact the system programmer.

**System programmer response:** Correct the problem with the data set.

**Module:** EZAFTPMR

---

**EZA2550W**  *Name length error for filename name*

**Explanation:** The pathname provided for a data transfer (get, put, append), delete, or rename request is too long. The name, when combined with the current working directory, must adhere to the following maximum lengths:
- 44 for a physical sequential data set
- 55 for a member of a PDS (includes the parentheses for the member name)
- 1023 for a file in the hierarchical file system.

**Note:** The maximum length for a file name is 255 -- the total pathname maximum length is 1023.

**System action:** The request is not performed.

**Operator response:** Reissue the request with a name that meets the limits for the type of data set or file.

**System programmer response:** No action is needed.

**Module:** EZAFTPCG, EZAFTPCP

---

**EZA2551W**  *Unknown HOME directory for filename name*

**Explanation:** A command was issued that required the client to resolve the user’s HOME directory name (for example, a file name was entered that began with the directory notation ~/), but the client was unable to determine the user’s HOME directory.

**System action:** The command is rejected. FTP continues.

**Operator response:** Verify that the OMVS user ID has a HOME directory. If necessary, define a HOME directory for the user ID.

**System programmer response:** No action is needed.

**Module:** EZAFTPCG, EZAFTPCP

---

**EZA2552W**  *Nonexistent GDG data set dsname*

**Explanation:** The relative generation number for the Generation Data Group (GDG) data set is invalid. The number should be a negative integer, a positive integer (for a store command only), or a 0, enclosed in parentheses.

**System action:** FTP continues.

**Operator response:** Reissue the command with a valid relative number for the data set.

**System programmer response:** No action is needed.

**Module:** EZAFTPCG, EZAFTPCP

---

**EZA2553W**  *Unable to send dsname*

**Explanation:** The named data set is for a generation data group (GDG) that does not exist.

**System action:** The data set is not sent. FTP continues.

**Operator response:** Ensure that the GDG exists.
EZA2554W  •  EZA2558W

System programmer response:  No action is needed.
Module:  EZAFTPCG, EZAFTPCP

EZA2554W  cmd fails: filename is a directory.
Explanation:  The file that is named is a directory.  The get, put, and append commands do not support file transfer for a directory file.
System action:  The command is rejected. FTP continues.
Operator response:  Reissue the command specifying a name of a file that is not a directory.
System programmer response:  No action is needed.
Module:  EZAFTPCG, EZAFTPCP

EZA2555W  cmd fails: filename is a pipe or FIFO.
Explanation:  The file that is named is a pipe or FIFO special file. The file transfer subcommands do not support files of this type.
System action:  The command is rejected. FTP continues.
Operator response:  Reissue the command specifying a name of a file that is not a pipe or FIFO special file.
System programmer response:  No action is needed.
Module:  EZAFTPCG, EZAFTPCP

EZA2556W  cmd fails: filename is a character special file.
Explanation:  The file that is named is a character special file. The file transfer subcommands do not support files of this type.
System action:  The command is rejected. FTP continues.
Operator response:  Reissue the command specifying a name of a file that is not a character special file.
System programmer response:  No action is needed.
Module:  EZAFTPCG, EZAFTPCP

EZA2557W  cmd fails: filename is an unknown type.
Explanation:  The file that is named is an unknown type. The file transfer subcommands do not support files of this type.
System action:  The command is rejected. FTP continues.
Operator response:  Reissue the command specifying a name of a file that is not an unknown file type.
System programmer response:  No action is needed.
Module:  EZAFTPCG, EZAFTPCP

EZA2558W  cmd fails: filename does not exist.
Explanation:  The file that is named does not exist. The put and append subcommands require that the file exists.
System action:  The command is rejected. FTP continues.
Operator response:  Reissue the command specifying a name of a file exists.
System programmer response:  No action is needed.
Module:  EZAFTPCP
EZA2560W Volume is not ready and automatic tape mounts are not allowed.

Explanation: A request to read from a data set or write to a data set on a tape volume was received. The tape volume is not mounted and you have requested NoAutoTapeMount.

System action: The request is not performed.

Operator response: Request that the tape be mounted by the operator and then reissue the request. Also, you can code the FTPDATA statement AUTOTAPEMOUNT to allow automatic tape mounts to occur.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

EZA2561W Error allocating tape data set dname

Explanation: The client attempted to allocate to a data set on a tape volume. The dynamic allocation was unsuccessful.

System action: The command is rejected. FTP continues.

Operator response: No action is needed.

System programmer response: Examine the trace and look for trace messages with the tag alloc_tape. These trace messages provide the reason codes for the dynamic allocation error.

Module: EZAFTPCG, EZAFTPCP

EZA2562W Allocation of dsn failed (error code s99error info code s99info S99ERSN s99ersn)

Explanation: The client attempted to allocate to a data set on a DASD or tape volume. The dynamic allocation was unsuccessful.

In the message text:

dsn
The data set name.

s99error
The hexadecimal Error Reason Code from an SVC 99 request or a DYNALLOC request. See the information about interpreting Error Reason Codes from DYNALLOC in z/OS MVS Programming: Authorized Assembler Services Guide.

s99info
The hexadecimal Information Reason Code from an SVC 99 request. See the information about Interpreting Information Reason Codes from DYNALLOC in z/OS MVS Programming: Authorized Assembler Services Guide.

s99ersn
The hexadecimal SMS Reason Code from SVC 99 request. See the information about S99RBX fields in z/OS MVS Programming: Authorized Assembler Services Guide for more information about SMS Reason Codes.

Examples: Not applicable.

System action: The command is rejected. FTP continues.

Operator response: No action is needed.

System programmer response: Examine the trace and look for trace messages with the tag alloc_dasd. These trace messages provide the reason codes for the dynamic allocation error.

Problem determination: Look up the S99ERROR, S99INFO, and S99ERSN codes information as described in the explanation and take the actions recommended there. If the FTP client trace was enabled at the time of failure, and at least option FSC was enabled, you might be able to obtain more information by inspecting trace output for messages with the tag alloc_dasd. See the information about diagnosing FTP client problems with tracing in z/OS Communications Server: IP Diagnosis Guide for more information about using traces.

Source: z/OS Communications Server TCP/IP: FTP
Module: ezaftpc, ezaftpcg, ezaftpcp
Routing code: *
Descriptor code: *
Automation: Not applicable.

EZA2563W Data set dsname used exclusively by someone else.
Explanation: A data transfer (get, put or append) of a partitioned data set (PDS) was requested and the member requested is currently in use.
System action: The operation is not performed.
Operator response: Try the operation later when no one else is using the member of the PDS.
System programmer response: No action is needed.
Module: EZAFTPCG, EZAFTPCP

EZA2564W Open of dsname failed.
Explanation: The data set cannot be opened.
System action: The requested operation is terminated. FTP continues.
Operator response: Rerun the FTP with tracing turned on. Contact the system programmer.
System programmer response: Look at the trace and find one of the following trace entry sequences:
- seq_open_file: xyz -> ...
  seq_open_file: failed (aa): bbbb

  The first line describes open mode with values x, y, and z that are defined as follows:
  x = I --> Input
  x = O --> Output
  y = S --> Stream I/O
  y = R --> Record I/O
  z = B --> Binary stream
  z = T --> Text stream

  The second line describes the error that occurred. aa is the errno value returned from the fopen of file. bbbb is the text associated with the errno value. The following describe values and text that could be observed:

  (61): Error trying to define file
  The file is already opened.
- seq_open_file: Using BSAM, I, SYS00006, , 29
  0, 0, 0
  seq_open_file: BSMOP returned NULL, rc xxx, reason yyy

  The second line describes the error which occurred on the open. Use the return code (rc) and reason code to determine why the error occurred.

  For return code 80a, reason code 10, or return code 4, FTP was unable to obtain storage to open the data set. Increase the region size for the FTP job or user.
Module: EZAFTPCG, EZAFTPCP

EZA2565W Command fails for dsname. User not authorized.
Explanation: The command was issued to read a data set. The requested data set is protected by a security system such as RACF, and the user is not authorized to read the data set.
System action: The data set is not sent. FTP continues.
EZA2566E  Requested action not taken: invalid REST parameter.

Explanation: A command is being processed as part of a restart of a checkpointed command. Before the command was sent, a REST command was processed and a restart marker was saved. The restart marker is incorrect.

System action: The command is rejected.

Operator response: No action is needed.

System programmer response: Look at the trace to determine the error that occurred when the repositioning was done.

Module: EZAFTPCG, EZAFTPCP

EZA2567E  Record structure requires stream mode (mode S)

Explanation: Record structure transfers require the stream transmission mode (mode S). No other transmission mode is supported for record structure file transfers.

System action: No files are transferred.

Operator response: Use the STREAM command or MODE S command to change the transmission mode to stream mode. For more information about these commands, see the z/OS Communications Server: IP User’s Guide and z/OS Communications Server: IP Commands.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

EZA2568E  Transfer aborted: attempt to connect to db2name failed (sql_rc)

Explanation: FTP attempted to process a SQL request, but was unable to connect to the DB2 subsystem named db2name. (sql_rc) is the SQL return code. See DB2 Messages and Codes for a complete description of SQL return codes.

System action: No data is sent. FTP continues.

Operator response: If the DB2 subsystem name (db2name) is incorrect, issue a 'locsite db2name' command for the correct DB2 subsystem name, and resubmit the SQL query. If the DB2 subsystem name is correct, contact the system programmer for FTP.

System programmer response: Ensure that the DB2 subsystem has been started.

Module: EZAFTPCP

EZA2569E  Transfer aborted: SQL not available. Attempt to open plan plan_name failed (sql_rc)

Explanation: FTP attempted to process a SQL request, but was unable to open the FTP DB2 subsystem plan named plan_name. (sql_rc) is the SQL return code. See DB2 Messages and Codes for a complete description of SQL return codes.

System action: No data is sent. FTP continues.

Operator response: If FTP SQL support should be available, contact the system programmer for FTP. If a SQL query was not intended, issue locsite filetype= command to change the file type from SQL to SEQ before the next FTP put command.

System programmer response: Ensure that a BIND was done for plan plan_name and that execute authorization was granted for the plan.

If you used a plan name other than EZAFTPMQ for the EZAFTPMQ DBRM, your FTP.DATA file must contain a DB2PLAN statement to specify the plan name that the FTP client is to use.
EZA2570E  Transfer aborted: SQL PREPARE/DESCRIBE failure
Explanation: DB2 encountered an error while processing a SQL statement submitted through FTP. The FTP output file contains the error message from DB2.
System action: FTP continues.
Operator response: Correct the error indicated in the output file, and resubmit the SQL request.
System programmer response: No action is needed.
Module: EZAFTPCP

EZA2571E  Transfer aborted: SQL CURSOR DECLARE failure
Explanation: DB2 encountered an error while processing a SQL statement submitted through FTP. The FTP output file contains the error message from DB2.
System action: FTP continues.
Operator response: If possible, correct the error indicated in the output file and resubmit the SQL request. Otherwise, contact the system programmer for FTP.
System programmer response: Correct the error indicated by the message contained in the output file. For a detailed explanation of DB2 error codes, see DB2 Messages and Codes.
Module: EZAFTPCP

EZA2572E  Transfer aborted: SQL CURSOR OPEN failure
Explanation: DB2 encountered an error while processing a SQL statement submitted through FTP. The FTP output file contains the error message from DB2.
System action: FTP continues.
Operator response: If possible, correct the error indicated in the output file and resubmit the SQL request. Otherwise, contact the system programmer for FTP.
System programmer response: Correct the error indicated by the message contained in the output file. For detailed explanation of DB2 error codes, see DB2 Messages and Codes.
Module: EZAFTPCP

EZA2573E  Transfer aborted: unsupported SQL statement
Explanation: FTP retrieved a file (or data set) while the local filetype was SQL, but the file contains an SQL statement that is not supported by FTP.
System action: The PUT command is rejected.
Operator response: If an SQL query was intended, issue the PUT command for a file that contains an SQL SELECT statement. If an SQL query was not intended, issue a site filetype= command to change the current setting of filetype.
System programmer response: No action is needed.
Module: EZAFTPCP

EZA2574E  Transfer aborted: SQL FETCH error
Explanation: A SQL query was submitted through FTP, but DB2 has encountered an error retrieving the data. Data retrieval for this query is discontinued. Data in the output file may be incomplete. code indicates the reason for the failure.

(code) is the SQL return code. See DB2 Messages and Codes for a complete description of SQL return codes.
System action: FTP continues.
Operator response: Resubmit the query. If the problem persists, contact the system programmer for FTP.

System programmer response: Correct the problem described in (sql_rc). See [DB2 Messages and Codes](#) for a complete description of SQL return codes.

Module: EZAFTPCP

---

EZA2575E Transfer aborted: insufficient storage to process SQL request

Explanation: A SQL query was being attempted through FTP, but there is not enough system storage available for FTP to complete the request.

System action: No data is sent. FTP continues.

Operator response: Try again. If the problem persists, contact the system programmer for the FTP client.

System programmer response: Determine why FTP is unable to acquire dynamic storage and correct the problem.

Module: EZAFTPCP

---

EZA2576E Transfer aborted: internal error while processing SQL request

Explanation: FTP has encountered an internal error while processing a SQL request. No data is sent.

System action: FTP continues.

Operator response: Try again. If the problem persists, contact the system programmer for FTP.

System programmer response: If the problem occurs repeatedly, use the client’s debug facility to get a trace of the FTP operation and contact the IBM Support Center.

Module: EZAFTPCP

---

EZA2578I Local directory name set to hierarchical file directory

Explanation: The name of the local directory is a hierarchical file directory. Files are grouped in a directory, which is a special kind of file consisting of the names of a set of files and other information about them.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCP

Module: EZAFTPCL

---

EZA2580E cmd cmd failed: error_description

Explanation: The FTP user issued the command cmd. While processing the command, the FTP client issued a C runtime library function that did not complete successfully.

error_description describes error.

System action: The command cmd is not executed.

Operator response: Reissue the command. If the problem persists, contact the system programmer with the error message.

System programmer response: Correct the error indicated by error_description.

Module: EZAFTPCD

---

EZA2581I HFS directory directory is the current working directory

Explanation: The user has issued the LCD command to change the current working directory. The LCD command has completed successfully and has changed the current working directory to the z/OS UNIX file system (HFS) directory indicated by the directory value.
EZA2582E · EZA2587E

System action: The current working directory is changed to the new directory.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCD

EZA2582E  * cmd failed: Unknown HOME directory

Explanation: A command was issued that required the client to resolve the user's HOME directory name (for example, a pathname was entered that began with the directory notation ~/) but the client was unable to determine the user's HOME directory.
System action: The command is rejected. FTP continues.
Operator response: Verify that the OMVS user ID has a HOME directory. If necessary, define a HOME directory for the user ID.
System programmer response: No action is needed.
Module: EZAFTPCD

---

EZA2583I  Working Directory for GET is NULL Device

Explanation: The user has entered the LCD *DEV.NULL command to change the current working directory of the client to the NULL directory. When the current working directory is the NULL directory, data transferred to the client from the server (GET or RETR), will not be stored at the client, but will be received and discarded. The NULL directory is used only for data transferred from the server to the client. Data transferred from the client to the server (PUT) will continue to use the working directory which was in effect prior to the issuance of the LCD *DEV.NULL command. The directory which will be used for the PUT command is described in the message that follows this one:
- EZA2584I for PUT is “directory” partitioned data set
- EZA2585I for PUT is the z/OS UNIX file system directory directory
- EZA2586I for PUT is “directory” name prefix.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCD, EZAFTPCL

---

EZA2584I  for PUT is “directory” partitioned data set.
Explanation: This message is part of a group. See EZA2583I for message group information.

---

EZA2585I  for PUT is HFS directory directory
Explanation: This message is part of a group. See EZA2583I for message group information.

---

EZA2586I  for PUT is “directory” name prefix.
Explanation: This message is part of a group. See EZA2583I for message group information.

---

EZA2587E  LCD ./ only valid for HFS directories
Explanation: The LCD command was entered with a pathname of ./ to back up one directory level, but the current working directory was either an MVS partitioned data set, or an MVS high level qualifier. The “./” notation is only valid when the current working directory is a z/OS UNIX file system directory.
System action: The LCD command is rejected.
Operator response: Reissue the LCD command with the corrected pathname.
System programmer response: No action is needed.
Module: EZAFTPCD

EZA2588E Unable to connect to alternate TCPIP name
Explanation: Error returned from setibmopt routine.
System action: None.
Operator response: If the TCPIP start parameter is used, check the spelling of the parameter. If the spelling is correct, check that the stackname specified in the start parameter matches the TCPIPJOBNAME specified in the TCPIPDATA configuration file. For more information about the TCPIPDATA configuration file, see the z/OS Communications Server: IP Configuration Reference.
System programmer response: No action is needed.

Module: EZAFTPCY

EZA2589E Connection to server interrupted or timed out. operation
Explanation: The FTP server is no longer responding to the FTP client or the user has caused an interrupt (for example, Cntrl-c).
operation is the operation that was in progress at the time of the interruption. Possible values are:

Initial connection
During initial connection to a non-IPv6 server.
Initial IPv6 connection
During initial connection to an IPv6 server.
Waiting for data connection
Waiting for the server to establish the data connection.
Sending a command
Sending a command to the server on the control connection.
Sending ABORT command
Sending the ABORT command to the server.
Receiving data
Receiving data on the data connection.
Sending data
Sending data on the data connection.
Waiting for reply
Waiting for a reply from the server.
Sending command to SOCKS server
Sending a command to a SOCKS server.
Waiting for reply from SOCKS server
Waiting for a reply from a SOCKS server.
Establishing data connection through SOCKS server
While trying to establish a data connection through a SOCKS server.
Initial connection to SOCKS server
During initial connection to a SOCKS server.

System action: The current subcommand is ended.
Operator response: The server may not be responding because of traffic in the network. In this case a retry may be successful. The server may have crashed, in which case it will need to be restarted before attempting communications again. A complete description of each operation’s relevant client timers and recommended steps for diagnosis can be found in the section on diagnosing FTP transfer failures with EZA2589E in z/OS Communications Server: IP Diagnosis Guide If the problem continues, contact the system programmer.

System programmer response: Possible sources of the failure include the client, server, network, firewall, and configuration errors. See the section on diagnosing FTP transfer failures with EZA2589E in z/OS Communications Server: IP Diagnosis Guide for recommended actions to diagnose the failure.
Module: EZAFTPSC

EZA2590E  function error from location - error

Explanation: The FTP client has issued a socket call and received an error return code.

function is the C library function that failed and returned an error.

location is the location in the FTP client.

erorr is the C run-time library error message for the failure. For more information, see z/OS Language Environment Run-Time Messages.

System action: Communications are interrupted. The current operation is ended.

Operator response: Retry the operation. If the problem persists, contact the system programmer.

System programmer response: If the problem persists, report the contents of the message to the IBM Software Support center.

Module: EZAFTPSC

EZA2591I Waiting for recall of “dsname”

Explanation: You issued a subcommand which referenced the data set dsname, which has been migrated.

System action: The client attempts to recall the data set.

Operator response: No action is needed.

System programmer response: If you do not want the FTP client to recall migrated data sets, use the LOCSIte subcommand to set the autorecall mode to noautorecall. See z/OS Communications Server: IP User’s Guide and Commands for information about the LOCSIte subcommand.

Module: EZAFTPCD

EZA2592I Waiting for mount for “dsname”

Explanation: You issued a subcommand which references dsname, an existing data set which is cataloged on a volume which is not mounted. The client is attempting to mount the volume so it can complete the request.

System action: The client waits for the volume to be mounted.

Operator response: If you do not want the FTP client to mount unmounted volumes, use the LOCSIte subcommand to set automount mode to noautomount. See z/OS Communications Server: IP User’s Guide and Commands for information about the LOCSIte subcommand.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2593I HFS directory “directory” created.

Explanation: The indicated the z/OS UNIX file system (HFS) directory has been created.

System action: The directory is created. FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2594E LMKDIR failed. Unit=unit_name invalid for PDS.

Explanation: The LMKDIR command was issued to create a new PDS, but the current setting of the LOCSITE UNIT parameter was not valid for a PDS (for example, the LOCSITE UNIT was set to TAPE and a PDS cannot be allocated on a tape).

System action: The LMKDIR command is rejected.
Operator response: Issue the LOCSITE command with the UNIT parameter to change the setting of the UNIT parameter to a unit that is valid for a PDS, then reissue the LMKDIR command.

System programmer response: No action is needed.

Module: EZAFTPCD

---

EZA2595E  LMKDIR failed. DCBDsn data set dcbdsn_name has a recfm of recfm which is invalid for a PDS.

Explanation: The LMKDIR command was issued to create a new PDS. The LOCSITE DCBDsn parameter was in effect specifying that all new data sets be created with the same characteristics as the data set dcbdsn_name. However, the model data set dcbdsn_name had a record format recfm that is not valid for a PDS. Record formats FBS, VBS, and VS are not valid record formats for a PDS.

System action: The LMKDIR command is rejected.

Operator response: Use the LOCSITE command to either specify a different DCBDsn data set, or to specify the data set characteristics without using the DCBDsn model data set parameter. Or use a combination of DCBDsn and RECFM LOCSITE parameters to use all of the characteristics of the model DCBDsn data set except the record format, which will be overridden by the RECFM parameter. After changing the appropriate LOCSITE parameters, reissue the LMKDIR command.

System programmer response: No action is needed.

Module: EZAFTPCD

---

EZA2596E  LMKDIR fails: new_directory. User not authorized

Explanation: The LMKDIR command was issued to create the new PDS new_directory. However, some part of the high-level qualifiers for new_directory were protected by a security system, such as RACF, and the user did not have sufficient authority to create a data set by this name.

System action: The LMKDIR command is rejected.

Operator response: Contact the security administrator to get the necessary authorization for creating the data set.

System programmer response: No action is needed.

Module: EZAFTPCD

---

EZA2597E  LMKDIR failed. Volume=serial is a tape and is invalid for a PDS.

Explanation: The LMKDIR command was issued to create a new PDS. The LOCSITE VOLUME parameter was in effect, specifying that all new data sets be allocated on volume serial. serial was determined to be a tape, and partitioned data sets cannot be allocated to tape.

System action: The LMKDIR command is rejected.

Operator response: Issue the LOCSITE VOLUME command to change or reset the volume serial for new data sets to a direct access volume, then reissue the LMKDIR command.

System programmer response: No action is needed.

Module: EZAFTPCD

---

EZA2598E  LMKDIR failed. Recfm recfm is invalid for a PDS.

Explanation: The LMKDIR command was issued to create a new PDS. The LOCSITE RECFM parameter had a value of recfm, which is not a valid record format for a PDS.

System action: The LMKDIR command is rejected.

Operator response: Issue the LOCSITE RECFM command to change the setting of RECFM to a record format that is valid for a PDS, then reissue the LMKDIR command. Incorrect record formats are FBS, VBS, and VS).

System programmer response: No action is needed.

Module: EZAFTPCD
**EZA2599W • EZA2604I**

**EZA2599W**  
ftpd_data file, line line_number: NCP obsolete: parameter not required.

**Explanation:** While processing the FTP.DATA file, the FTP client encountered the NCP keyword. This keyword is no longer required. Access method buffer information is computed internally.

**Operator response:** No action is needed.

**System programmer response:** If the FTP.DATA file is used only by the FTP server and client for z/OS UNIX System Services MVS, and is not shared with another server or client that needs the keyword, remove the keyword from the FTP.DATA file. See the [z/OS Communications Server: IP Configuration Reference](https://publib.boulder.ibm.com/infocenter/zos/v1r11/index.jsp?topic=/com.ibm.zos.eza.doc/index.html) for information on the parameters of the FTP.DATA file.

**Module:** EZAFTPEP

---

**EZA2600E**  
Command command name is not a valid proxy command.

**Explanation:** The indicated command was not a valid command that can be sent to the proxy server. For example, local client commands cannot be sent to the proxy server.

**System action:** The command is rejected.

**Operator response:** Reissue the command without the proxy prefix, or enter a valid command for the proxy server.

**System programmer response:** No action is needed.

**Module:** EZAFTPPC

---

**EZA2601W**  
NOWRTAPEFastio already specified. WRTAPEFastio ignored.

**Explanation:** The NOWRTAPEFastio parameter was already specified on this LOCSITE subcommand. The WRTAPEFastio parameter is ignored.

**System action:** FTP Continues

**Operator response:** Issue the LOCSITE subcommand again with the desired setting.

**System programmer response:** No action is needed.

---

**EZA2602E**  
Error reading the file

**Explanation:** The local file could not be read.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCP

---

**EZA2603E**  
Error sending the file

**Explanation:** The local file could not be sent.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCP

---

**EZA2604I**  
DSORG=DA requires structure: FILE, mode: STREAM, and transfer type: IMAGE.

**Explanation:** A command was issued that required the server to transfer an MVS data set which had a dsorg of DA (Direct Access). Data sets with a dsorg of DA can only be transferred in stream mode with the transfer type set to image (binary).

**System action:** The command is rejected. FTP continues.
Operator response: Set the structure to FILE, the mode to STREAM, the transfer type to IMAGE, and reissue the command.

System programmer response: No action is needed.

EZA2605W Local data set is full (value)
Explanation: FTP was unable to write to the local data set because it is full. One of the following explicit values was received when the write failed:
19 An unrecoverable error has permanently marked the data set in error.
33 An attempt was made to extend a non-extendable file.
65 A write system error occurred.
System action: FTP continues.
Operator response: Request a larger space allocation for the local data set and try the transfer again.
System programmer response: No action is needed.
Module: EZAFTPCG

EZA2606W File I/O error value
Explanation: FTP experienced a file I/O error when reading from or writing to a data set or file.
value is an unrecognized error value from the file I/O request.
System action: FTP continues.
Operator response: Notify the system programmer about the error.
System programmer response: Activate the debug option and reenter the request. Contact the IBM Software Support Center.
Module: EZAFTPCG

EZA2607W Transfer aborted due to receive error (file_status)
Explanation: The transfer of data ended because of an error receiving data from the data connection.
file_status is an FTP error number. The message immediately following this one gives the complete description of the error.
System action: FTP continues.
Operator response: Notify the system programmer about the error.
System programmer response: Correct the error described in file_status.
Module: EZAFTPCG

EZA2617W parameter2 already specified. parameter1 ignored.
Explanation: The LOCSITE subcommand parameters parameter1 and parameter2 are mutually exclusive and cannot be specified on the same LOCSITE subcommand. parameter2 has already been encountered on this LOCSITE subcommand, causing parameter1 to be rejected.
System action: parameter2 is used instead of parameter1. FTP continues.
System programmer response: No action is needed.
Module: EZAFTPCG
EZA2624W  WRTAPEFastio already specified. NOWRTAPEFastio ignored.

Explanation: The WRTAPEFastio parameter was already specified on this LOCSITE subcommand. The NOWRTAPEFastio parameter is ignored.

System action: FTP continues.

Operator response: Issue the LOCSITE subcommand again with the desired setting.

System programmer response: No action is needed.

EZA2625W  Invalid format data set name "name". Dbdsn parameter ignored.

Explanation: The data set name specified for the DCbdsn parameter of the LOCSITE command, which is used to specify the name of the data set to be used as a model for allocation of new data sets, has an incorrect format. The data set name must conform to MVS data set naming conventions.

System action: The DCbdsn parameter is ignored. FTP continues.

System programmer response: Assist the user as necessary.

EZA2627I  Internal debug option value enabled

Explanation: The internal debug options are set on. If value is 1, regular tracing is on. If value is 2, detailed tracing is on.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

EZA2628W  parm parameter's value (value) must be between low value and high value. The parameter is ignored.

Explanation: The LOCSITE command was specified with the parm parameter, but the value, value, specified for the parm parameter was outside the valid range.

System action: The parm parameter is ignored.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2631W  CHKptint parameter (value) is larger than a 4 byte integer. Chkptint ignored.

Explanation: The value of the CHKptint parameter, value, was larger than the maximum value allowed for a 4 byte integer.

System action: The value in error is ignored.

System programmer response: No action is needed.
Module: EZAFTPCK

EZA2632I  Data set name too long. Use MVS or HFS naming conventions.

Explanation: A command was entered with a data set name that was longer than the MVS maximum of 44 characters or the z/OS UNIX file system (HFS) maximum of 1023 characters.

System action: The command is rejected.

Operator response: Reissue the command with the correct data set or z/OS UNIX file name.

System programmer response: No action is needed.

Module: EZAFTPMR

EZA2633I  File name too long. Use HFS naming conventions.

Explanation: The command was entered with a file name that was longer than the z/OS UNIX file system (HFS) maximum of 1023 characters.

System action: The command is rejected.

Operator response: Reissue the command with the correct z/OS UNIX file name.

System programmer response: No action is needed.

Module: EZAFTPMR

EZA2634I  cmd failed: Unknown HOME directory

Explanation: A command was issued that required FTP to resolve the user’s HOME directory name (for example, a pathname was entered that began with the directory notation ~/) but FTP was unable to determine the user’s HOME directory.

System action: The command is rejected. FTP continues.

Operator response: Verify that the OMVS user ID has a HOME directory. If necessary, define a HOME directory for the user ID.

System programmer response: No action is needed.

Module: EZAFTPMR

EZA2635I  Member name too long. Use MVS naming conventions.

Explanation: The command was entered with a data set name and member name requested, but the member name was longer than the MVS maximum length of 8 characters.

System action: The command is rejected.

Operator response: Reissue the command with the correct member name syntax.

System programmer response: No action is needed.

Module: EZAFTPMR

EZA2636E  TSO Command failed with return code value

Explanation: The TSO command requested completed in error.

System action: The command fails.

Operator response: Correct the command and reissue. If the command is correct but still fails, turn on debug and reissue the command. Give the debug output to the system programmer.

System programmer response: The debug output from the TSO command shows the return code and reason code from the IKJEFTSR service facility routine, which is used to invoke the TSO command from FTP. See z/OS TSO/E Programming Services for a list of return codes and reason codes for the IKJEFTSR service facility routine.

Module: EZAFTPCU
EZA2637I  No data sets found
Explanation:  The command requested a listing of one or more data sets, but FTP could not find any data sets that matched the requested pathname.
System action:  The command is rejected.
Operator response:  Verify that the correct data set name or path was entered.
System programmer response:  No action is needed.
Module:  EZAFTPMR

EZA2638I  error reading PDS directory
Explanation:  The command requested members of a partitioned data set, but FTP was unable to read the directory of the PDS.
System action:  The command is rejected.
Operator response:  Reissue the command. If the problem persists, contact the system programmer.
System programmer response:  Correct the problem with the data set.
Module:  EZAFTPMR

EZA2639I  Qualifier too long. Use MVS naming conventions.
Explanation:  A command was entered with a data set name that contained a qualifier that was longer than the MVS maximum of 8 characters.
System action:  The command is rejected.
Operator response:  Correct the data set name and reissue the command.
System programmer response:  No action is needed.
Module:  EZAFTPMR

EZA2640I  Error allocating storage for list
Explanation:  FTP was not able to allocate the storage necessary to process the command.
System action:  The command is rejected.
Operator response:  Reissue the command. If the problem persists, contact the system programmer.
System programmer response:  FTP might need to be started with a larger region size.
Module:  EZAFTPMR

EZA2641I  Patterns (%) and *) may only be specified in the last qualifier when in directory mode
Explanation:  The command was entered with a pathname that contained the global file-name characters % and *. The global file-name characters were not in the last qualifier of the pathname, and the MVS server was currently in directory mode. The global file-name characters can only be used in the last qualifier when in directory mode.
System action:  The command is rejected.
Operator response:  Either correct the pathname to have the global file-name characters in the last qualifier and reissue the command in directory mode, or issue the LOCSITE/SITE DATASETMODE command to change the server to data set mode and then reissue the command as is.
System programmer response:  No action is needed.
Module:  EZAFTPMR
EZA2643I Unable to obtain data set list
Explanation: A service call was issued to obtain the list of requested data sets from the MVS system, but the service call was unsuccessful.
System action: The command is rejected.
Operator response: Retry the command. If the problem persists, contact the system programmer.
System programmer response: If necessary, re-create the problem with FTP traces turned on. Locate the last occurrence of the trace message pslist: reason code rc from CSI. This trace message will contain the reason code from the service call that was unsuccessful. Determine the cause and correct the problem.
Recommend Trace: UTL
Module: EZAFTPMR

EZA2644I No members found.
Explanation: The command requested members of a partitioned data set, but no members were found in the PDS that matched the requested name.
System action: The command is rejected.
Operator response: Verify that the member name or path was entered correctly.
System programmer response: No action is needed.
Module: EZAFTPMR

EZA2658W parm parameter (value) is not valid. parm ignored.
Explanation: The LOCSITE command was entered with the parm parameter, but the value specified, value, was not a valid value. Valid values for the parm parameter are Catlg and Delete.
System action: The parm parameter is ignored.
Operator response: Reenter the LOCSITE subcommand, specifying the correct value for parm. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2659W parm parameter (value) is not numeric. parm ignored.
Explanation: The LOCSITE command was specified with the parm parameter, but the value, value, specified for the parm parameter was not a numeric value.
System action: The parm parameter is ignored.
Operator response: Reissue the command with a valid value. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2660I Workarea allocation failed.
Explanation: The allocation of the workarea for qdisk failed.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2661W  Restart requires file structure

Explanation: A RESTART command was issued, but the structure is not file structure.

System action: FTP continues.

Operator response: Change the structure to file (issue file or structure f) and reissue the RESTART command.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2662W  NCP parameter obsolete: Parameter ignored.

Explanation: The NCP parameter is obsolete. It is no longer required because values are computed internally.

System action: FTP continues.

Operator response: None required, the parameter is ignored.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2663W  parameter not allowed when user not logged in. parameter ignored.

Explanation: The LOCSITE subcommand was issued with the parameter, but the user was not currently logged on to the server with a valid user ID. The user must first login with a valid user ID and password before issuing the LOCSITE subcommand with the parameter parameter.

System action: FTP continues.

Operator response: Login to the server using the USER and PASS subcommands, then reissue the LOCSITE subcommand with the parameter parameter.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2664W  CHMod invalid syntax. Specify CHMod mode filename. CHMod ignored.

Explanation: The CHMod parameter of the LOCSITE command was entered incorrectly. The correct syntax of the CHMod parameter of the LOCSITE subcommand is LOCSite CHMode mode filename where mode is the new permission bit setting for the file, and filename is the name of the file to change.

System action: The CHMod parameter is ignored.

Operator response: Reissue the LOCSITE command with the correct syntax for the CHmod parameter. See the z/OS Communications Server: IP User's Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User's Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2665W  CHMod invalid filename filename

Explanation: The file name specified by the CHMod parameter of the LOCSITE subcommand was longer than the z/OS UNIX file name maximum of 1023 characters. If the file name operand of the CHMod parameter began with a forward slash (/), then the filename value is the file name operand used “as is”; otherwise, the filename value is the file name operand appended to the current working directory.

filename is the name of the file that is not valid.

System action: The CHMod parameter is ignored.
Operator response: Reissue the LOCSITE command with a valid value specified for the file name on the CHMOD parameter. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2667W CHMod filename is not a valid HFS file. CHMod ignored

Explanation: The file name specified on the CHMod parameter of the LOCSITE subcommand was not an z/OS UNIX (HFS) file. The CHMod parameter is valid only for z/OS UNIX files.

System action: The CHMod parameter is ignored.

Operator response: Reissue the LOCSITE command with a valid value specified for the file name on the CHMod parameter. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2668W CHMod cannot access file filename: error_description

Explanation: The FTP client encountered an error while attempting to obtain the file information for filename. error_description describes the C runtime library error that was encountered while accessing filename.

System action: The CHMod parameter is ignored.

Operator response: Reissue the LOCSITE command with a valid value specified for the file name on the CHMod parameter. If the problem persists, contact the system programmer.

System programmer response: If necessary, correct the error indicated by error_description.

Module: EZAFTPCK

EZA2669W CHMod failed: error_description

Explanation: The FTP client encountered an error while attempting to change the permission bits of the file. error_description describes the C runtime library error that was returned in response to the chmod() request.

System action: The CHMod parameter is ignored.

Operator response: Contact the system programmer.

System programmer response: Correct the error indicated by error_description.

Module: EZAFTPCK

EZA2670W CHMod mode value invalid. Specify mode as a 1-3 digit octal value, or as {u|g|o|a}{=|+|-}{r|w|x|rw|rx|rwrx}. CHMod ignored

Explanation: The LOCSITE command was entered with the CHMod parameter, but the mode operand of the CHMod parameter was incorrect. The mode operand specifies the permission bit settings of the file, and should be expressed as either a 1-3 digit octal number (for example, 666 for permission setting rw-rw-rw-), or as a mnemonic indicating the changed bits, (for example a+x to turn on the execute bit for user, group, and other).

System action: The CHMod parameter is ignored.

Operator response: Reenter the LOCSITE subcommand, specifying the correct value for the mode operand. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.
EZA2671W  CHMod parameters missing. Specify CHMod mode filename. CHMod ignored

Explanation: The LOCSITE subcommand was entered with the CHMod parameter, but the syntax of the CHMod parameter was incorrect. One or more of the operands required on the CHMod parameter were missing. The syntax of the CHMod parameter is LOCSITE CHMod mode filename.

System action: The CHMod parameter is ignored.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2672W  UMask invalid syntax. Specify UMask umask_value. UMask ignored

Explanation: The LOCSITE command was issued with the UMask parameter, but the syntax of the UMask parameter was incorrect. The correct syntax is LOCSITE UMask umask_value, where umask_value is a 3 character octal number representing file permission bits.

System action: The UMask parameter is ignored. FTP continues.

System programmer response: Assist the user as necessary.

Module: EZAFTPCK

EZA2673I  parameter parameter not allowed when the control connection is not secured

Explanation: You entered an FTP client subcommand during a secure session while the control connection was not secured. The subcommand parameter is not allowed while the control connection is not secured.

In the message text:

    parameter

    The subcommand parameter that is not allowed when the control connection is not secured.

    If the subcommand parameter is TLSCLEVEL=DRAFT, the user is trying to transition the client to the Internet draft level of RFC 4217, On Securing FTP with TLS. However, the Internet draft level of RFC 4217 implemented by z/OS FTP does not support a TLS-secured session with an unsecured control connection.

Examples:

Command: ccc
>>>CCC
200 CCC command successful
losite TLSCLEVEL=DRAFT NOFWFRIENDLY
EZA2673I parameter TLSCLEVEL=DRAFT is not allowed when control connection is not secured

System action: FTP ignores the subcommand parameter.

Operator response: No action is needed.

User response: If you are trying to switch the client from using TLSCLEVEL=RFC4217 to using TLSCLEVEL=DRAFT, use the AUth subcommand with the TLS parameter to secure the control connection, and try switching the client again. See the information about the AUth subcommand information in [z/OS Communications Server: IP User's Guide and Commands].

System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: FTP
Module: Not applicable.
Routing code: 10
Descriptor code: 12

EZA2674W  UMask value invalid. Specify UMask value as 1 - 3 octal digits
Explanation: The LOCSITE command was issued with the UMask parameter, but the value specified for the UMask parameter was invalid. The value specified for UMask should be a 1 to 3 character octal number representing file permission bits.
System action: The UMask parameter is ignored. FTP continues.
System programmer response: Assist the user as necessary.
Module: EZAFTPCK

EZA2675W  UMask value missing. Specify UMask value as 1 - 3 octal digits
Explanation: The LOCSITE command was issued with the UMask parameter, but no value was specified for the UMask parameter. The value specified for UMask should be a 1 to 3 character octal number representing file permission bits.
System action: The UMask parameter is ignored. FTP continues.
System programmer response: Assist the user as necessary.
Module: EZAFTPCK

EZA2676I  Connected to host, Port:FTP control (21), logged in
Explanation: This message is issued in response to the LOCSTAT subcommand. The host is the remote host to which you are connected. The port is the default FTP control port, 21, on the remote host.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2677I  Connected to host, Port:FTP control (21), not logged in
Explanation: This message is issued in response to the LOCSTAT subcommand. The host is the remote host to which you are connected. The port is the default FTP control port, 21, on the remote host.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK
EZA2689I  Prompting: prompt, Globbing: glob

Explanation:  This message is issued in response to the LOCSTAT subcommand. The prompt value indicates whether the PROMPT setting is on or off. On indicates that interactive prompting on multiple commands is on. The glob value indicates whether the GLOB setting is on or off. On indicates that character expansion of local file names is on.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPCK

EZA2689I  Invalid response to prompt. Try again.

Explanation:  You entered an invalid response to an interactive prompt.

System action:  FTP continues.

Operator response:  Enter one of the valid responses that are displayed in the prompt message.

System programmer response:  No action is needed.

Module:  EZAFTPCA

EZA2691I  Globbing on

Explanation:  File-name parameters for the multiple commands (mdelete, mget, and mput) are expanded. That is, the asterisk is used as a wildcard.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPCL

EZA2692I  Globbing off

Explanation:  File name parameters for the multiple subcommands (mdelete, mget, and mput) are not expanded. That is, the asterisk (*) is not used as a wildcard.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPCL

EZA2693I  Interactive mode is on

Explanation:  FTP subcommands will prompt for verification before deleting, retrieving, or sending multiple files during the mdelete, mget, and mput subcommands. One of the following four values must be entered for each prompt:

Y (Yes)    execute the subcommand
N (No)     do not execute the subcommand
Q (Quit)   quit processing the subcommand immediately
S (Stop prompting)    do not prompt anymore for this subcommand.

Note:  Pressing the enter key with no value is not a valid response.

System action:  FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA2694I Interactive mode is off
Explanation: FTP commands will not prompt for verification before deleting, retrieving, or sending multiple files during the mdelete, mget, and mput commands.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA2695I mdelete filename (Yes | No | Quit | Stop prompting)?
Explanation: The prompt is displayed for each file before it is deleted when the mdelete subcommand is being processed.
filename is the name of the file or data set that FTP is about to delete.
You must enter one of the following values before processing continues:
Y (Yes) Delete the file or data set indicated by filename. FTP will prompt you with a new file name if it finds another data set or file to delete.
N (No) Do not delete the file or data set indicated by filename. FTP will prompt you with a new file name if it finds another data set or file to delete.
Q (Quit) Quit processing the subcommand immediately (do not delete any more files or data sets).
S (Stop prompting) Delete filename. Continue deleting data sets or files, but stop prompting before each file or data set deletion.
Notes:
1. Only the first character of the entered value is interrogated. That is, entering yyyyy has the same effect as entering yes.
2. Pressing the enter key with no value is not a valid response.
3. If you do not want to see the prompt the next time you issue the mdelete subcommand, use the prompt subcommand to toggle the interactive mode to off.
System action: FTP waits for your reply. The subsequent action depends on how you reply to the prompt.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCA

EZA2696I mget filename (Yes | No | Quit | Stop prompting)?
Explanation: The prompt is displayed for each file before it is retrieved when the mget subcommand is being processed.
Filename is the name of the file or data set FTP is about to retrieve.
You must enter one of the following values before processing continues:
Y (Yes) Retrieve filename. FTP will prompt you with another filename if it finds another file or data set to retrieve.
N (No) Do not retrieve filename. FTP will prompt you with another filename if it finds another file or data set to retrieve.
Q (Quit)
Quit processing the subcommand immediately (do not retrieve any more files or data sets).

S (Stop prompting)
Retrieve filename. Continue retrieving files or data sets, but do not prompt before retrieving each file.

Notes:
1. Only the first character of the entered value is interrogated. That is, entering yyyyy has the same effect as entering yes.
2. Pressing the enter key with no value is not a valid response.
3. If you do not want to see the prompt the next time you issue the mget subcommand, use the prompt subcommand to toggle the interactive mode to off.

System action: FTP waits for your reply. The subsequent action depends on how you reply to the prompt.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCA

EZA2697I  Mput filename(Yes | No | Quit | Stop prompting)?
Explanation: The prompt is displayed for each file before it is sent when the mput command is being processed.
filename is the name of the file or data set that FTP is about to send to the server.

You must enter one of the following values before processing continues:
Y (Yes) Send filename. FTP will prompt you with another filename if it finds another file or data set to send.
N (No) Do not send filename. FTP will prompt you with another filename if it finds another file or data set to send.
Q (Quit) Quit processing the subcommand immediately (do not send any more files or data sets).
S (Stop prompting) Send filename. Continue sending files or data sets to the server, but do not prompt before sending each file.

Notes:
1. Only the first character of the entered value is interrogated. That is, entering yyyyy has the same effect as entering yes.
2. Pressing the enter key with no value is not a valid response.
3. If you do not want to see the prompt the next time you issue the mput subcommand, use the prompt subcommand to toggle the interactive mode to off.

System action: FTP waits for your reply. The subsequent action depends on how you reply to the prompt.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCA

EZA2698I  Proxy connection to host, Port: port, logged in
Explanation: This message is issued in response to the LOCSTAT subcommand. A proxy connection to a remote host exists. The host is the remote host to which you are connected. The port is the port number of the remote host.
This message is only displayed if a proxy connection exists.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

126  z/OS V1R11.0 Comm Svr: IP Messages Volume 1 (EZA)
EZA2699I  Proxy connection to host, Port: port, not logged in
Explanation: This message is issued in response to the LOCSTAT subcommand. A proxy connection to a remote host exists. The host is the remote host to which you are connected. The port is the port number of the remote host. This message is only displayed if a proxy connection exists.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2700I  Proxy connection to host, Port:FTP control (21), logged in
Explanation: This message is issued in response to the LOCSTAT subcommand. A proxy connection to a remote host exists. The host is the remote host to which you are connected. The port is the default FTP control port, 21, on the remote host. This message is only displayed if a proxy connection exists.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2701I  Connected to host, Port:FTP control (21), not logged in
Explanation: This message is issued in response to the LOCSTAT subcommand. A proxy connection to a remote host exists. The host is the remote host to which you are connected. The port is the default FTP control port, 21, on the remote host. This message is only displayed if a proxy connection exists.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2702I  Proxy Local Port: port
Explanation: This message is issued in response to the LOCSTAT subcommand. The indicated port is the port number of the local host for the proxy connection. This message is only displayed if a proxy connection exists.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2703I  Valid proxy commands are:
Explanation: This message is issued in response to the HELP PROXY subcommand. Following it are a list of commands which are valid on the PROXY subcommand.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
EZA2704I • EZA2708E

EZA2704I  For more information about proxy commands, say ‘HELP ALL PROXY’

Explanation:  This message provides information about how to request help for PROXY commands using the HELP command. This message is issued in response to a HELP PROXY request.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPCL

EZA2705E  Command not available. Unable to load Japanese translation tables in filename; return code: code

Explanation:  The FTP client encountered an error while attempting to load the indicated translation table. Possible return codes are:

1  No storage for the translation table
2  Unable to find the translation table header
3  Error reading the file

System action:  FTP continues.

Operator response:  Notify the system programmer of the error.

System programmer response:  Respond as indicated by the return code displayed in the message.

Module:  EZAFTPNC

EZA2706E  Command not available. Unable to access Japanese translation tables.

Explanation:  The FTP client cannot open the indicated translation table.

System action:  FTP continues.

Operator response:  Notify the system programmer of the error.

System programmer response:  Make sure that the translation table is properly specified and loaded in storage accessible to the FTP client.

Module:  EZAFTPNC

EZA2707E  Command not available. Unable to load Korean translation tables in filename; return code: code

Explanation:  The FTP client encountered an error while attempting to load the indicated translation table. Possible return codes are:

1  No storage for the translation table
2  Unable to find the translation table header
3  Error reading the file

System action:  FTP continues.

Operator response:  Notify the system programmer of the error.

System programmer response:  Respond as indicated by the return code displayed in the message.

Module:  EZAFTPNC

EZA2708E  Command not available. Unable to access Korean translation tables.

Explanation:  The FTP client cannot open the indicated translation table.

System action:  FTP continues.

Operator response:  Notify the system programmer of the error.

System programmer response:  Make sure that the translation table is properly specified and loaded in storage accessible to the FTP client.

Module:  EZAFTPNC
EZA2709E  Command not available. Unable to load traditional Chinese translation tables in filename; return code: code

**Explanation:** The FTP client encountered an error while attempting to load the indicated translation table. Possible return codes are:

1. No storage for the translation table
2. Unable to find the translation table header
3. Error reading the file

**System action:** FTP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Respond as indicated by the return code displayed in the message.

**Module:** EZAFTPNC

EZA2710E  Command not available. Unable to access traditional Chinese translation tables.

**Explanation:** The FTP client cannot open the indicated translation table.

**System action:** FTP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Make sure that the translation table is properly specified and loaded in storage accessible to the FTP client.

**Module:** EZAFTPNC

EZA2711E  Command not available. Unable to load simplified Chinese translation tables in filename; return code: code

**Explanation:** The FTP client encountered an error while attempting to load the indicated translation table. Possible return codes are:

1. No storage for the translation table
2. Unable to find the translation table header
3. Error reading the file

**System action:** FTP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Respond as indicated by the return code displayed in the message.

**Module:** EZAFTPNC

EZA2712E  Command not available. Unable to access simplified Chinese translation tables.

**Explanation:** The FTP client cannot open the indicated translation table.

**System action:** FTP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Make sure that the translation table is properly specified and loaded in storage accessible to the FTP client.

**Module:** EZAFTPNC

EZA2713I  Language: name characteristics

**Explanation:** This message is issued in response to the LOCDATA subcommand when the FTP data transfer type is 'B' (DBCS). It displays the name of the particular DBCS data type, followed by any SO/SI characteristics that were specified when this data type was specified.

**System action:** FTP continues.

**Operator response:** No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2714I Proxy Command:
Explanation: The system is prompting you to enter a proxy command.
System action: The system waits for you to enter a proxy command.
Operator response: Enter the command you want to process.
System programmer response: No action is needed.
Module: EZAFTPCC

EZA2715I No primary connection
Explanation: You entered a proxy command that requires both a primary and a secondary connection. The OPEN subcommand must be issued to establish a connection to the primary FTP server.
System action: FTP continues.
Operator response: Issue the OPEN subcommand with a host name.
System programmer response: No action is needed.
Module: EZAFTP, EZAFTPCC, EZAFTPCP

EZA2716I Replace option is invalid for a proxy command
Explanation: You entered a proxy get or mget command with the replace option. The option is not supported.
System action: FTP continues.
Operator response: Issue the command without replace.
System programmer response: No action is needed.
Module: EZAFTPCC, EZAFTPCG

EZA2717E PROXY and NOTYPE are conflicting specifications.
Explanation: You entered a proxy command with the notype option. A proxy command is normally sent to the secondary server but the notype option indicates the corresponding type command should not be sent to the server.
System action: The command is ignored. FTP continues.
Operator response: Issue the command without notype, or not as a proxy command.
Operator response: If you intended the command for the secondary server, reissue the command without the notype option. If you intended this command for the client only, reissue it without specifying proxy.
System programmer response: No action is needed.
Module: EZAFTPCC

EZA2718I ASA control characters transferred as C control character sequences
Explanation: This message is issued in response to the LOCSTAT subcommand. ASA control characters in ASA files opened for text processing will be converted to C control character sequences during file transfer.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCC
EZA2719I  ASA control characters transferred as ASA control characters
Explanation:  This message is issued in response to the LOCSTAT subcommand. ASA control characters in ASA files
opened for text processing will be transferred as ASA control characters.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA2720I  New data sets catalogued if a store operation terminates abnormally
Explanation:  This message is issued in response to the LOCSTAT subcommand. New data sets will be cataloged if a
store operation terminates abnormally.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA2721I  New data sets deleted if a store operation terminates abnormally
Explanation:  This message is issued in response to the LOCSTAT subcommand. New data sets will be deleted if a
store operation terminates abnormally.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA2722I  Single quotes will override the current working directory
Explanation:  This message is issued in response to the LOCSTAT subcommand. Single quotes will override the
current working directory.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA2723I  Single quotes will be treated as part of the filename
Explanation:  This message is issued in response to the LOCSTAT subcommand. Single quotes will be treated as part
of the file name.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCK
Explanation: This message is issued in response to the LOCSTAT subcommand. Specifies the octal umask to be used when allocating new z/OS UNIX files.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

Explanation: A LOCSITE subcommand has been entered with an SBDATACONN parameter that has incorrect syntax. The SBDATACONN parameter must be either a pair of code set names (the first must be an EBCDIC code set name, and the second must be an ASCII code set name), or the fully qualified name of an MVS data set or z/OS UNIX file containing translate tables generated by the CONVXLAT utility.

System action: FTP continues.

Operator response: Resubmit the LOCSITE subcommand with corrected syntax.

System programmer response: No action is needed.

Module: EZAFTPCK

Explanation: A LOCSITE subcommand has been entered with an SBDATACONN parameter specifying a invalid code page name. The SBDATACONN parameter is ignored.

System action: FTP continues.

Operator response: See the z/OS XL C/C++ Programming Guide for information on supported code set converters and valid code set names. Resubmit the corrected LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK

Explanation: A LOCSITE subcommand has been entered with an SBDATACONN parameter, but there is no supported code set converter for the code sets parm1 and parm2. The SBDATACONN parameter is ignored.

System action: FTP continues.

Operator response: See the z/OS XL C/C++ Programming Guide for information on supported code set converters and valid code set names. Resubmit the corrected LOCSITE subcommand, with the EBCDIC code set name as the first SBDATACONN value, followed by the ASCII code set name.

System programmer response: No action is needed.

Module: EZAFTPCK

Explanation: A LOCSITE subcommand has been entered with an SBDATACONN parameter. A code set convertor was successfully opened, but FTP was unable to set up single-byte translate tables using the requested code sets. The SBDATACONN parameter is ignored.

System action: FTP continues.

Operator response: Ensure that the requested code set names are for single-byte code pages. SBDATACONN is not
supported for double-byte. See the z/OS XL C/C++ Programming Guide for information on supported code set converters and valid code set names.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

**EZA2738W**  
Translate file ‘file’ not found. SBDATACONN ignored.

**Explanation:** A LOCSITE subcommand has been entered with an SBDATACONN parameter that specified a file name, but FTP was unable open file. The SBDATACONN parameter is ignored.

**System action:** FTP continues.

**Operator response:** Ensure that the file name specified on the SBDATACONN parameter is a fully qualified name of an existing MVS data set or z/OS UNIX file.

**System programmer response:** If the file name is correct, use the FTP client’s debug facility to determine why FTP cannot open the file.

**Module:** EZAFTPCK

---

**EZA2739W**  
Translate file ‘file’ invalid. SBDATACONN ignored.

**Explanation:** A LOCSITE subcommand has been entered with an SBDATACONN parameter that specified a file name, but FTP encountered an error while trying to load its translate tables using file. Possible errors include an invalid header record or incorrect file length. (The file must contain exactly 768 bytes of data.) The SBDATACONN parameter is ignored.

**System action:** FTP continues.

**Operator response:** Ensure that the file name specified is correct. It must be a fully qualified name, and the file must contain translate tables in the format generated by the CONVXLAT utility.

**System programmer response:** Use the client’s debug facility to help determine why the file cannot be used.

**Module:** EZAFTPCK

---

**EZA2740E**  
SQL query not available. Can’t load CAF routines.

**Explanation:** FTP was unable to load the CAF (Call Access Facility) modules it uses to provide support for SQL queries.

**System action:** The command is rejected. FTP continues.

**Operator response:** If FTP SQL support is desired, ensure that the appropriate DSNLOAD library is included in the STEPLIB for the FTP client. (If FTP is started from the UNIX shell, the STEPLIB environment variable must be set.) Restart the FTP client session.

If FTP SQL support was not intended, issue a **locsite filetype=** command to change the filetype from its current setting of SQL to SEQ.

**System programmer response:** Ensure that the appropriate DSNLOAD library is accessible.

**Module:** EZAFTPMQ

---

**EZA2741W**  
Ctrlconn invalid syntax. Specify CTRLCONN=ascii_code_page_name or CTRLCONN=7BIT. CNTRLCONN ignored.

**Explanation:** A LOCSITE subcommand has been entered with a CTRLCONN parameter whose value begins with ‘(‘. The syntax for the CTRLCONN parameter does not use parentheses. The CTRLCONN parameter is ignored.

**System action:** FTP continues.

**Operator response:** Reenter the LOCSITE command with corrected syntax.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK
**EZA2742W**  parameter=operand ignored. Requested conversion is not supported.

**Explanation:** A CTRLCONN parameter was entered on a LOCSITE subcommand, but there is no conversion available between the FTP client’s code page and operand. The CTRLCONN parameter is ignored. The translate tables for the control connection are not changed.

**System action:** FTP continues.

**Operator response:** Reissue the LOCSITE command, specifying either "7bit" or the name of an ASCII code page supported by iconv. See the [z/OS XL C/C++ Programming Guide](https://www.ibm.com) for a list of the code pages supported by iconv. The code page name must be entered exactly as shown in the list (for example: IBM-850 or ISO8859-1).

**System programmer response:** None

**Module:** EZAFTPCK

---

**EZA2743W**  keyword=value ignored. Unable to set up requested conversion.

**Explanation:** A CTRLCONN parameter was entered on a LOCSITE subcommand, but FTP was unable to build the single-byte translate tables for the control connection. The CTRLCONN parameter is ignored. The translate tables for the control connection are not changed.

**Note:** If the FTP client is running in a double-byte environment, the CTRLCONN parameter cannot be used to change the translate tables for the control connection.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** If the FTP client is running in a double-byte code set, the CTRLCONN parameter is not supported. The tables used for the control connection are set at client initialization from either a TCPXLBIN file, or from FTP’s internal default single-byte tables.

If the client is running in a single-byte environment, an internal error has occurred. If this occurs repeatedly, contact the IBM Support Center with an FTP trace.

**Module:** EZAFTPCK

---

**EZA2744W**  parameter parameter already specified. "parameter=value" ignored.

**Explanation:** parameter parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

**System action:** parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.

**Operator response:** If you wish to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

**EZA2745I** Error trying to delete the new file.

**Explanation:** FTP attempted to delete the new file that was created but the delete failed. One possible reason for a delete failure is that the data set has an unexpired retention period.

**System action:** No action is needed.

**Operator response:** The data set can be deleted with the data set utilities of the operating system.

**System programmer response:** No action is needed.

**Module:** EZAFTPCG
EZA2746E  A qualifier in name begins with an invalid character.

Explanation: You entered a subcommand with name as a parameter. A data set qualifier specified in name begins with an invalid character.

System action: No action is needed.

Operator response: Reissue the subcommand with a valid data set name.

System programmer response: No action is needed.

Module: EZAFTPGU

EZA2747E  A qualifier in name is more than 8 characters.

Explanation: A data set qualifier specified on the LCD or LMKDIR command is longer than 8 characters.

System action: No action is needed.

Operator response: Reissue the command with a valid data set name.

System programmer response: No action is needed.

Module: EZAFTPGU

EZA2748E  A qualifier in name contains an invalid character.

Explanation: A data set qualifier specified on the current subcommand contains an invalid character.

System action: FTP rejects the subcommand. Processing continues.

Operator response: Reissue the subcommand with a valid data set name.

System programmer response: No action is needed.

Module: EZAFTPGU

EZA2749E  Cannot establish conversion between codeset and UCS-2.

Explanation: While processing the FTP.DATA file, the value for the UCSHOSTCS parameter was not a valid code set name. An attempt to set up a conversion table between codeset and UCS-2 failed.

System action: The line containing the error is ignored. Processing of the FTP.DATA file continues with the next line in the file.

Operator response: Contact the System programmer with the error message to have the FTP.DATA file corrected.

System programmer response: Correct the FTP.DATA file to contain the correct code set for UCSHOSTCS. See the z/OS Communications Server: IP Configuration Reference for information on the parameters of the FTP.DATA file.

Module: EZAFTPCT, EZAFTPEP

EZA2756W  Unable to setup conversion between UCS-2 and codeset. UCSHOSTCS ignored.

Explanation: A conversion between the codeset specified on the LOCSITE UCSHOSTCS command and UCS-2 could not be completed.

System action: The UCSHOSTCS parameter on the LOCSITE command is ignored. FTP continues.

Operator response: Reissue the LOCSITE command with a valid code set name.

System programmer response: No action is needed.

Module: EZAFTPCK
EZA2757I  Host code set for TYPE U transfer code_set

Explanation: This message is issued in response to the LOCSTAT subcommand when the FTP data transfer type is 'U' (UCS-2). It displays the name of the EBCDIC code set used for EBCDIC to UCS-2 conversion and UCS-2 to EBCDIC conversion.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2773E  TYPE U transfer is not supported in mode mode

Explanation: FTP has retrieved or sent an UCS-2 file (or data set) but the current mode is not set to Stream. Stream mode is required for UCS-2 data.

System action: The GET or PUT subcommand is rejected.

Operator response: Change the mode to stream using the STREAM command.

System programmer response: No action is needed.

Module: EZAFTP, EZAFTP

EZA2774E  TYPE U transfer is only supported in stream mode

Explanation: To transfer a UCS-2 file, stream mode must be used. See EZA2773E for more information.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTP, EZAFTP

EZA2775E  Record structure is not supported for TYPE U transfer

Explanation: FTP has retrieved or sent an UCS-2 file (or data set) but the current structure is set to Record. File structure is required for UCS-2 data.

System action: The GET or PUT command is rejected.

Operator response: Change the structure to FILE using the STRUCT=F command.

System programmer response: No action is needed.

Module: EZAFTP, EZAFTP

EZA2776E  TYPE U transfer is not supported for filetype type

Explanation: FTP has retrieved or sent an UCS-2 file (or data set) but the current file type is not set to SEQ. Sequential file is required for UCS-2 data. JES or SQL files cannot be transferred as UCS-2 data.

System action: The GET or PUT command is rejected.

Operator response: If the file is not JES or SQL, change the filetype to SEQ using the LOCSITE FILETYPE=SEQ command.

System programmer response: No action is needed.

Module: EZAFTP, EZAFTP
EZA2777I  TYPE U transfer is only supported for filetype SEQ
Explanation:  An UCS-2 transfer failed because the filetype was not sequential. See EZA2776E for more information.
System action:  FTP continues.
Operator response:  None
System programmer response:  None
Module:  EZAFTPCG, EZAFTPCP

EZA2778E  Transfer of RDWs is not supported for TYPE U. Use ‘LOCSITE NORDW’
Explanation:  FTP has sent an UCS-2 file (or data set) and RDWs is currently ON. RDWs must be off when sending UCS-2 data.
System action:  The PUT command is rejected.
Operator response:  Turn RDWs off using the LOCSITE NORDW command.
System programmer response:  No action is needed.
Module:  EZAFTPCP

EZA2779E  Transfer of trailingblanks is not supported for TYPE U. Use ‘LOCSITE NOTRAILINGBLANKS’
Explanation:  FTP has sent an UCS-2 file (or data set) and TRAILINGBLANKS is currently ON. TRAILINGBLANKS must be off when sending UCS-2 data.
System action:  The PUT command is rejected.
Operator response:  Turn TRAILINGBLANKS off using the LOCSITE NOTRAILINGBLANKS command.
System programmer response:  No action is needed.
Module:  EZAFTPCP

EZA2780E  NOASATRANS is not supported for TYPE U. Use ‘LOCSITE ASATRANS’
Explanation:  FTP has retrieved or sent an UCS-2 file (or data set) and ASATRANS is currently set to OFF. ASATRANS must be ON when storing storing UCS-2 data in EBCDIC format into a ASA data set.
System action:  The GET or PUT command is rejected.
Operator response:  Turn ASATRANS on using the LOCSITE ASATRANS command.
System programmer response:  No action is needed.
Module:  EZAFTPCG, EZAFTPCP

EZA2781E  Transfer aborted: conversion failure
Explanation:  FTP has retrieved or sent an UCS-2 file (or data set), but was unable to convert it to/from EBCDIC.
System action:  The GET or PUT command is rejected.
Operator response:  Turn on debug and issue GET or PUT again. Give the output to the system programmer.
System programmer response:  Check the debug messages to determine the errno and errnojr being returned from the iconv system call.
Module:  EZAFTPCG, EZAFTPCP

EZA2782E  Transfer aborted: substitution occurred for TYPE U transfer
Explanation:  FTP has retrieved or sent an UCS-2 file (or data set) that contained a UCS-2 character that could not be converted to EBCDIC. The EBCDIC substitution character would need to be used to convert the UCS-2 character.
System action:  The GET or PUT command is rejected.
Operator response: To allow the file to be stored in EBCDIC, substitution must be allowed. Issue LOCSITE UCSSUB to turn ON UCS-2 substitution.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCC

EZA2783E Transfer aborted: uneven number of bytes received for TYPE U transfer
Explanation: FTP has retrieved or sent an UCS-2 file (or data set) that contained an uneven number of bytes.
System action: The GET or PUT command is rejected.
Operator response: No action is needed.
System programmer response: Make sure the UCS-2 file is not corrupt. By definition UCS-2 is double byte, which should result in the file length being an even number of bytes.
Module: EZAFTPCG

EZA2784I Conversion from Unicode to EBCDIC resulted in number substitutions.
Explanation: FTP has received a Unicode file. Some characters were replaced with the EBCDIC substitution character.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCG, EZAFTPCC

EZA2785E WRAPRECORD is not supported for TYPE U. Use ‘LOCSITE NOWRAPRECORD’
Explanation: FTP has retrieved an UCS-2 file (or data set) and WRAPRECORD is currently ON. WRAPRECORD must be off when storing UCS-2 data in EBCDIC format.
System action: The GET command is rejected.
Operator response: Turn WRAPRECORD off using the LOCSITE NOWRAPRECORD command.
System programmer response: No action is needed.
Module: EZAFTPCG

EZA2786E TYPE U transfer requires variable format data set
Explanation: FTP has retrieved an UCS-2 file (or data set) but the target data set is not variable format.
System action: The GET command is rejected.
Operator response: Change the target data set to a variable format data set.
System programmer response: No action is needed.
Module: EZAFTPCG

EZA2787E Transfer aborted: truncation occurred for TYPE U transfer
Explanation: FTP has retrieved an UCS-2 file (or data set) and converted it to EBCDIC. Some of the records were truncated. Also UCSTRUNC is currently set to NO.
System action: The GET command is rejected.
Operator response: Either set UCSTRUNC to YES using the LOCSITE UCSTRUNC command, or increase the logical record length of the retrieved file.
System programmer response: No action is needed.
Module: EZAFTPCG
EZA2788I Command ! may only be issued when the client is running in the z/OS UNIX shell.

**Explanation:** This message is issued when the ! subcommand was issued while not under the z/OS UNIX System Services shell. The ! subcommand is not supported in a batch, EXEC, TSO, or Callable API environment.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

---

EZA2789E DSORG=DA requires structure: FILE, mode: STREAM, and transfer type: IMAGE.

**Explanation:** A PUT command was issued for a DSORG=DA data set, but one or more of the following conditions are not met: FILE structure, STREAM mode, and IMAGE transfer type.

**System action:** FTP continues.

**Operator response:** If you intend to transfer a DSORG=DA file, use the LOCSTAT command to display the current status for the FTP client. Then use the STRUCT F, MODE S, and/or TYPE I commands as required.

**System programmer response:** No action is needed.

**Module:** EZAFTPCP

---

EZA2790E LRECL X valid only for RECFM of U or variable length spanned.

**Explanation:** The LOCSITE command was issued with LRECL=X, but the record format is not U or variable length spanned.

**System action:** FTP continues.

**Operator response:** If you intend to set LRECL=X, use the LOCSITE command to set the record format to U or variable length spanned.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

EZA2791I LRECL being reset to lrecl.

**Explanation:** The LOCSITE command was issued with LRECL=X, but the record format is not U or variable length spanned. LRECL is being reset to the previous value or 256 if the previous value was invalid.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

EZA2792I LRECL being reset to site default of 'not used'.

**Explanation:** The LOCSITE command was issued with LRECL=X, but the record format is not U or variable length spanned. LRECL is being reset to the default value of 'not used'.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK
EZA2793I  UCS Substitution: ucsub, UCS Truncation: ucstrunc

Explanation: This message is issued in response to the LOCSTAT subcommand if the transfer type is UCS-2. The ucsub value indicates whether substitution is allowed when converting between UCS-2 and EBCDIC. The ucstrunc value indicates whether truncation is allowed when converting between UCS-2 and EBCDIC.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2794I  Both CCTRANS and CTRLCONN were specified. Using CTRLCONN. CCTRANS will be ignored.

Explanation: The FTP client has encountered both CCTRANS and CTRLCONN keywords in FTP.DATA. The CCTRANS keyword is supported only to aid migration; the CTRLCONN keyword is the preferred keyword. When both keywords are present in FTP.DATA, the CTRLCONN value will be used for the client configuration and the CCTRANS value will be ignored.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: To avoid this message, remove the CCTRANS statement from the FTP.DATA file.
Module: EZAFTPEP

EZA2795I  Both SBTRANS and SBDATACONN were specified. Using SBDATACONN. SBTRANS will be ignored.

Explanation: The FTP client has encountered both SBTRANS and SBDATACONN keywords in FTP.DATA. The SBTRANS keyword is supported only to aid migration; the SBDATACONN keyword is the preferred keyword. When both keywords are present in FTP.DATA, the SBDATACONN value will be used for the client configuration and the SBTRANS value will be ignored.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: To avoid this message, remove the SBTRANS statement from the FTP.DATA file.
Module: EZAFTPEP

EZA2798I  Byte Order: byte_order

Explanation: This message is issued in response to the LOCSTAT subcommand if the transfer type is UCS-2. The byte_order indicates whether the UCS-2 files sent by the client are encoded using big-endian or little-endian.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2799W  The data set is allocated to another job and is unavailable.

Explanation: The client was unable to allocate the data set because it is already allocated to another job.

System action: No action is needed.
Operator response: Try again later.
System programmer response: No action is needed.
Module: EZAFTPCK, EZAFTPCG
EZA2800E  The FTP client is not available because the TCP/IP Base feature of OS/390 is not enabled.

Explanation: The FTP client attempted to register as product=OS/390 feature=TCP/IP_BASE but IFAPRDxx parmlib member does not indicate that the feature TCP/IP_BASE is enabled. This FTP client will only run if TCP/IP_BASE is enabled.

System action: The FTP initialization is terminated.

Operator response: Contact the system programmer.

System programmer response: Correct the IFAPRDxx parmlib member if it is in error and restart the FTP client. If TCP/IP_BASE is not part of your system there is no action to take and this FTP client cannot be used.

Module: EZAFTPCY

EZA2801I  Data not wrapped into next record.

Explanation: Data that does not fit within the target record will be truncated.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2802I  Data was truncated.

Explanation: A data transfer has completed, but FTP was not able to store all the data because the logical record size for the receiving data set was not large enough. Some data has been lost.

System action: FTP continues.

Operator response: If truncation is not acceptable, redo the data transfer to an existing data set that has a larger record size, or you can use the LOCSITE LRECL parameter to specify a particular record size that is larger and redo the data transfer to a new data set.

System programmer response: No action is needed.

Module: EZAFTPCG

EZA2803I  Lines were wrapped.

Explanation: A data transfer has completed. One or more lines of data were longer than the record size of the receiving data set; those lines were continued in the next record.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2804W  Data set is out of space.

Explanation: A data transfer has failed because there is not enough space in the data set.

System action: FTP continues.

Operator response: See message EZA2805W for the system completion code and reason code and take actions appropriate for the failure.

System programmer response: No action is needed.

Module: EZAFTPCG
EZA2805W  System completion code and reason: cc-rc

Explanation: A file I/O operation failed with the system completion code cc and the reason code rc.

cc-rc is the hexadecimal system completion code and the return code. See the z/OS MVS System Codes for the descriptions of the system completion codes. Return codes are described as part of the system completion codes.

System action: FTP continues.

Operator response: See the z/OS MVS System Codes publication for suggested actions for the specified failure code.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTCP

EZA2806I  DBCS conversion to EBCDIC encountered invalid input (number errors)

Explanation: The FTP client encountered input errors during conversion of type B data.

System action: FTP continues.

Operator response: For more specific information about the errors, issue the DEBUG subcommand and then reissue the GET subcommand. Check the source data and correct any errors. If you are creating a pure DBCS local file, ensure that the source data does not contain any single-byte data. Resubmit the data transfer.

System programmer response: No action is needed.

Module: EZAFTPCG

EZA2807I  Executing under single stack configuration. Specified TCPIP name tcpipname ignored.

Explanation: The FTP client was started with the -p or (TCP start parameter that specified TCPIP stack tcpipname was to be used. The client is running in an INET (single-stack) configuration and this start parameter applies only to a CINET (multi-stack) configuration.

System action: The parameter is ignored. FTP client continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCY

EZA2808W  File has unsupported DSORG.

Explanation: Requested file has a DSORG that is not supported by FTP.

System action: The file transfer request is terminated. FTP continues.

Operator response: Check DSORG for the file.

System programmer response: No action is needed.

Module: EZAFTCP

EZA2809I  CCONNTIME is cconntime

Explanation: CCONNTIME is the amount of time to wait after attempting to close a control connection before terminating the control connection and reporting an error.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL
EZA2810I  DATACTTIME is datacttime
Explanation:  DATACTTIME is the amount of time to wait after attempting to send or receive data before terminating the data connection and reporting an error to the user.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCL

EZA2811I  DCONNTIME is dconntime
Explanation:  DCONNTIME is the amount of time to wait after attempting to close a data transfer connection before terminating the data connection and reporting an error.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCL

EZA2812I  INACTTIME is inacttime
Explanation:  INACTTIME is the amount of time to wait for an expected response from the server, on either the control or the data connection, before closing the session.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCL

EZA2813I  MYOPENTIME is myopentime
Explanation:  MYOPENTIME is the amount of time to wait for a session to open before terminating the attempt and reporting an error.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCL

EZA2814I  UCOUNT is ucount
Explanation:  UCOUNT is the unit count for new allocations.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCL

EZA2815I  VCOUNT is vcount
Explanation:  VCOUNT is the volume count for new allocations.
System action:  FTP continues.
Operator response:  No action is needed.
EZA2816I  No automatic mount of tape volumes.
Explanation:  NOAUTOMOUNT was specified. NOAUTOMOUNT is the default value.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCL

EZA2817I  Automatic mount of tape volumes.
Explanation:  AUTOMOUNT was specified.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCL

EZA2818I  Data connections for the client are firewall friendly.
Explanation:  This message is issued in response to the LOCSTAT subcommand. It indicates that when a data connection is set up, the client will be the active end of the data connection and therefore firewall friendly.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCL

EZA2819I  Data connections for the client are not firewall friendly.
Explanation:  This message is issued in response to the LOCSTAT subcommand. It indicates that when a data connection is set up, the client will be the passive end of the data connection and therefore not firewall friendly.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCL

EZA2822W  NOFWFriendly already specified. FWFriendly ignored.
Explanation:  NOFWFriendly was already specified on this LOCSITE command, FWFriendly is ignored.
System action:  FTP continues.
Operator response:  Specify one option, FWFriendly or NOFWFriendly on the LOCSITE command.
System programmer response:  No action is needed.
Module:  EZAFTPCK
FWFriendly already specified. NOFWFriendly ignored.

Explanation: FWFriendly was already specified on this LOCSITE command, NOFWFriendly is ignored.

System action: FTP continues.

Operator response: Specify one option, FWFriendly or NOFWFriendly on the LOCSITE command.

System programmer response: No action is needed.

Module: EZAFTPCK

Open of filename failed due to incorrect BLKSIZE or LRECL. Use SITE LRECL or BLKSIZE

Explanation: An incorrect block size or logical record length was specified for the file.

filename is the name of the file that could not be opened.

System action: The requested operation is ended. FTP continues.

Operator response: Override the incorrect BLKSIZE/LRECL by issuing a SITE command with the correct settings.

System programmer response: No action is needed.

Module: EZAFTPCP

Procedures Name: sndfile

File contains records that are too long to be processed

Explanation: The FTP client cannot process the received data because a record delimiter was not found in the data and the FTP client is not configured to wrap records. The FTP client expects to find a record delimiter, such as a Carriage Return and Line Feed (CRLF) in ASCII mode or a Newline(NL) in EBCDIC mode, to denote the end of a record.

System action: The file is not transferred.

Operator response: Ensure that the ASCII or EBCDIC file being received has proper delimiters in the data or configure the FTP client to wrap records using the wraprecord parameter. See z/OS Communications Server: IP User's Guide and Commands for information about configuring wraprecord.

System programmer response: No action is needed.

Module: EZAFTPCG

Procedure Name: mvs_rcvFile()

Volume=volume_serial_list contains a tape volume.

Explanation: The LMKDIR subcommand was issued to create a new PDS. The LOCSITE VOLUME parameter was in effect, specifying that all new data sets will be allocated on volumes volume_serial_list. One of the volumes in volume_serial_list was determined to be a tape, and partitioned data sets cannot be allocated to tape.

System action: The LMKDIR subcommand is rejected.

Operator response: Issue the LOCSITE VOLUME command to change the volume list for new data sets to DASD volumes, then reissue the LMKDIR subcommand. See z/OS Communications Server: IP User's Guide and Commands for more information on the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCD

Procedure Name: lmkdir()
EZA2827I  Error mounting one of these volumes: volume_serial_list.

Explanation: The LMKDIR subcommand was issued to create a new PDS. The LOCSITE VOLUME parameter was in effect, specifying that all new data sets will be allocated on volumes volume_serial_list. FTP was not able to mount one of the volumes in volume_serial_list.

System action: The LMKDIR subcommand is rejected.

Operator response: Ask the operator to mount all volumes required. Reissue the LMKDIR command. If this does not correct the problem, report the error to the system programmer.

System programmer response: Check the MVS console for messages related to the volumes in volume_serial_list. Correct the errors, and reissue LMKDIR.

Module: EZAFTPCD

Procedure Name: lmkdir()
EZA2831E EMAILADDRCHECK value must be NO, WARNING or FAIL

Explanation: While processing the FTP.DATA file, the server encountered the EMAILADDRCHECK parameter with a parameter value that was not NO, WARNING or FAIL. The only valid values for the EMAILADDRCHECK parameter are NO, WARNING or FAIL.

System action: The line containing the error is ignored. Processing of the FTP.DATA file continues with the next line in the file.

Operator response: Contact the System programmer with the error message to have the FTP.DATA file corrected.

System programmer response: Correct the FTP.DATA file to contain the correct value for the specified parameter. See the z/OS Communications Server: IP Configuration Reference for information on the parameters of the FTP.DATA file.

Module: EZAFTPEP

EZA2832I Load module transfer requires FILETYPE = SEQ

Explanation: The user has requested a file transfer that might involve load modules and the client’s local file type is not SEQ.

System action: Load module transfer processing ends and base processing continues.

Operator response: If you want load module transfer processing to be performed, issue a LOCSITE FILETYPE=SEQ subcommand.

System programmer response: No action is needed.

Module: EZAFTPCC

EZA2833I Load module transfer does not support load module rename

Explanation: The user has requested a file transfer that might involve load modules and has requested that the files be renamed. Load module transfer processing does not support renaming of load modules.

System action: Load module transfer processing ends and base processing continues. Any MVS load modules transferred will not be executable on the target system.

Operator response: If you want load module transfer processing to be performed, issue a transfer subcommand that does not include a rename of the files.

System programmer response: No action is needed.

Module: EZAFTPCC

EZA2834I Load module transfer supports member names only

Explanation: The user has requested a file transfer that might involve load modules but has specified either an z/OS UNIX file name or a fully qualified MVS data set name. Load module transfer only supports transfer of members of the PDS or PDSE which is the current working directory.

System action: Load module transfer processing ends and base processing continues. Any MVS load modules transferred will not be executable on the target system.

Operator response: If you want load module transfer processing to be performed, reissue the transfer subcommand without using quotes or slashes.

System programmer response: No action is needed.

Module: EZAFTPCC

EZA2835I Load module transfer requires local directory to be PDS or PDSE

Explanation: The user has requested a file transfer that might involve load modules but the current working directory is not a PDS or a PDSE. Load module transfer requires the current working directory to be a PDS or a PDSE.
**EZA2836I • EZA2839I**

**System action:** Load module transfer processing ends and base processing continues. Any MVS load modules transferred will not be executable on the target system.

**Operator response:** If you wanted load module transfer processing to be performed, change the local directory to a load library (a PDS or a PDSE with RECFM=U).

**System programmer response:** No action is needed.

**Module:** EZAFTPCC

---

**EZA2836I** No members of the data set match the selection pathnames

**Explanation:** The user has requested a PUT or MPUT that might involve load modules but the PDS or PDSE current working directory does not contain any members that match the local file name provided.

**System action:** FTP waits for the next subcommand.

**Operator response:** Check the file name specified on the PUT or MPUT subcommand.

**System programmer response:** No action is needed.

**Module:** EZAFTPCC

---

**EZA2837I** Could not build a file list

**Explanation:** While performing load module transfer, the FTP client was unable to build a list of file names to transfer.

**System action:** Load module transfer processing ends and base processing continues. Any MVS load modules transferred will not be executable on the target system.

**Operator response:** No action is needed.

**System programmer response:** Verify adequate storage available for memory files.

**Module:** EZAFTPCC

---

**EZA2838I** Load module transfer syntax error

**Explanation:** An unexpected or incorrectly formatted load module transfer response was sent from the FTP server to the FTP client. This is a violation of the load module transfer protocol.

**System action:** Load module transfer processing is aborted and the file transfer is completed using base processing. Any MVS load modules transferred will not be executable on the target system.

**Operator response:** Contact the system programmer.

**System programmer response:** Ensure that the server and client are both at a supported level of Communications Server. If not, contact the vendor of the non-IBM FTP program for service.

**Module:** EZAFTPCC

---

**EZA2839I** Reload of the load library failed

**Explanation:** While processing a GET or MGET command for one or more load modules, the client failed to reload the unloaded load module from the temporary data set into the load library.

**System action:** The transfer is aborted, and no files will be transferred. FTP waits for the next subcommand.

**Operator response:** Contact the system programmer.

**System programmer response:** Verify that sufficient free space exists in the load library to receive the load modules. Look for console messages from the file system or the IEBCOPY system utility. If none were provided, get an FTP client trace of the operation.

**Module:** EZAFTPCC
EZA2840I  Unload of the load library failed

Explanation: While processing a PUT or MPUT command for one or more load modules, the client failed to unload the load module from the load library into a temporary data set.

System action: The transfer is aborted, and no files will be transferred. FTP waits for the next subcommand.

Operator response: Contact the system programmer.

System programmer response: Verify sufficient free space exists in the file system for a temporary file to hold the unloaded load modules. Look for console messages from the file system or the IEBCOPY utility. If none were provided, get an FTP client trace of the operation.

Module: EZAFTPCC

EZA2841I  Local directory might be a load library

Explanation: As a result of the LCD subcommand, the FTP client local directory is a PDS or a PDSE with REC FM=U. This might be a load library, and load module transfer processing might be attempted for this directory.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2842I  System service invoked for load module transfer failed: IEBCOPY rc=rc

Explanation: While performing a load module transfer, the client invoked the IEBCOPY system utility to unload load modules into a temporary data set (for PUT or MPUT) or to reload unloaded load modules from temporary data set into the target load library (for GET or MGET). IEBCOPY failed.

rc is the decimal return code provided by IEBCOPY. IEBCOPY return codes are documented in z/OS DFSMSdfp Utilities.

System action: Load module transfer ends. No files will be transferred. The FTP client waits for the next subcommand.

Operator response: Contact the system programmer

System programmer response: Use the z/OS DFSMSdfp Utilities manual to determine the corrective action for the IEBCOPY return code.

Module: EZAFTPM D

EZA2843E  Incorrect format data set name dsn

Explanation: The FTP server was parsing keywords in the FTP.DATA file. The data set name specified, dsn, was not a valid MVS data set name. The keyword is ignored. The FTP server continues with the next keyword.

System action: FTP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Correct the data set name in the FTP.DATA file. See the z/OS Communications Server IP Configuration Reference for information on the parameters of the FTP.DATA file.

Module: EZAFTPEP

EZA2844I  ISPFSTAT is set to ispfsstat

Explanation: ISPFSTAT can be set to either TRUE or FALSE. When ISPFSTAT is set to TRUE, ISPF Statistics of a PDS member that has been transferred to the FTP client will be updated or created. The default setting is FALSE.

ispfsstat is either TRUE or FALSE.

System action: FTP Continues.
EZA2845I • EZA2850E

Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCL
Procedure Name:  locstat()

EZA2845I  Statistics have been updated for the PDS member that was transferred
Explanation:  Statistics had to be updated for the PDS member that was transferred because the PDS member that it replaced had statistics. ISPFSTAT setting of FALSE was ignored.
System action:  FTP continues
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPMR
Procedure Name:  pds_stats_update()

EZA2846E  Lrecl X transfer not supported with condition
Explanation:  A put was issued for a data set with Lrecl X and an incorrect condition was detected.
condition can be one of the following:
MODE C
   Compressed mode
TYPE U 2
   Data type U 2
FILETYPE=SQL
   SQL
NOASATRANS
   NOASAtrans cannot be specified with Lrecl X w/ASA
STRUCT R
   Record structure
System action:  The request is rejected. FTP continues.
Operator response:  Send the Lrecl X data set using the correct FILETYPE, MODE, STRUCT, TYPE, or ASATRANS setting.
System programmer response:  No action is needed.
Module:  EZAFTPCP
Procedure Name:  sndFile

EZA2850E  Lrecl X transfer not supported with Record I/O
Explanation:  A put was issued for a data set with Lrecl X and Record I/O has been requested. The condition is unexpected.
System action:  The request is rejected. FTP continues.
Operator response:  Contact the system programmer.
System programmer response:  Collect an FTP Client trace that includes the failure and call the IBM Support Center.
Module:  EZAFTPCP
Procedure Name:  sndFile
EZA2852I Parameters not supported: value_1 ... value_n
Explanation: This is a list of the values entered on a DEBUG or a DUMP subcommand that are not supported.
System action: The unsupported values are ignored. FTP continues.
Operator response: See the z/OS Communications Server: IP User’s Guide and Commands for information about FTP Subcommands and the supported values for the DEBUG and DUMP subcommands.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: debug

EZA2858I Message IDs are not displayed when running in system UNIX
Explanation: This message is generated after the VERBOSE subcommand to the FTP client. It indicates that VERBOSE mode is toggled off and client messages will be displayed without their message ID numbers. The VERBOSE setting is applicable only when the FTP client is running in a UNIX environment.

In the message text:

system is the name of the operating system (for example, z/OS).
System action: FTP continues.
Operator response: Reissue the VERBOSE subcommand to toggle the setting on, if necessary.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: verbose()

EZA2859I Message IDs are displayed when running in system UNIX
Explanation: This message is generated after the VERBOSE subcommand to the FTP client. It indicates that VERBOSE mode is toggled on and client messages will be displayed with their message ID numbers. The VERBOSE setting is applicable only when the FTP client is running in a UNIX environment.

In the message text:

system is the name of the operating system (for example, z/OS).
System action: FTP continues.
Operator response: Reissue the VERBOSE subcommand to toggle the setting off, if necessary.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: verbose()

EZA2860I Secure Hostname is: level
Explanation: This message is issued in response to the LOCSTAT subcommand. It indicates whether host name verification in the server’s certificate is required or optional.

In the message text:

level
The setting for the SECURE_HOSTNAME statement in the FTP.DATA file. The possible levels for the secure hostname are REQUIRED or OPTIONAL. OPTIONAL is the default.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat
EZA2861I  Using **socks_configuration_file** for SOCKS server configuration

**Explanation:** The FTP client identified a file or data set containing SOCKS server configuration information.

**socks_configuration_file** is the z/OS UNIX file or MVS data set containing SOCKS configuration information.

**System action:** The FTP client continues processing. The SOCKS configuration will be referenced for any attempt to connect the client to an FTP server. The SOCKS configuration might cause the FTP client to connect to FTP servers through a SOCKS server, instead of connecting directly to the FTP server.

**Operator response:** If **socks_configuration_file** is the correct file to use for the SOCKS server configuration, no action is needed. Otherwise, contact the system programmer.

**System programmer response:** If **socks_configuration_file** is the correct file to use for the SOCKS server configuration, no action is needed. If you want to use a different file for the SOCKS configuration, see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/SSLTBW_2.1.0/com.ibm.zosنشأ/pit_config.htm) for information about configuring the FTP client for SOCKS.

**Module:** ezaftpcl

**Procedure Name:** locstat()

---

EZA2862I  Errors parsing SOCKS configuration file **file** on line **line_number** - use of SOCKS has been disabled.

**Explanation:** The FTP client located the specified SOCKS configuration file, but encountered syntax errors when parsing the information.

**file** is the name of the z/OS UNIX file or MVS data set containing the SOCKS configuration file.

**line_number** is the line of file where the error was encountered.

**System action:** The FTP client continues, but disables use of any SOCKS server for this session.

**Operator response:** Contact the system programmer.

**System programmer response:** Correct the error in the SOCKS configuration file or data set. See the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/SSLTBW_2.1.0/com.ibm.zosنشأ/pit_config.htm) manual for information about configuring the FTP client for SOCKS.

**Module:** ezaftpcy

**Procedure Name:** ftpSocks()

---

EZA2863I  Error **error** opening SOCKS configuration file **socks_configuration_file** - use of SOCKS has been disabled

**Explanation:** The FTP client encountered an error while attempting to open the SOCKS configuration file.

**error** is the C run-time library error message returned for the failing fopen() call. For more information, see [z/OS Language Environment Run-Time Messages](https://www.ibm.com/support/knowledgecenter/SSLTBW_2.1.0/com.ibm.zosنشأ/pit_msg.htm).

**socks_configuration_file** is the name of the file that failed to open.

**System action:** The FTP client continues. It will not be configured to use a SOCKS server.

**Operator response:** Specify the correct **socks_configuration_file** or contact the system programmer.

**System programmer response:** Specify the correct **socks_configuration_file** or correct the error indicated by **error**.

**Module:** EZAFTPCY

**Procedure Name:** findSocks()

---

EZA2864I  Error **error** reading SOCKS configuration file **socks_configuration_file** - use of SOCKS has been disabled

**Explanation:** The FTP client encountered an error while attempting to read the SOCKS configuration file.

**error** is the C run-time library error message returned. For more information, see [z/OS Language Environment Run-Time Messages](https://www.ibm.com/support/knowledgecenter/SSLTBW_2.1.0/com.ibm.zosştir/pit_msg.htm).

**socks_configuration_file** is the name of the file that had the read error.
System action:  The FTP client continues. It will not be configured to use a SOCKS server.
Operator response:  Specify the correct socks_configuration_file or contact the system programmer.
System programmer response:  Specify the correct socks_configuration_file or correct the error indicated by error.
Module:  EZAFTPCY
Procedure Name:  ftpSocks()

EZA2865I  Tape write is allowed to use BSAM I/O.
Explanation:  When processing ASCII data in stream mode for GET and writing to tape, the FTP Client is allowed to use the BSAM I/O routine instead of the LE Run-Time Library. The WRTAPEFastio option has been set in the FTPDATA data set or in a LOCSITE subcommand. The option is honored unless a request that contradicts it has been made (such as ASATRANS for a data set with ASA control characters).
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.

EZA2866I  Tape write is not allowed to use BSAM I/O.
Explanation:  When processing ASCII data in stream mode for GET and writing to tape, the FTP Client must use the LE Run-Time Library fwrite() function. This is the default setting and is changed by specifying WRTAPEFastio TRUE in the FTPDATA data set or by specifying WRTAPEFastio on a LOCSITE subcommand.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.

EZA2870I  TLS security mechanism negotiation failed - data connection closed
Explanation:  The FTP client and server failed during the negotiation step (also known as the handshake) to protect a data connection with the TLS mechanism.
System action:  No action is needed.
Operator response:  Activate the FTP client and server traces as follows:
   SITE DEBUG=(NONE,ACC,SOC(3))
   DEBUG NONE ACC SOC(3)

Retry the subcommand and contact the system programmer with the error message.

If you are not allowed to issue the SITE command to change the server trace options, ask the system programmer to set the options, close the session to the server, enter FTP again and try the failing subcommand.

System programmer response:  Use the FTP client and server traces to determine the cause of the error and correct the problem.
Module:  EZAFTPCA, EZAFTPCC, EZAFTPCG, EZAFTPCP
Procedure Name:  getList, rcvXLMT, sndXLMT, rcvFile, rcvNullDir, sndFile

EZA2889I  Authentication mechanism:  mechanism
Explanation:  This message is issued in response to the LOCSTAT subcommand. It indicates that the FTP session is protected by the authentication mechanism that is displayed.
The supported mechanisms are GSSAPI or TLS.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat

EZA2890I  Control connection protection: level
Explanation: This message is issued in response to the LOCSTAT subcommand. It indicates that the control connection has the security level that is displayed.
The possible security levels for the GSSAPI security mechanism are Clear, Safe, or Private.
The security level for the TLS security mechanism is always Private.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat

EZA2891I  Data connection protection: level
Explanation: This message is issued in response to the LOCSTAT subcommand. It indicates that the data connection has the security level that is displayed.
The possible security levels for the GSSAPI security mechanism are Clear, Safe, or Private.
The possible security levels for the TLS and TLS-P security mechanisms are Clear and Private.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat

EZA2892I  Secure port port_number does not support the -a or -r start parameter
Explanation: You issued the ftp command with the port_number parameter and the -a or -r parameter. The port number you specified was the secure port. The -a and -r start parameters are not allowed when you specify the port indicated by the port_number value.
In the message text:
    port_number
The port number on the remote host to which you specified that the FTP client should be connected.
Examples: Your client FTPDATA contains this statement:
    TLPSPORT 990
This statement sets the secure port to 990. You attempt to connect to the FTP server at port 990 on the host specified hostname value. You specify the -a parameter also:
    /rphase ftp -v -a tls hostname 990
EZA2892I Secure port 990 does not allow the -a or -r start parameter
Message EZA2892I is issued because you specified the -a parameter while trying to connect to the secure port.
System action: The FTP client ends.
Operator response: No action is needed.
User response: Issue the ftp command without the -a or -r start parameter to log into the server using the secure
port. Or, log into the server using the -a or -r start parameter with another port number.

**System programmer response:** No action is needed.

**Problem determination:** Not applicable.

**Source:** z/OS Communications Server TCP/IP: FTP

**Module:** Not applicable.

**Routing code:** 10

**Descriptor code:** 12

---

**EZA2894I**  
**Explanation:** You specified the mechanism on the -a or the -r parameter on the FTP command. The mechanism is not one of the supported mechanisms.

**System action:** FTP continues.

**Operator response:** If a security mechanism is required, stop FTP and start again with one of the supported security mechanisms. The supported security mechanisms are GSSAPI or TLS.

**System programmer response:** No action is needed.

**Module:** EZAFTPCY

**Procedure Name:** processStartParms

---

**EZA2895I**  
**Explanation:** A security mechanism was requested to protect the session. The client and server have successfully negotiated to protect the session.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCZ

**Procedure Name:** ftpOpen

---

**EZA2896I**  
**Explanation:** The client was unable to set the control connection protection to the required level as specified on the SECURE_CTRLCONN statement in the client’s FTP.DATA file. The server does not support the protection level for the control connection.

**System action:** FTP continues. The connection to the FTP server ends.

**Operator response:** Contact the system programmer with the error message to have the FTP.DATA file corrected.

**System programmer response:** Correct the FTP.DATA file to set the SECURE_CTRLCONN statement to a level supported by the server. See the z/OS Communications Server: IP Configuration Guide for information about configuring FTP.

**Module:** EZAFTPCZ

**Procedure Name:** ftpOpen

---

**EZA2897I**  
**Explanation:** The client was unable to negotiate authentication with the server.

**System action:** FTP continues.

**Operator response:** Activate the FTP client and server traces as follows:

- SITE DEBUG=(NONE,SEC,SOC(3))
EZA2898I  •  EZA2900I

- DEBUG NONE SEC SOC(3)

Retry the connection and contact the system programmer with the error message.

If you are not allowed to issue the SITE command to change the server trace options, ask the system programmer to set the options, close the session to the server, enter FTP again and try the failing subcommand.

System programmer response: Use the MODIFY command to set the tracing options for the server.

Module:       EZAFTPCZ
Procedure Name:   ftpOpen

---
EZA2898I  Unable to successfully negotiate required authentication
Explaination:  The client was unable to successfully negotiate the required authentication with the server.
System action:  The connection with the server ends. FTP continues.
Operator response:  Activate the FTP server and client traces as follows:
- SITE DEBUG=(NONE,ACC,SOC(3))
- DEBUG NONE ACC SOC(3)

Retry the connection and contact the system programmer with the error message.

If you are not allowed to issue the SITE command to change the server trace options, ask the system programmer to set the options. Then close the session to the server, restart FTP, and try the failing subcommand.

If the server is not the z/OS FTP server, get servers traces as defined by the operating system of the FTP server.

System programmer response:  Contact your IBM Support Representative and provide the client and server traces for diagnosis.

Module:       EZAFTPCZ
Procedure Name:   ftpOpen

---
EZA2899I  Request to import name name failed
Explaination:  The call to the gss_import_name() function failed to import name. This message is preceded by the messages EZA2912I and EZA2913I. See those messages for further diagnosis.
System action:  FTP continues.
Operator response:  No action is needed.

System programmer response:  See /OS Integrated Security Services Network Authentication Service Programming for an explanation of the gss_import_name() function.

Module:       EZAFTPCF
Procedure Name:   ftpAuth

---
EZA2900I  Request to initialize the security context failed
Explaination:  The call to the gss_init_sec_context() function failed. This message is preceded by the messages EZA2912I and EZA2913I. See those messages for further diagnosis.
System action:  FTP continues.
Operator response:  No action is needed.

System programmer response:  See /OS Integrated Security Services Network Authentication Service Programming for an explanation of the gss_init_sec_context() function.

Module:       EZAFTPCF
Procedure Name:   ftpAuth
EZA2903I  The subcommand is not valid when there is no active security mechanism

Explanation: You entered a subcommand that is not valid when no security mechanism is active.

System action: FTP continues.

System programmer response: No action is needed.

Module: EZAFTPFC

Procedure Name: setclevel, setdlevel

EZA2904I  Cannot set protection level to level

Explanation: The protection was not set to the requested level. This might happen because the FTP.DATA file SECURE_CTRLCONN or SECURE_DATACONN statements do not support the requested level or because the server denied the request.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPFC

Procedure Name: setclevel, setdlevel

EZA2905I  Control connection protection is level

Explanation: This message displays the current level of protection for the control connection.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPFC

Procedure Name: setclevel

EZA2906I  Data connection protection is level

Explanation: This message displays the current level of protection for the data connection.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPFC

Procedure Name: setdlevel

EZA2907I  Attempt to encrypt data failed

Explanation: The call to the gss_wrap() function failed. This message is preceded by the messages EZA2912I and EZA2913I. See those messages for further diagnosis.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: See z/OS Integrated Security Services Network Authentication Service Programming for an explanation of the gss_wrap() function.

Module: EZAFTPFC
Procedure Name: gss_secure_command

EZA2909I Cannot base 64 decode reply: error
Explanation: A reply from the server was unable to be Base 64 decoded.
error will be one of the following:

1 Bad character in encoding: An invalid character was received from the server as part of a base 64 encoded string. The valid characters in a base 64 encoded string are the letters A - Z, the letters a - z, the numbers 0 - 9, the plus sign (+), and the forward slash (/).

2 Encoding not properly padded: An invalid base 64 encoded string was received from the server. The string was not padded with equal signs to extend the length of the string to a multiple of four characters.

3 Decoded number of bits not a multiple of 8: An invalid base 64 encoded string was received from the server. The string was unable to be decoded because it did not decode into a multiple of eight bits.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPFC
Procedure Name: gss_secure_reply

EZA2910I Attempt to decrypt data failed
Explanation: The call to the gss_unwrap() function failed. This message is preceded by messages EZA2912I and EZA2913I. See those messages for further diagnosis.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: See z/OS Integrated Security Services Network Authentication Service Programming for an explanation of the gss_unwrap() function.
Module: EZAFTPFC
Procedure Name: gss_secure_reply

EZA2911I Received unprotected reply - Current protection level: level
Explanation: An unprotected reply was received from the server, but the current level of protection on the control connection required protection.
level is the current level of protection on the control connection and will be either Safe or Private.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPFC
Procedure Name: gss_secure_reply

EZA2912I GSSAPI error major status code: value - text
Explanation: This message displays the status code returned from a GSSAPI function call. This message is followed by message EZZ2913 and a message indicating the failing GSSAPI function call.
value is the hexadecimal value of the major status code.
text is the text describing the status code obtained by calling the gss_display_status() function.

System action: FTP continues.
Operator response: No action is needed.

System programmer response: See [z/OS Integrated Security Services Network Authentication Service Programming](https://www.ibm.com) for an explanation of the major status code.

Module: EZAFTPFC

Procedure Name: gss_user_error

---

**EZA2913I** GSSAPI error minor status code: value - text

**Explanation:** This message displays the minor status code returned from a GSSAPI function call. This message is preceded by message EZZ2912 and is followed by a message indicating the failing GSSAPI function call.

*value* is the hexadecimal value of the minor status code.

*text* is the text describing the status code obtained by calling the gss_display_status() function.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** See [z/OS Integrated Security Services Network Authentication Service Programming](https://www.ibm.com) for an explanation of the minor status code.

Module: EZAFTPFC

Procedure Name: gss_user_error

---

**EZA2915I** Length length of received buffer is greater than PBSZ size

**Explanation:** An encrypted message was received whose length was greater than the negotiated protection buffer size as specified on the SECURE_PBSZ statement in FTP.DATA.

*length* is the length of the received encrypted message.

*size* is the maximum length of an encrypted message as negotiated with the server.

**System action:** FTP continues. The message is discarded.

**Operator response:** Increase the SECURE_PBSZ value in the FTP.DATA file.

**System programmer response:** No action is needed.

Module: EZAFTPFC

Procedure Name: gss_receive_data

---

**EZA2916I** local site variable statement_name is set to value

**Explanation:** This message is displayed as part of the LOCSItat subcommand output.

*statement_name* is the name of the statement coded in the client FTP.DATA file.

*value* is the current setting of *statement_name*. It is the default value assigned by FTP, or what you specified in the FTP.DATA file, or the most recent value you assigned with a LOCSIte subcommand. You can use the LOCSIte subcommand to change *value*. See the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com) and the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com) for information about the *statement_name* statement in the client FTP.DATA file.

**System action:** Processing continues.

**Operator response:** If you want to change the setting of *statement_name* temporarily, use the LOCSIte subcommand. See the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com) for information about the LOCSIte subcommand. If you want to make a permanent change to *statement_name*, see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com) for information about coding the *statement_name* statement.

**System programmer response:** No action is needed.

Module: ezaftpcl

Procedure Name: locstat()
EZA2917I  PROXY OPEN is not supported with security mechanisms

Explanation: The FTP session is protected by the GSSAPI security mechanism or the TLS security mechanism. FTP does not allow a second session to be opened using PROXY OPEN while the primary session is protected.

System action: FTP continues.

Operator response: If proxy transfers are needed, close the primary connection and open a connection that does not have a security mechanism protecting the session. Then the PROXY OPEN can be issued.

System programmer response: No action is needed.

Module: EZAFTPCZ

Procedure Name: ftpOpen

EZA2918I  Filetype SQL requires type A (ASCII) or E (EBCDIC)

Explanation: The user issued a PUT or APPEND subcommand. The filetype specified by the LOCITE subcommand or in the FTP.DATA file is SQL. An SQL transfer from the client requires that the data type of the connection is ASCII or EBCDIC.

System action: The PUT or APPEND subcommand is not performed.

Operator response: Change the data type by issuing the ASCII or EBCDIC subcommand and reissue the put or append subcommand.

System programmer response: No action is needed.

Module: EZAFTPCP

Procedure Name: sndFile

EZA2919I  Session starts with protection on the data connection

Explanation: The data connection is protected for secure data transfers.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCZ

Procedure Name: ftpOpen

EZA2920I  SECURE_DATACONN NEVER configuration statement is ignored

Explanation: The mechanism TLS-P started with an implied protection level of PRIVATE which is inconsistent with the statement SECURE_DATACONN NEVER that is specified in the FTP.DATA file. The statement is ignored and a statement of SECURE_DATACONN CLEAR is assumed for this connection.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCZ

Procedure Name: ftpOpen

EZA2922I  Active client dumpIDs - id_1 ... id_n

Explanation: This is a display of the active FTP extended trace IDs (dumpIDs).

System action: FTP continues.

Operator response: No action is needed.
**System programmer response:** No action is needed.

**Module:** EZAFTPCL

**Procedure Name:** dump

---

EZA2923I  Active client traces - name_1 ... name_n

**Explanation:** This message displays the active FTP client general traces. This message is issued when a debug subcommand is used to change or display the values for the FTP general trace.

name_x can be one of the following:

- **FLO** function flow
- **CMD** command trace
- **PAR** parser details
- **INT** program initialization and termination
- **ACC** access control (logging in)
- **UTL** utility functions
- **FSC(1)** file services -- level 1
- **FSC(2)** file services -- level 2
- **FSC(3)** file services -- level 3
- **FSC(4)** file services -- level 4
- **FSC(5)** file services -- level 5
- **FSC(6)** file services -- level 6
- **FSC(7)** file services -- level 7
- **FSC(8)** file services -- level 8
- **SOC(1)** socket services -- level 1
- **SOC(2)** socket services -- level 2
- **SOC(3)** socket services -- level 3
- **SOC(4)** socket services -- level 4
- **SOC(5)** socket services -- level 5
- **SOC(6)** socket services -- level 6
- **SOC(7)** socket services -- level 7
- **SOC(8)** socket services -- level 8
- **SQL** SQL processing

If no trace is active, NONE is displayed.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** None

**Module:** EZAFTPCL

**Procedure Name:** debug
EZA2926I  The subcommand is not valid for the mechanism security mechanism

Explanation: The user entered an FTP subcommand during a session that was protected with a security mechanism. The subcommand is not valid while the session is secured.

In the message text:

mechanism
The security mechanism used to secure the session. Valid values are TLS and GSSAPI.

Examples:
Command: safe
EZA2926I The subcommand is not valid for the TLS security mechanism.

System action: The command is ignored.

Operator response: No action is needed.

User response: When the mechanism value is GSSAPI, either do not enter the subcommand, or report the error to the system programmer.

When the mechanism value is TLS, use the LOCSTat subcommand to display the TLSRFCLEVEL configuration option value, and report the error to the system programmer.

System programmer response: When the mechanism value is GSSAPI, secure the session using a different security mechanism, do not secure the secure the session, or instruct the user to refrain from entering the subcommand.

When the mechanism value is TLS, more subcommands are permitted during a TLS-secured session when the TLSRFCLEVEL parameter value is RFC4217 than when the TLSRFCLEVEL parameter value is DRAFT. If the TLSRFCLEVEL parameter value is DRAFT, consider setting the TLSRFCLEVEL parameter value to RFC4217.

For more information, see the following sources:

- The information about the steps for customizing the FTP client for TLS in z/OS Communications Server: IP Configuration Guide.
- The information about the TLSRFCLEVEL (FTP client and server) in z/OS Communications Server: IP Configuration Reference.

If the value TLSRFCLEVEL RFC4217 is not acceptable, or if using that value does not solve the problem, do one of the following:

- Do not secure the session
- Secure the session with a different mechanism
- Instruct the user to refrain from using the subcommand

Problem determination: If the FTP server is z/OS V1R9 or later, you can display the server’s TLSRFCLEVEL value with the stat subcommand. The server must be configured to use the value TLSRFCLEVEL RFC4217 to allow the client the full range of RFC 4217 functionality.

Source: z/OS Communications Server TCP/IP: FTP

Module: Not applicable.

Routing code: 10

Descriptor code: 12

EZA2927I  SJISKANJI (NOTYPE requires type A (ASCII)

Explanation: A SJISKANJI subcommand was entered with a parameter of (NOTYPE. This parameter requires that the server be set to ASCII. For more information about the SJISKANJI command, see the z/OS Communications Server: IP User’s Guide and Commands.

System action: The request is rejected. FTP continues.
EZA2928I • EZA2937I

Operator response: Issue the Type A command prior to entering the SJISKANJI (NOTYPE command.
System programmer response: No action is needed.
Module: EZAFTPCT
Procedure Name: cliDBOpt, sjisk

---

EZA2928I File contains binary data - enter binary subcommand before entering transfer subcommand
Explanation: FTP has determined that the local file is tagged as a binary file. FTP will transfer this file only if the data type is set to binary.
System action: FTP continues.
Operator response: Enter the binary or TYPE I subcommand and reenter the transfer request.
System programmer response: No action is needed.
Module: EZAFTPCT
Procedure Name: hfs_sndFile

---

EZA2929I File contains ASCII data - enter ASCII subcommand before entering transfer subcommand
Explanation: FTP has determined that the local file is tagged as an ASCII file. FTP will transfer this file only if the data type is set to ASCII.
System action: FTP continues.
Operator response: Enter the ASCII or TYPE A subcommand and reenter the transfer request.
System programmer response: No action is needed.
Module: EZAFTPCT
Procedure Name: hfs_sndFile

---

EZA2930I Transfer failed because data cannot be translated
Explanation: The data cannot be translated using the current translate table. The translate table was built from the code sets that are specified by the SBDATACONN parameter on LOCSITE or an SBDATACONN statement in the FTP.DATA file. At the time the table was built, one or more of the codepoints was reported as untranslatable for specific data codepoints. The data in this transfer has one or more of the codepoints.
System action: FTP continues.
Operator response: Use LOCSITE SBDATACONN to build or select a translation table that can translate the codepoints in the data.
System programmer response: No action is needed.
Module: EZAFTPCT, EZAFTPCT
Procedure Name: hfs_rcvFile, sndFile

---

EZA2937I SBDataconn codeset names: codeset_1, codeset_2
Explanation: This message is issued in response to the LOCSTAT subcommand.
codeset_1 and codeset_2 are the names of the code sets used to define the data connection translate table specified by the SBDATACONN statement in the FTPDATA file or by the LOCSITE SBDATACONN subcommand.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat
**EZA2938I • EZA2944I**

---

**EZA2938I**  Tagged *type* file translated with table built using file system *codepage_1*, network transfer *codepage_2*

**Explanation:** The FTP client detected that the local file is tagged with a coded character set ID (ccsid). A translation table is built for this data transfer using the codepage that corresponds to the ccsid.

- *type* is either ASCII or EBCDIC.
- *codepage_1* is the codepage of the file.
- *codepage_2* is the codepage that was specified for the network transfer codepage on LOCSITE SBDATACONN or on the SBDATACONN statement in the FTP.DATA file.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCP

**Procedure Name:** hfs_sndFile

---

**EZA2939I**  Tagged *type* file translated with current data connection translation table

**Explanation:** The FTP client detected that the local file is tagged with a coded character set ID (ccsid). The data connection translate table is not defined with the SBDATACONN=(file_system_cp,network_transfer_cp) method. Without a network transfer codepage, the client cannot build a translate table using the ccsid of the file. The FTP client uses the translate table defined for the data connection.

- *type* is either ASCII or EBCDIC.

**System action:** FTP continues.

**Operator response:** If you do not want to use the current data connection translate table, issue a LOCSITE SBDATACONN=(file_system_cp,network_transfer_cp) subcommand to provide a codepage to be used to build a translate table.

**System programmer response:** No action is needed.

**Module:** EZAFTPCP

**Procedure Name:** hfs_sndFile

---

**EZA2943I**  SBSUB is set to *sbsub*

**Explanation:** SBSUB can be set to either TRUE or FALSE.

- *sbsub* is one of the following:
  - **TRUE**  A substitution character is used when untranslatable characters are encountered during the data transfer.
  - **FALSE** The data transfer will fail because of an untranslatable character. FALSE is the default setting.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

**Procedure Name:** locstat()

---

**EZA2944I**  SBSUBCHAR is set to *sbsubchar*

**Explanation:** During the data transfer, untranslatable characters will be replaced by the substitution character, *sbsubchar*. If SPACE is specified, then the ASCII or EBCDIC representation of a blank will be substituted. The SBSUBCHAR setting is ignored when SBSUB is set to FALSE.

- *sbsubchar* is either SPACE or a substitution character in hexadecimal.

**System action:** FTP continues.
EZA2946I  SBSUBChar parameter sbsubchar is not valid - SBSUBChar ignored

Explanation: The SBSUBChar parameter must be either a hexadecimal number or SPACE.
sbsubchar is not a valid substitution character.

System action: The parameter is ignored.

Operator response: Reissue the LOCSITE command with a valid value specified for the SBSUBChar parameter. See the z/OS Communications Server: IP User’s Guide and Commands in the chapter about transferring data using the file transfer protocol for information about the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK
Procedure Name: locsite

EZA2947I One or more characters were substituted during the transfer

Explanation: During a data transfer, one or more untranslatable characters were found and were replaced by the substitution character (SBSUBCHAR). For single byte transfers the substitution character specified by SBSUBCHAR will be used. See the z/OS Communications Server: IP Configuration Reference and the z/OS Communications Server: IP User’s Guide and Commands for information about specifying and displaying the SBSUBCHAR value.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: ezafpcg, ezaftpck
Procedure Name: hfs_rcvFile(), sndFile()

EZA2950I usage: uuid@gen [-lpcPC]

Explanation: This message displays the correct format and syntax for the UUID command. For more information about the UUID command, see the Network Computing System Reference Manual.

System action: TCPIP continues.

Operator response: Correct the format and syntax as indicated and resubmit the command.

System programmer response: Assist the user as necessary.

Module: UUID@GEN
Procedure Name: main

EZA2956E GLBD: unable to listen on type address family

Explanation: The Global Location Broker Daemon (GLBD), which controls the Global Location Broker database, which helps clients locate servers on the network, is unable to listen on a socket. The Berkeley socket concept is used for the Network Computing System (NCS), of which the GLBD is a part. Sockets are identified by a socket address composed of an address family, which defines the structure of the address, network address (host address), and port number (endpoint address). This message indicates that the GLBD cannot find a socket address for the indicated address family. No requests can be received over the socket.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.
System programmer response: Check the physical connections between the host and the network. Check to make sure that the indicated socket is available to the GLBD. For more information about the GLBD, see the z/OS Communications Server: IP Configuration Reference.

Module: GLBD
Procedure Name: register_server

EZA2957E GLBD: unable to listen on any address families

Explanation: The remote procedure call to the Global Location Broker Daemon (GLBD) did not include any active address families. The Berkeley socket concept is used for the Network Computing System, of which the GLBD is a part. It can listen to more than one socket identified by a socket address composed of an address family, which defines the structure of the address, the network (host) address, and port number (endpoint address). Without an active address family, the GLBD is unable to receive requests over a connection.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Check the remote procedure call used to invoke the GLBD to make sure that it contains active address families. For more information about the GLBD, see the z/OS Communications Server: IP Configuration Reference.

Module: GLBD
Procedure Name: main

EZA2961I LLBD: (find_socket) called with no ready sockets

Explanation: The procedure find_socket, which finds an available socket for a Local Location Broker Daemon (LLBD) connection, was called, but found no sockets ready to open a connection. A connection is not established.

System action: TCPIP continues.

Operator response: Resubmit the request when a socket is available.

System programmer response: Assist the user as necessary.

Module: LLBD
Procedure Name: find_socket

EZA2962I info name [port]

Explanation: This message provides information about the use of a port.

Processing Request port The indicated port has been used to submit a request that is now being processed.

Listening On port NCS is listening on the indicated port for user requests.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: LLBD
Procedure Name: print_socket_info

EZA2963I LLBD: (use_family) Can’t create socket

Explanation: The function use_family, which is called to set up a socket for a connection, was unable to create a socket. No connection is established.

System action: TCPIP continues.

Operator response: Resubmit the command when storage is available to create the socket.

System programmer response: Assist the user as necessary.
Module: LLBD
Procedure Name: use_family

EZA2964I LLBD: (use_family) Can’t bind socket
Explanation: The function use_family, which is called to set up a socket for a connection to Local Location Broker Daemon (LLBD), was unable to bind the socket because the bind request was rejected by the remote host. No connection is established.
System action: TCPIP continues.
Operator response: Resubmit the command when a socket is available on the remote host.
System programmer response: Check the remote host to determine why it is rejecting the LLBD BIND request.
Module: LLBD
Procedure Name: use_family

EZA2965I LLBD: Unable to obtain type family port
Explanation: The Local Location Broker Daemon (LLBD) was unable to obtain a port for the indicated address family. The LLBD uses the Berkeley socket concept, allowing it to listen on multiple sockets, each of which has an address family, which defines the structure of the address, a network (host) address, and a port address. This message indicates the address family type for which the LLBD is unable to get a port. No connection is established.
System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Check the host to determine why no port can be allocated.
Module: LLBD
Procedure Name: open_sockets

EZA2966E LLBD: Unable to obtain any sockets
Explanation: The Local Location Broker Daemon (LLBD) is unable to obtain any sockets for communication with the network. The LLBD uses sockets to listen for requests and to send replies.
System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Make sure that the LINK and DEVICE statements for the LLBD are configured properly and that the socket allocation requests submitted by LLBD specify valid, available sockets. Check the physical connections between the host and the network. Make sure that one or more ports are available to handle the sockets. For more information about socket errors, see the z/OS Communications Server: IP Programmer’s Guide and Reference.
Module: LLBD
Procedure Name: main

EZA2970I usage lb@admin -n[q]
Explanation: This message displays the correct format and syntax for the lb@admin command, which is used to invoke the location broker.
System action: TCPIP continues.
Operator response: Correct the syntax and resubmit the command.
System programmer response: Assist the user as necessary.
Module: LB@ADMIN
Procedure Name: main
Unknown command: command

Explanation: The indicated command is not supported by the location broker. The command is not processed.

System action: TCPIP continues.

Operator response: Correct the syntax and resubmit the command. For more information about commands supported by the location broker, see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.

System programmer response: Assist the user as necessary.

Module: LB@ADMIN

Procedure Name: main

Unknown option 'option'

Explanation: The indicated option is not supported by the location broker. The command is not processed.

System action: TCPIP continues.

Operator response: Correct the option and resubmit the command. For more information about options supported by the location broker, see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.

System programmer response: Assist the user as necessary.

Module: LB@ADMIN

Procedure Name: main

Usage: unregister OBJ TYPE INTERFACE LOCATION

Explanation: This message gives the format and syntax for the unregister command, which is used to remove an identifier from the location broker database. For more information about the unregister command, see the Network Computing System Reference Manual. The command is not processed.

System action: TCPIP continues.

Operator response: Correct the syntax and resubmit the command.

System programmer response: Assist the user as necessary.

Module: LB@ADMIN

Procedure Name: process_register_parms

Usage: register OBJ TYPE INTERFACE LOCATION ANNOTATION {global | local}

Explanation: This message displays the format and syntax for the register command, which is used to add an identifier to the location broker database. The command is not processed. For more information about the register command, see the Network Computing System Reference Manual.

System action: TCPIP continues.

Operator response: Correct the syntax and resubmit the command.

System programmer response: Assist the user as necessary.

Module: LB@ADMIN

Procedure Name: main

Usage: set_broker {local | global} LOCATION

Explanation: This message displays the format and syntax for the set_broker command, which is used to start the Location Broker Daemon. The command is not processed. For more information about the set_broker command, see the Network Computing System Reference Manual.
EZA2976I  Usage: set_broker {local | global} LOCATION

Explanation: This message displays the format and syntax for the set_broker command, which is used to start the Location Broker Daemon. The command is not processed. For more information about the set_broker command, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: Correct the syntax and resubmit the command.
System programmer response: Assist the user as necessary.
Module: LB@ADMIN
Procedure Name: main

EZA2977E  specification - illegal broker specification

Explanation: The set_broker command contained an incorrect broker specification. The command is not processed. For more information about the specifications for set_broker command, see the Network Computing System Reference Manual.

System action: TCPIP continues.
Operator response: Correct the specification and resubmit the command.
System programmer response: Assist the user as necessary.
Module: LB@ADMIN
Procedure Name: main

EZA2948I  Usage: set_broker local | global

Explanation: This message displays the format and syntax for the use_broker command, which is used to specify the location broker to be used. For more information about the use_broker command, see the Network Computing System Reference Manual.

System action: TCPIP continues.
Operator response: Correct the syntax and resubmit the command.
System programmer response: Assist the user as necessary.
Module: LB@ADMIN
Procedure Name: main

EZA2979I  No entries match.

Explanation: No entries were found matching the location broker found in the use_broker command. The command is not processed.

System action: TCPIP continues.
Operator response: Resubmit the use_broker command, specifying a valid location broker. For more information about the use_broker command, see the Network Computing System Reference Manual.
System programmer response: Assist the user as necessary.
Module: LB@ADMIN
Procedure Name: main

EZA2991I  id=id

EZA2992I  Bindings for id @ hash_table_position
Explanation: These messages display information from the server’s name table in a readable form.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: NAMETBL
Procedure Name: NAMETBL_dump_tab

EZA2994I  Unexpected (or unimplemented) type (" ) encountered in label

EZA2995I  ) encountered in label

EZA2996I  ; exiting.
Explanation: The function BACKEND_init, which initializes the code for the BACKEND procedure, encountered a type that it does not recognize in the indicated label. The function exits the label containing the unrecognized type.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: BACKEND
Procedure Name: BACKEND_init

EZA2997I  name address is “name”
Explanation: This message translates a name table entry to a readable name.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: BACKEND
Procedure Name: NAMETABLE_id_to_string

EZA2998I  NIDL compiler invoked
Explanation: This message indicates that the Network Interface Definition Language (NIDL) compiler has been invoked.
System action: The NIDL compiler is initialized. TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MAIN
Procedure Name: main
EZA2999I

EZA2999I NIDL compiler ended

Explanation: The Network Interface Definition Language compiler (NIDL) has ended.

System action: The NIDL compiler ends. TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MAIN

Procedure Name: main
Chapter 4. EZA3xxx messages

EZA3000I unexpected EOF inside a comment at line line

Explanation: The Network Interface Definition Language (NIDL) compiler encountered an unexpected end of file in a comment at the indicated line in the current file. Processing of the file halts.

System action: TCPIP continues.

Operator response: Notify the system programmer of the problem.

System programmer response: Remove the end of file marker from the comment and recompile. For more information about NIDL, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/support/docview Wax2).

Module: LEX_YY

Procedure Name: main

---

EZA3001E Illegal option ftype in getflags: ftype

Explanation: The Network Interface Definition Language (NIDL) compiler encountered an incorrect option in the procedure getflags, which is used to set processing flags for the compiler. The option is not processed.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Correct the indicated option and recompile. For more information about NIDL compiler options, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/support/docview Wcap).

Module: GETFLAGS

Procedure Name: main

---

EZA3002E Unknown flag (flag) in getflags

Explanation: The Network Interface Definition Language (NIDL) compiler encountered an option that it does not recognize. The option is not processed.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Correct the indicated option and recompile. For more information about NIDL compiler options, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/support/docview Wax).

Module: GETFLAGS

Procedure Name: main

---

EZA3003E Options table:

Explanation: This message precedes the printing of the options table for the Network Interface Definition Language (NIDL) compiler in response to an incorrect option.

System action: The options table is displayed. TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Correct the options as necessary and recompile.

Module: GETFLAGS

Procedure Name: printflags

*flag*

**Explanation:**  
The indicated Network Interface Definition Language (NIDL) flag, which is either a TOGGLEARG flag or an ASSERTARG flag, is incorrect.

**System action:**  
The NIDL compiler halts. TCPIP continues.
Operator response: Notify the system programmer of the error.

System programmer response: Correct the flag and recompile. For more information about NIDL compiler flags, see the Network Computing System Reference Manual.

Module: GETFLAGS
Procedure Name: printflags

---

EZA3009E flag

Explanation: The DENYARG flag for the Network Interface Definition Language (NIDL) compiler is incorrect.

System action: The NIDL compiler halts. TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Correct the DENYARG flag and recompile. For more information about NIDL compiler options, see the Network Computing System Reference Manual.

Module: GETFLAGS
Procedure Name: printflags

---

EZA3010E flag

Explanation: The CHRARG flag for the Network Interface Definition Language (NIDL) compiler is incorrect.

System action: The NIDL compiler halts. TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Correct the CHRARG flag and recompile. For more information about NIDL compiler options, see the Network Computing System Reference Manual.

Module: GETFLAGS
Procedure Name: printflags

---

EZA3011E flag

Explanation: The FLTARG flag for the Network Interface Definition Language (NIDL) compiler is incorrect.

System action: The NIDL compiler halts. TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Correct the FLTARG flag and recompile. For more information about NIDL compiler options, see the Network Computing System Reference Manual.

Module: GETFLAGS
Procedure Name: printflags

---

EZA3012E flag

Explanation: The LONGARG flag for the Network Interface Definition Language (NIDL) compiler is incorrect.

System action: The NIDL compiler halts. TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Correct the LONGARG flag and recompile. For more information about NIDL compiler options, see the Network Computing System Reference Manual.

Module: GETFLAGS
Procedure Name: printflags

---

**EZA3014E** -ansi is no longer needed.

**Explanation:** The NIDL command, which is used to invoke the Network Interface Definition Language (NIDL) compiler, was submitted with the ansi option specified. The ansi option is no longer necessary. The command is not processed.

**System action:** TCPIP continues.

**Operator response:** Resubmit the command without specifying the ansi option.

**System programmer response:** Assist the user as necessary.

**Module:** FRONTEND

**Procedure Name:** NIDL_init

---

**EZA3030E** (alloc_socket) Can't create socket, *errno*=

**Explanation:** The procedure alloc_socket, which is called to allocate a socket, was unable to create a new socket.

*errno* is the UNIX System Services Return Code. These return codes are listed and described in the [z/OS UNIX System Services Messages and Codes](https://www.ibm.com/support/docdisplay?rs=5200&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=linux&context=li...
**EZA3032E** (send_pkt) cannot enable broadcast, status=\textit{status}

**Explanation:** The function send\_pkt, which is called to send packets to clients, is unable to broadcast a packet over the network because the socket from which the packet is to be sent does not have the correct status.

**System action:** TCPIP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Determine the reason the socket has an incorrect status and respond as indicated.

**Module:** RPC\@C

**Procedure Name:** send\_pkt

---

**EZA3033E** (send_pkt) cannot enable broadcast, errno=\textit{errno}

**Explanation:** The function send\_pkt, which is called to send a packet, could not send a broadcast message. No packet is sent.

\textit{errno} is the UNIX System Services Return Code. These return codes are listed and described in the \textit{z/OS UNIX System Services Messages and Codes}.

**System action:** TCPIP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Use the \textit{errno} displayed in this message to determine the cause of the error and respond as indicated.

**Module:** RPC\@C

**Procedure Name:** send\_pkt

---

**EZA3034E** (recv\_pkt/client) Rcvd packet from wrong place; wanted \textit{address}

**EZA3035E** (recv\_pkt/client) got \textit{address}

**Explanation:** The function recv\_pkt/client, which is called to receive a packet, received a packet from an address other than the one it expected. The packet is discarded.

**System action:** TCPIP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Check the client and both indicated addresses to determine why the client is receiving packets from an incorrect address.

**Module:** RPC\@C

**Procedure Name:** recv\_pkt/client

---

**EZA3036I** (recv\_pkt/client) Rcvd callback (ptype=\textit{packet\_type})

**Explanation:** The function recv\_pkt/client, which is called to receive a packet, received a callback from a client indicating that the last packet sent to that client has been received.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** RPC\@C

**Procedure Name:** recv\_pkt/client
EZA3037I  (recv_pkt/client) Rcvd packet not for my activity

**Explanation:** The host received a packet that does not match the host’s current activity. If the sequence number of the packet is correct, the packet will be acknowledged, preventing retransmission of the packet. Otherwise the packet will be discarded, causing the client to resend the packet when the acknowledgment timeout expires.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** RPC@C

**Procedure Name:** recv_pkt/client

---

EZA3038I  (recv_pkt/client) Rcvd packet with bad seq (should be number, is number ptype=packet_type)

**Explanation:** The host has received a packet with an incorrect sequence number. The packet is discarded without acknowledgment, causing the client to resend the packet after the acknowledgment timeout has expired. The actual sequence number, expected sequence number, and packet type are displayed in this message.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** RPC@C

**Procedure Name:** recv_pkt/client

---

EZA3039I  (ack_replies) Aicking [address, sequence_number]

**Explanation:** The function ack_replies, which is called to send acknowledgments for packets that have been received, is sending an acknowledgment to the indicated address for the packet with the indicated sequence number.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** RPC@C

**Procedure Name:** ack_replies

---

EZA3040E  (ack_replies) Can’t send ACK, errno=errno

**Explanation:** The function ack_replies, which is called to acknowledge packets that have been received, is unable to send an acknowledgment.

*errno* is the UNIX System Services Return Code. These return codes are listed and described in the z/OS UNIX System Services Messages and Codes.

**System action:** TCPIP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Use the *errno* given in this message to determine the cause of the error and respond as indicated.

**Module:** RPC@C

**Procedure Name:** ack_replies
EZA3041I (await_reply) timeout

Explanation: The host is currently in a time out initiated by the procedure await_reply, which is called to put the host in a wait state to receive packets.

System action: After the timeout, the host resumes processing. TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@C

Procedure Name: await_reply

EZA3042I (await_reply) timeout (EINTR)

Explanation: A request from the function await_reply, which waits for a reply to a packet, to the operating system was interrupted. The request will be resubmitted to the system.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@C

Procedure Name: await_reply

EZA3043I (rpc_sar) Starting to ping

Explanation: The host is sending a PING packet to check for the existence of other hosts on the network. For more information about the PING function, see the [z/OS Communications Server: IP System Administrator's Commands](https://www.ibm.com/servers/resourcelink/)

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@C

Procedure Name: rpc__sar

EZA3044I (rpc_sar) Too many pings...signaling

Explanation: The local host has sent the maximum number of PING packets to check for the existence of another host on the network. The local host assumes that the host it is seeking does not exist. No more PING packets are sent.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@C

Procedure Name: rpc__sar

EZA3045I (rpc__sar) Rcvd “working” during frag send!

Explanation: The host received a “working” packet, but the host is sending fragmented packets, disrupting data transmission. The packet is acknowledged.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.
**EZA3046I • EZA3049I**

Module: RPC@C
Procedure Name: rpc__sar

---

**EZA3046I** (rpc__sar) Rcvd “working” pkt; seq=\*number\*

**Explanation:** The host has received a “working” packet with the indicated sequence number. The packet is acknowledged.

**System action:** TCPIP continues.
**Operator response:** No action is needed.
**System programmer response:** No action is needed.

---

**EZA3047I** (rpc__sar) Got “fack” for non-large request!

**Explanation:** The host received a fragmentation acknowledgment packet for a request that was not large enough to need fragmentation. This indicates that the client is configured to receive a smaller maximum transmission unit (MTU) than the host is configured to send. The packet is transmitted in fragments to allow the client to receive it.

**System action:** TCPIP continues.
**Operator response:** Notify the system programmer of the error.
**System programmer response:** Check the client to determine why it is acknowledging fragmentation when none is necessary.

---

**EZA3048I** (rpc__sar) Got “response” during frag recv!

**Explanation:** The host received a response packet while sending a fragmented packet. The response packet is received and acknowledged after sending of the fragmented packet is completed.

**System action:** TCPIP continues.
**Operator response:** No action is needed.
**System programmer response:** No action is needed.

---

**EZA3049I** (rpc__sar) Got non-frag “response” during frag send!

**Explanation:** The host received a non-fragmented response packet while sending a fragmented packet. The response will be accepted and acknowledged after the host is through sending the fragmented packet.

**System action:** TCPIP continues.
**Operator response:** No action is needed.
**System programmer response:** No action is needed.

---
EZA3050E  (use_family) Can’t create socket

Explanation: The function use_family, which is used to create and register a socket for listening, was unable to create a socket. This prevents the host from receiving requests over the connection.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Check the host to determine why it is unable to create a socket, and respond as indicated. For more information about socket errors, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

Module: RPC@S

Procedure Name: use_family

EZA3051E  (use_family) Can’t bind socket, errno=errno

Explanation: The function use_family, which is used to create and register a socket for listening, could not bind a socket to open a connection, preventing the host from receiving requests over that connection.

errno is the UNIX System Services Return Code. These return codes are listed and described in the z/OS UNIX System Services Messages and Codes.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Use the errno displayed in this message to determine the cause of the error and respond as indicated.

Module: RPC@S

Procedure Name: use_family

EZA3052E  (rpc__use_family) Can’t getsockname, errno=errno

Explanation: The function getsockname, which is used by the function rpc__use_family to get the name of a socket to be used for listening, was unsuccessful. The connection is not established.

errno is the UNIX System Services Return Code. These return codes are listed and described in the z/OS UNIX System Services Messages and Codes.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Use the errno displayed in this message to determine the cause of the error and respond as indicated.

Module: RPC@S

Procedure Name: use_family

EZA3053E  (rpc__use_family) Can’t get my netaddr

Explanation: The function rpc__use_family, which uses a socket to listen for requests from clients, was unable to get the network address for the socket. The socket is closed.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Check the host to determine why the network address was not passed to rpc__use_family. For more information about this function, see the Network Computing System Reference Manual.

Module: RPC@S

Procedure Name: rpc__use_family

Chapter 4. EZA3xxx messages  181
EZA3054E - rpc__use_family

Can't get socket

Explanation: The function rpc__use_family, which uses a socket to listen for requests, was unable to get a socket. The connection is not established.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Check the host to determine why no socket is available and respond as indicated. For more information about socket errors, see the z/OS Communications Server: IP Programmer's Guide and Reference.

Module: RPC@S

Procedure Name: rpc__use_family

EZA3055I - scan_activities

Freeing passive connection

Explanation: The function scan_activities, which retransmits unacknowledged replies and frees old activities, is freeing the indicated passive connection.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S

Procedure Name: scan_activities

EZA3056I - scan_activities

Passivating idle connection

Explanation: The function scan_activities, which retransmits unacknowledged replies and frees old activities, is changing the state of the indicated connection from idle to passive open.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S

Procedure Name: scan_activities

EZA3057I - scan_activities

Dropping reply [identifier, sequence_number]

Explanation: The function scan_activities, which retransmits unacknowledged replies and frees old activities, is dropping the indicated packet because it has been sent the maximum allowable number of times.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S

Procedure Name: scan_activities

EZA3058I - scan_activities

Retransmitting reply (state=state) [id, reply_packet_sequence_header_]

Explanation: The function scan_activities, which retransmits unacknowledged replies and frees old activities, is resending the indicated packet.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.
EZA3059I  (ping_common) Working (ptype=packet_type) [id, sequence_number]

Explanation: The function ping_common, which is used to process request and PING packets whose sequence numbers indicated that they are current, is processing the indicated packet.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S

Procedure Name: ping_common

EZA3060I  (ping_common) Resending reply (state=state, ptype=packet_type, frag=fragmentation_number) [id, sequence_number]

Explanation: The function ping_common, which is used to process request and PING packets whose sequence number indicates that they are current, is resending the indicated reply packet.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S

Procedure Name: ping_common

EZA3061I  (ping_common) No call (state=state, ptype=packet_type) [id, sequence_number]

Explanation: The function ping_common, which is used to process request and PING packets whose sequence numbers indicate that they are current, received a packet that did not contain a call for a service.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S

Procedure Name: ping_common

EZA3062I  (who_are_you) Doing callback

Explanation: The function who_are_you, which is used to determine the identity of a client, is doing a callback to the client.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S

Procedure Name: who_are_you
EZA3063I  (who_are_you) Can’t bind to client, st=status

Explanation: The function who_are_you, which is used to determine the identity of a client, is unable to bind a socket for communication with the client. The reason is indicated by the status displayed in this message.

System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Respond as indicated by the status displayed in this message.
Module: RPC@S
Procedure Name: who_are_you

EZA3064I  (who_are_you) fault, st=status

Explanation: The function who_are_you, which is used to determine the identity of a client, has encountered an error. The connection to the client is not established. The reason is indicated by the status displayed in this message.

System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Respond as indicated by the status displayed in this message.
Module: RPC@S
Procedure Name: who_are_you

EZA3065I  (who_are_you) who_are_you failed, st=status

Explanation: The function who_are_you, which is used to determine the identity of a client, was unsuccessful. The reason is indicated by the status displayed in this message. The connection is closed and the function rpc_free_handle is called to free the socket.

System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Respond as indicated by the status displayed in this message.
Module: RPC@S
Procedure Name: who_are_you

EZA3066I  (do_request_frag) Bad initial frag

Explanation: The function do_request_frag, which is called to handle fragmented request packets, received an initial fragment other than the one that was expected.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_request_frag

EZA3067I  (do_request_frag) Out of order frag; expecting number [packet_type, sequence_number]

Explanation: The function do_request_frag, which is used to handle fragmented request packets, received a fragment other than the one that is expected. The fragment is not acknowledged, prompting the sending client to resend the fragment after the acknowledgment timeout.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@s
Procedure Name: do_request_frag

EZA3068I (do_request) Unknown interface [packet_type, sequence_number]
Explanation: The function do_request, which accepts and handles client request packets, received a packet from an interface that is not registered with a location broker. The packet is refused and the request is not processed.
System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Register the interface with the location broker and resubmit the request. For more information about registering an interface with a location broker, see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.
Module: RPC@s
Procedure Name: do_request.

EZA3069I (do_request) Opnum out of range [id, sequence_number]
Explanation: The function do_request, which accepts and handles client request packets, received a packet whose operation number was outside the valid range. The packet is rejected, prompting the sending client to create a new packet to send the request.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@s
Procedure Name: do_request.

EZA3070I (do_request) Got inappropriate request (state=state) [id, sequence_number]
Explanation: The function do_request, which accepts and handles client requests, received a request packet during the processing of a duplicate request. Processing of the old request halts. The new request is returned, prompting the client to retransmit the request and allowing the host time to shut down processing of the old request.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@s
Procedure Name: do_request.

EZA3071I (do_request) Old sequence, previous=sequence_number [id, sequence_number]
Explanation: The function do_request, which accepts and handles client request packets, received a packet whose sequence number indicates that it is not current. The packet is rejected.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@s
Procedure Name: do_request.
**EZA3072I** - do_request

**Mismatch sequence during frag reassembly**

- **Explanation:** The function do_request, which accepts and handles client request packets, received a packet with an incorrect sequence number during the reassembly of a fragmented packet. The fragment is rejected. The fragmented packet is reassembled.

- **System action:** TCPIP continues.

- **Operator response:** No action is needed.

- **System programmer response:** No action is needed.

- **Module:** RPC@S

- **Procedure Name:** do_request.

**EZA3073E** - do_request

**Protocol error**

- **Explanation:** The function do_request, which accepts and handles client request packets, encountered a protocol error caused by an out of sequence packet. The packet is not processed.

- **System action:** TCPIP continues.

- **Operator response:** Notify the system programmer of the error.

- **System programmer response:** Check the sending device to determine why it is sending out of sequence packets.

- **Module:** RPC@S

- **Procedure Name:** do_request.

**EZA3074E** - do_request

**Fault while executing request, st=status**

- **Explanation:** The function do_request, which accepts and handles client request packets, encountered an error while processing a request. The reason is indicated by the status displayed in this message.

- **System action:** Processing halts. TCPIP continues.

- **Operator response:** Notify the system programmer of the error.

- **System programmer response:** Respond as indicated by the status portion of this message.

- **Module:** RPC@S

- **Procedure Name:** do_request.

**EZA3075I** - do_ping

**No call (no activity for this call)**

- **Explanation:** The function do_ping, which handles PING packets, received a packet that did not contain a request for an activity.

- **System action:** TCPIP continues.

- **Operator response:** No action is needed.

- **System programmer response:** No action is needed.

- **Module:** RPC@S

- **Procedure Name:** do_ping

**EZA3076I** - do_ping

**No call (higher numbered ping), ahint=activity_number, previous=old*us.sequence_number**

- **Explanation:** The function do_ping, which handles PING packets, received a packet with a sequence number higher than the sequence number of the current activity, indicating that the “quit” packet for that activity has been lost. The current activity is stopped.

- **System action:** TCPIP continues.

- **Operator response:** No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_ping

**EZA3077I** (do_ping) Drop ping [id, sequence_number]
Explanation: The function do_ping, which is called to handle PING packets, is dropping the indicated PING packet.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_ping

**EZA3078I** (do_ack) No or incorrect ahint in ack, ahint=activity_number [id, sequence_number]
Explanation: The function do_ack, which handles acknowledgment packets, received a packet with a missing or incorrect activity number. The packet is dropped, then resent.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_ack

**EZA3079I** (do_fack) No or incorrect ahint in fack, ahint=activity_number [id, sequence_number]
Explanation: The function do_fack, which handles fragmented acknowledgment packets, received a packet with a missing or incorrect activity number for a fragmented packet. The packet is dropped, the packet is resent.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_fack

**EZA3080I** (do_fack) Anomalous fack, state=state, prev_seq=sequence_number, frag=fragment_number, [id, sequence_number]
Explanation: The function do_fack, which handles fragmented acknowledgment packets, received a packet with a state, sequence number, or fragmentation number other than what was expected.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_fack
EZA3081I  (do_quit) No call (no activity for this call) [id, sequence_number]
Explanation: The function do_quit, which handles quit packets, received a packet that did not contain an activity number.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_quit

EZA3082I  (do_bad_pkt) Bad pkt, ptype=packet_type [id, sequence_number]
Explanation: The function do_bad_pkt, which handles incorrect packets, has been called for the indicated packet.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_bad_pkt

EZA3083I  (rpc__listen_dispatch) Trash ahint (activity_number)
Explanation: The function rpc__listen_dispatch, which does server-side processing for one incoming packet, received a packet with an activity number that is greater than the range of valid activity numbers. The packet is discarded.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: rpc__listen_dispatch

EZA3084I  (rpc__listen_dispatch) Trashi ihint (activity_number)
Explanation: The function rpc__listen_dispatch, which does server-side processing for one packet at a time, received a packet with an IP address outside the valid range. The packet is discarded.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: rpc__listen_dispatch

EZA3085I  (rpc__listen_dispatch) Server boot time mismatch
Explanation: The function rpc__listen_dispatch, which handles server-side processing for one packet at a time, received a packet with a server boot time field that does not match the current server. This indicates that the server has been rebooted since the last communication with this client. The packet is rejected, prompting the client to update their tables with the correct boot time. The packet will be resent by the client.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S

Procedure Name: rpc__listen_dispatch

EZA3086I (check_for_pkt) Rcvd (ptype= type) [id, sequence_number]

Explanation: The function check_for_pkt, which checks all sockets for data and processes any non-request packets, received the indicated packet.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S

Procedure Name: check_for_pkt

EZA3087I (check_for_pkt) Waiting...

Explanation: The function check_for_pkt, which checks all sockets for data and processes any non-request packets, is currently in a waiting state.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S

Procedure Name: check_for_pkt

EZA3088I (check_for_pkt) Checking for pkts...

Explanation: The function check_for_pkt, which checks all sockets for data and processes any non-request packets, is checking all sockets for data.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S

Procedure Name: check_for_pkt

EZA3089I (listen) task task_number

Explanation: The function listen, which listens for requests from clients, received a packet with a request for the indicated task.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S

Procedure Name: listen

EZA3090I (listen) Spurious quit activity fault ignored

Explanation: The function listen, which listens for requests from clients, received a quit request for an activity that has already been stopped. The request is ignored.

System action: TCPIP continues.
EZA3091I • EZA3094E

Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  RPC@S
Procedure Name:  listen

EZA3091I (listen) wait failed status
Explanation:  The function listen, which listens for requests from clients, did not receive data after entering a wait state to wait for data.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  RPC@S
Procedure Name:  listen

EZA3092I (listen) Spurious quit activity fault ignored
Explanation:  The function listen, which listens for requests from clients, received a quit request for an activity that has already been stopped. The request is ignored.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  RPC@S
Procedure Name:  listen

EZA3093E (rpc) *** FATAL ERROR “error” at file\line ***
Explanation:  The server has encountered an error in the indicated data set at the indicated line.
System action:  Processing of the data set halts. TCPIP continues.
Operator response:  Notify the system programmer of the error.
System programmer response:  Correct the data set as indicated and resubmit it for processing.
Module:  RPC@UTIL
Procedure Name:  rpc__die

EZA3094E (rpc__lock) Can’t get lock lock at file\line
Explanation:  The function rpc__lock, which is used to make sure that only one processing thread is occurring during many RPC runtime routines, was unable to lock the indicated data set at the indicated line.
System action:  Processing of the data set halts. TCPIP continues.
Operator response:  Notify the system programmer of the error.
System programmer response:  Correct the indicated line in the data set and resubmit the data set for processing.
Module:  RPC@UTIL
Procedure Name:  rpc__lock
EZA3095E  (rpc__recvfrom) Error in recv, errno=errno

Explanation: The function rpc__recvfrom, which is used to receive a packet from a socket, was unable to receive a packet.

errno is the UNIX System Services Return Code. These return codes are listed and described in the z/OS UNIX System Services Messages and Codes.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Use the errno displayed in this message to determine the cause of the error and respond as indicated.

Module: RPC@UTIL
Procedure Name: rpc__recvfrom

---

EZA3096E  (.rpc_recvfrom) Bad RPC version (version)

Explanation: The function rpc__recvfrom, which receives a packet from a socket, received a packet sent by an incompatible RPC version. The packet is not processed.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Replace the incompatible RPC version with a compatible one. For more information about RPC versions, see the Network Computing System Reference Manual.

Module: RPC@UTIL
Procedure Name: rpc__recvfrom

---

EZA3097E  (rpc__recvfrom) Bad pkt type (type)

Explanation: The function rpc__recvfrom, which receives a packet from a socket, received a packet with an incorrect type. The packet is not processed.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Check the sending device to determine why it is sending incorrect packet types.

Module: RPC@UTIL
Procedure Name: rpc__recvfrom

---

EZA3098E  (rpc__recvfrom) Packet too short: is length data length is length

Explanation: The function rpc__recvfrom, which receives a packet from a socket, received a packet that is too small. The packet is not processed.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Check the sending device to determine why it is sending packets that are smaller than allowed.

Module: RPC@UTIL
Procedure Name: rpc__recvfrom
EZA3099E  (rpc__sendto) sento failed, errno=errno

Explanation: The function rpc__sendto, which sends a packet to a socket, was unsuccessful.

errno is the UNIX System Services Return Code. These return codes are listed and described in the z/OS UNIX System Services Messages and Codes.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Use the errno displayed in this message to determine the cause of the error and respond as indicated.

Module: RPC@UTIL

Procedure Name: rpc__sendto

EZA3100E  (periodic_task) "task" task exited, status=status

Explanation: A task that is called periodically has been exited, rather that entering a wait state until the next call. The status displayed in this message indicates the reason.

System action: The task is exited. TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Use the status displayed in this message to determine the cause of the error and respond as indicated.

Module: RPC@UTIL

Procedure Name: periodic_task

EZA3101I  rpc_vers: version

EZA3102I  xtype: packet_type (type)

EZA3103I  flags: header_flags

EZA3104I  int_rep: integer_representation

EZA3105I  char_rep: character_representation

EZA3106I  float_rep: floating_decimal_representation

Explanation: These messages display information about the RPC version being used.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@UTIL

Procedure Name: rpc__dump_pkt_hdr

EZA3107I  object uuid: object_identifier
EZA3108I  interface uuid: interface_identifier

EZA3109I  activity uuid: activity_identifier

EZA3110I  server boot time: time

EZA3111I  interface version: version

EZA3112I  sequence number: number

EZA3113I  operation number: number

EZA3114I  interface hint: number

EZA3115I  activity hint: number

EZA3116I  fragment #: number

EZA3117I  length of body: length

Explanation: These messages display information about a packet received by the RPC utility.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@UTIL
Procedure Name: rpc__dump_pkt_hdr

EZA3950I  NDB Port Manager for MVS Version 3 started

Explanation: This message is printed to job log output when the NDB port manager is started. It displays the current level, version, and release of code being used.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: NDBPS
Procedure Name: NDBPS

EZA3951E  Cannot create type service.

Explanation: NDB uses remote procedure call (RPC) to handle requests between the NDB port manager, NDB servers and NDB clients. NDBPS was trying to establish the indicated type of service via RPC, but it failed.
System action: The NDB port manager ends.
Operator response: Notify the system programmer of the error.
System programmer response: Check job log output for related RPC error messages. Correct any errors reported. Make sure that the portmapper is started and restart the procedure PORTS.
Module: NDBPS
Procedure Name: NDBPS
EZA3952E  Unable to register (PORTS_PROG, PORTS VERS, string).

Explanation: NDB uses remote procedure call (RPC) to handle requests between the NDB port manager, NDB servers and NDB clients. NDBPS was trying to register either a TCP or UDP service transport handle, as indicated by string with the local Portmapper via the RPC call svc_register, but it failed.

System action: The NDB port manager ends.

Operator response: Notify the system programmer of the error.

System programmer response: Check job log output for related RPC error messages. Correct any errors reported. Make sure the portmapper is started and restart the procedure PORTS.

Module: NDBPS

Procedure Name: NDBPS

---

EZA3953E  Unable to free arguments

Explanation: NDB uses remote procedure call (RPC) to handle requests between the NDB port manager, NDB servers and NDB clients. NDBPS was trying to free storage previously allocated for argument decoding via the RPC call svc_freeargs, but it failed.

System action: The NDB port manager ends.

Operator response: Notify the system programmer of the error.

System programmer response: Check job log output for related RPC error messages. Correct any errors reported. Make sure the Portmapper is started and restart the procedure PORTS.

Module: NDBPS

Procedure Name: NDBPS
Chapter 5. EZA4xxx messages

EZA4000I  PORTCLNT for MVS Version 3 started

Explanation:  This message is printed to job log output when the NDB port client first starts to indicate that the NDB port client is started and to display the current host, level, and version of code being used.

System action:  TCPIP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  PORTCLNT

Procedure Name:  PORTCLNT

EZA4001E  Parameters to be specified are: HOMEID USERID DB2SSID NUMSRV TRACE

Explanation:  This message is printed to job log output when the NDB port client finds it has an incorrect number of startup parameters. It lists the possible parameters that PORTCLNT will accept. The first 3 are required. If NUMSRV is not specified, it is set to 1, and PORTCLNT continues. TRACE is an optional parameter and is usually turned off.

System action:  NDB port client startup terminates.

Operator response:  Correct the parameters and restart the procedure PORTC.

System programmer response:  No action is needed.

Module:  PORTCLNT

Procedure Name:  PORTCLNT

EZA4002E  MALLOC failed for storage for SSCB (PCb) fields

Explanation:  PORTCLNT tried to obtain storage for an SSCB type of internal control block but was unsuccessful.

System action:  NDB port client startup terminates.

Operator response:  Notify the system programmer of the error.

System programmer response:  Increase the region size and restart the application.

Module:  PORTCLNT

Procedure Name:  PORTCLNT

EZA4003E  Caller is neither the NDB Server nor NDB Client. Exit(4).

Explanation:  PORTCLNT acknowledges communications from two places, one of the NDB servers or from an NDB client. A communication has been received that did not come from one of these sources.

System action:  NDB port client startup terminates.

Operator response:  Make sure that NDB is properly installed. If the error persists, notify the system programmer.

System programmer response:  Obtain trace information and contact the IBM Software Support Center.

Module:  PORTCLNT

Procedure Name:  PORTCLNT
EZA4004E  •  EZA4008E

EZA4004E  DB2 subsystem name, name, is longer than is allowed by DB2.
Explanation: The parameter DB2SSID contained a DB2 subsystem name that was longer than 4 bytes.
System action: NDB port client startup terminates.
Operator response: Verify the DB2 subsystem name, correct it on the JCL, and restart the procedure PORTC.
System programmer response: No action is needed.
Module: PORTCLNT
Procedure Name: PORTCLNT

EZA4005E  NUMSRV contains an incorrect value. value is: value
Explanation: The parameter NUMSRV contained a value other than a number 1 through 20. This message displays
the value PORTCLNT received for the parameter NUMSRV. The parameter is set to 1 and processing continues.
System action: The NDB port client continues.
Operator response: Correct the parameter and restart the procedure PORTC.
System programmer response: No action is needed.
Module: PORTCLNT
Procedure Name: PORTCLNT

EZA4006E  NUMSRV is not between 1-20. defaulting to 1.
Explanation: The parameter NUMSRV contained a value other than a number 1 through 20; the value in NUMSRV
is reset to 1 by PORTCLNT.
System action: The NDB port client continues.
Operator response: Correct the value of NUMSRV and restart the procedure PORTC.
System programmer response: Assist the user as necessary.
Module: PORTCLNT
Procedure Name: PORTCLNT

EZA4007I  Number of NDB Servers being started is number
Explanation: This message is printed to job log output during NDB port client startup. It indicates the number of
NDB servers being started by PORTCLNT.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: PORTCLNT
Procedure Name: PORTCLNT

EZA4008E  MTF function ‘function’ failed. RC is rc
Explanation: PORTCLNT uses the C/370™ Multitasking Facility to startup multiple NDB servers. While trying to
execute the indicated MTF function an error was encountered, as specified by rc portion of this message.
System action: The NDB port client ends.
Operator response: Notify the system programmer of the error.
System programmer response: Use the return code displayed in this message and the list of return codes in the
C/370 Programming Guide or the header file MTF.H to determine the cause of the error, and respond as indicated.
Module: PORTCLNT
Procedure Name: PORTCLNT

EZA4009E    RPC error occurred during ports_msg_1 call. Exit(7).

Explanation: NDB uses remote procedure call (RPC) to handle requests between NDB clients and NDB servers. It is also used by the NDB port client to register each NDB server started with the NDB port manager (the NDB component that assigns NDB servers to clients). During the RPC call from the NDB port client to the NDB port manager to register this NDB server, an RPC failure occurred.

System action: The NDB port client ends.

Operator response: Check job log output for related RPC error messages. Correct any errors reported. Make sure the Portmapper and NDB port manager are started and restart PORTC.

System programmer response: Assist the user as necessary.

Module: PORTCLNT

Procedure Name: PORTCLNT

EZA4010E    All the ports are busy. Please try again later.

Explanation: The NDB port manager can handle up to 20 NDB servers. This is because it has 20 program numbers reserved in the ETCRPC member of the SEZAINST data set. These program numbers become associated with a port when an NDB client requests an NDB server and one is assigned. Currently, all ports are in use.

System action: The NDB port client ends.

Operator response: Wait for a free port before trying to establish a connection.

System programmer response: No action is needed.

Module: PORTCLNT

Procedure Name: PORTCLNT

EZA4011I    Server number started. Prognum is program number (Hex), program number (Dec).

Explanation: This message is printed to job log output when the NDB port client has started up an NDB server. The program number from the ETCRPC member of the SEZAINST data set assigned to this NDB server is reported in hexadecimal and decimal.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: PORTCLNT

Procedure Name: PORTCLNT

EZA4012I    PORTCLNT exit. Normal shutdown completed.

Explanation: This message is printed to job log output when the NDB port client is stopped.

System action: PORTCLNT ends.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: PORTCLNT

Procedure Name: PORTCLNT
EZA4150I  NDB Server program number (HEX) started, accessing name

Explanation: This message is printed to job log output when an NDB server is started by the NDB port client. The program number from the ETCRPC member of the SEZAINST data set assigned to this NDB Server is reported in hexadecimal. The DB2 subsystem that can be accessed by this NDB Server is specified in name.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: NDBSS
Procedure Name: NDBSS

EZA4151I  host NDB Server received a call from host userid userid

Explanation: This message is printed to job log output when an NDB server is called by an NDB client. host is MVS or VM, indicating the version of NDB server code being used and the host user ID provided by the user of the NDB client is also displayed.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: NDBSS
Procedure Name: NDBSRV

EZA4152E  MALLOC of string failed in function string

Explanation: NDBSS tried to obtain storage for whatever is specified in the first string but was unsuccessful. The function trying to do the MALLOC is named in the second string.

System action: The NDB server terminates the current request.
Operator response: Notify the system programmer of the error.
System programmer response: Increase the region size for the indicated function.
Module: NDBSS
Procedure Name: NDBSRV

EZA4153E  Invalid NDBC control block. Reason: string.

Explanation: The NDB server and the NDB client use a control block, NDBC, to transfer information to each other. Several fields of NDBC are used as validity checks also. This message indicates that one of these fields contains an incorrect value.

<table>
<thead>
<tr>
<th>If string Is:</th>
<th>Bad field Is:</th>
<th>Should be:</th>
</tr>
</thead>
<tbody>
<tr>
<td>NDB Release numbers don’t match</td>
<td>NDBREL</td>
<td>1</td>

<tr>
<td>NDB Version numbers don’t match</td>
<td>NDBVER</td>
<td>2</td>
</tr>
<tr>
<td>Eyecatcher not for NDBC control block</td>
<td>NDBCB</td>
<td>NDBC</td>
</tr>
<tr>
<td>NDB Server names don’t match</td>
<td>NDBSNAME</td>
<td>netdbsrv</td>
</tr>
</tbody>
</table>

System action: The NDB server terminates the current request.
Operator response: Notify the system programmer of the error.
System programmer response: Get the member NDBCLTC from the SEZAINST data set again and rename it according to the client platform. For more information, see the z/OS Communications Server: IP Configuration Reference

Module: NDBSS
EZA4154E  Cannot create type service.

**Explanation:** NDB uses remote procedure call (RPC) to handle requests between NDB clients and NDB servers. NDBSS was trying to establish either a TCP or UDP (as specified by *type*) service transport handle via RPC, but it was unsuccessful.

**System action:** The NDB server terminates.

**Operator response:** Check job log output for related RPC error messages. Correct any errors reported. Make sure the Portmapper and NDB port manager are started and restart PORTC.

**System programmer response:** Assist the user as necessary.

**Module:** NDBSS

**Procedure Name:** NDBSS

---

EZA4155E  Unable to register (NETDB_PROG, NETDB_VERS, type).

**Explanation:** NDB uses remote procedure call (RPC) to handle requests between NDB clients and NDB servers. NDBSS was trying to register either a TCP or UDP service transport handle, as indicated by *type*, with the local portmapper via the RPC call svc_register, but it was unsuccessful.

**System action:** The NDB server terminates.

**Operator response:** Check job log output for related RPC error messages. Correct any errors reported. Make sure the portmapper and NDB port manager are started and restart PORTC.

**System programmer response:** Assist the user as necessary.

**Module:** NDBSS

**Procedure Name:** NDBSS

---

EZA4156E  Error occurred for SQL CLOSE CURSOR string. SQLCODE is number.

**Explanation:** The indicated function encountered an error while doing an SQL CLOSE CURSOR statement. The type of error is indicated by the SQLCODE displayed in the message.

**System action:** The NDB Server continues processing.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Use the SQLCODE displayed in the message and the list of codes in DB2 Messages and Codes to determine the cause of the error, and respond as indicated.

**Module:** NDBSS

**Procedure Name:** DBUTIL2

---

EZA4157E  Error occurred for SQL string. SQLCODE is number.

**Explanation:** A DB2 error condition was encountered while processing an SQL statement. The SQL statement and the function reporting the error are indicated by *string*, and the DB2 error code reported in the SQLCA field SQLCODE is indicated by *number*.

**System action:** The NDB Server terminates the current request.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Use the SQLCODE displayed in the message and the list of codes in DB2 Messages and Codes to determine the cause of the error and respond as indicated.

**Module:** NDBSS

**Procedure Name:** DBUTIL2
EZA4158E  Single row of query data is larger than reply buffer. Query ended.

Explanation: The length of one row of data to be returned from the current query is greater than the length of the NDB reply buffer. The size of the NDB reply buffer is specified in the NDBC field NDBRPDLN.

System action: The NDB Server terminates the current query.

Operator response: Retrieve fewer columns per query either by issuing multiple queries or by making the query more restrictive in the number of columns requested, or increase the size of the NDB reply buffer. For more information on increasing the size of the reply buffer, see the z/OS Communications Server: IP User's Guide and Commands.

System programmer response: Assist the user as necessary.

Module: NDBSS

Procedure Name: DBUTIL2

---

EZA4159E  Unable to free arguments

Explanation: NDB uses remote procedure call (RPC) to handle requests between NDB clients and NDB servers. NDBSS was trying to free storage previously allocated for argument decoding via the RPC call svc_freeargs, but it failed.

System action: The NDB Server terminates.

Operator response: Check job log output for related RPC error messages. Correct any errors reported. Make sure the portmapper and NDB port manager are started and restart PORTC.

System programmer response: Assist the user as necessary.

Module: NDBSS

Procedure Name: NDBSS

---

EZA4160E  Host userid or password is not valid

Explanation: The user ID or password supplied to the NDB server from the NDB client on behalf of the user was not accepted by the security facility (such as RACF).

System action: The NDB Server terminates the current request.

Operator response: Make sure that you are specifying a valid host user ID and password when you invoke the NDB client.

System programmer response: Assist the user as necessary.

Module: NDBSS

Procedure Name: NDBSS

---

EZA4161E  CAF error: Wrong number of parms or end-of-list bit off

Explanation: The NDB servers use the DB2 Call Attachment Facility (CAF) to establish a connection with DB2. NDB uses two services of CAF, one to open the plan in DB2 used by NDB and called EZAND320, establishing a connection to DB2; and another to close the plan EZAND320 and end the connection. While making one of these calls, CAF reported to NDB that an error has occurred. The error was that an incorrect number of parameters was specified on the call to CAF by NDB or that the end-of-list bit, which should have been on, was set to off.

System action: The NDB server terminates the current request.

Operator response: Make sure that the Call Attachment Facility is properly installed and DB2 is started, and restart your NDB Client session. If the error persists, notify the system programmer of the error.

System programmer response: Obtain trace information and contact the IBM Software Support Center.

Module: NDBSS

Procedure Name: NDBSRV
EZA4162E  CAF error: Unrecognized function parameter

Explanation: The NDB servers use the DB2 Call Attachment Facility (CAF) to establish a connection with DB2. NDB uses two services of CAF, one to open the plan in DB2 used by NDB and called EZAND320, establishing a connection to DB2; and another to close the plan EZAND320 and end the connection. While making one of these calls, CAF reported to NDB that an error has occurred. The error was that the service NDB requested of CAF was not a supported function, such as OPEN or CLOSE.

System action: The NDB Server terminates the current request.

Operator response: Make sure that the Call Attachment Facility is properly installed and that DB2 is started. If the error persists, notify the system programmer.

System programmer response: Obtain trace information and contact the IBM Software Support Center.

Module: NDBSS

Procedure Name: NDBSRV

EZA4163E  CAF error: Access two different DB2 subsystems, one TCB

Explanation: The NDB servers use the DB2 Call Attachment Facility (CAF) to establish a connection with DB2. NDB uses two services of CAF, one to open the plan in DB2 used by NDB and called EZAND320, establishing a connection to DB2; and another to close the plan EZAND320 and end the connection. While making one of these calls, CAF reported to NDB that an error has occurred. The error was that CAF received two calls from one NDB server, each call requesting to access a different DB2 subsystem.

System action: The NDB Server terminates the current request.

Operator response: Make sure that the Call Attachment Facility is properly installed and that DB2 is started. If the error persists, notify the system programmer.

System programmer response: Obtain trace information and contact the IBM Software Support Center.

Module: NDBSS

Procedure Name: NDBSRV

EZA4164E  CAF error: Release level mismatch between DB2 and CAF

Explanation: The NDB servers use the DB2 Call Attachment Facility (CAF) to establish a connection with DB2. NDB uses two services of CAF, one to open the plan in DB2 used by NDB and called EZAND320, thereby also establishing a connection to DB2; and another to close the plan EZAND320 and end the connection. While making one of these calls, CAF reported to NDB that an error has occurred. The error was that the level of DB2 currently executing and the level of CAF currently executing are not the same.

System action: The NDB server terminates the current request.

Operator response: Make sure the Call Attachment Facility is properly installed and that DB2 is started and restart the NDB client session. If the error persists, notify the system programmer.

System programmer response: Obtain trace information and contact the IBM Software Support Center.

Module: NDBSS

Procedure Name: NDBSRV

EZA4165E  CAF system error: Probable error in the attach or DB2

Explanation: The NDB servers use the DB2 Call Attachment Facility (CAF) to establish a connection with DB2. NDB uses two services of CAF, one to open the plan in DB2 used by NDB and called EZAND320, thereby also establishing a connection to DB2; and another to close the plan EZAND320 and end the connection. While making one of these calls, CAF reported to NDB that an error has occurred. The error was that CAF detected an error it could not identify.

System action: The NDB server terminates the current request.

Operator response: Make sure the Call Attachment Facility is properly installed and that DB2 is started and restart the NDB client session. If the error persists, notify the system programmer.
**EZA4166E • EZA4169E**

**System programmer response:** Obtain trace information and contact the IBM Software Support Center.

**Module:** NDBSS  
**Procedure Name:** NDBSRV

---

**EZA4166E**  
**CAF string DB failed. Return code = number. Reason code = hex number(HeX)**

**Explanation:** The NDB servers use the DB2 Call Attachment Facility (CAF) to establish a connection with DB2. NDB uses two services of CAF, one to open the plan in DB2 used by NDB and called EZAND320, thereby also establishing a connection to DB2; and another to close the plan EZAND320 and end the connection. While making one of these calls, CAF reported to NDB that an error has occurred.

**System action:** The NDB server terminates the current request.

**Operator response:** Make sure the Call Attachment Facility is properly installed and that DB2 is started and restart your NDB client session. If the error persists, notify the system programmer.

**System programmer response:** Use the codes displayed in this message and [DB2 Messages and Codes](#) to determine the cause of the error and respond as indicated.

**Module:** NDBSS  
**Procedure Name:** NDBSRV

---

**EZA4167E**  
**NDB server could not do CAF OPEN DB; DB2**

**Explanation:** The NDB servers use the DB2 Call Attachment Facility (CAF) to establish a connection with DB2. NDB uses two services of CAF, one to open the plan in DB2 used by NDB and called EZAND320, establishing a connection to DB2; and another to close the plan EZAND320 and end the connection. The NDB server was unable to make a CAF OPEN call, because the name of the DB2 subsystem to be used was missing.

**System action:** The NDB server terminates the current request.

**Operator response:** Make sure that the DB2 subsystem name was provided when PORTC JCL was started. Check the PORTC job log console for previous error messages. If the error persists, notify the system programmer.

**System programmer response:** Obtain trace information and contact the IBM Software Support Center.

**Module:** NDBSS  
**Procedure Name:** NDBSRV

---

**EZA4168E**  
**Load of CAF modules failed. Return code is rc.**

**Explanation:** The NDB servers use the DB2 Call Attachment Facility (CAF) to establish a connection with DB2. NDB uses two services of CAF, one to open the plan in DB2 used by NDB and called EZAND320, establishing a connection to DB2; and another to close the plan EZAND320 and end the connection. While trying to load the CAF modules needed to make these calls, an error occurred because DB2 was unable to load the modules.

**System action:** The NDB server terminates the current request.

**Operator response:** Make sure the Call Attachment Facility is properly installed and that DB2 is started, and restart your NDB client session. If the error persists, notify the system programmer.

**System programmer response:** Use the return code displayed in this message and [DB2 Messages and Codes](#) to determine the cause of the error and respond as indicated.

**Module:** NDBSS  
**Procedure Name:** NDBSRV

---

**EZA4169E**  
**Privilege to execute plan EZAND320 not granted to this user or to public**

**Explanation:** During NDB installation, a job, NDBSETUP, was to have been run that would bind a DBRM to DB2 that is used by NDB and is called EZAND320. NDBSETUP also granted the DB2 execute, or run, privilege to all users (PUBLIC) on EZAND320. If a customer chose to restrict use of NDB, they could modify NDBSETUP to grant to only a select set of user IDs or could have done the bind of EZAND320 and grant to select users through DB2.
facilities. The current user is not authorized to use EZAND320, and therefore cannot use NDB.

System action: The NDB server terminates the current request.

Operator response: Contact the system administrator for authorization to use DBUTIL2.

System programmer response: Grant access to DBUTIL2 in accordance with current internal guidelines.

Module: NDBSS

Procedure Name: NDBSRV

EZA4170E  DB2 Subsystem is unavailable. DB2 not active at OPEN DB.

Explanation: The NDB servers use the DB2 Call Attachment Facility (CAF) to establish a connection with DB2. NDB uses two services of CAF, one to open the plan in DB2 used by NDB and called EZAND320, establishing a connection to DB2; and another to close the plan EZAND320 and end the connection. While making an OPEN call, CAF reported to NDB that the DB2 subsystem specified in the call was not active.

System action: The NDB server terminates the current request.

Operator response: Start the DB2 subsystem that was specified in the DB2SSID parameter at PORTC startup.

System programmer response: Assist the user as necessary.

Module: NDBSS

Procedure Name: NDBSRV

EZA4171E  ‘Should never occur’ error number number has occurred.

Explanation: This message indicates a possible programming error.

System action: The NDB server terminates the current request.

Operator response: Notify the system programmer of the error.

System programmer response: Make sure that DB2, TCP/IP, and NDB are installed correctly. If so, obtain trace information and contact the IBM Software Support Center.

Module: NDBSS

Procedure Name: NDBSRV

EZA4172E  SQLCA error tokens are string

Explanation: This message follows message EZA4156E or EZA4157E when the SQLCA contains error tokens. The SQLCA error tokens are displayed.

System action: The NDB server terminates the current request.

Operator response: Notify the system programmer of the error.

System programmer response: Use the SQLCA tokens, the SQLCODE from the previous message, and the list of codes in the DB2 Messages and Codes to determine the cause of the error. Respond as indicated.

Module: NDBSS

Procedure Name: DBUTIL2

EZA4173E  Error during host userid/password validation. SAF RC is rc, security RC is rc, security reason code is code.

Explanation: The installed host security system detected an error while attempting to validate the specified user ID and password. The return code from the MVS Security Access Facility (SAF), as well as the host security system return code and reason code, are displayed.

System action: The NDB server terminates the current NDB session.

Operator response: Make sure that you are specifying a valid host user ID and password when you invoke the NDB client.
EZA4250E • EZA4253E

System programmer response: Locate the specified return codes and reason code in your installed host security system’s Messages and Codes manual to determine the cause of the error. Respond as indicated. For RACF, see the z/OS Security Server RACF Messages and Codes.

Module: NDBSS
Procedure Name: NDBSRV

EZA4250E couldn’t do udp_create
Explanation: The svcudp_create() call, which creates a UDP-based service transport to which it returns a pointer, was unsuccessful.
System action: Portmapper stops.
Operator response: Inform the system programmer of this message.
System programmer response: Check for storage availability, check that all the udp_create parameters have been correctly specified and restart the program.

Module: PORTMAP
Procedure Name: Main()

EZA4251E couldn’t do tcp_create
Explanation: The svctcp_create() call, which creates a TCP-based service transport to which it returns a pointer, was unsuccessful.
System action: Portmapper stops.
Operator response: Inform the system programmer of this message.
System programmer response: Check for storage availability, check that all the tcp_create parameters have been correctly specified, and restart the program.

Module: PORTMAP
Procedure Name: Main()

EZA4252I portmap: started
Explanation: The portmapper process has been initiated. Portmapper is the software that supplies client programs with the port numbers of server programs.
System action: Portmapper continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: PORTMAP
Procedure Name: reg_portmapper

EZA4253E svc_run returned unexpectedly
Explanation: The procedure svc_run, which accepts RPC requests and calls the appropriate service using svc_getreq(), was unsuccessful.
System action: Portmapper stops.
Operator response: Inform the system programmer of this message.
System programmer response: Check for the correct PORTMAP specifications in the hlq.PROFILE.TCPIP configuration data set, restart PORTMAP, and run the program again. If the error persists, call the IBM Software Support Center.

Module: PORTMAP
Procedure Name: svc_run

204  z/OS V1R11.0 Comm Svr: IP Messages Volume 1 (EZA)
EZA4254I  portmap: procedure procedure called from address

Explanation: Indicates the procedure that has been called and the address where the call was issued. This message is written to an output file.

System action: Portmapper continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: PORTMAP

Procedure Name: reg_srv

EZA4255E  svc_sendreply

Explanation: The procedure svc_sendreply(), which is called by the service dispatch routine to send the results of the call to the caller, was unsuccessful.

System action: Portmapper stops.

Operator response: Inform the system programmer of this message.

System programmer response: Check for the correct PORTMAP specifications in the hlq.PROFILE.TCPIP configuration data set, restart PORTMAP, and run the program again. If the error persists, call the IBM Software Support Center.

Module: PORTMAP

Procedure Name: reg_srv

EZA4256I  PORTMAPPER STARTED

Explanation: The UNIX System Services Portmapper issues this message when it has completed initialization and is ready to accept requests.

System action: Portmapper continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: portmap

Procedure Name: main(), svc_run()
EZA4258I  RPCBIND INITIALIZATION COMPLETED AT time ON date

Explanation:  The UNIX System Services rpcbind server issues this message when it has completed initialization and is ready to accept requests.

In the message text:

- **time**
  The time that the initialization was completed, in local time.

- **date**
  The date that the initialization was completed, in local time.

Examples:

EZA4258I  RPCBIND INITIALIZATION COMPLETED AT 16:15:48 ON 11/01/05.

System action:  rpcbind continues.

Operator response:  If time and date are accurate in local time, no action is required. Otherwise, notify the system programmer.

User response:  No action required.

System programmer response:  If time and date do not reflect the current local time and date, correct the configuration and start rpcbind again. Local time is affected by time zone information such as:

- The TZ environment variable
- The _TZ environment variable
- The LC_TOD category

See the information about building a locale in z/OS XL C/C++ Programming Guide for a description of LC_TOD, which is a nonstandard z/OS C/C++ proprietary locale category. See the information about setting your local time zone in z/OS UNIX System Services User’s Guide or the information about customizing a time zone in z/OS XL C/C++ Programming Guide for information about customizing the local time zone.

Problem determination:  Not applicable.

Module:  oco part

Routing code:  11

Descriptor code:  0

---

EZA4259I  RPCBIND BIND() TO stack protocol PORT portnum FAILED ERRNO = errno  ERRNO2 = errnojr

Explanation:  The rpcbind server attempted to use the C/C++ bind() API using protocol to stack on portnum. The interface returned -1 with a decimal errno and hexadecimal errnojr. See the z/OS XL C/C++ Run-Time Library Reference to determine the reason for the returned value of the bind() call. The most common returned value is 1115, EADDRINUSE. This means that another application is listening on the specified port. Use the Netstat command netstat -p stack -P portnum in the z/OS UNIX environment, or NETSTAT TCP stack (PORT portnum) in the TSO environment to determine what application is listening on the specified port.

In the message text:

- **stack**
  The name of the TCP/IP stack.

- **protocol**
  The value is either TCP or UDP.

- **portnum**
  The port number, usually 111, that RPCBIND tried to bind to a socket.

- **errno**
  The UNIX System Services return code. These return codes are listed in and described in the return codes (errno) chapter in z/OS UNIX System Services Messages and Codes. The most likely errno value for this error is 1115 for EADDRINUSE.
errnojr

The hexadecimal UNIX System Services reason code. The format of the 4-byte reason code is explained in the introduction to the reason codes (errnojrs) chapter of the z/OS UNIX System Services Messages and Codes where the reason codes are listed. The most likely errnojr value for this error is 0xXXXX7232, JrBindAddrInUsed.

Examples:
EZA4259I RPCBIND BIND() TO TCPCS UDP PORT 111 FAILED ERRNO = 1115 ERRNO2 = 0X74637232

System action: rpcbind terminates.

Operator response: Contact the system programmer.

User response: Not applicable.

System programmer response: If the errno is 1115 (EADDRINUSE), use the netstat -P portnum command to determine which application is using the specified port. End the application’s use of the port and restart rpcbind. If the errno is not 1115, see z/OS UNIX System Services Messages and Codes to determine the reason for the returned values. Determine and correct the failure. Restart rpcbind.

If the errno is 1115 for EADDRINUSE, you can use the Netstat command’s port report to determine which application is already using port 111. In the following example, the PORTMAP address space already has port 111 and needs to be stopped before starting RPCBIND.

netstat -p TCPCS -P 111
MVS TCP/IP NETSTAT CS VIR8 TCPIP Name: TCPCS 09:06:27
User Id Conn State

EZA4260I UNSUPPORTED MODIFY COMMAND PARAMETER text.

Explanation: The UNIX System Services rpcbind server issues this message when it receives a syntactically incorrect modify request from the MVS operator. A correct modify request is in the form TRACE=keyword. The valid keywords can be found in z/OS Communications Server: IP System Administrator’s Commands.

In the message text:

  text

  The unrecognized text entered after the procedure name.

Examples:
EZA4260I F RPCBIND,TRACE=XXX EZA4260I UNSUPPORTED MODIFY COMMAND PARAMETER XXXX.

System action: rpcbind continues. The modify request is ignored.

Operator response: Contact the system programmer.

User response: Not applicable.

System programmer response: See the information about the MODIFY command -- RPCBIND in z/OS Communications Server: IP System Administrator’s Commands to correct the syntax of the modify request.

Problem determination: Not applicable.
Source: Not applicable.
Module: rpcbind.c

Routing code: 11  
Descriptor code: 0

---

**EZA4261I**  
RPCBIND KEYWORD *keyword* SET *status*

**Explanation:** The UNIX System Services rpcbind server issues this message in response to the MVS modify RPCBIND TRACE request. The message displays the setting of a TRACE keyword. See the information about the MODIFY command -- RPCBIND in [z/OS Communications Server: IP System Administrator's Commands](#) to set the keyword.

In the message text:

*keyword*  
The type of trace. The values for keyword are FLOW, ERROR, LOG, XDR.

*status*  
The value is either ON or OFF.

**Examples:**

```
f rpcbind,trace?
EZA4261I RPCBIND KEYWORD FLOW SET ON
EZA4261I RPCBIND KEYWORD ERROR SET ON
EZA4261I RPCBIND KEYWORD LOG SET ON
EZA4261I RPCBIND KEYWORD XDR SET ON
```

**System action:** rpcbind continues.

**Operator response:** Contact the system programmer.

**User response:** Not applicable.

**System programmer response:** Verify that the TRACE settings are set correctly. See the information about the MODIFY command -- RPCBIND in [z/OS Communications Server: IP System Administrator's Commands](#) to set the keyword.

**Problem determination:** Not applicable.

**EZA4262I**  
THE RPCBIND PID FILE rpcbind.pid CANNOT BE WRITTEN TO DIRECTORY *dir* - *reason*

**Explanation:** The UNIX System Services rpcbind server issues this message when it tries to write the PID file, rpcbind.pid, to the specified directory. The directory might not exist or it might be mounted as read only.

In the message text:

*dir*  
The directory specified with the rpcbind -i option, or the default directory /etc if no -i option was specified.

*reason*  
The reason the PID file cannot be written to the directory specified by the *dir* value.

**Examples:**  
EZA4262I THE RPCBIND PID CANNOT BE WRITTEN TO DIRECTORY '/XXX' - DIRECTORY DOES NOT EXIST

**System action:** rpcbind stops.

**Operator response:** Contact the system programmer.

**User response:** Not applicable.

**System programmer response:** If the specified reason is DIRECTORY DOES NOT EXIST, create the directory using the **mkdir** command with the specified directory name from the UNIX shell. If the specified reason is DIRECTORY IS READ ONLY, ensure that the file system on which the directory is mounted is read/write. Correct the problem indicated by *reason*, or use the -i option of the **rpcbind** command to specify a different directory.
Problem determination: Not applicable.

Descriptor code: 0

**EZA4263I**  RPCBIND COULD NOT BE RUN AS NONSWAPPABLE

Explanation: The UNIX System Services rpcbind server issues this message when the -n option was specified and the user ID associated with rpcbind does not have READ access to resource BPX.STOR.SWAP in the FACILITY class.

Examples: EZA4263I RPCBIND COULD NOT BE RUN AS NONSWAPPABLE

System action: rpcbind stops.
Operator response: Contact the system programmer
User response: Not applicable.
System programmer response: Ensure that rpcbind has READ access to the BPX.STOR.SWAP resource in the FACILITY class before restarting rpcbind with the -n option.

Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: rpcbind
Module: rpcbind.c
Routing code: 11
Descriptor code: 0

**EZA4264I**  INCORRECT RPCBIND OPTION option SPECIFIED

Explanation: The UNIX System Services rpcbind server issues this message when it receives an incorrect option. One possible reason for the error is that options are case sensitive even though messages that appear on the z/OS console are uppercase. Therefore, if an option appears to be correct in a message, verify that the option was specified in the correct case when it was issued.

In the message text:

*option*  
The option specified on the rpcbind command.

Examples: EZA4264I INCORRECT RPCBIND OPTION -X SPECIFIED

System action: rpcbind stops.
Operator response: Contact the system programmer.
User response: Not applicable.
System programmer response: Restart rpcbind with a valid option. See the information about the *RPCBIND* in z/OS Communications Server: IP Configuration Reference for more information.

Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: rpcbind
Module: rpcbind.c
Routing code: 11
Descriptor code: 0
EZA4265I  RPCBIND api FAILED ERRNO = errno ERRNO2 = errnojr

Explanation: The rpcbind server attempted to use the API specified by C/C++. The interface returned -1 with errno and errnojr.

In the message text:

api  The failing C/C++ run-time library call name.

erro

The UNIX System Services return code. These return codes are listed in and described in the return codes chapter in z/OS UNIX System Services Messages and Codes.

erro

The hexadecimal UNIX System Services reason code. The format of the 4-byte reason code is explained in the introduction to the reason codes chapter of the z/OS UNIX System Services Messages and Codes, where the reason codes are listed.

Examples: RPCBIND BIND() FAILED ERRNO = 1115 ERRNO2 = 0X74637232

System action: None.

Operator response: Contact the system programmer.

User response: Not applicable.

System programmer response: See z/OS XL C/C++ Run-Time Library Reference to determine the reason for the returned value of the specified API. Determine and correct the API failure. Restart rpcbind.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: rpcbind

Module: rpcbind.c

Routing code: Not applicable.

Descriptor code: Not applicable.

EZA4266I  LOST STATISTICS FOR PROGRAM = program VERSION = version PROC = proc

Explanation: The rpcbind server received a request to pass a call to another server on the rpcbind host.

The rpcbind server processed the request and tried to save statistics about the call. However, the rpcbind server was not able to save the statistics for that call.

If you use the rpcinfo utility from another host to query the rpcbind server statistics, the statistics reported will not include the program (program), version (version), or procedure (proc) information about this call. Likewise, if a program sends an RPCBPROC_GETSTAT request to the rpcbind server, the statistics reported will not include the program (program), version (version), or procedure (proc) information about this call.

In the message text:

program  The program number of the target program that was requested.

version  The version of the program that was requested.

proc  The procedure implemented by the program that was requested.

Examples: EZA4266I LOST STATISTICS FOR PROGRAM= 200000 VERSION = 3 PROC=12

System action: Processing of the request completes. Statistics regarding the call are not saved.

Operator response: Save the system log for problem determination and contact the system programmer.

User response: Not applicable.

System programmer response: Obtain the system log and contact the IBM Support Center.

The rpcbind start option, -s, allows you to specify the number of statistics entries per binding protocol that the
rpcbind server will maintain. Specifying a larger value for the -s option when starting rpcbind prevents the loss of statistics.

See the information about starting the rpcbind address space in z/OS Communications Server: IP Configuration Guide for more information about the -s parameter.

For more information about the RPCBPROC_GETSTAT request and about statistics regarding rpcbind calls to other servers, see RFC 1833. See Appendix C, “Related protocol specifications,” on page 649 for information about accessing RFCs.

Problem determination: Not applicable.

Descriptor code: 2

---

EZA4267I PARAMETER parameter NOT VALID - VALUE MUST BE IN THE RANGE OF low - high.

Explanation: You specified a parameter with a value that is not valid when you started the rpcbind server.

In the message text:

parameter
The name of the specified parameter.

low
The lowest value allowed for the specified parameter.

high
The highest value allowed for the specified parameter.

Examples:

EZA4267I PARAMETER -s NOT VALID - VALUE MUST BE IN THE RANGE OF 113 - 500.

System action: The rpcbind server exits.

Operator response: Contact the system programmer.

User response: Not applicable.

System programmer response: See the information about starting the rpcbind address space in z/OS Communications Server: IP Configuration Guide for more information about the specified parameter. Ensure that the operator specifies a value within the acceptable range when starting the rpcbind server.

Problem determination: Not applicable.

---

**EZA4276E**  get_myaddress: socket

Explanation: The function get_myaddress(), which puts the local host’s IP address into the `addr` parameter, was unsuccessful because of a negative return value received from the `socket()` system call. The `socket()` system call creates an endpoint for communication and returns a socket descriptor representing the endpoint.

System action: The calling program ends.

Operator response: No action is needed.

System programmer response: Check for the correct entries declared in the `domain`, `type`, and `protocol` parameters of the `socket()` call and the `addr` parameter of the `get_myaddress()` call, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module: PMAP@CLN

Procedure Name: get_myaddress()

---

**EZA4277E**  get_myaddress: ioctl(get interface configuration)

Explanation: The function get_myaddress(), which puts the local host’s IP address into `addr`, was unsuccessful because of a negative return value received from the `ioctl()` system call. The `ioctl()` system call controls the operating characteristics of sockets.

System action: The calling program ends.

Operator response: No action is needed.

System programmer response: Check for the correct entries declared in the `s`, `cmd`, and `arg` parameters of the `ioctl()` system call and the `addr` parameter of the `get_myaddress()` call, check that the network interface configuration is defined in an `ifconf` structure of the IF.H data set, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module: PMAP@CLN

Procedure Name: get_myaddress()

---

**EZA4278E**  get_myaddress: ioctl

Explanation: The function get_myaddress(), which puts the local host’s IP address into `addr`, was unsuccessful because of a negative return value received from the `ioctl()` system call. The `ioctl()` system call controls the operating characteristics of sockets.

System action: The calling program ends.

Operator response: No action is needed.

System programmer response: Check for the correct entries declared in the `s`, `cmd`, and `arg` parameters of the `ioctl()` system call and the `addr` parameter of the `get_myaddress()` call, check that the network interface flags are defined in an `ifreq` structure of the IF.H data set, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module: PMAP@CLN

Procedure Name: get_myaddress()
EZA4279E broadcast: ioctl (get interface configuration)

Explanation: The procedure getbroadcastnets(), which gets the address of a network to broadcast a remote procedure, was unsuccessful because of a negative return code received from the ioctl() system call. The ioctl() call controls the operating characteristics of sockets.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Check for the correct entries declared in the s, cmd, and arg parameters of the ioctl() system call and the parameters of the clnt_broadcast() call, check that the network interface configuration is defined in an ifconf structure of the IF.H data set, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module: PMAP@RMT

Procedure Name: getbroadcastnets()

---

EZA4280E broadcast: ioctl (get interface destination address)

Explanation: The procedure getbroadcastnets(), which gets the address of a network to broadcast a remote procedure, was unsuccessful because of a negative return code received from the ioctl() system call. The ioctl() call controls the operating characteristics of sockets.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Check for the correct entries declared in the s, cmd, and arg parameters of the ioctl() system call and the parameters of the clnt_broadcast() call, check that the network interface destination address is defined in an ifreq structure of the IF.H data set, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module: PMAP@RMT

Procedure Name: getbroadcastnets()

---

EZA4281E broadcast: ioctl (get interface broadcast address)

Explanation: The procedure getbroadcastnets(), which gets the address of a network to broadcast a remote procedure, was unsuccessful because of a negative return code received from the ioctl() system call. The ioctl() call controls the operating characteristics of sockets.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Check for the correct entries declared in the s, cmd, and arg parameters of the ioctl() system call and the parameters of the clnt_broadcast() call, check that the network interface broadcast address is defined in an ifreq structure of the IF.H data set, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module: PMAP@RMT

Procedure Name: getbroadcastnets()

---

EZA4282E Cannot create socket for broadcast rpc

Explanation: The procedure clnt_broadcast(), which broadcasts the remote procedure described by prognum, versnum, and procnum to all locally connected broadcast network, was unsuccessful because of a negative return code received from the socket() system call. The socket() call creates an endpoint for communication and returns a socket descriptor representing the endpoint.

System action: An error is returned to the calling program.

Operator response: No action is needed.

System programmer response: Check for the correct entries declared in the clnt_broadcast() and the socket()
parameters and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module: PMAP@RMT

Procedure Name: clnt_broadcast()
System action: Svc_run() returns to the caller.
Operator response: No action is needed.

System programmer response: Check for the correct entries declared in the nfds, readfds, writefds, exceptfds, and timeout parameters of the select() system call and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.
Module: SVC@RUN
Procedure Name: svc_run()

---

EZA4287E svtcp_.c - tcp socket creation problem

Explanation: The function svtcp_create(), which creates a TCP-based service transport, was unsuccessful because of a negative return code received from the socket() system call. The socket() call creates an endpoint for communication and returns a socket descriptor representing the endpoint. When RPC_ANYSOCK is specified in the sock parameter of the svtcp_create() call, a new socket is created. If the socket is not bound to a local TCP port, it is bound to an arbitrary port.

System action: An error is returned to the calling program.
Operator response: No action is needed.

System programmer response: Check for the correct entries declared in the parameters of the svtcp_create() and socket() calls, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.
Module: SVC@TCP
Procedure Name: svtcp_create()

---

EZA4288E svtcp_.c - cannot getsocketname or listen

Explanation: The function svtcp_create(), which creates a TCP-based service transport, was unsuccessful because of a negative return code received from the getsockname() or the listen() system call. The getsockname() call stores the current name for the socket specified by the s parameter into the structure pointed to by the name parameter. It returns the address of the socket that has been bound. The listen() call applies only to stream sockets. This call completes the binding necessary for a socket and it creates a connection request queue to queue incoming connection requests.

System action: An error is returned to the calling program.
Operator response: No action is needed.

System programmer response: Check for the correct entries declared in the parameters of the svtcp_create(), getsockname(), and listen() calls, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.
Module: SVC@TCP
Procedure Name: svtcp_create()

---

EZA4289E svcudp_create: socket creation problem

Explanation: The function svcudp_create(), which creates a UDP-based service transport, was unsuccessful because of a negative return code received from the socket() system call. The socket() call creates an endpoint for communication and returns a socket descriptor representing the endpoint. When RPC_ANYSOCK is specified in the sock parameter of the svcudp_create() call, a new socket is created.

System action: An error is returned to the calling program.
Operator response: No action is needed.

System programmer response: Check for the correct entries declared in the parameters of the svcudp_create() and socket() calls, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.
Module: SVC@UDP
**EZA4290E • EZA4301I**

**Procedure Name:** svcudp_bufcreate()

**EZA4290E**  svcudp_create - cannot getservername

**Explanation:** The function svcudp_create(), which creates a UDP-based service transport, was unsuccessful because of a negative return code received from the getservername(). The getservername() call stores the current name for the socket specified by the s parameter into the structure pointed to by the name parameter. It returns the address of the socket that has been bound.

**System action:** An error is returned to the calling program.

**Operator response:** No action is needed.

**System programmer response:** Check for the correct entries declared in the parameters of the svcudp_create(), getservername(), and listen() calls, and restart the program. See the [z/OS Communications Server: IP Programmer's Guide and Reference](#) for more information.

**Module:** SVC@UDP

**Procedure Name:** svcudp_bufcreate()

---

**EZA4291E** broadcast: ioctl (get interface flags)

**Explanation:** The procedure getbroadcastnets(), which gets the address of a network to broadcast a remote procedure, was unsuccessful because of a negative return code received from the ioctl() system call. The ioctl() call controls the operating characteristics of sockets.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Check for the correct entries declared in the s, cmd, and arg parameters of the ioctl() system call and the parameters of the clnt_broadcast() calls, check that the network interface flags are defined in an ifreq structure of the IF.H data set, and restart the program. See the [z/OS Communications Server: IP Programmer's Guide and Reference](#) for more information.

**Module:** PMAP@CLN

**Procedure Name:** getbroadcastnets()

---

**EZA4301E** *** Can't initialize resolver.

**Explanation:** The Domain Name Server was unable to initialize the resolver library routines, which are used by clients to request resolution by the Domain Name Server. This indicates that there was an error in specifying the configuration file for the resolver, or the Domain Name Server was unable to allocate the configuration data set. The default name for the configuration data set is hlq.RESOLV.CONF.

**System action:** Initialization stops. TCPIP continues.

**Operator response:** Check the syntax of the configuration data set and resubmit the command. If the error persists, specify the configuration options using the NSLOOKUP command and its parameters. For more information about the configuration data set, see [z/OS Communications Server: IP Configuration Reference](#). For more information about the NSLOOKUP command and its parameters, see the [z/OS Communications Server: IP System Administrator’s Commands](#).

**System programmer response:** Make more storage available to the Domain Name Server if necessary.

---

**EZA4302I** Usage: command infile command

**Explanation:** The command line syntax was incorrect; the correct command line syntax is displayed. Command is replaced by the name of this program, RPCGEN, unless the executable’s file name was changed.

**System action:** RPCGEN exits.

**Operator response:** Correct the syntax and restart.

**System programmer response:** No action is needed.

**Module:** RPCMAIN
**EZA4303I • EZA4308E**

Procedure Name: Main()

**EZA4303I** [-c | -h | -l | -m] [-o fn ft fm] [in fn in ft [in fm]]

Explanation: The command line syntax was incorrect. This message indicates the correct syntax for this command.

System action: RPCGEN continues.

Operator response: Enter the command using the correct syntax and try it again. See the [z/OS Communications Server: IP User's Guide and Commands](https://www.ibm.com) for more information.

System programmer response: No action is needed.

Module: RPCMAIN

Procedure Name: main()

**EZA4304I** command [-c | -h | -l | -m] [-o outfile] [infile]

Explanation: The command line syntax was incorrect. This message indicates the correct syntax for this command.

System action: RPCGEN continues.

Operator response: Enter the command using the correct syntax and try it again. See the [z/OS Communications Server: IP User's Guide and Commands](https://www.ibm.com) for more information.

System programmer response: No action is needed.

Module: RPCMAIN

Procedure Name: main()

**EZA4306I** command [-s udp | tcp] * [-o outfile] [infile]

Explanation: The command line syntax was incorrect. This message indicates the correct syntax for this command.

System action: RPCGEN continues.

Operator response: Enter the command using the correct syntax and try it again. See the [z/OS Communications Server: IP User's Guide and Commands](https://www.ibm.com) for more information.

System programmer response: No action is needed.

Module: RPCMAIN

Procedure Name: main()

**EZA4307E** command: output would overwrite file

Explanation: The specified output file would overwrite the input file. The output file name should be different from the input file name.

System action: RPCGEN exits.

Operator response: Change the output file name and restart.

System programmer response: No action is needed.

Module: RPCMAIN

Procedure Name: Open_output()

**EZA4308E** command: unable to open file rc

Explanation: RPCGEN was unable to open the output file.

System action: RPCGEN exits.

Operator response: Determine from the error code why the file is unavailable. Possible reasons include: file missing, out of storage, and wrong pointer.
EZA4309E • EZA4313E

**System programmer response:** No action is needed.

**Module:** RPCMAIN

**Procedure Name:** Open output()

---

**EZA4309E**  
*line, line number: preprocessor error*

**Explanation:** RPCGEN encountered a preprocessor error while searching for the null at the end of the number and spaces. A non-null character was found at the end of the number and spaces.

**System action:** RPCGEN exits.

**Operator response:** Correct the program and restart; or tell the system programmer about the error.

**System programmer response:** Correct the program.

**Module:** RPCSCAN

**Procedure Name:** Docpline()

---

**EZA4310E**  
*line, line number: constant or identifier expected*

**Explanation:** RPCGEN expected a constant or identifier at this point in the source file.

**System action:** RPCGEN exits.

**Operator response:** Correct the program and restart; or tell the system programmer about the error.

**System programmer response:** No action is needed.

**Module:** RPCSCAN

**Procedure Name:** Scan num()

---

**EZA4311E**  
*line, line number: illegal character in file*

**Explanation:** RPCGEN encountered an incorrect character in the source file.

**System action:** RPCGEN exits.

**Operator response:** Correct the program and restart; or tell the system programmer about the error.

**System programmer response:** Correct the program.

**Module:** RPCSCAN

**Procedure Name:** Get token()

---

**EZA4312E**  
*line, line number: unterminated string constant*

**Explanation:** RPCGEN encountered an unterminated string constant. The string should be terminated with a null character (\0 or X'00'). The program could be overwriting data.

**System action:** RPCGEN exits.

**Operator response:** Correct the program and restart; or tell the system programmer about the error.

**System programmer response:** Examine the program data for an unterminated string or an incorrect pointer. Correct the program.

**Module:** RPCSCAN

**Procedure Name:** Findstrconst()

---

**EZA4313E**  
*line, line number: preprocessor error*

**Explanation:** RPCGEN encountered an error during preprocessing. This message indicates the data set name and the line number where the error occurred.

**System action:** RPCGE continues.
Operator response: No action is needed.

System programmer response: Correct the line number, specified in this message, in the source data set and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module: RPCSCAN

Procedure Name: docpline()

---

EZA4314E Too many files!

Explanation: The number of open files exceeds the maximum permitted. The maximum number of files allowed is 4. The program depends upon the C compiler to clear the variable nfiles to 0. If C does not clear nfiles to 0, the message occurs unpredictably.

System action: RPCGEN exits.

Operator response: No action is needed.

System programmer response: If the compiler does not provide a reset to nfiles, add a software reset to nfiles.

Module: RPCUTIL, RPCMAIN

Procedure Name: Record_open(), main()

---

EZA4318E line file, line number: definition keyword expected

Explanation: RPCGEN expected a definition keyword at this point in the source file.

System action: RPCGEN exits.

Operator response: Correct the source file and restart.

System programmer response: No action is needed.

Module: RPCPARSE

Procedure Name: Get_definition()

---

EZA4319E line file, line number: illegal result type

Explanation: RPCGEN encountered an incorrect result type, Opaque, on this line of the source file.

System action: RPCGEN exits.

Operator response: Correct the source file and restart.

System programmer response: No action is needed.

Module: RPCPARSE

Procedure Name: Def_program()

---

EZA4320E line file, line number: illegal argument type

Explanation: RPCGEN encountered an incorrect argument type, Opaque, on this line of the source file.

System action: RPCGEN exits.

Operator response: Correct the source file and restart.

System programmer response: No action is needed.

Module: RPCPARSE

Procedure Name: Def_program()
EZA4321E  line file, line number: no array-of-pointer declarations — use typedef
Explanation:  RPCGEN encountered an incorrect array-of-pointer declaration at this line in the source file. RPCGEN does not allow arrays of pointers, but they can be implemented by means of typedef.
System action:  RPCGEN exits.
Operator response:  Do a typedef of the array-of-pointers, or tell the system programmer about the error.
System programmer response:  Do a typedef of the array-of-pointers and restart.
Module:  RPCPARSE
Procedure Name:  Get_declaration()

EZA4322E  line file, line number: array declaration expected
Explanation:  RPCGEN expected an array declaration at this line of the source file.
System action:  RPCGEN exits.
Operator response:  Correct the program and restart; or tell the system programmer about the error.
System programmer response:  Correct the program.
Module:  RPCPARSE
Procedure Name:  Get_declaration()

EZA4323E  line file, line number: variable-length array declaration expected
Explanation:  RPCGEN expected a variable-length array declaration at this point in the source file.
System action:  RPCGEN exits.
Operator response:  Correct the input program and restart; or tell the system programmer about the error.
System programmer response:  Correct the input program.
Module:  RPCPARSE
Procedure Name:  Get_declaration()

EZA4324E  line file, line number: voids allowed only inside union and program definitions
Explanation:  RPCGEN encountered an inappropriate void type at this line in the source file.
System action:  RPCGEN exits.
Operator response:  Correct the program and restart; or tell the system programmer about the error.
System programmer response:  Correct the program.
Module:  RPCPARSE
Procedure Name:  Get_type()

EZA4325E  line file, line number: expected type specifier
Explanation:  RPCGEN expected a type specifier at this point in the source file.
System action:  RPCGEN exits.
Operator response:  Correct the program and restart; or tell the system programmer about the error.
System programmer response:  Correct the program.
Module:  RPCPARSE
Procedure Name:  Get_type()
EZA4326I  Program program is not available

Explanation:  The program name specified in the prognum parameter of the clntudp_create() procedure is not available. This procedure call creates a client transport handle for the remote program (prognum). UDP is used as the transport.

System action:  The system continues.

Operator response:  No action is needed.

System programmer response:  Specify the correct program name in the prognum parameter of the clntudp_create() procedure call, check that the program name specified is available in storage and resubmit the call. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module:  RPCINFO

Procedure Name:  udpping()

EZA4327I  Program number version version is not available

Explanation:  The indicated program is not ready.

System action:  The system continues.

Operator response:  Start the server that uses the required program number.

System programmer response:  No action is needed.

Module:  RCPINFO

Procedure Name:  Pmapdump()

EZA4328I  Program number version version ready and waiting

Explanation:  The indicated program is ready.

System action:  The system continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  RPCINFO

Procedure Name:  Pmapdump()

EZA4329X  Rpcinfo: can’t contact portmapper (EZA4329)

Explanation:  RPCINFO encountered an error establishing a TCP connection to Portmapper. See z/OS Communications Server: IP and SNA Codes for more information on System Return Codes.

System action:  RPCINFO exits.

Operator response:  Correct the problem identified in the error response. A typical error is that the Portmapper is not running on the host. Start PORTMAP. PING the host to determine that Portmapper is running and available on the network.

System programmer response:  No action is needed.

Module:  RPCINFO

Procedure Name:  Pmapdump(), clnt_call() brdcst(), clnt_broadcast()

EZA4330I  No remote programs registered.

Explanation:  No remote programs have been registered on the Portmapper to be retrieved by RPCINFO.

System action:  RPCINFO continues.

Operator response:  Start a server that registers a procedure on the Portmapper.
**EZA4331E • EZA4337E**

**System programmer response:** No action is needed.

**Module:** RPCINFO

**Procedure Name:** Pmapdump()

---

**EZA4331E**  Usage: rpcinfo -n portnum u host prognum versnum

---

**EZA4332I**  rpcinfo -n portnum t host prognum versnum

---

**EZA4333I**  rpcinfo p host

---

**EZA4334I**  rpcinfo -b prognum versnum

**Explanation:** The command line syntax is displayed to indicate that the user invoked RPCINFO with incorrect arguments.

**System action:** RPCINFO exits.

**Operator response:** Reenter RPCINFO with the correct control parameter syntax.

**System programmer response:** No action is needed.

**Module:** RPCINFO

**Procedure Name:** Usage()

---

**EZA4335E**  Rpcinfo: service is unknown service

**Explanation:** The program number specified on the command line does not correspond to a known service.

**System action:** RPCINFO exits.

**Operator response:** Correct the program number. Check that the server is running and that it registers the correct number. Rerun.

**System programmer response:** No action is needed.

**Module:** rpcinfo

**Procedure Name:** Getprognum(), getrpchbyname()

---

**EZA4336E**  Rpcinfo: host is unknown host

**Explanation:** You specified an unrecognized host on the RPCINFO command line. The name server might be down. The host name might have been changed to another network. The hlq.HOSTS.LOCAL, hlq.HOSTS.ADDRINFO, or hlq.HOSTS.SITEINFO data sets might be incorrect. You might need to run MAKESITE.

**System action:** RPCINFO exits.

**Operator response:** PING the host. Determine whether the host name is correct and whether the name server is running.

**System programmer response:** Make any necessary changes to the hlq.HOSTS.LOCAL data set and run MAKESITE.

**Module:** RPCINFO

**Procedure Name:** Get_net_address() udpping(), socket() udpping(), tcpping()

---

**EZA4337E** Rpcinfo: broadcast failed: rc

**Explanation:** RPCINFO encountered an error issuing a broadcast.

**System action:** RPCINFO exits.

**Operator response:** Use err in the message to determine the probable cause. There are many possible return codes. See clnt_stat in z/OS Communications Server: IP Programmer’s Guide and Reference
**System programmer response:** No action is needed.

**Module:** RPCINFO

**Procedure Name:** Brdcsit(), clnt_broadcast()

---

**EZA4338E**  
procedure: out of memory

**Explanation:** The procedure specified was unsuccessful because of insufficient storage allocated for completion.

**System action:** TCPIP continues.

**Operator response:** Inform the system programmer of this message.

**System programmer response:** Increase the region size of the application executing the remote procedure call (RPC).

**Module:** AUTH@UNI, CLNT@TCP, CLNT@UDP, SVC@SIMP, SVC@TCP, SVC@UDP, XDR, XDR@ARRA, XDR@REC, XDR@REFE, XDR@STR

**Procedure Name:** authunix_create(), clnttcp_create(), mem_alloc(), clntudp_bufcreate(), registerrpc(), malloc(), makefd_xprt(), svctcp_create(), svcudp_bufcreate(), xdr_array(), xdr_bytes(), xdr_reference(), xdr_string(), xdrrec_create()

---

**EZA4339E**  
message

**Explanation:** The procedure clnt_sperror(), which returns the address of a message indicating why an RPC did not complete, returned the displayed message. This procedure receives pointers previously declared in the clnt parameter of the clnt_create(), clntudp_create(), clnttcp_create(), or clntraw_create() procedures. The clnt parameter is the pointer to a client handle that was obtained using one of the above procedures. Depending on the location where the procedure stopped, only one of these messages will be displayed.

**System action:** TCPIP continues.

**Operator response:** Inform the system programmer of this message.

**System programmer response:** Following are the possible responses for this message:

<table>
<thead>
<tr>
<th>Message</th>
<th>Response</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>RPC: Success</strong></td>
<td>None.</td>
</tr>
<tr>
<td><strong>RPC: Can’t encode arguments</strong></td>
<td>Check for the correct XDR procedure name in the inproc parameter of the callrpc() call and restart the program.</td>
</tr>
<tr>
<td><strong>RPC: Can’t decode result</strong></td>
<td>Check for the correct XDR procedure name in the outproc procedure of the callrpc() call and restart the program.</td>
</tr>
<tr>
<td><strong>RPC: Unable to send</strong></td>
<td>Check for the correct parameter entries in the callrpc() call and restart the program.</td>
</tr>
<tr>
<td><strong>RPC: Unable to receive; errno = value, error list</strong></td>
<td>Check for the correct parameter entries in the callrpc() call and restart the program.</td>
</tr>
<tr>
<td><strong>RPC: Timed out</strong></td>
<td>Restart the program if required.</td>
</tr>
<tr>
<td><strong>RPC: Incompatible versions of RPC; low version = version, high version = version</strong></td>
<td>Check for the correct remote program version number in the versnum parameter of the callrpc() call and restart the program.</td>
</tr>
<tr>
<td><strong>RPC: Authentication error; why = reason</strong></td>
<td>Check for the correct entries in the authentication parameters of the authunix_create() call.</td>
</tr>
<tr>
<td><strong>RPC: Authentication error; why = unknown authentication error - value</strong></td>
<td>Check for the correct entries in the authentication parameters of the authunix_create() call.</td>
</tr>
<tr>
<td><strong>RPC: Program unavailable</strong></td>
<td>Check for the correct program number in the prognum parameter of the callrpc()</td>
</tr>
</tbody>
</table>
call, register the program using the registerrpc() call, or contact the remote system administrator to obtain access to the program and restart the program.

RPC: Program/version mismatch; low version = version, high version = version
    Check for the correct remote program number and version in the prognum and versnum parameters of the callrpc() and restart the program.

RPC: Procedure unavailable
    Check for the correct procedure number in the procnum parameter of the callrpc() call and restart the program.

RPC: Server can’t decode arguments
    Check for the correct XDR routine in the inproc parameter of the svc_freeargs() call and restart the program.

RPC: Remote system error errcode
    Use the system error code displayed in this message and the list of system error codes in z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference to determine the cause of the error and inform the remote system administrator.

RPC: Unknown host
    Check for the correct host ID in the host parameter of the callrpc() call and restart the program.

RPC: Unknown protocol
    Check for the transport protocol in the -s transport parameter of the RPCGEN command and verify that both TCP and UDP are specified in the /etc/protocol directory. TCP and UDP are the supported transports. A sample copy of the /etc/protocol directory is shipped in the /usr/lpp/tcpip/samples/protocol directory.

RPC: Port mapper failure
    Check that the tcpip.SEZAINST(ETCRPC) data set contains an entry for the portmapper procedure name and restart the program.

RPC: Program not registered
    Check for the correct program number in the prognum parameter of the svc_register() call. This parameter specifies the program number to be registered.

RPC: Failed (unspecified error)
    Contact the IBM Software Support Center.

RPC: default; sl=value, s2=value, message, message
    Contact the IBM Software Support Center.

See Appendix B, “Additional information about remote procedure call (RPC) messages,” on page 647 for more information about tcperror return codes. For more information about the RPC and XDR protocols, see the Sun Microsystems publication, Networking on the Sun Workstation: Remote Procedure Call Programming Guide.

Module: CLNT@PER
Procedure Name: clnt_sperror

---

EZA4340E  clnt_raw.c - Fatal header serialization error.

Explanation: The procedure call clntraw_create, which creates a dummy RPC client for the remote program, was unsuccessful because a call issued to xdrmem_create() returned an incorrect return code. The xdrmem_create() call initializes an XDR stream in local storage.

System action: TCPIP continues.

Operator response: Inform the system programmer of this message.

System programmer response: Check for the correct remote program number and version in the prognum and versnum parameters of the clntraw_create() call and the parameters specified in the xdrmem_create() call, and restart the program.

Module: CLNT@RAW
Procedure Name: clntraw_create
EZA4341I  clnt_tcp: readtcp: read returns=value

Explanation: The procedure clnt_tcp, which creates a remote procedure call (RPC) client transport handle for the remote program specified in the prognum, versnum parameters, has received the specified return value from the readtcp procedure. The readtcp() reads data contained in the TCP data buffer. This procedure is an interface between the external data representation (xdr) serializer and the TCP connection. TCP is used as the transport layer.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CLNT@TCP
Procedure Name: readtcp

EZA4342I  clnt_tcp: attempting to write number bytes

EZA4343I  call name: function: buffer dump

Explanation: The procedure clnt_tcp, which creates a remote procedure call (RPC) client transport handle for the remote program specified in the prognum, versnum parameters, is trying to write the specified number of bytes received from TCP. These parameters specify the remote program number and the version number of the remote program. This procedure is an interface between the external data representation (XDR) serializer and the TCP connection. TCP is used as the transport layer.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CLNT@TCP
Procedure Name: readtcp

EZA4344E  Can't reassign procedure number procedure

Explanation: The registerrpc() call registers a procedure with the local portmapper, and creates a control structure to remember the server procedure and its external data representation (XDR) routine. Because of an incorrect procedure number specified in the procnum parameter, this call did not complete.

System action: TCPIP continues.
Operator response: Inform the system program about this message.
System programmer response: Check for the correct procedure number and restart the program. Procedures registered using registerrpc() are accessed using the UDP transport layer. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.
Module: SVC@SIMP
Procedure Name: registerrpc()

EZA4345E  Couldn't create an rpc server

Explanation: A request to create an RPC server was unsuccessful because of an incorrect pointer declared in the sockp parameter of the svcudp_create() call. This parameter specifies the pointer to the socket associated with the service transport handle. If sockp is RPC_ANYSOCK, a new socket is created. This procedure creates a UDP-based service transport to which it returns a pointer. The UDP transport layer is used to access the procedures registered in the registerrpc() call.

System action: TCPIP continues.
Operator response: Inform the system programmer of this message.
System programmer response: Specify the correct pointer in the sockp parameter of the svcudp_create() call. See the
**EZA4346E • EZA4349E**

Module: SVC@SIMP  
Procedure Name: registerrpc()

---

**EZA4346E**  
**Couldn't register prog number vers number**

**Explanation:** A request to have RPC register this program and version was unsuccessful because portmapper might not be running or sufficient storage might not be available.

**System action:** TCPIP continues.

**Operator response:** Inform the system programmer of this message.

**System programmer response:** Use PING and RPCINFO to determine whether portmapper is running, allocate more storage if necessary, and restart the program. See the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com) for more information.

---

**Module:** SVC@SIMP  
**Procedure Name:** pmap_unset

---

**EZA4347E**  
**svc_sendreply failed**

**Explanation:** The svc_sendreply(), which is called by the service dispatch routine to send the results of the call to the caller, was unsuccessful.

**System action:** TCPIP continues.

**Operator response:** Inform the system programmer of this message.

**System programmer response:** Remove unneeded tasks to free storage, check for an incorrect pointer, or check that storage is sufficient, and restart the program. See the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com) for more information.

---

**Module:** SVC@SIMP  
**Procedure Name:** universal()

---

**EZA4348E**  
**Trouble replying to prog number**

**Explanation:** The procedure svc_sendreply, which is called by the service dispatch routine to send the results of the call to the caller, was unsuccessful because of an incorrect pointer declared in the xprt parameter or not enough storage was allocated for the procedure to complete. The xprt parameter is the pointer to the caller’s transport handle.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** Specify the correct pointer in the xprt parameter of the svc_sendreply procedure, check whether the task has adequate storage, and restart the program. See the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com) for more information.

---

**Module:** SVC@SIMP  
**Procedure Name:** universal()

---

**EZA4349E**  
**Never registered prog number**

**Explanation:** An attempt was made to communicate with an unregistered program.

**System action:** TCPIP continues.

**Operator response:** Inform the system programmer of this message.

**System programmer response:** Use PING and RPCINFO to determine whether the host is up and the program is registered. If the program is not registered, register it on the target host. See the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com) for more information.
Module: SVC@SIMP
Procedure Name: universal()

EZA4350E  Bad auth_len gid length str length auth length

Explanation: An RPC server received authorization credentials of an incorrect length. Authorization is denied. This message indicates the length specified in the len parameter of the authunix_create() call. This parameter is the length of the information pointed to by aup_gids.

System action: TCPIP continues.
Operator response: Inform the system programmer of this message.
System programmer response: Check for the correct authorization credentials entries in the authunix_create() call and restart the program.

Module: SVC@AUUN
Procedure Name: Svcauth_unix()

EZA4351I  xdr_u_long decode gets value, returns value

Explanation: The procedure xdr_u_long(), which translates between C unsigned long integers and their external representations, has been initiated. This message indicates the value that has been decoded.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: XDR
Procedure Name: xdr_u_long

EZA4352I  xdr_u_long encode adds value, returns value

Explanation: The procedure xdr_u_long(), which translates between C unsigned long integers and their external representations, has been initiated. This message indicates the value that has been encoded.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: XDR
Procedure Name: xdr_u_long

EZA4353I  Alarm called with argument: value; old value = value.

Explanation: A timer has been set by the svc_run function. This message indicates the value supplied to this function for use in a select() system call. When the timeout parameter of the select() call is not a NULL pointer, it specifies a maximum interval to wait for the selection to complete.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SVC@RUN
Procedure Name: svc_run()
EZA4354I  svc_run: call select with timeout = time

Explanation: The timeout value points to the time to wait for the select() system call to complete. When the timeout parameter is not a NULL pointer, it specifies a maximum interval to wait for the selection to complete. The select call then returns either when a new client request arrives, or when the time value ends, whichever occurs first.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SVC@RUN
Procedure Name: svc_run

EZA4355I  svc_run: calling select with no timeout.

Explanation: No timeout has been set by the svc_run for the select call. When the timeout parameter is a NULL pointer, the select call blocks until a socket becomes ready.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SVC@RUN
Procedure Name: svc_run()

EZA4356I  svc_run: select returns value time I NULL

Explanation: Indicates the value of the timeout parameter returned by the select() system call. The select() call monitors activity on a set of sockets to see if any of the sockets are ready for reading, writing, or have an exceptional condition pending. Depending on the value specified only one of these variables will be displayed.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SVC@RUN
Procedure Name: svc_run()

EZA4359I  sigsetmask: new mask = value, old mask = value

Explanation: Indicates the value of the old and new masks that have been set by the sigsetmask() function. This function is called when the pointer specified in the timeout parameter of the select() system call expires.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: R SIGNAL
Procedure Name: sigsetmask

EZA4360I  sigblock: arg = value, new mask = value, old mask = value.

Explanation: The function sigblock, which adds the specified signals to the current mask, has been initiated with the displayed values.

System action: TCPIP continues.
Operator response: No action is needed.
**System programmer response:** No action is needed.

**Module:** RSIGNAL

**Procedure Name:** sigblock

---

**EZA4361I  rraise: arg = value.**

**Explanation:** The rraise function, which invokes the specified signal handler synchronously, has been initiated. This function is called when the time specified in the timeout parameter of the select() system call returns a value of 0 indicating that a timeout has occurred.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** RSIGNAL

**Procedure Name:** rraise

---

**EZA4375E  rexecd: fread: rc**

**Explanation:** An error was detected while the spool data set was being read. This message indicates the return code received for this procedure.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Check the REXEC command format when submitting REXEC as a batch job. See the [z/OS Communications Server: IP Configuration Reference](#) for more information.

**Module:** MVRSHD

**Procedure Name:** main

---

**EZA4376E  rshd: remuser too long**

**Explanation:** The user ID specified in the -l user/password parameter of the RSH command is too long. The connection is closed. The maximum length for this parameter is 15 characters. This parameter specifies the user ID on the remote host.

**System action:** Processing continues.

**Operator response:** Check for the correct user ID in the -l user/password parameter of the RSH command and resubmit the command. See the [z/OS Communications Server: IP Configuration Reference](#) for more information.

**System programmer response:** No action is needed.

**Module:** MVRSHD

**Procedure Name:** main

---

**EZA4377E  rexecd: username too long**

**Explanation:** The user ID specified in the -l user_id parameter of the REXEC command is too long. The connection is closed. The maximum length for this parameter is 15 characters. This parameter specifies the user ID on the remote host.

**System action:** Processing continues.

**Operator response:** Check for the correct user ID in the -l user_id parameter of the REXEC command and resubmit the command. See the [z/OS Communications Server: IP Configuration Reference](#) for more information.

**System programmer response:** No action is needed.

**Module:** MVRSHD

**Procedure Name:** main
EZA4378E  rshd: username too long

Explanation: The user ID specified in the -l user_id parameter of the REXEC command is too long. The connection is closed. The maximum length for this parameter is 15 characters. This parameter specifies the user ID on the local host.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Check for the correct user ID in the -l user_id parameter of the REXEC command and resubmit the command. See the z/OS Communications Server: IP Configuration Reference for more information.

Module: MVRSHD

Procedure Name: main

EZA4379E  rexecd: password too long

Explanation: The password declared in the -p password parameter of the REXEC command or the -l user/password parameter of the RSH command is too long. The connection is closed. This parameter specifies the password for the user ID on the remote host. The maximum length is 15 characters.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Check for the correct password in the -p password parameter of the REXEC command or the -l user/password parameter of the RSH command and resubmit the command. See the z/OS Communications Server: IP Configuration Reference for more information.

Module: MVRSHD

Procedure Name: main

EZA4380E  rshd: Host unknown.

Explanation: The IP address of the machine issuing the RSH command could not be resolved to a hostname. getnameinfo() failed.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Ensure that the IP address and host name of remote clients can be determined by resolver services. Restart the connection if required, and resubmit the command. See the z/OS Communications Server: IP Configuration Reference for more information.

Module: MVRSHD

Procedure Name: doit

Accept socket_number from remote_address on local_address

Explanation: The server has accepted a connection on the specified socket from the remote IP address to the local IP address.

In the message text:

socket_number
   The number of the socket from which the connection was being made.

remote_address
   The remote IP address and port number.

local_address
   The local IP address and port number.

Examples:
EZA4381I Accept 2 from 9.44.36.163:1023 on 9.42.105.158:514
System action: Processing continues.
Operator response: No action is needed.
User response: No action is needed.
System programmer response: No action is needed.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: RSHD
Module: MVRSHD
Routing code: 10
Descriptor code: 12
Automation: Not applicable for automation.

EZA4382I  Connecting on socket number to remote_address from local_address
Explanation: The server is opening a connection on the specified socket to the remote IP address from the local IP address.
In the message text:
socket_number
   The number of the socket from which the connection was being made.
remote_address
   The remote IP address and port number.
local_address
   The local IP address and port number.
Examples:
EZA4382I Connecting on 4 to 9.44.36.163:3291 from 9.42.105.158:1037
   System action: Processing continues.
   Operator response: No action is needed.
   User response: Not applicable.
   System programmer response: No action is needed.
   Problem determination: Not applicable.
   Source: z/OS Communications Server TCP/IP: RSHD
   Module: MVRSHD
   Routing code: 10
   Descriptor code: 12
   Automation: Not applicable for automation.

EZA4383I  SSCSARAY jobid flag
Explanation: The progress of the job is being tracked. This message indicates the job name and the value of the flag.
The 2-digit number following the job name is a byte with the following bit pattern:
1   Job is currently active
1   Job is waiting for processing
1   Job is on the output queue
1   Job is held in its current queue
1   Job has a second-level message
1   Job active in NJE
11 Unused
System action: Processing continues.
EZA4384I  EZA4387I

Operator response: No action is needed.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main

EZA4384I  SCSRT: rc jobname job ID
Explanation: A cancel request has been received. This message displays the return code, the job name, and the job ID of the job currently running or waiting to be run. The job name and ID are the same as the job to be submitted.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main

EZA4385I  SSSORT(CTRL): rc
Explanation: Displays the return code from an SSSO request with the CTRL bit on. This request is used to tell JES that RSHD is starting to look for output from a job. SSSO is the subsystem option block extension for processing SYSDUT data sets.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main

EZA4386E  rshd: Permission denied.
Explanation: This message is displayed for one of the following reasons:
• The RSH command issued from the client did not include a valid password.
• The userid.RHOSTS.DATA data set does not exist or was inaccessible to the REXEC Daemon.
• The userid.RHOSTS.DATA data set does not contain the host name and user ID for the client host where the command was issued.
A message is sent to the RSH connection and the connection is closed.
System action: Processing continues.
Operator response: Issue the RSH command with a valid password, or make sure that the userid.RHOSTS.DATA data set exists and contains both the host name and user ID of the client system.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: Not applicable

EZA4387I  SSSORT(del): rc
Explanation: Displays any nonzero return codes received when output from a previous job, which might be interpreted as output for this job, is found. These files are deleted when found.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main

EZA4388I  SSSORT(fail): rc

Explanation: The output data set could not be opened. The job that was submitted is purged. This message indicates the return code received after this procedure.

System action: Processing continues.

Operator response: Check for the correct parameters declared in the output data set and submit the job again. See the z/OS Communications Server: IP Configuration Reference for more information.

System programmer response: No action is needed.

Module: MVRSHD
Procedure Name: main

EZA4389I  SSSORT(init): rc

Explanation: Displays the return code received after looking for the first output to be directed back to the terminal. If there is no output, either this is an old job with the same name, or the output for the correct job is not available yet.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MVRSHD
Procedure Name: main

EZA4390I  SSSORT(next): rc

Explanation: Checking to see if there is any more work to be done. This is usually the last message you will see and indicates that the return code was nonzero. The various possibilities for the return code are:

0   Successful completion - request went to the subsystem.
4   Subsystem does not support this function. This is the one that is expected when there is no more work to do.
8   Subsystem exists, but is not up.
12  Subsystem does not exist.
16  Function not completed - irrecoverable error.
20  Logical error (for example, incorrect SSOB format, length.)

System action: Processing continues.

Operator response: If the return code is other than 0 or 4, contact the system programmer.

System programmer response: If the return code is other than 0 or 4, determine the cause of the error using the return codes above. If the error persists, contact the IBM Software Support Center.

Module: MVRSHD
Procedure Name: main

EZA4391I  SSSORT(tso): rc

Explanation: Indicates the return code received after a TSO command has been encountered.

System action: Processing continues.

Operator response: No action is needed.
EZA4392I • EZA4395E

System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main

EZA4392I  S99ret: rc destination-class job-name data-set-name
Explanation: The return code from an SVC 99 where the data set is being allocated is listed first, followed by the destination class, the job name, and the SYSOUT data set name in that order.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main

EZA4393I  S99ret: rc
Explanation: This message posts the return code for the SVC 99 deallocation of the data set that was named in message EZA4392I.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main

EZA4394I  Writing record record, bytes bytes.
Explanation: While attempting to write data to the socket an error occurred. This is most likely an internal processing error.
System action: Processing continues.
Operator response: Inform the system programmer of the error.
System programmer response: If the error can be repeated, contact the IBM Software Support Center with the console log from the server.
Module: MVRSHD
Procedure Name: main

EZA4395E  Syntax error: error
Explanation: A command has been entered that contains a syntax error.
System action: Processing continues with the previously defined options.
Operator response: Enter the command with the correct syntax and resubmit the command. See the Communications Server: IP Configuration Reference for more information.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: process_options
EZA4396E  MAXCONN parameter may not be set after START.

Explanation: A MAXCONN parameter was specified with a MODIFY command after the server had already been started. MAXCONN specifies the maximum number of open sockets at any one time. Usually, each client requires 2 sockets while the command is being processed and the output is being returned. The default is 512. MAXCONN must be specified when the server is started.

System action: Processing continues with the value declared for the MAXCONN parameter at the time of initialization.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MVRSHD

Procedure Name: process_options

EZA4397E  Insufficient storage

Explanation: There is not enough storage for the allocation of the fd_table to complete.

System action: The program ends. Processing continues.

Operator response: No action is needed.

System programmer response: Increase the region size of the application or lower the number of open sockets in the MAXCONN= parameter. See the z/OS Communications Server: IP Configuration Reference for more information.

Module: MVRSHD

Procedure Name: main

EZA4398E  Host unknown: client name; tracing ALLCLIENTS

Explanation: The TRACE= client name parameter has been specified for the indicated client. However, the client name cannot be resolved by the name server or found in the HOSTS.SITEINFO data set.

System action: Tracing is set to ALLCLIENTS. Processing continues.

Operator response: Check for the correct client name and resubmit the command. See the z/OS Communications Server: IP Configuration Reference for more information.

System programmer response: No action is needed.

Module: MVRSHD

Procedure Name: Process_options

EZA4399E  Invalid trace option value

Explanation: An incorrect option has been specified for the TRACE= parameter. The following is a list of the valid options for this parameter:

- LOG/NOLOG
- SEND/NOSEND
- CLIENT=client
- ALLCLIENTS
- RESET

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Specify the correct option for the TRACE= parameter. If more than one option is specified, enclose the options in parentheses. These trace options can be changed with a MODIFY command. See the z/OS Communications Server: IP Configuration Reference for more information.

Module: MVRSHD

Procedure Name: process_options
**EZA4400I**  Trace options: valueLOG,valueSEND,ALLCLIENTS

**Explanation:** Indicates the options that have been specified for the TRACE= parameter and that are in effect for the REXECD server.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** MVRSHD

**Procedure Name:** process_options

**EZA4401I**  Trace options: valueLOG,valueSEND, CLIENT=client

**Explanation:** Indicates the options that have been specified for the TRACE= parameter and that are in effect for the REXECD server.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** MVRSHD

**Procedure Name:** process_options

**EZA4402E**  Invalid option option

**Explanation:** An incorrect option has been specified for the TRACE= parameter. The following is a list of the valid options for this parameter:
- LOG/NOLOG
- SEND/NOSEND
- CLIENT=client
- ALLCLIENTS
- RESET

The default values for the TRACE= parameter are used.

**System action:** Processing continues.

**Operator response:** Specify the correct option for the TRACE= parameter. If more than one option is specified, enclose the options in parentheses. These trace options can be changed with a MODIFY command. See the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/docview藮1/) for more information.

**System programmer response:** No action is needed.

**Module:** MVRSHD

**Procedure Name:** process_options

**EZA4403I**  Parameters: MSGCLASS=class, TSCLASS=class, TSOPROC=value, MAXCONN=value, EXIT=value

**Explanation:** Indicates the values that have been specified for the parameters of the RXSERVE cataloged procedure. The following list provides a description of these parameters:

**EXIT=** The name of the user exit routine to inspect and alter JOB and EXEC parameters prior to submission of TSO batch jobs initiated by remote commands.

**TSOPROC=** The name of the TSO batch procedure. The default is IKJACCNT. The name IKJACCNT can be modified in the exit routine specified with the EXIT parameter.

**MSGCLASS=** The MSGCLASS parameter for TSO batch jobs submitted to execute remote commands. The parameter must not be altered by the EXIT routine.
TSCLASS= The SYSOUT class for the SYSTSPRT DD statement for submitted jobs. It should be different from
the MSGCLASS parameter and the class specified for other SYSOUT data sets in the specified
PROC.

MAXCONN= The maximum number of open sockets at any one time. Usually, each client requires 2 sockets
while the command is being processed and the output is being returned. The default is 512.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: process_options

EZA4404I Parameters: MSGCLASS=class,TSCLASS=class, TSOPROC=value,MAXCONN=value, NOEXIT
Explanation: Indicates the values that have been specified for the parameters of the RXSERVE cataloged procedure.
The following list provides a description of these parameters:
EXIT= Name of user exit routine to inspect and alter JOB and EXEC parameters prior to submission of
TSO batch jobs initiated by remote commands. In this case, there is no user exit routine.
TSOPROC= The name of the TSO batch procedure. The default is IKJACCNT. The name IKJACCNT can be
modified in the exit routine specified with the EXIT parameter.
MSGCLASS= The MSGCLASS parameter for TSO batch jobs submitted to execute remote commands. The
parameter must not be altered by the EXIT routine.
TSCLASS= The SYSOUT class for the SYSTSPRT DD statement for submitted jobs. It should be different from
the MSGCLASS parameter and the class specified for other SYSOUT data sets in the specified
PROC.
MAXCONN= The maximum number of open sockets at any one time. Usually, each client requires 2 sockets
while the command is being processed and the output is being returned. The default is 512.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: process_options

EZA4405E rexecd: command line exceeds 246 character limit; request denied.
Explanation: The remote execution server has submitted a job to the MVS system. However, because the command
line is longer than 246 characters, the job will fail with a JCL error. The server will not process the requested
command.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: Decrease the size of the command to 246 characters or less.
Module: MVRSHD
Procedure Name: main

EZA4406I rexecd: Too many matching jobnames exist for output to be returned.
Explanation: An REXEC command was issued to an MVS REXEC server requesting remote execution. Jobnames are
formed by concatenating 4 fixed character bytes with the socket number the request was presented on via the REXEC
command. When an attempt was made to return the output, a request for a list of matching jobnames was specified.
The data area for this request was too small to contain the list of all jobs matching the specification. Output from the job remains on the output spool.

System action: Processing continues.
Operator response: Determine which jobnames are duplicated and purge the duplicate job output.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main.

EZA4407I Too many matching jobnames exist for output to be purged.

Explanation: An REXEC command was issued to an MVS REXEC server requesting remote execution. Jobnames are formed by concatenating 4 fixed character bytes with the socket number the request was presented on via the REXEC command. When an attempt was made to purge the output, a request for a list of matching jobnames was specified. The data area for this request was too small to contain the list of all jobs matching the specification. Output from the job remains on the output spool.

System action: Processing continues.
Operator response: Determine which jobnames are duplicated and purge the duplicate job output.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main.

EZA4413E rexecd: non-valid parameter JES=x specified JES=2 or JES=3 must be specified.

Explanation: JES= was specified in the parameter list to the REXEC server. The JES= parameter only permits JES=2 or JES=3 to be specified.

System action: The REXEC server ends execution.
Operator response: Restart the REXEC server specifying JES=2 if your facility uses JES2, or JES=3 if your facility uses JES3.
System programmer response: Verify the JES= parameter is correct.
Module: RSHD

EZA4414I rexecd: Initialization using JES=X selected by Y

Explanation: This message indicates how the JES= parameter was determined. It could have been specified in the parameter or it could have been automatically detected.

X will be 2 on JES2 or 3 on JES3 systems.
Y will be:
• Automatic Specification if JES=x was not specified in the parameters.
• Parameter Specification if JES=x was specified in the parameters.

System action: The REXEC server continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RSHD
EZA4416I rexecd: Required resources are unavailable to process your request. Please try again later.
Explanation: There are currently 9999 rexec jobs running. REXECD cannot submit any more jobs.
System action: Processing continues.
Operator response: Wait and then reissue the REXEC request.
System programmer response: No action is needed.
Module: MVUSHD
Procedure Name: main

EZA4418I rexecd: Required resources are unavailable to process request for userid.
Explanation: There are currently 9999 rexec jobs running. REXECD cannot submit any more jobs.
userid is the user ID of the submitter of the request.
System action: Processing continues.
Operator response: Wait and then reissue the REXEC request.
System programmer response: No action is needed.
Module: MVUSHD
Procedure Name: main

EZA4419I rexecd: function rhosts = fd
Explanation: This is issued when trace is turned on.
function is the function being performed on the rhost file.
fd is the file descriptor of the rhost file.
System action: Processing continues.
Operator response: Wait and then reissue the REXEC request.
System programmer response: No action is needed.
Module: MVUSHD
Procedure Name: main

EZA4420E rexecd: Jobname was Not Found.
Explanation: The server has detected the situation where a job that it was waiting for cannot be found.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main

EZA4421E chkpass failed: safrc=rcode1, racfr=rcode2, racfre=reason
Explanation: The call to the chkpass function failed. Chkpass is called to validate a user ID and password with the system authorization facility (SAF). rcode1 is the system authorization facility return code, rcode2 is the RACF return code, and reason is the RACF reason code. This message is only written to the trace log.
System action: Message EZA4386E will be sent to the RSH client or message EZA4422E will be sent to the REXEC client. The connection to the client will be closed.
Operator response: See response for message EZA4386E if using RSH or EZA4422E if using REXEC.
System programmer response: Check the system authorization facility documentation to determine the cause of the failure. If RACF is installed, check the return codes for RACROUTE REQUEST=VERIFY in the z/OS Security Server RACROUTE Macro Reference.

Module: MVRSHD

Procedure Name: main

EZA4422E  rexecd: Permission Denied.
Explanation: Either the user ID or the password specified for the user ID is not valid on the remote system.
System action: Processing continues.
Operator response: Check the -l and -p parameters on REXEC and make sure that they are correct. If the user ID or the password, or both are being retrieved from a NETRC file, check the user ID and password in the NETRC file.
System programmer response: No action is needed.
Module: MVRSHD

Procedure Name: main

EZA4423I  Parameters: PURGE = purge, PREFIX = prefix, IPV6=ipv6, SECLABEL = seclabel
Explanation: This message is a continuation of EZA4403I or EZA4404I. It indicates the values that have been specified for the parameters of the RXSERVE cataloged procedure.

purge  The values for purge are Y or N. Y indicates the job output from the jobs submitted by the server should be purged immediately after the job execution and N indicates that the job output will be held in the output queue.

prefix  A four-character value to be used as the first four characters in the jobname of the jobs that are submitted by the server. The remaining characters of the jobname are a sequential number between 1 and MAXCONN.

ipv6  The values for ipv6 are Y or N. If N is specified, RXSERVE will not attempt to communicate over an IPv6 network. Only connections from IPv4 clients will be accepted. If this parameter is not specified or Y is specified, RXSERVE will attempt to communicate over an IPv6 network.

seclabel  The values for seclabel are Y or N. If this parameter is not specified or N is specified, RXSERVE does not attempt to add a security label to the job card. If Y is specified, RXSERVE adds a security label (if one exists) to the job card following the message class parameter. For information about using the remote execution server in an MLS environment, see the section on preparing for TCP/IP networking in a multilevel security environment in z/OS Communications Server: IP Configuration Guide.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MVRSHD

Procedure Name: process_options

EZA4424E  PURGE = value is not valid
Explanation: This message indicates that an invalid value was specified for the PURGE option.

value is the value that was incorrectly specified.
System action: Processing continues. The option is ignored.
Operator response: Reissue the option with a correct value.
System programmer response: No action is needed.
Module: MVRSHD

Procedure Name: process_options
EZA4425E  PREFIX parameter may not be set after START.

Explanation: A PREFIX parameter was specified with a MODIFY command after the server had been started. PREFIX specifies the first four characters of a job submitted by the server. PREFIX must be specified when the server is started.

System action: Processing continues with the value declared for the PREFIX parameter at the time of initialization.

Operator response: If new PREFIX value is required then stop the server and start it again with the new PREFIX value.

System programmer response: No action is needed.

Module: MVRSHD

Procedure Name: process_options

EZA4426E  Load of user exit user_exit failed

Explanation: The remote execution server was unable to load the user exit specified on the EXIT= start parameter.

user_exit is the start parameter specified.

System action: Processing continues with no user exit in effect.

Operator response: Contact the Systems Programmer.

System programmer response: The remote execution server will issue a fetch() command to load the user exit. This message indicates that the fetch() command failed. See the z/OS XL C/C++ Run-Time Library Reference for more information about the fetch() command.

Module: MVRSHD

Procedure Name: process_options

EZA4427I  User exit user_exit loaded at address

Explanation: This message indicates that user_exit was successfully loaded.

user_exit is the specified start parameter.

address is the hexadecimal address where user_exit is located.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MVRSHD

Procedure Name: process_options

EZA4428I  rhosts input: local host host local user user

Explanation: This message is issued by the MVS remote execution server when attempting to determine if the user is permitted to execute commands on the remote host. Local host and local user indicate what is being searched for in the userid.rhosts.data file.

host is the name of the local host.

user is the local user ID.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MVRSHD

Procedure Name: doit
EZA4430E • EZA4434I

EZA4430E No matching entry in userid.rhosts.data - user permission is denied

Explanation: This message is issued when no matching entry is found in the userid.rhosts.data file. See message 
EZA4428I for an indication of the search values.

userid is the local user ID.

System action: Processing continues but permission for command execution is denied to the user.

Operator response: No action is needed.

System programmer response: Ensure that the rhosts.data file contains correct entries. For a description of the 

rhosts.data file format, see the information about remote execution in [z/OS Communications Server: IP Configuration]

Module: MVRSHD

Procedure Name: doit

EZA4432E IPV6 = value is not valid.

Explanation: This message indicates that an invalid value was specified for the IPv6 option.

value is the invalid value specified.

System action: Processing continues. The option is ignored.

Operator response: Reissue the option with a valid value.

System programmer response: No action is needed.

Module: MVRSHD

Procedure Name: process_options

EZA4433I SECLABEL = value is not valid

Explanation: This message indicates that an invalid value was specified for the SECLABEL option.

value is the invalid value specified.

System action: Processing continues. The option is ignored.

Operator response: Reissue the option with a valid value. Restart RXSERVE.

System programmer response: No action is needed.

Module: MVRSHD

Procedure Name: process_options

EZA4434I rexed: Number of available job numbers is being depleted

Explanation: REXED is capable of tracking 9999 jobs. This message is issued when the number of jobs being
tracked is 85% of this limit.

Examples: Not applicable.

System action: A job number is assigned to the request and processing continues. This message is issued only once.

Operator response: Issue a modify command to change the PURGE parameter value to Y.

User response: Not applicable.

System programmer response: If the server is running with the PURGE parameter value N, remove jobs that have
already been processed from the JES spool. Change the PURGE parameter value to Y in the remote execution
cataloged procedure and recycle REXED. Or use a modify command to change the PURGE parameter value to Y
and add PURGE=Y to the remote execution cataloged procedure.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: REXEC
EZA4435E  rexecd: Number of available jobs is depleted
Explanation:  REXECD is capable of tracking 9999 jobs. This message is issued when the number of jobs that are
being tracked has reached this limit.
Examples:  Not applicable.
System action:  This message is issued once when REXECD detects that all available job numbers have been used.
REXECD attempts to identify a job number that has been assigned but has no output on the JES spool.
• If a job number with no output on the JES spool is found, that job number is re-assigned and processing continues.
• If no job number can be assigned, the request is not processed.
Operator response:  Issue a modify command to change the PURGE parameter value to Y.
User response:  Not applicable.
System programmer response:  If the server is running with the PURGE parameter value N, remove jobs that have
already been processed from the JES spool. Change the PURGE parameter value to Y in the remote execution
cataloged procedure and recycle REXECD. Or use a modify command to change the PURGE parameter value to Y
and add PURGE=Y to the remote execution cataloged procedure.
Problem determination:  Not applicable.

Automation:  This message is output to the console.

EZA4436I  SSCSARAY[n] jobnumber jobstatus ACTIVE
Explanation:  This is a trace message that is issued to indicate that the job is active.
In the message text:
n  The internal array index for the job number.
jobnumber
  The job number of the job that is being tracked.
jobstatus
  The status returned by JES, which indicates that the job is currently active.
Examples:
EZA4436I  SSCSARAY[0] JOB00131 80 ACTIVE
System action:  Processing continues.
Operator response:  Not applicable.
User response:  Not applicable.
System programmer response:  None.
Problem determination:  Not applicable.
Source:  z/OS Communications Server TCP/IP: REXEC

Routing code: 10
Descriptor code: 12
Automation: Not applicable.

**EZA4437I**  
**SSCSARAY**{\(n\)} *jobnumber* *jobstatus* WAITING

**Explanation:** This is a trace message that is issued to indicate that the job is on the JES input queue and is waiting to be started.

A job might be in this state for the following reasons:

- A JES initiator was not started to process the submitted job class.
- Other jobs might be running in this class that are preventing this job from starting.

In the message text:

- \(n\) The internal array index for the job.
- *jobnumber* The job number of the job that is being tracked.
- *jobstatus* The status returned by JES, which indicates the job is waiting.

**Examples:**

EZA4437I SSCSARAY[0] JOB00131 40 WAITING

**System action:** Processing continues.

**Operator response:** Not applicable.

**User response:** Not applicable.

**System programmer response:** None.

EZA4442I SSORT(next): 00000004 NO MORE OUTPUT ON JES SPOOL

Explanation: While processing the output for a job, JES returned a 00000004 return code. This trace message is issued to indicate that there is no more output on the JES spool for the specified job. Message EZA4392I that was issued earlier for the same socket identified the job that was being processed.

Examples:
socket 4: EZA4392I S99ret: 00000000, T RSHD USER1.RSHD3.JOB00049.D0000102.?
socket 4: EZA4393I S99ret: 00000000
socket 4: EZA4442I SSSSORT(next): 00000004 NO MORE OUTPUT ON JES SPOOL

System action: Processing continues.
Operator response: Not applicable.
User response: Not applicable.
System programmer response: None.
Problem determination: Not applicable.

---

EZA4726I Usage: rexec -? -d -b tab -l usr -p pwd -n -m -s port -t fn fhost cmd

Explanation: This message is the first message of a group of messages that is posted when REXEC is entered without any parameters, with the -? parameter, or under certain conditions that are not valid.

Examples: Following is the output when executing rexec -?:
EZA4726I Usage: rexec -? -d -b tab -l usr -p pwd -n -m -s port -t fn fhost cmd
EZA4727I options: -?
EZA4729I -d turn on debug tracing.
EZA4814I -m prefix '09'x to machine control output.
EZA4811I -b <tab> specifies tab value.
EZA4813I -l <usr> valid range 1 - 12 (default 1).
EZA4730I -s <port> specifies server port (default 512).
EZA4802I -t <fn> specifies translation table name.

EZA4734I Example: rexec -d -l guest -p guest hostname ls

System action: REXEC ends.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TSOREXEC

Explanation:  The program has entered the procedure recv_notices.
System action:  REXEC continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  REXEC
Procedure Name:  recv_notices

EZA4739I  SayNotEn(string)
Explanation:  This message ID can have any one of several messages. A listing of the messages and their descriptions follows. The operator and system response will vary depending on what the message is. Look at the message and the description to determine the action to take. If you still do not understand the problem contact the IBM Support Center for assistance.

Buffer space available (8680)  This notification is given when buffer space becomes available for a connection on which a TCP send request was previously rejected due to insufficient resources.

Connection state changed (8681)  This notification is given when a TCP connection receives information from the network that causes the state of the connection to change. Such changes arise when the remote client opens, closes, or ends the connection.

Data delivered (8682)  This notification is given when the client buffer indicated in an earlier TcpReceive request now contains data.

User-defined notification (8683)  For use by user-written programs.

Datagram space available (8684)  This notification is given when buffer space becomes available for a datagram on which an IP send request was previously rejected due to insufficient resources.

Urgent pending (8685)  This notification is given when the TCP/IP service is informed by the foreign site that there is urgent data not yet delivered to the client.

UDP datagram delivered (8686)  This notification is given when the client buffer indicated in an earlier UdpReceive request now contains a datagram.

UDP datagram space available (8687)  This notification is given when buffer space becomes available for a datagram on which an UDP send request was previously rejected due to insufficient resources.
Other external interrupt received (8688)
This special notification is returned when a non-VMCF external interrupt arrives for the client. Typically, this external interrupt will be CPexternalCOMMAND and will be interpreted by the client as a directive to abend.

User delivers line (8689)
The user has entered a line of data at the terminal.

User wants attention (8690)
The user has pressed an attention key, such as PF key.

Timer expired (8691)
A timer has expired.

Fsend response (8692)
Response has been received for TcpFSend call.

FReceive error (8693)
This notification is given when a TcpFReceive call resulted in an error, instead of a DATAdelivered notification. Every TcpFReceive call will eventually generate either DATAdelivered or RECEIVEError.

RawIP packets delivered (8694)
This notification is given when the client buffer indicated in an earlier RawIpReceive request now contains data.

RawIP space available (8695)
This notification is given when buffer space becomes available for a datagram on which a RawIpSend request was previously rejected due to insufficient resources.

IUCV interrupt (8696)
This special notification is returned when an IUCV external interrupt arrives for the client.

I/O interrupt (8697)
This notification is given when an I/O interrupt occurs on a device that the client program has specified in a NotifyIo() call.

Resources available for TcpOpen (8698)
This notification is given to a client who previously tried to do TcpOpen but got ZEROresources. When all resources necessary for open are available (TCB and SCB plus incoming and outgoing data buffer), this notice is given.

Resources available for UdpOpen (8699)
Similar to ResourcesAvailable, for TcpOpen.

Ping response or timeout (8700)
Sent when a PING response is received, or when the request times out.

SMSG receive (8701)
Sent when a CP special message (SMSG) is received.

System action: Varies according to the message displayed.
Operator response: Varies according to the message displayed.
System programmer response: Varies according to the message displayed.
Module: REXEC
Procedure Name: recv_notices

EZA4740I SayConSt(message_string)

Explanation: This message ID can have any one of several message_strings. A list of message_strings and their descriptions follows. The operator and system programmer response will vary depending on what the message_string is. Look at the message_string and the description to determine the action to take. If you still do not understand the problem contact the IBM Support Center for assistance.
**EZA4742I • EZA4743I**

Connection closing (8670)
Data can no longer be transmitted on this connection since the TCP/IP service is in the process of closing down the connection.

Listening (8671)
Waiting for a foreign site to open a connection.

Nonexistent (8672)
The connection no longer exists.

Open (8673)
Data can go either way on the connection.

Receiving only (8674)
Data can be received but not sent on this connection because the client has done a one-way close.

Sending only (8675)
Data can be sent out but not received on this connection. This means that the foreign site has done a one-way close.

Trying to open (8676)
Trying to contact a foreign site to establish a connection.

**Invalid state: ord=ord(STATE) (8679)**
The state was not one of the above.

**EZA4742I Unknown connection state change**

**Explanation:** The CONNECTIONstateCHANGED was not one of the following:
- OPEN
- RECEIVING
- LISTENING
- TRYINGtoOPEN
- SENDING
- CONNECTIONclosing
- NONEXISTENT

**System action:** REXEC continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** REXEC

**Procedure Name:** recv_notices

**EZA4743I Bytes in bytes delivered**

**Explanation:** This message indicates the number of bytes that have been received from a TcpReceive. There will be 1 extra byte per line to account for the carriage return.

**System action:** REXEC continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** REXEC

**Procedure Name:** recv_notices

250 z/OS V1R11.0 Comm Svr: IP Messages Volume 1 (EZA)
EZA4744I  errmsg (msgnum)
Explanation: REXEC encountered an error.
errmsg is the text of the message that describes the error.
msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in
errmsg. For more information about this message, see message EZAmsgnum.
System action: Varies depending on the message displayed.
Operator response: Varies depending on the message displayed.
System programmer response: Respond as indicated by the message EZAmsgnum.
Module: REXEC
Procedure Name: recv_notices

EZA4745I  tcpreceive error from errcon
Explanation: This message will be preceded by message EZA4744I, which should be consulted to determine the
error. This error message is printed when a TcpReceive has been issued and the return code was something other
than OK, NOsuchCONNECTION, or REMOTEclose.
System action: REXEC continues.
Operator response: Varies depending on the message EZA4744I.
System programmer response: Varies depending on the message EZA4744I.
Module: REXEC
Procedure Name: recv_notices.

EZA4746I  tcpreceive error from actconn
Explanation: This message will be preceded by message EZA4744, which should be consulted to determine the
error. This error message is printed when a TcpReceive has been issued and the return code was something other
than OK, NOsuchCONNECTION, or REMOTEclose.
System action: REXEC continues.
Operator response: Varies depending on the message EZA4744I.
System programmer response: Varies depending on the message EZA4744I.
Module: REXEC
Procedure Name: recv_notices.

EZA4748I  external interrupt code encountered
Explanation: An external interrupt has been received. If an external interrupt is received, the port is closed in
preparation for a shut down.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: recv_notices

Chapter 5. EZA4xxx messages  251
EZA4749I • EZA4753I

EZA4749I ignoring.
Explanation:  If the connection state is not one of the following: CONNECTIONstateCHANGED, DATAdelivered, or EXTERNALinterrupt, then it is ignored.
System action:  REXEC continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  REXEC
Procedure Name:  recv_notices

EZA4750I unknown notification
Explanation:  The connection state message is not one that has been previously defined.
System action:  REXEC continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  REXEC
Procedure Name:  recv_notices

EZA4751I Returning from recv_notices
Explanation:  The DEBUG option has been specified and processing is complete for the procedure recv_notices.
System action:  REXEC continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  REXEC
Procedure Name:  recv_notices

EZA4752I Please enter command (or "quit" to exit)
Explanation:  A command needs to be entered for the remote host. If "quit" is entered, then REXEC will end.
System action:  REXEC awaits input.
Operator response:  Enter a command.
System programmer response:  No action is needed.
Module:  REXEC
Procedure Name:  prompt_for_command

EZA4753I PASSWD (fhost: userid)
Explanation:  A password needs to be entered for the user ID on the remote host. If quit is entered, REXEC will end.
System action:  REXEC awaits input.
Operator response:  Enter the password.
System programmer response:  No action is needed.
Module:  REXEC
Procedure Name:  prompt_for_passwd
**EZA4754I**  USERID (fhost: userid)

**Explanation:** A user ID needs to be entered for the remote host. If quit is entered REXEC will end.

**System action:** REXEC awaits input.

**Operator response:** Enter the user ID.

**System programmer response:** No action is needed.

**Module:** REXEC

**Procedure Name:** prompt_for_userid

---

**EZA4755I** Please enter host name:

**Explanation:** A remote host name needs to be entered. If quit is entered REXEC will end.

**System action:** REXEC awaits input.

**Operator response:** Enter the remote host name.

**System programmer response:** No action is needed.

**Module:** REXEC

**Procedure Name:** prompt_for_fhost

---

**EZA4756I** Variables have the following assignments:

**Explanation:** The DEBUG option has been specified and the variables that have been entered will be displayed in messages EZA4757I - EZA4760I.

**System action:** REXEC continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** REXEC

**Procedure Name:** show_variables

---

**EZA4757I** fhost: fhost

**Explanation:** The DEBUG option has been specified and the remote host is displayed. See message EZA4756I.

**System action:** REXEC continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** REXEC

**Procedure Name:** show_variables

---

**EZA4758I** userid: userid

**Explanation:** The DEBUG option has been specified and the logon ID is displayed. See message EZA4756I.

**System action:** REXEC continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** REXEC

**Procedure Name:** show_variables
EZA4759I  passwd: passwd
Explanation:  The DEBUG option has been specified and the password entered is displayed. See message EZA4756I.
System action:  REXEC continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module: REXEC
Procedure Name: show_variables

EZA4760I  command: cmd
Explanation:  The DEBUG option has been specified and the command entered is displayed. See message EZA4756I.
System action:  REXEC continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module: REXEC
Procedure Name: show_variables

EZA4761I  ALL: theline
Explanation:  This is an informational message that displays the line of the NETRC data set that is being read, if DEBUG has been specified.
System action:  REXEC continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module: REXEC
Procedure Name: from_netrc

EZA4762I  MACHINE: word
Explanation:  This message displays the word following MACHINE in the NETRC data set, if DEBUG has been specified.
System action:  REXEC continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module: REXEC
Procedure Name: from_netrc

EZA4763I  LOGIN: word
Explanation:  The word following LOGIN in the NETRC data set is displayed if DEBUG has been specified.
System action:  REXEC continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module: REXEC
Procedure Name: from_netrc
EZA4764I  PASSWORD: word

Explanation:  This is an informational message that displays the word following PASSWORD in the NETRC data set, if debug is set.

System action:  REXEC continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  REXEC

Procedure Name:  from_netrc

EZA4765I  REJECTED: word

Explanation:  This message will be printed if a word is found other than MACHINE and a machine name, LOGIN and login name, and PASSWORD and password. This message will be followed by the following:

EZA4766E
EZA4726I
EZA4727I
EZA4728I
EZA4729I
EZA4730I
EZA4731I
EZA4732I
EZA4733I
EZA4802I
EZA4734I

System action:  REXEC ends.

Operator response:  Correct the user_id.NETREC.DATA data set.

System programmer response:  No action is needed.

Module:  REXEC

Procedure Name:  from_netrc

EZA4766I  Invalid data set format in netrc_data_set_name

Explanation:  During the parameter input data set read procedure, a format error was found in the NETRC_data_set. REXEC does not prompt you for the correct parameter input.

System action:  REXEC displays the following group of messages and ends:

EZA4766I
EZA4726I
EZA4727I
EZA4728I
EZA4729I
EZA4730I
EZA4731I
EZA4732I
EZA4733I
EZA4802I
EZA4734I

Operator response:  Correct the NETRC_data_set, and restart the program. Otherwise set the -n option for prompted input, or use the execution invocation argument inline parameter input when you rerun the program.

System programmer response:  No action is needed.

Module:  REXEC

Procedure Name:  from_netrc
EZA4767I  -l option required one parameter: alternate login id

Explanation:  A parameter for the -l option was missing or not correct.

System action:  REXEC prints the following group of messages and ends.

EZA4767I  EZA4726I  EZA4727I  EZA4728I  EZA4729I  EZA4730I  EZA4731I  EZA4732I  EZA4733I  EZA4802I  EZA4734I

Operator response:  Reenter the command with a correct logon ID.

System programmer response:  No action is needed.

Module:  REXEC

Procedure Name:  GETPARM

EZA4768I  -p option requires one parameter: passwd

Explanation:  A parameter for the -p option was missing or not correct.

System action:  REXEC prints the following group of messages and ends.

EZA4768I  EZA4726I  EZA4727I  EZA4728I  EZA4729I  EZA4730I  EZA4731I  EZA4732I  EZA4733I  EZA4802I  EZA4734I

Operator response:  Reenter the command with a valid password.

System programmer response:  No action is needed.

Module:  REXEC

Procedure Name:  GETPARM

EZA4769I  -s option requires one parameter: port

Explanation:  A parameter for the -s option was missing or not correct.

System action:  REXEC prints the following group of messages and ends.

EZA4769I  EZA4726I  EZA4727I  EZA4728I  EZA4729I  EZA4730I  EZA4731I  EZA4732I  EZA4733I  EZA4802I  EZA4734I
Operator response: Reenter the command with a valid port number.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: GETPARM

---

EZA4770I Unknown option word

Explanation: A parameter was entered that could not be parsed.

System action: REXEC prints the following group of messages and ends:
- EZA4770I
- EZA4726I
- EZA4727I
- EZA4728I
- EZA4729I
- EZA4730I
- EZA4731I
- EZA4732I
- EZA4733I
- EZA4802I
- EZA4734I

Operator response: Reenter the command with valid parameters.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: GETPARM

---

EZA4771I REXEC: No remote host name given.

Explanation: The host name was not entered.

System action: REXEC prints the following group of messages and ends.
- EZA4771I
- EZA4726I
- EZA4727I
- EZA4728I
- EZA4729I
- EZA4730I
- EZA4731I
- EZA4732I
- EZA4733I
- EZA4802I
- EZA4734I

Operator response: Reenter the command with a valid host name.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: GETPARM

---

EZA4772I parms are parameters

Explanation: When DEBUG is set on it will list the parameters that were passed to REXEC.

System action: REXEC continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: REXEC
Procedure Name: GETPARM

EZA4773I  REXEC: no command given.
Explanation: This message is displayed if no command was parsed.
System action: REXEC displays the following group of messages and ends.
  EZA4773I
  EZA4726I
  EZA4727I
  EZA4728I
  EZA4729I
  EZA4730I
  EZA4731I
  EZA4732I
  EZA4733I
  EZA4802I
  EZA4734I
Operator response: Reenter the complete REXEC command.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: GETPARM

EZA4774I  REXEC invoked;
Explanation: The DEBUG option has been entered and the first statement of procedure REXEC_util has been processed.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: REXEC_util

EZA4775I  Calling function rexec_af with: Host: aaa user bbb, cmd ccc, port ddd
Explanation: This message lists the host, user, cmd, and port that are being passed to the rexec_af function that is provided by z/OS UNIX System Services and that does the work of passing the information to the remote server.
  aaa is the host that the command is being passed to.
  bbb is the logon ID of the user on the remote system.
  ccc is the command that is being passed to the remote system.
  ddd is the port number.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: REXEC_util
EZA4776I  D2 len length
Explanation: This is the length of the string that is being sent to the remote host.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: REXEC_util

EZA4777I  tcpwaitsend errmsg (msgnum)
Explanation: The function tcpwaitsend encountered an error.
errmsg is the text of the message that describes the error.
msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in
errmsg. For more information about this message, see message EZAmsgnum.
System action: Varies depending on the message displayed.
Operator response: Varies depending on the message displayed.
System programmer response: Respond as indicated by the message EZAmsgnum.
Module: REXEC
Procedure Name: REXEC_util

EZA4778I  returning from REXEC_UTIL
Explanation: The DEBUG option has been entered and the last statement of procedure REXEC_util has been processed.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: REXEC_util

EZA4779I  errmsg (msgnum)
Explanation: REXEC encountered an error.
errmsg is the text of the message that describes the error.
msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in
errmsg. For more information about this message, see message EZAmsgnum.
System action: Varies depending on the message displayed.
Operator response: Varies depending on the message displayed.
System programmer response: Respond as indicated by the message EZAmsgnum.
Module: REXEC
Procedure Name: REXEC_Client
EZA4780I  calling GetHostResol with fhost
Explanation:  REXEC is calling GetHostResol to resolve the remote host name to a dotted decimal address.
System action:  REXEC continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  REXEC
Procedure Name:  REXEC_Client

EZA4781I  Host fhost Unknown
Explanation:  The call to GetHostResol has not resolved the name to a dotted decimal address.
System action:  REXEC ends.
Operator response:  Reenter the command using a valid remote host name.
System programmer response:  No action is needed.
Module:  REXEC
Procedure Name:  REXEC_Client

EZA4783I  Passive Conn – errmsg (msgnum) on local port localsocket.port
Explanation:  If everything is working correctly, Passive Conn – OK on local port port number will be displayed.
errmsg is the text of the message that describes the error.
msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in
errmsg. For more information about this message, see message EZAmsgnum.
System action:  Varies depending on message displayed.
Operator response:  Varies depending on the message displayed.
System programmer response:  Respond as indicated by the message EZAmsgnum.
Module:  REXEC
Procedure Name:  REXEC_Client

EZA4784I  Unable to open passive port for host host
Explanation:  This message precedes message EZA4779I. Consult that message for an explanation of why the port
was unable to be opened.
System action:  REXEC ends.
Operator response:  Varies depending on the message displayed.
System programmer response:  Varies depending on the message displayed.
Module:  REXEC
Procedure Name:  REXEC_Client

EZA4785I  passive open complete on port connection
Explanation:  A passive open has been completed and the connection state has changed to LISTENING.
System action:  REXEC continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  REXEC
Procedure Name: REXEC_Client

EZA4786I  Active Conn – errmsg (msgnum) on local port localsocket.port
Explanation: If everything is working correctly, Active Conn – OK on local port port number will be displayed.
errmsg is the text of the message that describes the error.
msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.
System action: Varies depending on the message displayed.
Operator response: Varies depending on the message displayed.
System programmer response: Respond as indicated by the message EZAmsgnum.
Module: REXEC
Procedure Name: REXEC_Client

EZA4787I  Unable to open port TCP_REXEC to host fhost
Explanation:  This message is preceded by message EZA4779I. Please consult that message for an explanation of why the port was unable to be opened.
System action: REXEC ends.
Operator response: Varies depending on the message displayed.
System programmer response: Varies depending on the message displayed.
Module: REXEC
Procedure Name: REXEC_Client

EZA4788I  active open complete on port connection
Explanation: An active open is complete.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: REXEC_Client

EZA4789I  REXEC complete
Explanation: The REXEC program has ended.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: REXEC_Client

EZA4790I  syntax error: unbalanced quotation marks substr(line.position)
Explanation: This message is displayed if a quoted string has been entered and there are unbalanced quotation marks. This message will be followed by the following group of messages:
EZA4726I
EZA4727I
EZA4728I

Chapter 5. EZA4xxx messages  261

EZA4730I
EZA4731I
EZA4732I
EZA4733I
EZA4802I
EZA4734I

System action: REXEC ends.
Operator response: Correct the quoted string and reenter the command.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: TcpQuote

EZA4791I  Connecting to fhost

Explanation: The REXEC is attempting to connect to the foreign host name, the foreign host address, and the remote host port given in the message.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: REXEC_Client

EZA4801I  MVS TCP/IP REXEC version

Explanation: The version of REXEC is displayed.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: GETPARM

EZA4802I  -t fn specifies translation table name.

Explanation: This is one of a group of messages that is posted when REXEC is entered without any parameters, or with the -? parameter, or under certain conditions that are not valid. The first message is "EZA4726I" on page 246. See that message for a complete description of the group.
System action: REXEC ends.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: GETPARM

EZA4803I  -t option requires one parameter

Explanation: A parameter for the -t option was missing or not valid.
System action: REXEC prints the following group of messages and ends:
EZA4803I
EZA4726I
EZA4804I  User specified translation table: table
Explanation: The user-specified translation table has been read in and will be used.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: GETPARM

EZA4805I  Fails to read User specified translation table: table
Explanation: The translate table that was supplied by the user could not be initialized.
System action: REXEC ends.
Operator response: Verify that the data set that has been specified with the -t option is correctly named and available to the system.
See the information about understanding configuration search orders in z/OS Communications Server: IP Configuration Guide for information about REXEC's data set search order.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: GETPARM

EZA4806E  Invalid integer parameter: word
Explanation: The port being read in with the -s option is non-numeric.
System action: REXEC prints the following group of messages and ends.
Operator response: Correct the port parameter.
EZA4807E  •  EZA4810E

System programmer response: No action is needed.
Module:   REXEC
Procedure Name:  GETPARM

---

EZA4807E  Invalid port number number

Explanation: The port number read in was not between the range of 1 and 65535.

System action:  REXEC prints the following group of messages and ends:
   EZA4807I
   EZA4726I
   EZA4727I
   EZA4728I
   EZA4729I
   EZA4730I
   EZA4731I
   EZA4732I
   EZA4733I
   EZA4802I
   EZA4734I

Operator response: Correct the port number.  

System programmer response: No action is needed.
Module:   REXEC
Procedure Name:  GETPARM

---

EZA4808E  Fails to read standard table

Explanation:  An REXEC command was issued from an MVS REXEC client requesting remote execution.  The standard translation table used by the client was found; however, it could not be successfully used.

System action:  TCPIP continues. The REXEC client command terminates.

Operator response: Reissue the REXEC command. If the problem persists, seek assistance from appropriate system support personnel.

System programmer response: No action is needed.
Module:   EZABBO1T
Procedure Name:  Main.

---

EZA4809I  Using NETRC file NETRC_data_set

Explanation: The debug option has been specified and the NETRC data set being used is displayed.  

System action:  REXEC continues.

Operator response: No action is needed. 

System programmer response: No action is needed. 

Module:   REXEC
Procedure Name:  from_netrc

---

EZA4810E  The call to rexec_af() function failed: description rsn = errnojr

Explanation: The call to the rexec_af() function that will pass the information to the remote host failed.  

description describes the error.

errnojr is the hexadecimal UNIX System Services Reason Code. The format of the 4-byte Reason Code is explained in
the introduction to the Reason Code section of the z/OS UNIX System Services Messages and Codes, where the Reason Codes are listed.

**System action:** REXEC ends.

**Operator response:** Examine the command typed and reissue the REXEC command. If the problem persists, contact the system programmer. The most common description is ECONNREFUSED. If this occurs, start the remote execution server on the remote host.

**System programmer response:** Correct the error indicated by *description* and *errnojr*.

**Module:** REXEC

**Procedure Name:** main()

---

**EZA4811I**  
-b *tab* specify tab value

**Explanation:** This message is part of message group for REXEC.

In the message text:

*tab*  The fixed tab spacing used to align data when the command response contains a tab character. The *tab* value is in the range of 1-12.

**Examples:**

```
EZA4726I Usage: rexec -? -d -b *tab* -l *usr* -p *pwd* -n -s *port* -t *fn* *remote host* *cmd*
EZA4727I options: -?
EZA4728I -d turn on debug tracing.
EZA4811I -b *tab* specifies tab value.
EZA4813I valid range 1 - 12, (default 1).
EZA4730I -l *usr* specifies remote userid.
EZA4731I -p *pwd* specifies remote password.
EZA4732I -n prevent automatic login.
EZA4733I -s *port* specifies server port (default 512.)
EZA4802I -t *fn* specifies translation table name.
EZA4734I Example: rexec -d -l guest -p guest *hostname* *ls*
```

**System action:** The default value of *tab* is 1.

**Operator response:** Enter a valid value.

**User response:** Not applicable.

**System programmer response:** No action is needed.

**Problem determination:** Not applicable.

**Source:** z/OS Communications Server TCP/IP: REXEC

**Module:** EZAREXC

**Routing code:** 10

**Descriptor code:** 12

---

**EZA4812I**  
A tab value of *tabcol* is not in the range of 1 - 12

**Explanation:** The value entered for the *tab* parameter is outside the valid range.

In the message text:

*tabcol*  The column width specified for the tab.

**Examples:**

```
EZA4812I A tab value of 13 is not in the range of 1 - 12
```

**System action:** The REXEC client exits.

**Operator response:** Enter a valid value and restart the client.

EZA4989I SayNotEn(string)

Explanation: This message ID can have any one of several messages. A listing of the messages and their meanings
follows. The operator and system programmer response will vary depending on the message displayed. If you still
do not understand the problem, contact the IBM Software Support Center for assistance.

Message Explanation

Buffer space available (8680)
This notification is given when buffer space becomes available for a connection on which a TCP send
request was previously rejected due to insufficient resources.

Connection state changes (8681)
This notification is given when a TCP connection receives information from the network that causes the state
of the connection to change. Such changes arise when the remote client opens, closes, or ends the
connection.

Data delivered (8682)
This notification is given when the client buffer indicated in an earlier TcpReceive request now contains
data.

User-defined notification (8683)
For use by user-written programs.

Datagram space available (8684)
This notification is given when buffer space becomes available for a datagram on which an IP send request
was previously rejected due to insufficient resources.

Urgent pending (8685)
This notification is given when the TCPIP service is informed by the foreign site that there is urgent data not
yet delivered to the client.

UDP datagram delivered (8686)
This notification is given when the client buffer indicated in an earlier UdpReceive request now contains a
datagram.

UDP datagram space available (8687)
This notification is given when buffer space becomes available for a datagram on which an UDP send
request was previously rejected due to insufficient resources.

Other external interrupt receive (8688)
This special notification is returned when a non-VMCF external interrupt arrives for the client. Typically, this
external interrupt will be CPexternalCOMMAND, which will be interpreted by the client as a directive to
abend.

User delivers line (8689)
The user has entered a line of data at the terminal.

User wants attention (8690)
The user has pressed an attention key, such as a PF key.
Timer expired (8691)
   A timer has expired.

Fsend response (8692)
   Response has been received for TcpFSend call.

FReceive error (8693)
   This notification is given when a TcpFReceive call resulted in an error, instead of a DATAdelivered
   notification. Every TcpFReceive call will eventually generate either DATAdelivered or RECEIVError.

RawIP packets delivered (8694)
   This notification is given when the client buffer indicated in an earlier RawIpReceive request now contains
data.

RawIP space available (8695)
   This notification is given when buffer space becomes available for a datagram on which a RawIpSend
   request was previously rejected due to insufficient resources.

IUCV interrupt (8696)
   This special notification is returned when an IUCV external interrupt arrives for the client.

I/O interrupt (8697)
   This notification is given when an I/O interrupt occurs on a device that the client program has specified in a
   NotifyIo() call.

Resources available for TcpOpen (8698)
   This notification is given to a client who previously tried to do TcpOpen but got ZEROresources. When all
   resources necessary for open are available (TCB and SCB plus incoming and outgoing data buffer), this
   notice is given.

Resources available for UdpOpen (8699)
   Similar to RESOURCESavailable for TcpOpen.

Ping response or time out (8700)
   Sent when a PING response is received, or when the request times out.

SMSG received (8701)
   Sent when a CP special message (SMSG) is received.

System action:   Varies according to the message displayed.

Operator response:   Varies according to the message displayed.

System programmer response:   Varies according to the message displayed.

EZA4990I   SayConSt(string)

Explanation:   This message ID can have any one of several messages. A listing of the message and their meanings
follows. The operator and system programmer response will vary depending on what the message is. Look at the
message and the description to determine the action to take. If you still do not understand the problem contact the
IBM Software Support Center for assistance.

Message

Connection closing
   Data can no longer be transmitted on this connection since the TCP/IP service is in the process of closing
down the connection.

Listening (8671)
   Waiting for a foreign site to open a connection.

Nonexistent (8672)
   The connection no longer exists.
Open (8673)
Data can go either way on the connection.

Receiving only (8674)
Data can be received but not sent on this connection, because the client has done a one-way close.

Sending only (8675)
Data can be sent out but not received on this connection. This means that the foreign site has done a one-way close.

Trying to open (8676)
Trying to contact a foreign site to establish a connection.

** Invalid state: ord = ord(STATE) *** (8679)
The state was not one of the above.

EZA5061I Using user-specified translation table: hlq.mql.TCPXLBIN

Explanation: The Debug option was specified and the REXEC client is using the user-specified translation table.

In the message text:

    hlq

    The high-level qualifier name used for the translation table.

    mql

    The middle-level qualifier name used for the translation table.

Examples:
EZA5061I Using User-specified translation table: USER1.FRENCH.TCPXLBIN

System action: The REXEC client uses the user-specified translation table for all data output.

Operator response: Not applicable.
User response: Verify that the correct translation table data set is being loaded and used. If the correct table is not being loaded, change the configuration so that the correct translation table data set is available to the REXEC client. See the information about understanding configuration search orders in z/OS Communications Server: IP Configuration Guide for information about searching for translation table data sets.

System programmer response: Not applicable.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: REXEC

Module: EZATREXE

Routing code: Not applicable.

Descriptor code: Not applicable.

---

EZA5125I IBM MVS SMTP version on date

Explanation: This message introduces SMTP and displays the version level and the date.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

---

EZA5127I Jobname of SMTP Server: name

Explanation: Displays the name of the Simple Mail Transfer Protocol job. It is usually SMTP.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

---

EZA5128I TCP Network Domain name: name

Explanation: Displays the name of the local host.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

---

EZA5129I Gateway TCP Network to NJE: path

Explanation: Displays whether TCPIP will gateway mail to and from remote NJE systems.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams
**EZA5130I  NJE Network Node Name: name**

**Explanation:** Displays the name of the NJE node on which the SMTP is running. To change this name, change the SMTPNODE variable in the SEZAINST(SMTPNOTE). For information on customizing this and other members, and for information on the SMTPNODE variables, see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support资参). For more information on the SMTPNODE variables, see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support资参).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStream

---

**EZA5131I  NJE Domain Name: domain name**

**Explanation:** Displays the name of the NJE domain if SMTP is running as a mail gateway. To change this name, edit the NJEDOMAIN statement in hlq.SMTP.CONFIG. The default name is the null string. For more information on the NJEDOMAIN statement, see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support资参).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStream

---

**EZA5133I  Local Delivery Format: punch / netdata**

**Explanation:** Displays the spool data set format for mail delivery to recipients on the local host. To change the format, change the LOCALFORMAT statement in hlq.SMTP.CONFIG. There are 2 choices for the format: NETDATA and PUNCH. The default format is NETDATA. For more information on the LOCALFORMAT statement, see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support资参).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStream

---

**EZA5134I  NJE Delivery Format: punch / netdata**

**Explanation:** Displays PUNCH or NETDATA as options. Specifies how long the records may be. The PUNCH parameter displayed means that records can be at most 80 characters while the default format, NETDATA, allows records longer than 80 characters and they arrive as MESSAGE-type records. To change the setting, change the NJEFORMAT statement in hlq.SMTP.CONFIG. For more information on the NJEFORMAT statement, see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support资参).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStream
**EZA5136I • EZA5140I**

**EZA5136I  Postmaster Address: address**

**Explanation:** Displays the current address where SMTP delivers all mail addressed to POSTMASTER. To change the address, change the POSTMASTER statement in hlq.SMTP.CONFIG. The default postmaster is TCPMAINT. For more information on the POSTMASTER statement, see the [z/OS Communications Server: IP Configuration Reference](#).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5137I  Userid for Bad Spool Files: user id**

**Explanation:** Displays the user ID that receives all the unreadable spool files and looping mail. To change the user ID, change the BADSPOOLFILEID statement in hlq.SMTP.CONFIG. The default user ID is TCPMAINT. For more information on the BADSPOOLFILEID statement, see the [z/OS Communications Server: IP Configuration Reference](#).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5139I  Port for Server SMTP: server port**

**Explanation:** Displays the port the SMTP utilizes. The port number 25 is normally reserved in hlq.PROFILE.TCPIP. To change the port that SMTP uses, you must change the PORT statement in hlq.SMTP.CONFIG and, unless testing, change the data set hlq.PROFILE.TCPIP.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5140I  Inactivity Timeout: seconds seconds**

**Explanation:** Displays the number of seconds until SMTP considers the connection dead. At that time, SMTP closes the connection. To change the amount of time, change the INACTIVE statement in hlq.SMTP.CONFIG. The default amount of time for the INACTIVE statement is 180 seconds. For more information on the INACTIVE statement, see the [z/OS Communications Server: IP Configuration Reference](#).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams
**EZA5141I** Finish Open Timeout: seconds seconds

**Explanation:** Displays the number of seconds SMTP waits while trying to establish a connection to a remote site. After the given amount of time, SMTP ends the connection. To change this setting, change the FINISHOPEN statement in hlq.SMTP.CONFIG. The default amount of time for the FINISHOPEN statement is 120 seconds. For more information on the FINISHOPEN statement, see the *z/OS Communications Server: IP Configuration Reference*.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStream

**EZA5142I** Retry down sites every: minutes minutes

**Explanation:** Displays the number of minutes SMTP waits between attempts to deliver mail to a host that is down. It is adjustable by using the RETRYINT statement in hlq.SMTP.CONFIG. The default time for the RETRYINT statement is 20 minutes. For more information on the RETRYINT statement, see the *z/OS Communications Server: IP Configuration Reference*.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

**EZA5143I** Return mail older than: days days

**Explanation:** Displays the number of days after which SMTP returns mail as undeliverable. SMTP returns the mail to the sender with a note listing recipients that did not receive the mail. To change the number of days, change the RETRYAGE statement in hlq.SMTP.CONFIG. The default number of days for the RETRYAGE statement is 3 days. For more information on the RETRYAGE statement, see the *z/OS Communications Server: IP Configuration Reference*.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

**EZA5144I** Max Length of Accepted Mail: number bytes

**Explanation:** Displays the maximum size, in bytes, of mail that is accepted over a TCP connection. To change the maximum size, change the MAXMAILBYTES statement in hlq.SMTP.CONFIG. The default for MAXMAILBYTES is 524 288 (512K) bytes. For more information on the MAXMAILBYTES statement, see the *z/OS Communications Server: IP Configuration Reference*.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams
EZA5145I  EZA5159E

EZA5145I  Translate Table: data set name / Compiled-in. Unable to load: data set name

Explanation: If SMTP is successful in loading the translation table data set, then the data set name is loaded and displayed. Otherwise, the other error message is displayed. See the z/OS Communications Server: IP Configuration Reference for information about managing SMTP translation tables.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStreams

EZA5156E  Unrecognized option in configuration file: option

Explanation: The indicated option is an incorrect configuration data set option. See the z/OS Communications Server: IP Configuration Reference for information about the valid options.

System action: SMTP ends.
Operator response: No action is needed.
System programmer response: Correct the entry in the configuration data set, and try again.
Module: SMTP
Procedure Name: ProcessConfigFile

EZA5157E  Invalid LOG file destination: destination

Explanation: The LOGFILE DD statement is incorrect or absent. SMTP does not log the session.

System action: SMTP continues.
Operator response: Verify the presence of the LOGFILE DD statement in SEZAINST(SMTPPROC) and make sure the data set destination is correct. For more information on the LOGFILE DD statement and hlq.SSMTP.CONFIG, see the z/OS Communications Server: IP Configuration Reference.
System programmer response: Assist the user as necessary.
Module: SMTP
Procedure Name: Error

EZA5158E  Invalid Address in Restricted List: address

Explanation: SMTP found an incorrect address in the RESTRICT list. Addresses should be in the form user_id@node_id, with the asterisk character (*) representing wild cards.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Correct the entry in the configuration data set, and try again.
Module: SMTP
Procedure Name: ProcessConfigFile

EZA5159E  Invalid Local Delivery Format: format

Explanation: An incorrect delivery format for the LOCALFORMAT option in the configuration data set was specified. The only valid delivery formats are NETDATA and PUNCH.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Correct the configuration data set, and restart SMTP.
Module: SMTP
Procedure Name: ProcessConfigFile

EZA5160E Invalid NJE Delivery Format: format
Explanation: An incorrect option for the NJEFORMAT option in the configuration data set was specified. The only valid choices for this option are NETDATA or PUNCH.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Correct the configuration data set, and restart SMTP.
Module: SMTP
Procedure Name: ProcessConfigFile

EZA5161E Invalid Disposition in Restrict command: command
Explanation: The disposition specified with the RESTRICT option is incorrect. Use only the valid options of PURGE, RETURN, and TRANSFERTO with the RESTRICT option.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Correct the entry in the configuration data set, and restart SMTP.
Module: SMTP
Procedure Name: ProcessConfigFile

EZA5162E Invalid Address for Mailer: address
Explanation: The length of the user ID for the receiving address exceeds 8 characters, which is the maximum allowable MVS user ID length for the MAILER option.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Correct the entry in the configuration data set, and restart SMTP.
Module: SMTP
Procedure Name: ProcessConfigFile

EZA5163E Invalid Max Mail Bytes: parameter
Explanation: The indicated parameter for the MAXMAILBYTES option was not a positive integer between 1 and 2,147,483,647.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Correct the configuration data set, and restart SMTP.
Module: SMTP
Procedure Name: ProcessConfigFile
EZA5164E  Invalid Post Master Userid: userid
Explanation: The indicated user ID does not exist for the POSTMASTER option in the configuration data set.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Check that this user ID exists. Otherwise, correct the SMTP configuration data set, specifying a valid user ID, and restart SMTP.
Module: SMTP
Procedure Name: ProcessConfigFile

EZA5165E  Invalid Badspoolfileid Userid: userid
Explanation: The reason for this message can be one of the following:
• The indicated user ID does not exist for the BADSPPOOLFILEID option in the configuration data set.
• The indicated user ID does not have proper authority.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Check that this user ID exists. If the user ID does not exist, correct the SMTP configuration data set, specifying a valid user ID, and restart SMTP. If the user ID does exist and RACF (or similar product) is used, ensure that the user ID has a security profile with create authority.
Module: SMTP
Procedure Name: ProcessConfigFile

EZA5167E  Invalid Transfer To Userid: userid
Explanation: The indicated user ID does not exist for the RESTRICT TRANSFERTO statement in the configuration data set.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Check that this user ID exists. Otherwise, correct the SMTP configuration data set by specifying a valid user ID. Correct any network errors, and restart SMTP.
Module: SMTP
Procedure Name: ProcessConfigFile

EZA5168E  Invalid Mailer Option: option
Explanation: The indicated option for the MAILER option in the configuration data set is not valid. See z/OS Communications Server: IP Configuration Reference for valid choices for the MAILER option.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Correct the configuration data set, and restart SMTP.
Module: SMTP
Procedure Name: ProcessConfigFile
EZA5169E  Invalid MailFileDSPrefix Option: option

Explanation:  When editing the MAILFILEDSPREFIX statement in hlq.SMTP.CONFIG, the name can have a maximum of 20 characters. The characters must be either alphanumeric, or one of the following symbols: period (.), dollar sign ($), number sign (#), or at sign (@), and the name must meet data set name conventions. The default name for this prefix, used in place of the incorrect name, is the job that is running SMTP. For more information, see the z/OS Communications Server: IP Configuration Reference.

System action:  SMTP continues.

Operator response:  Correct the prefix name in the MAILFILEDSPREFIX statement to one that follows the guidelines specified above.

System programmer response:  Assist the user as necessary.

Module:  SMTP

Procedure Name:  Error

EZA5170E  Invalid MailFileVolume Option: option

Explanation:  The MAILFILEVOLUME statement in hlq.SMTP.CONFIG has an incorrect parameter. The name of the volume cannot exceed 6 characters. The option is ignored. For more information on hlq.SMTP.CONFIG and the MAILFILEVOLUME, see the z/OS Communications Server: IP Configuration Reference.

System action:  SMTP continues.

Operator response:  Correct the name of the volume name in the MAILFILEVOLUME statement in hlq.SMTP.CONFIG to have 6 or fewer characters.

System programmer response:  Assist the user as necessary.

Module:  SMTP

Procedure Name:  Error

EZA5171E  Invalid MailFileUnit Option: data set name

Explanation:  There are more than 8 characters specified in the name of the unit in the MAILFILEUNIT statement in hlq.SMTP.CONFIG file. For more information on the MAKEFILEUNIT statement and hlq.SMTP.CONFIG, see the z/OS Communications Server: IP Configuration Reference.

System action:  SMTP continues.

Operator response:  Edit the MAILFILEUNIT statement in hlq.SMTP.CONFIG to make the name of the new unit fewer than or equal to 8 characters.

System programmer response:  Assist the user as necessary.

Module:  SMTP

Procedure Name:  Error

EZA5172E  Invalid TIMEZONE specified: time zone

Explanation:  The TIMEZONE statement in hlq.SMTP.CONFIG contains an incorrect number of characters. The character string for the TIMEZONE statement can be 1 - 5 characters long. For more information on the TIMEZONE statement and hlq.SMTP.CONFIG, see the z/OS Communications Server: IP Configuration Reference.

System action:  SMTP continues.

Operator response:  Change the TIMEZONE statement in hlq.SMTP.CONFIG to a printable character string that is 1 - 5 characters long.

System programmer response:  Assist the user as necessary.

Module:  SMTP

Procedure Name:  Error
EZA5175I Mail Logging:

Explanation: The LOG statement is present in hlq.SMTP.CONFIG. SMTP is outputting the mail status to the data set named or pointed to by the LOGFILE DD statement in SEZAINST(SMTPPROC).

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5176E LOGFILE DD card missing, NOLOG forced.

Explanation: The LOG statement was present in hlq.SMTP.CONFIG and there was no LOGFILE DD parameter in SEZAINST(SMTPPROC) specifying the name of the data set used for the mail logging. SMTP does not log the mail.

System action: SMTP continues.

Operator response: Change the LOGFILE DD statement in the SEZAINST (SMTPROC) to a valid data set name. For more information on the LOGFILE DD statement and the configuring process, see the z/OS Communications Server: IP Configuration Reference.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5177E Invalid LocalClass Option: class

Explanation: The class specifies the spool class for local mail delivered by SMTP. The class specified in hlq.SMTP.CONFIG is more than 1 character long.

System action: SMTP continues.

Operator response: Change the LOCALCLASS statement in hlq.SMTP.CONFIG to a single character. This option is site-dependent. Ask the system administrator for site-dependent information.

System programmer response: Provide the user with site-dependent information as necessary. The default setting for the LOCALCLASS statement is B.

Module: SMTP

Procedure Name: Error

EZA5178E Invalid NJEClass Option: class

Explanation: More than 1 character was specified in the NJECLASS statement of hlq.SMTP.CONFIG. There can only be a single character specified. The NJECLASS statement specifies the spool class for mail delivered by SMTP to the NJE network. This option is site-dependent. Check with the system administrator for site-dependent information.

System action: SMTP continues.

Operator response: Change the NJECLASS option in hlq.SMTP.CONFIG to a single character specified by the system administrator. For more information on the NJECLASS statement, see the z/OS Communications Server: IP Configuration Reference.

System programmer response: Provide the user with site-dependent information as necessary. The default setting for the LOCALCLASS statement is B.

Module: SMTP

Procedure Name: Error
EZA5179I  Debugging Enabled: yes | no

Explanation: Causes SMTP to record SMTP commands and replies in the data set specified in the SYSDEBUG DD statement. The SMTP connection number is recorded along with each SMTP command or reply. To change the data set pointed to, change the SYSDEBUG statement in SEZAINST(SMTPPROC). For more information on the DEBUG statement and the SYSDEBUG DD statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5180E  SYSDEBUG DD card missing, DEBUG option ignored.

Explanation: The DEBUG statement is present in hlq.SMTP.CONFIG, but there is no SYSDEBUG DD statement in SEZAINST(SMTPPROC). Debug is not enabled.

System action: SMTP continues.

Operator response: Put a SYSDEBUG DD statement in the SEZAINST( SMTPPROC) specifying the data set name for SMTP’s replies to the DEBUG commands. For more information on the DEBUG statement, the SYSDEBUG DD statement, and custom configuring, see the z/OS Communications Server: IP Configuration Reference.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5181E  Invalid SpoolPollInterval: seconds

Explanation: The SPOOLPOLLINTERVAL statement has been incorrectly set. The appropriate values for the parameter of this statement are between 5 and 3600. The SPOOLPOLLINTERVAL statement specifies the interval for SMTP to check the spool for incoming spool files.

System action: SMTP continues.

Operator response: Change the parameter for the SPOOLPOLLINTERVAL statement in hlq.SMTP.CONFIG to a number between 5 and 3600. For more information on the SPOOLPOLLINTERVAL statement, see the z/OS Communications Server: IP Configuration Reference.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: Error

EZA5183I  Spool Poll Interval: seconds seconds

Explanation: Displays the interval for SMTP to check the spool for incoming spool files. To change this setting, you must change the SPOOLPOLLINTERVAL statement in the hlq.SMTP.CONFIG data set. For more information on the SPOOLPOLLINTERVAL statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams
Mail from restricted users: Purge / Return / Transfer To id

Explanation: Informs the user that they have received mail from a user not allowed to utilize the SMTP services. The mail is not delivered but action taken on the mail is displayed. To make a user unrestricted, delete the RESTRICT statement containing the user ID from hlq.SMTP.CONFIG. For more information on the RESTRICT statement and hlq.SMTP.CONFIG, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStreams

Mail File Dataset Prefix: prefix

Explanation: Displays the prefix that is added to the SMTP mail data sets. Data sets with this prefix contain mail that is in the process of being received or delivered. All data sets are cataloged. To change the prefix, change the parameter of the MAILFILEPREFIX statement in the hlq.SMTP.CONFIG data set. The prefix can be up to 20 characters in length.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStreams

Mail File Unit Name: unit name

Explanation: Displays the unit where newly created SMTP mail data sets reside. To change this data set name, change the MAILFILEUNIT statement in the hlq.SMTP.CONFIG data set. Remember to use the data set naming guidelines in the z/OS Communications Server: IP User's Guide and Commands. For more information on the MAILFILEUNIT statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStreams

Mail File Volume: volume

Explanation: Displays the volume that newly allocated SMTP mail data set reside. If the name of the volume is not specified, SMTP allocates a storage volume. If your system does not have storage volumes, you must specify a volume name in the hlq.SMTP.CONFIG data set. For more information on the MAILFILEVOLUME statement and the hlq.SMTP.CONFIG data set, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStreams
EZA5189I  Local Output Class : class

Explanation:  Displays the spool class for local mail delivered by SMTP. This option is site-dependent. Change the LOCALCLASS statement in the hlq.SMTP.CONFIG to change this setting. Ask the system administrator before setting to verify all site-dependent information. For more information on the LOCALCLASS statement and hlq.SMTP.CONFIG, see the z/OS Communications Server: IP Configuration Reference

System action:  SMTP continues.
Operator response:  No action is needed.
System programmer response:  Provide user with all site-dependent information.

Module:  SMTP
Procedure Name:  OpenOutputStreams

EZA5191I  NJE Output Class : class

Explanation:  Displays the spool class for mail delivered by SMTP to a NJE network. This option is site-dependent. To change this setting, change the NJECLASS statement in hlq.SMTP.CONFIG. Contact the system administrator before setting all site-dependent information. For more information on the NJECLASS statement and the hlq.SMTP.CONFIG data set, see the z/OS Communications Server: IP Configuration Reference

System action:  SMTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.

Module:  SMTP
Procedure Name:  OpenOutputStreams

EZA5191I  REMOTEPORT for SMTP client : RemotePort

Explanation:  The REMOTEPORT statement is optional in the SMTP configuration file. If this statement is not coded, then the default value is used by the SMTP client. If this statement is not coded, then the default value (25, which is the well-known port for mail) is used by the SMTP client.

See the information about the REMOTEPORT statement in z/OS Communications Server: IP Configuration Reference for more information.

In the message text:

RemotePort
A decimal value in the range 1 - 65534.

Examples:  The following example is taken from the output file associated with the SMTP started task:
EZA5317I Listen on Address : Unspecified
EZA5139I Port for Server SMTP : 25
EZA5191I REMOTEPORT for SMTP client : 2000

In this example, the SMTP client will send mail to port 2000 and the local SMTP server will listen on port 25.

System action:  SMTP continues.
Operator response:  No action is needed.
User response:  Not applicable
System programmer response:  No action is needed.
Problem determination:  None.
Source:  z/OS Communications Server TCP/IP: SMTP
Module:  SMTP
Routing code:  None.
EZA5192E  INCORRECT REMOTEPORT SPECIFIED: number

Explanation: The number value displayed is the incorrect value, which was specified on the REMOTEPORT statement coded in the SMTP configuration file. This value represents the remote port number that the SMTP client uses to connect to an SMTP server for sending outbound mail. The value specified must be a decimal number in the range 1 - 65534.

In the message text:

number

The incorrect value that was specified on the REMOTEPORT statement.

Examples: The following is an example of the contents of the system console associated with the start of SMTP when the SMTP configuration file contains the statement REMOTEPORT 0:

$HASP373 SMTP STARTED
IEF4031 SMTP - STARTED - TIME=15.24.47
EZY1876I SMTP STACK FUNCTIONS STARTED WITH PARAMETER SMTP, PARM=, ERF FILE(SYSERR), NOSPIE/.
EZA5192E INCORRECT REMOTEPORT SPECIFIED: 0
EZY1877I SMTP STACK FUNCTIONS SHUTDOWN IS COMPLETE, RC = 0.

System action: SMTP ends.

Operator response: Contact the system programmer.

User response: Not applicable

System programmer response: Check the SMTP configuration file. On the REMOTEPORT statement, specify a decimal number in the range of 1 - 65534. See the information about the REMOTEPORT statement in z/OS Communications Server: IP Configuration Reference for more information.

Problem determination: See the system programmer response.

Source: z/OS Communications Server TCP/IP: SMTP

Module: SMTP

Routing code: 2,10

Descriptor code: 4

EZA5195I Unknown Command: command

Explanation: The command that was received on the server is not valid. The following are the valid commands:

- DATA
- EXPN
- HELP
- HELO
- MAIL
- NOOP
- QUEU
- QUIT
- RCPT
- RSET
- SAML
- SEND
- SOML
- TICK
- TURN
- VERB
- VRFY

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: The sender should correct the syntax before resubmitting the command.

Module: SMTPCMDS

Procedure Name: NoSuchCommand
EZA5196I  mm/dd/yy hlq:mm:ss connection_number command_line

Explanation: This message is written to the debug data set and is normally accompanied by message EZA5200I. The DEBUG statement is present in hlq.SMTP.CONFIG; SMTP is writing the command read to the data set specified by SYSDEBUG DD in SEZAINST(SMTPPROC) from a JES spool file created by the user. The DEBUG statement causes SMTP to record all commands and replies to a data set.

To turn the DEBUG statement on or off, include or exclude the statement in hlq.SMTP.CONFIG. See the information about the DEBUG statement in z/OS Communications Server: IP Configuration Reference. Also, a privileged user can turn DEBUG mode on and off interactively by using the SMSG SMTP DEBUG/NODEBUG commands. See the information about the SMSG SMTP command for the privileged user in z/OS Communications Server: IP User's Guide and Command.

Tip: Connection number 257 represents the communication between SMTP and the MVS JES spool.

In the message text:

- mm/dd/yy
  The current date in month/day/year format.

- hlq:mm:ss
  The current time in hours:minutes:seconds format.

Examples:
EZA5196I 257< mail from:<USER@myhost>
EZA5200I 257> 250 OK

System action: SMTP continues.
Operator response: No action is needed.
User response: No action is needed.
System programmer response: No action is needed.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPCMDS
Routing code: Not applicable.
Descriptor code: Not applicable.

EZA5197I  mm/dd/yy hlq:mm:ss connection_number Fragment: command

Explanation: The DEBUG statement is present in the hlq.SMTP.CONFIG data set and this message indicates that SMTP is writing the command to the data set specified in SEZAINST(SMTPPROC), by the SYSDEBUG statement. The DEBUG statement causes SMTP to record SMTP commands and replies to a data set. For more information on the DEBUG statement and the configuring data sets, see the z/OS Communications Server: IP Configuration Reference.

In the message text:

- mm/dd/yy
  The current date in month/day/year format.

- hlq:mm:ss
  The current time in hours:minutes:seconds format.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPCMDS
Procedure Name: PrintResQueue
EZA5198I  mm/dd/yy hh:mm:ss connection_number reply

Explanation: This message is written to the debug data set specified in the SYSDEBUG statement in SEZAINST(SMTPPROC). To turn the debug option on or off, simply include or exclude the DEBUG statement in hlq.SMTP.CONFIG, respectively. For more information on the DEBUG statement, see the z/OS Communications Server: IP Configuration Reference.

In the message text:

- **mm/dd/yy**
  The current date in month/day/year format.
- **hh:mm:ss**
  The current time in hours:minutes:seconds format.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPRPLY

**Procedure Name:** DoReply

---

EZA5199I  mm/dd/yy hh:mm:ss connection_number Fragment: reply

Explanation: This message is written to the debug data set specified in the SYSDEBUG statement in SEZAINST(SMTPPROC). To turn the debug option on or off, simply include or exclude the DEBUG statement in hlq.SMTP.CONFIG, respectively. For more information on the DEBUG statement, see the z/OS Communications Server: IP Configuration Reference.

In the message text:

- **mm/dd/yy**
  The current date in month/day/year format.
- **hh:mm:ss**
  The current time in hours:minutes:seconds format.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**Module:** SMTPRPLY

**Procedure Name:** DoReply

---

EZA5200I  mm/dd/yy hh:mm:ss connection_number reply

Explanation: This message is written to the debug data set specified in the SYSDEBUG statement in SEZAINST(SMTPPROC). To turn the debug option on or off, simply include or exclude the DEBUG statement in hlq.SMTP.CONFIG, respectively. For more information on the DEBUG statement, see the z/OS Communications Server: IP Configuration Reference.

In the message text:

- **mm/dd/yy**
  The current date in month/day/year format.
- **hh:mm:ss**
  The current time in hours:minutes:seconds format.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.
Module: SMTPUTIL

Procedure Name: SendReply

---

**Module:** SMTPUTIL

**Procedure Name:** SendReply

---

**Explanation:** SMTP sends this message to the console error log to show that SMTP encountered a looping mail condition. This condition exists because the number of mailing attempts has exceeded the looping mail threshold limit. The mail in question is transferred to the indicated user ID.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** Examine the piece of looping mail to see which user ID is causing the error. Because this error frequently occurs between the SMTP server and a MAILER, examine both for configuration errors.

---

**Module:** SMTPBTCH

**Procedure Name:** MakeBatchSMTPErrorFile

---

**Explanation:** An RCPT TO: command was issued to the indicated host machine, and the SMTP server received a negative reply from a Domain Name Server. If the SMTP server is not using a Domain Name Server, the server could not find the indicated host name in the site tables.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** If the host name exists, check the Domain Name Server or site tables for configuration errors, and resend the mail message.

---

**Module:** SMTPRES

**Procedure Name:** ProcessRQR

---

**Explanation:** The argument string supplied after a command keyword exceeds the maximum allowable argument string length of 512 characters.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** If the error persists, determine which host is sending the incorrect command line, and correct the SMTP server.

---

**Module:** SMTPCMDS

**Procedure Name:** DoCommand

---

**Explanation:** SMTP sends this message to the server console when SMTP receives an incorrect DATA, QUIT, RSET, NOOP, TURN, or QUEU command. This message shows that the arguments with these commands are incorrect and unnecessary. The incorrect argument string is indicated at the end of the message.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** The sender should either correct the syntax before resubmitting the command, or issue the HELP command.

---

**Module:** SMTPCMDS

**Procedure Name:** DoCommand
**EZA5209I**  
Local Time Zone : time zone

Explanation: Displays the local time zone. To change the time zone, change the TIMEZONE statement in \texttt{hlq.SMTP CONFIG}. The time zone must be exactly 3 characters. The default time zone is LCL. For more information on the TIMEZONE statement, see the \textit{z/OS Communications Server: IP Configuration Reference}.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

---

**EZA5210E**  
Bad format SMTPNJE.HOSTINFO file found. Please run SMTPNJE

Explanation: The format must be updated, so run SMTPNJE.

System action: SMTP continues.

Operator response: Run the SMTPNJE program.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: AmpXAloc

---

**EZA5211E**  
mm/dd/yy hh:mm:ss connection_number Data arrived while Sending Mail Body:

Explanation: The DEBUG statement is present in \texttt{hlq.SMTP CONFIG} and SMTP is writing this reply to the data set pointed to or named in \texttt{SEZAINST(SMTPPROC)} under the SYSDEBUG DD statement. For more information on the DEBUG statement, see the \textit{z/OS Communications Server: IP Configuration Reference}.

In the message text:

\begin{itemize}
  \item \textit{mm/dd/yy}  
    The current date in month/day/year format.
  \item \textit{hh:mm:ss}  
    The current time in hours:minutes:seconds format.
\end{itemize}

System action: SMTP continues.

Operator response: To view the commands and the responses, view the data set specified or pointed to by \texttt{SEZAINST(SMTPPROC)}.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: MarkForExpirationCheck

---

**EZA5214I**  
character

Explanation: Writes the data that arrived while SMTP was sending the mail body to the data set specified or pointed to in the SYSDEBUG statement in \texttt{SEZAINST(SMTPPROC)}. For more information on the DEBUG statement, see the \textit{z/OS Communications Server: IP Configuration Reference}.

System action: SMTP continues.

Operator response: To view the commands and the responses, view the data set specified or pointed to by \texttt{SEZAINST(SMTPPROC)}.

System programmer response: No action is needed.
Module: SMTP

Procedure Name: MarkForExpirationCheck

---

EZA5216I Connection Inactive - Timed Out

Explanation: SMTP has closed the connection because the time allotted for inactivity has passed. This message is written to the data set specified in the SYSDEBUG DD statement in SEZAINST(SMTPPROC). To change the amount of time given before SMTP closes the connection, change the INACTIVE statement in hlq.SMTP.CONFIG. For more information on the INACTIVE statement, see the z/OS Communications Server: IP Configuration Reference.

In the message text:

- `mm/dd/yy`: The current date (month/day/year).
- `hh:mm:ss`: The current time (hours:minutes:seconds).

System action: SMTP closes the connection.

Operator response: To use SMTP again, restart the program.

System programmer response: No action is needed.

---

EZA5217E Invalid numeric operand found: number

Explanation: The number entered was either too large or contained incorrect numbers. The numeric operand cannot have more than 10 digits and it cannot exceed 2 147 483 647. Also, there can be nothing but digits between 0 and 9 composing the operand.

System action: SMTP continues.

Operator response: Verify that the number entered follows the above guidelines.

System programmer response: No action is needed.

---

EZA5218E Invalid ServerPort specified: port

Explanation: The port number specified in the PORT statement of the hlq.PROFILE.TCPIP and the hlq.SMTP.CONFIG data sets must be in the range of 1 - 65 534 and they must both be of equal value. The default port number for both configuration data sets is 25.

System action: SMTP continues.

Operator response: Change the PORT statement in the hlq.PROFILE.TCPIP or the hlq.SMTP.CONFIG data sets to be of equal value. For more information on the PORT statement, the hlq.PROFILE.TCPIP, and the hlq.SMTP.CONFIG data sets see the z/OS Communications Server: IP Configuration Reference.

System programmer response: No action is needed.

---

EZA5220I Ignoring Data/Commands received after QUIT

Explanation: The quit command has been entered, and SMTP is in the process of closing the connection, so the commands issued after it are ignored.

In the message text:
EZA5221I • EZA5223I

mm/dd/yy
The current date in the month/day/year format.

hh:mm:ss
The current time in the hours:minutes:seconds format.

System action: SMTP continues closing the connection.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: MarkForExpirationCheck

EZA5221I mm/dd/yy hh:mm:ss NonExistent: rc

Explanation: The connection no longer exists for the specified return code reason. The connection could have been dropped because of a software error on the remote SMTP server or because of a routing or connectivity problem in the internet network.

In the message text:

mm/dd/yy
The current date in the month/day/year format.

hh:mm:ss
The current time in the hours:minutes:seconds format.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Normally, no action is necessary. The mail is delivered automatically at a later time when connectivity is restored. If the error persists, check for a software error in the remote SMTP server or for an error in the piece of mail itself. For example, if a user tries to send a binary piece of SMTP mail, some hosts' SMTP servers malfunction or abnormally close the connection.
Module: SMTEVNT
Procedure Name: CloseCompletedEvent

EZA5222I StoreData: entering “discard” mode

Explanation: SMTP sends the message to the local console to show that the sender’s mail data set exceeded the maximum length specified by the MAXMAILBYTES option in the hlq.PROFILE.TCPIP data set. The excessively large mail data set is erased. This message is issued before the message that confirms the erasing of the data set.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Tell the sender to shorten the mail data set or to subdivide the data set into shorter data sets that are within the existing MAXMAILBYTES limitation. Increase the MAXMAILBYTES option value in the SMTP.CONFIG configuration data set, and tell the sender to try again.
Module: SMTEVNT
Procedure Name: StoreData

EZA5223I StoreData: leaving “discard” mode

Explanation: SMTP sends this message to the local console to show that the sender’s mail data set exceeded the maximum length specified by the MAXMAILBYTES option in the hlq.PROFILE.TCPIP data set. This message also verifies that an attempt was made to return a message to the mail sender to inform the sender of a configuration problem on the receiving machine. The mail data set being processed is discarded.

System action: SMTP continues.
Operator response: No action is needed.

System programmer response: Tell the sender to shorten the mail data set or to subdivide the data set into shorter data sets that are within the existing MAXMAILBYTES limitation. Increase the MAXMAILBYTES option value in the SMTPCONFIG configuration data set, and tell the sender to try again.

Module: SMTP
Procedure Name: StoreData

EZA5225I  Resolver tracing : Enabled/Disabled

Explanation: Displays the status of the resolver tracer. The tracer causes a complete trace of all queries to and responses from the name server to be written on the user’s console. To toggle between Enabled and Disabled, use the TRACE RESOLVER statement in the TCPIP.DAT file. The TRACE RESOLVER statement is used for debugging purposes only. For more information on the TRACE RESOLVER statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP
Procedure Name: OpenOutputStreams

EZA5228I  Name Resolution Method method

Explanation: This message displays the method that SMTP uses for name resolution. The method selected is dependent on the value associated with the RESOLVERUSAGE statement in the SMTP configuration file and whether NSINTERADDR statement is coded in the TCPIP.DAT file for a name server.

method is one of the following:

- Host Tables
  Indicates that RESOLVERUSAGE is YES and no name server is configured in the TCPIP.DAT file

- Nameserver, Port port_number
  Indicates that RESOLVERUSAGE is YES and one or more name servers are configured in the TCPIP.DAT file. port_number is the port number of the name server.

- IPMAILERADDRESS or MAILER statement
  Indicates that RESOLVERUSAGE is NO. The mail is directed to either to the IP address associated with the IPMAILERADDRESS statement or to the mailer associated with the MAILER statement in the SMTP configuration file.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP
Procedure Name: OpenOutputStreams

EZA5231I  Nameserver Address (port number): address

Explanation: Displays the name server’s address and its corresponding port number.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP
Procedure Name: OpenOutputStreams
EZA5232I Nameserver Response Timeout : seconds seconds.

Explanation: Displays the amount of time that is allotted for the name server to respond before the resolver closes the connection. To change the number displayed, change the RESOLVERTIMEOUT statement in TCPIP.DATA. For more information on the RESOLVERTIMEOUT statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5233I Resolver Retry Interval : minutes minutes

Explanation: Displays the number of minutes SMTP waits between attempts to resolve domain names. To change this value, change the RESOLVERRETRYINT statement in hlq.SMTP.CONFIG. For more information on the RESOLVERRETRYINT statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5234I UDP Retries/Nameserver/Interval: seconds

Explanation: To change this value, change the UDPRETRYINTERVAL command in hlq.NSMAIN.DATA. The UDPRETRYINTERVAL command specifies the amount of time the name server should wait before sending a query to another name server. The default for this command is 5 seconds. For more information on the UDPRETRYINTERVAL command, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5235I RCPT TO: response delay : seconds seconds

Explanation: Displays how long the SMTP server delays responding to the RCPT commands from the sender SMTP, while it is waiting for domain name resolution. If resolution does not occur before the specified time, the server assumes the name resolution is successful and queues the recipient address for asynchronous resolution. SMTP also sends the following message to the sender SMTP: 250 ok. The mail is returned to the sender if SMTP later determines that the recipient address cannot be resolved. To change this delay, change the RCPTRESPONSEDELAY statement in SMTPSMTMP.CONFIG. For more information on the RCPTRESPONSEDELAY statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams
Max Temporary Error Retries: Disabled / number

Explanation: Displays the maximum number of times SMTP tries to redeliver mail to a host with a temporary problem. If the number of retries is 0, “Disabled” is displayed. Otherwise, the value for the TEMPERRORRETRIES statement is displayed. To change this value, change the TEMPERRORRETRIES statement in hlq.SMTP.CONFIG. For more information on the TEMPERRORRETRIES statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStreams

Option Conflict: SECURE and RESTRICT may not both be specified

Explanation: The options SECURE and RESTRICT cannot be used together because they are incompatible.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Correct the configuration data set, and restart SMTP.
Module: SMTP
Procedure Name: ProcessConfigFile

Invalid DBCS Option: option

Explanation: An invalid option has been specified in the hlq.SMTP.CONFIG data set for the DBCS statement. DBCS conversion is disabled.

System action: SMTP continues.
Operator response: Specify a valid option for the DBCS statement and restart SMTP. See z/OS Communications Server: IP Configuration Reference for more information about configuring DBCS support for the SMTP server.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: Error

Invalid Kanji shift-in Option: option

Explanation: An invalid shift-in option has been specified in the hlq.SMTP.CONFIG data set for the DBCS statement. The valid shift-in options for the JIS78KJ and JIS83KJ conversion types are ASCII and JISROMAN. DBCS conversion is disabled.

System action: SMTP continues.
Operator response: Specify a valid shift-in option for the DBCS statement and restart SMTP. See z/OS Communications Server: IP Configuration Reference for more information about configuring DBCS support for the SMTP server.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: Error
EZA5243E Too Many ALTTCPHOSTNAME statements - limit is number

Explanation: The number of alternative TCP host name options selected exceeds the maximum number allowed. The maximum number allowed is indicated at the end of the message; the default is 16.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Reduce the number of ALTTCPHOSTNAME statements in the configuration data set, or increase the MaxAltOurNames parameter to the desired number. Restart SMTP.

Module: SMTP

Procedure Name: ProcessConfigFile

EZA5256I Alternate TCP Domain Name number: domain name

Explanation: Displays the alternate, fully qualified host name by which SMTP recognizes the local host. To change the alternate domain name, change the ALTTCPHOSTNAME statement in hlq.SMTP.CONFIG. There can be up to 16 alternate host names. For more information on the ALTTCPHOSTNAME statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5257I Alternate TCP Domain Name number: domain name

Explanation: Displays the alternate, fully qualified host name by which SMTP recognizes the local host. To change the alternate domain name, change the ALTTCPHOSTNAME statement in hlq.SMTP.CONFIG. There can be up to 16 alternate host names. For more information on the ALTTCPHOSTNAME statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5258I Protocol Error. I= I Bytes Received = bytes

Explanation: This message is sent to the local console to show that the sender’s mail was not successfully delivered because of a protocol Recoverable error. The SMTP server received the string, <CR><LF><CR><LF>, followed by additional data. The string, <CR><LF><CR><LF>, is used to specify the end of the data; thus, the client SMTP server is in error. The data is accepted, and the client SMTP server waits for an additional <CR><LF><CR><LF> string.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Describe the error to the postmaster of the SMTP server that is sending the incorrectly formatted mail.

Module: SMTPEVENT

Procedure Name: StoreDataTableErrors
EZA5259I  Reply Line too long

Explanation: SMTP sends this message to the server console to show that a remote SMTP server’s response exceeded the 512-byte limitation specified by RFC 821. SMTP accepts the reply and truncates it to 512 bytes. See Appendix C, “Related protocol specifications,” on page 649 for information about accessing RFCs.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: If the error persists, notify the postmaster of the remote SMTP server the SMTP server is sending replies that are greater than the 512-byte limit.

Module: SMTPRPLY

Procedure Name: DoReply

EZA5260I  Rewrite 822 Mail Headers : Enabled using rules from data set/Enabled using default rules/Disabled

Explanation: Displays the status of the REWRITE822HEADER statement in hlq.SMTP.CONFIG. The REWRITE822HEADER statement specifies whether SMTP should rewrite or print the RFC 822 headers of mail arriving from the NJE side of the mail gateway. There are 3 possible combinations of parameters in this statement. For a description of these combinations, and more information on the REWRITE822HEADER statement, see the z/OS Communications Server: IP Configuration Reference. See Appendix C, “Related protocol specifications,” on page 649 for information about accessing RFCs.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5263I  DBCS Conversion : conversion_status

Explanation: This message indicates the DBCS conversion status for the SMTP server at initialization time. The status indicates the DBCS conversion type that will be used when transferring mail, or “disabled,” if DBCS conversion is not configured, or if the required DBCS translation table could not be loaded. DBCS conversion is either enabled, or disabled, according to the displayed status. For a detailed explanation of the DBCS conversion_status, see messages EZA5446N - EZA5456N.

System action: SMTP continues.

Operator response: If the status is “disabled,” and a DBCS translation table could not be loaded, then configure a valid DBCS binary translate table data set in the search order hierarchy for the required DBCS translation table. See z/OS Communications Server: IP Configuration Reference for more information about the loading and customizing of DBCS translation tables.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5264I  Alternate RSCS Domain Name : domain name

Explanation: Displays the alternate domain name of the NJE network when SMTP is running as a mail gateway. It can be specified only once. To change this value, change the ALTNJEDOMAIN statement in hlq.SMTP.CONFIG. For more information on the ALTNJEDOMAIN statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.
**EZA5265I • EZA5285E**

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5265I**  Warn about mail older than: *days* days

**Explanation:** Displays how many days until SMTP returns mail to the sender with a header indicating the mail has been undeliverable for WARNINGAGE days. To change this value, change the WARNINGAGE statement in hlq.SMTP.CONFIG. For more information on the WARNINGAGE statement and hlq.SMTP.CONFIG, see the z/OS Communications Server: IP Configuration Reference.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5272I**  Deliver via: *punch/netdata SR/NoSR Mailer temp: user ID@node ID local/NJE/unknown*  Addresses

**Explanation:** Displays the format, source route status, the mailer state, and the addresses. To change any of these, consult the z/OS Communications Server: IP Configuration Reference.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5284E**  Invalid value *seconds* specified for Inactive. Default used.

**Explanation:** There is an incorrect value for the INACTIVE statement in hlq.SMTP.CONFIG. The INACTIVE statement specifies the number of seconds of inactivity after which SMTP considers the connection to be dead. The connection is then closed. The correct range for the INACTIVE statement is between 0 and 86400 seconds. SMTP uses 180 for the INACTIVE statement’s value. For more information on the INACTIVE statement, see the z/OS Communications Server: IP Configuration Reference.

**System action:** SMTP continues.

**Operator response:** Change the INACTIVE statement in hlq.SMTP.CONFIG to a correct value.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** DoFinalChecks

---

**EZA5285E**  Invalid value *seconds* specified for FinishOpen. Default used.

**Explanation:** There is an incorrect value in the FINISHOPEN statement in hlq.SMTP.CONFIG. The value must be between 0 and 86400 seconds. SMTP uses 120 seconds as the value for FINISHOPEN. This statement specifies the number of seconds SMTP waits while trying to establish a connection to a remote site. After the time has passed, the connection is ended by SMTP. For more information on the FINISHOPEN statement, see the z/OS Communications Server: IP Configuration Reference.

**System action:** SMTP continues.

**Operator response:** Change the FINISHOPEN statement in hlq.SMTP.CONFIG to a correct value. If the default value is acceptable, remove the FINISHOPEN statement.

**System programmer response:** No action is needed.

**Module:** SMTP

---
Procedure Name: DoFinalChecks

EZA5286E Invalid value days specified for RetryAge. Default used.

Explanation: An incorrect value for the RETRYAGE statement in hlq.SMTP.CONFIG was used. The value must be between 0 and 365 days. The RETRYAGE statement specifies the number of days after which SMTP returns mail as undeliverable. SMTP uses 3 days as the value for the RETRYAGE statement. For more information on the RETRYAGE statement and hlq.SMTP.CONFIG, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.
Operator response: Change the parameter in the RETRYAGE statement in hlq.SMTP.CONFIG to a correct value.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: DoFinalChecks

EZA5287E Invalid value minutes specified for RetryInt. Default used.

Explanation: The value of the RETRYINT statement must be between 0 and 1440 minutes. The RETRYINT statement specifies the number of minutes SMTP should wait between attempts to deliver the mail to a TCP host that is down. SMTP uses 20 minutes for the value of the RETRYINT statement. For more information on the RETRYINT statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.
Operator response: Change the RETRYINT statement in hlq.SMTP.CONFIG to a correct value.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: DoFinalChecks

EZA5289E Invalid value minutes specified for ResolverRetryInt. Default used.

Explanation: An incorrect value was used for the RESOLVERRETRYINT statement in hlq.SMTP.CONFIG. This statement specifies the number of minutes SMTP waits between attempts to resolve domain names. The value for the RESOLVERRETRYINT statement must be between 0 and 1440 minutes. SMTP uses 20 minutes for the value of the RESOLVERRETRYINT statement. For more information on the RESOLVERRETRYINT statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.
Operator response: Change the RESOLVERRETRYINT statement in hlq.SMTP.CONFIG.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: DoFinalChecks

EZA5289E Invalid value value specified for RcptResponseDelay. Default used.

Explanation: The error is caused either by an incorrect value of less than 0 or greater than 86 400, or because NSInterAddr is not coded in the TCPIP.DATA data set. SMTP uses a default of 60.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Correct the SMTP configuration data set or the TCPIP.DATA data set.
Module: SMTP
Procedure Name: ProcessConfigFile
EZA5290E  Invalid value seconds specified for TempErrorRetries. Default used.

Explanation: The value of the TEMPERERRORRETRIES statement in hlq.SMTP.CONFIG must be either 0 or positive. This statement specifies the number of times SMTP tries to redeliver mail to a host with a temporary problem. SMTP uses the default value for the TEMPERERRORRETRIES statement.

System action: SMTP continues.

Operator response: Correct the TEMPERERRORRETRIES statement only when mail servers repeatedly terminate abnormally or hang SMTP mail transactions. If a change is necessary, change the TEMPERERRORRETRIES statement in hlq.SMTP.CONFIG. For more information on the TEMPERERRORRETRIES statement, see the z/OS Communications Server: IP Configuration Reference.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: DoFinalChecks

EZA5294E  Invalid value value specified for Inactive.

Explanation: The value for the INACTIVE statement was less than 0. This statement specifies the number of seconds of inactivity after which SMTP considers the connection dead. After the specified amount of inactive time, SMTP closes the connection. SMTP continues using the default value for the INACTIVE statement.

System action: SMTP continues.

Operator response: Change the INACTIVE statement in hlq.SMTP.CONFIG to a valid positive number. For more information on the INACTIVE statement, see the z/OS Communications Server: IP Configuration Reference.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: Error

EZA5295E  Invalid value seconds specified for FinishOpen.

Explanation: The FINISHOPEN statement specifies the number of seconds SMTP waits while trying to establish a connection to a remote site. After the specified number of seconds, SMTP ends the connection. The parameter for this statement must be between 1 and 86 400 seconds. The default value for this statement is 120 seconds. For more information on the FINISHOPEN statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: Change the FINISHOPEN statement in hlq.SMTP.CONFIG.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: Error

EZA5296E  Invalid value number for RetryAge.

Explanation: The RETRYAGE statement in hlq.SMTP.CONFIG must be positive. This statement specifies the number of days after which SMTP returns mil as undeliverable. SMTP uses the default value for the RETRYAGE statement, which is 3 days. For more information on the RETRYAGE statement and hlq.SMTP.CONFIG, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: Change the RETRYAGE statement in hlq.SMTP.CONFIG to a correct value.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: Error
EZA5297E  Invalid value minutes specified for RetryInt.

Explanation: The RETRYINT statement in hlq.SMTP.CONFIG must contain a positive value. This statement specifies the number of minutes SMTP should wait between attempts to deliver mail to a TCP host that is down. The range of correct values for the RETRYINT statement is 0 and 1440 minutes. SMTP uses the default for the RETRYINT statement, which is 20 minutes. For more information on the RETRYINT statement and hlq.SMTP.CONFIG, see the

zos Communications Server: IP Configuration Reference

System action: SMTP continues.

Operator response: Change the RETRYINT statement in hlq.SMTP.CONFIG to a correct value.

System programmer response: No action is needed.

Module: SMTP
Procedure Name: Error

EZA5298E  Invalid value minutes specified for ResolverRetryInt.

Explanation: The value for the RESOLVERRETRYINT statement must be a positive number. This statement specifies the number of minutes SMTP waits between attempts to resolve domain names. SMTP uses the default value for the RESOLVERRETRYINT statement, which is 20 minutes. For more information on the RESOLVERRETRYINT statement, see the

zos Communications Server: IP Configuration Reference

System action: SMTP continues.

Operator response: Change the RESOLVERRETRYINT statement in hlq.SMTP.CONFIG to a positive, correct value.

System programmer response: No action is needed.

Module: SMTP
Procedure Name: Error

EZA5299E  Invalid value number specified for RcptResponseDelay

Explanation: The value for the RCPTRESPONSEDELAY statement must be positive. This statement specifies how long the SMTP server delays responding to the RCPT commands from the sender SMTP. While it is waiting for domain name resolution, if resolution does not complete before the specified period, the SMTP server assumes name resolution is successful and sends a reply code of 250 ok. to the sender SMTP and queues the recipient address for asynchronous resolution. If the name resolution is later determined to be unresolved, the mail is returned to the sender. SMTP uses the default value for the RCPTRESPONSEDELAY statement, which is 60 seconds. For more information on this statement, see the

zos Communications Server: IP Configuration Reference

System action: SMTP continues.

Operator response: Change the parameter of the statement to a correct, positive value in hlq.SMTP.CONFIG.

System programmer response: No action is needed.

Module: SMTP
Procedure Name: Error

EZA5300E  Invalid value number specified for TempErrorRetries.

Explanation: The value for the TEMPERRORRETRIES in hlq.SMTP.CONFIG must be a positive number. SMTP uses the default settings for the TEMPERRORRETRIES statement, see the

zos Communications Server: IP Configuration Reference

System action: SMTP continues.

Operator response: Enter a correct, positive number in the TEMPERRORRTTRIES statement in hlq.SMTP.CONFIG.

System programmer response: Assist the user as necessary.

Module: SMTP
Procedure Name: Error
EZA5301E • EZA5311E

EZA5301E Invalid value *days* specified for WarningAge.

Explanation: An incorrect value was specified for the WARNINGAGE statement. SMTP uses the default setting. For more information on the WARNINGAGE statement and hlq.SMTP.CONFIG see the [z/OS Communications Server: IP Configuration Reference](#).

System action: SMTP continues.

Operator response: Change the WARNINGAGE statement in hlq.SMTP.CONFIG to a valid number.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: Error

---

EZA5302E OLD Option of Mailer statement no longer supported.

Explanation: This message only occurs when TCPIP parses the hlq.SMTP.CONFIG data set. The OLD parameter to the MAILER statement is no longer valid. If you are updating from an earlier release of TCP/IP, be aware that in Version 3 it is an error to specify OLD in the MAILER statement.

System action: The SMTP server halts until the error is corrected.

Operator response: No action is needed.

System programmer response: Remove the OLD parameter from the MAILER statement in your hlq.SMTP.CONFIG data set and reinitialize SMTP.

Module: SMTP

Procedure Name: Error

---

EZA5303E Invalid Address in SMSG Authorization List: *address*

Explanation: A syntax error has been found in the address of the local user ID you entered as a parameter to the SMSGAUTHLIST statement in your hlq.SMTP.CONFIG data set.

System action: The SMTP server halts until the error is corrected.

Operator response: No action is needed.

System programmer response: Correct the address that you entered in the SMSGAUTHLIST statement and reinitialize SMTP.

Module: SMTP

Procedure Name: Error

---

EZA5311E LOOPINGMAIL statement no longer valid. Please use the BADSPOOLFILEID statement

Explanation: Earlier versions of TCP/IP used the LOOPINGMAIL statement to specify a user ID on the local system where SMTP transfers unreadable spool files and looping mail. This statement has been replaced by the BADSPOOLFILEID statement in Version 3.

System action: The SMTP server is halted until the statement is corrected.

Operator response: No action is needed.

System programmer response: Replace the LOOPINGMAIL statement with an equivalent BADSPOOLFILEID statement in your hlq.SMTP.CONFIG data set and reinitialize SMTP.

Module: SMTP

Procedure Name: Error
EZA5312E  Only one POSTMASTER statement may be specified in SECURE mode

Explanation:  If you have entered a SECURE statement in your hlq.SMTP.CONFIG data set, you can only use one
POSTMASTER statement, and you can only specify a local user ID as the recipient of mail addressed to
POSTMASTER.

System action:  The SMTP server is halted until the error is corrected.

Operator response:  No action is needed.

System programmer response:  Make sure that you list only one POSTMASTER statement in your
hlq.SMTP.CONFIG data set. Also make sure that you specify a local user ID instead of a user address. Reinitialize
SMTP.

Module:  SMTP

Procedure Name:  Error

---

EZA5313E  Invalid POSTMASTER address: address

Explanation:  The NJE or SMTP address in the POSTMASTER statement of your hlq.SMTP.CONFIG data set is
incorrect.

System action:  The SMTP server is halted until the error is corrected.

Operator response:  No action is needed.

System programmer response:  Make sure that you have entered a correct, valid local user ID or a correct, valid NJE
or SMTP address as part of your POSTMASTER statement. Reinitialize SMTP.

Module:  SMTP

Procedure Name:  Error

---

EZA5314E  In SECURE mode, POSTMASTER address must be a valid local userid

Explanation:  If you have entered a SECURE statement in your hlq.SMTP.CONFIG data set, then the POSTMASTER
statement you use must take the form of a valid local user ID. You cannot enter a user address if you are in the
SECURE mode.

System action:  The SMTP server is halted until the error is corrected.

Operator response:  No action is needed.

System programmer response:  Make sure to enter only one valid local user ID in your POSTMASTER statement,
then reinitialize SMTP. See also message EZA5312I.

Module:  SMTP

Procedure Name:  Error

---

EZA5315E  Expecting 'PRINT' or 'NOPRINT' after 'REWRITE822HEADER YES' statement

Explanation:  If you entered a REWRITE822HEADER YES statement in your hlq.SMTP.CONFIG data set, you must
also enter the PRINT parameter or the NOPRINT parameter for the RFC 822 headers. See Appendix C, "Related
protocol specifications," on page 649 for information about accessing RFCs.

System action:  The SMTP server is halted until the error is corrected.

Operator response:  After the REWRITE822HEADER YES statement, enter PRINT or NOPRINT, depending on
whether you want the RFC 822 headers to display on your console. For more information, see z/OS Communications
Server: IP Configuration Reference

System programmer response:  No action is needed.

Module:  SMTP

Procedure Name:  Error
EZA5317I • EZA5320I

EZA5317I  Listen on Address : Unspecified

Explanation:  The LISTENONADDRESS configuration statement of the hlq.SMTP.CONFIG data set was used without the IP address specified. The LISTENONADDRESS statement defines which HOME IP address to use for a mutlhome system.

System action:  SMTP continues.

Operator response:  Reissue the LISTENONADDRESS statement specifying a HOME IP address. For more information about the LISTENONADDRESS statement, see the z/OS Communications Server: IP Configuration Reference

System programmer response:  No action is needed.

Module:  SMTP

Procedure Name:  OpenOutputStreams

---

EZA5318I  Listen on Address : IP address

Explanation:  The LISTENONADDRESS statement of the hlq.SMTP.CONFIG data set is parsed and the indicated IP address is confirmed. For more information about the LISTENONADDRESS statement, see the z/OS Communications Server: IP Configuration Reference

System action:  SMTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  SMTP

Procedure Name:  OpenOutputStreams

---

EZA5319I  Outbound Open Session Limit : None

Explanation:  The OUTBOUNDOPENLIMIT statement limits the number of simultaneous TCP connections in use for mail delivery. The default value is 0. For more information, see the z/OS Communications Server: IP Configuration Reference

System action:  SMTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  SMTP

Procedure Name:  OpenOutputStreams

---

EZA5320I  Outbound Open Session Limit : outbound open limit

Explanation:  If you have specified the number of connections as a parameter to the OUTBOUNDOPENLIMIT statement in your hlq.SMTP.CONFIG data set, this message displays the limit set. The OUTBOUNDOPENLIMIT statement should only be used if limited TCP resources exist on the system and SMTP is using an undue portion of those resources.

System action:  SMTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  SMTP

Procedure Name:  OpenOutputStreams
EZA5321I  SMSG Authorization List : None

Explanation: You have not authorized any local users to issue privileged SMTP SMSG commands. Only users specified in the SMSGAUTHLIST statement of the hlq.SMTP.CONFIG data set can issue the privileged commands. For more information about these commands, see z/OS Communications Server: IP User’s Guide and Commands. See also message EZA5322I.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5322I  SMSG Authorization List : Processed

Explanation: TCPIP has processed the user IDs you entered as parameters to the SMSGAUTHLIST statement in your hlq.SMTP.CONFIG data set. Those user IDs are now authorized to issue the privileged SMTP SMSG commands. For more information about the privileged commands, see z/OS Communications Server: IP User’s Guide and Commands.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5324I  procedure_name Terminating: (return_code)

Explanation: SMTP has received a TCP/IP shut down return code from the TCP/IP stack; therefore, SMTP will also terminate.

procedure_name is the SMTP procedure name.

(return_code) is the TCP/IP return code. This return code will always be (8558) which indicates that TCP/IP shut down.

System action: SMTP ends.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPUTIL

Procedure Name: CheckResult

EZA5325E Unable to delete existing file fulldatasetname, rc=returncode. SMTP terminating.

Explanation: SMTP failed to delete the data set specified in the error message. Determine if SMTP has authority to delete data sets beginning with the defined MAILFILEDSPREFIX.

fulldatasetname is the fully qualified name of the data set SMTP attempted to delete.

returncode is the return code passed back to SMTP by the utilities doing the I/O to delete the data set.

System action: SMTP ends.

Operator response: No action is needed.

System programmer response: Ensure that SMTP has the proper Security Authorization Facility (SAF) authority to delete data sets beginning with the prefix defined by MAILFILEDSPREFIX. Check for any system error messages that appear concurrently with this error message.

If return code is 208, check to see if there is data set contention for the data set name displayed in the error message.
SMTP must have access to all its data sets to perform its function. Therefore, if a defragmentation utility (or any other application) is actively accessing SMTP data sets while the SMTP server is active, a data set contention problem could occur. To avoid this problem, configure the application to bypass data sets with the SMTP high level qualifier. The high level qualifier is set by the SMTP configuration parameter MAILFILEDSPREFIX.

**Module:** SMTP

**Procedure Name:** InitializeDeliveryQueue

---

**EZA5326E** Unable to allocate new file fulldatasetname, RC=nn, DSPrefix may be invalid. SMTP terminating.

**Explanation:** SMTP attempts to allocate the data set specified in the error message. Determine whether SMTP has authority to allocate and delete data sets beginning with the defined MAILFILEDSPREFIX value. SMTP receives a return code from the SVC99 call.

`fulldatasetname` is the data set name that SMTP is using.

`nn` is an SVC99 return code passed to SMTP.

**System action:** SMTP ends.

**Operator response:** No action is needed.

**System programmer response:**
1. Check the Output file generated under the SMTP started task for any additional message pertaining to this data set.
2. Check the system console for any system error messages that appear concurrently with this error message.
3. Ensure that SMTP has the proper SAF authority to allocate and delete data sets beginning with the prefix defined by MAILFILEDSPREFIX.

**Module:** SMTP InitializeDeliveryQueue

---

**EZA5327E** Terminating: Cannot allocate data set name, rc=return code

**Explanation:** SMTP was unable to allocate a mail data set beginning with the prefix value specified in the MAILFILEDSPREFIX statement of your hlq.SMTP.CONFIG data set. An MVS operating system error was detected.

**System action:** SMTP ends.

**Operator response:** No action is needed.

**System programmer response:** Make sure that SMTP has the proper SAF authority to create or delete data sets beginning with the prefix defined in MAILFILEDSPREFIX. Check for any MVS system error messages that appear when this message does.

**Module:** SMTP

**Procedure Name:** InitializeDeliveryQueue

---

**EZA5328E** date time Terminating: Stop received

**Explanation:** SMTP received an external “Stop” interrupt from the operating system.

**System action:** All files are closed and SMTP ends.

**Operator response:** Contact the system programmer.

**System programmer response:** Check for any system error messages that appear concurrently with this error message.

**Module:** SMTP

**Procedure Name:** MarkForExpirationCheck
EZA5329E  *procedure name* Terminating: *errmsg (msgnum)*

**Explanation:** A condition has occurred that caused SMTP to end.

*errmsg* is the text of the message that describes the error.

*msgnum* is the 4-digit numeric portion of the message identifier of the **EZA** message whose text is displayed in *errmsg*. For more information about this message, see message **EZA**msgnum.

**System action:** SMTP ends.

**Operator response:** Notify the system administrator.

**System programmer response:** Respond as indicated by the message **EZA**msgnum.

**Module:** SMTPUTIL

**Procedure Name:** CheckResult

---

EZA5330I  *procedure name* SMTP TCP Returns: *errmsg (msgnum)*

**Explanation:** This message indicates an error in the SMTP/TCP interface, as specified. It generally implies that the connection has been closed by the remote site. This message is generated only if the DEBUG statement is active in the SMTP startup procedure.

*errmsg* is the text of the message that describes the error.

*msgnum* is the 4-digit numeric portion of the message identifier of the **EZA** message whose text is displayed in *errmsg*. For more information about this message, see message **EZA**msgnum.

**System action:** SMTP continues.

**Operator response:** Notify the system administrator.

**System programmer response:** Respond as indicated by the message **EZA**msgnum.

**Module:** SMTPUTIL

**Procedure Name:** CheckResult

---

EZA5331E  Local Error in MakeAddrBlok RC = rc

**Explanation:** SMTP did not have enough free disk space to store an ADDRBLOK data set.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** If the disk is full, delete old data sets, such as SMTP logs, or increase the size of the disk. If the disk is not full, there might be a problem with the ADDRBLOK data set. If the error persists, contact the IBM Software Support Center.

**Module:** SMTPEVNT

**Procedure Name:** StoreData

---

EZA5332E  Error occurred copying spool file, return code=return code

**Explanation:** An error occurred before the spool file finished copying. The spool file is closed.

**System action:** Processing is terminated.

**Operator response:** Use the return code value indicated to determine why the error is occurring and correct the problem or delete the file. Restart SMTP. For more information on return codes, see [z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference](https://www.ibm.com/support/docview.wss?uid=swg27007846)

**System programmer response:** No action is needed.

**Module:** SMTPBCH

**Procedure Name:** InformUser
EZA5333E  data_set ADDRBLOK is in an inconsistent state...repairing

Explanation: SMTP sends this message to the server console to show a problem with the ADDRBLOK data set. SMTP attempts to rewrite the ADDRBLOK data set in a correct format.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Normally, no response is necessary. If SMTP abends while performing this rewrite, the ADDRBLOK might not be recoverable. Rename or discard the ADDRBLOK data set to prevent further abends of SMTP.

Module: SMTPQUEU

Procedure Name: EnQueueForDelivery

EZA5334E  Delivery of Note note to address failed RC = rc

Explanation: SMTP sends this message to the server console to show that the indicated note was not successfully transferred to the indicated address for the indicated return code reason. This condition occurs if SMTP tries to punch a file to an incorrect user ID, or if SMTP tries to punch a file with a header with more than 80 characters to a mailer running Mailer Old.

System action: SMTP continues.

Operator response: Contact the system programmer.

System programmer response: Message EZA5336E precedes this error message, so follow the information in EZA5336E. Return code = 53 indicates an incorrect user ID or user node. Determine why this was unsuccessful, correct the problem, and try again.

Module: SMTPQUEU

Procedure Name: DeliverSpoolFile

EZA5335E  Unable to allocate the file data_set_name rc=return_code

Explanation: SMTP cannot allocate a data set necessary for it to continue functioning. Look for message EZA5560I in the SMTP output file for more information on why dynamic allocation failed.

data_set_name is the fully qualified data set name.

return_code is used internally, use message EZA5560I for more information.

System action: SMTP halts.

Operator response: Notify the system programmer of the error.

System programmer response: Use the text of message EZA5560I and the documentation describing Dynamic Allocation (DYNALLOC) in z/OS MVS Programming: Authorized Assembler Services Reference ALE-DYN to determine the cause of the error and respond as indicated. Most of these problems are DASD management related so you need to correct the problem, then restart SMTP.

Module: SMMVSUB

Procedure Name: svc202

EZA5336E  Error allocating spool, user=user node, user ID, class=output class, rc=return code

Explanation: This message indicates an error in delivering a mail file, either to a local user or to a user on the associated Job Entry Subsystem (JES). It specifies the user node and ID, the spool data set format, and the return code. The spool file is not delivered.

System action: SMTP continues.

Operator response: Contact the system programmer.

System programmer response: This problem usually occurs because the user ID is not a valid JES ID or the user node is not a valid NJE node for your system. Check that the user node is defined correctly in the IEFSSNxx parmlib.
member for your system. For more information about JES IDs, see the JES3 Initialization and Tuning Guide. If this is not the problem, use the return code value to determine why the error is occurring and correct the problem. Restart SMTP. For more information about spool return codes, see the JES3 Messages or JES2 Messages depending on which version of JES you are using.

Note: Instead of using the iefssnxx.parmlib member to specify the JES node, you can use the keyword NJENODENAME within your SMTP configuration to specify a valid NJE node. For more information, see NJENODENAME in Communications Server: IP Configuration Reference.

Module: SMTPQUEU
Procedure Name: DeliverSpoolFile

EZA5337E  SMTP inactive, resource full data set name not available rc=return code

Explanation: SMTP sends this message to the server console to show that SMTP cannot use one of its existing data sets.

System action: SMTP continues.
Operator response: Release the data set that SMTP is trying to use.
System programmer response: No action is needed.
Module: SMMVSUB
Procedure Name: svc202

EZA5338E  SMTP inactive, resource full data set name still not available rc=return code

Explanation: SMTP sends this message to the server console to show that SMTP still cannot use one of its existing data sets.

System action: SMTP continues.
Operator response: Release the data set that SMTP is trying to use.
System programmer response: No action is needed.
Module: SMMVSUB
Procedure Name: svc202

EZA5339E  SMTP active, resource full data set name now available rc=return code

Explanation: SMTP sends this message to the server console to show that SMTP now has the use of the data set for which it was waiting.

System action: SMTP resumes normal operation.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMMVSUB
Procedure Name: svc202

EZA5340I  SMTP NOTE from userid at nodeid was truncated by hostname

Explanation: This message is generated in the data set associated with the OUTPUT DD card in the SMTP started procedure. The SMTP note is truncated because the note being read from the JES spool is too large and the CHECKSPOOLSIZE statement is enabled. The message is also appended to the truncated SMTP note. The truncated note is sent to its recipients. The MAXMAILBYTES statement in the hlq.SMTP.CONFIG file can be adjusted to change the primary space allocated for the hlq.TEMPNOTE data set. For more information about the configuration statements see Communications Server: IP Configuration Reference.

In the message text:
**userid**
The user identifier that sent the SMTP note to the JES spool using TSO XMIT.

**nodeid**
The node identifier where the SMTP note originated.

**hostname**
The host where the SMTP mailer (which truncated the SMTP note) is active.

**Tip:** If the MAXMAILBYTES statement is not coded in the hlq.SMTP.CONFIG file, it has a default of 524288 bytes.

**Examples:** Your hlq.SMTP.CONFIG file contains the following statements:

```
MAXMAILBYTES nnnn
CHECKSPOOLSIZE
```

The following messages are generated in the data set associated with the OUTPUT DD card in the SMTP started procedure after a large note is sent:

```
EZA5340I SMTP note from USER at MYHOST was truncated by MYHOST.com
```

Fragment from truncated note:

```
Received: from MYHOST.com xxx.xxx.xxx.xxx by HOST.COM (IBM VM SMTP Level 440) via TCP with SMTP ; Wed, 02 Nov
Received: from MYHOST by MYHOST.com (IBM MVS SMTP CS V1R8) with BSMTP id TSU00026; Wed, 02 Nov 05 11:16:13 EST
Date: 2 Nov 05 11:15:27 EST
From: USER@MYHOST.com
To: USER1@HOST.com
<Body of the mail >
EZA5340I SMTP note from USER at MYHOST was truncated by MYHOST.com
```

**System action:** SMTP continues to run and large notes are truncated.

**Operator response:** Notify the system programmer about any truncated notes.

**User response:** Not applicable.

**System programmer response:** Review your system DASD resource requirements and adjust the MAXMAILBYTES statement, if appropriate.

**Problem determination:** Not applicable.

**Source:** z/OS Communications Server TCP/IP: SMTP

**Module:** SMTPBTCH

**Routing code:** Not applicable.

**Descriptor code:** Not applicable.

---

**EZA5341I CheckSpoolSize : Enabled**

**Explanation:** The CheckSpoolSize statement in the hlq.SMTP.CONFIG file is enabled. If this statement is enabled, SMTP checks the size of the JES spool file and if it is larger than the primary space allocation for the data set hlq.TEMP.NOTE, then that SMTP note is truncated. The default for this statement is disabled. For more information about the CHECKSPOOLSIZE statement see [z/OS Communications Server: IP Configuration Reference](http://www.ibm.com/servers/resourcelink/).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams
EZA5342I  SMTP NOTE from spool file job ID jobid was truncated by hostname

Explanation: This message is generated in the data set associated with the OUTPUT DD card in the SMTP started procedure. The SMTP note is truncated because the note being read from JES spool is too large and the CHECKSPOOLSIZE statement is enabled. The message is also appended to the truncated SMTP note. The truncated note is sent to its recipients. The MAXMAILBYTES statement in the hlq.SMTP.CONFIG file can be adjusted to change the primary space allocated for the hlq.TEMP.NOTE data set. For more information about the configuration statements see z/OS Communications Server: IP Configuration Reference.

In the message text:

jobid
The spool file job identifier of the SMTP note used by SMTP batch.

hostname
The host where the SMTP mailer that truncated the SMTP note is active.

Tip: If the MAXMAILBYTES statement is not coded in the hlq.SMTP.CONFIG file, it has a default of 524288 bytes.

Examples: Your hlq.SMTP.CONFIG file contains the following statements:

MAXMAILBYTES nnnn
CHECKSPOOLSIZE

The following messages are generated in the data set associated with the OUTPUT DD card in the SMTP started procedure after a large note is sent:

EZA5144I Max Length of Accepted Mail : nnnn bytes
EZA5341I CheckSpoolSize : Enabled
EZA5342I SMTP note from spool file job ID JOB00035 was truncated by MYHOST.com

Fragment from truncated note:

Received: from MYHOST.com xxx.xxx.xxx.xxx by HOST.COM (IBM VM SMTP Level 448) via TCP with SMTP ; Wed, 02 Nov
Received: from HOST by MYHOST.com (IBM MVS SMTP CS V1R8) with BSMTP id JOB00035; Wed, 02 Nov 05 14:42:06 EST
DATE: 19 DEC 03 08:00:00 GMT
FROM: User
TO: User2
SUBJECT: TEST

<Body of the mail >
EZA5342I SMTP note from spool file job ID JOB00035 was truncated by MYHOST.com

System action: SMTP continues to run and large notes are truncated.

Operator response: Notify the system programmer about any truncated notes.

User response: Not applicable.

System programmer response: Review your system DASD resource requirements and adjust the MAXMAILBYTES statement if appropriate.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: SMTP

Module: SMTPBTCH

Routing code: Not applicable.

Descriptor code: Not applicable.

EZA5343I  Translated ATSIGN symbol : symbol

Explanation: The ATSIGN statement in the hlq.SMTP.CONFIG file has been set. Setting this statement means that SMTP will use this character instead of the at sign (@) between the user ID and host ID fields in addressing strings, for example, userid@hostid. This statement should only be used for specific languages because of translation encodings.

Setting this option might cause problems if notes are being sent between different language sites.
EZA5344E • EZA5346E

symbol is the input symbol replacing the at sign (@).

For more information about the ATSIGN configuration statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues

Operator response: None

System programmer response: None

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5344E Incorrect ATSIGN symbol specified: symbol

Explanation: The input symbol replacing the @ symbol must be just one character in length. The specified input symbol is too large.

symbol is the input string replacing the @ symbol.

For more information about the ATSIGN configuration statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP ends.

Operator response: No action is needed.

System programmer response: Change the input string specified in the ATSIGN configuration statement to one character. Restart SMTP.

Module: SMTP

Procedure Name: ProcessConfigFile

EZA5345E Option conflict: the ATSIGN symbol and default REWRITE822 headers table cannot both be active

Explanation: The translate ATSIGN and REWRITE822 headers cannot both be activated because the default REWRITE822 header table contains a hardcoded @ symbol that cannot be modified. Therefore, these options cannot be used together.

For more information about the configuration statements, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP ends.

Operator response: No action is needed.

System programmer response: Select one of the two options to activate in the hlq.SMTP.CONFIG file. Restart SMTP.

Module: SMTP

Procedure Name: ProcessConfigFile

EZA5346E Invalid IPMailer Address Specified: IP address

Explanation: The IP address specified in the IPMAILERADDRESS statement of your hlq.SMTP.CONFIG data set is not correct or not valid.

System action: The SMTP server is halted until the problem is corrected.

Operator response: No action is needed.

System programmer response: Verify the IP address of the batch SMTP server, and correct the IPMAILERADDRESS statement as necessary. For details, see z/OS Communications Server: IP Configuration Reference.

Module: SMTP

Procedure Name: Error
EZA5347E  first_statement STATEMENT CONFLICTS WITH second_statement STATEMENT

Explanation: The statements in your hlq.SMTP.CONFIG data set are incompatible. These statements perform similar or opposing functions and therefore cannot both be active.

first_statement is the first statement of a pair of statements in conflict.

second_statement is the second statement of the pair that is in conflict.

See z/OS Communications Server: IP Configuration Reference for more information about the conflicting statements.

Examples: In the SMTP configuration the IPMAILERADDRESS and IPMAILERNAME statements represent different methods of forwarding mail; therefore, the following message is generated if both statements are coded in the hlq.SMTP.CONFIG data set.

16.58.29 EZY1876I SMTP STACK FUNCTIONS STARTED WITH PARAMETER SMTP,PARM=, ERRFILE(SYSERR),NOSPIE/.
16.58.29 EZA5347E IPMAILERADDRESS STATEMENT CONFLICTS WITH IPMAILERNAME STATEMENT
16.58.31 EZY1877I SMTP STACK FUNCTIONS SHUTDOWN IS COMPLETE, RC = 0.

System action: The SMTP server is halted.

Operator response: Contact the system programmer.

User response: Not applicable.

System programmer response: Choose the appropriate statement for your environment and remove the other statement from the hlq.SMTP.CONFIG data set. Restart SMTP.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: SMTP

Module: SMTP

Routing code: 2, 10

Descriptor code: 4

---

EZA5348I  IP Mailer Address: IP address

Explanation: This message specifies the current IP address for the IPMAILERADDRESS statement in the hlq.SMTP.CONFIG data set. If only the MAILER statement is used, the IP address is shown as “Disabled.”

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

---

EZA5351E  Invalid NJENode Specified: node name

Explanation: An incorrect NJENODENAME statement has been specified in the hlq.SMTP.CONFIG data set.

System action: The SMTP server is halted until the error is corrected.

Operator response: Refer this message to the system programmer.

System programmer response: Correct the NJENODENAME statement in the hlq.SMTP.CONFIG data set and restart SMTP. For more information, see the z/OS Communications Server: IP Configuration Reference.

Module: SMTP

Procedure Name: Error
Explanation: The connection was closed either by the local SMTP client or the remote SMTP server. This might occur due to normal networking problems or because the remote SMTP is not active. Depending on the error, SMTP might try to resend the mail at a later time. This message appears in the output file that is associated with the OUTPUT DD statement for the SMTPPROC.

date is the date (month/day/year) that the connection was closed.

time is the time (hours:minutes:seconds) that the connection was closed.

ipaddress is the TCP/IP address of the remote SMTP server.

ermsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in ermsg. See that message for more information.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Respond as indicated by the message EZAmsgnum.

Module: SMTP

Procedure Name: CloseCompletedEvent

EZA5353E  NJENode was specified after another option used its value. NJENode

Explanation: The NJENODENAME statement from the hlq.SMTP.CONFIG data set was parsed and a value that was previously defined for another statement was encountered. The NJENODENAME statement must be placed before the statement that is using the same value as that assigned to NJENODENAME.

System action: The SMTP server is halted until the error is corrected.

Operator response: Refer this message to the system programmer.

System programmer response: Move the NJENODENAME statement above the statement using the same value as that assigned to NJENODENAME or change the value of either statement to avoid the conflict. Contact the IBM Software Support Center if more information is required.

Module: SMTP

Procedure Name: Error

EZA5355E  GATEWAY specified but SMTPNJE DD card not found.

Explanation: The GATEWAY statement was included in the SMTP configuration data set but the input data set for SMTPNJE was not found. The NJE gateway facility is not enabled.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Issue the SMTPNJE command to create the input data set for SMTPNJE. Also, make sure that SMTPNJE is activated by removing the asterisk from the //SMTPNJE DD statement of the SMTP catalogued procedure. For more information, see “Configuring the SMTP Server” in the z/OS Communications Server: IP Configuration Reference.

Module: SMTP

Procedure Name: AmpXAloc
**EZA5364I**  MVS Debugging : Enabled

**Explanation:** The MVSDEBUG statement has been entered into the hlq.SMTP.CONFIG data set. This statement causes SMTP to do extensive debugging and should only be used when instructed by the IBM Software Support Center.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5378I**  Mailer : None

**Explanation:** If the MAILER statement in the hlq.SMTP.CONFIG data set specifies the NONJE parameter, then mail for recipients on the NJE network is spooled directly to the recipients. No batch SMTP server is defined for the associated NJE network.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5379E**  Invalid ListenOnAddress Specified: IP address

**Explanation:** The IP address specified for the LISTENONADDRESS statement in the hlq.SMTP.CONFIG data set is not valid. The address specified must match an existing HOME IP address as defined in the HOME statement of the hlq.TCPIP.PROFILE data set.

**System action:** The SMTP server is halted until the error is corrected.

**Operator response:** Refer this message to the system programmer.

**System programmer response:** Correct the LISTENONADDRESS statement with a valid HOME IP address or add the IP address defined in the hlq.SMTP.CONFIG data set to the HOME statement of the hlq.TCPIP.PROFILE data set. For details, see [z/OS Communications Server: IP Configuration Reference](#).

**Module:** SMTP

**Procedure Name:** MarkForExpirationCheck

---

**EZA5380E**  Using Default ListenOnAddress: IP address

**Explanation:** If the IP address parameter of the LISTENONADDRESS statement is not defined in the hlq.SMTP.CONFIG data set, this message indicates that SMTP is using the default value. For details see the [z/OS Communications Server: IP Configuration Reference](#).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** Specify a valid, correct IP address for this statement as necessary.

**Module:** SMTP

**Procedure Name:** MarkForExpirationCheck
EZA5383E • EZA5388I

**EZA5383E** Syntax Error in POSTMASTER address:

**EZA5384E**

**Explanation:** An error exists in user ID or NJE address specified in the POSTMASTER statement of the hlq.SMTP.CONFIG data set, as indicated by the error message.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** Enter the correct local user ID or NJE or SMTP address to which mail addressed to POSTMASTER should be delivered. For details, see [z/OS Communications Server: IP Configuration Reference](#).

**Module:** SMTPPARSE

**Procedure Name:** ReplySyntaxError

---

**EZA5385E** Nickname: nickname Address: address

**Explanation:** SMTP was unable to parse the user ID and node ID you entered in the SMTP NAMES data set. SMTP could not validate the syntax of the resulting user address. The name is not added to the SMTP NAMES data set.

**System action:** SMTP continues.

**Operator response:** Verify the user ID and node ID for the intended recipient. For more information, see [z/OS Communications Server: IP User's Guide and Commands](#).

**System programmer response:** No action is needed.

**Module:** SMTPNAME

**Procedure Name:** ValidateAddress

---

**EZA5387E** Ignoring duplicate definition of nickname: nickname

**Explanation:** A nickname already exists for the user ID and user node specified in your SMTP NAMES entry. SMTP ignores the entry.

**System action:** SMTP continues.

**Operator response:** Check your SMTP NAMES data set to verify the user ID and user node. For more information, see [z/OS Communications Server: IP User’s Guide and Commands](#).

**System programmer response:** No action is needed.

**Module:** SMTPNAME

**Procedure Name:** BuildNickNameTable

---

**EZA5388I** InboundOpenLimit: limit_value

**Explanation:** The INBOUNDOPENLIMIT statement in the hlq.SMTP.CONFIG file has been coded.

**limit_value** is the maximum number of simultaneous TCP connections to be used by the SMTP server to receive inbound mail. The valid range is 2 - 256 or the value of 0. If 0 is coded then the SMTP server will not open up a listening connection at all and autolog cannot be used to monitor and restart the SMTP started procedure.

See the information about the [INBOUNDOPENLIMIT statement](#) in [z/OS Communications Server: IP Configuration Reference](#).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams
EZA5389E INCORRECT VALUE limit_value SPECIFIED FOR INBOUNDOPENLIMIT STATEMENT - THE DEFAULT VALUE OF 256 WILL BE USED

Explanation: The input parameter on the INBOUNDOPENLIMIT statement in the hlq.SMTP.CONFIG file is invalid. A valid number is in the range of 2 - 256 or the value of 0. If 0 is coded the SMTP server will not open up a listening connection. If the value of 0 is coded then autolog cannot be used to monitor and restart the SMTP started procedure.

limit_value is the incorrect value specified.

See the information about the INBOUNDOPENLIMIT statement in z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues and the default value of 256 will be used.

Operator response: Contact the system programmer.

System programmer response: If you do not want to use the default of 256 then specify a correct value. Stop and restart SMTP started procedure to pick up the new setting.

Module: SMTP
Procedure Name: ProcessConfigFile

EZA5390I STOPONRENF : state

Explanation: The STOPONRENF statement is an option in the SMTP configuration file. This message indicates the state of that option.

state can have the following values:

Active The statement has been coded and the behavior of the SMTP server will be to terminate normally if a RENAME failure occurs on a data set associated with the batch connection (257).

Inactive The SMTP server will try to continue processing the other mail.

See the information about the STOPONRENF configuration statement in z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP
Procedure Name: OpenOutputStreams

EZA5391E SMTP TERMINATING DUE TO RENAME FAILURE AND STOPONRENF IS CODED IN CONFIGURATION FILE

Explanation: The SMTP server ended because of a failure to rename a data set associated with the batch connection (257) and the option STOPONRENF is coded in the SMTP configuration file.

Message EZA5544E is generated when a RENAME failure identifies the data set that SMTP was unable to rename. If this data set name is smthlq.CONN257.NOTE, then a note being processed by the batch connection (257) might have been lost.

See the information about the STOPONRENF configuration statement in z/OS Communications Server: IP Configuration Reference.

System action: SMTP stops.

Operator response: Contact the system programmer.

System programmer response: Determine why the RENAME failure is occurring. Check the system console log for messages prior to the EZA5544E message that are associated with the failing data set name. Change the SMTP configuration file if you want SMTP to continue when these types of failures occur.

Module: SMTP
EZA5393I • EZA5404I

Procedure Name: SMMVSUB

EZA5393I Rule rule number:
Explanation: This message specifies the rule number. The hlq.SMTP.RULES data set contains the rewrite rules for header addresses in SMTP.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRULE
Procedure Name: DisplayRulePrefix

EZA5397I keyword name

EZA5398I 'character string (non-case-sensitive)'

EZA5399I “character string (case-sensitive)”

EZA5400I character string (wildcard token)
Explanation: This is the SMTP RULES keyword. When SMTP parses the rule in message EZA5393I, each string in the keyword is displayed along with one of these messages. As indicated, the specific message you see depends on whether the string is case-sensitive and whether it is a wildcard. Some keywords have special meaning to the rules interpreter. For more information, see z/OS Communications Server: IP Configuration Reference. See also message EZA5416E.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRULE
Procedure Name: EchoElem

EZA5401I FIELD ALIASES:

EZA5402I alias name =

EZA5403I “alias definition (case-sensitive)”

EZA5404I ‘alias definition (non-case-sensitive)’
Explanation: These messages list the set of alias names (or field names) defined in the SMTP.RULES data set. As indicated, the specific message you see depends on whether the alias name is case-sensitive. For more information, see z/OS Communications Server: IP Configuration Reference.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRULE
Procedure Name: EchoRules
EZA5406I  REWRITE RULES:

EZA5407I  (alias name)

Explanation: These messages specify the rewrite rules for the alias name shown in message EZA5407I. They precede the procedure EchoElem, whose output is explained in messages EZA5397I - EZA5400I. EchoElem parses the keywords for each rule for the alias name indicated.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPRULE

Procedure Name: EchoRules

EZA5409I  => NJE to TCPIP address transformation rule

Explanation: This message specifies the rewrite rules for the alias name shown in message EZA5407I when the rule defines an address transformation from NJE to TCPIP. It precedes the procedure EchoElem, whose output is explained in messages EZA5397I - EZA5400I. EchoElem parses the keywords for each rule for the alias name indicated. See also message EZA5417I.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPRULE

Procedure Name: EchoRules

EZA5412E  rule line

EZA5414E  SMTP RULES ERROR: error message

EZA5415E  Line number line number

Explanation: The first of these 3 messages shows the line of code in the rule definition section of the SMTP.RULES data set where an error was found. The second message specifies the kind of error that was found, and the third message provides the line number where the error occurred.

System action: The SMTP server is halted until the error is corrected.

Operator response: No action is needed.

System programmer response: Use the information provided by the error messages to correct the syntax of the rule definition. For more information, see /OS Communications Server: IP Configuration Reference.

Module: SMTPRULE

Procedure Name: PrintError

EZA5416E  Error

Explanation: If the RULE keyword for the rule number specified in message EZA5393I contains a syntax error, this message appears when SMTP parses the SMTP.RULES data set.

System action: The SMTP server is halted until the error is corrected.

Operator response: No action is needed.

System programmer response: Correct the keyword syntax error. For details, see /OS Communications Server: IP Configuration Reference.
Module: SMTPRULE
Procedure Name: EchoElem

EZA5417I  ->
Explanation: This message specifies the rewrite rules for the alias name shown in message EZA5407I when the rule defines an address transformation from TCPIP to NJE. It precedes the procedure EchoElem, whose output is explained in messages EZA5397I - EZA5400I. This procedure parses the keywords for each rule for the alias name indicated. See also message EZA5409I.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: SMTPRULE
Procedure Name: EchoRules

EZA5423E  Invalid Record in SMTP SECTABLE (the SMTP Security Table):
Explanation: SMTP encountered a syntax error while processing the security table. The next message output is a listing of the erroneous security table record. This message is followed by one or more other messages that describe specific syntax or logic problems with the record.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Correct the errors in the security table data set, and restart SMTP.

Module: SMTPSEC
Procedure Name: SecurityTableErrors

EZA5425E  Expecting Nodeld but found none.
Explanation: This message indicates the reason for error message EZA5423E. In this case the NJE node ID of the authorized user was omitted from the hlq.DD data set entry. The hlq.DD data set entry is not recognized.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Add the NJE node ID to the security table entry for the authorized user. For more information, see z/OS Communications Server: IP Configuration Reference.

Module: SMTPSEC
Procedure Name: SecurityTableErrors

EZA5426E  PrimaryNickname/mbox mapping must be ‘Y’ or ‘N’ but found: nickname or mbox value
Explanation: The only valid values for the primary nickname and primary mbox parameters in the hlq.DD data set are Y and N. You have specified an incorrect value.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Enter Y or N for the parameter indicated. For more information, see z/OS Communications Server: IP Configuration Reference.

Module: SMTPSEC
Procedure Name: SecurityTableErrors
EZA5430E Unexpected characters found after nickname

Explanation: The syntax of the \texttt{hlq.DD} data set record is incorrect. Extraneous characters or an excess number of characters have been entered after the nickname. See message EZA5426I.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Correct the syntax of the security table as necessary. For more information, see \texttt{z/OS Communications Server: IP Configuration Reference}.

Module: SMTPSEC

Procedure Name: SecurityTableErrors

---

EZA5431E Duplicate Primary nickname/mbox mapping detected.

Explanation: Each nickname can have only one primary nickname record set to Y. Each NJE user ID, NJE node ID pair can have only one primary mailbox record set to Y. The duplicate primary nickname or primary mailbox record is ignored.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: See \texttt{z/OS Communications Server: IP Configuration Reference} for more information.

Module: SMTPSEC

Procedure Name: SecurityTableErrors

---

EZA5435E Special characters not allowed in nickname

Explanation: The nickname field in the \texttt{hlq.DD} data set data set contains special characters. Only alphanumeric characters are allowed for nicknames.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Make sure that nicknames contain no special characters.

Module: SMTPSEC

Procedure Name: SecurityTableErrors

---

EZA5439S Fatal Errors found in SMTP Security Table ... Halting!

Explanation: Either no primary mapping of the NJE node address is found or no primary mapping of the nickname is found. This message follows one or both of the error messages EZA5437E or EZA5438E.

System action: The SMTP server halts until the error is corrected.

Operator response: No action is needed.

System programmer response: Correct the \texttt{hlq.DD} data set security table, and restart SMTP.

Module: SMTPSEC

Procedure Name: CheckSecurityTable

---

EZA5440S Fatal Error: Unable to open SECTABLE DD but SECURE option was specified.

Explanation: The \texttt{SECURE} statement is used as a configuration statement in the \texttt{hlq.SMTPCONF} data set, but no corresponding SECTABLE data set definition name is found in the \texttt{SEZAINST(SMTPPROC)} data set.

System action: SMTP ends abnormally.

Operator response: No action is needed.
System programmer response: Make sure that the SECTABLE DD statement name is included in the updated SMTP cataloged procedure SEZAINST(SMTPPROC). This points to the DD data set data set and allows SMTP to operate as a secure mail gateway between TCP network sites and NJE network sites. For more information, see [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/POWER8.linkedin.zos910/irm/irmr0070b.html). Reinitialize SMTP.

Module: SMTPSEC
Procedure Name: CheckSecurityTable

---

**EZA5441E**  
**Wildcard "wildcard" not allowed in**

**EZA5442I**  
node name

**EZA5443I**  
nickname

**EZA5444I**  
field.

**Explanation:** The indicated wildcard token or string entered in either the node ID field or the nickname field of the record (see message EZA5423E for the specific security table record) is not a valid token or string for that field.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** Correct the syntax of the DD data set record as indicated. See [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/POWER8.linkedin.zos910/irm/irmr0070b.html) for more information.

Module: SMTPSEC
Procedure Name: SecurityTableErrors

---

**EZA5445I**  
**NickName not allowed with wildcard userid field.**

**Explanation:** If the NJE user ID is specified as a wildcard in the DD data set, then the nickname field must be left blank.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** Delete the entry from the nicknames field, or change the user ID field in the DD data set to eliminate the wildcard. For details, see [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/POWER8.linkedin.zos910/irm/irmr0070b.html).

Module: SMTPSEC
Procedure Name: SecurityTableErrors

---

**EZA5446N**  
**KANJI JIS 1978 shift-in ASCII**

**Explanation:** The SMTP server and client programs access data sets containing data that is usually in extended binary coded decimal interchange code (EBCDIC) format. To transfer these data sets to or from an American National Standard Code for Information Interchange (ASCII) based host requires the use of a translation table. This message indicates that the SMTP client is configured to use the Japan Institute of Standards (JIS) 1978 version if kanji conversion is enabled. ASCII is output when the server converts from JIS kanji code. For more information on configuring the translation tables, see [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/POWER8.linkedin.zos910/irm/irmr0070b.html).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

Module: SMTP
Procedure Name: OpenOutputStreams
EZA5447N  KANJI JIS 1978 shift-in JISROMAN

Explanation: The SMTP server and client programs access data sets containing data that is usually in extended binary coded decimal interchange code (EBCDIC) format. To transfer these data sets to or from an American National Standard Code for Information Interchange (ASCII) based host requires the use of a translation table. This message indicates that the SMTP client is configured to use the Japan Institute of Standards (JIS) 1978 version if kanji conversion is to be performed. JISROMAN is used when the server converts from JIS kanji code. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStreams

EZA5448N  KANJI JIS 1983 shift-in ASCII

Explanation: The SMTP client is configured to use the Japan Institute of Standards (JIS) 1983 version if kanji conversion is to be performed. It also indicates that ASCII is used when the SMTP server converts from JIS kanji code. See also message EZA5447I. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStreams

EZA5449N  KANJI JIS 1983 shift-in JISROMAN

Explanation: The SMTP client is configured to use the Japan Institute of Standards (JIS) 1983 version if kanji conversion is to be performed. It also indicates that JISROMAN is used when the server converts from JIS kanji code. See also message EZA5447I. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStreams

EZA5450N  SJISKANJI

Explanation: The SMTP client is configured to use the Japan Institute of Standards (JIS) version if the KANJI statement in the hlq.SMTP.CONFIG data set is enabled. It also indicates that the transfer type for the SMTP server is not changed. See also message EZA5447I. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStreams
**EZA5451N • EZA5454N**

**EZA5451N EUCKANJI**

**Explanation:** The SMTP client is configured to use the Extended Unix Code kanji transfer type if the KANJI statement in the hlq.SMTP.CONFIG data set is enabled. It also indicates that the transfer type for the SMTP server is not changed. See also message EZA5447I. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5452N IBMKANJII**

**Explanation:** The SMTP client is configured to use the IBM (EBCDIC) kanji transfer type if the KANJI statement in the hlq.SMTP.CONFIG data set is enabled. It also indicates that the transfer type for the SMTP server is not changed. See also message EZA5447I. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5453N HANGEUL**

**Explanation:** The SMTP client is configured to use the Hangeul transfer type if the KANJI statement in the hlq.SMTP.CONFIG data set is enabled. It also indicates that the transfer type for the SMTP server is not changed. See also message EZA5447I. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5454N KSC-5601**

**Explanation:** The SMTP client is configured to use the Korean Standard Code KSC-5601 if the KANJI statement in the hlq.SMTP.CONFIG data set is enabled. It also indicates that the transfer type for the SMTP server is not changed. See also message EZA5447I. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---
EZA5455N  TRADITIONAL CHINESE

Explanation:  The SMTP client is configured to use Traditional Chinese (5550) if the KANJI statement in the hlq.SMTP.CONFIG data set is enabled. It also indicates that the transfer type for the SMTP server is not changed. See also message EZA5447I. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference.

System action:  SMTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  SMTP

Procedure Name:  OpenOutputStreams

EZA5456N  Disabled. Unable to load: DBCS standard file name.load file type

Explanation:  The double-byte character set (DBCS) translation table that you specified cannot be loaded. It is not supported by SMTP.

System action:  SMTP continues.

Operator response:  No action is needed.

System programmer response:  See z/OS Communications Server: IP Configuration Reference for the most recent list of DBCS translation data sets supported by SMTP under MVS.

Module:  SMTP

Procedure Name:  OpenOutputStreams

EZA5457E  Date Time #connection_number DBCSEtoA Conversion Error

Explanation:  A DBCS EBCDIC to ASCII conversion error occurred when transferring mail using the specified connection number. The body of the transferred mail contained invalid DBCS characters. DBCS characters in error are transmitted unconverted.

System action:  SMTP continues.

Operator response:  Use the connection number to determine the originator and destination of the invalid mail. The DEBUG statement may be configured in hlq.SMTP.CONFIG to aid in matching connection number to mail originator or destination. Check the mail body to see if it contains valid DBCS characters for the DBCS conversion type configured for the SMTP server. See z/OS Communications Server: IP Configuration Reference and z/OS Communications Server: IP User’s Guide and Commands for more information about DBCS support in SMTP.

System programmer response:  No action is needed.

Module:  SMTPRPLY

Procedure Name:  ResumeFillingDataBuffer

EZA5458E  DBCS conversion specified, but no DBCS tables could be loaded

Explanation:  DBCS conversion is configured for the SMTP server, but the required DBCS translation table could not be loaded. DBCS conversion is disabled.

System action:  The program continues.

Operator response:  Configure a valid DBCS binary translate table data set in the search order hierarchy for the required DBCS translation table. See z/OS Communications Server: IP Configuration Reference for more information about the loading and customizing of DBCS translation tables.

System programmer response:  No action is needed.

Module:  SMTP
**EZA5459E • EZA5462I**

**Procedure Name:** OpenOutputStreams

---

**EZA5459E**  
*date time #connection DBCSAtoE Conversion Error*

**Explanation:** A DBCS ASCII to EBCDIC conversion error occurred when transferring mail using the specified connection number. The body of the transferred mail contained invalid DBCS characters. DBCS characters in error are transmitted unconverted.

**System action:** The program continues.

**Operator response:** Use the connection number to determine the originator and destination of the invalid mail. The DEBUG statement may be configured in hlq.SMTP.CONFIG to aid in matching the connection number to the mail originator or destination. Check the mail body to see if it contains valid DBCS characters for the DBCS conversion type configured for the SMTP server. See *z/OS Communications Server: IP Configuration Reference* and *z/OS Communications Server: IP User’s Guide and Commands* for more information about DBCS support in SMTP.

**System programmer response:** No action is needed.

**Module:** SMTPEVNT

**Procedure Name:** DoDbcsConversion

---

**EZA5460I**  
*date time BSMTP Helo Domain: sending host name host reply*

**Explanation:** If logging is turned on in SMTP's configuration file, this message specifies the domain name of the sending host, along with a reply indicating whether the HELO command is accepted.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPCMDS

**Procedure Name:** DoHelo

---

**EZA5461I**  
*date time TCP (user domain name) Helo Domain: host domain name user IP address*

**Explanation:** If you enter the HELO command while using a TCP connection to SMTP, this message specifies the domain name of your local host, as well as your domain name and IP address.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPCMDS

**Procedure Name:** DoHelo

---

**EZA5462I**  
*date time Restricting BSMTP/TCP MAIL FROM/RCPT TO : ‘user name@domain.host name’*

**Explanation:** The user is restricted from using SMTP. This message also indicates whether the connection is a batch connection or a TCP connection. For more information about restricted users, see *z/OS Communications Server: IP Configuration Reference*.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPCMDS

**Procedure Name:** DoRestricted
EZA5463E  date time  Unregistered BSMTP Spool File from userid@nodeid

Explanation: An unregistered batch spool data set was received from the sender at the indicated node ID. This condition occurred because the sender is not registered in the DD data set security table. The BSMTP data set is not delivered.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: The sender should obtain authorization to use the secure gateway. To do so, the sender should follow the instructions contained in the SECURITY.MEMO data set, which is returned from the SMTP server just before this batch log entry.

Module: SMTPCMDS

Procedure Name: DoMail

EZA5464E  date time  Unregistered BSMTP MAIL FROM: print path

Explanation: SMTP sends this message to the batch job log to show that unregistered BSMTP mail was received from the address specified. The condition occurred because the sender is not registered in the DD data set security table. The BSMTP mail is not delivered.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: The sender should obtain authorization to use the secure gateway. To do so, the sender should follow the instructions contained in the SECURITY.MEMO data set, which is returned from the SMTP server just before this batch log entry.

Module: SMTPCMDS

Procedure Name: DoMail

EZA5465E  date time  Deleting Spool File from undetermined origin job number ( spoolid )

Explanation: This message is sent to the SMTP batch log to show when a spool data set of an unknown origin is deleted. SMTP cannot accept an NJE spool data set if its origin cannot be determined. This message is generated because either the originator’s user ID or the originator’s node ID was missing. There are two ways to spool a data set to SMTP:

• The TSO XMIT command
• The batch SMTP commands with the IEBGENER utility in TSO/ISPF

date is the date (month/day/year) the message was sent.

time is the time (hours:minutes:seconds) the message was sent.

spoolid is the JES spool identifier (SSSOJOBI).

System action: SMTP continues.

Operator response: Contact the system programmer.

System programmer response: Determine why SMTP is receiving spooled data sets without the originator’s user ID or the originator’s node ID, and correct the error. This type of string (MAIL FROM: <> ) is commonly generated by a remote SMTP sending an error notification for undeliverable mail.

If you are using the TSO XMIT command, it must be set up correctly to pass a valid NJE user ID and a valid NJE node ID. For more information about the TSO XMIT command, see the z/OS TSO/E Command Reference.

If you are using the Batch SMTP interface, check your application that generates the SMTP commands for HELO and MAIL FROM. The MAIL FROM command must have the originator’s user ID and the originator’s host ID (equivalent to the originator’s node ID.) See the z/OS Communications Server: IP User’s Guide and Commands for more information about SMTP commands and batch SMTP.
EZA5466E • EZA5469E

Module: SMTPBTCH
Procedure Name: MakeBatchSMTPErrorFile

EZA5466E  date time  Deleting Spool File from userid at nodeid

Explanation: The spool data set from the specified user ID and node ID is being deleted because the user ID started with an asterisk (*).

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Determine the origin of the mail. Normally this message can be ignored.

Module: SMTPBTCH
Procedure Name: MakeBatchSMTPErrorFile

EZA5467E  date time  Rejecting job number (spool ID) From userid at nodeid

EZA5468E  date time  Gateway is not enabled and the file is not from the local node (node name)

Explanation: The job number was rejected for the indicated user ID and node ID either because the sender’s address is in the RESTRICT list or because the TCP-to-NJE mail gateway is not enabled.

System action: SMTP continues.
Operator response: Check to ensure that the IEFSSNxx parmlib member has the correct JES node name specified and that the IKJTSO00 parmlib has the correct MVS node name specified on the TRANSREC/TRANSMIT statement.
System programmer response: Run the SMTPNJE program to configure the SMTP server to run as a mail gateway between TCP network users and users located on an NJE network attached to the local host. For more information about the RESTRICT list and the SMTPNJE program, see z/OS Communications Server: IP Configuration Reference.

Module: SMTPBTCH
Procedure Name: InformUser

EZA5469E  mm/dd/yy hh:mm:ss  UNABLE TO ACCESS SPOOL FILE spoolid  SMTP STOPPED

Explanation: SMTP detected a JES spool file that it cannot access. Trying to do I/O functions to this file would have resulted in ABENDS001 in SMTP. SMTP was stopped to allow the system administrator to look at the spool file and correct the application that is generating the spool file. This error might have been caused by an improperly closed file.

mm/dd/yy is the date (month/day/year) of the message.
hh:mm:sss is the time (hours:minutes:seconds) of the message.
spoolid is the JES spool identifier (SSSOJOBI).

System action: SMTP halts.
Operator response: Contact the System Programmer.
System programmer response: Check the application that generated the spool file for SMTP. Delete the current spool file or change the destination to be something other than the SMTP started procedure. If more of these spool files are expected, then SMTP can be configured to automatically delete them. See the z/OS Communications Server: IP Configuration Reference for more information about the configuration statement DELETEBADSPOOLFILE.

Module: SMTPBTCH
Procedure Name: ServiceReaderMVS
**EZA5470E**  
*mm/dd/yy hlq:mm:ss UNABLE TO ACCESS SPOOL FILE spoolid FILE DELETED*

**Explanation:** SMTP detected a JES spool file that it cannot access. Trying to do I/O functions to this file would have resulted in ABENDS001 in SMTP. SMTP was given permission to delete this spool file because the statement DELETEBADPOOLFILE has been configured. This error might have been caused by an improperly closed file.

*mm/dd/yy* is the date (month/day/year) of the message.

*hlq:mm:ss* is the time (hours:minutes:seconds) of the message.

*spoolid* is the JES spool identifier (SSSOJOB).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPBTCH

**Procedure Name:** SERVICEREADERMVS

---

**EZA5471I**  
*DeleteBadSpoolFile : state*

**Explanation:** This message indicates whether the DELETEBADPOOLFILE statement has been coded.

*state* displays the value of Yes or No.

If *state* is No, then the DELETEBADPOOLFILE statement in the hlq.SMTP.CONFIG file has not been coded. This means that SMTP stops when it tries to access a spool file that would cause an ABENDS001. Message EZA5469E is generated before SMTP stops. Manually delete the spool file or reroute it to another destination before restarting SMTP.

If *state* is Yes, then the DELETEBADPOOLFILE statement in the hlq.SMTP.CONFIG file has been coded. This statement permits SMTP to delete a spool file that would cause an ABENDS001 if SMTP were to access it. Message EZA5470E is generated if any deletions occur when SMTP is active.

See the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/docs/en/z-os-communications-server-ip) for more information about the DELETEBADPOOLFILE configuration statement.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5472I**  
*date time Generating Note data set name as BSMTP REPLY*

**Explanation:** If the delivery type specified for the note command is “BATCH” and the LOG statement in the hlq.SMTP.CONFIG data set is enabled, SMTP sends a data set containing the note and any error message(s) to the sender when the connection specified cannot be established. This error message is also sent to the SMTP LOGFILE.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** Perform a Resolver Trace for the SMTP server to determine why the connection could not be established. Take corrective actions as necessary, and resend the note. For more information about SMTP traces, see [z/OS Communications Server: IP Diagnosis Guide](https://www.ibm.com/docs/en/z-os-communications-server-ip). If more help is required contact the IBM Software Support Center.

**Module:** SMTPQUEU

**Procedure Name:** MakeAddrBlok

---

Chapter 6. EZA5xxx messages 335
**EZA5473I • EZA5476I**

---

**EZA5473I**  
*date time Generating Note note_name as Error Notification for Undeliverable Mail*

**Explanation:** If the delivery type specified in the note command is not “BATCH” and the LOG statement in the hlq.SMTP.CONFIG data set is enabled, SMTP sends a note containing an error message to the sender. One of the common causes for this message is that the recipient’s address associated with the original note is UNKNOWN. This error message appears in the SMTP log file associated with the LOGFILE DD statement for the SMTPPROC.

*date* is the date (month/day/year) the message was sent.

*time* is the time (hours:minutes:seconds) the message was sent.

*note_name* is the Error Notification identifier.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** If the problem is the recipient’s address, then check the spelling of the recipient’s user ID and domain. If it is spelled correctly, perform a Resolver Trace for the SMTP server to determine why the connection could not be established. Take corrective actions as necessary, and resend the note. For more information about SMTP traces, see [z/OS Communications Server: IP Diagnosis Guide](#).

**Module:** SMTPQUEU

**Procedure Name:** MakeAddrBlok

---

**EZA5474I**  
*date time Received Note note_name via BSMTP From printpath bytes bytes*

**Explanation:** If the sender specified the BATCH parameter in the note command and the LOG statement in the hlq.SMTP.CONFIG data set is enabled, this message is sent to the SMTP LOGFILE to indicate that the connection was established and that a data set containing the note of the size specified was received at the indicated date and time.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPQUEU

**Procedure Name:** MakeAddrBlok

---

**EZA5475I**  
*date time Received Note note_name via TCP connection number From printpath bytes Bytes*

**Explanation:** If the sender did not specify the BATCH parameter in the note command and the LOG statement in the hlq.SMTP.CONFIG data set is enabled, this message is sent to the SMTP LOGFILE to indicate that the connection was established and that a note of the size specified was received at the indicated date and time.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPQUEU

**Procedure Name:** MakeAddrBlok

---

**EZA5476I**  
*date time Delivered Note note_name to printpath*

**Explanation:** This message is sent to the SMTP LOGFILE to show that an SMTP note was delivered to the user ID at the node ID specified.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPQUEU
Procedure Name: MarkDeliveredRecipients

EZA5477E date time Unable to Deliver Note note name to printpath
Explanation: This message is sent to the SMTP LOGFILE to show that SMTP was unable to deliver the note to the user ID at the node ID specified.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Make sure that the recipient of the note is a user on an NJE or RSCS node connected to a TCP/IP network at gateway_name.domain. Also check that the path address is correct. For more information, see z/OS Communications Server: IP Diagnosis Guide.
Module: SMTPQUEU
Procedure Name: MarkDeliveredRecipients

EZA5478E date time Unregistered RCPT TO: printpath
Explanation: This message is sent to the SMTP LOGFILE to show that the indicated user is not a registered secure gateway user.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Update the DD data set security table as necessary. For more information, see z/OS Communications Server: IP Configuration Reference.
Module: SMTPRES
Procedure Name: ProcessLocal, ProcessRQR

EZA5480I date time connection TcpOpen returned connection still in use.
Explanation: SMTP attempted to open the TCP connection that is displayed in the message. The TCP connection is opened and in use.
System action: SMTP creates a timer for the connection and continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenConnection

EZA5481I date time connection Received ConnectionStateChange Notification with NewState = Open
Explanation: SMTP has received a TCP/IP event notification of CONNECTIONstateCHANGE. The SMTP TCP connection displayed in the message has been changed to OPEN.
System action: SMTP changes the TCP connection state to open and continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: MainLoop
**EZA5482I**  *date time connection* Connection already open, StateSet = connection state

Explanation: SMTP has received a TCP/IP event notification of CONNECTIONstateCHANGE. SMTP is ignoring the request to open the connection because it is already open.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: MainLoop

**EZA5483I**  *date time connection* Closing old direction Connection

Explanation: SMTP has received a TCP/IP event notification of CONNECTIONstateCHANGE. SMTP will close the old TCP connection.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: MainLoop

**EZA5484I**  *date time connection* Aborting new direction Connection

Explanation: SMTP has received a TCP/IP event notification of CONNECTIONstateCHANGE. SMTP will close the TCP connection.

System action: SMTP issues a TCPABORT against the connection and continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: MainLoop

**EZA5485I**  *date time connection* Ignoring ConnectionStateChanged Notification for Closed Connection.

**EZA5486I**  *date time connection* NewState = newstate

Explanation: SMTP has received a TCP/IP event notification of CONNECTIONstateCHANGE for a closed connection. SMTP will ignore the request.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: MainLoop

**EZA5487I**  *date time QueryNumber* Popping request from Wait to SendQ

Explanation: This debug message is displayed when SMTP is attempting to resolve a domain name. SMTP has waited the amount of time defined by the RESOLVERRETRYINT and will retry the request to the name server.

System action: SMTP sends the request and continues.

Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: MainLoop

**EZA5488I**  date time QueryNumber ReSetting Wait Timer seconds

Explanation: This debug message is displayed when SMTP resets the wait timer to the value defined by RESOLVERRETRYINT.
System action: SMTP resets the timer and continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: MainLoop

**EZA5489I**  date time QueryNumber Popping request from Wait to Send

Explanation: This debug message is displayed when SMTP is attempting to resolve a domain name. SMTP has waited the amount of time defined by the RESOLVERRETRYINT and will retry the request to the name server.
System action: SMTP sends the request and continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: MainLoop

**EZA5490I**  date time QueryNumber Reseting Retry Timer: seconds left seconds

Explanation: This debug message is displayed when SMTP is attempting to resolve a domain name. SMTP resets the retry timer.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: MainLoop

**EZA5491I**  date time UDP packet arrived from: foreign_host data_length / full_length bytes.

Explanation: This debug message is displayed when SMTP has received a UDP packet. The name of the host that sent the packet, data length and the full length of the packet are displayed.
System action: The Packet is received and SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: MainLoop
**EZA5492I • EZA5499I**

---

**EZA5492I**

**date time #errconnection Looping mail transfer to badspoolfile**

**Explanation:** SMPT has detected looping mail. The mail file is sent to the file BADSPOOLFILE.

**System action:** SMPT sends the mail file to the BADSPOOLFILE and continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPBTCH

**Procedure Name:** MakeBatchSMTPErrorFile

---

**EZA5496I**

**date time #connection Syntax Error: args after 'command command. command line**

**Explanation:** The SMPT command was entered with arguments. An error was detected because the command entered does not accept arguments.

**System action:** SMPT ignores the command and continues.

**Operator response:** Reenter the command without arguments. For more information about SMPT commands, see the [z/OS Communications Server: IP User's Guide and Commands](https://www.ibm.com). 

**System programmer response:** No action is needed.

**Module:** SMTPCMDS

**Procedure Name:** DoCommand

---

**EZA5497I**

**date time Enqueuing file data set name recipient recipient number on ip address**

**Explanation:** This debug message is displayed when a mail file is enqueued. The recipient number on the queue and the IP address are displayed. For more information on queued mail, see the [z/OS Communications Server: IP User’s Guide and Command](https://www.ibm.com).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPEVNT

**Procedure Name:** CloseCompletedEvent

---

**EZA5498I**

**date time #connection 552 Too many hops - threshold exceeded**

**Explanation:** The SMTP file has hopped more than 25 times. The SMTP mail file will not be delivered.

**System action:** SMTP returns the mail file to the sender and continues.

**Operator response:** Verify that the recipient exists and resend.

**System programmer response:** The actual failing piece of mail is saved in a data set with the naming convention of MailFileDSPPrefix.Connxxx.LOOPMAIL, where the value of MailFileDSPPrefix can be found in the SMTP configuration data set and xxx represents the connection number which received the message. Use this data set to determine problems with the recipient address. This data set can then be deleted after the problem has been resolved.

**Module:** SMTPEVNT

**Procedure Name:** StoreData

---

**EZA5499I**

**date time #connection 451 Local error: Disk Full. Data from sender was discarded.**

**Explanation:** The SMTP attempted to receive a mail file, but SMTP was unable to store the mail file because there was not enough disk space available. The remote SMTP may resend the data at a later time. This message appears in both the output file associated with the OUTPUT DD statement and the log file associated with the LOGFILE DD statement for the SMTPPROC.
date is the date (month/day/year) the message was sent.
time is the time (hours:minutes:seconds) the message was sent.
connection is the TCP/IP connection number.
sender is the sender's e-mail address.

System action: SMTP returns a reply code to the sender and discards the SMTP file.
Operator response: Contact the system programmer.
System programmer response: If the problem continues, increase the volume size for SMTP.
Module: SMTPEVNT
Procedure Name: StoreData

EZA5500I date time connection 451 Local error: Allocation Error. Data from sender was discarded.
Explanation: The SMTP attempted to allocate a file and received an allocation error. The remote SMTP may resend the data at a later time. This message appears in both the output file associated with the OUTPUT DD statement and the log file associated with the LOGFILE DD statement for the SMTPPROC.

date is the date (month/day/year) the message was sent.
time is the time (hours:minutes:seconds) the message was sent.
connection is the TCP/IP connection number.
sender is the sender's e-mail address.

System action: SMTP returns a reply code to the sender and discards the SMTP file.
Operator response: Verify that the volume is available.
System programmer response: No action is needed.
Module: SMTPEVNT
Procedure Name: StoreData

EZA5501I date time connection 552 Local error: Mail file too large. Data from sender was discarded.
Explanation: The SMTP attempted to receive a mail file that is too large. This message appears in both the output file associated with the OUTPUT DD statement and the log file associated with the LOGFILE DD statement for the SMTPPROC.

date is the date (month/day/year) the message was sent.
time is the time (hours:minutes:seconds) the message was sent.
connection is the TCP/IP connection number.
sender is the sender's e-mail address.

System action: SMTP returns a reply code to the sender and discards the SMTP file.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPEVNT
Procedure Name: StoreData

EZA5502I date time Enqueuing file dataset recipient recipient on address
Explanation: SMTP is placing the indicated data set in the queue to the specified recipient.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPQUEU
Procedure Name: EnqueueTCPRecipient

SMTP is processing the path for the indicated sender address.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: ProcessSender

SMTP has converted the sender address to the indicated IP mail address.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: ProcessSender

SMTP has received mail for a host that it does not recognize. The mail will be sent to the indicated
address for further resolution.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: ProcessRSCS

SMTP is resolving the address of the indicated mail recipient to an IP mail address.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: ProcessRQR

This message indicates the preference and mailbox name for the remaining mail records.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: ProcessRQR

**EZA5508I**  
*date time Not Found in Host Table: address*

Explanation: SMTP did not find the indicated mail address in its Host Tables. SMTP will attempt to resolve the address.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: SMTPRES
Procedure Name: HostTableLookUp

**EZA5509I**  
*date time Not found in Host Table: host_name*

Explanation: SMTP did not find the indicated host name in its Host Table. SMTP will attempt to resolve the host name.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: SMTPRES
Procedure Name: HostTableLookUp

**EZA5510I**  
*date time Found in Host Table: address*

Explanation: SMTP found the indicated address in its Host Table.

Module: SMTPRES
Procedure Name: HostTableLookUP

**EZA5513I** date time Canonicalizing To: canonical_name
Explanation: SMTP is converting an address to the indicated canonical name.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: HostTableLookUp

**EZA5514I** date time Found in Host Table: host name
Explanation: SMTP found the indicated host name in the host table.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: HostTableLookUp

**EZA5515I** date time Canonicalizing To: canonical_name
Explanation: SMTP is converting an address to the indicated canonical name.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: HostTableLookUp

**EZA5516I** date time Unknown Host Name: name
Explanation: SMTP has received mail for the indicated host, but does not have the host name in the host table.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: Correct the SMTP host table if necessary.
Module: SMTPRES
Procedure Name: HostTableLookUp

**EZA5517I** date time#query_number Unable to resolve request for number days
Explanation: SMTP has been unable to resolve a query for an address for the indicated number of days. SMTP returns the query to the sender.
System action: Processing continues.
Operator response: Make sure that the host requested exists on the network.
System programmer response: Assist the user as necessary.
Module: SMTPRES
Procedure Name: SendRQR

EZA5518I  date time # query_number Adding Request to Retry Queue
Explanation: SMTP was unable to resolve a query, and is placing the query on the queue to be retried.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: SentRQR

EZA5519I  date time # query_number Setting Retry Timer: number seconds
Explanation: SMTP is setting the retry timer, which governs the frequency with which requests are retried, to the indicated value.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: SendRQR

EZA5520I  date time # query_number UDP Query Sent, Try: number to NS name_server := address
Explanation: SMTP is sending a query to the indicated name server for resolution. The number of times SMTP has tried to resolve the query is indicated in the message.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: SendRQR

EZA5521I  date time # query_number Adding Request to Wait Queue
Explanation: SMTP was unable to resolve the indicated query, and is placing it on the WAIT queue to be retried.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: SendRQR

EZA5522I  date time # query_number Setting Wait Timer: value
Explanation: SMTP is setting the WAIT timer, which specifies the length of time SMTP waits before retrying a query, to the indicated value.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
**EZA5523I • EZA5527I**

**Procedure Name:** SentRQR

---

**EZA5523I**  
*date time Invalid Namerserver Header Record*

**Explanation:** SMTP has received a name server record with a header that contains no data. The record is discarded.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPRES

**Procedure Name:** NameServerToRQR

---

**EZA5524I**  
*date time#query_number Remote Nameserver down/unable to perform recursion*

**Explanation:** A remote name server to which SMTP sent a query for resolution is either not running or unable to perform recursion. The query is queued and retried.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Contact the administrator for the remote name server and inform them of the problem.

**Module:** SMTPRES

**Procedure Name:** NameServerToRQR

---

**EZA5525I**  
*date time#query_number Discarding Name Server Response with Format Error*

**Explanation:** SMTP received an incorrectly formatted response from a name server. The response is discarded.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Contact the administrator for the name server and inform them of the problem.

**Module:** SMTPRES

**Procedure Name:** NameServerToRQR

---

**EZA5526I**  
*date time#query_number Truncation Bit set in Nameserver Response*

**Explanation:** SMTP received a response from a name server with a truncation bit indicating that the response has been truncated.

**System action:** The response is discarded and the query is repeated.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPRES

**Procedure Name:** NameServerToRQR

---

**EZA5527I**  
*date time#query_number Discarding Invalid Nameserver Response*

**Explanation:** SMTP has received a response to a name server query that either does not contain a valid name or has a data length error on the response. The response is discarded and the query is repeated.

**System action:** The system continues processing.

**Operator response:** No action is needed.

**System programmer response:** Contact the administrator for the name server and inform them of the problem.
EZA5528I  date time#query_number Unable to match Nameserver Response with Query

Explanation: SMTP was unable to match a response from a name server with a query. The response is discarded.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: SMTPRES
Procedure Name: NameServerToRQR

EZA5529I  date time#query_number Discarding Invalid Nameserver Record

Explanation: SMTP received a response to a name server query that did not contain a valid name. The response is discarded.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: Contact the administrator for the name server and inform them of the problem.

Module: SMTPRES
Procedure Name: NameServerToRQR

EZA5530I  date time#query_number Discarding Invalid CNAME Record

Explanation: SMTP received a response to a mailbox type query that did not contain a valid name. The response is discarded.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: Contact the administrator for the name server and inform them of the problem.

Module: SMTPRES
Procedure Name: NameServerToRQR

EZA5531I  date time#query_number Throwing away circular CNAME record: name

Explanation: SMTP received a circular response to a CNAME type query. A circular response points back to itself, giving the canonical name instead of the address. The response is discarded.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: Contact the administrator for the name server and inform them of the problem.

Module: SMTPRES
Procedure Name: NameServerToRQR

EZA5532I  date time#query_number Canonicalized with: canonical_name

Explanation: SMTP has converted an address to the indicated canonical name.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: NameServerToRQR

EZA5533I date time #query_number Discarding Invalid MX Record

Explanation: SMTP received a response to a mailbox query that did not contain a valid mailbox name. The response is discarded.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: Contact the administrator for the name server and inform them of the problem.

Module: SMTPRES
Procedure Name: NameServerToRQR

EZA5536I date time #query_number Ignoring Non-Authoritative response

Explanation: SMTP received a non-authoritative response to a name server query. Non-authoritative responses point to a name server that has authority for the correct zone. SMTP cannot send mail to the name server, so the non-authoritative answer is ignored. SMTP will send a name server query to determine the proper name server to use.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: SMTPRES
Procedure Name: NameServerToRQR

EZA5537I date time Converting dataset ADDRBLOCK to new format

Explanation: SMTP is converting the address block for the indicated data set to a new format.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: SMTPRFMT
Procedure Name: ReformatAddrBlok

EZA5539I date time Restricted SMSG command: command from: userID at: node

Explanation: The indicated user issued an authorized SMSG command. The command will be executed.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: SMTPSMSG
Procedure Name: ProcessSMSG

EZA5542I date time #query_number Ignoring Referral response

Explanation: SMTP received a referral response to a name server query. SMTP does not do recursive processing and relies on the name server for recursive processing. The referral is ignored.

System action: Processing continues.
Operator response:   No action is needed.
System programmer response:   Inform the name server’s administrator of the recursion problem.
Module:   SMTPRES
Procedure Name:   NameServerToRQR

---

**EZA5543I**    date time query_number Unable to resolve MX host name hostname

Explanation:   SMTP received an MX record for this host but did not receive the A record information. SMTP reissues the request to obtain the A information for the specified host name from the name server.
System action:   Processing continues.
Operator response:   No action is needed.
System programmer response:   No action is needed.
Module:   SMTPRES
Procedure Name:   NameServerToRQR

---

**EZA5544E**   Unable to RENAME file data set name to data set name rc=rc

Explanation:   An attempt by SMTP to rename a data set failed. This may cause SMTP to have problems with processing the mail.
System action:   Processing continues.
Operator response:   Refer this message to the system programmer.
System programmer response:   Check the system log for message IEC614I. Use the diagnostic information provided and see MVS/DFP™ V3R3 Diagnostic Reference. If message IEC614I is not present, check for a return code of 408. This indicates that the new data set name already exists but is not cataloged. Locate and delete the data set.
Module:   SMMVSUB
Procedure Name:   svc202r

---

**EZA5545E**    date time addrblokname.ADDRBLOK does not exist. No Mail Error process is attempted. RC = rc

Explanation:   SMTP tried to build an error file, but the original SMTP note, represented by the data set addrblokname.ADDRBLOK, has not been allocated.
In the message text:

date
   The date in the form mm/dd/yy.
time
   The time in the form hh:mm:ss.
addrblokname
   The name of the SMTP data set.
rc
   The return code from the program that detected the error.
Examples:   This message is generated on a test system because the data set TPOUSER.00000006.ADDRBLOK was deleted and one day passed; this causes the mail to be considered undeliverable.
EZA5143I   Return mail older than : 1 days
EZA5474I   11/03/05 15:24:59 Received Note 00000006 via BSMTP From <USER1@MVS7> 222 Bytes
EZA5545E   11/04/05 15:32:04 TPOUSER.00000006.ADDRBLOK does not exist. No Mail Error process is attempted. RC = 28

Tip:   The ?GETSTATE macro returns RC 28 because the data set does not exist.
System action:   SMTP continues.
Operator response:   No action is needed.
EZA5546E • EZA5547I

User response: Not applicable.

System programmer response: Check your system console to ensure that another application or defragmentation utility did not access or delete the SMTP data set while the SMTP server was active. Data set contention can cause this problem. To avoid this problem, configure the application to bypass data sets with the SMTP high-level qualifier.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: SMTP

Module: SMTPUTIL

Routing code: 2, 10

Descriptor code: 4

EZA5546E  date time Zero bytes were read from addrblokname.ADDRBLOK. No Mail Error process is attempted.
RC = rc

Explanation: SMTP tried to build an error file, but the original SMTP note, represented by the data set addrblokname.ADDRBLOK, is empty. Therefore, the sender's address cannot be retrieved.

date is the date in the form mm/dd/yy.
time is the time in the form hh:mm:ss.
addrblokname is the name of the SMTP data set.
rc is the return code from the program that detected the error.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Check your system console to ensure that another application or defragmentation utility did not access or delete the SMTP data set while the SMTP server was active. Data set contention can cause this problem. To avoid this problem, configure the application to bypass data sets with the SMTP high level qualifier.

Note: Before you start the SMTP server again, delete addrblokname.ADDRBLOK.

Module: SMTPUTIL

Procedure Name: MakeErrorFile

EZA5547I  date time Processing Path String: pathstring and length = length

Explanation: This message displays the path string built by SMTP. This message will be displayed only if resolver trace is active.

date is the date in the form mm/dd/yy.
time is the time in the form hh:mm:ss.
pathstring is the path string built by SMTP.
length is the path string length. The maximum length allowed is 256 characters.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPRES

Procedure Name: PrintPath
EZA5548E  Unable to open existing file FullDataSetName, rc= ReturnCode. SMTP Terminating.

Explanation: SMTP attempted to open the data set specified in the error message which already existed and received an error from the operating system.

FullDataSetName is the name of the data set.

ReturnCode is the value of the return code.

System action: SMTP ends.

Operator response: None

System programmer response: If return code is 28, check to see if there is data set contention for the data set name displayed in the error message. SMTP must have access to all its data sets to perform its function. Therefore, if a defragmentation utility (or any other application) is actively accessing SMTP data sets while the SMTP server is active, a data-set contention problem could occur. To avoid this problem, configure the application to bypass data sets with the SMTP high level qualifier. The high level qualifier is set by the SMTP configuration parameter MAILFILEDSPREFIX.

Module: SMMVSUB

Procedure Name: svc202

EZA5549I  A USER EXIT HAS BEEN ACTIVATED FOR THIS INVOCATION OF SMTP

Explanation: A user supplied exit has been located, loaded, and activated for this execution of the SMTP program.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZABB01X

Procedure Name: None.

EZA5550I  date time EXIT Rejects - CONNECTION connection_number ACTIONCODE action

Explanation: The user exit has chosen to reject an inbound mail item. This message is written to the logfile, if the logfile option is active.

date and time indicate when the connection was rejected.

connection_number is the unique identifier of this connection.

action is the action code that was used when the exit was called. The action codes are defined in the EZBZSMTP macro.

System action: The partner SMTP application is notified that service is denied due to a user supplied exit and processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZABB020

Procedure Name: DoExit

EZA5551I  mm/dd/yy hh:mm:ss connection_number EXITPARMS VER version ACTN actioncode USER TOKEN value

Explanation: This parmlist was passed to the user supplied SMTP exit for the connection number specified. This message will be written to the debug file, if the debug option is active. The less than symbol (<) indicates data flowing to the user supplied exit.

In the message text:
**EZA5552I**

*mm/dd/yy*

The current date in the month/day/year format.

*hh:mm:ss*

The current time in the hours:minutes:seconds format.

*connection_number*

The unique identifier of this connection.

*version*

The version number of the parmlist.

*actioncode*

The action code for which the user supplied exit was called. The action codes are defined in the EZBZSMTP macro.

*value*

A 4-byte value supplied by the user.

*ipaddr*

The source IP address of the remote SMTP client for inbound TCP/IP connections.

*length*

The length of the data in the buffer.

*safaddr*

The address of the SAF (security) token associated with the JES spool file for outbound data.

See [z/OS Communications Server: IP Configuration Reference](#) for more information about the EXITDIRECTION configuration statement.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZABB020

**Procedure Name:** DoExit

---

**EZA5552I**  

*mm/dd/yy hh:mm:ss connection_number> USER EXIT RETCODE returncode*

**Explanation:** The displayed return code was received from the user supplied SMTP exit for the connection number specified. This information is written to the debug file, if the debug option is active.

In the message text:

*mm/dd/yy*

The current date in the month/day/year format.

*hh:mm:ss*

The current time in the hours:minutes:seconds format.

*connection_number*

The unique identifier of this connection.

$returncode$

A user-supplied value. The return code should be selected from those defined in the EZBZSMTP macro.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZABB020

**Procedure Name:** DoExit
Explanation: This diagnostic message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST(SMTPPROC). This message is generated whenever the TCPDATA file has RESOLVER traces active.

date is the current date.

time is the current time.

SitePtr is the pointer to the current site for the mail.

dataset_name is the file name pointed to by File_Queue. This data set contains a single piece of mail.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: You can use the dataset_name and other messages generated in the trace to determine if the data set has been placed on the retry queue or is still on the active SMTP queue working with secondary IP address. Review the messages and their sequence to determine if you have a problem. If there is a problem, collect these traces and contact the IBM Software Support Center.

Module: SMTPEVNT

Procedure Name: CloseCompletedEvent

Explanation: This diagnostic message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST(SMTPPROC). This message is generated whenever the TCPDATA file has RESOLVER traces active.

date is the current date.

time is the current time.

nextsite is the pointer to the next site for the mail.

dataset_name is the file name pointed to by File_Queue. This data set contains a single piece of mail.

next_nextsite is the pointer to the next site for the mail.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: You can use the dataset_name and other messages generated in the trace to determine if the data set has been placed on the retry queue or is still on the active SMTP queue working with secondary IP address. Review the messages and their sequence to determine if you have a problem. If there is a problem, collect these traces and contact the IBM Software Support Center.

EZA5561  date time  Retry_QTail = retryqueue_tail  File_Queue  dataset_name  NextQueued = retryqueue_tail_nextsite

Explanation: This diagnostic message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST(SMTPPROC). This message is generated whenever the TCPDATA file has RESOLVER traces active.

date is the current date.

time is the current time.

retryqueue_tail is the pointer to the tail of the retry queue for mail.

dataset_name is the file name pointed to by File_Queue. This data set contains a single piece of mail.

retryqueue_tail_nextsite is the pointer to the next site for the mail on the retry queue tail. This should always be zero.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: You can use the dataset_name and other messages generated in the trace to determine if the data set has been placed on the retry queue. This message immediately follows message EZA5555I. Review the messages and their sequence to determine if you have a problem. If there is a problem, collect these traces and contact the IBM Software Support Center.

Module: SMTPEVNT

Procedure Name: CloseCompletedEvent

---

EZA5571  date time  SMTP_Queue = SMTPqueue_head  File_Queue  dataset_name  NextQueued = SMTPqueue_nextsite

Explanation: This diagnostic message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST(SMTPPROC). This message is generated whenever the TCPDATA file has RESOLVER traces active.

date is the current date.

time is the current time.

SMTPqueue_head is the pointer to the head of the SMTP queue for mail.

dataset_name is the file name pointed to by File_Queue. This data set contains a single piece of mail.

SMTPqueue_nextsite is the pointer to the next site for the mail on the SMTP queue.

If timing_sequence is 1, this is the SMTP queue values prior to adding or deleting from the queue. If timing_sequence is 2, this is the SMTP queue after changes have been made.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: You can use the dataset_name and other messages generated in the trace to determine if the data set has been placed on the active SMTP queue working with secondary IP address. timing_sequence applies to both this message and EZA5558I. Review the messages and their sequence to determine if you have a problem. If there is a problem, collect these traces and contact the IBM Software Support Center.

Module: SMTPEVNT
**Procedure Name:** CloseCompletedEvent

**EZA5558I**  
```
date time SMTP_QTail = SMTPqueue_tail File_Queue dataset_name NextQueued = SMTPqueue_tail_nextsite
```

**Explanation:** This diagnostic message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST(SMTPPROC). This message is generated whenever the TCPDATA file has RESOLVER traces active.

- `date` is the current date.
- `time` is the current time.
- `SMTPqueue_tail` is the pointer to the tail of the SMTP queue for mail.
- `dataset_name` is the file name pointed to by `File_Queue`. This data set contains a single piece of mail.
- `SMTPqueue_tail_nextsite` is the pointer to the next site for the mail on the SMTP queue tail. This should always be zero.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** You can use the `dataset_name` and other messages generated in the trace to determine if the data set has been placed on the active SMTP queue working with secondary IP address. This message immediately follows message EZA5557I. Review the messages and their sequence to determine if you have a problem. If there is a problem, collect these traces and contact the IBM Software Support Center.

**Module:** SMTPEVNT

**Procedure Name:** CloseCompletedEvent

**EZA5559I**  
```
date time SitePtr = siteptr to be disposed NextQueued = nextsite
```

**Explanation:** This diagnostic message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST(SMTPPROC). This message is generated whenever the TCPDATA file has RESOLVER traces active.

- `date` is the current date.
- `time` is the current time.
- `siteptr` is the pointer currently being disposed of.
- `nextptr` is the pointer to the next site for the mail. Should always be zero.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** `siteptr` shows what pointer is being disposed of (freed). Review the messages and their sequence to determine if you have a problem. If there is a problem, collect these traces and contact the IBM Software Support Center.

**Module:** SMTPQUEU

**Procedure Name:** DisposeSitePtr

**EZA5560I**  
```
error_message
```

**Explanation:** This diagnostic message is preceded by an SMTP error message. This message displays the text of the Dynamic Allocation (SVC 99 - DYNALLOC) message. This message provides additional information about why the Dynamic Allocation failed. The message might be issued multiple times to include the completer text from Dynamic Allocation.

- `error_message` is text of the message produced by DYNALLOC.

**System action:** SMTP might halt or continue depending on the preceding SMTP error message.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Use the text of this message and the documentation describing Dynamic Allocation.
EZA5561I RESOLVERUSAGE NO specified without a forwarding mailer

Explanation: SMTP resolver usage was disabled by the RESOLVERUSAGE NO statement in the hlq.SMTP.CONFIG data set and a remote mailer to handle unknown mail has not been specified. All non-local mail received by SMTP is returned as undeliverable.

System action: SMTP does not attempt to resolve non-local host names. Any non-local mail received by SMTP is returned as undeliverable.

Operator response: Notify system the programmer.

System programmer response: Specify a remote mailer where unknown mail will be forwarded by specifying the IPMAILERADDRESS statement or the MAILER...UNKNOWN statement. For information about the IPMAILADDRESS and the MAILER...UNKNOWN statements, see the z/OS Communications Server: IP Configuration Guide.

Module: SMTP
Procedure Name: DoFinalChecks

EZA5562I Resolver Usage parm Specified

Explanation: RESOLVERUSAGE was specified in the hlq.SMTP.CONFIG data set. The new value parm will change the current value for this configurable setting.

parm is either YES to attempt resolving non-local host names or NO to inhibit the resolving of non-local host names.

System action: If the final setting is NO, SMTP will not attempt to resolve any non-local host names. Mail will be forwarded if the IPMAILERADDRESS statement or the MAILER...UNKNOWN statement has been specified in the hlq.SMTP.CONFIG data set. For information about the IPMAILADDRESS and the MAILER...UNKNOWN statements, see the z/OS Communications Server: IP Configuration Guide.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP
Procedure Name: ProcessConfigFile

EZA5563I Incorrect or missing operand associated with statement RESOLVERUSAGE incorrect_operand

Explanation: The only valid operands for the RESOLVERUSAGE statement are YES and NO. Either YES or NO must be specified.

incorrect_operand is the incorrect operand that was found. If no operand was specified, this will be blank.

System action: SMTP ends.

Operator response: Notify the system programmer.

System programmer response: Specify the correct operand for the RESOLVERUSAGE statement and restart the SMTP job to pick up the new settings in the SMTP configuration data set.

Module: SMTP
Procedure Name: Error
**EZA5564I**  
*date time Processing spool file filename*

**Explanation:** This message is written to the SMTP sysdebug data set specified in the SYSDEBUG statement in SEZAINST(SMTPPROC). This message is generated whenever debug is active and SMTP is processing data from the JES spool.

*date* is the current date.

*time* is the current time.

*filename* is the spool file name being processed by SMTP.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPBTCH

**Procedure Name:** ServiceReaderMVS

---

**EZA5565I**  
*date time Read spool file filename sent by userid at nodeid using TSO XMIT*

**Explanation:** This message is written to the SMTP sysdebug data set specified in the SYSDEBUG statement in SEZAINST(SMTPPROC). This message is generated whenever debug is active and SMTP is processing data from the JES spool. The message indicates that the spool file was sent using the TSO/E TRANSMIT(XMIT) command. This command puts certain information in its headers indicating who and where the XMIT command was issued from. The spool file is transmitted with headers, built by XMIT, that identify the originating node and user ID.

*date* is the current date.

*time* is the current time.

*filename* is the name of the spool file being processed by SMTP.

*userid* is the user identification taken from the XMIT headers.

*nodeid* is the NJE node identification taken from the XMIT headers.

**System action:** SMTP continues

**Operator response:** If *userid* or *nodeid* is incorrect then contact the system programmer.

**System programmer response:** If *userid* or *nodeid* is incorrect then check the XMIT command setup parameters.

**Module:** SMTPBTCH

**Procedure Name:** ServiceReaderMVS

---

**EZA5566I**  
*date time Read spool file filename sent by a batch job*

**Explanation:** This message is written to the SMTP sysdebug data set specified in the SYSDEBUG statement in SEZAINST(SMTPPROC). This message is generated whenever debug is active and SMTP is processing from the JES spool. The message indicates that the spool file was sent by a batch job.

*date* is the current date.

*time* is the current time.

*filename* is the name of the spool file being processed by SMTP.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPBTCH

**Procedure Name:** ServiceReaderMVS

---

Chapter 6. EZA5xxx messages  357
EZA5567I  filename.ADDRBLOK was incomplete and was deleted.

Explanation:  This message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST (SMTPPROC). This message is generated when SMTP detects a partial control block data set (filename.ADDRBLOK) exists. The control block data set must contain the following records:

- record 1 - header information.
- record 2 - sender information.
- record 3 - recipient information. At least one recipient record must be present.

If SMTP detects a partial data set it will delete filename.ADDRBLOK and any corresponding filename.NOTE data set. Partial data sets might be created by failures to get space on the DASD.

filename.ADDRBLOK is the name of the data set being deleted by SMTP.

System action:  SMTP continues.
Operator response:  No action is needed.
System programmer response:  Ensure that there is enough DASD space available for SMTP to continue.
Module:  SMTPQUEU
Procedure Name:  EnqueueForDelivery

EZA5568E  UNABLE TO ALLOCATE ADDRBLOK DATA SET CORRECTLY.

Explanation:  This message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST (SMTPPROC). SMTP cannot allocate enough space for its control block data set (*.ADDRBLOK). This problem might be caused by not enough available DASD space.

System action:  SMTP continues.
Operator response:  Contact the system programmer.
System programmer response:  If SMTP did not end, then use the MVS stop command to end SMTP. Ensure that the DASD used by SMTP is defined properly and has enough space available. Correct any DASD problem and restart SMTP.
Module:  SMTPQUEU
Procedure Name:  MakeAddrBlok

EZA5569I  No Source Routing : parameter

Explanation:  The NOSOURCEROUTE statement in the hlq.SMTPCONF file has been set. Depending on the parameter following the statement, SMTP will modify its behavior regarding source routing addressing strings that can be passed on both the MAIL FROM: and RCPT TO: SMTP commands.

parameter is an input string whose valid options are DISABLED, MAILCMD, RCPTCMD or ENABLED.

See the z/OS Communications Server: IP Configuration Reference for more information about the NOSOURCEROUTE configuration statement.

System action:  SMTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  SMTP
Procedure Name:  OpenOutputStreams
EZA5570E INCORRECT VALUE parameter SPECIFIED FOR NOSOURCEROUTE STATEMENT - THE DEFAULT VALUE OF DISABLED WILL BE USED

Explanation: The input parameter following the NOSOURCEROUTE statement is invalid. The default value of DISABLED will be used instead. This means that the SMTP server will generate and pass source route addressing strings on both the MAIL FROM: and the RCPT TO: SMTP commands.

parameter shows a maximum of 10 characters of the invalid input parameter.

See the z/OS Communications Server: IP Configuration Reference for more information about the NOSOURCEROUTE configuration statement.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Change the parameter associated with the NOSOURCEROUTE configuration statement to a valid parameter. Stop and restart SMTP to activate the new parameter setting.

Module: SMTP

Procedure Name: ProcessConfigFile

EZA5571E date time SPOOL FILE jobid WAS DELETED DUE TO RECORD COUNT OF ZERO

Explanation: The JES spool job identified in this message was intentionally deleted by the SMTP code because it contained a total record count (SSSOLNCT) of zero. See the z/OS MVS Using the Subsystem Interface for more information about the JES interface used by SMTP.

date is the current date stamp.

time is the current time stamp.

jobid is the JES spool identifier (SSSOJOB1).

System action: SMTP deletes the JES spool file. Processing continues.

Operator response: No action is needed.

System programmer response: Check the applications that use the JES spool for SMTP. The most probable cause for these files being created with a zero record count is an application abend.

Module: ServiceReaderMVS

Procedure Name: SMTPBTCH

EZA5573I RcptReply452 Active : state

Explanation: Indicates whether the RCPTREPLY452 statement was present in the hlq.SMTP.CONFIG file.

state is one of the following:

YES The RCPTREPLY452 statement was present. The SMTP client interprets the 452 reply code received during RCPT command processing to mean 'too many recipients'.

NO The RCPTREPLY452 statement was not present. The SMTP client interprets the 452 reply code received during command processing to mean 'insufficient system storage' and the mail processing is halted.

See z/OS Communications Server: IP Configuration Reference for more information about the RCPTREPLY452 configuration statement.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams
EZA5574I  SMTP ExitDirection : direction saf

Explanation: The EXITDIRECTION statement in the hlq.SMTPCONFIG file has been set. Depending on the parameters following the statement, SMTP will modify its behavior regarding when to call the customer supplied SMTP exit program.

direction is the direction when the exit program is called. Valid options are INBOUND or BOTH.
saf indicates if SAF information is requested. saf appears only if direction is BOTH. Valid options are SAFYES or SAFNO.

See z/OS Communications Server: IP Configuration Reference for more information about the EXITDIRECTION configuration statement.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5575E  NO DESTINATION SPECIFIED FOR NOTE

Explanation: The user attempted to send a note using the SMTPNOTE EXEC without specifying a destination. Without a destination, the note cannot be delivered.

System action: SMTP continues.

Operator response: Specify a destination and resend the note.

System programmer response: Assist the user as necessary.

Module: SMTPNOTE

Procedure Name: main

EZA5576E  UNABLE TO ALLOCATE TEMPORARY DATASET ‘data_set’

Explanation: SMTPNOTE is unable to allocate the indicated temporary data set, which is used to hold a current note, because of lack of available storage.

System action: SMTPNOTE EXEC halts. SMTP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Increase the region size and restart SMTPNOTE.

Module: SMTPNOTE

Procedure Name: main

EZA5577I  NOTE CANCELLED

Explanation: A note created using SMTPNOTE has been canceled by the user.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPNOTE

Procedure Name: main
EZA5578I UNABLE TO EDIT TEMPORARY DATASET 'data_set'

Explanation: SMTPNOTE is unable to edit the indicated temporary data set, which is used to hold a note being created. This message will be accompanied by messages from the operating system giving further information about the reason.

System action: SMTP continues.
Operator response: Notify the system programmer of this message.
System programmer response: Increase the region size and restart SMTPNOTE.
Module: SMTPNOTE
Procedure Name: main

EZA5579E UNABLE TO TRANSMIT DATA TO 'name' AT 'node'

Explanation: SMTPNOTE is unable to transmit a note to the indicated user at the indicated address.

name is the name of the SMTP server started task. For SMTPNOTE CLIST the customization variable is SMTPJOB whose value is used for name.

node is the NJE node on which the SMTP server is running. For SMTPNOTE CLIST the customization variable is SMTPNODE whose value is used for node.

System action: The data is not transmitted. SMTPNOTE stops.
Operator response: Notify the system programmer of the error.
System programmer response: Check that the name is correct for the SMTP server started task. Check that the node is correct NJE node name where the SMTP server is running. Check that the node exists in the data set IKJTSOxx for the TRANSREC parameter (NODESMT). Make any changes to the SMTPNOTE customization variables or IKJTSOxx data set and retry SMTPNOTE. For more information about the customization of SMTPNOTE see z/OS Communications Server: IP Configuration Guide.
Module: SMTPNOTE
Procedure Name: main

EZA5580E UNABLE TO DELETE TEMPORARY DATASET 'data_set'

Explanation: SMTPNOTE is unable to delete the temporary data set used to hold notes being created. This message will be accompanied by messages from the operating system indicating the reason for the error.

System action: SMTP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Use the messages displayed by the operating system to determine the cause of the error, and respond as indicated.
Module: SMTPNOTE
Procedure Name: main

EZA5581E CONFLICTING PARAMETERS ‘DATASET’ AND ‘REUSE’

Explanation: The REUSE parameter, which is used to reuse an existing temporary data set to hold notes being created by SMTPNOTE, was specified, but no temporary data set currently exists. The REUSE parameter is ignored and a new temporary data set is created.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPNOTE
Procedure Name: main
EZA5582E • EZA5585E

EZA5582E  UNABLE TO USE DATASET 'data_set'

Explanation:  SMTPNOTE is unable to access the indicated data set. This message is accompanied by messages from the operating system indicating the reason for the error.

System action:  SMTP continues.

Operator response:  Verify that the data set is protected. Use the DATESET parameter passed to SMTPNOTE to specify a different data set to be used. If that is not the problem, notify the system programmer of the error.

System programmer response:  SMTPNOTE uses the TSO allocation (alloc) command to create a temporary data set similar to the data set passed on the DATESET parameter. The allocation command is failing. Use the messages issued by the operating system to determine the cause of the error and respond as indicated. For more information, see the [z/OS TSO/E Command Reference](https://www.ibm.com/support/knowledgecenter/SSLTBW_2.3.0/en/tso/tso10003.htm).

Module:  SMTPNOTE  
Procedure Name:  main

EZA5583E  UNABLE TO USE DATASET 'data_set', COPYING ERRORS DETECTED

Explanation:  SMTPNOTE cannot use the indicated data set because it is a protected data set.

System action:  SMTP continues.

Operator response:  Verify that the data set logical record (LRECL) attribute is 243 or less. Also, verify that the data set is not being shared with other users when SMTPNOTE is executed. If this is not the problem, notify the system programmer of the error.

System programmer response:  SMTPNOTE used the TSO REPRO command to copy the user's data into a temporary data set. This command is failing. Use the messages issued by the operating system to determine the cause of the error and respond as indicated. For more information, see the [z/OS DFSMS Access Method Services for Catalogs](https://www.ibm.com/support/knowledgecenter/SSLTBW_2.3.0/en/edfsms/acm000000.htm).

Module:  SMTPNOTE  
Procedure Name:  main

EZA5584E  INVALID PARAMETER, parameter

Explanation:  SMTPNOTE has received an incorrect parameter. The only valid parameters for SMTPNOTE are BATCH, DEBUG, and REUSE.

System action:  SMTP continues.

System programmer response:  No action is needed.

Module:  SMTPNOTE  
Procedure Name:  main

EZA5585E  BATCH PARAMETER REQUIRES DATASET PARAMETER

Explanation:  The BATCH parameter was submitted without a data set name. The BATCH parameter requires a data set name to be imported into the note.

System action:  SMTP continues.

Operator response:  Resubmit the SMTPNOTE command, specifying a valid data set to be imported into the note using the BATCH parameter. For more information, see the [z/OS Communications Server: IP User's Guide and Commands](https://www.ibm.com/support/knowledgecenter/SSLTBW_2.3.0/en/zosipu/guides001.pdf).

System programmer response:  No action is needed.

Module:  SMTPNOTE  
Procedure Name:  main
EZA5586E  CONFLICTING PARAMETERS ‘CC’ AND ‘NOCC’

Explanation: Both the CC parameter, which specifies addresses to be copied on a note, and the NOCC parameter, which specifies that no addresses are to be copied on the note, were specified. These parameters are mutually exclusive.

System action: SMTP continues.
Operator response: Submit only one of these parameters when using SMTPNOTE.
System programmer response: No action is needed.
Module: SMTPNOTE
Procedure Name: main

EZA5587E  NO VALUE FOR PARAMETER ‘TO’

Explanation: No address or user ID was specified in the TO field of the note being created by SMTPNOTE. Without a note or user ID in this field, the note cannot be sent.

System action: SMTP continues.
Operator response: Specify an address or user ID to receive the note in the TO field of the note. For more information, see the z/OS Communications Server: IP User’s Guide and Commands.
System programmer response: No action is needed.
Module: SMTPNOTE
Procedure Name: main

EZA5588E  NO VALUE FOR PARAMETER ‘CC’

Explanation: The CC parameter was specified, indicating that one or more addresses are to be copied on the current note, but no addresses or user IDs were specified. Without an address or user ID, no copies of the note can be sent.

System action: SMTP continues.
Operator response: Resubmit the SMTPNOTE command, supplying an address or user ID to receive a copy of the note using the CC parameter. For more information, see the z/OS Communications Server: IP User’s Guide and Commands.
System programmer response: No action is needed.
Module: SMTPNOTE
Procedure Name: main

EZA5589E  NO VALUE FOR PARAMETER ‘DATASET’

Explanation: The DATASET parameter, which indicates that a data set is to be imported into the note, was specified without a data set name. Without a data set name, no data set can be imported.

System action: SMTP continues.
Operator response: Resubmit the SMTPNOTE command, specifying a data set to be included in the note using the DATASET parameter. For more information, see the z/OS Communications Server: IP User’s Guide and Commands.
System programmer response: No action is needed.
Module: SMTPNOTE
Procedure Name: main.
**EZA5590S**  •  **EZA5594I**

---

**EZA5590S**  **UNKNOWN ERROR CODE 'errcode'**

**Explanation:** SMTPNOTE has encountered an error that it does not recognize.

**System action:** SMTP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Obtain a trace log for the SMTP host and use this information to determine the cause of the error. If no error is apparent, contact the IBM Software Support Center for assistance.

**Module:** SMTPNOTE

**Procedure Name:** main

---

**EZA5593I**  **SMG HELP Output**

**Explanation:** A MODIFY smtpprocname,SMSG,HELP command was issued. This message displays the output from the SMSG HELP command, which provides a list of valid MODIFY SMTP SMSG commands.

**Examples:**

EZA5593I SMSG HELP Output 376
Valid SMSG Commands:
- QUEues,max=xxxx - for mail queue lengths
- NUMQueue - for total number of mail messages currently queued
- Stats - for operating statistics
- HELP - to get this message
- TRace - to enable resolver tracing
- NOTrace - to disable resolver tracing
- DEbug - to enable session debugging
- NODebug - to disable session debugging
- EXpire,a.b.c.d - to expire the domain name resolution for mail queued for delivery to this IP address
- SHutdown - to terminate the SMTP server
- STARTEXIT - start/restart the user exit
- STOPEXIT - stop the user exit

**System action:** SMTP continues.

**Operator response:** No action is needed.

**User response:** Not applicable

**System programmer response:** No action is needed.

**Problem determination:** No action is needed.

**Source:** z/OS Communications Server TCP/IP: SMTP

**Module:** SMTPSMSG

**Routing code:** Output is returned to the user.

**Descriptor code:** Output is returned to the user.

---

**EZA5594I**  **SMG QUEUE Output**

**Explanation:** You issued a MODIFY smtpprocname,SMSG,QUEUE command. This message displays the output from the SMSG QUEUE command, which provides information about the mail queued on the various SMTP mail delivery queues.

See the information about the [Modify command-SMSG](https://www.ibm.com) in z/OS Communications Server: IP System Administrator's Commands for more information about this output.

**Examples:**

EZA5594I SMSG QUEUE Output
----- Mail Queues -----
--- Spool Queue : 0
--- Undeliverable Queue: 0
--- Resolver Queues ---
Process Queue: 0
Send Queue: 0
Wait Queue: 0
Retry Queue: 0
Completed Queue: 0
Error Queue: 0

System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

---

EZA5595I SMSG STATS Output

Explanation: You issued a MODIFY smtpprocname,SMSG,STATS command. This message displays the output from the command. This display provides operating statistics about the SMTP server since the SMTP server was started.

Examples:
EZA5595I SMSG STATS Output 618
Last Up Time: Sat, 29 Jul 06 17:07:10 EST
Statistics : 07/29
From TCP : 0
From Spool : 0
BSMTP Logs : 0
Error Mail : 0
To Local : 0
To RSCS : 0
To TCP : 0
Passive Opns: 0
Active Opens: 0

--------------------------------
Highest num queued: 0
High reached at: Date: Sat, 29 Jul 06 17:07:09 EST

System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

---

EZA5596I SMSG NUMQUEUE Output - Current Number of Mail Queued is number

Explanation: You issued a MODIFY smtpprocname,SMSG,NUMQUEUE command. This message displays the output from the command. This display provides information about the number of pieces of mail currently queued in SMTP.

In the message text:
number

The current number of pieces of mail that are queued in SMTP.

Examples:
EZA5596I MSG NUMQUEUE Output - Current Number of Mail Queued is 50

System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

EZA5597I SMSG DEBUG Output - Session Debugging Enabled

Explanation: You issued a MODIFY smtpprocname,SMTP,DEBUG command. This message displays the output from the command. This command enables the connection to the SMTP,DEBUG data set, if the connection is not already enabled, and starts the collection of debugging and tracing information. The MODIFY smtpprocname,SMTP,DEBUG command has the same effect as adding the DEBUG option to the SMTP,CONFIG data set.

Examples: None.
System action: SMTP continues. Debug information is being collected.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

EZA5598I SMSG EXPIRE Output - ipaddr - Mail queued for re-resolution

Explanation: You issued a MODIFY smtpprocname,SMTP,EXPIRE command. This message displays the output from the command. The domain name resolution for the mail queued for delivery to this IP address to expires when this command is issued. SMTP tries to resolve the IP addresses for mail again if the mail is still within the retry time window.

The mail was queued for re-resolution

In the message text:

ipaddr

The address for which the EXPIRE command has been issued.

Examples: None.
System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

EZA5599I SMSG NODEBUG Output - Session Debugging Disabled
Explanation: You issued a MODIFY smtpprocname,SMSG,NODEBUG command. This message displays the output from the command. This command disables connection debugging and tracing.
Examples: None.
System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTP
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

EZA5600I Correct form is:

EZA5602I SmtpNJE MVSDSName <( SpoolSystemType>

EZA5603I where MVSDSName is the dataset name (including membername, if

EZA5604I any) of the JES2 or JES3 initialization stream, which is used as

EZA5605I input to SMTPNJE. This dataset must be cataloged. If the

EZA5606I dataset is not enclosed in quotes, the userid will prepended

EZA5607I to it. SmtpNJE will create the file: userid.SMTPNJE.HOSTINFO as

EZA5608I output, which should be renamed to the dataset name pointed to by

EZA5609I the SMTPNJE DD of the SMTP server.
Explanation: This is the combined help message displayed when a question mark (?) is entered on the command line with SMTPNJE. This message is also displayed when an incorrect data set name is specified, or if there is a problem opening a data set. Finally, it is also displayed when incorrect form is used when specifying an optional parameter while initiating SMTPNJE. For more information about SMTPNJE, see the z/OS Communications Server: IP Configuration Reference.
System action: SMTP continues.
Operator response: No action is needed.
EZA5611E • EZA5615E

**System programmer response:** No action is needed.

**Module:** SMTPRSCS  
**Procedure Name:** GiveHelp

---

**EZA5611E**  
**Unrecognized parameters:** *parameter*

**Explanation:** The data set name and any additional parameters should be separated by an open parenthesis [([.]

**System action:** SMTPNJE continues.

**Operator response:** No action is needed.

**System programmer response:** Rerun the SMTPNJE program using the correct, specified format. See the z/OS Communications Server: IP Configuration Reference for information.

**Module:** SMTPRSCS  
**Procedure Name:** ProcessCommandLine

---

**EZA5612E**  
**Unable to find input file:** *data_set*

**Explanation:** The data set name specified as the program invocation argument cannot be found on any MVS volume.

**System action:** SMTPNJE halts.

**Operator response:** No action is needed.

**System programmer response:** Check that SMTPNJE has access to the data set on one of the MVS volumes.

**Module:** SMTPRSCS  
**Procedure Name:** ProcessCommandLine

---

**EZA5613W**  
**Warning: Duplicate entry:** *node*

**Explanation:** A duplicate name exists in the input data set being processed. The duplicate is ignored.

**System action:** SMTPNJE continues.

**Operator response:** No action is needed.

**System programmer response:** If the input data set is in error, remove the duplicate name entry.

**Module:** SMTPRSCS  
**Procedure Name:** Insert

---

**EZA5614E**  
**Invalid system type specified:** *type*

**Explanation:** An incorrect optional SpoolSystemType was entered at the command line. The only valid options are RSCS, JES2, or JES3. Use the form SMTPNJE *data_set_name* ( JES2 or JES3. The default is JES2.

**System action:** SMTPNJE continues.

**Operator response:** No action is needed.

**System programmer response:** Reenter the command with a valid SpoolSystemType and the correct form.

**Module:** SMTPRSCS  
**Procedure Name:** ParseOptionalPart

---

**EZA5615E**  
**Unrecognized options:** *option*

**Explanation:** SMTPNJE found additional characters in the option string after a valid option was found.

**System action:** SMTPNJE continues.

**Operator response:** No action is needed.
System programmer response: Rerun the SMTPNJE program using the correct specified format. See the z/OS Communications Server: IP Configuration Reference for information.

Module: SMTPRSCS  
Procedure Name: ParseOptionalPart

EZA5616E Invalid DSName Specifications: data set
Explanation: A data set name was entered that exceeds 44 characters in length. The incorrect data set name is indicated at the end of the message.
System action: SMTPNJE halts.
Operator response: No action is needed.
System programmer response: Correct the data set name, and rerun the program.
Module: SMTPRSCS  
Procedure Name: ProcessCommandLine

EZA5617I Entries in the NJE Hash Table: number of entries
Explanation: Displays the number of nodes listed in the hash table.
System action: SMTPNJE continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRSCS  
Procedure Name: AmpxFree

EZA5618I Length of Hash Table: length
Explanation: Displays the length of the hash table.
System action: SMTPNJE continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRSCS  
Procedure Name: AmpxFree

EZA5619I Average seeks per Entry: result
Explanation: Displays the number of searches for a name in the hash table per number of entries.
System action: SMTPNJE continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRSCS  
Procedure Name: AmpxFree

EZA5620I Hash Table is: percent% Full
Explanation: Shows how full the hash table is in percentage.
System action: SMTPNJE continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRSCS
Procedure Name: AmpxFree

EZA5622E Unable to find input file: data set
Explanation: The data set specified as the program invocation argument cannot be found on any MVS volume.
System action: SMTPNJE halts.
Operator response: Verify that the data set exists and that the user has access to it.
System programmer response: No action is needed.
Module: SMTPRSCS
Procedure Name: GiveHelp

EZA5624E Maximum number of NJE nodes found. SMTPNJE only supports up

EZA5625E to maxnodes.
Explanation: SMTPNJE found more that the specified number of JES2 or JES3 nodes allowed by the MaxNodes constant.
System action: SMTPNJE continues.
Operator response: No action is needed.
System programmer response: Increase the MaxNodes constant in the SMTPRSCS Pascal program to the desired value, recompile the source, relink-edit the executable module, and run SMTPNJE again.
Module: SMTPRSCS
Procedure Name: EndofGame

EZA5627W JES Destination: oldnode to : newnode
Explanation: The specified JES node name is greater than the maximum of 8 characters and was truncated to the indicated name.
System action: SMTPNJE continues.
Operator response: No action is needed.
System programmer response: Correct the JES node name to be 8 characters or fewer. See the z/OS Communications
Server: IP Programmer’s Guide and Reference for more information about the JES node name.
Module: SMTPNJE
Procedure Name: ParseJES2initFile

EZA5628W JES Destination: oldnode truncated to: newnode
Explanation: The JES3 node name after NAME= is greater than the maximum of 8 characters and was truncated to the indicated name.
System action: SMTPNJE continues.
Operator response: No action is needed.
System programmer response: Correct the JES3 node name to be 8 characters or fewer.
Module: SMTPRSCS
Procedure Name: ParseJES3InitFile
EZA5629E  Error opening input file: data set name
Explanation: There was an error opening the specified data set on the command line when using the SMTPNJE data set name command.
System action: SMTPNJE halts.
Operator response: Verify the name of the data set specified and that it is accessible.
System programmer response: No action is needed.
Module: SMTPRSCS
Procedure Name: ProcessCommandLine

EZA5630E  Error opening output file: set name
Explanation: There was an error opening the file userid.SMTPNJE.HOSTINFO, which will be the data set containing the hash table. The attempt to allocate the file was unsuccessful.
System action: SMTPNJE halts.
Operator response: Verify the type of access you have to this data set. If necessary, ask the data set's owner for access.
System programmer response: No action is needed.
Module: SMTPRSCS
Procedure Name: AmpxFree

EZA5631E  No nodes found in set name. SMTPNJE data set will not be created.
Explanation: There are no node names specifying which user's mail is supported, so SMTPNJE cannot create a hash table.
System action: SMTPNJE continues.
Operator response: Edit the data set that contains the names of the nodes. Verify that the data set contains NJE node definitions. For more information see the z/OS Communications Server: IP Configuration Reference.
System programmer response: No action is needed.
Module: SMTPRNJE
Procedure Name: Insert

EZA5632I  SMTPNJE version
Explanation: Indicates the version of SMTPNJE in use.
System action: SMTPNJE continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRSCS
Procedure Name: AmpxFree

EZA5633I  Generic node ID not supported, ignoring group_node RSCS_token
Explanation: The system will not accept any node with an asterisk (*).
System action: SMTPNJE continues.
Operator response: Reenter a node that does not contain an asterisk.
System programmer response: No action is needed.
Module: SMTPRSCS
EZA5641E • EZA5643I

Procedure Name: ProcessNode

EZA5641E  IMBED not supported on MVS

Explanation: An IMBED statement was encountered while processing an RSCS style configuration data set. The IMBED is ignored.

System action: SMTPNJE continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPRSCS

Procedure Name: IMBEDstatement

EZA5642E  INCORRECT VALUE parameter SPECIFIED FOR EXITDIRECTION STATEMENT - THE DEFAULT VALUE OF INBOUND WILL BE USED

Explanation: The input parameter on the EXITDIRECTION statement is invalid. The default value of INBOUND will be used instead. This means that the SMTP server will call the customer supplied SMTP exit program to process inbound data from a TCP/IP connection.

parameter shows a maximum of 10 characters of the invalid input parameter. If the parameter is shown as <NULL>, the parameter is missing and needs to be coded.

See z/OS Communications Server: IP Configuration Reference for more information about the EXITDIRECTION configuration statement.

System action: SMTP continues

Operator response: No action is needed.

System programmer response: Change the parameter associated with the EXITDIRECTION configuration statement to a valid one. If EXITDIRECTION is BOTH then you must also code SAFYES or SAFNO. Stop and restart SMTP to activate the new parameter setting.

Module: SMTP

Procedure Name: ProcessConfigFile

EZA5643I  Disallowed Commands: number

Explanation: The DISALLOWCMD statement in the hlq.SMTP.CONFIG file has been set. Depending on the parameter following the statement, SMTP will modify its behavior regarding what SMTP commands are supported.

number is a decimal number indicating which SMTP commands are not allowed. A valid decimal number parameter is in the range of 1 - 31. To disable multiple commands add the individual command numbers together. The following numbers are assigned to each command:

2  VERB
2  QUEU
4  HELP
8  VRFY
16 EXPN

See z/OS Communications Server: IP Configuration Reference for more information about the DISALLOWCMD configuration statement.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

372  z/OS V1R11.0 Comm Svr: IP Messages Volume 1 (EZA)
**EZA5644E** INCOMPLETE STATEMENT

**Explanation:** The input parameter on the DISALLOWCMD statement is invalid. The default behavior of SMTP server will be to allow these SMTP commands. The parameter must be a decimal number in the range of 1 - 31. To disable multiple commands add the individual command numbers together. The following numbers are assigned to each command:

- 1 VERB
- 2 QUEU
- 4 HELP
- 8 VRFY
- 16 EXPN

*parameter* shows up to 10 characters of the input parameter that is in error.

See the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/servers/z/os/) for more information about the DISALLOWCMD configuration statement.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** Change the parameter associated with the DISALLOWCMD configuration statement to a valid one. Stop and restart SMTP to activate the new parameter setting.

**Module:** SMTP

**Procedure Name:** ProcessConfigFile

---

**EZA5645I** IP Mailer Name : *mailername* scope

**Explanation:** The IPMAILERNAME statement in the hlq.SMTP.CONFIG file has been set. Depending on the parameters following the statement, SMTP will modify its behavior regarding when to forward non-local mail destined for the IP network to the IP mailer name specified.

*mailername* is the fully qualified name of a mail server in the IP network. The length of the string being displayed is limited to 100 characters.

*scope* indicates whether the IP mail name should be used for all non-local mail destined for the IP network or just mail where the recipient’s host is unknown to the domain name servers responding to SMTP queries. Possible values are ALL or UNKNOWN.

See [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/servers/z/os/) for more information about the IPMAILERNAME configuration statement.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5646E** INCOMPLETE STATEMENT

**Explanation:** The input parameters on the IPMAILERNAME statement are not valid. There are two required parameters that must be coded. The first parameter is the IP mailer fully qualified name or host name. The first parameter must not end with a period. The second parameter is the usage scope, which must be either ALL or UNKNOWN.

In the message text:
**EZA5647E**

*parameter* shows the first 10 characters of the input parameter that is not valid. If the *parameter* value is shown as `<NULL>`, the parameter is missing and needs to be coded. See the information about the [IPMAILERNAME](x) configuration statement in *z/OS Communications Server: IP Configuration Reference*.

**Examples**: The following statement is coded in the *hlq*.SMTP.CONFIG data set. This statement contains the error that the string MYHOST has an ending period:

```
IPMAILERNAME MYHOST. UNKNOWN
```

The following messages are generated when you try to start SMTP:

```
EZY1876I SMTP STACK FUNCTIONS STARTED WITH PARAMETER SMTP,PARM=,
ERRFILE(SYSERR),NOSPIE/.
EZA5646E INCORRECT VALUE MYHOST. SPECIFIED FOR IPMAILERNAME STATEMENT
EZY1877I SMTP STACK FUNCTIONS SHUTDOWN IS COMPLETE, RC = 0.
```

The following statement is coded in the *hlq*.SMTP.CONFIG data set. This statement contains the error that the second parameter is not ALL or UNKNOWN:

```
IPMAILERNAME MYHOST BADPARM
```

The following messages are generated when you try to start SMTP:

```
EZY1876I SMTP STACK FUNCTIONS STARTED WITH PARAMETER SMTP,PARM=,
ERRFILE(SYSERR),NOSPIE/.
EZA5646E INCORRECT VALUE BADPARM SPECIFIED FOR IPMAILERNAME STATEMENT
EZY1877I SMTP STACK FUNCTIONS SHUTDOWN IS COMPLETE, RC = 0.
```

**System action**: The SMTP server is halted.

**Operator response**: Contact the system programmer.

**User response**: Not applicable.

**System programmer response**: Change the parameter associated with the IPMAILERNAME configuration statement to a valid one. Restart SMTP.

**Problem determination**: Not applicable.

**Source**: *z/OS Communications Server TCP/IP: SMTP*

**Module**: SMTP

**Routing code**: 2, 10

**Descriptor code**: 4

---

**EZA5647E** *date time* POTENTIAL LOOP DETECTED USING IPMAILERNAME *ipmailername*

**Explanation**: The IPMAILERNAME statement has been configured in the *hlq*.SMTP.CONFIG data set. SMTP has resolved the IPMAILERNAME statement and the only IP address in the IP address list is a home IP address for the system currently running SMTP. This configuration is not valid, and can cause mail to loop or to be delivered to the wrong mailbox.

In the message text:

- **date**
  - The date when the message is issued.

- **time**
  - The time when the message is issued.

- **ipmailername**
  - The fully qualified name of a mail server in the IP network. The length of the string being displayed is limited to 100 characters.

**Examples**: The following statement is coded in the *hlq*.SMTP.CONFIG data set. This statement contains the error that the string MVS7 is also the name of the system running the SMTP:

```
IPMAILERNAME MVS7 ALL
```
The following messages are generated after you start SMTP and the first note is being processed. When SMTP resolves the name MVS7 it will have the same IP addresses as the home list for this system. Because the ALL parameter is coded, all the mail will be forwarded. The mailer cannot forward mail to itself, therefore, the SMTP is terminated:

IEF695I START SMTP WITH JOBNAME SMTP IS ASSIGNED TO USER IBMUSER GROUP SYS1
$HASP373 SMTP STARTED
IEF403I SMTP - STARTED - TIME=14.20.40

EZA5647E 11/03/05 14:22:51 POTENTIAL LOOP DETECTED USING IPMAILERNAME MVS7.TCP.RALEIGH.IBM.COM
EZY1877I SMTP STACK FUNCTIONS SHUTDOWN IS COMPLETE, RC = 0.

System action: There are two possible system actions when a home IP address is the only address in the IP list:
- If the IPMAILERNAME statement has the parameter ALL configured, SMTP terminates.
- If the IPMAILERNAME statement has the parameter UNKNOWN configured, SMTP continues. The mail becomes undeliverable.

Operator response: No action is needed.

User response: Not applicable.

System programmer response: Check that the IP mailer name is correct. If the name is correct, then activate resolver traces in SMTP to understand how SMTP is resolving the ipmailername value. Remove the home IP address from the list of addresses associated with the IPMAILERNAME in the DNS data base or local host tables. See the information about the SMTP RESOLVER trace in z/OS Communications Server: IP Diagnosis Guide.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: SMTP

Module: SMTPRES
Routing code: 2, 10
Descriptor code: 4

EZA5648I MaxMsgSent : number

Explanation: This message indicates the maximum number of messages that can be sent on a single TCP/IP connection. This value is set on the MAXMSGSENT statement, which is optional, in the SMTP configuration file. The number 0 indicates that no limit is set, 0 is the default if the statement is not coded. Setting this value might affect performance. Lower values might cause slower mail processing.

In the message text:

number

A decimal value in the range 0 - 2 147 483 647.

See the information about the MAXMSGSENT in z/OS Communications Server: IP Configuration Reference.

Examples: EZA5648I MaxMsgSent : 20

This message would be generated in the file associated with the OUTPUT DD card for SMTP started task when MAXMSGSENT 20 is specified in the SMTP configuration file and SMTP is started.

System action: SMTP continues.

Operator response: No action is needed.

User response: Not applicable.

System programmer response: No action is needed.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: SMTP

Module: SMTP
EZA5649E • EZA5652I

Routing code: Not applicable.
Descriptor code: Not applicable.

EZA5649E  INVALID MAXMSGSENT VALUE: value

Explanation: A incorrect value was specified on the MAXMSGSENT statement coded in the SMTP configuration file. This value represents a limit on the number of messages that the SMTP client can send over a single TCP/IP connection.

In the message text:

Value
The incorrectly specified value.

Examples: EZA5649E INVALID MAXMSGSENT VALUE: 5F6
This message displayed on the console and also generated in the file associated with the OUTPUT DD card for the SMTP started task when MAXMSGSENT 5F6 is specified in the SMTP configuration file and SMTP is started. The value for MAXMSGSENT must be a decimal number.

System action: SMTP ends.
Operator response: Contact the system programmer.
User response: Not applicable.

System programmer response: Check the SMTP configuration file and specify a valid decimal number in the range 0 - 2 147 483 647 on the MAXMSGSENT statement. The value 0 indicates that no limit is set; 0 is the default if the statement is not coded. Setting this value might effect performance. Lower values might cause slower mail processing.

See the information about the MAXMSGSENT in z/OS Communications Server: IP Configuration Reference.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTP
Routing code: 2, 10
Descriptor code: 4

EZA5651N  SIMPLIFIED CHINESE

Explanation: The SMTP server is configured to use Simplified Chinese if the DBCS statement in the hlq.SMTP.CONFIG data set is enabled. See also message EZA5263I. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OPENOUTPUTSTREAMS

EZA5652I  currentdate currenttime CurrentNumMail: currentnumber MaxNumMail: maxnumber at maxdate maxtime

Explanation: This message is issued when debugging is on. The message displays the number of pieces of mail that are currently queued in SMTP, and the maximum number of pieces of mail that has been queued in SMTP has been. This display also indicates the time and date when the maximum limit occurred.

In the message text:

currentdate
The date this message was displayed.

376  z/OS V1R11.0 Comm Svr: IP Messages Volume 1 (EZA)
currenttime
   The time this message was displayed.

currentnumber
   The number of pieces of mail currently queued up in SMTP.

maxnumber
   The maximum number of pieces of mail that has been queued in SMTP.

maxdate
   The date when the maximum number of pieces of mail was queued in SMTP.

maxtime
   The time when the maximum number of pieces of mail was queued in SMTP.

Examples:
EZA56521 05/30/06 14:50:44 CurrentNumMail: 50 MaxNumMail: 100 at 05/30/06 12:14:23

System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTP
Routing code: 10
Descriptor code: 12

EZA5653I  date time  Recalculating number of current mail queued due to error with addrblok -
           CurrentNumMail: currentnumber

Explanation: This message is written when debugging is turned on. This message indicates that SMTP encountered
an error with an address block (addrblok) and needs to recalculate how much mail is queued in SMTP.
In the message text:

date
   The date when this message was issued.

time
   The time when this message was issued.

currentnumber
   The number of pieces of mail that are currently queued in SMTP.

Examples:
EZA56531 05/30/06 12:21:20 Recalculating number of current mail queued due to
          error with addrblok - CurrentNumMail: 5

System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTP
Routing code: 10
EZA5654I • EZA5656I

Descriptor code: 12

EZA5654I SMSG NOTRACE Output - Resolver Tracing Disabled
Explanation: You issued a MODIFY smtpprocname,SMSG,NOTRACE command. This message displays the output from the command. This command disables resolver tracing.
Examples: Not applicable.
System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

EZA5655I SMSG SHUTDOWN Output - Stopping SMTP
Explanation: You issued a MODIFY smtpprocname,SMSG,SHUTDOWN command. This message displays the output from the command. The SMTP server stops when this command is issued.
Examples: EZA5655I SMSG SHUTDOWN Output - Stopping SMTP
System action: SMTP ends.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

EZA5656I SMSG STARTEXIT Output - Exit started
Explanation: You issued a MODIFY smtpprocname,SMSG,STARTEXIT command. This message displays the output from the command. This command causes SMTP to enable a user exit program by issuing the initialization call to the user exit program, if one exists.
See the information about [Designing an SMTP exit to inspect and filter unwanted mail] in [z/OS Communications Server: IP Configuration Guide] for more information about user exit programs.
Examples: No action is needed.
System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
EZA5657I  SMSG STOPEXIT Output - Exit Stopped

Explanation: You issued an SMSG $smtpprocname$,SMSG,STOPEXIT command. This message displays the output from the command. This command causes SMTP to disable a currently running user exit program by issuing the termination call to the user exit program, if one exists.

See the information about [designing an SMTP exit to inspect and filter unwanted mail] in [z/OS Communications Server IP Configuration Guide] for more information about user exit programs.

Examples:
EZA5657I SMSG STOPEXIT Output - Exit Stopped

System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

EZA5658I  SMSG TRACE Output - Resolver Tracing Enabled

Explanation: You issued a MODIFY $smtpprocname$,SMSG,TRACE command. This message displays the output from the command. This command enables resolver tracing. The output of the resolver trace is sent to the SMTP console. The MODIFY $smtpprocname$,SMSG,TRACE command has the same effect as adding the TRACE RESOLVER option to the TCPIP.DATA data set.

Examples:
EZA5658I SMSG TRACE Output - Resolver Tracing Enabled

System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.
EZA5692I  SMSG EXPIRE Output - ipaddr - No Mail Found

Explanation: You issued a MODIFY smtpprocname,SMSG,EXPIRE command. This message displays the output from the command. The domain name resolution for mail queued for delivery to this IP address expires when this command is issued. SMTP tries to resolve the IP addresses for mail again if the mail is still within the retry time period. In this case, there is no mail queued for that IP address.

In the message text:

ipaddr
   The address for which the EXPIRE command has been issued.

Examples:
EZA5692I SMSG EXPIRE Output - 123.123.123.123 - No Mail Found

System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: None.

EZA5693I  SMSG EXPIRE Output - ipaddr - Try Later

Explanation: You issued a MODIFY smtpprocname,SMSG,EXPIRE command. This message displays the output from the command. This command causes the domain name resolution for mail queued for delivery to this IP address to expire. SMTP will again try to resolve the IP addresses for mail if the mail is still within the retry time window. Mail needs to be on the retry queue for the EXPIRE command to work.

In the message text:

ipaddr
   The address for which the EXPIRE command has been issued.

Examples:
EZA5693I SMSG EXPIRE Output - 123.123.123.123 - Try Later

System action: SMTP continues.
Operator response: Try again later when the mail for that IP address is in the retry queue. Use the MODIFY smtpprocname,SMSG,QUEUE command to determine when the mail is on the retry queue.
User response: Not applicable.
System programmer response: Not applicable.
Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.
EZA5694I  SMSG STOPEXIT Output - Exit previously stopped

Explanation: You issued an SMSG smtpprocname,SMSG,STOPEXIT command. This message displays the output from the command. This command causes SMTP to disable a currently running user exit program by issuing the termination call to the user exit program, if one exists.

See information about designing an SMTP exit to inspect and filter unwanted mail in z/OS Communications Server: IP Configuration Guide for more information about user exit programs.

Examples: None.

System action: SMTP continues

Operator response: No action is needed.

User response: Not applicable.

System programmer response: Not applicable.

Problem determination: None.

Source: z/OS Communications Server TCP/IP: SMTP

Module: SMTPSMSG

Routing code: Output is returned to the user.

Descriptor code: Output is returned to the user.

EZA5695I  SMSG STARTEXIT Output - Exit previously started

Explanation: You issued a MODIFY smtpprocname,SMSG,STARTEXIT command. This message displays the output from the command. This command causes SMTP to enable a user exit program by issuing the initialization call to the user exit program, if one exists.

See information about designing an SMTP exit to inspect and filter unwanted mail in z/OS Communications Server: IP Configuration Guide for more information about user exit programs.

Examples: None.

System action: SMTP continues.

Operator response: No action is needed.

User response: Not applicable.

System programmer response: No action is needed.

Problem determination: None.

Source: z/OS Communications Server TCP/IP: SMTP

Module: SMTPSMSG

Routing code: Output is returned to the user.

Descriptor code: Output is returned to the user.

EZA5696I  SMSG STARTEXIT Output - Error encountered starting exit

Explanation: You issued a MODIFY smtpprocname,SMSG,STARTEXIT command. This message displays the output from the command. This command causes SMTP to enable a user exit program by issuing the initialization call to the user exit program, if one exists.

See information about designing an SMTP exit to inspect and filter unwanted mail in z/OS Communications Server: IP Configuration Guide for more information about user exit programs.

Examples: None.

System action: SMTP continues.
Operator response:  Contact the system programmer.

User response:  Not applicable.

System programmer response:  See the information about diagnosing SMTP problems in z/OS Communications Server: IP Configuration Reference for more information about why the exit could not be started.

Problem determination:  See the system programmer response.

Source:  z/OS Communications Server TCP/IP: SMTP

Module:  SMTPSMSG

Routing code:  Output is returned to the user.

Descriptor code:  Output is returned to the user.

---

**EZA5697I**  Maximum number of SMSG commands queued to SMTP

**Explanation:**  Twenty SMSG commands are currently queued in SMTP. Wait for SMTP to process the current SMSG commands before issuing more MODIFY smtpprocname,SMSG commands or TSO SMSG commands.

**Examples:**  None.

**System action:**  SMTP continues.

**Operator response:**  Attempt to issue the next MODIFY smtpprocname,SMSG or TSO SMSG command later. If SMTP still does not accept MODIFY smtpprocname,SMSG or TSO SMSG commands, contact the system programmer.

**User response:**  Not applicable.

System programmer response:  Determine whether SMTP is currently processing a large JES spool file. If SMTP is not processing a large JES spool file, collect the SMTP joblog, take a dump of the SMTP address space and contact IBM service support. See the information about diagnosing SMTP problems in z/OS Communications Server: IP Configuration Reference for more information.

Problem determination:  None.

Source:  z/OS Communications Server TCP/IP: SMTP

Module:  EZBPAINT

Routing code:  Output is returned to the user.

Descriptor code:  Output is returned to the user.

---

**EZA5698I**  SMSG Option not valid - option

**Explanation:**  An option of the SMSG command was not valid

**Examples:**

EZA5698I  SMSG Option not valid - abcd

**System action:**  SMTP continues.

**Operator response:**  Fix the error and issue the command again. For a list of valid SMSG commands, issue the MODIFY smtpprocname,SMSG,HELP command.

**User response:**  Not applicable.

**System programmer response:**  Fix the error and issue the command again. For a list of valid SMSG commands, issue the MODIFY smtpprocname,SMSG,HELP command.

Problem determination:  See the System Programmer Response

EZA5775I  Usage: SNALINK tcpipname applid
Explanation: SNALINK was invoked with incorrect command line parameters. Correct command line syntax is shown.
System action: SNALINK exits.
Operator response: Retry the command with the correct parameters.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: Main

EZA5776E  Invalid max RU size code
Explanation: An optional third argument to SNALINK is the maximum RU size code. This parameter was specified on the command line, but is not valid. See z/OS Communications Server: SNA Programming for more information.
System action: SNALINK exits.
Operator response: Retry the command with the correct parameters.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: Main

EZA5777E  Can not obtain storage for path index table
Explanation: SNALINK could not allocate storage for the path index table.
System action: SNALINK continues to attempt opening the ACB until the open succeeds or it is stopped.
Operator response: No action is needed.
System programmer response: Check that the SNALINK address space is defined correctly.
Module: SNALINK
Procedure Name: Main

EZA5778E  Error error in DLC INIT call
Explanation: SNALINK encountered an error issuing a DLC INIT request to initialize DLC.
System action: SNALINK abends.
Operator response: No action is needed.

EZA5785E  Unexpected iptype type received
Explanation:  SNALINK received an IUCV interrupt with an unexpected or out-of-range type.
System action:  SNALINK abends.
Operator response:  No action is needed.
System programmer response:  This error indicates a probable TCPIP code problem. Contact the IBM Software Support Center.
Module:  SNALINK
Procedure Name:  prociucv

EZA5787E  Can't find CONNBLOK for severed path path
Explanation:  SNALINK received a SEVER interrupt from TCPIP, but could not find the associated connection in its tables. The connection is severed.
System action:  SNALINK continues processing.
Operator response:  No action is needed.
System programmer response:  This message indicates a probable TCPIP code problem. Contact the IBM Software Support Center.
Module:  SNALINK
Procedure Name:  sever

EZA5788E  PENDCONN received from wrong TCPIP id id
Explanation:  SNALINK received a Connection Pending interrupt from a TCPIP ID other than the one specified on the command line. The pending connection is severed.
System action:  SNALINK continues processing.
Operator response:  No action is needed.
System programmer response:  Check TCPIP parameters (MVS) for the correct TCPIP data set.
Module:  SNALINK
Procedure Name:  pendconn

EZA5789E  Cannot connect to LU name — No more CONNBLOKS!
Explanation:  SNALINK does not have enough data structures (CONNBLOKs) allocated to service a pending connection. The pending connection is severed. If existing connections are later closed, resources are freed to allow SNALINK to service this connection.
System action:  SNALINK continues processing.
Operator response:  No action is needed.
System programmer response:  Increase the maximum connections allowed.
Module:  SNALINK
Procedure Name:  pendconn

EZA5790S  Severing pending conn because existing session not killed
Explanation:  SNALINK received a Connection Pending interrupt for this LU. However, a connection already exists for this LU. The pending connection is severed.
System action:  SNALINK continues processing.
Operator response:  No action is necessary if the connection you want is up; otherwise, stop and restart SNALINK.
EZA5795E  Unexpected GENTYPE value found
Explanation: SNALINK encountered an incorrect GENTYPE value when processing a VTAM exit.
System action: SNALINK abends.
Operator response: No action is needed.
System programmer response: This error indicates a possible TCPIP code problem. Contact the IBM Software Support Center.
Module: SNALINK
Procedure Name: procvtam

EZA5796E  Unexpected control field value in SCIP exit
Explanation: SNALINK encountered an incorrect control field in a SCIP information block, while SNALINK was either acting as an SLU for a connection and waiting for the PLU to establish the connection, or receiving an UNBIND request.
System action: SNALINK ignores the SCIP exit and resumes processing.
Operator response: Tell your VTAM administrator.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: vtamscip

EZA5797E  Rejecting bind from plu - no DLC found
Explanation: SNALINK received a BIND request from the indicated primary LU. It is rejecting the BIND request because it cannot find an associated pending DLC connection in its tables.
System action: The BIND request is rejected.
Operator response: Use the NETSTAT command to check that TCPIP started SNALINK.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: scipbind

EZA5798E  Rejecting bind - already have receive session
Explanation: SNALINK received a BIND request for an LU on which it has already established communication.
System action: The BIND request is rejected.
Operator response: Tell your VTAM administrator.
System programmer response: This error indicates a possible VTAM problem.
Module: SNALINK
Procedure Name: scipbind
EZA5799I  Received BIND request for SNA receive session
Explanation:  A BIND request has been received.
System action:  Processing continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  SNALINK
Procedure Name:  scipfoun

EZA5800E  Error in MODCB NIB for receive session. R15 value R0 value
Explanation:  SNALINK encountered an error modifying a network information block in preparation for an
OPNSEC call to accept a BIND for this LU.
System action:  The BIND request is rejected.
Operator response:  Tell your VTAM administrator.
System programmer response:  This error indicates a possible TCPIP code problem. Contact the IBM Software
Support Center.
Module:  SNALINK
Procedure Name:  scipfoun

EZA5801I  Got UNBIND for receive session
Explanation:  An UNBIND request has been received.
System action:  The session is brought down.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  SNALINK
Procedure Name:  scipunbd

EZA5802I  Got UNBIND for send session
Explanation:  An UNBIND request has been received.
System action:  The session is brought down.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  SNALINK
Procedure Name:  scipunbd

EZA5803E  Zero user word in SCIP exit for UNBIND
Explanation:  SNALINK encountered a user word containing zero in an UNBIND request, indicating a null
connection block address.
System action:  The UNBIND request is not processed.
Operator response:  No action is needed.
System programmer response:  This error indicates a possible TCPIP or VTAM code problem. Tell your VTAM
administrator.
Module:  SNALINK
Procedure Name: scipunbd

EZA5804E  CID in SCIP UNBIND parm list not found

Explanation: SNALINK received an UNBIND request that was not associated with either the send or receive session on its LU.

System action: The UNBIND request is not processed.

Operator response: No action is needed.

System programmer response: This error indicates a possible VTAM or TCPIP code problem. See the VTAM console for more information.

Module: SNALINK

Procedure Name: scipunbd

EZA5805I  TESTCB shows send session not established

Explanation: SNALINK received a VTAM OPNDST EXIT interrupt specifying a session that has not been established.

System action: SNALINK ends the connection.

Operator response: No action is needed.

System programmer response: This error indicates a possible VTAM or TCPIP code problem.

Module: SNALINK

Procedure Name: vtamopnd

EZA5806E  OPNDST exit can't find CONNBLOK. RPL addr address

Explanation: SNALINK received a VTAM OPNDST EXIT interrupt for which it has no associated connection block.

System action: SNALINK abends.

Operator response: No action is needed.

System programmer response: This error indicates a possible VTAM or TCPIP code problem.

Module: SNALINK

Procedure Name: vtamopnd

EZA5807I  SNA send session established

Explanation: An SNA send session was established.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SNALINK

Procedure Name: vtamopnd

EZA5808I  TESTCB shows receives session not established

Explanation: SNALINK received a VTAM OPNSEC EXIT interrupt specifying a session that has not been established.

System action: SNALINK ends the connection.

Operator response: No action is needed.

Module:  SNALINK
Procedure Name:  vtamrcv

EZA5816E  CLSDST exit can’t find CONNBLOK. RPL addr address
Explanation:  SNALINK received a VTAM CLSDST EXIT interrupt with an incorrect connection block pointer.
System action:  SNALINK abends.
Operator response:  Restart SNALINK.
System programmer response:  This error indicates a possible VTAM or TCPIP code problem. See the VTAM console for more information.
Module:  SNALINK
Procedure Name:  vtamclsd

EZA5817E  TERMSESS exit can’t find CONNBLOK. RPL addr address
Explanation:  SNALINK received a VTAM TERMSESS EXIT interrupt with an incorrect connection block pointer.
System action:  SNALINK abends.
Operator response:  Tell your VTAM administrator.
System programmer response:  No action is needed.
Module:  SNALINK
Procedure Name:  vtamterm

EZA5818I  LOSTERM reason rc for receive session
Explanation:  SNALINK received a VTAM LOSTERM EXIT interrupt, which indicates that this LU lost its receive session for the indicated reason code.
System action:  SNALINK ends the connection.
Operator response:  Check your hardware or VTAM for errors.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: vtamlost

EZA5819I  LOSTERM reason rc for send session
Explanation: SNALINK received a VTAM LOSTERM EXIT interrupt, which indicates that this LU lost its receive
session for the indicated reason code.
System action: SNALINK ends the connection.
Operator response: Check your hardware or VTAM for errors.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: vtamlost

EZA5820I  Zero CONNBLOK ptr in LOSTERM exit, reason rc
Explanation: SNALINK received a VTAM LOSTERM EXIT interrupt with a null connection block pointer.
System action: SNALINK abends.
Operator response: No action is needed.
System programmer response: This error indicates a possible VTAM or TCPIP problem. Tell your VTAM
administrator.
Module: SNALINK
Procedure Name: vtamlost

EZA5821I  CID in LOSTERM parm list not found, reason rc
Explanation: SNALINK received a VTAM LOSTERM EXIT interrupt for which it has no parameter list.
System action: SNALINK ignores the interrupt.
Operator response: No action is needed.
System programmer response: This error indicates a possible VTAM or TCPIP code problem. See the VTAM console
for more information.
Module: SNALINK
Procedure Name: vtamlost

EZA5822I  NSEXIT CLEANUP request for receive session
Explanation: SNALINK received a VTAM NSEXIT interrupt with a cleanup request for this LU’s receive session.
System action: SNALINK ends the connection.
Operator response: Check your hardware or VTAM for errors.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: vtamns

EZA5823I  NSEXIT CLEANUP request for send session
Explanation: SNALINK received a VTAM NSEXIT interrupt with a cleanup request for this LU’s send session.
System action: SNALINK ends the connection.
Operator response: Check your hardware or VTAM for errors.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: vtamns

EZA5824E  Zero CONNBLOK ptr in NSEXIT exit
Explanation: SNALINK received a VTAM NSEXIT interrupt with a null connection block pointer.
System action: SNALINK abends.
Operator response: No action is needed.
System programmer response: This error indicates a possible VTAM or TCPIP problem. Tell your VTAM administrator.
Module: SNALINK
Procedure Name: vtamns

EZA5825E  CID in NSEXIT parm list not found
Explanation: SNALINK received a VTAM NSEXIT interrupt for which an associated parameter list could not be found.
System action: SNALINK ignores the interrupt.
Operator response: No action is needed.
System programmer response: This error indicates a possible VTAM or TCPIP code problem. See the VTAM console for more information.
Module: SNALINK
Procedure Name: vtamns

EZA5826I  Sending BIND request for SNA send session
Explanation: SNALINK is trying to establish the connection. The other side should have a DLC path pending.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: dovtopnd

EZA5827E  Error in MODCB NIB for send session. R15 value R0 value
Explanation: SNALINK received a VTAM OPNDST interrupt but encountered an error when processing the OPNDST. An error indication is returned to the caller.
System action: The BIND request is rejected.
Operator response: Tell your VTAM administrator.
System programmer response: This error indicates a possible TCPIP code problem.
Module: SNALINK
Procedure Name: dovtopnd
EZA5828I  Cannot issue OPNDST - Previous OPNDST active

Explanation: SNALINK encountered an error processing a VTAM OPNDST request. The associated request parameter list (RPL) is in use, indicating a previous OPNDST is active.
System action: SNALINK does not process the VTAM OPNDST request.
Operator response: No action is needed.
System programmer response: This error indicates a possible TCPIP code problem.
Module: SNALINK
Procedure Name: dovtopnd

EZA5829I  Accepting DLC path

Explanation: A BIND was received. SNALINK accepts a DLC connection to TCPIP.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: doiucacc

EZA5830E  Error error accepting DLC path

Explanation: SNALINK encountered an error in a DLC ACCEPT request.
System action: SNALINK ends the current connection and returns to its caller.
Operator response: No action is needed.
System programmer response: This error indicates a possible TCPIP code problem.
Module: SNALINK
Procedure Name: Main

EZA5831E  Error error sending on DLC path

Explanation: SNALINK encountered an error sending data on a DLC path.
System action: SNALINK ends the current connection.
Operator response: No action is needed.
System programmer response: This error indicates a possible system problem.
Module: SNALINK
Procedure Name: doiucsnd

EZA5832E  Error error receiving on DLC path

Explanation: SNALINK encountered an error receiving data on a DLC path.
System action: SNALINK ends the current connection.
Operator response: Check that TCPIP is operational.
System programmer response: This error indicates a possible TCPIP code problem.
Module: SNALINK
Procedure Name: doiucrcv
EZA5833E  Error *error* severing DLC path
Explanation:  SNALINK encountered an error severing a DLC path.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  Respond as indicated by the *error* portion of this message.
Module:  SNALINK
Procedure Name:  dosever

EZA5834E  Error *error* in VTAM CLOSE
Explanation:  SNALINK encountered an error closing an ACB.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  Respond as indicated by the *error* portion of this message.
Module:  SNALINK
Procedure Name:  closeacb

EZA5835E  Error in GENCB RPL. R15 value R0 value
Explanation:  SNALINK received an error from a GENCB RPL call.
System action:  SNALINK resumes processing. More errors can result.
Operator response:  No action is needed.
System programmer response:  Check the error indication.
Module:  SNALINK
Procedure Name:  setupcon

EZA5836E  Error in GENCB NIB. R15 value R0 value
Explanation:  SNALINK received an error from a GENCB NIB call.
System action:  SNALINK resumes processing. More errors can result.
Operator response:  No action is needed.
System programmer response:  Check the error indication.
Module:  SNALINK
Procedure Name:  setupcon

EZA5837E  function err. R15 value R0 value RTNCD rc FDBK2 value
Explanation:  SNALINK encountered an error in the indicated function. The associated sense code returned by VTAM is displayed.
System action:  Based on the sense code, TCPIP either retries, ends the session, or ignores the error and continues processing.
Operator response:  No action is needed.
System programmer response:  Tell your VTAM administrator.
Module:  SNALINK
Procedure Name:  prtrpler
Explanation: SNALINK encountered an error in the indicated function. The associated sense code returned by VTAM is displayed.

System action: Based on the sense code, TCPIP either retries, ends the session, or ignores the error and continues processing.

Operator response: No action is needed.

System programmer response: Tell your VTAM administrator.

Module: SNALINK

Procedure Name: prtchker

Explanation: This message lists the sense fields from a SNALINK RPL.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SNALINK

Procedure Name: prtsense

Explanation: This message displays Sense information.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SNALINK

Procedure Name: prtsense

Explanation: ANALYZE returned the specified value.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SNALINK

Procedure Name: analyze

Explanation: The session type, type, invalid. Valid values are: SINGLE, DUAL or blank

System action: SNALINK abends.

Operator response: Check the SNALINK parameters, and correct them as needed. See z/OS Communications Server: IP Configuration Reference for more information.

System programmer response: No action is needed.

Module: SNALINK
Procedure Name: chmod

EZA5843I Using DUAL LU0 sessions
Explanation: This mode is compatible with previous versions of SNALINK.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: chmod

EZA5844I Using SINGLE LU0 sessions
Explanation: This mode is not compatible with previous versions of SNALINK.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: chmod

EZA5845I Got UNBIND for session
Explanation: An UNBIND request was received for a single session.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: scipunbd

EZA5846I Received BIND request for SNA session
Explanation: A BIND request was received for a single session.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: scipfoun

EZA5847I SNA session established
Explanation: A single session was established.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: vtamopnd
EZA5848E  LOSTERM received, reason rc
Explanation: A LOSTERM request was received.
System action: SNALINK ends the connection.
Operator response: Check your hardware or VTAM for problems.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: vtamlost

EZA5849E  NSEXIT CLEANUP request for session
Explanation: A VTAM NSEXIT interrupt with cleanup request was received.
System action: SNALINK ends the connection.
Operator response: Check your hardware or VTAM for problems.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: vtams

EZA5850I  Sending SNA BIND request
Explanation: A connection is being established.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: vtamlgon

EZA5851E  Rejecting logon attempt from id -no DLC found
Explanation: There is no corresponding DLC connection to TCPIP for the indicated ID. No connection is established.
System action: Processing continues.
Operator response: Check that the SNALINK device is running.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: vtamlgon

EZA5852E  Rejecting logon attempt - already have a session with id
Explanation: A BIND request was received for an LU that has already established a connection.
System action: The BIND is not accepted.
Operator response: Tell your VTAM administrator.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: vtamlgon
EZA5853I  Processing LOGON exit

Explanation:  The requested logon is being processed.
System action: A BIND request is sent.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: vtamlgon

EZA5854E  Invalid number of sessions, using default of 6 sessions

Explanation: The maximum session parameter is not valid.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: To avoid this error, correct the maximum session parameter.
Module: SNALINK
Procedure Name: main

EZA5855E  Invalid delay interval, using default of 15 minutes

Explanation: The retry interval parameter is not valid.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: To avoid this error, correct the retry interval parameter.
Module: SNALINK
Procedure Name: main

EZA5856I  REPLY X TO SHUT DOWN

Explanation: SNALINK is shutting down.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: main

EZA5864I  Max Sessions value: Retry Interval value

Explanation: This message displays the values set for the maximum number of sessions and the retry interval being used by SNALINK.
System action: Processing continues.
Operator response: Correct the values if necessary.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: main
**EZA5866W • EZA5869E**

---

**EZA5866W date time {luname} | Command is too long, truncating**

**Explanation:** The operator has entered a MODIFY command that is longer than 254 characters. If the first 254 characters of the command are syntactically correct then the command is executed with no additional messages. Otherwise, additional messages will be generated.

**System action:** Processing continues.

**Operator response:** The command should be reentered as several shorter commands.

**System programmer response:** No action is needed.

**Module:** SNALINK ASSEMBLE

**Procedure Name:** PROCMOD

---

**EZA5867E date time {luname} | Invalid MODIFY sub-command.**

**Explanation:** The operator has entered a MODIFY command with a subcommand which was neither HALT nor PKTTRACE. The command is ignored.

**System action:** Processing continues.

**Operator response:** Specify the MODIFY command with either the HALT or PKTTRACE subcommand.

**System programmer response:** No action is needed.

**Module:** SNALINK ASSEMBLE

**Procedure Name:** PROCMODF

---

**EZA5868W date time {luname} | START CIB not freed, MODIFY Commands restricted**

**Explanation:** An error occurred during the initialization of MODIFY command processing. The command input buffer (CIB) containing the START command was not freed from the task CIB chain. This is an internal error. It will not cause a system problem.

**System action:** SNALINK continues.

**Operator response:** No action is needed.

**System programmer response:** Contact the IBM Software Support Center to report this error. MODIFY commands may result in IEE342I messages from the MVS operating system. See [z/OS MVS System Messages, Vol 7 (IEB-IEE)](z/OS MVS System Messages, Vol 7 (IEB-IEE)) for an explanation of the IEE342I message.

**Module:** SNALINK ASSEMBLE

**Procedure Name:** MAIN

---

**EZA5869E date time {luname} | PKTTRACE Disabled, TCP/IP links not connected**

**Explanation:** The operator has attempted to issue a PKTTRACE subcommand before TCP/IP has connected to SNALINK.

SNALINK receives link information from TCP/IP before establishing VTAM sessions. Packet tracing is enabled when link information has been received from TCP/IP. The PKTTRACE subcommand is ignored.

**System action:** Processing continues.

**Operator response:** Wait for the IUCV connection between TCP/IP and SNALINK to be established and reenter the command.

**System programmer response:** No action is needed.

**Module:** SNALINK ASSEMBLE

**Procedure Name:** PROCMODF
EZA5926I  LU62CFG: Starting Pass value of value

Explanation: The indicated pass number of the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG has just been started. If errors are not detected in earlier passes, the data set is parsed by way of the number of indicated passes.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62INIT
Procedure Name: RLCFG#P1, RLCFG#P2

EZA5927I  LU62CFG: No Errors Detected - Initialization will Continue

Explanation: No errors were detected in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

System action: Initialization continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62INIT
Procedure Name: L62ENTRY

EZA5928I  LU62CFG: Errors Detected - Address Space will Terminate

Explanation: One or more errors were detected during the parsing of the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

System action: The address space shuts down immediately.
Operator response: No action is needed.
System programmer response: See the previous console messages and messages written to the SYSPRINT data set to determine the exact nature of the errors. Correct the errors, and restart the SNALINK LU6.2 interface.
Module: LU62INIT
Procedure Name: L62ENTRY

EZA5929I  Address Space address Already Active - this Address Space will Terminate

Explanation: The indicated address space is already running; each instance of a SNALINK LU6.2 interface should have a unique address space name.

System action: This address space shuts down immediately.
Operator response: No action is needed.
System programmer response: If multiple SNALINK LU6.2 address spaces are required, each one should have a unique name.
Module: LU62INIT
Procedure Name: L62ENTRY

EZA5930I  Errors Detected in VTAM Initialization - Address Space will Terminate

Explanation: One or more errors were detected during the initialization of the interface with the VTAM subsystem.

System action: The address space shuts down immediately.
Operator response: No action is needed.
### EZA5931I • EZA5934I

**System programmer response:** See the previous console messages and messages written to the SYSPRINT data set to determine the exact nature of the errors. If possible, correct the errors, and restart the SNALINK LU6.2 interface. Otherwise, if the previous error messages indicate a potential program logic error, contact the IBM Software Support Center.

**Module:** LU62INIT  
**Procedure Name:** L62ENTRY

---

**EZA5931I** — **Errors Detected in DLC Initialization - Address Space will Terminate**

**Explanation:** One or more errors were detected during the initialization of the DLC interface between the SNALINK LU6.2 address space and the TCPIP address space.

**System action:** The address space shuts down immediately.

**Operator response:** No action is needed.

**System programmer response:** See the previous console messages and messages written to the SYSPRINT data set to determine the exact nature of the errors. If possible, correct the errors, and restart the SNALINK LU6.2 interface. Otherwise, if the previous error messages indicate a potential program logic error, contact the IBM Software Support Center.

**Module:** LU62INIT  
**Procedure Name:** L62ENTRY

---

**EZA5932I** — **Initialization complete - Applid: application TCP/IP: address**

**Explanation:** The initialization of the SNALINK LU6.2 interface has been successfully completed. The indicated application ID is used for VTAM-related communication, and DLC connections are only accepted from the indicated address space.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** LU62VTAM  
**Procedure Name:** VTAMINIT

---

**EZA5933I** — **Link name opened**

**Explanation:** A DLC connection associated with the indicated TCPIP link has been successfully opened. Datagrams to and from destinations associated with the indicated link are passed between the TCPIP address space and the SNALINK LU6.2 address space using the DLC connection.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** LU62IUCV  
**Procedure Name:** IUCVPCON

---

**EZA5934I** — **Establishing connection with name for address**

**Explanation:** An SNA LU type 6.2 connection has been initiated with the indicated remote LU name. This connection is used as the medium through which data to and from the indicated IP address are transferred.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.
Module: LU62IUCV
Procedure Name: IUCVPMES

EZA5935I  Send conversation allocated for address

Explanation: The SNA LU type 6.2 conversation that is used for sending data to the destination node associated with the indicated IP address has been successfully established. IP datagrams addressed to the indicated address are sent to the destination node using the send conversation.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: LU62VTAM
Procedure Name: VTAMALOC

EZA5936I  Receive conversation allocated for address

Explanation: The SNA LU type 6.2 conversation to be used for receiving data from the destination node associated with the indicated IP address has been successfully established. IP datagrams from the indicated IP address are transferred to the local node using the receive conversation.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: LU62VTAM
Procedure Name: VTAMALOC

EZA5937I  Link name closed

Explanation: The DLC connection associated with the indicated TCPIP link has been closed. The SNALINK LU6.2 interface attempts to buffer any datagrams received from destination nodes associated with the indicated link. However, if the link is not reestablished before the buffer space is exhausted, incoming datagrams are discarded. The TCPIP address space is responsible for the reconnection of the DLC link.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: If the SNALINK LU6.2 address space is not shut down, check the reason for the severing of the DLC connection. The TCPIP address space might have been shut down or abended.

Module: LU62IUCV
Procedure Name: IUCVSEVR, IUCVCMES

EZA5938I  Received operator shutdown request

Explanation: A console command requesting the orderly shutdown of the SNALINK LU6.2 interface has been received and is processed immediately.

System action: The SNALINK LU6.2 address space shuts down immediately.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: LU62MAIN
Procedure Name: MAINPROC
EZA5939I  TPEND exit called with reason rc

Explanation: A VTAM shutdown notification was received resulting in the invocation of the TPEND exit routine. The indicated reason code was passed to the exit routine.

System action: The SNALINK LU6.2 address space shuts down immediately.

Operator response: No action is needed.

System programmer response: Determine the cause of the VTAM shutdown notification. For more information about VTAM shutdown notifications see z/OS Communications Server: SNA Programmer's LU 6.2 Reference.

Module: LU62MAIN

Procedure Name: MAINPROC

EZA5940I  TCPIP ADDRESS SPACE NAME SET TO AddressSpaceName

Explanation: The TCPIP address space name to be used by SNALINK LU6.2 has been set to AddressSpaceName. It corresponds to the value of the TCPIPJOBNAME statement found in TCPIP.DATA.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Check that the indicated name is the correct TCPIP address space name to be used by SNALINK LU6.2. If the name is incorrect, specify the correct name as the value of the TCPIP.DATA TCPIPJOBNAME statement and restart the SNALINK LU6.2 application.

Module: LU62INIT

Procedure Name: READTCPD

EZA5950W  LU62CFG: Line number: DEST statement - Blank Connection Start Type, type assumed

Explanation: The indicated line of the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG contains a DEST statement that does not include a specification of when the connection to the destination is to be established. The indicated start type value is assumed. The indicated start type value is used for the destination defined on the indicated line of the configuration data set.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Check that the indicated start type is the required start type value for the destination. If the value is incorrect, correct the SNALINK LU6.2 configuration data set, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

EZA5951W  LU62CFG: Line number: BUFFERS statement - Blank number of Additional Send Buffers, value assumed

Explanation: The indicated line of the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG contains a BUFFERS statement that does not include a specification of the number of additional send buffers to be allocated for each destination. The indicated default value is assumed. The number of additional send buffers allocated for each destination is the indicated number.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Check that the indicated number is the required number of additional send buffers for each destination. If the number is incorrect, correct the SNALINK LU6.2 configuration data set, and restart the SNALINK LU6.2 address space.

Module: LU62INIT
Procedure Name: RLCFG#P1

EZA5952W  LU62CFG: Line number: BUFFERS statement - Blank Send Queue Limit, value assumed
Explanation: The indicated line of the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG contains a BUFFERS statement that does not include a specification of the send queue limit to be enforced for each destination. The indicated default value is assumed.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Check that the indicated number is the required send queue limit to be enforced for each destination. If the number is incorrect, correct the SNALINK LU6.2 configuration data set, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1

EZA5953W  LU62CFG: Line number: LINK statement - Blank Idle Timeout, seconds assumed
Explanation: The indicated line of the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG contains a LINK statement that does not include a specification of the idle timeout to be used for all connections associated with the link. The indicated default number of seconds is assumed. Inactive connections for the current link are closed after the indicated number of seconds of inactivity.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Check that the indicated number of seconds is the required idle timeout value for each destination associated with the link. If the number of seconds is incorrect, correct the SNALINK LU6.2 configuration data set, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

EZA5954W  NO TCPIP.DATA FILE ACCESSED - ADDRESS SPACE NAME TCPIP ASSUMED
Explanation: The TCPIP address space name to be used by SNALINK LU6.2 has been set to TCPIP. This is the default value. It has been assigned because no TCPIPUSERID or TCPIPJOBNAME TCPIP.DATA statement was found.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: If the name is incorrect, specify the correct name as the value of the TCPIP.DATA TCPIPJOBNAME statement. Also check that the SYSTCPD DD statement for the SNALINK LU6.2 procedure has the correct TCPIP.DATA file specified. After making any changes restart the SNALINK LU6.2 application.

Module: LU62INIT

Procedure Name: READTCPD

EZA5959I  CANCEL Command Accepted - Address Space will Abend
Explanation: A CANCEL subcommand was entered from an operator console (using the MODIFY console command).

System action: The SNALINK LU6.2 address space abends immediately. If the SYSUDUMP ddname is defined, a dump is produced.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: LU62MDFY
Procedure Name: MODIFY

EZA5960I  HALT Command Accepted - Address Space will Shutdown
Explanation: A HALT subcommand was entered from an operator console (using the MODIFY console command).
System action: The SNALINK LU6.2 shuts down immediately.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: MODIFY

EZA5961I  Establishment of Connection to IP Address address Initiated
Explanation: The establishment of a connection to the destination node identified by the indicated IP address has been requested by a RESTART subcommand entered from an operator console (using the MODIFY console command).
System action: A connection to the indicated IP address is initiated.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: STRTCNN

EZA5962I  Drop of Connection to IP Address address Initiated
Explanation: The termination of a connection with the destination node identified by the indicated IP address has been requested by a DROP subcommand entered from an operator console (using the MODIFY console command).
System action: The connection with the indicated IP address is closed.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: DROPCNN

EZA5963I  TRACE Command Completed
Explanation: The trace level specified in a TRACE subcommand entered from an operator console (using the MODIFY console command) has been set for the specified destinations. The new trace levels take effect immediately.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: TRACE

EZA5964I  address (Disconnected)
Explanation: This message is output on the operator console in response to a LIST subcommand (entered using the MODIFY console command). It indicates that no connection with the indicated IP address has been established during the current invocation of the SNALINK LU6.2 address space.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: LISTCONN

EZA5965I  address (Disconnected on date at time)

Explanation: This message is output on the operator console in response to a LIST subcommand (entered using the MODIFY console command). It indicates that no connection with the indicated IP address currently exists, but a connection was disconnected at the indicated time on the indicated date. The date is in Julian date format (yy.ddd), and the time is in standard 24-hour clock format (hh:mm:ss).

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: LISTCONN

EZA5966I  address (Connected on date at time)

Explanation: This message is output on the operator console in response to a LIST subcommand (entered using the MODIFY console command). It indicates that a connection with the indicated IP address currently exists; it was established at the indicated time on the indicated date. The date is in Julian date format (yy.ddd), and the time is in standard 24-hour clock format (hh:mm:ss). Further details of the status of this connection are output on the console (using a multiline WTO).

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: LISTCONN

EZA5967I  Connected via: type Trace Level: level

Explanation: This message is output on the operator console following message EZA5966I to provide further details of the connection identified in the EZA5966I message.

The indicated type describes why the connection was established:
• Data. Connection established either because a datagram was sent or received to or from the destination node, or an INIT option was processed by the destination node;
• Init. Connection established because of the INIT option in the configuration data set;
• Restart. Connection established because of the RESTART subcommand entered on console (using MODIFY console command).

The indicated trace level indicates the current level of tracing in force for the connection (“On,” “Off,” or “Detail”). Further details of the status of this connection are output on the console (using a multiline WTO).

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: LISTCONN
EZA5968I  SEND- Status: status Packets Out: value

Explanation: This message is output on the operator console following messages EZA5966I and EZA5967I to provide further details of the connection identified in the EZA5966I message.

The indicated status value describes the current status of the send conversation with the conversation node:
- Allocated. Conversation is allocated and ready to send data.
- Not Allocated. Conversation is either yet to be started, or has just been deallocated.
- Pending Alloc. Allocation of conversation has been initiated but not yet completed.
- Pending Dealloc. Deallocation of the conversation has been initiated but not yet completed.

The indicated value describes the number of datagrams sent to the destination node during the period that the current connection has existed. Further details of the status of this connection are output on the console (using a multiline WTO).

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: LISTCONN

EZA5969I  RECV- Status: status Packets In: value

Explanation: This message is output on the operator console following messages EZA5966I, EZA5967I and EZA5968I to provide further details of the connection identified in the EZA5966I message.

The indicated status describes the current status of the receive conversation with the conversation node:
- Allocated. Conversation is allocated and ready to receive data.
- Not Allocated. Conversation is either yet to be started, or has just been deallocated.
- Pending Alloc. Allocation of conversation has been initiated but not yet completed.
- Pending Dealloc. Deallocation of the conversation has been initiated but not yet completed.

The indicated value describes the number of datagrams received from the destination node during the period that the current connection has existed. This is the last line in the multiline message for a connected destination.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: LISTCONN

EZA5970I  LIST Accepted; Range = Single Connection

Explanation: A LIST subcommand requesting details of the connection status for a single destination has been entered from an operator console (using the MODIFY console command). Subsequent messages are written to the operator console showing the connection status for the specified destination.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: LISTCONN
EZA5971I LIST Accepted; Range = All Connections

Explanation: A LIST subcommand requesting details of the connection status for all destinations has been entered from an operator console (using the MODIFY console command). Subsequent messages are written to the operator console showing the connection status for each of the destinations defined in the SNALINK LU6.2 configuration data set.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: LISTCONN

EZA5972I LIST Accepted; Range = All Active Connections

Explanation: A LIST subcommand requesting details of the connection status for all currently connected destinations has been entered from an operator console (using the MODIFY console command). Subsequent messages are written to the operator console showing the connection status for each of the destinations defined in the SNALINK LU6.2 configuration data set that have currently established connections.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: LISTCONN

EZA5973I LIST Completed

Explanation: The connection status information requested using the LIST subcommand has been written to the operator console.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: LISTCONN

EZA5984I OLU= name, DLU= name, IP address= address

Explanation: This message is written to the SYSPRINT data set when tracing is enabled to identify the source and destination LU names relating to the action in the preceding message. It can appear following either EZA5986I, EZA5987I, EZA5988I, or EZA5989I. The indicated OLU name is the originating LU name of the allocation, deallocation, send, or receive identified by the preceding message. The indicated DLU name is the destination LU name.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62VTAM
Procedure Name: VTAMALOC, VTAMDALC, VTAMSEND, VTAMRECV
EZA5985I  LU= name, Linkname= name, IP address = address

Explanation: This message is written to the SYSPRINT data set when tracing is enabled to identify the LU name and link name relating to the action in the preceding message. It can appear following either EZA5990I, EZA5991I, EZA5992I, EZA5993I, or EZA5994I. The indicated LU name is the LU name associated with the action described by the preceding message. The indicated link name is the TCPIP link name.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62VTAM
Procedure Name: VTAMRECV, ADDVTSND, DOVTALOC

EZA5986I  VTAM conversation allocated; Convid= id, SID= id

Explanation: This message is written to the SYSPRINT data set when tracing is enabled and a conversation is allocated. The indicated conversation and session IDs are the conversation and session identifiers returned from VTAM. Message EZA5984I appears following this message.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62VTAM
Procedure Name: VTAMALOC

EZA5987I  VTAM conversation deallocated; Convid= id, SID= id

Explanation: This message is written to the SYSPRINT data set when tracing is enabled and a conversation is deallocated. The indicated conversation and session IDs are the conversation and session identifiers returned from VTAM. Message EZA5984I appears following this message.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62VTAM
Procedure Name: VTAMDALC

EZA5988I  VTAM sent logical record; Convid= id, SID= id, bytes= length

Explanation: This message is written to the SYSPRINT data set when tracing is enabled and a logical record is passed to VTAM for transmission to a destination node. The indicated conversation and session IDs are the conversation and session identifiers returned from VTAM. The indicated length is the length of the VTAM logical record, which includes a (2-byte) GDS ID and a (2-byte) length field as well as the IP datagram. Message EZA5984I is written following this message.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62VTAM
Procedure Name: VTAMSEND
EZA5989I VTAM received logical record; Convid= id, SID= id, bytes= length

Explanation: This message is written to the SYSPRINT data set when tracing is enabled and a logical record was received from VTAM. The indicated conversation and session IDs are the conversation and session identifiers returned from VTAM. The indicated length is the length of the VTAM logical record, which includes a (2-byte) GDS ID and a (2-byte) length field as well as the IP datagram. Message EZA5984I appears following this message.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62VTAM
Procedure Name: VTAMRECV

EZA5990I IP datagram packed into message, bytes= length

Explanation: This message is written to the SYSPRINT data set when detailed tracing is enabled and an IP datagram, which was extracted from a logical record received from VTAM, was loaded into a DLC message buffer. The DLC message buffer is sent to the TCPIP address space (using DLC) once the buffer is filled or there are no more records to receive from VTAM. The indicated length is the length of the IP datagram loaded into the buffer. Message EZA5985I appears following this message.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62VTAM
Procedure Name: VTAMRECV

EZA5991I IP datagram added to the pending message queue, bytes= length

Explanation: This message is written to the SYSPRINT data set when detailed tracing is enabled and an IP datagram, which was extracted from a logical record received from VTAM, was loaded into the VTAM-pending message queue. Datagrams are only loaded into the VTAM-pending message queue if the DLC message buffer is either full or currently being sent to the TCPIP address space. Entries in the queue are placed in the DLC message buffer (and subsequently sent to TCPIP) once the current buffer has been successfully sent to the TCPIP address space. The indicated length is the length of the IP datagram placed on the queue. Message EZA5985I appears following this message.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62VTAM
Procedure Name: VTAMRECV

EZA5992I IP datagram added to the VTAM send queue, bytes= length, queue count= number

Explanation: This message is written to the SYSPRINT data set when detailed tracing is enabled and an IP datagram, which was sent to destination nodes are placed on the VTAM send queue. All datagrams to be sent to destination nodes are placed on the VTAM send queue. From there they are extracted and passed to VTAM for transmission. The indicated number is the number of entries on the VTAM send queue after the new entry has been added. The indicated length is the length of the IP datagram placed on the queue. Message EZA5985I appears following this message.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.

**EZA5996I**  
**Number of IP packets received on address=value**

**Explanation:** This message is written to the SYSPRINT data set when detailed tracing is enabled and an IP datagram has just been received, using VTAM, from the destination node associated with the indicated IP address. The indicated number is the number of IP datagrams received from the indicated IP address during the current invocation of the SNALINK LU6.2 address space, including the datagram that triggered this message.
System action: Processing continues. One or more lines of message EZA5999I appear following this message to show the contents of the datagram just received.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: LU62VTAM

Procedure Name: VTAMRECV

EZA5997I Connection address will timeout in seconds seconds

Explanation: This message is written to the SYSPRINT data set when detailed tracing is enabled and the inactivity timeout value for the connection associated with the indicated IP address has just been recalculated. The indicated number of seconds is the time until the connection is due to timeout unless the connection is used within that period. If the connection with the indicated IP address is not used within the indicated number of seconds, the connection is closed.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: LU62VTAM

Procedure Name: RESTIMER

EZA5998I VTAM connection has reached timeout period and expired

Explanation: This message is written to the SYSPRINT data set when detailed tracing is enabled and the inactivity timeout period for a connection has expired. Message EZA5985I is written to the SYSPRINT data set following this message to identify the connection involved. The connection identified in message EZA5985I, which follows this message, is closed.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: LU62VTAM

Procedure Name: RESTIMER

EZA5999I datagram

Explanation: This message is written to the SYSPRINT data set when detailed tracing is enabled. It contains a hexadecimal dump of the contents of an IP datagram and is repeated until the entire datagram has been dumped. Each of these messages shows the hexadecimal representation of 40 bytes of data from the datagram. Trailing nulls (X'00') are used to fill the last message for a datagram if required. This message is repeated until the contents of the entire datagram have been written to SYSPRINT.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Chapter 7. EZA6xxx messages

EZA6009W Conversations for address terminated

Explanation: The send and receive conversations comprising the connection to the destination node associated with the indicated IP address have been closed. The connection was closed for one of the following reasons:

- An allocation failure occurred.
- One of the conversations was closed because of a VTAM error or command.
- The connection was closed using a DROP subcommand entered from an operator console (using the MODIFY console command).
- The inactivity timeout period for the connection expired.
- The destination node closed one or both conversations.

Internal data structures are reinitialized to allow the connection to be restarted when required.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: If the termination was caused by an error, see the preceding messages in the SYSPRINT data set to determine the exact nature of the problem.

Module: LU62VTAM

Procedure Name: CLEARCON

EZA6010E Receive error for address, what received= value, length= length

Explanation: An incomplete logical record was received from the destination node associated with the indicated IP address. The indicated value is the what received field returned from VTAM. The indicated length is the number of bytes received. This error can be caused by the SNALINK LU6.2 transaction program on the destination node that does not conform to the protocol defined in the relevant RFC.

System action: The connection is closed. Processing continues.

Operator response: No action is needed.

System programmer response: See the z/OS Communications Server: SNA Programmer's LU 6.2 Reference for an explanation of the received value. If possible, correct the error; otherwise, contact the IBM Software Support Center.

Module: LU62VTAM

Procedure Name: VTAMRECV

EZA6011E Unable to allocate send conversation for address

Explanation: The send conversation could not be allocated with the destination node associated with the indicated IP address. Preceding messages in the SYSPRINT data set indicate the exact nature of the problem.

System action: Processing continues; the connection is closed.

Operator response: No action is needed.

System programmer response: See the preceding messages to determine the nature of the problem.

Module: LU62VTAM

Procedure Name: VTAMALOC
EZA6012E  Unable to flush the FMH5 for address

Explanation:  The send conversation could not be allocated with the destination node associated with the indicated IP address. The Function Management Header (FMH5) could not be flushed. Messages EZA6029E to EZA6032E are also written to the SYSPRINT data set to describe the exact nature of the problem.

System action:  Processing continues; the connection is closed.

Operator response:  No action is needed.

System programmer response:  See messages EZA6029E to EZA6032E in the SYSPRINT data set to determine the nature of the problem.

Module:  LU62VTAM

Procedure Name:  VTAMALOC

EZA6013W  Unable to deallocate conversation for address

Explanation:  A send and receive conversation with the destination node associated with the indicated IP address could not be deallocated. Messages EZA6029E to EZA6032E are also written to the SYSPRINT data set to describe the exact nature of the problem.

System action:  Processing continues; the connection is closed.

Operator response:  No action is needed.

System programmer response:  See messages EZA6029E to EZA6032E in the SYSPRINT data set to determine the nature of the problem.

Module:  LU62VTAM

Procedure Name:  VTAMDALC

EZA6014W  Rejecting receive conversation allocation attempt for address

Explanation:  An attempt to allocate a receive conversation with the destination node associated with the indicated IP address was rejected.

System action:  Processing continues; the connection is closed.

Operator response:  No action is needed.

System programmer response:  See the preceding messages in the SYSPRINT data set to determine the nature of the problem.

Module:  LU62VTAM

Procedure Name:  VTAMATTN

EZA6015W  A conversation allocation attempt has been lost

Explanation:  A conversation allocation attempt has been unsuccessful because the Function Management Header (FMH5) was not received correctly. Messages EZA6029E to EZA6032E are also written to the SYSPRINT data set to describe the exact nature of the problem.

System action:  Processing continues; the connection is closed.

Operator response:  No action is needed.

System programmer response:  See messages EZA6029E to EZA6032E in the SYSPRINT data set to determine the nature of the problem.

Module:  LU62VTAM

Procedure Name:  VTAMATTN
EZA6016W  Not authorized to accept conversation allocation attempt from lu.

Explanation: A conversation allocation attempt was received from the indicated logical unit, but the logical unit is not defined in the SNALINK LU6.2 configuration data set.

System action: Processing continues; the conversation allocation attempt is rejected.

Operator response: No action is needed.

System programmer response: Correct the SNALINK LU6.2 configuration data set and restart the SNALINK LU6.2 address space.

Module: LU62VTAM

Procedure Name: VTAMATTN

EZA6017W  VTAM event queue full, event lost

Explanation: The VTAM event queue has overflowed, and an event has been lost.

System action: The SNALINK LU6.2 address space attempts to continue; however, more problems might occur with VTAM interactions.

Operator response: No action is needed.

System programmer response: Contact the IBM Software Support Center.

Module: LU62VTAM

Procedure Name: PUTVTAM

EZA6018W  Unable to reject conversation for address

Explanation: An error was encountered while attempting to reject a receive conversation allocation attempt from the destination node associated with the indicated IP address. Messages EZA6029E to EZA6032E are also written to the SYSPRINT data set to describe the exact nature of the problem.

System action: Processing continues; the connection is closed.

Operator response: No action is needed.

System programmer response: See messages EZA6029E to EZA6032E in the SYSPRINT data set to determine the nature of the problem.

Module: LU62VTAM

Procedure Name: VTAMATTN

EZA6019W  Unable to find destination entry for lu; partner for lost conversation

Explanation: A loss notification was received from VTAM for a conversation with the indicated logical unit; however, the logical unit is not defined in the SNALINK LU6.2 configuration data set. The loss notification is ignored.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Potential problem in either VTAM or SNALINK LU6.2. Contact the IBM Software Support Center.

Module: LU62VTAM

Procedure Name: VTAMATTN
EZA6020W  *Lost send conversation for address*

**Explanation:** A loss notification has been received from VTAM for the send conversation for the connection with the destination node associated with the indicated IP address.

**System action:** Processing continues; the connection is closed.

**Operator response:** No action is needed.

**System programmer response:** See the VTAM diagnostic messages to determine the reason for the conversation loss.

**Module:** LU62VTAM

**Procedure Name:** VTAMATTN

---

EZA6021W  *Lost receive conversation for address*

**Explanation:** A loss notification has been received from VTAM for the receive conversation for the connection with the destination node associated with the indicated IP address.

**System action:** Processing continues; the connection is closed.

**Operator response:** No action is needed.

**System programmer response:** See the diagnostic messages output by the SNALINK LU6.2 transaction program on the destination node to determine the reason for the conversation loss.

**Module:** LU62VTAM

**Procedure Name:** VTAMATTN

---

EZA6022W  *Closing conversations for address*

**Explanation:** The connection to the destination node associated with the indicated IP address is being closed because of an error condition encountered during processing. Preceding error messages in the SYSPRINT data set describe the exact nature of the problem.

**System action:** Processing continues; the connection is closed.

**Operator response:** No action is needed.

**System programmer response:** See the preceding messages in the SYSPRINT data set to determine the nature of the problem.

**Module:** LU62VTAM

**Procedure Name:** VTAMSEND, DOVTSEND, VTAMRECV, DOVTRECV

---

EZA6023W  *Unable to complete CNOS on LU lu for address*

**Explanation:** The CNOS macro invocation for the indicated logical unit was unsuccessful. The CNOS macro is the first VTAM macro executed in the conversation allocation process. This error condition occurs when the indicated LU name is either incorrect or unreachable. Messages EZA6029E to EZA6032E are also written to the SYSPRINT data set to describe the exact nature of the problem.

**System action:** Processing continues; the connection is closed.

**Operator response:** No action is needed.

**System programmer response:** See messages EZA6029E to EZA6032E in the SYSPRINT data set to determine the nature of the problem.

**Module:** LU62VTAM

**Procedure Name:** DOVTALOC
EZA6024E  DLC event queue full, event lost
Explanation:  The DLC event queue has overflowed, and an event has been lost.
System action:  The SNALINK LU6.2 address space abends with 3C5 reason 105.
Operator response:  No action is needed.
System programmer response:  Contact the IBM Software Support Center.
Module:  LU62IUCV
Procedure Name:  PUTIUCV

EZA6025E  Unable to allocate receive conversation for address
Explanation:  The allocation of the receive conversation with the destination node associated with the indicated IP address was unsuccessful. Preceding messages in the SYSPRINT data set indicate the exact nature of the problem.
System action:  Processing continues; the connection is closed.
Operator response:  No action is needed.
System programmer response:  See the preceding messages to determine the nature of the problem.
Module:  LU62VTAM
Procedure Name:  VTAMALOC

EZA6026E  Unable to initiate conversation allocation with lu for address
Explanation:  A conversation allocation request for the indicated logical unit was rejected by VTAM. This can be because of incorrect LU or mode names, or corrupted request blocks, control blocks, or both. Messages EZA6029E to EZA6032E are also written to the SYSPRINT data set to describe the exact nature of the problem.
System action:  Processing continues; the connection is closed.
Operator response:  No action is needed.
System programmer response:  See messages EZA6029E to EZA6032E in the SYSPRINT data set to determine the nature of the problem.
Module:  LU62VTAM
Procedure Name:  DOVTALOC

EZA6027E  Error rc in VTAM OPEN
Explanation:  An error occurred in opening the Access Method Control Block (ACB) defined in the VTAM statement in the SNALINK LU6.2 configuration data set. The indicated return code is the ACB error value returned by VTAM.
System action:  The SNALINK LU6.2 address space shuts down immediately.
Operator response:  No action is needed.
System programmer response:  If the return code = 5A, then verify that the VTAM APPL on the VTAM statement in TCPIPL62.TCPIPL62.CONFIG data set is defined in your VTAM list and has been activated. If other return codes are issued with this message, see z/OS Communications Server: SNA Programmer's LU 6.2 Reference to find the meaning of the indicated ACB error value returned by VTAM.
Module:  LU62VTAM
Procedure Name:  VTAMINIT

EZA6028E  Error flag in VTAM CLOSE
Explanation:  An error occurred in closing the Access Method Control Block (ACB) defined in the VTAM statement in the SNALINK LU6.2 configuration data set. The indicated flag is the ACB error flag value returned by VTAM.
System action:  The SNALINK LU6.2 address space shuts down immediately.
EZA6029E  •  EZA6031E

Operator response: No action is needed.

System programmer response: See the VTAM diagnostic documentation to determine the meaning of the indicated flag.

Module: LU62VTAM

Procedure Name: CLOSEACB

---

**EZA6029E**  
**command err. R15 value R0 value RTNCD rc FDBK2 rc**

**Explanation:** The indicated VTAM APPC command was unsuccessful. The indicated value for R15 is the value returned using general register 15. The indicated value for R0 is the value returned using general register 0. The indicated return code for RTNCD is the return code returned from the APPC command. The indicated return code for FDBK2 is the value of the feedback return code returned using the RPL.

**System action:** Processing continues; messages EZA6030E to EZA6032E are also written to the SYSPRINT data set following this message to further describe the error condition encountered.

**Operator response:** No action is needed.

**System programmer response:** See [z/OS Communications Server: SNA Programmer’s LU 6.2 Reference](#) for a description of the meanings of each of the values reported in this message.

Module: LU62VTAM

Procedure Name: PRTRPXER

---

**EZA6030E**  
**command err. RCPRI= rc, RCSEC= rc**

**Explanation:** The indicated VTAM APPC command was unsuccessful. This message follows message EZA6029E to further describe the error encountered. The indicated return code for RCPRI is the value returned from VTAM using the primary return code field of the RPL. The indicated return code for RCSEC is the secondary return code value. Messages EZA6031E and EZA6032E are also written to the SYSPRINT data set following this message to further describe the error condition encountered.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** See [z/OS Communications Server: SNA Programmer’s LU 6.2 Reference](#) for a description of the meanings of the primary and secondary return code values reported in this message.

Module: LU62VTAM

Procedure Name: PRTRPXER

---

**EZA6031E**  
**command err. Sense code received: value**

**Explanation:** The indicated VTAM APPC command was unsuccessful. This message follows messages EZA6029E and EZA6030E to further describe the error encountered. The indicated sense code is the sense code value returned from VTAM. Message EZA6032E is also written to the SYSPRINT data set following this message to further describe the error condition encountered.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** See [z/OS Communications Server: SNA Programmer’s LU 6.2 Reference](#) for a description of the sense code values.

Module: LU62VTAM

Procedure Name: PRTSENSE
**EZA6032E**  command err. Sense code specified: value

**Explanation:** The indicated VTAM APPC command was unsuccessful. This message follows messages EZA6029E to EZA6031E to further describe the error encountered. The indicated sense code is the sense code value specified on the VTAM macro invocation that was unsuccessful.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** See [z/OS Communications Server: SNA Programmer’s LU 6.2 Reference](http://www.ibm.com) for a description of the sense code values.

**Module:** LU62VTAM

**Procedure Name:** PRTSENSE

**EZA6046E**  Rejecting DLC path for link, not configured

**Explanation:** A DLC path allocation request has been received from the TCPIP address space for the indicated link, but the link is not defined by a LINK statement in the SNALINK LU6.2 configuration data set. The DLC path allocation request is rejected.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Correct the hlq.PROFILE.TCPIP data set or the SNALINK LU6.2 configuration data set, so that the link names used in each data set correspond exactly.

**Module:** LU62IUCV

**Procedure Name:** IUCVPCON

**EZA6047E**  Rejecting DLC path for link, bad entry setup

**Explanation:** A DLC path allocation request has been received from the TCPIP address space for the indicated link, but an error was encountered in creating the corresponding DLC table entry. The DLC path allocation request is rejected. The error detected was either that the SNALINK LU6.2 address space has insufficient free storage to allocate the buffers required for the link to be established, or an active entry already exists in the DLC table data structure. A preceding message in the SYSPRINT data set identifies the exact nature of the error.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** If insufficient storage caused the error, increase the REGION size for the SNALINK LU6.2 address space, and restart the address space.

**Module:** LU62IUCV

**Procedure Name:** IUCVPCON

**EZA6048E**  Error rc accepting DLC path

**Explanation:** An error was encountered during the establishment of a DLC path between the TCPIP address space and the SNALINK LU6.2 address space. The DLC path allocation request is rejected. The indicated return code is the code returned using register 15 from the accept attempt.

**System action:** Processing continues.

**Operator response:** Check that the TCPIP address space is active.

**System programmer response:** Check the TCPIP log data set for an indication of the nature of the error. Attempt to retry the path establishment by restarting the SNALINK LU6.2 device from within TCPIP. If the error persists, contact the IBM Software Support Center.

**Module:** LU62IUCV

**Procedure Name:** DOIUACCP
EZA6049E  Error rc sending on DLC path

**Explanation:** An error was encountered while sending data using a DLC path to the TCPIP address space. The DLC path is severed. The indicated return code is the code returned using register 15 from the send attempt.

**System action:** Processing continues.

**Operator response:** Check that the TCPIP address space is active.

**System programmer response:** Check the TCPIP log data set for an indication of the nature of the error. Attempt to reestablish the IUCV path by restarting the SNALINK LU6.2 device from within TCPIP. If the error persists, contact the IBM Software Support Center.

**Module:** LU62IUCV

**Procedure Name:** DOIUSEND

---

EZA6050E  Error rc receiving on DLC path

**Explanation:** An error was encountered while receiving data using a DLC path from the TCPIP address space. The DLC path is severed. The indicated return code is the code returned using register 15 from the receive attempt.

**System action:** Processing continues.

**Operator response:** Check that the TCPIP address space is active.

**System programmer response:** Check the TCPIP log data set for an indication of the nature of the error. Attempt to reestablish the IUCV path by restarting the SNALINK LU6.2 device from within TCPIP. If the error persists, contact the IBM Software Support Center.

**Module:** LU62IUCV

**Procedure Name:** DOIURECV

---

EZA6051E  Error rc severing DLC path

**Explanation:** An error was encountered while severing a DLC path between the TCPIP address space and the SNALINK LU6.2 address space. The indicated return code is the code returned using register 15 from the sever attempt.

**System action:** Processing continues as though the DLC path was successfully severed.

**Operator response:** Check that the TCPIP address space is active.

**System programmer response:** Check the TCPIP log data set for an indication of the nature of the error. If problems are encountered in the subsequent reestablishment of the path, shut down, and restart the SNALINK LU6.2 address space. If the error persists, contact the IBM Software Support Center.

**Module:** LU62IUCV

**Procedure Name:** DOIUSEVR

---

EZA6052E  Error rc in DLC initialization

**Explanation:** An error was encountered during the DLC initialization. The indicated return code is the code returned using register 15 from the initialization routine.

**System action:** The SNALINK LU6.2 address space shuts down immediately.

**Operator response:** Check that the TCPIP address space is active.

**System programmer response:** Check the TCPIP log data set for an indication of the nature of the error. Restart the SNALINK LU6.2 address space. If the error persists, contact the IBM Software Support Center.

**Module:** LU62IUCV

**Procedure Name:** IUCVINIT
EZA6059W  Error encountered in processing name - dataset closed
Explanation:  An I/O error was detected during the processing of the data set defined by the indicated ddname. This message is accompanied by message EZA6060W, which describes the nature of the error detected.
System action:  Message EZA6060W is output to indicate the nature of the error detected, and the data set is closed.
Operator response:  No action is needed.
System programmer response:  Locate the accompanying message EZA6060W to identify the nature of the error.
Module:  LU62IO
Procedure Name:  OPENOUT, OPENINP, PUTDS, GETDS, CLOSEDS

EZA6060W  I/O_error_message
Explanation:  This message accompanies message EZA6059W; the indicated error message describes the nature of the I/O error detected.
System action:  See message EZA6059W.
Operator response:  No action is needed.
System programmer response:  The indicated error message was constructed using the SYNADAF system macro. See the documentation for this macro to determine the exact nature of the I/O error encountered. Correct the error, and restart the SNALINK LU6.2 address space.
Module:  LU62IO
Procedure Name:  OPENOUT, OPENINP, PUTDS, GETDS, CLOSEDS

EZA6061W  Abend code-rc trapped in operation for name - dataset closed
Explanation:  An abend condition was encountered during the running of the indicated operation on the data set defined by the indicated ddname. The abend was trapped and the address space allowed to continue.
System action:  Processing continues; the data set is closed by the system.
Operator response:  No action is needed.
System programmer response:  Determine the nature of the abend condition using the indicated Abend code and reason code values, correct the problem, and restart the SNALINK LU6.2 address space.
Module:  LU62IO
Procedure Name:  OPENOUT, OPENINP, PUTDS, GETDS, CLOSEDS

EZA6062W  Error in open of name - output to dataset will be suppressed
Explanation:  An error was encountered during the opening of the output data set defined by the indicated ddname. All attempts to write to the data set are suppressed.
System action:  Processing continues.
Operator response:  No action is needed.
System programmer response:  See previous error messages to determine the nature of the problem, correct the problem, and restart the SNALINK LU6.2 address space.
Module:  LU62INIT
Procedure Name:  L62ENTRY

EZA6063W  Error in open of name - no data will be read
Explanation:  An error was encountered during the opening of the input data set defined by the indicated ddname.
System action:  Processing continues as though the input data set was empty.
Operator response:  No action is needed.
System programmer response: See previous error messages to determine the nature of the problem, correct the problem, and restart the SNALINK LU6.2 address space.

Module: LU62INIT
Procedure Name: L62ENTRY

---

**EZA6064W** Record Format of *name* must be either F or V - dataset closed

**Explanation:** An unexpected record format was encountered during the open of the input data set defined by the indicated ddname. Only fixed- or variable-length record formats are supported.

**System action:** Processing continues as though the input data set was empty.

**Operator response:** No action is needed.

**System programmer response:** Correct the record format of the data set, and restart the SNALINK LU6.2 address space.

Module: LU62IO
Procedure Name: GETDS

---

**EZA6065W** Error in read of *name* - dataset closed

**Explanation:** An error was encountered during a read operation on the data set defined by the indicated ddname.

**System action:** Processing continues as though an end-of-file condition was encountered.

**Operator response:** No action is needed.

**System programmer response:** See previous error messages to determine the nature of the problem, correct the problem, and restart the SNALINK LU6.2 address space.

Module: LU62INIT
Procedure Name: READTCPD, RLCFG#P1, RLCFG#P2

---

**EZA6074E** MODIFY sub-command missing

**Explanation:** A MODIFY command was entered for the SNALINK LU6.2 address space from an operator console, but no subcommand was specified. The command is ignored.

**System action:** Processing continues.

**Operator response:** Enter the MODIFY command in the correct format.

**System programmer response:** No action is needed.

Module: LU62MDFY
Procedure Name: MODIFY

---

**EZA6075E** Invalid MODIFY sub-command

**Explanation:** A MODIFY command was entered for the SNALINK LU6.2 address space from an operator console, but the subcommand specified was not recognized by the SNALINK LU6.2 address space. The command is ignored.

**System action:** Processing continues.

**Operator response:** Enter the MODIFY command in the correct format.

**System programmer response:** No action is needed.

Module: LU62MDFY
Procedure Name: MODIFY

---

424 z/OS V1R11.0 Comm Svr: IP Messages Volume 1 (EZA)
EZA6076W  DROP: No Current Connection to IP Address address
Explanation: A DROP subcommand, which included the indicated IP address in the specified address range, was entered from an operator console (using the MODIFY console command), but there was no current connection to that destination. The rest of the connections in the address range are closed.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: DROPCONN

EZA6077W  RESTART: Connection to IP Address address Already Established
Explanation: A RESTART subcommand, which included the indicated IP address in the specified address range, was entered from an operator console (using the MODIFY console command), but there was already a connection established with that destination. Connections are established with the rest of the destinations in the address range.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: STRTCONN

EZA6078E  DROP: IP/LU/ALL Expected after DROP
Explanation: The syntax of a DROP subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.
System action: Processing continues.
Operator response: Enter the command using the correct syntax.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: DROP

EZA6079E  command: ‘=’ Expected after IP
Explanation: The syntax of the indicated subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.
System action: Processing continues.
Operator response: Enter the command using the correct syntax.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: DROP, LIST, RESTART

EZA6080E  command: IP Address Expected after ‘IP=’
Explanation: The syntax of the indicated subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.
System action: Processing continues.
Operator response: Enter the command using the correct syntax.
**EZA6081E • EZA6084E**

**System programmer response:** No action is needed.
**Module:** LU62MDFY
**Procedure Name:** DROP, LIST, RESTART

---

**EZA6081E command: Invalid Format for a fully qualified IP Address**

**Explanation:** The IP address contained in the indicated subcommand entered from an operator console (using the MODIFY console command) was not in the required format. The IP address should be in the correct dotted-decimal format for a network node (for example, 192.9.207.100). The command is ignored.

**System action:** Processing continues.
**Operator response:** Enter the command using the correct syntax.
**System programmer response:** No action is needed.
**Module:** LU62MDFY
**Procedure Name:** DROP, LIST, RESTART

---

**EZA6082E command: IP Address Not Defined in Configuration Dataset**

**Explanation:** The IP address contained in the indicated subcommand entered from an operator console (using the MODIFY console command) is not defined as a destination address in the SNALINK LU6.2 configuration data set. The command is ignored.

**System action:** Processing continues.
**Operator response:** Enter the command using a valid IP address.
**System programmer response:** No action is needed.
**Module:** LU62MDFY
**Procedure Name:** DROP, LIST, RESTART

---

**EZA6083E command: ‘=’ Expected after LU**

**Explanation:** The syntax of the indicated subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

**System action:** Processing continues.
**Operator response:** Enter the command using the correct syntax.
**System programmer response:** No action is needed.
**Module:** LU62MDFY
**Procedure Name:** DROP, LIST, RESTART

---

**EZA6084E command: LU Name Expected after ‘LU=’**

**Explanation:** The syntax of the indicated subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

**System action:** Processing continues.
**Operator response:** Enter the command using the correct syntax.
**System programmer response:** No action is needed.
**Module:** LU62MDFY
**Procedure Name:** DROP, LIST, RESTART
**EZA6085E**  command: **Invalid Format for LU Name**

**Explanation:** The LU name contained in the indicated subcommand entered from an operator console (using the MODIFY console command) was longer than 8 characters. The command is ignored.

**System action:** Processing continues.

**Operator response:** Enter the command using the correct syntax.

**System programmer response:** No action is needed.

**Module:** LU62MDFY

**Procedure Name:** DROP, LIST, RESTART

---

**EZA6086E**  command: **LU Name Not Defined in Configuration Dataset**

**Explanation:** The LU name contained in the indicated subcommand entered from an operator console (using the MODIFY console command) is not defined in the SNALINK LU6.2 configuration data set. The command is ignored.

**System action:** Processing continues.

**Operator response:** Enter the command using a valid LU name.

**System programmer response:** No action is needed.

**Module:** LU62MDFY

**Procedure Name:** DROP, LIST, RESTART

---

**EZA6087E**  **RESTART:** **Invalid Range Specified - IP,LU,INIT or ALL expected**

**Explanation:** The syntax of a RESTART subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

**System action:** Processing continues.

**Operator response:** Enter the command using the correct syntax.

**System programmer response:** No action is needed.

**Module:** LU62MDFY

**Procedure Name:** RESTART

---

**EZA6088E**  **LIST:** **Invalid Range Specified - IP,LU,ACTIVE or ALL expected**

**Explanation:** The syntax of a LIST subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

**System action:** Processing continues.

**Operator response:** Enter the command using the correct syntax.

**System programmer response:** No action is needed.

**Module:** LU62MDFY

**Procedure Name:** LIST

---

**EZA6089E**  **TRACE:** **ON/OFF/DETAIL or ALL/IP expected after TRACE**

**Explanation:** The syntax of a TRACE subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

**System action:** Processing continues.

**Operator response:** Enter the command using the correct syntax.

**System programmer response:** No action is needed.

**Module:** LU62MDFY
EZA6090E  EZA6094E

Procedure Name:  TRACE

EZA6090E  TRACE: ALL/IP expected after ON/OFF/D Ell
Explanation:  The syntax of a TRACE subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.
System action:  Processing continues.
Operator response:  Enter the command using the correct syntax.
System programmer response:  No action is needed.
Module:  LU62MDFY
Procedure Name:  TRACE

EZA6091E  TRACE: '=' expected after IP
Explanation:  The syntax of a TRACE subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.
System action:  Processing continues.
Operator response:  Enter the command using the correct syntax.
System programmer response:  No action is needed.
Module:  LU62MDFY
Procedure Name:  TRACE

EZA6092E  TRACE: IP address expected after '='
Explanation:  The syntax of a TRACE subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.
System action:  Processing continues.
Operator response:  Enter the command using the correct syntax.
System programmer response:  No action is needed.
Module:  LU62MDFY
Procedure Name:  TRACE

EZA6093E  TRACE: Invalid format for fully qualified IP address
Explanation:  The IP address contained in a TRACE subcommand entered from an operator console (using the MODIFY console command) was not in the required format. The IP address should be in the correct dotted-decimal format for a network node (for example, 192.9.207.100). The command is ignored.
System action:  Processing continues.
Operator response:  Enter the command using the correct syntax.
System programmer response:  No action is needed.
Module:  LU62MDFY
Procedure Name:  TRACE

EZA6094E  TRACE: IP address not defined in Configuration dataset
Explanation:  The IP address contained in a TRACE subcommand entered from an operator console (using the MODIFY console command) is not defined as a destination IP address in the SNALINK LU6.2 configuration data set. The command is ignored.
System action:  Processing continues.
Operator response: Enter the command using a valid IP address.

System programmer response: No action is needed.

Module: LU62MDFY

Procedure Name: TRACE

---

EZA6095W  RESTART: No connections to start

Explanation: A RESTART subcommand, with a range specification of INIT, was entered from an operator console (using the MODIFY console command), but there are no destinations defined with the INIT option in the configuration data set. The command is ignored.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: LU62MDFY

Procedure Name: RESTART

---

EZA6114E  LU62CFG: Line number Col column: Invalid Statement Type

Explanation: An incorrect statement type was encountered in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Remove or correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1

---

EZA6115E  LU62CFG: Line number Col column: VTAM statement - Application Id expected

Explanation: The application ID was omitted from a VTAM statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1

---

EZA6116E  LU62CFG: Line number Col column: VTAM statement - Invalid format for Application Id

Explanation: The application ID contained in a VTAM statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is longer than 8 characters. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT
### EZA6117E - LU62CFG: Line number Col column: VTAM statement - Invalid format for Password

**Explanation:** The password contained in a VTAM statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is longer than 8 characters. The error was detected at the indicated line in the indicated column.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT

**Procedure Name:** RLCFG#P1

---

### EZA6118E - LU62CFG: Line number Col column: LINK statement - TCP/IP Link Name expected

**Explanation:** The TCPIP link name field of a LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is missing. The error was detected at the indicated line in the indicated column.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT

**Procedure Name:** RLCFG#P1

---

### EZA6119E - LU62CFG: Line number Col column: LINK statement - Invalid TCP/IP Link Name

**Explanation:** The TCPIP link name contained in a LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is longer than 8 characters. The error was detected at the indicated line in the indicated column.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT

**Procedure Name:** RLCFG#P1

---

### EZA6120E - LU62CFG: Line number Col column: LINK statement - Link Name already defined

**Explanation:** The TCPIP link name field in a LINK statement in the SNALINK LU6.2 configuration data set has already been defined in a previous LINK statement. The error was detected at the indicated line in the indicated column.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT

**Procedure Name:** RLCFG#P2
**EZA6121E**  LU62CFG: Line *number* Col *column*: LINK statement - Log Mode Table Name expected

**Explanation:** The Log Mode Table field of a LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is missing. The error was detected at the indicated line in the indicated column.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT  
**Procedure Name:** RLCFG#P2

---

**EZA6122E**  LU62CFG: Line *number* Col *column*: LINK statement - Invalid Log Mode Table Name

**Explanation:** The Log Mode Table name contained in a LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is longer than 8 characters. The error was detected at the indicated line in the indicated column.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT  
**Procedure Name:** RLCFG#P2

---

**EZA6123E**  LU62CFG: Line *number* Col *column*: LINK statement - Invalid Idle Timeout value

**Explanation:** The Idle Timeout value contained in a LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is not a valid integer in the range 0 to $2^{31}-1$. The error was detected at the indicated line in the indicated column.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT  
**Procedure Name:** RLCFG#P2

---

**EZA6124E**  LU62CFG: Line *number* Col *column*: DEST statement - Destination IP Address expected

**Explanation:** The Destination IP address field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is missing. The error was detected at the indicated line in the indicated column.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT  
**Procedure Name:** RLCFG#P2
EZA6125E LU62CFG: Line number Col column: DEST statement - Invalid format for a fully qualified IP address

Explanation: The Destination IP address field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is not in the correct dotted-decimal format for a network node (for example, 192.9.207.100). The error was detected at the indicated line of the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

EZA6126E LU62CFG: Line number Col column: DEST statement - Duplicate IP address detected

Explanation: The Destination IP address field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG has already been defined in a previous DEST statement. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct or remove the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

EZA6127E LU62CFG: Line number Col column: DEST statement - Send LU Name expected

Explanation: The Send LU Name field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is missing. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

EZA6128E LU62CFG: Line number Col column: DEST statement - Invalid Send LU Name

Explanation: The Send LU Name field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is longer than 8 characters. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2
EZA6129E  LU62CFG: Line number Col column: DEST statement - Receive LU Name or ‘=’ expected

Explanation: The Receive LU Name field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is missing. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

EZA6130E  LU62CFG: Line number Col column: DEST statement - Invalid Receive LU Name

Explanation: The Receive LU Name field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is longer than 8 characters. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

EZA6131E  LU62CFG: Line number Col column: DEST statement - Duplicate LU Name Detected

Explanation: The Send or Receive LU Name field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG has already been defined on a previous DEST statement. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

EZA6132E  LU62CFG: Line number Col column: DEST statement - LU Name cannot equal the Application Id on the VTAM statement

Explanation: The Send or Receive LU Name field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is the same as that defined on the VTAM statement. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2
EZA6133E  EZA6136E

EZA6133E  LU62CFG: Line number Col column: DEST statement - Invalid Connection Start Type

Explanation: The Connection Start Type field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG contains an incorrect value. The Connection Start Type value should be either DATA, INIT, or blank. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

EZA6134E  LU62CFG: Line number Col column: BUFFERS statement - Maximum Packet Size value expected

Explanation: The Maximum Packet Size field of a BUFFERS statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is missing. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1

EZA6135E  LU62CFG: Line number Col column: BUFFERS statement - Invalid Maximum Packet Size value

Explanation: The Maximum Packet Size value contained in a BUFFERS statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is not a valid integer in the range 20 - 32758. The error was detected at the indicated line of the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1

EZA6136E  LU62CFG: Line number Col column: BUFFERS statement - Invalid number of Additional Send Buffers

Explanation: The Additional Send Buffers value contained in a BUFFERS statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is not a valid integer in the range 0 to $2^{31} - 1$. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1
EZA6137E  LU62CFG: Line number: BUFFERS statement - Invalid Send Queue Limit value

Explanation: The Send Queue Limit value contained in a BUFFERS statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is not a valid integer in the range 0 to 2^{31}−1. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1

---

EZA6138E  LU62CFG: Line number: TRACE statement - ON/OFF/DETAIL or ALL/IP expected after TRACE

Explanation: The syntax of a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is incorrect. The error was detected at the indicated line.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

---

EZA6139E  LU62CFG: Line number: TRACE statement - ALL/IP expected after ON/OFF

Explanation: The syntax of a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is incorrect. The error was detected at the indicated line.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

---

EZA6140E  LU62CFG: Line number: TRACE statement - ‘=’ expected after IP

Explanation: The syntax of a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is incorrect. The error was detected at the indicated line.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

---
**Explanation:** The syntax of a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is incorrect. The error was detected at the indicated line.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT

**Procedure Name:** RLCFG#P2

---

**Explanation:** The IP address field of a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is not in the required format. The IP address should be in the correct dotted-decimal format for a network node (for example, 192.9.207.100). The error was detected at the indicated line.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT

**Procedure Name:** RLCFG#P2

---

**Explanation:** The IP address specified in a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG was not previously defined in a DEST statement. The error was detected at the indicated line.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT

**Procedure Name:** RLCFG#P2

---

**Explanation:** Extra trailing data was found on a line containing a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT

**Procedure Name:** RLCFG#P2
EZA6145E  LU62CFG: Line number: Only one VTAM statement may be specified
Explanation: More than one VTAM statement was found in the SNALINK LU6.2 configuration data set defined by
the ddname LU62CFG. The error was detected at the indicated line.
System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.
Operator response: No action is needed.
System programmer response: Remove one of the VTAM statements, and restart the SNALINK LU6.2 address space.
Module: LU62INIT
Procedure Name: RLCFG#P1

EZA6146E  LU62CFG: VTAM statement missing
Explanation: A VTAM statement was not found in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.
System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.
Operator response: No action is needed.
System programmer response: Add a VTAM statement to the configuration data set, and restart the SNALINK LU6.2 address space.
Module: LU62INIT
Procedure Name: RLCFG#P1

EZA6147E  LU62CFG: Line number: Only one BUFFERS statement may be specified
Explanation: More than one BUFFERS statement was found in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line.
System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.
Operator response: No action is needed.
System programmer response: Remove one of the BUFFERS statements, and restart the SNALINK LU6.2 address space.
Module: LU62INIT
Procedure Name: RLCFG#P1

EZA6148E  LU62CFG: BUFFERS statement missing
Explanation: A BUFFERS statement was not found in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.
System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.
Operator response: No action is needed.
System programmer response: Add a BUFFERS statement to the configuration data set, and restart the SNALINK LU6.2 address space.
Module: LU62INIT
Procedure Name: RLCFG#P1
EZA6149E  LU62CFG: No LINK statements defined

Explanation: No LINK statements were found in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Add a LINK statement for each IUCV connection required between the SNALINK LU6.2 address space and the TCPIP address space. Each of these connections should also be defined in the hlq.PROFILE.TCPIP data set using DEVICE and LINK statements. If DEVICE and LINK statements are added to the hlq.PROFILE.TCPIP data set, restart the TCPIP address space.

Module: LU62INIT
Procedure Name: RLCFG#P1

EZA6150E  LU62CFG: No DEST statements defined

Explanation: No DEST statements were found in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Add a DEST statement for each destination IP address in the network directly connected to the SNALINK LU6.2 address space.

Module: LU62INIT
Procedure Name: RLCFG#P1

EZA6151E  LU62CFG: Line number: No DEST statements defined for previous LINK statement

Explanation: No DEST statements were found for the previous LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Either add a DEST statement following the previous LINK statement, or delete the previous LINK statement; then restart the SNALINK LU6.2 address space.

Module: LU62INIT
Procedure Name: RLCFG#P1

EZA6152E  LU62CFG: Line number: VTAM statement must appear before first LINK statement

Explanation: No VTAM statement was found before the first LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the configuration data set, and restart the SNALINK LU6.2 address space.

Module: LU62INIT
Procedure Name: RLCFG#P1
EZA6153E  LU62CFG: Line number: A DEST statement can only appear after a LINK statement

Explanation:  No LINK statement was found before the first DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line.

System action:  The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response:  No action is needed.

System programmer response:  Correct the configuration data set, and restart the SNALINK LU6.2 address space.

Module:  LU62INIT

Procedure Name:  RLCFG#P1

---

EZA6154E  LU62CFG: No DEST statements defined for last LINK statement

Explanation:  No DEST statements were found for the last LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

System action:  The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response:  No action is needed.

System programmer response:  Either add a DEST statement following the last LINK statement or delete the last LINK statement; then restart the SNALINK LU6.2 address space.

Module:  LU62INIT

Procedure Name:  RLCFG#P1

---

EZA6155E  LU62CFG: Line number Col column: Extraneous trailing data on line

Explanation:  Extra trailing data was found on a line following a statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line in the indicated column.

System action:  The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response:  No action is needed.

System programmer response:  Correct the line in error, and restart the SNALINK LU6.2 address space.

Module:  LU62INIT

Procedure Name:  RLCFG#P1, RLCFG#P2

---

EZA6170W  Unable to setup connection entry.

Explanation:  An error occurred during the creation of a Connection Table entry for a new connection. The cause is either insufficient storage available to create the buffers associated with the entry, or a program logic error. Preceding messages in the SYSPRINT data set indicate the exact nature of the error.

System action:  Processing continues; the connection attempt is abnormally ended.

Operator response:  No action is needed.

System programmer response:  If preceding messages indicate insufficient storage, increase the REGION size parameter for the SNALINK LU6.2 address space, and restart the address space.

Module:  LU62VTAM

Procedure Name:  ALOCCONN
EZA6171W  Unable to start connection for address; connection entry setup failed

Explanation: This message is output on the console when a connection establishment that was initiated using the MODIFY command has been unsuccessful because of an error in creating the corresponding Connection Table entry. This error can occur when either there is insufficient storage available to create the buffers associated with the entry or a program logic error has occurred; preceding messages in the SYSPRINT data set indicate the exact nature of the error.

System action: Processing continues; the connection attempt is abnormally ended.

Operator response: No action is needed.

System programmer response: If preceding messages indicate insufficient storage, increase the REGION size parameter for the SNALINK LU6.2 address space, and restart the address space.

Module:  LU62VTAM

Procedure Name:  MAKECONN

EZA6172E  Sequential search length too large length

Explanation: The indicated search field length passed to the sequential search routine was longer than 255.

System action: Processing continues as though the required entry was not found. Depending on the type of entry being located, this can lead to subsequent errors.

Operator response: No action is needed.

System programmer response: Probable program logic error. Contact the IBM Software Support Center.

Module:  LU62MAIN

Procedure Name:  SEQSERCH

EZA6173E  Binary search length too large length

Explanation: The indicated search field length passed to the binary search routine was longer than 255.

System action: Processing continues as though the required entry was not found. Depending on the type of entry being located, this can lead to subsequent errors.

Operator response: No action is needed.

System programmer response: Probable program logic error. Contact the IBM Software Support Center.

Module:  LU62MAIN

Procedure Name:  BINSERCH

EZA6174W  Unable to setup DLC table entry for link; entry already active for path

Explanation: An attempt to establish a DLC connection for the indicated TCPIP link has been unsuccessful because the corresponding DLC table entry is already marked as active.

System action: Processing continues; the DLC connection attempt is abnormally ended.

Operator response: No action is needed.

System programmer response: Probable program logic error. Contact the IBM Software Support Center. The data structures can be reinitialized by restarting the SNALINK LU6.2 address space.

Module:  LU62IUCV

Procedure Name:  SETUPIUC
EZA6175E Unable to setup DLC table entry; free memory exhausted, RC=rc

Explanation: An attempt to establish a DLC connection has been unsuccessful because of an error in a GETMAIN macro invocation.

System action: Processing continues; the DLC connection attempt is abnormally ended.

Operator response: No action is needed.

System programmer response: Check the indicated GETMAIN return code value to determine the cause of the error. If insufficient storage caused the error, increase the REGION size parameter for the SNALINK LU6.2 address space, and restart the address space.

Module: LU62IUCV

Procedure Name: SETUPIUC

EZA6176W Unable to clear DLC table entry; already inactive for path

Explanation: An attempt to close a DLC connection for the indicated TCPIP link has been unsuccessful because the corresponding DLC table entry is already marked as inactive.

System action: Processing continues; the DLC connection is assumed to be correctly closed.

Operator response: No action is needed.

System programmer response: Contact the IBM Software Support Center.

Module: LU62IUCV

Procedure Name: CLEANIUC

EZA6177E Unable to clear DLC table entry for path; can’t free memory RC=rc

Explanation: An attempt to close a DLC connection has been unsuccessful because of an error in a FREEMAIN macro invocation. The indicated return code is the return code for the unsuccessful FREEMAIN macro invocation.

System action: Processing continues; the DLC connection is assumed to be correctly closed.

Operator response: No action is needed.

System programmer response: Probable program logic error. Contact the IBM Software Support Center.

Module: LU62IUCV

Procedure Name: CLEANIUC

EZA6178W The connection entry passed to SETUPCON is already in use

Explanation: An attempt to establish a connection with a destination node has been unsuccessful because of the corresponding Connection Table entry already being marked as active.

System action: Processing continues; the connection establishment attempt is abnormally ended.

Operator response: No action is needed.

System programmer response: Probable program logic error. Contact the IBM Software Support Center.

Module: LU62VTAM

Procedure Name: SETUPCON

EZA6179E Getmain error RC=rc

Explanation: An attempt to establish a connection with a destination node has been unsuccessful because of an error in a GETMAIN macro invocation. The indicated return code is the return code value from the unsuccessful GETMAIN macro invocation.

System action: Processing continues; the connection establishment attempt is abnormally ended.

Operator response: No action is needed.
**System programmer response:** Check the indicated GETMAIN return code value to determine the cause of the error. If insufficient storage caused the error, increase the REGION size parameter for the SNALINK LU6.2 address space, and restart the address space.

**Module:** LU62VTAM  
**Procedure Name:** SETUPCON

---

**EZA6180E**  
**GENCB error RC= rc**

**Explanation:** An attempt to establish a connection with a destination node has been unsuccessful because the VTAM RPL could not be generated in the Connection Table entry. The indicated return code is the return code value from the unsuccessful GENCB macro invocation.

**System action:** Processing continues; the connection establishment attempt is abnormally ended.

**Operator response:** No action is needed.

**System programmer response:** Check the indicated GENCB return code value to determine the cause of the error, and correct the problem if possible.

**Module:** LU62VTAM  
**Procedure Name:** SETUPCON

---

**EZA6181W**  
The connection entry passed to CLEARCON is already inactive

**Explanation:** The Connection Table entry address, passed to the routine responsible for clearing the entry and freeing the memory used by associated buffers, is already marked as inactive.

**System action:** Processing continues; the connection is assumed to be correctly closed.

**Operator response:** No action is needed.

**System programmer response:** Probable program logic error. Contact the IBM Software Support Center.

**Module:** LU62VTAM  
**Procedure Name:** CLEARCON

---

**EZA6182E**  
**Freemain error; RC= rc**

**Explanation:** An attempt to close a connection with a destination node has been unsuccessful because of an error in a FREEMAIN macro invocation. The indicated return code is the return code for the unsuccessful FREEMAIN macro invocation.

**System action:** Processing continues; the connection is assumed to be correctly closed.

**Operator response:** No action is needed.

**System programmer response:** Probable program logic error. Contact the IBM Software Support Center.

**Module:** LU62VTAM  
**Procedure Name:** CLEARCON

---

**EZA6183E**  
The IP address *address* from the connection table is undefined

**Explanation:** An attempt to close a connection with a destination node has been unsuccessful because of a probable program logic error or internal data structure corruption.

**System action:** Processing continues; the connection is assumed to be correctly closed.

**Operator response:** No action is needed.

**System programmer response:** Probable program logic error. Contact the IBM Software Support Center.

**Module:** LU62VTAM  
**Procedure Name:** KILLCONN
EZA6184E Invalid connection entry address passed to ADD INACTIVITY
Explanation: An error occurred while adding a connection to the timeout inactivity list; the connection entry address did not reference a valid Connection Table entry.
System action: The SNALINK LU6.2 address space issues a user abend immediately.
Operator response: No action is needed.
System programmer response: Probable program logic error. Contact the IBM Software Support Center.
Module: LU62MAIN
Procedure Name: ADDINACT

EZA6185E Invalid connection entry address passed to SUB INACTIVITY
Explanation: An error occurred while removing a connection from the timeout inactivity list; the connection entry address did not reference a valid Connection Table entry.
System action: The SNALINK LU6.2 address space issues a user abend immediately.
Operator response: No action is needed.
System programmer response: Probable program logic error. Contact the IBM Software Support Center.
Module: LU62MAIN
Procedure Name: SUBINACT

EZA6186E The inactivity queue has lost the address connection
Explanation: The Connection Table entry for the indicated IP address has been lost from the timeout inactivity list.
System action: The SNALINK LU6.2 address space issues a user abend immediately.
Operator response: No action is needed.
System programmer response: Contact the IBM Software Support Center.
Module: LU62MAIN
Procedure Name: SUBINACT

EZA6187E Unable to match RPL address to send or receive for address
Explanation: The RPL address returned from VTAM for a conversation allocation request did not match either the send or receive RPL address.
System action: The SNALINK LU6.2 address space issues a user abend immediately.
Operator response: No action is needed.
System programmer response: Probable program logic error or data corruption in either VTAM or SNALINK LU6.2. Contact the IBM Software Support Center.
Module: LU62VTAM
Procedure Name: VTAMALOC

EZA6188W The connection entry passed to KILLCONN is already inactive
Explanation: An attempt to close a connection with a destination node has been unsuccessful because of the corresponding Connection Table entry already being marked as inactive.
System action: Processing continues; the connection is assumed to be correctly closed.
Operator response: No action is needed.
System programmer response: Probable program logic error. Contact the IBM Software Support Center.
Module: LU62VTAM
**EZA6189W • EZA6193W**

Procedure Name:  KILLCONN

---

**EZA6189W**  Unable to honor connection request for *address*; connection entry setup failed

**Explanation:** An error was encountered during the creation of a Connection Table entry for a new connection that was initiated from the destination node associated with the indicated IP address. This error can occur when either there is not enough storage to create the buffers associated with the entry or a program logic error has occurred. The preceding messages in the SYSPRINT data set indicate the exact nature of the error.

**System action:** Processing continues; the connection attempt is abnormally ended.

**Operator response:** No action is needed.

**System programmer response:** If preceding messages indicate insufficient storage, increase the REGION size parameter for the SNALINK LU6.2 address space, and restart the address space.

**Module:**  LU62VTAM

**Procedure Name:**  VTAMATTN

---

**EZA6190W**  Program Parameters Ignored

**Explanation:** Program parameters were passed to the SNALINK LU6.2 address space, but no parameters are processed by the SNALINK LU6.2 address space. The parameters are ignored.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Remove the program parameters from the invocation JCL.

**Module:**  LU62INIT

**Procedure Name:**  L62ENTRY

---

**EZA6192W**  CIB for START Command not freed - MODIFY Commands may not be available

**Explanation:** An error occurred during the initialization of MODIFY command handling. MODIFY commands might not be available.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Probable program error. Contact the IBM Software Support Center.

**Module:**  LU62MAIN

**Procedure Name:**  MAINPROC

---

**EZA6193W**  Unrecognized Console Command - Command Ignored

**Explanation:** An unrecognized console command was passed to the SNALINK LU6.2 address space; only START, MODIFY, STOP, and PURGE commands are recognized. The command is ignored.

**System action:** Processing continues.

**Operator response:** Enter the required command using the correct format.

**System programmer response:** No action is needed.

**Module:**  LU62MAIN

**Procedure Name:**  MAINPROC
EZA6204W  Datagram for address discarded, queue limit exceeded

Explanation: The length of the send queue, which holds IP datagrams waiting to be passed to VTAM, has exceeded the maximum length specified in the BUFFERS statement in the SNALINK LU6.2 configuration data set. The indicated address is the destination IP address of the datagram triggering this message. The datagram is discarded.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Consider increasing the send queue limit or maximum packet size value on the BUFFERS statement. If possible, tune the VTAM connection with the destination node to provide better throughput.

Module: LU62IUCV

Procedure Name: IUCVPMES

EZA6205W  Datagram for address discarded, no free memory for connection entry

Explanation: An IP datagram for the indicated IP address has initiated a connection attempt with the corresponding destination node, but the connection attempt was unsuccessful because of insufficient available storage to allocate the required buffers. The datagram is discarded.

System action: Processing continues; the connection attempt is abnormally ended.

Operator response: No action is needed.

System programmer response: Increase the value of the REGION parameter for the SNALINK LU6.2 address space, and restart the address space.

Module: LU62IUCV

Procedure Name: IUCVPMES

EZA6206W  Datagram for address discarded, VTAM send buffer pool exhausted

Explanation: The buffer pool used to hold IP datagrams waiting to be passed to VTAM has been exhausted. The datagram is discarded.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Consider increasing the number of additional send buffers and maximum packet size values in the BUFFERS statement. If possible, tune the VTAM connections to provide better throughput.

Module: LU62IUCV

Procedure Name: IUCVPMES

EZA6207W  VTAM send queue limit exceeded for address

Explanation: The length of the send queue, which holds IP datagrams waiting to be passed to VTAM, has exceeded the maximum length specified in the BUFFERS statement in the SNALINK LU6.2 configuration data set. The indicated address is the destination IP address of the datagram triggering this message. Message EZA6204W is also written to the SYSPRINT data set, and the datagram is discarded.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: See message EZA6204W.

Module: LU62VTAM

Procedure Name: ADDVTSND
**EZA6208W**  Datagram for address discarded, link requested, link defined

Explanation: An IP datagram for the indicated IP address was received from TCPIP using the indicated link. However, in the SNALINK LU6.2 configuration data set, the first indicated link has been defined to use the second indicated link. The datagram is discarded.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Correct the hlq.PROFILE.TCPIP data set or the SNALINK LU6.2 configuration data set, and restart the address spaces.

Module: LU62IUCV

Procedure Name: IUCVPMES

---

**EZA6209W**  Datagram for address discarded, link link closed

Explanation: An IP datagram has been received from the indicated IP address, but the associated IUCV connection on which the datagram is to be passed to TCPIP is not currently open. TCPIP is responsible for initiating the establishment of IUCV connections and will retry to establish the connections every 30 seconds. The datagram is discarded.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Check that the TCPIP address space is active and that the IUCV connection to the SNALINK LU6.2 address space has been successfully started.

Module: LU62VTAM

Procedure Name: VTAMRECV

---

**EZA6210W**  Datagram for address discarded, IP address not defined

Explanation: An IP datagram with the indicated first-hop address was received from TCPIP (using IUCV), but the address is not defined in the SNALINK LU6.2 configuration data set. The datagram is discarded.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Correct the SNALINK LU6.2 configuration data set, and restart the address space.

Module: LU62IUCV

Procedure Name: IUCVPMES

---

**EZA6211W**  Message from link discarded, receive buffer too small

Explanation: A message sent by the TCPIP address space using IUCV is too large to be received into the IUCV receive buffer. The indicated link name is the TCPIP link name on which the message was sent. The datagrams in the message are discarded.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Probable program error. Contact the IBM Software Support Center.

Module: LU62IUCV

Procedure Name: DOIURECV
EZA6212W  Datagram for address discarded, Send datagram exceeded the MAX packet size

Explanation:  An IP datagram received from TCPIP (using IUCV) is larger than the maximum packet size value defined in the BUFFERS statement in the SNALINK LU6.2 configuration data set. This maximum packet size value should be set to the same value as that defined for the corresponding link in the hlq.PROFILE.TCPIP data set. The datagram is discarded.

System action:  Processing continues.

Operator response:  No action is needed.

System programmer response:  Correct the hlq.PROFILE.TCPIP data set or the SNALINK LU6.2 configuration data set, and restart the address spaces.

Module:  LU62IUCV

Procedure Name:  IUCVPMES

EZA6213W  Datagram from address discarded, Receive datagram exceeded the MAX packet size

Explanation:  An IP datagram sent from a destination node (using VTAM) is larger than the maximum packet size value defined in the BUFFERS statement in the SNALINK LU6.2 configuration data set. This maximum packet size value should be set to the same value on all nodes in the network directly connected to the SNALINK LU6.2 address space. The datagram is received in sections and then discarded.

System action:  Processing continues.

Operator response:  No action is needed.

System programmer response:  Check that the maximum packet size value is set to the same value on all nodes in the network directly connected to the SNALINK LU6.2 address space.

Module:  LU62VTAM

Procedure Name:  VTAMRECV

EZA6219E  IUCV Initialization Failed, VMCF Subsystem not located

Explanation:  While trying to determine the Program Call number for use by the IUCV interface, the JES Subsystem Communication Vector Table (SSCT) entry for VMCF could not be located.

System action:  The SNALINK LU6.2 address space shuts down immediately.

Operator response:  No action is needed.

System programmer response:  Check that the TCPIP initialization step involving the IEFSSNxx member of SYS1.PARMLIB was correctly performed and is in effect.

Module:  LU62INIT

Procedure Name:  GETIPC

EZA6220S  Unable to start connection for address; no free connection entries

Explanation:  An attempt to establish a connection with the destination node associated with the indicated IP address failed because there were no free Connection Table entries. This indicates a program logic error or internal data corruption has occurred because there should have been sufficient entries allocated during initialization of the address space.

System action:  The SNALINK LU6.2 address space issues a user abend immediately.

Operator response:  No action is needed.

System programmer response:  Contact the IBM Software Support Center.

Module:  LU62VTAM

Procedure Name:  ALOCCONN
EZA6221S  Invalid exit type found on VTAM event queue, Type= type

Explanation:  The indicated exit type was found on the VTAM event queue. The valid exit types are SEND, RECV, ATTN, ALOC, and DALC.

System action:  The SNALINK LU6.2 address space issues a user abend immediately.

Operator response:  No action is needed.

System programmer response:  Contact the IBM Software Support Center.

Module:  LU62VTAM

Procedure Name:  PROCVTAM

EZA6222S  No connection entry found in RPL record

Explanation:  All VTAM requests are made with the address of the relevant Connection Table entry in the word immediately preceding the RPL address defined to VTAM. This address has somehow been corrupted.

System action:  The SNALINK LU6.2 address space issues a user abend immediately.

Operator response:  No action is needed.

System programmer response:  Contact the IBM Software Support Center.

Module:  LU62VTAM

Procedure Name:  VTAMALOC, VTAMSEND, VTAMRECV, VTAMDALC

EZA6223S  Unmatched RPL address for address in DEALOC

Explanation:  The RPL address returned from a VTAM deallocate request does not match either the Send or Receive RPL address, which indicates that the RPL has probably been corrupted.

System action:  The SNALINK LU6.2 address space issues a user abend immediately.

Operator response:  No action is needed.

System programmer response:  Contact the IBM Software Support Center.

Module:  LU62VTAM

Procedure Name:  VTAMDALC

EZA6224S  VTAM send completed, but send queue empty for address

Explanation:  The VTAM send queue was empty when it was expected to contain an entry, indicating that the queue has probably been corrupted.

System action:  The SNALINK LU6.2 address space issues a user abend immediately.

Operator response:  No action is needed.

System programmer response:  Contact the IBM Software Support Center.

Module:  LU62VTAM

Procedure Name:  VTAMSEND

EZA6225S  ATTN Exit event type invalid. Type= type

Explanation:  The indicated ATTN exit type was detected. The valid exit types are FMH5, CNOS, and LOSS.

System action:  The SNALINK LU6.2 address space issues a user abend immediately.

Operator response:  No action is needed.

System programmer response:  Contact the IBM Software Support Center.

Module:  LU62VTAM
Procedure Name: VTAMATTN

EZA6226S  Negative send queue count for address
Explanation: A counter, which contains the number of entries in the VTAM send, contains a negative number, indicating a probable program logic error.
System action: The SNALINK LU6.2 address space issues a user abend immediately.
Operator response: No action is needed.
System programmer response: Contact the IBM Software Support Center.
Module: LU62VTAM
Procedure Name: SUBVTSND

EZA6227S  Bad RPL specified on command
Explanation: The return codes from the indicated VTAM APPC command show that the RPL specified was not valid. Messages EZA6029E to EZA6032E are written to the SYSPRINT data set to provide further details of the error.
System action: The SNALINK LU6.2 address space issues a user abend.
Operator response: No action is needed.
System programmer response: Contact the IBM Software Support Center.
Module: LU62VTAM
Procedure Name: ANALYZE

EZA6228S  Bad RPLX specified on command
Explanation: The return codes from the indicated VTAM APPC command show that the extended RPL specified was not valid. Messages EZA6029E to EZA6032E are written to the SYSPRINT data set to provide further details of the error.
System action: The SNALINK LU6.2 address space issues a user abend.
Operator response: No action is needed.
System programmer response: Contact the IBM Software Support Center.
Module: LU62VTAM
Procedure Name: ANALYZE

EZA6229S  command received a policing error
Explanation: The return codes from the indicated VTAM APPC command indicate that a non-APPC command was issued on a APPC connection. Messages EZA6029E to EZA6032E are written to the SYSPRINT data set to provide further details of the error.
System action: The SNALINK LU6.2 address space issues a user abend.
Operator response: No action is needed.
System programmer response: Contact the IBM Software Support Center.
Module: LU62VTAM
Procedure Name: ANALYZE

EZA6230S  Pending message buffer pool exhausted
Explanation: The free pool for the pending message queue has been exhausted. This should never happen because sufficient entries are allocated during initialization, and a maximum of one entry can be used by each connection. This is a probable program logic error. A dump is produced if the ddname SYSUDUMP has been defined.
EZA6275I  •  EZA6278I

System action:  The SNALINK LU6.2 address space abnormally ends.
Operator response:  No action is needed.
System programmer response:  Contact the IBM Software Support Center.
Module:  LU62VTAM
Procedure Name:  VTAMRECV

EZA6275I    SNMP query engine running and awaiting queries...
Explanation:  The SNMP query engine is running and it is available to handle queries.
System action:  The SNMP query engine continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  sqeserv
Procedure Name:  MAIN

EZA6276I    There are available_FD's Client connections possible
Explanation:  The number of client connections possible is determined by subtracting the number of current connections from the maximum number of connections defined in the management information base (MIB).
System action:  The SNMP query engine continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  sqeserv
Procedure Name:  MAIN

EZA6277S    more than trans_count transactions in a second
Explanation:  The maximum number of transactions per second has been exceeded. This can be a sign that SQESERV is in a loop.
System action:  The SNMP query engine exits.
Operator response:  Tell the system programmer about the error.
System programmer response:  Contact the IBM Software Support Center.
Module:  sqeserv
Procedure Name:  await_queries

EZA6278I    await_queries : select
Explanation:  The SQE server has attempted to issue a select function to determine if any queries were outstanding. Message EZA6279E is displayed.
System action:  The SQE server ends.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  SQESERV
Procedure Name:  await_queries
**EZA6279E**  
**select failed in await_queries**  
**Explanation:** The SQE server encountered an error issuing a select function call to determine if any queries were outstanding.  
**System action:** The SQESERV module ends.  
**Operator response:** Tell the system programmer about the error.  
**Module:** SQESERV  
**Procedure Name:** await_queries  

---  

**EZA6280E**  
**accept_new_client : accept**  
**Explanation:** The SQE server encountered an error while trying to establish an accept for a TCP listen.  
**System action:** SNMP query server continues processing.  
**Operator response:** Tell the system programmer about the error.  
**Module:** SQESERV  
**Procedure Name:** accept_new_client  

---  

**EZA6281E**  
**mkNVlisten: socket**  
**Explanation:** The SQE server encountered an error while trying to establish a socket for a TCP listen.  
**System action:** The SQESERV module ends.  
**Operator response:** Tell the system programmer about the error.  
**Module:** SQESERV  
**Procedure Name:** mkNVlisten  

---  

**EZA6282E**  
**mkNVlisten: bind**  
**Explanation:** The SQE server encountered an error while trying to establish a bind for a TCP listen.  
**System action:** The SQESERV module ends.  
**Operator response:** Tell the system programmer about the error.  
**Module:** SQESERV  
**Procedure Name:** mkNVlisten  

---  

**EZA6283E**  
**mkNVlisten: socket(AF_IUCV)**  
**Explanation:** The SQE server encountered an error while trying to establish an IUCV socket for a TCP listen.  
**System action:** The SQESERV module ends.  
**Operator response:** Tell the system programmer about the error.  
EZA6285E  •  EZA6288E

Module:  SQESERV
Procedure Name:  mkNVlisten

EZA6285E  Can't make UDP port - can't send SNMP requests
Explanation:  The SQE server could not make the SNMP UDP port.
System action:  The SQESERV module ends.
Operator response:  Tell the system programmer about the error.
System programmer response:  This error message is preceded by a message indicating an error with either the socket or bind request.

Module:  SQESERV
Procedure Name:  create_ports

EZA6286W  Can't make SNMP trap port - can't receive traps
Explanation:  The SQE server cannot make the SNMP trap port because of an unsuccessful socket call or bind.
System action:  The SQESERV module ends.
Operator response:  Check that another SQESERV program is not already running. Only one SQESERV program can use the SNMP trap port. If this is the only SQESERV program attempting to run, contact the system programmer.
System programmer response:  Check that the user is allowed to use the reserved port by making the appropriate PORT entries in the hlq.PROFILE.TCPIP data set.

Module:  SQESERV
Procedure Name:  create_ports

EZA6287E  Can't do TCP listen - can't accept TCP clients
Explanation:  The SQE server encountered an error attempting a TCP listen.
System action:  The SQESERV module ends with exit code 1.
Operator response:  Tell the system programmer about the error.

Module:  SQESERV
Procedure Name:  create_ports

EZA6288E  Can't do IUCV listen - can't accept IUCV clients
Explanation:  The SQE server encountered an error attempting an IUCV listen.
System action:  The SQESERV module ends.
Operator response:  Tell the system programmer about the error.

Module:  SQESERV
Procedure Name:  create_ports
EZA6289W Can’t make raw ICMP socket - can’t do PING

Explanation: The SQE server encountered an error making the PING port. SNMP Ping requests are unsuccessful.

System action: Processing continues without the raw socket.

Operator response: Check that the user is permitted to use RAW sockets.

System programmer response: If you are running on a system with the RACF program installed, check that the SNMPQE user ID is authorized to the RACF. See the EZARACF sample shipped in SEZAINST for sample RACF definitions.

Restart SNMPQE with debug level 4 to get detailed information about the problem. See the information about specifying SNMPQE parameters in z/OS Communications Server: IP Configuration Reference for more information about starting SNMPQE with debug level 4.

Module: SQESERV

Procedure Name: create_ports

EZA6290I Accepted new client connection

Explanation: The SQE server was able to establish a new client connection.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SQESERV

Procedure Name: accept_new_client

EZA6292I Received following NVquery packet.

Explanation: The SQE server was able to receive a packet. Following this message will be a hexadecimal display of the packet.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SQESERV

Procedure Name: getNVquery

EZA6293I Terminated client connection.

Explanation: The SQE server has ended a client connection.

System action: The client connection is ended and the SNMP query engine continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SQESERV

Procedure Name: terminate_connection

EZA6294E getSNMPresponse: recvfrom

Explanation: The SQE server was unable to receive a response from an SNMP query.

System action: Processing continues.

Operator response: Tell the system programmer about the error.

System programmer response: Verify that the SNMPD agent is available.
Module: SQESERV
Procedure Name: getSNMPresponse

EZA6295I  Received following SNMP_response packet

Explanation: The SQE server was able to receive a response from an SNMP query. The hexadecimal display of the packet will follow.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: SQESERV
Procedure Name: getSNMPresponse

EZA6297E  error code err_code: out of memory

Explanation: The SQE server was unable to get enough storage.
System action: Processing continues.
Operator response: Tell the system programmer about the error.
System programmer response: Increase the region size and restart the SNMP query engine.
Module: SQESERV, SQEQUEUE, SQEPNV, SQEMKREQ
Procedure Name: Various

EZA6298E  create_SNMP_TRAP_port: socket

Explanation: The SQE server was unable to establish a socket for an SNMP trap port.
System action: The SQESERV module ended.
Operator response: Tell the system programmer about the error.
System programmer response: Verify that the port for SNMPQE was defined correctly in the hlq.PROFILE.DATA data set. If the port was defined correctly see z/OS Communications Server: IP Programmer's Guide and Reference for information about socket errors.
Module: SQESERV
Procedure Name: create_SNMP_trap_port

EZA6299E  create_SNMP_TRAP_port: bind

Explanation: The SQE server was unable to bind a socket for an SNMP trap port.
System action: The SQESERV module ended.
Operator response: Tell the system programmer about the error.
Module: SQESERV
Procedure Name: create_SNMP_trap_port

EZA6300I  getSNMPtrap: recvform

Explanation: The SQE server was unable to receive an SNMP trap packet.
System action: Processing continues.
Operator response: Tell the system programmer about the error.

Module: SQESERV

Procedure Name: getSNMPtrap

---

EZA6301I  Received following SNMP_trap packet

Explanation: The SQE server was able to receive a trap packet for the SNMP query server. The hexadecimal display of the packet will follow.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SQESERV

Procedure Name: getSNMPtrap

---

EZA6303E  recvPING: recvfrom

Explanation: The SQE server was unable to receive a SNMP ICMP packet.

System action: Processing continues.

Operator response: Tell the system programmer about the error.

Module: SQESERV

Procedure Name: create_SNMP_trap_port

---

EZA6304E  Error code err_code: received ICMP packet >= size bytes

Explanation: The SQE server was unable to receive an SNMP ICMP packet because the packet was too large. The largest packet size supported by the SQE server is 4096 bytes.

System action: Processing continues.

Operator response: Reissue the PING request with a smaller packet size.

System programmer response: No action is needed.

Module: SQESERV

Procedure Name: getSNMPresponse

---

EZA6305I  dumping packet of size bytes

Explanation: The SQE server will print a packet as hexadecimal data.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SQESERV

Procedure Name: hex_dump
EZA6306W  resolver not yet supported
Explanation: The SQE server found a Q_RESOLVER_RESPONSE request, which is not currently supported. The request is ignored.
System action: Processing continues with the next request.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEQUEUE
Procedure Name: queue_entry

EZA6307E  queue_entry
Explanation: Either an SNMP, RESOLVER, PING, or an incorrect query was requested and was unsuccessful.
System action: Processing continues.
Operator response: Tell the system programmer about the error.
System programmer response: Determine the cause of the error by referring to the messages that follow.
Module: SQEQUEUE
Procedure Name: queue_entry

EZA6308I  sending SNMP request to host
Explanation: The SQE query engine is sending a request to the host specified.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEQUEUE
Procedure Name: send_SNMP_request

EZA6309W  ret_response: cant find q_ptr.

EZA6310W  queue= queue req_id= req_id minor_err= minor_err
Explanation: The SQE query engine has no more outstanding responses in the queue.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEQUEUE
Procedure Name: ret_response

EZA6311W  fd fd not ready for writing for timeout seconds
Explanation: The SQE query engine timed out while trying to write a response to the connection.
System action: The connection is closed.
Operator response: Reestablish the connection.
System programmer response: Verify that the SNMPD client is available.
Module: SQEQUEUE
Procedure Name: write_reply
EZA6312W Dropping packet for client on fd=fd
Explanation: The SQE query engine could not write a response to the connection.
System action: Connection is closed.
Operator response: Contact the system programmer.
System programmer response: Determine if the agent is available, then reestablish the connection.
Module: SQEQUEUE
Procedure Name: ret_response

EZA6313W Ignored write_reply for unexpected fd fd
Explanation: The SQE query engine could not write a response to the connection.
System action: Connection is closed.
Operator response: Contact system programmer.
System programmer response: Determine if the agent is available, reestablish the connection.
Module: SQEQUEUE
Procedure Name: ret_response

EZA6314E error code err_code : unknown request type
Explanation: The SQE query engine received an unknown request type and could not respond.
System action: Processing continues.
Operator response: Tell the system programmer about the error.
System programmer response: Check the sending device and determine why it is sending incorrect request types.
Module: SQEMKREQ
Procedure Name: SQEMKREQ

EZA6316E mkPINGport : socket
Explanation: The SQE Query engine PING routine could not establish a socket connection for a PING request.
System action: SQEPING exits.
Operator response: Tell the system programmer about the error.
Usually this problem is caused by an authorization failure. See the information about the configure the SNMP query engine in z/OS Communications Server: IP Configuration Guide for more information about the required authorization.
Module: SQEPING
Procedure Name: mkPINGport

EZA6317E send_ping_packet: sendto
Explanation: The SQE Query engine PING routine was unable to send a PING packet.
System action: SQEPING exits.
Operator response: Tell the system programmer about the error.
System programmer response: Verify that the specified host is connected. Verify that the that the PING was requested correctly.
Module: SQEPING
EZA6319W • EZA6324E

Procedure Name: send_PING_packet

EZA6319W  Objectid to long: obj_id
Explanation: The object identifier was too long.
System action: MIB@DESC exits.
Operator response: Tell the system programmer about the error.
System programmer response: Correct the object identifier and resubmit. See z/OS Communications Server: IP Programmer’s Guide and Reference for more information about the correct format of the object identifier in Management Information Base (MIB) Objects.
Module: MIB@DESC
Procedure Name: MIB@DESC

EZA6320W  Cannot open MIB description file: data_set
Explanation: SNMP was unable to open the indicated MIB description data set.
System action: MIB@DESC returns control to the calling application.
Operator response: Make sure that the indicated MIB description data set is loaded and in storage accessible to the host.
System programmer response: No action is needed.
Module: MIB@DESC
Procedure Name: MIB@DESC

EZA6321E  MIB_descript_file
Explanation: This message is displayed with message EZA6320W to indicate the current MIB file.
System action: MIB@DESC returns control to the calling application.
Operator response: Respond as indicated by message EZA6320W.
System programmer response: Respond as indicated by message EZA6320W.
Module: MIB@DESC
Procedure Name: MIB@DESC

EZA6322I  Using MIB_descript_file as MIB description file
Explanation: The MIB description file was opened successfully.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MIB@DESC
Procedure Name: MIB@DESC

EZA6324E  unknown MIB type: type
Explanation: The SQE server found an unknown type field in the MIB description file.
System action: Processing continues.
Operator response: Tell the system programmer about the error.
System programmer response: Correct the MIB description file, the hlq.MIB@DESC.DATA data set, and restart SQESERV.
Module: SNMPSEND
Procedure Name: read_mib_desc_tbl

EZA6325W  out of memory in read_mib_desc_tbl
Explanation:  MIB@DESC was unable to get enough storage to process the MIB description file.
System action:  Processing continues.
Operator response:  Tell system programmer about the error.
System programmer response:  Increase the region size for the SNMPD program.
Module: MIB@DESC
Procedure Name: MIB@DESC

EZA6326E  create_SNMP_port: socket error
Explanation:  A socket() call was unsuccessful in attempting to create an SNMP port. The port could not be created.
System action:  The SQESERV module ends.
Operator response:  Tell the system programmer about the error.
System programmer response:  See Appendix B, “Additional information about remote procedure call (RPC) messages,” on page 647 for more information about tcperror return codes.
Module: SNMPSEND
Procedure Name: create_SNMP_port

EZA6327E  create_SNMP_port: bind error
Explanation:  A bind() call was unsuccessful in attempting to create an SNMP port. The port could not be created.
System action:  The SQESERV module ends.
Operator response:  Tell the system programmer about the error.
System programmer response:  See Appendix B, “Additional information about remote procedure call (RPC) messages,” on page 647 for more information about tcperror return codes.
Module: SNMPSEND
Procedure Name: create_SNMP_port

EZA6328W  parse_SNMP_packet: cannot parse packet (ps_alloc)
Explanation:  The SQE server could not parse an SNMP request because sufficient storage could not be allocated. The request is ignored.
System action:  Processing continues with the next request.
Operator response:  If the error persists, tell the system programmer about the error.
System programmer response:  Start the SNMPQE procedure with a larger region size.
Module: SNMPPARS
Procedure Name: parse_SNMP_packet

EZA6329W  parse_SNMP_packet: cannot parse packet (str_setup)
Explanation:  The SQE server could not parse an SNMP request because sufficient storage could not be allocated. The request is ignored.
System action:  Processing continues with the next request.
Operator response:  If the error persists, tell the system programmer about the error.
**EZA6330W • EZA6334W**

**System programmer response:** Start the SNMPQE procedure with a larger region size.

**Module:** SNMPPARS

**Procedure Name:** parse_SNMP_packet

---

**EZA6330W parse_SNMP_packet: cannot parse packet (ps2pe)**

**Explanation:** The SQE server could not parse an SNMP request because of an error converting a presentation stream to a presentation element. The request is ignored.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Contact the IBM Software Support Center.

**Module:** SNMPPARS

**Procedure Name:** parse_SNMP_packet

---

**EZA6331W ps_errno**

**Explanation:** The SQE server could not parse an SNMP request because of an error converting a presentation stream to a presentation element. The request is ignored.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Contact the IBM Software Support Center.

**Module:** SNMPPARS

**Procedure Name:** parse_SNMP_packet

---

**EZA6332W parse_SNMP_packet: cannot parse packet (decode)**

**Explanation:** The SQE server encountered an error decoding an SNMP request. The request is ignored.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Identify the agent that sent the incorrect request and correct any problems at that agent.

**Module:** SNMPPARS

**Procedure Name:** parse_SNMP_packet

---

**EZA6333W parse_SNMP_packet: corrupted packet**

**Explanation:** The SNMP server found a corrupted packet. There is a problem with the agent that sent the request. The request is ignored.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Identify the SNMP agent that sent the incorrect packet, and correct any errors.

**Module:** SNMPPARS

**Procedure Name:** parse_SNMP_packet

---

**EZA6334W snmp_parse: store_SNMP_var cannot parse packet (length1)**

**Explanation:** SNMPPARS could not parse a packet because the packet was longer than expected.

**System action:** Processing continues.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Determine the device sending packets with incorrect lengths. If it is SNMPD agent, verify that the packet size was specified correctly at startup.

**Module:** SNMPPARS

**Procedure Name:** store_SNMP_var
EZA6335W  snmp_parse: store_SNMP_var cannot parse packet (length2)
Explanation:  SNMPPARS could not parse a packet because the packet was longer than expected.
System action:  Processing continues.
Operator response:  Tell the system programmer about the error.
System programmer response:  Determine the device sending packets with incorrect lengths. If it is SNMPD agent, verify that the packet size was specified correctly at startup.
Module:  SNMPPARS
Procedure Name:  store_SNMP_var

EZA6336W  store_SNMP_var: unknown MIB type: type
Explanation:  The SQE server received a response containing an object with an unknown MIB type. The request is ignored. The object is not processed.
System action:  Processing continues with the next request.
Operator response:  Tell the system programmer about the error.
System programmer response:  Identify the agent sending the incorrect response, and correct any problems with the agent.
Module:  SNMPPARS
Procedure Name:  store_SNMP_var

EZA6337W  make_SNMP_packet: illegal SNMP request: request
Explanation:  The SQE server found an incorrect SNMP request. The request is ignored.
System action:  Processing continues with the next request.
Operator response:  Tell the system programmer about the error.
System programmer response:  Contact the IBM Software Support Center.
Module:  SNMPPARS
Procedure Name:  make_SNMP_request

EZA6338W  make_SNMP_request: illegal object identifier: id
Explanation:  The SQE server found an incorrect object identifier, which was ignored. The request is ignored.
System action:  Processing continues with the next request.
Operator response:  Tell the system programmer about the error.
System programmer response:  An application has provided an incorrect object identifier. Identify the application and correct the error. If you are using an IBM application program (for example, the NetView® program), contact the IBM Software Support Center.
Module:  SNMPPARS
Procedure Name:  make_SNMP_request

EZA6339W  make_SNMP_request: out of memory (oid_cpy)
Explanation:  A call to oid_cpy was unsuccessful because it could not allocate the storage needed.
System action:  Processing continues.
Operator response:  Tell the system programmer about the error.
System programmer response:  Increase the region size.
Module:  SNMPPARS
Procedure Name: make_SNMP_request

EZA6340W  make_SNMP_packet: no MIB type defined: name
Explanation: An application has tried to issue an SNMP Set request for an object for which no MIB description data is known. The request is ignored.
System action: Processing continues with the next request.
Operator response: Tell the system programmer about the error.
System programmer response: Add the relevant data to the MIB description file and restart SQESERV. This is the hlq.MIB@DESC.DATA data set.
Module: SNMPPARS
Procedure Name: make_SNMP_request

EZA6341W  make_SNMP_request: cannot parse packet (encode)
Explanation: A call to make_SNMP_request was unsuccessful. Preceding messages further define the nature of the problem.
System action: Processing continues.
Operator response: Tell system programmer about the problem.
System programmer response: If the problem is due to incorrect packet information or an incorrect packet format, contact the IBM Software Support Center.
Module: SNMPPARS
Procedure Name: make_SNMP_request

EZA6342W  make_SNMP_packet: cannot parse packet (ps_alloc)
Explanation: The SQE server could not allocate sufficient storage to parse a packet. The request is ignored.
System action: Processing continues with the next request.
Operator response: If the error persists, tell the system programmer about the error.
System programmer response: Start the SNMPQE procedure with a larger region size.
Module: SNMPPARS
Procedure Name: make_SNMP_request

EZA6343W  make_SNMP_packet: cannot parse packet (str_setup)
Explanation: The SQE server could not parse an SNMP request because sufficient storage could not be allocated. The request is ignored.
System action: Processing continues with the next request.
Operator response: If the error persists, tell the system programmer about the error.
System programmer response: Start the SNMPQE procedure with a larger region size.
Module: SNMPPARS
Procedure Name: make_SNMP_request

EZA6344W  make_SNMP_packet: cannot parse packet (pe2ps)
Explanation: The SQE server could not parse an SNMP request because of an error converting a presentation element to a presentation stream. The request is ignored.
System action: Processing continues with the next request.
Operator response: Tell the system programmer about the error.
System programmer response: Invalid data was passed in the SNMP request. Check the application program that initiated the request. If you are using an IBM application program (for example, the NetView program), contact the IBM Software Support Center.

Module: SNMPPARS
Procedure Name: make_SNMP_request

EZA6345W snmp_parse: do_qb2str: out of memory
Explanation: The SQE server could not parse an SNMP request because sufficient storage could not be allocated. The request is ignored.
System action: Processing continues.
Operator response: Tell the system programmer about the problem if it persists.
System programmer response: Start the SNMPQE procedure with a larger region size.
Module: SNMPPARS
Procedure Name: do_qb2str

EZA6346W snmp_parse: is_invalid_ObjectID: illegal object identifier obj_id
Explanation: The SQE server encountered an incorrect object identifier. The request is ignored.
System action: Processing continues.
Operator response: Tell the system programmer about the problem.
System programmer response: Check the sending device to determine why it is sending an object identifier that is not allowed. Correct the object identifier and resubmit. See z/OS Communications Server: IP Programmer’s Guide and Reference for more information about the correct format of the object identifier in “Management Information Base (MIB) Objects.”
Module: SNMPPARS
Procedure Name: do_qb2str

EZA6347W out of memory in cache_object (new)
Explanation: The SQE server could not allocate storage to add a new object to a list. No caching is done.
System action: Processing continues.
Operator response: Tell the system programmer about the error.
System programmer response: Start the SNMPQE procedure with a larger region size.
Module: SQECACHE
Procedure Name: cache_object

EZA6348W out of memory in cache_object name
Explanation: The SQE server could not allocate enough storage to add an object to a list. No caching is done.
System action: Processing continues.
Operator response: Tell the system programmer about the error.
System programmer response: Start the SNMPQE procedure with a larger region size.
Module: SQECACHE
Procedure Name: cache_object
**EZA6351E • EZA6355E**

**EZA6351E** error code err_code: illegal protocol.

Explanation: The SNMP query engine received a packet with an unknown protocol. The packet is discarded.

System action: The SNMP query engine continues.

Operator response: Contact the system programmer.

System programmer response: Determine the device that is sending incorrect packets to the SNMP query engine and why it is sending them.

Module: SQEPNV

Procedure Name: sqepnv

---

**EZA6352E** error code err_code: illegal character set

Explanation: The SNMP query engine received a packet with a character other than ASCII or EBCDIC. The packet is discarded.

System action: The SNMP query engine continues.

Operator response: Contact the system programmer.

System programmer response: Determine the device that is sending incorrect packets to the SNMP query engine and why it is sending them.

Module: SQEPNV

Procedure Name: sqepnv

---

**EZA6353E** error code err_code: illegal packet type

Explanation: The SNMP query engine received a packet that it did not recognize. The packet is discarded.

System action: The SNMP query engine continues.

Operator response: Contact the system programmer.

System programmer response: Determine the device that is sending incorrect requests to the SNMP query engine and why it is sending them. See "z/OS Communications Server: IP User's Guide and Commands" for more information on valid SNMP commands.

Module: SQEPNV

Procedure Name: sqepnv

---

**EZA6354E** error code err_code: illegal request packet type

Explanation: The SNMP query engine received a request packet that it did not recognize. The packet is discarded.

System action: The SNMP query engine continues.

Operator response: Contact the system programmer.

System programmer response: Determine the device that is sending incorrect requests to the SNMP query engine and why it is sending them. See "z/OS Communications Server: IP User's Guide and Commands" for more information on valid SNMP commands.

Module: SQEPNV

Procedure Name: sqepnv

---

**EZA6355E** error code err_code: null get variable list

Explanation: The SNMP query engine received a GET request that did not have any variables passed with it. The packet is discarded.

System action: The SNMP query engine continues.

Operator response: See "z/OS Communications Server: IP User's Guide and Commands" for more information about the...
valid format for SNMP GET commands. The variables expected by the SNMP query engine are the host name, community name, and the variable name(s).

**System programmer response:** No action is needed.

**Module:** SQEPNV

**Procedure Name:** nv_get_variable

---

**EZA6356E  error code err_code: unknown MIB variable**

**Explanation:** The SNMP query engine tried to locate the Management Information Base (MIB) variable. Either the MIB variable was unable to be located, the ANSI name is longer than 200 characters, the end of string character was not located at the end of the MIB variable, or the MIB variable type could not be located.

**System action:** The SNMP query engine continues.

**Operator response:** Verify that the hlq.MIBDESC.DATA is correct. See [z/OS Communications Server: IP User’s Guide and Commands](z/OS%20Communications%20Server:%20IP%20User’s%20Guide%20and%20Commands) for more information about the valid format for SNMP query commands and MIB variable names.

**System programmer response:** No action is needed.

**Module:** SQEPNV

**Procedure Name:** sqepnv

---

**EZA6357E  unrecognized type: type**

**Explanation:** The SNMP query engine was unable to determine the data type within a MIB variable.

**System action:** The SNMP query engine stops processing the mib variable. The SNMP query engine continues.

**Operator response:** Verify that the hlq.MIBDESC.DATA is correct. See [z/OS Communications Server: IP User’s Guide and Commands](z/OS%20Communications%20Server:%20IP%20User’s%20Guide%20and%20Commands) chapter on “Managing TCP/IP Network Resources Using SNMP.” Verify that the request to the SNMP query engine was done correctly. Check the SNMP agent job output for messages that indicate a problem. See [z/OS Communications Server: IP User’s Guide and Commands](z/OS%20Communications%20Server:%20IP%20User’s%20Guide%20and%20Commands) for more information about the valid format for SNMP query commands.

**System programmer response:** No action is needed.

**Module:** SQEPNV

**Procedure Name:** sqepnv

---

**EZA6358W  null hdr pointer**

**Explanation:** The pointer to the packet header is equal to 0.

**System action:** The SNMP query engine stops processing the packet and continues.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** View job output for the SNMP query engine and look for any other messages that may show more information about the problem. If the problem persists contact the IBM Software Support Center.

**Module:** SQEPRNV

**Procedure Name:** prNVparse

---

**EZA6359I  major version major version**

**EZA6360I  minor version minor version**
EZA6361I  release release
Explaination: These messages echo the major and minor version numbers and the release levels of the received packet.
System action: The SNMP query engine processes the packet and continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVparse

EZA6362W  illegal protocol specification
Explaination: The SNMP query engine has received a packet with an incorrect protocol specifications. The SNMP query engine stops processing the packet.
System action: The SNMP query engine continues.
Operator response: Contact the system programmer.
System programmer response: View the previous messages EZA6359 - EZA6361 for the packets major and minor versions and the release. Determine the device that is sending packets with incorrect protocol specifications and investigate.
Module: SQEPRNV
Procedure Name: prNVparse

EZA6363I  native set: character set
Explaination: The SNMP query engine is displaying the native character set for the packet.
System action: The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVparse

EZA6364I  packet type: packet type
Explaination: The SNMP query engine is displaying the type of packet received.
System action: The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVparse

EZA6365W  packet type&colan illegal packet type ( packet type )
Explaination: The SNMP query engine has received an incorrect type of packet.
System action: The SNMP query engine stops processing the packet. The SNMP query engine continues.
Operator response: If the packet was sent as a request, verify that the request was sent correctly. See z/OS Communications Server: IP User’s Guide and Commands for valid SNMP commands. If the error was the result of a response for an SNMP agent, notify the system programmer.
System programmer response: Determine the SNMP agent sending incorrect responses and investigate the reason it is sending incorrect responses.

Module: SQEPRNV
Procedure Name: prNVparse

EZA6366I null request body
Explanation: The SNMP query engine has received a request packet, but the body of the request was empty.
System action: The SNMP query engine stops processing the packet. The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVrequest

EZA6367I sequence ID: sequence_ID
Explanation: The SNMP query engine has received a packet that has the stated sequence_ID. The SNMP query engine will use the sequence_ID to associate requests with responses.
System action: The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVrequest

EZA6368I hostname len: name length
Explanation: The SNMP query engine is displaying the length of the name of the host the request will be sent to.
System action: The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVrequest

EZA6369W no hostname:
Explanation: The SNMP query engine could not find a host name for the request packet.
System action: The SNMP query engine continues.
Operator response: Verify that the request was entered correctly.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVrequest

EZA6370I hostname: hostname
Explanation: The SNMP query engine is displaying the host name that the request will be sent to.
System action: The SNMP query engine continues.
Operator response: No action is needed.
System programmer response:  No action is needed.
Module:  SQEPRNV
Procedure Name:  prNVrequest

**EZA6371I**  community len: community len
Explanation:  The SNMP query engine is displaying the length of the community name.
System action:  The SNMP query engine continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  SQEPRNV
Procedure Name:  prNVrequest

**EZA6372W**  no community name!
Explanation:  The SNMP query engine could not find a community name for the request packet.
System action:  The SNMP query engine continues.
Operator response:  Verify that the request was entered correctly.
System programmer response:  No action is needed.
Module:  SQEPRNV
Procedure Name:  prNVrequest

**EZA6373I**  community name: community name
Explanation:  The SNMP query engine is displaying the community name that the request was made for.
System action:  The SNMP query engine continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  SQEPRNV
Procedure Name:  prNVrequest

**EZA6374I**  optional length optional length
Explanation:  The SNMP query engine is displaying the number of retry parameters that SNMPIUCV has received from the SNMPARMS member of the DSIPARMS data set.
System action:  The SNMP query engine continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  SQEPRNV
Procedure Name:  prNVrequest

**EZA6375I**  max. retries: snmprcnt
Explanation:  The SNMP query engine is displaying the number of times that the SNMP query engine will resend an SNMP PDU when no response was received.
System action:  The SNMP query engine continues.
Operator response:  No action is needed.
**EZA6376I**  initial timeout snmprio

**Explanation:** The SNMP query engine is displaying the timeout value for a request (in tenths of a second). After sending an SNMP request to an agent, the SNMP query engine waits \( n \) tenths of a second for a response.

**System action:** The SNMP query engine continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SQEPRNV

**Procedure Name:** prNVrequest

---

**EZA6377I**  backoff exponent: snmpreto

**Explanation:** The SNMP query engine is displaying the retry back-off exponent. The retry back-off exponent specifies whether the timeout value between retries of an SNMP request is calculated linearly or exponentially. The valid values are 1 (linear) or 2 (exponential). The default is 2.

**System action:** The SNMP query engine continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SQEPRNV

**Procedure Name:** prNVrequest

---

**EZA6378W**  illegal packet type ( packet type )

**Explanation:** The SNMP query engine has received an incorrect type of packet.

**System action:** The SNMP query engine stops processing the packet. The SNMP query engine continues.

**Operator response:** If the packet was sent as a request, verify that the request was sent correctly. See [z/OS Communications Server: IP User's Guide and Commands](https://www.ibm.com/support/docdisplay?rs=5075&uid=swg21857831) for valid SNMP commands. If the error was the result of a response for an SNMP agent, notify the system programmer.

**System programmer response:** Determine the SNMP agent sending incorrect responses and investigate the reason it is sending incorrect responses.

**Module:** SQEPRNV

**Procedure Name:** prNVparse

---

**EZA6379I**  null list hdr

**Explanation:** The SNMP query engine has receive a request packet from SNMPiUCV that has an empty list header.

**System action:** The SNMP query engine stops processing the packet. The SNMP query engine continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SQEPRNV

**Procedure Name:** prNVgetreq, prNVsetreq
**EZA6380I • EZA6383W**

**EZA6380I** name length length

**EZA6381I** name name

**Explanation:** The SNMP query engine has received a request or is sending a response to a SNMPIUCV packet. Displayed is the length and the name of the variable being sent or requested.

**System action:** The SNMP query continues to process the packet.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SQEPRNV

**Procedure Name:** prNVgetreq, prNVsetreq

**EZA6382I** value type type

**Explanation:** The SNMP query engine has received a request or is sending a response to a SNMPIUCV packet. Displayed is the value type of the data being processed. The valid value types are:

- text
- number
- internet address
- empty
- counter
- gauge
- time ticks
- display string
- string
- object ID

**System action:** The SNMP query continues to process the packet.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SQEPRNV

**Procedure Name:** prNVgetreq, prNVsetreq

**EZA6383W** value type: unknown type!

**Explanation:** The SNMP query engine has received a request or is sending a response to a SNMPIUCV packet. The value type received is not a known value type. The valid value types are:

- text
- number
- internet address
- empty
- counter
- gauge
- time ticks
- display string
- string
- object ID

**System action:** The SNMP query engine tries to process the packet. The SNMP query engine continues.

**Operator response:** Verify that the hlq.MIBDESC.DATA correct. Verify that the request to the SNMP query engine was done correctly. See z/OS Communications Server: IP User's Guide and Commands for more information about the valid format for SNMP query commands.

**System programmer response:** No action is needed.

**Module:** SQEPRNV

470 z/OS V1R11.0 Comm Svr: IP Messages Volume 1 (EZA)
Procedure Name: prNVgetreq, prNVsetreq

EZA6384I value length length
Explanation: The SNMP query engine has received a request or is sending a response to a SNMPiUCV packet. The value length is being displayed.
System action: The SNMP query engine continues to process the packet. The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVgetreq, prNVsetreq

EZA6385I value string value
Explanation: The SNMP query engine has received a request or is sending a response to a SNMPiUCV packet. The Management Information Base (MIB) variable is being displayed.
System action: The SNMP query engine continues to process the packet. The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVgetreq, prNVsetreq

EZA6386I value decimal value
Explanation: The SNMP query engine has received a request or is sending a response to a SNMPiUCV packet. The Management Information Base (MIB) variable is being displayed.
System action: The SNMP query engine continues to process the packet. The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVgetreq, prNVsetreq

EZA6387I value unsigned value
Explanation: The SNMP query engine has received a request or is sending a response to a SNMPiUCV packet. The Management Information Base (MIB) variable is being displayed.
System action: The SNMP query engine continues to process the packet. The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVgetreq, prNVsetreq

EZA6388I major error: major error number

Chapter 7. EZA6xxx messages 471
EZA6389I  minor error: minor error number

EZA6390I  error index: error index

EZA6391I  error text len: error text len

EZA6392I  error text: error text

Explanation: The SNMP query engine has received a response to a SNMPIUCV packet. The major and minor error codes are being displayed along with any error text. For more information about SNMP error codes see Communications Server: IP User’s Guide and Commands.

System action: The SNMP query engine continues to process the packet. The SNMP query engine continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SQEPRNV
Procedure Name: prNVgetreq, prNVsetreq

EZA6393W  null response request body

Explanation: The SNMP query engine has received a response packet from an SNMP agent. The body of the response was empty.

System action: The SNMP query engine stops processing the packet. The SNMP query engine continues.

Operator response: Contact the system programmer.

System programmer response: Determine the SNMP agent that is sending incorrect packets to the SNMP query engine. Investigate why the agent is sending incorrect packets.

Module: SQEPRNV
Procedure Name: prNVresp_copy

EZA6394I  filter ID: filter id

Explanation: The SNMP query engine has received a trap response or trap request packet. Displayed is filter ID used to filter the trap responses.

System action: The SNMP query engine continues processing the packet.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SQEPRNV
Procedure Name: prNVresp_copy, prNVtrap, prNVtrap_req

EZA6395I  agent address: agent address

Explanation: The SNMP query engine has received a trap response or trap request packet. Displayed is the IP address of the agent sending the trap response.

System action: The SNMP query engine continues processing the packet.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SQEPRNV
Procedure Name: prNVresp_copy, prNVtrap
**EZA6396I**  network mask  network mask

**Explanation:**  The SNMP query engine has received a trap response packet. Displayed is the network mask that is ANDed with the dotted decimal IP address. The result will be compared with the desired network.

**System action:**  The SNMP query engine continues processing the packet.

**Operator response:**  No action is needed.

**System programmer response:**  No action is needed.

**Module:**  SQEPRNV

**Procedure Name:**  prNVresp_copy

---

**EZA6397I**  desired network:  network mask

**Explanation:**  The SNMP query engine has received a trap response packet. Displayed is the desired network. The desired network will be compared to the results from ANDing the agent address with the network mask.

**System action:**  The SNMP query engine continues processing the packet.

**Operator response:**  No action is needed.

**System programmer response:**  No action is needed.

**Module:**  SQEPRNV

**Procedure Name:**  prNVresp_copy

---

**EZA6398I**  null trap body

**Explanation:**  The SNMP query engine has received a trap packet that has no data associated with it.

**System action:**  The SNMP query engine stops processing the packet. The SNMP query engine continues.

**Operator response:**  No action is needed.

**System programmer response:**  No action is needed.

**Module:**  SQEPRNV

**Procedure Name:**  prNVtrap

---

**EZA6399I**  generic trap:  decimal_value(hex_value)

**Explanation:**  The SNMP query engine has received a trap packet. The generic trap type value is displayed. See z/OS Communications Server: IP User's Guide and Commands for more information about SNMP generic trap types.

**System action:**  The SNMP query engine continues processing the packet.

**Operator response:**  No action is needed.

**System programmer response:**  No action is needed.

**Module:**  SQEPRNV

**Procedure Name:**  prNVtrap

---

**EZA6400I**  specific trap:  decimal_value(hex_value)

**Explanation:**  The SNMP query engine has received a trap packet. The specific trap type value is displayed. The specific trap value will be 0 unless the generic trap type is 6. For more information about generic and specific traps see z/OS Communications Server: IP User's Guide and Commands.

**System action:**  The SNMP query engine continues processing the packet.

**Operator response:**  No action is needed.

**System programmer response:**  No action is needed.

**Module:**  SQEPRNV
Procedure Name: prNVtrap

EZA6401I  time stamp: time stamp
Explanation: The SNMP query engine has received a trap packet. The time stamp that was present within the trap packet is displayed.
System action: The SNMP query engine continues processing the packet.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVtrap

EZA6402I  enterprise len: length

EZA6403I  enterprise: enterprise
Explanation: The SNMP query engine has received a trap packet. The length of the enterprise object ID and the enterprise object ID are displayed. See z/OS Communications Server: IP User's Guide and Commands for more information about enterprise object IDs.
System action: The SNMP query engine continues processing the packet.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVtrap

EZA6404W  null var_name body
Explanation: The SNMP query engine tried to parse the variable name out of the packet. The body of the packet that should contain the name was empty.
System action: The SNMP query engine stops processing the packet. The SNMP query engine continues.
Operator response: Verify that the request was done properly and resubmit.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVvar_name

EZA6405I  object ID len: length

EZA6406I  object ID: object id
Explanation: The SNMP query engine has received a var_name packet. Displayed is the object ID and its length. See z/OS Communications Server: IP User's Guide and Commands for more information about enterprise object IDs.
System action: The SNMP query engine continues processing the packet.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNvvar_name
EZA6407W  null ping_req body
Explanation:  The SNMP query engine received a ping request packet. The body of the packet was empty.
System action:  The SNMP query engine stops processing the packet. The SNMP query engine continues.
Operator response:  Verify that the ping request was done correctly and resubmit.
System programmer response:  No action is needed.
Module:  SQEPNIV
Procedure Name:  prNVping_req

EZA6408I  STOP command received - SNMP Query Engine stops
Explanation:  The SNMP query engine received the MVS STOP command and ended.
Examples:  Not applicable.
System action:  SNMP query engine ends.
Operator response:  None.
User response:  Not applicable.
System programmer response:  None.
Problem determination:  Not applicable.
Source:  z/OS Communications Server TCP/IP: SNMP Query Engine
Module:  SQESERV
Routing code:  10
Descriptor code:  12

EZA6423I  mibdesc_file_name(line_num), illegal object identifier object_id
Explanation:  The SNMP agent is checking the MIBDESC.DATA data set. Displayed is the MIBDESC datset name, line number, and the object ID that was not correct.
System action:  The SNMP agent continues processing the MIBDESC file.
Operator response:  Contact system programmer.
System programmer response:  Correct the MIBDESC.DATA data set.
Module:  MIB@DESC
Procedure Name:  

EZA6424I  Decoded SNMP PDU :
Explanation:  SNMP has received an SNMP message.
System action:  The SNMP continues processing the SNMP message.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  SNMPPRNT
Procedure Name:  print_SNMP_Message
EZA6425W  Message: out of memory

Explanation: The SNMP Query Engine was decoding an SNMP message, but the SNMP Query Engine could not allocate enough storage to build the decoded SNMP message. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response: No action is needed.

Module: SNMPTYPE

Procedure Name: decode_SNMP_Message, encode_SNMP_Message

---

EZA6426W  version: out of memory

Explanation: The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the SNMP version number. The SNMP message is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response: No action is needed.

Module: SNMPTYPE

Procedure Name: encode_SNMP_Message

---

EZA6427E  version has unknown component: component

Explanation: While encoding or decoding the presentation element for the SNMP version number in an SNMP request, the SNMP Query Engine was expecting the presentation element to have a version number of 0 (SNMP version-1). The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: For errors in decoding incoming SNMP requests, run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center. For errors encoding an SNMP response or trap PDU to be sent out, contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_Message, encode_SNMP_Message

---

EZA6428E  Message bad sequence: pe_error

Explanation: If decoding the presentation element for an SNMP request, the SNMP Query Engine was expecting a presentation element with a class of Sequence to have a form of Constructed. If encoding an SNMP response or trap PDU, the SNMP Query Engine received the indicated pe_error while adding a presentation element to a sequence. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: For errors occurring on incoming SNMP messages, run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center. For errors occurring on outgoing SNMP PDUs (other than out of storage errors), contact the IBM Software Support Center.
Module:  SNMPTYPE
Procedure Name:  decode_SNMP_Message, encode_SNMP_Message

EZA6429W  community initialization fails
Explanation:  The SNMP Query Engine was encoding an SNMP PDU, but the message being encoded does not have a valid community name. The SNMP PDU is discarded.
System action:  Processing continues with the next request.
Operator response:  Tell the system programmer about the error.
System programmer response:  Contact the IBM Software Support Center.
Module:  SNMPTYPE
Procedure Name:  encode_SNMP_Message

EZA6430W  community: out of memory
Explanation:  The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the community name. The SNMP PDU is discarded.
System action:  Processing continues with the next request.
Operator response:  If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response:  No action is needed.
Module:  SNMPTYPE
Procedure Name:  encode_SNMP_Message

EZA6431E  PDUs invalid choice selected: choice
Explanation:  While encoding an SNMP PDU, the SNMP Query Engine was expecting the type to be 1 (get request), 2 (getNext request), 3 (get response), 4 (set request), or 5 (trap). Instead, the PDU had the indicated type. The SNMP PDU is discarded.
System action:  Processing continues with the next request.
Operator response:  Tell the system programmer about the error.
System programmer response:  Contact the IBM Software Support Center.
Module:  SNMPTYPE
Procedure Name:  encode_SNMP_PDU

EZA6432W  PDU: out of memory
Explanation:  The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation elements for the PDU. The SNMP PDU is discarded.
System action:  Processing continues with the next request.
Operator response:  If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response:  No action is needed.
Module:  SNMPTYPE
Procedure Name:  encode_SNMP_PDU
EZA6433W  request-id: out of memory

Explanation: The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the request-ID. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response: No action is needed.

Module: SMNPTYPE

Procedure Name: encode_SNMP_PDU

EZA6434E  PDU bad sequence: pe_error

Explanation: The SNMP Query Engine received the indicated pe_error while encoding or decoding the data portion of an SNMP request. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: For errors encountered while decoding an incoming PDU, run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center. For errors encountered while encoding an SNMP PDU, contact the IBM Software Support Center.

Module: SMNPTYPE

Procedure Name: decode_SNMP_PDU, encode_SNMP_PDU

EZA6435W  error-status: out of memory

Explanation: The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the error-status. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response: No action is needed.

Module: SMNPTYPE

Procedure Name: encode_SNMP_PDU

EZA6436E  error-status has unknown component: component

Explanation: While encoding or decoding the error-status presentation element of an SNMP PDU, the SNMP Query Engine was expecting the error-status to be 0 (no error), 1 (too big), 2 (no such name), 3 (bad value), 4 (read only), or 5 (general error). Instead, the error-status had the indicated value. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: For errors encountered while decoding an incoming PDU, run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center. For errors encountered while encoding an outgoing PDU, contact the IBM Software Support Center.

Module: SMNPTYPE

Procedure Name: decode_SNMP_PDU, encode_SNMP_PDU
EZA6437W  error-index: out of memory
Explanation: The SNMP Query Engine was encoding an SNMP PDU to be sent out, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the error-index. The SNMP PDU is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.
Module: SNMPTYPE
Procedure Name: encode_SNMP_PDU

EZA6438W  Trap-PDU: out of memory
Explanation: The SNMP Query Engine was encoding an SNMP TRAP PDU, but the SNMP Query Engine could not allocate enough memory to build the presentation element for the PDU. The TRAP PDU is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.
Module: SNMPTYPE
Procedure Name: encode_SNMP_trap_PDU

EZA6439W  enterprise initialization fails
Explanation: The SNMP Query Engine was encoding an SNMP TRAP PDU, but the trap being encoded does not contain a valid enterprise object ID. The TRAP PDU is discarded.
System action: Processing continues with the next request.
Operator response: Tell the system programmer about the error.
System programmer response: Contact the IBM Software Support Center.
Module: SNMPTYPE
Procedure Name: encode_SNMP_trap_PDU

EZA6440W  enterprise: out of memory
Explanation: The SNMP Query Engine was encoding an SNMP TRAP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the enterprise object ID. The SNMP TRAP PDU is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.
Module: SNMPTYPE
Procedure Name: encode_SNMP_trap_PDU

EZA6441E  Trap-PDU bad sequence: pe_error
Explanation: The SNMP Query Engine received the indicated pe_error while encoding or decoding an SNMP TRAP PDU. The SNMP request is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, tell the system programmer about the error.
System programmer response: For errors encountered while decoding an incoming TRAP, run traces (either the
SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center. For errors encountered while encoding an SNMP TRAP PDU, contact the IBM Software Support Center.

**Module:**  SNMPTYPE  
**Procedure Name:**  decode_SNMP_trap_PDU, encode_SNMP_trap_PDU

---

**EZA6442W  generic-trap: out of memory**

**Explanation:**  The SNMP Query Engine was encoding an SNMP TRAP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the generic-trap type. The SNMP TRAP PDU is discarded.

**System action:**  Processing continues with the next request.

**Operator response:**  If the error persists, restart the SNMP Query Engine with a larger region size.

**System programmer response:**  No action is needed.

**Module:**  SNMPTYPE  
**Procedure Name:**  decode_SNMP_trap_PDU, encode_SNMP_trap_PDU

---

**EZA6443E  generic-trap has unknown component: component**

**Explanation:**  While encoding or decoding the presentation element for the generic-trap type in an SNMP TRAP PDU, the SNMP Query Engine was expecting the generic-trap to be 0 (coldStart), 1 (warmStart), 2 (linkDown), 3 (linkUp), 4 (authenticationFailure), 5 (egpNeighborLoss), or 6 (enterpriseSpecific). Instead, the generic-trap type had the indicated value. The SNMP trap is discarded.

**System action:**  Processing continues with the next request.

**Operator response:**  If the error persists, tell the system programmer about the error.

**System programmer response:**  For errors encountered while decoding an incoming SNMP TRAP PDU, run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that originated the trap. If the received encode trap is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center. For errors encountered while encoding an outgoing SNMP TRAP PDU, contact the IBM Software Support Center.

**Module:**  SNMPTYPE  
**Procedure Name:**  decode_SNMP_trap_PDU, encode_SNMP_trap_PDU

---

**EZA6444W  specific-trap: out of memory**

**Explanation:**  The SNMP Query Engine was encoding an SNMP TRAP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the specific trap type. The SNMP TRAP PDU is discarded.

**System action:**  Processing continues with the next request.

**Operator response:**  If the error persists, restart the SNMP Query Engine with a larger region size.

**System programmer response:**  No action is needed.

**Module:**  SNMPTYPE  
**Procedure Name:**  encode_SNMP_trap_PDU
EZA6445W  VarBind: out of memory
Explanation:  The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough memory to build the presentation element for the variable bindings pair. The SNMP PDU is discarded.

System action:  Processing continues with the next request.
Operator response:  If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response:  No action is needed.
Module:  SNMPTYPE
Procedure Name:  encode_SNMP_VarBind

EZA6446E  VarBind bad sequence: pe_error
Explanation:  The SNMP Query Engine received the indicated pe_error while encoding or decoding the variable bindings in an SNMP PDU. The SNMP request is discarded.

System action:  Processing continues with the next request.
Operator response:  If the error persists, tell the system programmer about the error.
System programmer response:  For errors encountered while decoding an incoming PDU, run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center. For errors encountered encoding the PDU, contact the IBM Software Support Center.
Module:  SNMPTYPE
Procedure Name:  decode_SNMP_VarBind, encode_SNMP_VarBind

EZA6447W  VarBindList: out of memory
Explanation:  The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the variable bindings list. The SNMP PDU is discarded.

System action:  Processing continues with the next request.
Operator response:  If the error persists, start the SNMP Query Engine with a larger region size.
System programmer response:  No action is needed.
Module:  SNMPTYPE
Procedure Name:  encode_SNMP_VarBindList

EZA6448E  Message bad class/form/id: class/form/id
Explanation:  While decoding the presentation element for the SNMP request, the SNMP Query Engine was expecting the presentation element to have a class of 0 (universal), a form of 1 (constructed), and an ID of X'10'x (sequence). Instead, the encoded request had the indicated class, form, and ID. The SNMP request is discarded.

System action:  Processing continues with the next request.
Operator response:  Tell the system programmer about the error.
System programmer response:  Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.
Module:  SNMPTYPE
Procedure Name:  decode_SNMP_Message
EZA6449E  Message bad form: form

Explanation: While decoding the presentation element for an encoded SNMP message, the SNMP Query Engine was expecting the presentation element to have a form of 1 (constructed). Instead, the SNMP Query Engine request had the indicated form. The SNMP request is discarded.

This message might also appear if VTAM is closed before the SNMP Query Engine (SNMPQE) task is closed.

System action: Processing continues with the next request.

Operator response: Ensure that the SNMPQE task is closed before VTAM. If the error persists, contact the system programmer.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_Message

EZA6450W  out of memory

Explanation: SNMP could not allocate enough storage to decode an incoming SNMP request. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response: No action is needed.

Module: SMITYPES, SNMPTYPE

Procedure Name: decode_SNMP_Message, decode_SNMP_PDUs, decode_SNMP_PDU decode_SNMP_VarBindList decode_SNMP_VarBind decode_SNMP_trap_PDU decode_SMI_ObjectSyntax decode_SMI_Counter decode_SMI_Gauge decode_SMI_TimeTicks

EZA6451E  version bad class/form/id: class/form/id

Explanation: While decoding an incoming SNMP request, the SNMP Query Engine was expecting the presentation element for the version number to have a class of 0 (universal), a form of 0 (primitive), and an ID of 2 (integer). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_Message

EZA6452E  version bad integer: pe_error

Explanation: The SNMP Query Engine received the indicated pe_error while decoding the SNMP version number in an SNMP request. The SNMP request is discarded.

System action: Processing continues with the next request.
Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_Message

EZA6453E  Message missing version element
Explanation: While decoding an incoming SNMP request, the SNMP Query Engine could not find a presentation element for the SNMP version. The SNMP request is discarded.
System action: Processing continues with the next request.
Operator response: Tell the system programmer about the error.
System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.
Module: SNMPTYPE
Procedure Name: decode_SNMP_Message

EZA6454E  community bad class/form/id: class/form/id
Explanation: While decoding an incoming SNMP request, the SNMP Query Engine was expecting a presentation element for the community name to have class of 0 (universal) and an ID of 4 (octet string). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, tell the system programmer about the error.
System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.
Module: SNMPTYPE
Procedure Name: decode_SNMP_Message

EZA6455E  community bad octetstring: pe_error
Explanation: The SNMP Query Engine received the indicated pe_error while decoding the presentation element for the community name in an incoming SNMP PDU. The SNMP request is discarded.
System action: Processing continues with the next request.
Operator response: If the pe_error indicates a storage problem, restart the SNMP Query Engine with a larger region size. Otherwise, tell the system programmer about the error.
System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.
Module: SNMPTYPE
EZA6456E • EZA6459E

Procedure Name: decode_SNMP_Message

EZA6456E  Message missing community element

Explanation: While decoding an SNMP request, the SNMP Query Engine could not find a presentation element for the community name. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_Message

EZA6457E  Message missing data element

Explanation: While decoding an incoming SNMP request, the SNMP Query Engine could not find any presentation elements for the data. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_Message

EZA6458E  Message has too many elements(3): number

Explanation: While decoding an SNMP request, the SNMP Query Engine was expecting the SNMP request to have 3 presentation elements (version, community name, and data). Instead, the request had the indicated number of elements. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_Message

EZA6459E  PDUs has unknown choice: classformid

Explanation: While decoding the presentation element of an SNMP message, the SNMP Query Engine was expecting the data portion to have a class of CONT (context-specific) and an ID of 0 (Get Request), 1 (GetNext Request), 2 (Get Response), 3 (Set Request), or 4 (trap). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.

System action: Processing continues with the next request.
Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_PDUs

---

EZA6460E  GetRequest-PDU bad class/id: class/id

Explanation: While decoding the presentation element for the data portion of the SNMP Get PDU, the SNMP Query Engine was expecting the presentation element to have a class of CONT (context-specific) and an ID of 0 (Get). Instead, the request had the indicated class and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the Recoverable error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_GetRequest_PDU

---

EZA6461E  GetNextRequest-PDU bad class/id: class/id

Explanation: While decoding the presentation element for the data portion of the SNMP GetNext Request PDU, the SNMP Query Engine was expecting the presentation element to have a class of CONT (context-specific) and an ID of 1 (GetNext). Instead, the presentation element had the indicated class and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_GetNextRequest_PDU

---

EZA6462E  GetResponse-PDU bad class/id: class/id

Explanation: While decoding the presentation element for the data portion of the SNMP GetResponse PDU, the SNMP Query Engine was expecting a class of CONT (context-specific) and an ID of 2 (Get Response). Instead, the presentation element had the indicated class and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_GetResponse_PDU

**EZA6463E** SetRequest-PDU bad class/id: class/id

**Explanation:** While decoding an SNMP SetRequest, the SNMP Query Engine expected the presentation element of the data portion of the request to contain a class of CONT (context-specific) and an ID of 3 (Set Request). Instead, the presentation element had the indicated class and ID. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SNMPTYPE

**Procedure Name:** decode_SNMP_SetRequest_PDU

**EZA6464E** PDU bad class/form/id: class/form/id

**Explanation:** While decoding the data portion of an SNMP PDU, the SNMP Query Engine was expecting the presentation element to have a class of UNIV (universal), a form of 1 (constructed), and an ID of X'10' (sequence). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SNMPTYPE

**Procedure Name:** decode_SNMP_PDU

**EZA6465E** PDU bad form: form

**Explanation:** While decoding the data portion of an SNMP PDU, SNMP was expecting the presentation element to have a form of 1 (constructed). Instead, the presentation element had the indicated form. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SNMPTYPE

**Procedure Name:** decode_SNMP_PDU

**EZA6466E** request-id bad class/form/id: class/form/id

**Explanation:** While decoding the presentation element containing the request-ID for the SNMP PDU, the SNMP Query Engine was expecting the presentation element to have a class of UNIV (universal), a form of 0 (primitive), and an ID of 2 (integer). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.
System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_PDU

**EZA6469E**  
error-status bad class/form/id: class/form/id

Explanation: While decoding the presentation element for the error-status of an incoming SNMP PDU, the SNMP Query Engine was expecting the presentation element to have a class of UNIV (universal), a form of 0 (primitive), and an ID of 2 (integer). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.
EZA6470E  EZA6472E

Module:  SNMPTYPE
Procedure Name:  decode_SNMP_PDU

EZA6470E  error-status bad integer: pc_error

Explanation:  The SNMP Query Engine received the indicated pc_error while decoding the presentation element for the error-status value in an incoming SNMP PDU. The SNMP request is discarded.

System action:  Processing continues with the next request.

Operator response:  If the error persists, tell the system programmer about the error.

System programmer response:  Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module:  SNMPTYPE
Procedure Name:  decode_SNMP_PDU

EZA6471E  PDU missing error-status element

Explanation:  While decoding an incoming SNMP PDU, the SNMP Query Engine could not find the presentation element for the error-status. The SNMP request is discarded.

System action:  Processing continues with the next request.

Operator response:  If the error persists, tell the system programmer about the error.

System programmer response:  Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module:  SNMPTYPE
Procedure Name:  decode_SNMP_PDU

EZA6472E  error-index bad class/form/id: class/form/id

Explanation:  While decoding the presentation element for the error-index in a received SNMP PDU, the SNMP Query Engine was expecting the presentation element to have a class of UNIV (universal), a form of 0 (primitive), and an ID of 2 (integer). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.

System action:  Processing continues with the next request.

Operator response:  If the error persists, tell the system programmer about the error.

System programmer response:  Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module:  SNMPTYPE
Procedure Name:  decode_SNMP_PDU
EZA6473E  error-index bad integer: pe_error
Explanation: The SNMP Query Engine received the indicated pe_error while decoding the error-index value in a received SNMP PDU. The SNMP request is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, tell the system programmer about the error.
System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.
Module: SNMPTYPE
Procedure Name: decode_SNMP_PDU

EZA6474E  PDU missing error-index element
Explanation: While decoding an incoming SNMP PDU, the SNMP Query Engine could not find a presentation element for the error-index. The SNMP request is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, tell the system programmer about the error.
System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.
Module: SNMPTYPE
Procedure Name: decode_SNMP_PDU

EZA6475E  PDU missing variable-bindings element
Explanation: While decoding an incoming SNMP PDU, the SNMP Query Engine could not find the presentation element for the variable bindings. The SNMP request is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, tell the system programmer about the error.
System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.
Module: SNMPTYPE
Procedure Name: decode_SNMP_PDU

EZA6476E  PDU has too many elements(4): number
Explanation: While decoding the data portion of an SNMP request, the SNMP Query Engine was expecting the request to have 4 presentation elements (request-id, error-status, error-index, and variable bindings). Instead, the PDU had the indicated number of elements. The SNMP request is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, tell the system programmer about the error.
System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the
encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SNMPTYPE  
**Procedure Name:** decode_SNMP_PDU

---

**EZA6477E Trap-PDU bad class/id:** class/id

**Explanation:** While decoding the presentation element of an SNMP TRAP PDU, the SNMP Query Engine was expecting the presentation element to have a class of CONT (context-specific) and an ID of 4 (trap). Instead, the presentation element had the indicated class and ID. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SNMPTYPE  
**Procedure Name:** decode_SNMP_trap_PDU

---

**EZA6478E enterprise bad class/form/id:** class/form/id

**Explanation:** While decoding the presentation element for the enterprise object identifier in a received TRAP PDU, the SNMP Query Engine was expecting the presentation element to have a class of UNIV (universal), a form of 0 (primitive), and an ID of 6 (objectID). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SNMPTYPE  
**Procedure Name:** decode_SNMP_trap_PDU

---

**EZA6479E enterprise bad object identifier:** pe_error

**Explanation:** The SNMP Query Engine received the indicated pe_error while decoding the presentation element for the enterprise object identifier for a TRAP PDU. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_VarBindList

EZA6497E  VarBindList bad form: form

Explanation: While decoding the variable bindings list in an SNMP PDU, the SNMP Query Engine was expecting the presentation element to have a form of 1 (constructed). Instead, the presentation element had the indicated form. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.
EZA6498E • EZA6501W

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_VarBindList

EZA6498E VarBindList bad sequence: pe_error
Explanation: The SNMP Query Engine received the indicated pe_error while decoding the variable bindings list in an SNMP PDU. The SNMP request is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, tell the system programmer about the error.
System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_VarBindList

EZA6499E ObjectName initialization fails
Explanation: The SNMP Query Engine was encoding an SNMP PDU, but the PDU being encoded does not have a valid object name. The SNMP PDU is discarded.
System action: Processing continues with the next request.
Operator response: Tell the system programmer about the error.
System programmer response: Contact the IBM Software Support Center.
Module: SMITYPES
Procedure Name: encode_SMI_ObjectName

EZA6500W ObjectName: out of memory
Explanation: The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the object name. The SNMP PDU is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.
Module: SMITYPES
Procedure Name: encode_SMI_ObjectName

EZA6501W number: out of memory
Explanation: The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the variable is number. The SNMP Query Engine could not allocate enough storage to build the presentation element for the variable value. The PDU is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.
Module: SMITYPES
Procedure Name: encode_SMI_ObjectSyntax

EZA6502E  string initialization fails

Explanation: The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the
variable is string. The PDU did not have a valid string to be encoded. The PDU is discarded.

System action: Processing continues with the next request.
Operator response: Tell the system programmer about the error.
System programmer response: Contact the IBM Software Support Center.

Module: SMITYPES
Procedure Name: encode_SMI_ObjectSyntax

EZA6503W  string: out of memory

Explanation: The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the
variable is string. The SNMP Query Engine could not allocate enough storage to build the presentation element for
the variable value. The SNMP PDU is discarded.

System action: Processing continues with the next request.
Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.

Module: SMITYPES
Procedure Name: encode_SMI_ObjectSyntax

EZA6504E  object initialization fails

Explanation: The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the
variable is object id. The PDU being encoded did not have the object ID value. The SNMP PDU is discarded.

System action: Processing continues with the next request.
Operator response: Tell the system programmer about the error.
System programmer response: Contact the IBM Software Support Center.

Module: SMITYPES
Procedure Name: encode_SMI_ObjectSyntax

EZA6505W  object: out of memory

Explanation: The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the
variable is object id. The SNMP Query Engine could not allocate enough storage to build the presentation element for
the variable value. The SNMP PDU is discarded.

System action: Processing continues with the next request.
Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.

Module: SMITYPES
Procedure Name: encode_SMI_ObjectSyntax
EZA6506W  empty: out of memory

Explanation: The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the variable is empty. The SNMP Query Engine could not allocate enough storage to build the presentation element for the variable value. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response: No action is needed.

Module: SMITYPES

Procedure Name: encode_SMI_ObjectSyntax

EZA6507E  ObjectSyntax invalid choice selected: choice

Explanation: While encoding the variable bindings of an SNMP PDU, the SNMP Query Engine expected the syntax of the variable to be 1 (number), 2 (string), 3 (object ID), 4 (empty), 5 (internet address), 6 (counter), 7 (gauge), 8 (time-ticks), or 9 (opaque). Instead, the variable had the indicated syntax. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: Contact the IBM Software Support Center.

Module: SMITYPES

Procedure Name: encode_SMI_ObjectSyntax

EZA6510E  NetworkAddress invalid choice selected: type

Explanation: While encoding the agent address of a TRAP PDU, the SNMP Query Engine was expecting the network address type to be 1 (internet address). Instead, the network address had the indicated type. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: Contact the IBM Software Support Center.

Module: SMITYPES

Procedure Name: encode_SMI_NetworkAddress

EZA6511E  IpAddress initialization fails

Explanation: The SNMP Query Engine was encoding the agent address of an SNMP TRAP PDU or the variable bindings of an SNMP PDU. The syntax of the variable is internet address. The PDU being encoded did not have a valid internet address to be encoded. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: Contact the IBM Software Support Center.

Module: SMITYPES

Procedure Name: encode_SMI_IpAddress

EZA6512W  IpAddress: out of memory

Explanation: The SNMP Query Engine was encoding the agent address of an SNMP TRAP PDU or the variable bindings of an SNMP PDU. The syntax of the variable is internet address. The SNMP Query Engine could not allocate enough storage to build the presentation element for the internet address. The SNMP PDU is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.
Module: SMITYPES
Procedure Name: encode_SMI_IpAddress

EZA6513W Counter: out of memory
Explanation: The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the variable is counter. The SNMP Query Engine could not allocate enough storage to build the presentation element for the variable value. The SNMP PDU is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.
Module: SMITYPES
Procedure Name: encode_SMI_Counter

EZA6514W Gauge: out of memory
Explanation: The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the variable is gauge. The SNMP Query Engine could not allocate enough storage to build the presentation element for the variable value. The SNMP PDU is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.
Module: SMITYPES
Procedure Name: encode_SMI_Gauge

EZA6515W TimeTicks: out of memory
Explanation: The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the variable is time ticks. The SNMP Query Engine could not allocate enough storage to build the presentation element for the variable value. The SNMP PDU is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.
Module: SMITYPES
Procedure Name: encode_SMI_TimeTicks

EZA6516E Opaque initialization fails
Explanation: The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the variable is opaque. The SNMP PDU being encoded did not have a valid value for the variable. The SNMP PDU is discarded.
System action: Processing continues with the next request.
Operator response: Tell the system programmer about the error.
System programmer response: Contact the IBM Software Support Center.
Module: SMITYPES
**EZA6517W • EZA6520E**

Procedure Name: encode_SMI_Opaque

---

**EZA6517W  Opaque: out of memory**

**Explanation:** The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the variable is opaque. The SNMP Query Engine could not allocate enough storage to build the presentation element for the variable value. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, restart the SNMP Query Engine with a larger region size.

**System programmer response:** No action is needed.

**Module:** SMITYPES

**Procedure Name:** encode_SMI_Opaque

---

**EZA6518E  ObjectName bad class/form/id: class/form/id**

**Explanation:** While decoding the presentation element of the variable bindings of an SNMP PDU, the SNMP Query Engine was expecting the presentation element to have a class of UNIV (universal), a form of 0 (primitive), and an ID of 6 (object ID). Instead, the presentation element had the indicated class, form, and ID. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES

**Procedure Name:** decode_SMI_ObjectName

---

**EZA6519E  ObjectName bad form: form**

**Explanation:** While decoding the presentation element of the variable bindings of an SNMP PDU, the SNMP Query Engine was expecting the presentation element to have a form of 0 (primitive). Instead, the presentation element had the indicated form. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES

**Procedure Name:** decode_SMI_ObjectName

---

**EZA6520E  ObjectName bad object identifier: pe_error**

**Explanation:** The SNMP Query Engine received the indicated pe_error while decoding the variable name of an SNMP PDU. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** See [z/OS Communications Server: IP and SNA Codes](https://www.ibm.com/support/knowledgecenter/SSLTBW_2.2.0/com.ibm.zos.messages/iz29/iz29_ia400000000000000000_000000.htm) for information about pe_errors. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the error occurred on the incoming encoded stream or the encoding of the SNMP request. Contact the IBM Software Support Center.
encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES  
**Procedure Name:** decode_SMI_ObjectName

---

**EZA6521E**  
**number bad integer:** `pe_error`

**Explanation:** The SNMP Query Engine received the indicated `pe_error` while decoding the presentation element for the variable value of an SNMP PDU. The syntax of the variable is `number`. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** See [z/OS Communications Server: IP and SNA Codes](#) for information about `pe_errors`. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES  
**Procedure Name:** decode_SMI_ObjectSyntax

---

**EZA6522E**  
**string bad octetstring:** `pe_error`

**Explanation:** The SNMP Query Engine was decoding the variable bindings of an SNMP PDU. The syntax of the variable is `string`. The SNMP Query Engine received the indicated `pe_error` while decoding the variable value. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** See [z/OS Communications Server: IP and SNA Codes](#) for information about `pe_errors`. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES  
**Procedure Name:** decode_SMI_ObjectSyntax

---

**EZA6523E**  
**object bad object identifier:** `pe_error`

**Explanation:** The SNMP Query Engine received the indicated `pe_error` while decoding the presentation element for the variable value of an SNMP PDU. The syntax of the variable is `object id`. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** See [z/OS Communications Server: IP and SNA Codes](#) for information about `pe_errors`. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES  
**Procedure Name:** decode_SMI_ObjectSyntax
EZA6524E  ObjectSyntax has unknown choice: class/form/id

Explanation:  While decoding the presentation element of the variable value of an SNMP PDU, the SNMP Query Engine was expecting the presentation element to have one of the following class and ID combinations:

<table>
<thead>
<tr>
<th>Class</th>
<th>ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>APPL (application-specific)</td>
<td></td>
</tr>
<tr>
<td>0 (internet address)</td>
<td></td>
</tr>
<tr>
<td>APPL (application-specific)</td>
<td></td>
</tr>
<tr>
<td>1 (counter)</td>
<td></td>
</tr>
<tr>
<td>APPL (application-specific)</td>
<td></td>
</tr>
<tr>
<td>2 (gauge)</td>
<td></td>
</tr>
<tr>
<td>APPL (application-specific)</td>
<td></td>
</tr>
<tr>
<td>3 (time-ticks)</td>
<td></td>
</tr>
<tr>
<td>APPL (application-specific)</td>
<td></td>
</tr>
<tr>
<td>4 (opaque)</td>
<td></td>
</tr>
<tr>
<td>UNIV (universal)</td>
<td></td>
</tr>
<tr>
<td>2 (number)</td>
<td></td>
</tr>
<tr>
<td>UNIV (universal)</td>
<td></td>
</tr>
<tr>
<td>4 (string)</td>
<td></td>
</tr>
<tr>
<td>UNIV (universal)</td>
<td></td>
</tr>
<tr>
<td>5 (empty)</td>
<td></td>
</tr>
<tr>
<td>UNIV (universal)</td>
<td></td>
</tr>
<tr>
<td>6 (object ID)</td>
<td></td>
</tr>
</tbody>
</table>

Instead, the presentation element had the indicated class, form, and ID. The SNMP PDU is discarded.

System action:  Processing continues with the next request.

Operator response:  Tell the system programmer about the error.

System programmer response:  Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module:  SMITYPES

Procedure Name:  decode_SMI_ObjectSyntax

---

EZA6527E  NetworkAddress has unknown choice: class/form/id

Explanation:  While decoding the presentation element for the agent address of the SNMP TRAP PDU, the SNMP Query Engine was expecting the presentation element to have a class of APPL (application-specific) and an ID of 0 (internet address). Instead, the presentation element had the indicated class, form, and ID. The SNMP TRAP PDU is discarded.

System action:  Processing continues with the next request.

Operator response:  Tell the system programmer about the error.

System programmer response:  Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module:  SMITYPES, SMIPRINT

Procedure Name:  decode_SMI_NetworkAddress
EZA6528E  IpAddress bad class/id: \textit{class/id}

\textbf{Explanation:} The SNMP Query Engine was decoding the agent address of an SNMP TRAP PDU or the variable bindings of an SNMP PDU. The syntax of the variable is \textit{internet address}. The SNMP Query Engine was expecting the presentation element for the variable value or agent address to have a class of APPL (application-specific) and an ID of 0 (internet address). Instead, the presentation element had the indicated class and ID. The SNMP PDU is discarded.

\textbf{System action:} Processing continues with the next request.

\textbf{Operator response:} Tell the system programmer about the error.

\textbf{System programmer response:} Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

\textbf{Module:} SMITYPES

\textbf{Procedure Name:} decode_SMI_IpAddress

---

EZA6529E  IpAddress bad octetstring: \textit{pe_error}

\textbf{Explanation:} The SNMP Query Engine received the indicated \textit{pe_error} while decoding the agent address of an SNMP TRAP PDU or the variable bindings of an SNMP PDU. The syntax of the variable is \textit{internet address}. The SNMP PDU is discarded.

\textbf{System action:} Processing continues with the next request.

\textbf{Operator response:} Tell the system programmer about the error.

\textbf{System programmer response:} See [z/OS Communications Server: IP and SNA Codes] for information about \textit{pe_errors}. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

\textbf{Module:} SMITYPES

\textbf{Procedure Name:} decode_SMI_IpAddress

---

EZA6530E  Counter bad class/id: \textit{class/id}

\textbf{Explanation:} The SNMP Query Engine was decoding the variable bindings of an SNMP PDU. The syntax of the variable is \textit{counter}. The SNMP Query Engine was expecting the presentation element for the variable value to have a class of APPL (application-specific) and a value of 1 (counter). Instead, the presentation element had the indicated class and ID. The SNMP request is discarded.

\textbf{System action:} Processing continues with the next request.

\textbf{Operator response:} If the error persists, tell the system programmer about the error.

\textbf{System programmer response:} Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

\textbf{Module:} SMITYPES

\textbf{Procedure Name:} decode_SMI_Counter
EZA6531E  Counter bad integer: pe_error

Explanation: The SNMP Query Engine was decoding the variable bindings of an SNMP PDU. The syntax of the variable is counter. The SNMP Query Engine received the indicated pe_error while decoding the variable value. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: See z/OS Communications Server: IP and SNA Codes for information about pe_errors. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SMITYPES

Procedure Name: decode_SMI_Counter

EZA6532E  Gauge bad class/id: class/id

Explanation: The SNMP Query Engine was decoding the variable bindings of an SNMP PDU. The syntax of the variable is gauge. The SNMP Query Engine was expecting the presentation element for the variable value to have a class of APPL (application-specific) and an ID of 2 (gauge). Instead, the presentation element had the indicated class and ID. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SMITYPES

Procedure Name: decode_SMI_Gauge

EZA6533E  Gauge bad integer: pe_error

Explanation: The SNMP Query Engine received the indicated pe_error while decoding the presentation element for the variable value of an SNMP PDU. The syntax of the variable is gauge. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: See z/OS Communications Server: IP and SNA Codes for information about pe_errors. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SMITYPES

Procedure Name: decode_SMI_Gauge

EZA6534E  TimeTicks bad class/id: class/id

Explanation: The SNMP Query Engine was decoding the variable bindings of an SNMP PDU. The syntax of the variable is time ticks. The SNMP Query Engine was expecting the presentation element for the variable value to have a class of APPL (application-specific) and an ID of 3 (time ticks). Instead, the presentation element had the indicated class and ID. The SNMP PDU is discarded.

System action: Processing continues with the next request.
Operator response: Tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SMITYPES

Procedure Name: decode_SMI_TimeTicks

---

**EZA6535E**  TimeTicks bad integer: *pe_error*

**Explanation:** The SNMP Query Engine received the indicated *pe_error* while decoding the presentation element for the variable value of an SNMP PDU. The syntax of the variable is *time ticks*. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** See [z/OS Communications Server: IP and SNA Codes](#) for information about *pe_errors*. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SMITYPES

Procedure Name: decode_SMI_TimeTicks

---

**EZA6536E**  Opaque bad class/id: *classid*

**Explanation:** The SNMP Query Engine was decoding the variable bindings of an SNMP PDU. The syntax of the variable is *opaque*. The SNMP Query Engine was expecting the presentation element for the variable value to have a class of APPL (application-specific) and an ID of 4 (opaque). Instead, the presentation element had the indicated class and ID. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SMITYPES

Procedure Name: decode_SMI_Opaque

---

**EZA6537E**  Opaque bad octetstring: *pe_error*

**Explanation:** The SNMP Query Engine received the indicated *pe_error* while decoding the variable bindings of an SNMP PDU. The syntax of the variable is *opaque*. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** See [z/OS Communications Server: IP and SNA Codes](#) for information about *pe_errors*. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SMITYPES
Procedure Name: decode_SMI_Opaque

**EZA6617I** pDPIpacket: **Major=major version, Minor=minor version, Release=release, Type=type**

**Explanation:** The SNMP agent has received a pDPIpacket request. Displayed are the values in the snmp_dpi_hdr. See [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com/support/docview.wss?uid=swg27044864) for more information about the pDPIpacket command.

**System action:** The SNMP agent continues processing the pDPIpacket.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** MKDPI

**Procedure Name:** mkdpi

**EZA6618W** pDPIpacket: No support for this level of DPI

**Explanation:** The SNMP agent has received a pDPIpacket request with Major release not equal to 2 or a minor release not equal to 1 or a release version not equal to 0 or 1. See [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com/support/docview.wss?uid=swg27044864) for more information about the pDPIpacket command.

**System action:** The SNMP agent stops processing the pDPIpacket. The SNMP agent continues.

**Operator response:** Contact the system programmer.

**System programmer response:** Review the minor and major version levels and the release level displayed in preceding messages. Determine the agent making the request. Determine why it is making the request with an unsupported level of DPI®.

**Module:** MKDPI

**Procedure Name:** mkdpi

**EZA6619I** pDPIget: **oid=object id**

**Explanation:** The SNMP agent has received a pDPIpacket request. Displayed is the object identifier being requested. See [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com/support/docview.wss?uid=swg27044864) for more information about the pDPIpacket command.

**System action:** The SNMP agent continues processing the pDPIpacket.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** MKDPI

**Procedure Name:** mkdpi

**EZA6620I** pDPInext: **group_id=group id, oid=object id**

**Explanation:** The SNMP agent has received a pDPIpacket request. Displayed is the group identifier and object identifier being requested. See [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com/support/docview.wss?uid=swg27044864) for more information about the pDPIpacket command.

**System action:** The SNMP agent continues processing the pDPIpacket.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** MKDPI

**Procedure Name:** mkdpi
EZA6621E  pDPIset: Invalid packet, integer length =length

Explanation: The SNMP agent has received a pDPIpacket request. Displayed is the length of integer to be set. The length is not equal to 4. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPIpacket command.

System action: The SNMP agent stops processing the pDPIpacket. The SNMP agent continues.

Operator response: Contact the system programmer.

System programmer response: Determine the agent that is sending the incorrect packet. Analyze the output to determine why it is sending incorrect packets.

Module: MKDPI

Procedure Name: dpi_set_packet

EZA6622I  pDPIset: oid=object id, type='type'H, value_len=length

Explanation: The SNMP agent has received a pDPIpacket request. Displayed is the object identifier, the SNMP_TYPE and the length of the value. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPIpacket command.

System action: The SNMP agent continues processing the pDPIpacket.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MKDPI

Procedure Name: dpi_set_packet

EZA6623I  value=decimal_value hex_value

Explanation: The SNMP agent has received a pDPIpacket request. Displayed is the value of the object identifier in long decimal and hexadecimal formats. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPIpacket command.

System action: The SNMP agent continues processing the pDPIpacket.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MKDPI

Procedure Name: dpi_set_packet

EZA6624I  value=decimal_value hex_value

Explanation: The SNMP agent has received a pDPIpacket request. Displayed is the value of the object identifier in unsigned long decimal and hexadecimal formats. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPIpacket command.

System action: The SNMP agent continues processing the pDPIpacket.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MKDPI

Procedure Name: dpi_set_packet
Explanation: The SNMP agent has received a pDPIpacket request. Displayed is the value of the object identifier as an octet string format. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPIpacket command.

System action: The SNMP agent continues processing the pDPIpacket.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MKDPI

Procedure Name: dpi_set_packet

Explanation: The SNMP agent has received a pDPItrap request. Displayed is the value of the traps generic and specific fields. Each field is displayed in decimal and hexadecimal formats. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPItrap command.

System action: The SNMP agent continues processing the pDPIpacket.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MKDPI

Procedure Name: dpi_trap_packet

Explanation: The SNMP agent has received a pDPItrap request. Displayed is the value of the traps generic and specific fields along the enterprise value. The generic and specific fields are displayed in both decimal and hexadecimal formats. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPItrap command.

System action: The SNMP agent continues processing the pDPIpacket.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MKDPI

Procedure Name: dpi_trap_packet

Explanation: The SNMP agent has received a pDPItrap request using version 1.1 or higher. Displayed are the values of the trap’s generic and specific fields. The generic and specific fields are displayed in both decimal and hexadecimal formats. No enterprise value was specified. See z/OS Communications Server: IP Programmer's Guide and Reference for more information about the pDPItrap command.

System action: The SNMP agent continues processing the pDPIpacket.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MKDPI

Procedure Name: dpi_trap_packet
EZA6630E  fDPIparse: Unknown packet_type: type

Explanation: While parsing a packet from an SNMP subagent over the DPI interface, SNMPD was expecting the packet type to be 1 (get), 2 (getNext), 3 (set), 4 (trap), 5 (response), or 6 (register). Instead, the packet had the indicated type. The DPI request is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: Check the DPI subagent program for errors. If there are no apparent errors in the subagent program, contact the IBM Software Support Center. If the subagent is the SNMP subagent existing in the TCPIP module, contact the IBM Software Support Center.

Module: MKDPI

Procedure Name: fDPIparse

EZA6631E  cDPIpacket: Unknown packet_type

Explanation: The SNMP agent has received a packet that is unknown.

System action: The SNMP agent stops processing the pDPIpacket. The SNMP agent continues.

Operator response: Contact the system programmer.

System programmer response: Determine the device that is sending the incorrect packets. View the device output to determine why it is sending incorrect packets. See z/OS Communications Server: IP Programmer’s Guide and Reference for more information about the pDPIpacket command.

Module: MKDPI

Procedure Name: cDPIpacket

EZA6632E  cDPIset: Invalid packet, integer length length

Explanation: The SNMP agent has received a set packet. The variable to be set is an integer type. Integer types must have a length of 4.

System action: The SNMP agent stops processing the pDPIpacket. The SNMP agent continues.

Operator response: Contact the system programmer.

System programmer response: Determine the device that is sending the incorrect packets. View the device output to determine why it is sending incorrect packets. See z/OS Communications Server: IP Programmer’s Guide and Reference for more information about the pDPIpacket command.

Module: MKDPI

Procedure Name: cDPIset

EZA6633E  mkMIBquery: Unknown packet type: packet type

Explanation: The SNMP agent has received a mkDPIregister packet. While trying to query the Management Information Base (MIB) it determined that the packet type was unknown.

System action: The SNMP agent stops processing the pDPIpacket. The SNMP agent continues.

Operator response: Contact the system programmer.

System programmer response: Determine the device that is sending the incorrect packets. View the device output to determine why it is sending incorrect packets. See z/OS Communications Server: IP Programmer’s Guide and Reference for more information about the pDPIregister command.

Module: MKDPI

Procedure Name: mkMIBquery
EZA6634E  mkDPIset: Unknown SNMP_TYPE: type
Explanation: The SNMP agent has received an mkDPIset packet. The SNMP_TYPE is not supported.
System action: The SNMP agent stops processing the pDPIpacket. The SNMP agent continues.
Operator response: Contact the system programmer.
System programmer response: Determine the device that is sending the incorrect packets. View the device output to determine why it is sending packets with incorrect SNMP_TYPEs. See z/OS Communications Server: IP Programmer’s Guide and Reference for more information about the mkDPIset command.
Module: MKDPI
Procedure Name: dpi_set_packet

EZA6635E  mkDPIlist: Unknown SNMP_TYPE: type
Explanation: The SNMP agent has received an mkDPIlist packet. The SNMP_TYPE is not supported.
System action: The SNMP agent stops processing the pDPIpacket. The SNMP agent continues.
Operator response: Contact the system programmer.
System programmer response: Determine the device that is sending the incorrect packets. View the device output to determine why it is sending packets with incorrect SNMP_TYPEs. See z/OS Communications Server: IP Programmer’s Guide and Reference for more information about the mkDPIlist command.
Module: MKDPI
Procedure Name: dpi_set_packet
Chapter 8. EZA8xxxx messages

EZA8200I MVS TCP/IP Telnet version level
Explanation: You are running the indicated version of TCP/IP Telnet for MVS.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNTELP
Procedure Name: ClearScreen

EZA8201I Telnet will allow you to log in to a remote host
EZA8202I machine. Note that the “remote” host may be the
EZA8203I same as your local host.
EZA8205I You may specify a remote host when invoking TELNET.
EZA8206I Otherwise, you will be prompted to enter one of the
EZA8207I following:
EZA8208I a remote host, “quit”, or “?” for assistance.
EZA8210I Specify the remote host either via an internet
EZA8211I host name, or via an internet address of the form
EZA8212I “nn.nn.nn.nn.”.
EZA8214I Once connected, follow the log in and usage procedures
EZA8215I of the remote host.
EZA8217I To invoke one of several TELNET commands, hit an
EZA8218I appropriate attention key:
EZA8219I In Transparent Mode -- PA1
EZA8220I In Line Mode -- any PFkey but PF 1,2,3, or 13,14,15
Then, enter any of the following commands:

- **Help or ?** -- Receive (this) assistance
- **AYT** -- Are You There?
- **AO** -- Abort Output
- **BRK** -- Break
- **IP** -- Interrupt Process
- **PA1** -- Send PA1 key; ONLY if NOT in LLine Mode
- **SYNCH** -- Clear data path, except for TELNET commands
- **Quit** -- Quit the TELNET session

If in Line Mode, the following PF settings are in force:

- **PF1 or 13** -- Retrieve previous input line
- **PF2 or 14** -- Scroll halfway up
- **PF3 or 15** -- Turn off display of user-line; designed to be used before entering password

These messages are displayed when Help is invoked. This is displayed by typing a question mark (?) or `Help` at the command line.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNUTMAS

**Procedure Name:** HelpMe

Telnet terminated -- Connection closed

**Explanation:** The Telnet session has ended because of a connection state type of CONNECTIONclosing, SENDINGonly, or NONEXISTENT notification has been received.

**System action:** The Telnet connection ends. TCPIP continues.

**Operator response:** Reinitialize the Telnet connection if desired.

**System programmer response:** No action is needed.

**Module:** TNUTMAS

**Procedure Name:** UtEndTelnet
EZA8247E  Telnet terminated
Explanation:  The Telnet connection has been ended.
System action:  The Telnet connection ends. TCPIP continues.
Operator response:  Reinitiate the Telnet connection if desired.
System programmer response:  No action is needed.
Module:  TNUTMAS
Procedure Name:  UtEndTelnet

EZA8248E  Port 'port number' invalid (out-of-range or not numeric.)
Explanation:  The port number specified in the port_number parameter of the TELNET command is incorrect. The port parameter indicates the port number to which you want to connect on the remote host. When connecting to a non-TELNET port, the data exchange must follow the protocol recognized by the other port. The default is well-known port 23.
System action:  TCPIP continues.
Operator response:  Check for the correct command syntax and port number and reissue the command. See the Communications Server: IP User’s Guide and Commands for more information.
System programmer response:  No action is needed.
Module:  TNUTMAS
Procedure Name:  GetParameters

EZA8249I  Ignoring extraneous parameters after port
Explanation:  Additional parameters have been entered after the port number parameter of the TELNET command. These parameters are unnecessary and are being ignored.
System action:  TCPIP continues.
Operator response:  Check for correct command syntax and try command again.
System programmer response:  No action is needed.
Module:  TNUTMAS
Procedure Name:  GetParameters

EZA8250I  Missing parm after TRANSLATE
Explanation:  The data set name of the translation table for the TRANSLATE parameter is missing. This parameter specifies a nonstandard translation table file and can be declared as an option of the TELNET command.
System action:  TCPIP continues.
Operator response:  Enter the correct data set name and resubmit the command. See the Communications Server: IP User’s Guide and Commands for more information.
System programmer response:  No action is needed.
Module:  TNUTMAS
Procedure Name:  GetParameters

EZA8251I  Invalid option “value” ignored
Explanation:  An incorrect option in the TELNET command has been declared. This option is being ignored.
System action:  TCPIP continues.
Operator response:  Check for the correct command syntax and try the command again. See the Communications Server: IP User’s Guide and Commands for more information.
System programmer response: No action is needed.

Module: TNUTMAS
Procedure Name: GetParameters

**EZA8252E**  *errmsg (msgnum)*

**Explanation:** This message indicates the return code received after the BeginTcpIp or Handle procedure was unsuccessful. The BeginTcpIp procedure is used to inform the TCPIP address space that you want to start using its services. The Handle procedure is used to specify that you want to receive notifications in the given set. This procedure is called after BeginTcpIp and before accessing the TCPIP services.

terrmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action: TCPIP continues.
Operator response: Consult the system programmer.
System programmer response: Respond as indicated by the message EZAmsgnum.

Module: TNUTMAS
Procedure Name: GetParameters

**EZA8253I**  *Host “host ID” Unknown.*

**Explanation:** The foreign host name specified in the foreign_host parameter of the TELNET command is incorrect or Telnet was not able to reach the destination. This parameter specifies the name or internet address of the local or remote host.

System action: TCPIP continues.
Operator response: Check the correct command syntax and host name and try the command again. See the z/OS Communications Server: IP User’s Guide and Commands for more information.
System programmer response: No action is needed.

Module: TNUTMAS
Procedure Name: GetParameters

**EZA8254I**  *Enter foreign host (and optional port), “quit”, or “?” for help:*

**Explanation:** The host parameter was not specified with the TELNET command. If you do not specify the name or internet address of the local or remote host, you are prompted for the remote host.

System action: TCPIP continues.
Operator response: Enter the local or remote host name and optional port number. See the z/OS Communications Server: IP User’s Guide and Commands for more information.
System programmer response: No action is needed.

Module: TNUTMAS
Procedure Name: UtStartTelnetInit

**EZA8255E**  *Cannot load translate table data set name; errmsg (msgnum)*

**Explanation:** The data set name specified in the data set name option of the TRANSLATE parameter of the TELNET command is incorrect. This data set name specifies the name of a nonstandard translation table.

terrmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.
System action: The Telnet connection ends. TCPIP continues.

Operator response: Check for the correct translation data set name, reinitiate the Telnet connection and resubmit the command. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response: Respond as indicated by the message EZAmsgnum.

Module: TNUTMAS

Procedure Name: UtStartTelnetInit

---

EZA8256I Connecting to remote host, port port number

Explanation: A connection has been initiated between the server and the indicated remote host. This message also indicates the port number for which the connection has been opened on the remote host.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: UtStartTelnetInit

---

EZA8259E Waiting for TCP connection resources. Use ATTN to quit.

Explanation: The procedure TcpWaitOpen, which initiates a TCP connection, returned a ZEROresources return code. ZEROresources means that TCP cannot handle any more connections at this time. Since the current application does not handle RESOURCESavailable notifications and the TcpWaitOpen procedure returned a ZEROresources return code, the connection is ended. The RESOURCESavailable notifications can be declared in the Notifications record. This notification is sent only if a previous TcpOpen or TcpWaitOpen returned ZEROresources. This message is displayed with EZA8260E.

System action: The Telnet connection ends. TCPIP continues.

Operator response: Reinitiate the Telnet connection.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: UtStartTelnetInit

---

EZA8260E errmsg (msgnum)

Explanation: This message displays the return code received after a connection has ended. This message is displayed with EZA8259E.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action: The Telnet connection ends.

Operator response: No action is needed.

System programmer response: Respond as indicated by the message EZAmsgnum.

Module: TNUTMAS

Procedure Name: UtStartTelnetInit
EZA8261I  Quitting...bye

Explanation: An external interrupt notification has been received by the server to stop the Telnet connection. An EXTERNAL interrupt notification is given when a simulated external interrupt occurs in your address space.

System action: The Telnet connection ends.

Operator response: Reinitiate the Telnet connection.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: UtStartTelnetInit

EZA8262I  errmsg (msgnum)

Explanation: This message indicates the return code received after the Telnet connection has ended.

ermsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action: The Telnet connection ends.

Operator response: Notify the system programmer of the message.

System programmer response: Respond as indicated by the message EZAmsgnum.

Module: TNUTMAS

Procedure Name: UtStartTelnetInit

EZA8263E  TELNET requires a 327x-type terminal

Explanation: The terminal type currently being used is not one supported by the Telnet protocol. The TELNET command supports IBM 3270-type display stations. Examples of supported display stations are:

- IBM 3178 Display Station
- IBM 3179 Display Station
- IBM 3180 Display Station
- IBM 3191 Display Station
- IBM 3192 Display Station
- IBM 3193 Display Station
- IBM 3194 Display Station
- IBM 3275 Display Station Model 2
- IBM 3276 Control Unit Display Station Models 2, 3, and 4
- IBM 3277 Display Station Model 2
- IBM 3278 Display Station Models 2, 3, 4, and 5
- IBM 3279 Color Display Station Models 2 and 3.

System action: The Telnet connection ends.

Operator response: Run a 3270 type terminal emulator or use a 3270 type display station.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: UtStartTelnetInit

EZA8265I  Using Line Mode...

Explanation: The line mode parameter has been specified for the TELNET command. The LINEMODE parameter indicates the logon operation. In line mode, the remote host’s output is displayed on the screen one line at a time, without full-screen capabilities.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: UtFinishTelnetInit

---

EZA8267I Notes on using Telnet when in Line Mode;

EZA8268I - To hide Password, Hit PF3 or PF15

EZA8269I - To enter Telnet Command, Hit PF14-12, or PF16-24

Explanation: These messages provide information about Telnet when the LINEMODE parameter for the TELNET command has been specified.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: UtFinishTelnetInit

---

EZA8270I Using Transparent Mode...

Explanation: The transparent mode of operation is the default for the TELNET command. When in transparent mode, the remote host’s full-screen capabilities are functional on the local terminal.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: UtFinishTelnetInit

---

EZA8271I Notes on using Telnet when in Transparent Mode;

EZA8273I - To enter Telnet Command, Hit PA1

Explanation: These messages provide information about using Telnet when the transparent mode has been specified in the TELNET command.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: UtFinishTelnetInit

---

EZA8271I **** Telnet: Internal consistency failure;

Explanation: The procedure UtMustHave, which checks that a given internal consistency condition exists, was unsuccessful. This message displays the condition associated with this procedure.

Although these messages will be displayed on the console without the message number, the following table lists the
### Description
- bad case in UtToServ.
- BuffEmpty: bad return code: *errmsg (msgnum)*
- BuffEmpty: *errmsg (msgnum)*
- CallToServer: Bad user command.
- CallTcpSend: *errmsg (msgnum)*
- CallToServer: Bad Tag.
- CallToUser: bad return code.
- GetNote finds user attention flag wrong.
- GobbleChar: urgent bytes went below 0 before DM
- GobbleChar: urgent bytes went below 0 before DM
- GobbleChar: urgent bytes went below 0 before DM
- GobbleChar: urgent bytes went below 0 before DM
- GobbleChar: urgent bytes went below 0 before DM

Procedure Name: UtMustHave

**EZA8277I CallTcpSend: errmsg (msgnum)**

Explanation: This message is displayed after an unsuccessful attempt to start a Telnet session. This message is displayed with EZA8246E.

`errmsg` is the text of the message that describes the error.

`msgnum` is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in `errmsg`. For more information about this message, see message EZAmgnum.

System action: TCPIP continues.
Operator response: Inform the system programmer of this message.
System programmer response: Respond as indicated by the message EZAmgnum.
Module: TNUTMAS
Procedure Name: CallTcpSend

**EZA8278I UtGetBuffSpace: Bad ReturnCode.**

Explanation: The procedure UtGetBuffSpace, which is called when a TcpSend is unsuccessful due to insufficient buffer space, has been initialized. This procedure also receives notes from the notification list until it finds a BUFFERspaceAVAILABLE note. A BUFFERspaceAVAILABLE notification is given when space becomes available on a connection. This message is displayed with EZA8246E.

System action: The Telnet connection ends.
Operator response: Reinitiate the Telnet connection.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: UtGetBuffSpace

**EZA8279I Connection closed**

Explanation: The Telnet connection has ended.

System action: The Telnet connection ends.
Operator response: Reinitiate the Telnet connection if required.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: UtGetBuffSpace

**EZA8280I GetNote finds user attention flag wrong.**

Explanation: The procedure GetNote, which checks and processes the notification queue, found that there were no user attention notifications pending or that the queue was empty. This message is displayed with EZA8246E.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
EZA8281I  CallToServer: Bad user command.

Explanation: An incorrect command has been received by the server. This message is displayed with EZA8246E.

System action: TCPIP continues.

Operator response: Check for the correct function keys and commands available when using transparent mode. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response: No action is needed.

Module: TNUTMAS
Procedure Name: CallToServer

EZA8282I  CallToServer: Bad Tag.

Explanation: An incorrect command or attention key has been received by the server. This message is displayed with EZA8246E.

System action: TCPIP continues.

Operator response: Check for the correct function keys and commands available when using transparent mode. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System programmer response: No action is needed.

Module: TNUTMAS
Procedure Name: CallToServer

EZA8283I  in SendNegotiation

EZA8284I  Claim is (ord) claim: Option is (ord) option

Explanation: The procedure SendNegotiation processes option negotiations. This message indicates the command code received for the option negotiation.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS
Procedure Name: SendNegotiation

EZA8285I  in FindTermName

Explanation: The procedure FindTermName, which processes the terminal name and sends the TERMINAL-type option subnegotiation to the client, has been initialized.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS
Procedure Name: FindTermName
EZA8286I in SendIS
Explanation: The SendIS procedure has been initiated. This procedure processes “terminal type is” statements from the user. The command code for IS is 0.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: SendIS

EZA8287I termname is terminal name TermIndexSent is terminal index
Explanation: Indicates the terminal name as it was declared in the terminal-type option negotiation.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: SendIS

EZA8288I in DONTnack
Explanation: The procedure DONTnack, which sends a DONT negotiation acknowledgment, has been initiated. A DONT command is a denial of request to perform a specified option.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: DONTnack

EZA8289I in WONTnack
Explanation: The procedure WONTnack, which sends a WONT negotiation acknowledgment, has been initiated. A WONT command is a refusal to perform a specified option.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: WONTnack

EZA8290I in BackOutOptions: backing out of state (ordinal value); status
Explanation: The procedure BackOutOptions, which ends any transparent mode option negotiation and resets the option negotiation status, has been initiated.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
**EZA8291I • EZA8295I**

Procedure Name: BackOutOptions

EZA8291I in Negotiate Options; option is (ordinal value): option

EZA8292I tag is (ordinal value): tag

Explanation: The procedure NegotiateOptions, which handles the negotiation of Telnet options, has been initiated. This message also indicates the option negotiation command.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: NegotiateOptions

EZA8293I DONT or WONT received for unknown option

Explanation: A DONT or WONT command has been received for an option that was not specified or is not known.

System action: TCPIP continues.

Operator response: Check for the correct Telnet option command syntax and resubmit the command. See RFC 854 for more information about option negotiations. See Appendix C, “Related protocol specifications,” on page 649 for information about accessing RFCs.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: NegotiateOptions

EZA8294I Received Subnegotiation on Echo option

Explanation: A subnegotiation command has been received after an Echo option. When the Echo option is in effect, the party at the end performing the echoing is expected to transmit (echo) data characters it receives back to the sender of the data character. This message is displayed with EZA8246E.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: NegotiateOptions

EZA8295I NegotiateOptions: bad subnegotiation sent

Explanation: The procedure NegotiateOptions, which handles the negotiation of Telnet options, received an incorrect subnegotiation command. This message is displayed with EZA8246E.

System action: TCPIP continues.

Operator response: Check for the correct Telnet option command syntax and resubmit the command. See RFC 854 for more information about option negotiations. See Appendix C, “Related protocol specifications,” on page 649 for information about accessing RFCs.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: NegotiateOptions
EZA8296I  Received Subnegotiation on Use-Eor option
Explanation:  A subnegotiation option command has been received on a Use-Eor option. End of record (EOR) is used to frame the end of a write command when in transparent mode. This message is displayed with EZA8246E.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  TNUTMAS
Procedure Name:  NegotiateOptions

EZA8297I  Received Subnegotiation on Transmit-binary option
Explanation:  A subnegotiation option has been received on a transmit binary option. The transmit binary option allows for a transmission change to 8-bit binary. This message is displayed with EZA8246E.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  TNUTMAS
Procedure Name:  NegotiateOptions

EZA8298I  Received Subnegotiation on unsupported option
Explanation:  The option for which a subnegotiation has been received is not implemented on this Telnet connection. This message is displayed with EZA8246E.
System action:  TCPIP continues.
Operator response:  Check for the correct Telnet option command syntax and resubmit the command. See RFC 854 for more information about option negotiations. See Appendix C, “Related protocol specifications,” on page 649 for information about accessing RFCs.
System programmer response:  No action is needed.
Module:  TNUTMAS
Procedure Name:  NegotiateOptions

EZA8305I  in IacNoteArrives
Explanation:  The procedure IacNoteArrives, which handles Interpret As Command (IAC) commands received from the Telnet server, has been initiated.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  TNUTMAS
Procedure Name:  IacNoteArrives

EZA8306I  Option neg. stuff arrives
Explanation:  The procedure IacNoteArrives, which handles Interpret As Command (IAC) commands received from the Telnet server, has received a Telnet option negotiation command.
System action:  TCPIP continues.
Operator response:  No action is needed.
**EZA8307I • EZA8310I**

**System programmer response:** No action is needed.

**Module:** TNUTMAS

**Procedure Name:** IacNoteArrives

---

**EZA8307I**  
**IacNoteArrives: server sent DM after UrgentSpan**

**Explanation:** A data mark (DM) has been received. A data mark is a reserved octet that is appended to a control function. While in Urgent mode, this option will end a program running on the remote host. This message is displayed with EZA8246E.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNUTMAS

**Procedure Name:** IacNoteArrives

---

**EZA8308I**  
**Other Telnet char arrives**

**Explanation:** Additional Telnet characters are being received by the server.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNUTMAS

**Procedure Name:** IacNoteArrives

---

**EZA8309I**  
**CallToUser: bad return code.**

**Explanation:** The procedure CallToUser, which processes return codes received from UtToUser, was unsuccessful because of an incorrect return code received. The procedure UtToUser contains the routines for correspondence from server Telnet to the user. This message is displayed with EZA8246E.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** This message should be preceded by more specific error messages. Correct the errors indicated by the preceding messages.

**Module:** TNUTMAS

**Procedure Name:** CallToUser

---

**EZA8310I**  
**DataDelivered; # bytes: bytes**

**Explanation:** Indicates the number of bytes delivered from the user to the Telnet server.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNUTMAS

**Procedure Name:** MainLoop
EZA8311I UrgentMode;LastUrgByte byte
Explanation: The server has received an attention signal to begin data transmission in urgent mode. When in urgent mode, the data stream is immediately scanned for attention signals. These signals are used to invoke special handling of the data stream by the process that receives it. This message also indicates the last urgent byte being delivered.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: MainLoop

EZA8312I got USERwantsATTENTION
Explanation: The user has entered an attention key. An attention key is a function key on terminals that, when pressed, causes an I/O interruption in the processing unit.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: MainLoop

EZA8313I got USERdeliversLINE
Explanation: The user has entered a line of data at the terminal.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: MainLoop

EZA8314I got CONNECTIONstate
Explanation: The client has received a connection state change notification. This notification is given when a TCP connection receives information from the network that causes the state of the connection to change. Such changes might arise when the remote client opens, closes, or abends the connection.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: MainLoop

EZA8315I Connection closed
Explanation: The Telnet connection has ended.
System action: The Telnet connection ends.
Operator response: Reinitiate the Telnet connection if required.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: MainLoop

EZA8316I in URGENTpending
Explanation: An URGENTpending notification has been received. This notification is given when the TCPIP service is informed by the remote site that there is urgent data not yet delivered to the client.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: MainLoop

EZA8317I UtGetBuffSpace: UrgentSpan is negative.
Explanation: No more urgent data is found in the data stream before a data mark (DM) is received. This message is displayed with EZA8246E.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: MainLoop

EZA8318I UrgentMode
Explanation: Urgent mode has been initiated. When in urgent mode, the data stream is immediately scanned for attention signals. These signals are used to invoke special handling of the data stream by the process that receives it.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: MainLoop

EZA8319I got EXTERNALinterrupt: code
Explanation: An EXTERNAL interrupt notification has been received. This notification is given when a simulated external interrupt occurs in your address space.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: MainLoop

EZA8320I MainLoop: Bad notification: notification
Explanation: The procedure MainLoop, which processes data from the user to the Telnet server, was unsuccessful because of an incorrect notification received. This message displays the notification name. This message is displayed with EZA8246E.
System action: TCPIP continues.
Operator response: This message should be preceded by more specific error messages.
System programmer response:  No action is needed.
Module:  TNUTMAS
Procedure Name:  MainLoop

**EZA8321I  in UtEndTelnet**

**Explanation:**  The procedure UtEndTelnet, which ends the user's Telnet connection, turns off the full-screen services, and shuts down the TCP connection, has been initiated.

**System action:**  TCPIP continues.
**Operator response:**  No action is needed.
**System programmer response:**  No action is needed.

Module:  TNUTMAS
Procedure Name:  UtEndTelnet

**EZA8322I  Session ended. <ENTER> to return to TSO**

**Explanation:**  The Telnet connection has ended. To return to the time sharing option (TSO) environment, press the ENTER key.

**System action:**  The Telnet connection ends. TCPIP continues.
**Operator response:**  Press the ENTER key.
**System programmer response:**  No action is needed.

Module:  TNUTMAS
Procedure Name:  UtEndTelnet

**EZA8323I  UtEndTelnet: Bad TurnCode from GetNextNote.**

**Explanation:**  The UtEndTelnet procedure, which stops a Telnet connection, received an incorrect return code from GetNextNote. The GetNextNote procedure gets the next notification off the notification queue. This message is displayed with EZA8246E.

**System action:**  The Telnet connection is ended. TCPIP continues.
**Operator response:**  No action is needed.
**System programmer response:**  No action is needed.

Module:  TNUTMAS
Procedure Name:  UtEndTelnet

**EZA8324I  Using TCPIPTES...**

**Explanation:**  The test option has been specified for the NETSTAT command. This command provides information about the status of the local host. The TEST option displays detailed information about the TCPIPTES address space. You can use the TEST parameter in conjunction with any other NETSTAT parameter to display information about the specified TCPIPTES address space.

**System action:**  TCPIP continues.
**Operator response:**  No action is needed.
**System programmer response:**  No action is needed.

Module:  TNUTMAS
Procedure Name:  GetParameters
EZA8325I Option (ordof enum):

EZA8326I WILL.

EZA8327I WILL consummated.

EZA8328I DO.

EZA8329I DO consummated.

Explanation: Indicates the options that are currently in effect. A WILL option indicates the desire to begin performing, or confirmation that you are now performing, the indicated option. A DO option indicates the request that the other party perform, or confirmation that you are expecting the other party to perform, the indicated option. Depending on the options specified only some of these options will be displayed.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: UtFinishTelnetInit

EZA8331I Telnet

Explanation: The Telnet services have been invoked.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: UtFinishTelnetInit

EZA8335I Pop (in UtToUser): bad stack pointer.

Explanation: Telnet issues this message while attempting to process data received by the server. The submitted data has been processed and no more procedure calls are required. This message is displayed with EZA8246E.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNTOUSE

Procedure Name: Push

EZA8337I BuffEmpty : bad return code : errmsg (msgnum)

Explanation: Telnet issues this message when an unsuccessful return code is given while attempting to retrieve data from the buffer for processing. This message is displayed with EZA8246E.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action: TCPIP continues.

Operator response: No action is needed.
System programmer response:  Respond as indicated by the message EZAmsgnum.
Module:  TNTOUSE
Procedure Name:  GetMoreData

Explanation:  This message occurs as a result of the most recent character to be processed being retrieved from the buffer, processed, and printed to the user screen.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  TNTOUSE
Procedure Name:  IacScan

EZA8339I  ord: Transparent mode, found IAC at IacOffset number is character
Explanation:  Telnet issues this message as a result of an Interpret As Command (IAC) character being detected while tracing is on in transparent mode. The IAC is displayed with a command code. If this command deals with option negotiation, the command will have a number to show the code for the referenced option.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  TNTOUSE
Procedure Name:  IacScan

EZA8340I  GobbleChar: urgent bytes went below 0 before DM
Explanation:  Telnet issues this message while in transparent mode. The data submitted containing urgent data bytes has been exhausted before the data mark. This message is displayed with EZA8246E.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  TNTOUSE
Procedure Name:  IacScan

EZA8341I  GobbleChar: urgent bytes went below 0 before DM
Explanation:  Telnet issues this message while in Line (non-transparent) mode. The data submitted containing urgent data bytes have been exhausted before detecting a data mark. This message is displayed with EZA8246E.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  TNTOUSE
Procedure Name:  IacScan
EZA8342I - GobbleChar: urgent bytes went below before DM

**Explanation:** Telnet issues this message while in line (non-transparent) mode. The data submitted containing urgent data bytes have been exhausted before detecting a data mark. This message is displayed with EZA8246E.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNOTUSE

**Procedure Name:** IacScan

---

EZA8343I - NewLineRead: bad line feed state.

**Explanation:** Telnet issues this message while in line (non-transparent) mode. An incorrect line feed state was recognized while attempting to read the line feed set sequence. This message is displayed with EZA8246E.

**System action:** TCPIP continues.

**Operator response:** Submit a valid LfSet sequence in the data set to declare a new line.

**System programmer response:** No action is needed.

**Module:** TNOTUSE

**Procedure Name:** CheckForNeedToSuspend.

---

EZA8344I - NewLineRead: bad line feed state.

**Explanation:** Telnet issues this message while in line (non-transparent) mode. An incorrect line feed state was recognized while attempting to read the carriage return set sequence. This message is displayed with EZA8246E.

**System action:** TCPIP continues.

**Operator response:** Submit a valid CrSet sequence in the data set to declare a new line.

**System programmer response:** No action is needed.

**Module:** TNOTUSE

**Procedure Name:** CheckForNeedToSuspend

---

EZA8345I - in TelnetRead

**Explanation:** Telnet issues this message while tracing is on. The Telnet command, which was indicated by the presence of an Interpret As Command (IAC) character, is now being read.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNOTUSE

**Procedure Name:** TelnetRead

---

EZA8346I - TelnetRead: Excepting IACnvrt.

**Explanation:** Telnet issues this message while tracing is on. The client is now scanning for an Interpret As Command (IAC) character. This message is displayed with EZA8246E.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNOTUSE
Procedure Name: TelnetRead

**EZA8347I**  TelnetRead: urgent bytes went below 0 before DM

**Explanation:** Telnet issues this message while tracing is on. The data submitted containing urgent bytes have been exhausted before the data mark. This message is displayed with EZA8246E.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNTOUSE

**Procedure Name:** TelnetRead

---

**EZA8348I**  TelnetRead: urgent bytes went below 0 before DM

**Explanation:** Telnet issues this message while in urgent mode. While looking for a command following the IAC (Interpret As Command) character, the data containing urgent bytes has been exhausted before the data mark. This message is displayed with EZA8246E.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNTOUSE

**Procedure Name:** TelnetRead

---

**EZA8349I**  TelnetRead: urgent bytes went below 0 before DM

**Explanation:** Telnet issues this message while in urgent mode. While scanning for the negotiation option following the Interpret As Command (IAC) character, the data containing urgent bytes was exhausted before detecting a data mark. This message is displayed with EZA8246E.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNTOUSE

**Procedure Name:** TelnetRead

---

**EZA8350I**  TelnetRead: urgent bytes went below 0 before DM

**Explanation:** Telnet issues this message while in urgent mode. The data containing urgent bytes was exhausted before detecting a data mark while negotiating options. This message is displayed with EZA8246E.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNTOUSE

**Procedure Name:** TelnetRead

---

**EZA8351I**  TelnetRead: urgent bytes went below 0 before DM

**Explanation:** Telnet issues this message while in urgent mode. While scanning for a negotiation option following the Interpret As Command (IAC) character, the data containing urgent bytes was exhausted before detecting a data mark. This message is displayed with EZA8246E.
EZA8352I • EZA8355I

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNOTUSE

**Procedure Name:** TelnetRead

---

**EZA8352I**  TelnetRead: Length of subnegotiation too long

**Explanation:** Telnet issues this message to indicate that too many negotiation commands were submitted during the negotiation process. This message is displayed with EZA8246E.

**System action:** TCPIP continues.

**Operator response:** Resubmit the negotiation process.

**System programmer response:** No action is needed.

**Module:** TNOTUSE

**Procedure Name:** TelnetRead

---

**EZA8353I**  TelnetRead: urgent bytes went below 0 before DM

**Explanation:** Telnet issues this message while in urgent mode. While scanning for the end of the subnegotiations, the data containing urgent bytes was exhausted before detecting a data mark. This message is displayed with EZA8246E.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNOTUSE

**Procedure Name:** TelnetRead

---

**EZA8354I**  TelnetRead: urgent bytes went below 0 before DM

**Explanation:** Telnet issues this message while in urgent mode. While scanning for the end of the Telnet command, the data containing urgent bytes was exhausted before detecting a data mark. This message is displayed with EZA8246E.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNOTUSE

**Procedure Name:** TelnetRead

---

**EZA8355I**  TelnetRead: Length of subnegotiation too long

**Explanation:** Telnet issues this message while scanning for the end of the Telnet subnegotiations. Instead of a subnegotiation end command, an Interpret As Command (IAC) character was detected. This message is displayed with EZA8246E.

**System action:** TCPIP continues.

**Operator response:** Resubmit the Telnet command subnegotiations.

**System programmer response:** No action is needed.

**Module:** TNOTUSE

**Procedure Name:** TelnetRead
EZA8356I  TelnetRead: Bad subnegotiation sent.
Explanation: Telnet issues this message to indicate that it has received an incorrect subnegotiation packet from the other side of the connection. This message is displayed with EZA8246E.
System action: TCPIP continues.
Operator response: Resubmit the Telnet command.
System programmer response: No action is needed.
Module: TNGTOUSE
Procedure Name: TelnetRead

EZA8357I  TelnetRead: Bad UnderstandingState.
Explanation: The Telnet server has received an incorrect message while expecting either subnegotiation commands or Interpret As Command (IAC) character. This message is displayed with EZA8246E.
System action: TCPIP continues.
Operator response: Check client machine for the syntax of the command being submitted.
System programmer response: No action is needed.
Module: TNGTOUSE
Procedure Name: TelnetRead

EZA8358I  UTToUser: Bad CurrentChar.
Explanation: This message indicates an internal consistency error. For more information, see message EZA8275I.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNGTOUSE
Procedure Name: TelnetRead

EZA8359I  Data received from TCP:
Explanation: Telnet issues this message when more data is sent to the client machine due to data exhaustion of the buffer.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNGTOUSE
Procedure Name: UTToUser

EZA8361I  address
Explanation: Telnet issues this message while tracing is on and in transparent mode. The address of the current character is displayed.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNGTOUSE
EZA8364I • EZA8368I

Procedure Name: UtToUser

EZA8364I  address
Explanation: Telnet issues this message while tracing is on and in transparent mode. The address of the current character is displayed.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNTOUSE
Procedure Name: UtToUser

EZA8366I  bad case in UtToUser
Explanation: The command called to be processed by the Utouser procedure was not recognized.
System action: TCPIP continues.
Operator response: Check the Telnet client machine for the syntax of the command being submitted.
System programmer response: No action is needed.
Module: TNTOUSE
Procedure Name: UtToUser

EZA8367I  BuffEmpty: errmsg (msgnum)
Explanation: Telnet issues this message while attempting to receive more data from the server. The buffer that contained the data was empty. This message is displayed with EZA8246E.
errmsg is the text of the message that describes the error.
msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: Respond as indicated by the message EZAmsgnum.
Module: TNTOUSE
Procedure Name: UtTuInit

EZA8368I  Valid telnet cmds: AO,AYT,BRK,IP,PA1,QUIT,SYNCH.
Explanation: Telnet issues this message when an incorrect Telnet subcommand is submitted. A list of valid Telnet command is displayed.
System action: TCPIP continues.
Operator response: Resubmit the Telnet command.
System programmer response: No action is needed.
Module: TNTOSRV
Procedure Name: FsHelpMe
EZA8369I  IssueRead: Bad Return Code.

Explanation:  Telnet attempted to create a new buffer for user input, but one already exists. This message is displayed with EZA8246E.

System action:  TCPIP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  TNTOSRV

Procedure Name:  IssueRead

---

EZA8370I  TryToSendData: errmsg (msgnum)

Explanation:  An attempt to send data was unsuccessful. The reason for the unsuccessful attempt is indicated by the SayCalRe portion of this message. This message is displayed with EZA8246E.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action:  TCPIP continues

Operator response:  No action is needed.

System programmer response:  Respond as indicated by the message EZAmsgnum.

Module:  TNTOSRV

Procedure Name:  TryToSend

---

EZA8371I  in Senddata

Explanation:  Telnet issues this message while in debug mode to indicate that it is using the procedure Senddata, which sends data to Server Telnet.

System action:  TCPIP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  TNTOSRV

Procedure Name:  SendData

---

EZA8372I  Telnet command is

EZA8373I  command

Explanation:  Telnet issues these message while tracing is on. The current Telnet command is displayed.

System action:  TCPIP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  TNTOSRV

Procedure Name:  Fs2ndFieldAddr
EZA8375I  ‘?’ for help: Hit Enter to continue..
Explanation:  Telnet issues this message in line (non-transparent) mode to indicate that the previous command submitted was incorrect.
System action:  TCPIP continues.
Operator response:  Submit a correct command or type ? for help.
System programmer response:  No action is needed.
Module:  TNTOSRV
Procedure Name:  UserCommand

EZA8376W  AMBIGUOUS command: Hit Enter to continue..
Explanation:  Telnet was unable to determine which command was indicated by a user response due to truncation or incorrect syntax.
System action:  TCPIP continues.
Operator response:  Check the syntax and resubmit the Telnet command.
System programmer response:  No action is needed.
Module:  TNTOSRV
Procedure Name:  UserCommand

EZA8377W  Command illegal in Line-Mode: Hit Enter to continue..
Explanation:  Telnet issues this message when the PA1 key is pressed while in line mode. This key is incorrect in line (non-transparent) mode.
System action:  TCPIP continues.
Operator response:  Press Enter to continue.
System programmer response:  No action is needed.
Module:  TNTOSRV
Procedure Name:  UserCommand

EZA8378I  UserCommand: Bad Telnet Command.
Explanation:  You submitted an incorrect Telnet command. This message is displayed with EZA8246E.
System action:  TCPIP continues.
Operator response:  Check the syntax and resubmit the command.
System programmer response:  No action is needed.
Module:  TNTOSRV
Procedure Name:  UserCommand

EZA8379I  Telnet command:
Explanation:  This message prompts the user for a Telnet command. A valid Telnet command is expected.
System action:  TCPIP continues.
Operator response:  Enter the appropriate Telnet command.
System programmer response:  No action is needed.
Module:  TNTOSRV
Procedure Name:  UserDemandsAttention
EZA8380I User data is...  

EZA8381I data set data set  

EZA8382I ; Len is data set length  

Explanation: Telnet issues these messages while tracing is on. When the user data is received by the server, the address and length of the data buffer containing that information is recorded.  

System action: TCPIP continues.  

Operator response: No action is needed.  

System programmer response: No action is needed.  

Module: TNTOSRV  

Procedure Name: UserDataArrives  

EZA8383I bad case in UtToServ.  

Explanation: The command to be processed by the UtToServ procedure was not recognized. This message is displayed with EZA8246E.  

System action: TCPIP continues.  

Operator response: Check the Telnet server machine for the syntax of the command being submitted.  

System programmer response: No action is needed.  

Module: TNTOSRV  

Procedure Name: UtToServ  

EZA8384I UtTsInit: Bad return code from the receive.  

Explanation: Telnet issues this message as a result of a return code error while attempting to ready a buffer for user input.  

System action: TCPIP continues.  

Operator response: Increase the buffer size by using the DATABUFFERPOOLSIZEx statement described in the z/OS Communications Server: IP Configuration Reference.  

System programmer response: No action is needed.  

Module: TNTOSRV  

Procedure Name: UtTsInit  

EZA8395I Once connected, follow the log in and usage  

EZA8396I procedures of the remote host.  

EZA8397I To invoke one of several TELNET commands, hit a  

EZA8398I PF key (PF4-12), PF(16-24), and then enter  

EZA8399I the following commands:
**EZA8400I • EZA8500S**

---

**EZA8400I**  Help or ? -- Receive (this) assistance

**EZA8401I**  AYT -- Are You There?

**EZA8402I**  AO -- Abort Output

**EZA8403I**  BRK -- Break

**EZA8404I**  IP -- Interrupt Process

**EZA8405I**  SYNCH -- Clear data path, except for TELNET commands

**EZA8406I**  Quit -- Quit the TELNET session

**EZA8408I**  The following PF settings are in force:

- **EZA8409I**  % PF1 or 13 -- Retrieve previous input line
- **EZA8410I**  % PF2 or 14 -- Scroll halfway up
- **EZA8411I**  % PF3 or 15 -- turn off display of user-line; designed.
- **EZA8412I**  to be used before entering password
- **EZA8414I**  For control characters, enter \c or `c where c is:
  - **EZA8415I**  "0": 00, "a" - "z" or "A" - "Z": 0x01-0x1A
  - **EZA8416I**  "2" - "6": 0x1B-0x1F
- **EZA8417I**  "": 0x5D, ":": 0x7

**Explanation:** Telnet issues these messages when the help (?) option is selected in line (non-transparent) mode.

**System action:** TCP/IP continues.

**Operator response:** Proceed as instructed.

**System programmer response:** No action is needed.

**Module:** TNTOSRV

**Procedure Name:** FsHelpMe

---

**EZA8500S**  GetVirtualAddress call should not occur.

**Explanation:** TCP/IP has called the procedure GetVirtualAddress, which should not be called for MVS. This indicates a software error.

**System action:** TCP/IP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Contact the IBM Software Support Center.

**Module:** CMMVSUB
Procedure Name: GetVirtualAddress

EZA8501I Dataset: data_set_name
Explanation: This message displays the name of a partitioned data set.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMMVSUB
Procedure Name: PrintSpecOfFile

EZA8502I Dataset: partitioned_data_set(member_name)
Explanation: This message displays the name of a partitioned data set and one of its members.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMMVSUB
Procedure Name: PrintSpecOfFile

EZA8503E error_message
Explanation: This diagnostic message is preceded by an SMTP error message. This message displays the text of the Dynamic Allocation (SVC 99 - DYNALLOC) message. This message provides additional information about why the Dynamic Allocation failed. The message might be issued multiple times to include the completer text from Dynamic Allocation.
error_message is text of the message produced by DYNALLOC.
System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: See the z/OS MVS Programming: Authorized Assembler Services Guide for information about the IEFDB476 service routine message displayed in this message and respond as indicated.
Module: CMMVSUB
Procedure Name: S99Error

EZA8520I OK
Explanation: The specified application or function is OK in TCPIP. Another message should prefix this message specifying the application or function.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.
EZA8521I  Abnormal condition due to CSA storage shortage
Explanation: There is no CSA storage available.
System action: TCPIP continues.
Operator response: Wait a few minutes and retry. If the problem persists, contact the System Programmer.
System programmer response: Verify the configuration and storage definitions.
Module: various.
Procedure Name: various.

EZA8522I  Connection already closing
Explanation: The connection that you are attempting to disconnect is already in the process of closing.
System action: TCPIP continues.
Operator response: If you do not want the connection to close, reestablish your connection.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8523I  Invalid length specified
Explanation: A parameter was of an incorrect length for the remote site.
System action: TCPIP continues.
Operator response: Reissue your command with a valid parameter length specified. This error should never occur for SMTP or the FTP Server. If it does occur, this indicates that there might be an error with SMTP or the FTP Server code. If this is the case, refer the error to the system programmer or the IBM Software Support Center.
System programmer response: Parse the SMTP or the FTP Server code with trace on for the specific application where the error occurred. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application through TCPIP.
Module: various.
Procedure Name: various.

EZA8524I  Cannot send data
Explanation: The FTP Server did not acknowledge receipt of the data sent. In the case of Telnet, this message indicates that the Telnet server could not send the function StKillConn, which closes connections, to the connection indicated in a previous message. A message following this one indicates that there is no such connection and shutdown continues.
System action: TCPIP continues. The calling program continues.
Operator response: This error should never occur in the case of FTP. If it does, this indicates that there might be an error with the FTP Server FTP code. If this is the case, refer the error to the system programmer or the IBM Software Support Center. In the case of the Telnet server, check the connection number indicated in the previous message to determine the problem. If the connection indicated is OK then the problem could be with the server code. If so, refer this problem to the IBM Software Support Center.
System programmer response: Assist the operator as required.
Module: various.
Procedure Name: various.
EZA8525I  Client reinitialized TCP/IP service
Explanation:  A client has reinitialized TCPIP.
System action:  TCPIP restarts.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  various.
Procedure Name:  various.

EZA8526I  Connection already exists
Explanation:  A connection to the server already exists. The request is ignored by the server.
System action:  TCPIP continues. The calling program continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  various.
Procedure Name:  various.

EZA8527I  Destination address is unreachable
Explanation:  The address that you specified is unreachable. This occurs as a result of errors from the remote site. Connection to the remote site is not established.
System action:  TCPIP continues.
Operator response:  Contact the remote site administrator for assistance.
System programmer response:  No action is needed.
Module:  various.
Procedure Name:  various.

EZA8528I  Error in profile data set. Details are in PROFILE.TCPIPERROR or the //SYSERROR DD file. Expansion may be necessary.
Explanation:  There is an error in the hlq.PROFILE.TCPIP data set.
System action:  TCPIP continues.
Operator response:  Open the hlq.PROFILE.TCPIPERROR data set, or the data set pointed to by the //SYSERROR DD statement in the TCPIP JCL procedure. Respond to the details provided in the data set.
System programmer response:  Assist the operator as required.
Module:  various
Procedure Name:  various

EZA8529I  Fatal inter-address communications error VMCF RC=number User=lastuser
Explanation:  The Virtual Machine Communication Facility “VMCF” encountered a network pacing response code. The VMCF return codes below describe the different types of error conditions that may cause the fatal inter-address communication error.

Return Code
Cause
1  Invalid virtual buffer address
2  Invalid subfunction code
3  Protocol violation
EZA8530I  EZA8531I

4  Source machine not authorized
5  TCPjobname user not available
6  Protection violation
7  Sendx data too large
9  Target machine in quiesce state
10  Message limit exceeded
11  REPLY canceled
12  Message not found
13  Synchronization error
15  Paging I/O error
16  Incorrect length
17  Destructive overlap
18  User not authorized for PRIORITY message.
19  Data transfer error
20  CANCEL - busy

System action:  TCPIP halts.

Operator response:  Tell the system programmer the VMCF communication error encountered.

System programmer response:  Use the return code displayed in the list of error responses to determine the cause of the error.

If the return code=5, verify that the TCPIPJOBNAME is correctly specified in the TCPIP.DATA data set. Ensure that you are using the correct TCPIP.DATA data set.

For other return codes, correct the error using the different resources stated below that may apply to the error condition specified. Once the error is corrected restart TCP/IP. For more information on the VMCF facility and return codes see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference. For information on configuring the TCPIP.DATA for the VMCF, see the z/OS Communications Server: IP Configuration Reference. If the error is beyond the scope of these resources, contact the IBM Software Support Center.

Module:  various

Procedure Name:  various

EZA8530I  No password in RACF directory

Explanation:  The password entered does not exist in the RACF directory.

System action:  TCPIP continues. Connection to the remote host ends.

Operator response:  Check the password and syntax and make sure that it is a valid password and try your request again.

System programmer response:  Help the user update their password in the RACF directory if required.

Module:  various

Procedure Name:  various

EZA8531I  TCPIP not authorized to access dataset

Explanation:  The specific data set requested through TCPIP is not accessible; the user is not authorized.

System action:  TCPIP continues. The application continues.

Operator response:  To access the data set you must be authorized by the remote site. Check with your system administrator to authorize your user ID to have access to the data set on the FTP server.

System programmer response:  Assist the operator as required.

Module:  various

Procedure Name:  various
**EZA8532I Invalid request**

**Explanation:** The FTP server has received an incorrect request from TCPIP.

**System action:** TCPIP halts. The calling program halts.

**Operator response:** This error should never occur. If it occurs it indicates an error with the server FTP code itself. Refer this error to the system programmer or the IBM Software Support Center.

**System programmer response:** Parse the code with trace on for the specific application where the error occurred. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application through TCPIP.

**Module:** various.

**Procedure Name:** various.

---

**EZA8534I Invalid virtual address**

**Explanation:** The virtual address specified to TCPIP is not valid. No connection is made to the remote host.

**System action:** TCPIP continues.

**Operator response:** Check to make sure that you entered a valid virtual address defined in the remote system. Call the remote system administrator for assistance.

**System programmer response:** Assist the operator as required.

**Module:** various.

**Procedure Name:** various.

---

**EZA8535I You aborted the connection**

**Explanation:** You either intentionally or unintentionally abended the connection to the remote host.

**System action:** TCPIP continues. The remote host connection is abended.

**Operator response:** Reinitialize the connection to the remote host.

**System programmer response:** Assist the operator as required.

**Module:** various.

**Procedure Name:** various.

---

**EZA8536I The requested local port is not available**

**Explanation:** The local port on which TCPIP has been accessed is not available.

**System action:** TCPIP halts.

**Operator response:** Wait several minutes or until TCPIP has been restarted. You should receive a second message after attempting to use TCPIP that reads, TCPIP has been restarted...for some reason or other, when TCPIP becomes available.

**System programmer response:** No action is needed.

**Module:** various.

**Procedure Name:** various.

---

**EZA8537I Data set is in use by someone else and cannot be accessed**

**Explanation:** The data set requested through TCPIP is in use by someone else and is not accessible at this time.

**System action:** TCPIP continues. The calling program continues.

**Operator response:** Wait a few minutes until the data set becomes available and reissue your request.

**System programmer response:** No action is needed.
EZA8538I  Data set not available
Explanation: The data set requested is not available. It is either in use or inaccessible.
System action: TCPIP continues. The calling program continues.
Operator response: Wait a reasonable amount of time and try accessing the data set again. If you are not successful after several tries, contact the system programmer or the IBM Software Support Center.
System programmer response: Assist the operator as required.
Module: various.
Procedure Name: various.

EZA8540I  The foreign host has closed this connection
Explanation: The remote host has closed this connection.
System action: TCPIP continues. The host is unsuccessful.
Operator response: Wait until the remote host is ready and reissue the connection to the remote host.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8541I  The internet address is not local to this host
Explanation: The host address entered though TCPIP is not local to this host. This host address verification is part of the virtual machine communication facility (VMCF) used within the MVS system. Connection to the remote host is unsuccessful.
System action: TCPIP continues.
Operator response: Check the host address entered and verify that it is correct. If it is, then it has to be updated in your VMCF data set.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8542I  No outstanding notifications
Explanation: There is an error in the application program code itself. The application will halt. The application could include, but is not limited to; SMTP, FTP server, LPD.
System action: TCPIP continues. The calling program halts.
Operator response: Reinitialize your connection and the application program. If the problem persists, contact the system programmer or the IBM Software Support Center.
System programmer response: Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.
Module: various.
Procedure Name: various.
EZA8543I  No such connection

Explanation: The connection you attempted to query or use does not exist. For the Telnet server, this indicates that the function StKillConn which was called to close a connection was unsuccessful because the connection could not be found.

System action: TCPIP continues. In the case of the Telnet server, this message is ignored and shutdown procedures continue.

Operator response: In most cases you can try your request again using the correct spelling and syntax for the remote address to correct the error. For the Telnet server see other messages that appear with this one for more information. If the error persists, contact the IBM Software Support Center.

System programmer response: Assist the operator as required.

Module: various.

Procedure Name: various.

---

EZA8544I  No TCP/IP service available

Explanation: TCPIP is not available.

Operator response: Wait until TCPIP becomes available and try your request again.

System programmer response: No action is needed.

System action: TCPIP halts.

Module: various.

Procedure Name: various.

---

EZA8545I  Not yet begun TCP/IP service

Explanation: TCPIP is not available.

System action: TCPIP halts.

Operator response: Wait until TCPIP resumes service or reinitialize TCPIP.

System programmer response: No action is needed.

Module: various.

Procedure Name: various.

---

EZA8546I  The connection is not yet open

Explanation: This error should never occur. If it does it means that there is an error with the specific application code itself. Affected applications include, but are not limited to, SMTP and FTP server.

System action: TCPIP continues. The calling program continues.

Operator response: Report this error to the system programmer or the IBM Software Support Center.

System programmer response: Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

Module: various.

Procedure Name: various.

---

EZA8547I  Foreign host rejected the open attempt

Explanation: The remote host that you attempted to connect to has rejected the open attempt.

System action: TCPIP continues. The connection to the remote host is abended.

Operator response: This error occurs on the remote site. Contact the site and reissue your open attempt when their system clears up.
**EZA8548I • EZA8551I**

**System programmer response:** No action is needed.

**Module:** various.

**Procedure Name:** various.

---

**EZA8548I**  
**TcpOpen error: invalid local address**

**Explanation:** The local address that you attempted to use for a communication channel is not valid. The attempted connection is not established.

**System action:** TCPIP continues.

**Operator response:** This error should not occur. If the error does occur, it implies an error with the application code itself. Refer the error to the system programmer or the IBM Software Support Center.

**System programmer response:** Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program. Check the address and syntax and reissue your connection attempt. If the problem persists, contact your system administrator to verify the local address or the IBM Software Support Center for help in debugging the code.

**Module:** various.

**Procedure Name:** various.

---

**EZA8549I**  
**TcpOpen error: invalid initial state**

**Explanation:** You need to specify whether you are initiating a TCPIP connection in a passive or active state. It could also indicate that there is an error with the application (FTP server, SMTP) code itself.

**System action:** The connection is not established.

**Operator response:** Reissue the connection indicating whether it will be a passive or active connection. If the problem exists in the application code itself, refer this error to the system programmer or the IBM Software Support Center.

**System programmer response:** Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

**Module:** various.

**Procedure Name:** various.

---

**EZA8550I**  
**Invalid timeout parameter**

**Explanation:** The timeout parameter is used for the PING function when accessing a remote host. PING will return with a message that states that the remote host is not responding if after a few moments it receives no responses from the remote host. In the case of FTP server and SMTP, this could indicate an error with the application code itself.

**System action:** TCPIP continues. The connection is not established.

**Operator response:** If the error occurred as result of the PING function, then wait until the host responds or call the remote host’s system administrator to find out the status of the host. In the case of FTP server and SMTP, refer the error to the system programmer or the IBM Software Support Center.

**System programmer response:** Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

**Module:** various.

**Procedure Name:** various.

---

**EZA8551I**  
**TcpOpen error: unspecified foreign address in active open**

**Explanation:** Indicates, in the case of the TCP engine, that the host address has not been specified in your open attempt. In the case of FTP and SMTP, this error indicates that there might be a problem with the application code itself. The connection is not established.
System action: TCPIP continues.

Operator response: Specify a valid host address when issuing a socket request. If the error persists, verify the address with the other host’s administrator. If the error occurred within the FTP or SMTP function, refer this error to the system programmer or the IBM Software Support Center.

System programmer response: Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

Module: various.
Procedure Name: various.

EZA8552I TcpOpen error: unspecified foreign port in active open

Explanation: The host port has not been specified in your open attempt. In the case of FTP and SMTP, this error indicates that there might be a problem with the application code itself.

System action: TCPIP continues. The program halts.

Operator response: Specify a valid host port when issuing a socket request. If the error persists, verify the address with the other host’s administrator. If the error occurred within the FTP or SMTP function, refer this error to the system programmer or the IBM Software Support Center.

System programmer response: Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

Module: various.
Procedure Name: various.

EZA8553I TCPIP cannot read profile data set

Explanation: TCPIP cannot access or read your hlq.PROFILE.TCPIP data set.

System action: TCPIP continues.

Operator response: Make sure that your hlq.PROFILE.TCPIP data set is accessible by TCPIP. If it is and you are still experiencing this error, open the data set and check the contents to make sure that the information is correct and complete and that the information in the data set is not damaged. For more information about the hlq.PROFILE.TCPIP data set, see z/OS Communications Server: IP Configuration Reference

System programmer response: No action is needed.

Module: various.
Procedure Name: various.

EZA8554I Receive still pending on this connection

Explanation: No data has been received on the specified connection. In the case of the FTP server and SMTP, this message could indicate a problem with the code itself.

System action: TCPIP continues.

Operator response: If the error specified is from any application other than the FTP server or SMTP, wait for data or ask the remote site to send you an acknowledgment packet to test your connection. If the error is the SMTP or the FTP server code, refer this error to the system programmer or the IBM Software Support Center.

System programmer response: Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

Module: various.
Procedure Name: various.
EZA8555I  Foreign host unexpectedly closed the connection

Explanation: The remote host has closed the connection, for the specified application, without notice or acknowledgment.

System action: TCPIP continues. The program halts.

Operator response: This message occurs as a result of a problem with the remote host. Reinitialize your connection or call the system administrator for the remote host for assistance.

System programmer response: No action is needed.

Module: various.

Procedure Name: various.

EZA8556I  Foreign host aborted the connection

Explanation: The other host has abended the connection. This could indicate a connection reset at the other host. This could also apply to your Offload device.

System action: TCPIP continues. The program halts or is disconnected.

Operator response: In the case of the Offload device, reinitialize the connection from the Offload device. In any other application, contact the other host’s administrator to reset their host or determine if there are other problems on their end causing this error.

System programmer response: No action is needed.

Module: various.

Procedure Name: various.

EZA8557I  Software error in TCP/IP!

Explanation: TCPIP cannot continue because of an error in TCPIP itself.

System action: TCPIP halts.

Operator response: Wait a few moments until TCPIP restarts. If after a reasonable amount of time TCPIP does not restart, contact your system administrator.

System programmer response: No action is needed.

Module: various.

Procedure Name: various.

EZA8558I  TCP/IP service is being shut down

Explanation: TCPIP is being shut down either manually or due to a problem with the application connection.

System action: TCPIP halts.

Operator response: Wait a few moments until TCPIP restarts. If after a reasonable amount of time TCPIP does not restart, contact your system administrator.

System programmer response: No action is needed.

Module: various.

Procedure Name: various.

EZA8559I  Foreign host is no longer responding

Explanation: The connection to the other host has not responded within a certain time threshold.

System action: TCPIP continues. The connection to the remote host abends.

Operator response: Wait a few moments until TCPIP restarts. If after a reasonable amount of time TCPIP does not restart, contact the other host’s system administrator.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8560I Foreign host did not respond within OPEN timeout
Explanation: The open attempt to the other host has not responded within a certain time threshold. The connection to the remote host is not established.
System action: TCPIP continues.
Operator response: Wait a few moments until TCPIP restarts. If after a reasonable amount of time TCPIP does not restart, contact the other host’s system administrator.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8561I Too many open connections already exist
Explanation: The host connection that you are attempting to establish a connection with already has too many open connections. The connection is not established.
System action: TCPIP continues.
Operator response: Contact the other host’s administrator to determine the availability of their system.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8563I Permission is denied
Explanation: The error might be caused by one of the following:
  - Not being APF-authorized to use the RAW IP interface
  - A Firewall access failure
  - A network access failure
System action: The command is not performed and TCPIP continues.
Operator response: Contact your system administrator to gain access to the specific application that you are attempting use.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8564I Foreign host violated the connection protocol
Explanation: The other host has sent data that does not conform to the connection protocol.
System action: TCPIP continues. The program halts or the connection is abended.
Operator response: This error arises as a problem at the remote site. Wait until the problem clears or contact the remote site system administrator.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.
**EZA8565I • EZA8568I**

---

**EZA8565I  Unimplemented TCP/IP request**

**Explanation:** TCPIP has received a request for a function that has not been implemented.

**System action:** TCPIP continues.

**Operator response:** If the specified request should be implemented in TCPIP, contact the system programmer or administrator.

**System programmer response:** If the request should be updated in your hlq.PROFILE.TCPIP data set, open the data set, set up the specified request in the proper area of the data set and reinitialize TCPIP. For more information about the hlq.PROFILE.TCPIP data set see [z/OS Communications Server: IP Configuration Reference](#).

**Module:** various.

**Procedure Name:** various.

---

**EZA8566I  Destination host is not known**

**Explanation:** The host address that you are attempting to reach is not known.

**System action:** TCPIP continues. The program halts or the connection is not established.

**Operator response:** Check the address and make sure you used the proper syntax and that the address exists for the remote host that you are attempting to reach. If the problem persists, contact the remote host administrator.

**System programmer response:** No action is needed.

**Module:** various.

**Procedure Name:** various.

---

**EZA8567I  Destination network is unreachable**

**Explanation:** The network address that you entered is an unreachable network address.

**System action:** TCPIP continues. The program or the connection abends.

**Operator response:** Check that the IP addresses are correct in the hlq.PROFILE.TCPIP data set. Use the GATEWAY statement to add the destination to the configuration data set if necessary. See the [z/OS Communications Server: IP Configuration Reference](#) for more information about the GATEWAY statement.

**System programmer response:** No action is needed.

**Module:** various.

**Procedure Name:** various.

---

**EZA8568I  Unspecified connection**

**Explanation:** In the case of SMTP and FTS server, this could indicate an error with the code itself. The connection is not established.

**System action:** TCPIP continues.

**Operator response:** If the error specified is from any application other than the FTP server or SMTP, wait for data or ask the remote site to send you an acknowledgment packet to test your connection. If the error is with the SMTP or the FTP server code, refer this error to the system programmer or the IBM Software Support Center.

**System programmer response:** Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

**Module:** various.

**Procedure Name:** various.
EZA8569I  Client address space has too little storage
Explanation: The virtual storage of a client address is too small for TCPIP to continue processing.
System action: TCPIP halts.
Operator response: Wait until TCPIP resumes. If TCPIP does not resume, contact the system programmer or the IBM Software Support Center.
System programmer response: Increase the virtual storage for client.
Module: various.
Procedure Name: various.

EZA8570I  Foreign host disagreed on security or precedence
Explanation: The other host has rejected the connection because of discrepancies in either the security or precedence of the open attempt.
System action: TCPIP halts. The calling program halts.
Operator response: This error should never occur. If it does it indicates an error with the server FTP code itself. Refer this error to the system programmer or the IBM Software Support Center.
System programmer response: Parse the code with trace on for the specific application where the error occurred. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application through TCPIP.
Module: various.
Procedure Name: various.

EZA8571I  No local X.25 virtual circuits available
Explanation: There are no available X.25 virtual circuits for access. This error results from problems at the remote site.
System action: TCPIP continues. The program halts or the connection is not established.
Operator response: Wait until the problem clears, or call the remote site administrator for assistance.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8575I  Client has ended TCP/IP service
Explanation: The client has ended TCPIP either intentionally or unintentionally.
System action: TCPIP continues. The connection abended.
Operator response: This error occurs from the client site. Wait until they restart TCPIP or call the site administrator for assistance.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8576I  TCP cannot handle any more connections now
Explanation: TCPIP has no more resources available to handle new connections. This is usually a problem with the remote site not having enough resources available to handle your connection request. In the case of the TCPIP engine, this could indicate the address was not specified or there is not enough room in the TRANSLATE table in your hlq.PROFILE.TCPIP data set. A connection is not established.
EZA8577I  EZA8582I

System action: TCPIP continues.
Operator response: If the problem is with the remote site, wait until a connection becomes available. If the problem is with the engine, either add the address to your TRANSLATE table or make room for the address in your hlq.PROFILE.TCPIP data set. For more information about the TRANSLATE table and the hlq.PROFILE.TCPIP data set, see z/OS Communications Server: IP Configuration Reference.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8577I  Invalid local address for UDP
Explanation: The local address specified through UDP is not valid. A connection is not established.
System action: TCPIP continues.
Operator response: Verify that the address exists for UDP. Check your address for any syntax errors and try your address again. If you continue to experience problems, contact the IBM Software Support Center.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8579I  Address unspecified when specification necessary
Explanation: The connection you attempted to access through UDP requires that you specify a valid address. A connection is not established.
System action: TCPIP continues.
Operator response: Check the syntax and the address. Make sure you specify an address as required by UDP connections and reissue your connection request.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8580I  Port unspecified when specification necessary
Explanation: The connection you attempted to access through UDP required that you specify a valid port. A connection is not established.
System action: TCPIP continues.
Operator response: Check the syntax of your connection request. Make sure that you specify a port as required for UDP connections and reissue your connection.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8582I  FSend still pending on this connection
Explanation: There is already an FSEND (file in send status) function pending on the connection you are attempting to use.
System action: TCPIP continues.
Operator response: The problem might be with the remote host. Call the system administrator at the remote host for assistance or wait until the current FSEND clears and reissue your request.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8583I  Message from MVS host to S/1 is too large
Explanation: The Series/1 processor received a message from the MVS host system that is too large to process. The message is dropped.
System action: TCPIP continues.
Operator response: Resend the message using smaller packets of data or decrease the size of the message.
System programmer response: No action is needed.
Module: TO18S1P
Procedure Name: To1822S1RuptHandler

EZA8584I  IO write error on the 370 Channel
Explanation: TCPIP has encountered an I/O error on a System/370 channel.
System action: TCPIP continues.
Operator response: Check the channel adapter for the 1822 interface and make sure that all connections are attached correctly. Also make sure that the hardware is switched on and is online. If you continue to receive this error, check your hardware maintenance guide for more troubleshooting information.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8585I  Obtained unknown sense data
Explanation: TCPIP does not recognize the data sent to or from the 1822 Series/1 device.
System action: TCPIP continues.
Operator response: If this error persists, check your connections and make sure that they are properly attached. It might be necessary to shut down the device and restart the device to synchronize the connection. Check your hardware maintenance manual for more assistance.
System programmer response: Assist the operator as required.
Module: various.
Procedure Name: various.

EZA8591I  Series/1 processor is unavailable
Explanation: TCPIP is getting device errors from the Series/1 channel because the Series/1 processor is either shut down or offline. The connection to the Series/1 is abended.
System action: TCPIP continues.
Operator response: Make sure all the connections to the Series/1 are properly attached. Shut down and restart the device if necessary.
System programmer response: Assist the operator as required.
Module: various.
Procedure Name: various.
EZA8592I  Interface Message Processor is unavailable
Explanation:  The 1822 Interface Message Processor (IMP) is not ready or offline. The IMP is down.
System action:  TCPIP continues.
Operator response:  Check your hardware connections and make sure that they are properly attached. Also make sure that the device is online. Restart the device if necessary. If the problem persists, consult your hardware manual for more troubleshooting information.
System programmer response:  Assist the operator as required.
Module:  various.
Procedure Name:  various.

EZA8593I  Foreign host is dead or unreachable
Explanation:  The other host cannot be reached by TCPIP either because the other host is shut down or the first hop address or network address is not valid.
System action:  TCPIP continues.
Operator response:  Check the GATEWAY statement in your hlq.PROFILE.TCPIP data set and make sure that the first hop and network addresses for the other host are defined correctly. For more information about the GATEWAY statement see z/OS Communications Server: IP Configuration Reference.
System programmer response:  Assist the operator as required.
Module:  various.
Procedure Name:  various.

EZA8594I  More than 8 outstanding messages to that host
Explanation:  The Information Message Processor (IMP) has detected more than 8 messages for that host. This could indicate that the host is not receiving because it is shut down or experiencing problems.
System action:  TCPIP continues.
Operator response:  Try pinging the host to see if it is online. If it is, then it might be that it is slow in receiving its envelopes. Call the host’s system administrator for help if necessary.
System programmer response:  Assist the operator as required.
Module:  various.
Procedure Name:  various.

EZA8595I  Initiating restart, Series/1 thinks host is down
Explanation:  The Sseries/1 processor is restarting the host because it has not received acknowledgments from the host.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  various.
Procedure Name:  various.

EZA8596I  Series/1 application program is not available
Explanation:  The 1822 Series/1 application is not ready or available. A connection is not established.
System action:  TCPIP continues.
Operator response:  Check the connections to the Series/1 channel and make sure that they are properly attached.
Shut down the driver and start it again. If the system does not respond, contact the IBM Software Support Center.

**System programmer response:** Assist the operator as required.

**Module:** various.

**Procedure Name:** various.

---

**EZA8597I** Series/1 ready to receive datagram

**Explanation:** The 1822 Series/1 processor is now up and ready to receive data. The connection is established.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** various.

**Procedure Name:** various.

---

**EZA8598I** X25 Driver in loopback mode

**Explanation:** The X.25 interface driver is in a loopback mode. The X.25 interface cannot transmit or receive data.

**System action:** TCPIP continues.

**Operator response:** Check the X.25 driver modem hardware and reset it to DATA if it is LOOPBACK. If the hardware is OK, stop and restart the driver through TCPIP. If the problem persists, contact the IBM Software Support Center.

**System programmer response:** Assist the user as required.

**Module:** various.

**Procedure Name:** various.

---

**EZA8599I** Connection dropped by operator

**Explanation:** The operator intentionally dropped the connection to TCPIP.

**System action:** TCPIP halts.

**Operator response:** Reinitiate TCPIP if necessary.

**System programmer response:** No action is needed.

**Module:** various.

**Procedure Name:** various.

---

**EZA8600I** Error opening or reading data set

**Explanation:** TCPIP cannot open or read a Translate table data set. Translate tables are used to convert transmitted data from EBCDIC to ASCII or ASCII to EBCDIC.

**System action:** TCPIP continues. The calling program continues.

**Operator response:** Make sure that the translate table data set is available to TCPIP. If available, make sure that the data set does not contain corrupted information. For more information about translate tables see [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/SLARPW_8.5.0/com.ibm.net.tcpip.doc/)

**System programmer response:** Assist the operator as required.

**Module:** various.

**Procedure Name:** various.
EZA8601I  Data set format invalid

Explanation:  The translate table data set has been recognized by TCPIP as having a premature end of file (EOF). This indicates that the data set is a null file or that the data set has corrupted data. The translate table data set is not read.

System action:  TCPIP continues.

Operator response:  Check the translate table data set and make sure that the data is in the correct format and that the data set is not blank. For more information about translate tables see z/OS Communications Server: IP Configuration Reference.

System programmer response:  Assist the operator as required.
Module:  various.
Procedure Name:  various.

EZA8602I  Offload box error

Explanation:  TCPIP has received an error from the Offload device that TCPIP does not recognize.

System action:  TCPIP halts.

Operator response:  Restart the Offload device and TCPIP. If the problem persists, contact the IBM Software Support Center.

System programmer response:  Assist the operator as required.
Module:  various.
Procedure Name:  various.

EZA8603I  Offload box restart

Explanation:  The Offload device has been restarted.

System action:  TCPIP halts.

Operator response:  Wait until the Offload device has been completely initiated before using TCPIP.

System programmer response:  No action is needed.
Module:  various.
Procedure Name:  various.

EZA8604I  Offload box down

Explanation:  The Offload device is not responding to TCPIP.

System action:  TCPIP halts.

Operator response:  Restart the Offload device and wait until it initiates TCPIP before attempting to use it. If this problem persists contact the IBM Software Support Center.

System programmer response:  Assist the operator as required.
Module:  various.
Procedure Name:  various.

EZA8624E  *** Unknown TCP return code = CallReturn ***

Explanation:  TCPIP has encountered a return code that it does not recognize.

System action:  TCPIP continues.

Operator response:  Call the IBM software Support Center for assistance.

System programmer response:  Assist the operator as required.
Module: various.
Procedure Name: various.

Note: The following messages display the call type returned from the procedure SayCliCa, which is called to determine the type of call issued by a client.

---

**EZA8625I**  **Abort TCP**

Explanation: A client is using the procedure TcpAbort to close TCP service.

System action: TCP service to the client ends. TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMERUPT

Procedure Name: TcpAbort

---

**EZA8626I**  **Begin TCP/IP service**

Explanation: A client is using the procedure StartTcpIpService to initiate TCP/IP service.

System action: TCP/IP service is initiated for the client.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMERUPT

Procedure Name: StartTcpIpService

---

**EZA8627I**  **Close TCP**

Explanation: A client has issued a request to close TCP service.

System action: TCP service to the client ends. TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

---

**EZA8628I**  **Close UDP**

Explanation: A client has issued a request to close UDP service.

System action: UDP service to the client ends. TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

---

**EZA8629I**  **End TCP/IP service**

Explanation: A client has issued a request to end TCP/IP service.

System action: TCP/IP service to the client ends. TCPIP continues.

Operator response: No action is needed.
EZA8630I  Handle notice

**Explanation:** The procedure ClientHandle has been called to handle an event notification. ClientHandle checks a client activity and initiates the proper procedure to handle the notification.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** varies

**Procedure Name:** varies

---

EZA8631I  Is host local?

**Explanation:** A client has requested verification of a local address by the procedure ClientIsHostLocal to determine whether a host address is local. Address verification is performed by the procedure ClientIsHostLocal.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TCPREQU

**Procedure Name:** TcpRequest

---

EZA8632I  Monitor command

**Explanation:** A client has called the procedure MonCommand, which instructs the TCPIP address space’s monitor process to open a data set and execute the commands found there. This is the principal means of updating network and address tables while the TCPIP address space is in use. MonCommand opens the data set and executes the commands found there.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** MonCommand

---

EZA8633I  Monitor query

**Explanation:** A client has called the procedure MonQuery, which is used to check the status of the TCPIP address space’s monitor process.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** MonQuery
EZA8634I  No client call
Explanation:  A virtual machine communication facility (VMCF) packet header did not contain a client call.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  CMVERT
Procedure Name:  CallToRequest

EZA8635I  Open TCP
Explanation:  A client has issued a call to the procedure ClientOpen, which establishes connections to TCP for clients, to establish TCP service. TCP service is established for the client.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  TCREFIX
Procedure Name:  TcpRequest

EZA8636I  Open UDP
Explanation:  A client has issued a call to the procedure UdpOpen, which establishes UDP connections, to open UDP service. UDP service to the client is opened.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  CMERUPT
Procedure Name:  UdpOpen

EZA8637I  Option TCP
Explanation:  A client has issued a call to the procedure ClientOption, which sets client TCP options, to specify options for a TCP connection. ClientOption completes execution and returns.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  TCREFIX
Procedure Name:  TcpRequest

EZA8638I  Receive TCP
Explanation:  A client is using the procedure TcpReceive to notify the host that it is ready to receive TCP data.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  CMERUPT
Procedure Name:  TcpReceive
EZA8639I  •  EZA8643I

EZA8639I  Receive UDP
Explanation: A client is using the procedure UdpReceive to notify the host that it is ready to receive UDP datagrams.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMERUPT
Procedure Name: UdpReceive

EZA8640I  NReceive UDP
Explanation: A client is using the procedure UdpNReceive to notify the host that it is ready to receive UDP datagrams. UdpNReceive allows the client to specify the maximum size for the datagrams it will receive. This parameter is not supported under UdpReceive.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMERUPT
Procedure Name: UdpNReceive

EZA8641I  Status UDP
Explanation: A client has called the procedure UdpStatus to check the status of a UDP connection.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMERUPT
Procedure Name: UdpStatus

EZA8642I  Option UDP
Explanation: A client has issued a call to the procedure UdpOption, which sets client UDP options, to specify options for a UDP connection.
System action: UdpOption completes execution and returns. TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMERUPT
Procedure Name: UdpOption

EZA8643I  Send TCP
Explanation: A client is using the procedure TcpSend to send data normally over a TCP connection.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMERUPT
**Procedure Name:** TcpSend

**EZA8644I** Send UDP

**Explanation:** A client is using the procedure UdpSend to send data grams normally over a UDP connection.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** UdpSend

---

**EZA8645I** Status TCP

**Explanation:** A client is using the procedure TcpStatus to check the status of a connection to TCP.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** TcpStatus

---

**EZA8646I** FReceive TCP

**Explanation:** A client is using the procedure TcpFReceive to receive data pushed over a TCP connection.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** TcpFReceive

---

**EZA8647I** FSend TCP

**Explanation:** A client is using the procedure TcpFSend to send data over a TCP connection before the output buffer is full. This function is not supported under TcpSend, which is used to send data normally over TCP connections.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** TcpFSend

---

**EZA8648I** Close RawIP

**Explanation:** A client is closing a raw IP connection. All data associated with the connection, including any data queued to that connection will be destroyed.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT
**EZA8649I • EZA8669E**

**Procedure Name:** SmfSend, RawIpClose

---

**EZA8649I**  
**Open RawIP**

**Explanation:** A client is using the procedure RawIpOpen to open a raw IP connection to the host.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** RawIpOpen

---

**EZA8650I**  
**Receive RawIP**

**Explanation:** A client is using the procedure RawIpReceive to tell the network that it is ready to receive raw IP packets.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** RawIpReceive

---

**EZA8651I**  
**Send RawIP**

**Explanation:** A client is using the procedure RawIpSend to send raw IP packets over the network normally.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** RawIpSend

---

**EZA8652I**  
**Ping request**

**Explanation:** A client is using the procedure PingRequest to perform a PING to test continuity across the network. For more information on the PING command, see the z/OS Communications Server: IP User's Guide and Commands.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** PingRequest

---

**EZA8669E**  
*** Invalid call: ord = call_number ***

**Explanation:** A client has issued a call that TCPIP does not recognize. This indicates a programming error. The call is refused.

**System action:** TCPIP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Check the client to determine why it is sending incorrect calls.

**Module:** CMPRCOM
Procedure Name: SayCliCa

Note: The following messages display the connection state returned by the function SayConSt, which is called to determine the state of a connection.

EZA8670I  Connection closing
Explanation: The connection for which SayConSt was called is closing.
System action: TCPIP continues.
Operator response: Restart the connection if necessary.
System programmer response: Assist the user as necessary.
Module: varies
Procedure Name: varies

EZA8671I  Listening
Explanation: The connection for which SayConSt was called is currently in a listening state.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8672I  Nonexistent
Explanation: The connection for which SayConSt was called does not exist.
System action: TCPIP continues.
Operator response: Start the connection if necessary.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8673I  Open
Explanation: The connection for which SayConSt was called is in an Open state.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8674I  Receiving only
Explanation: The connection for which SayConSt was called is in a Receiving Only state.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

---

**EZA8675I** Sending only

**Explanation:** The connection for which SayConSt was called is in a Sending Only state.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** varies

**Procedure Name:** varies

---

**EZA8676I** Trying to open

**Explanation:** TCPIP is attempting to open the connection for which SayConSt was called.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** varies

**Procedure Name:** varies

---

**EZA8679E** *** Invalid state: ord = state ***

**Explanation:** SayConSt encountered a state it did not recognize. The state is displayed in the message.

**System action:** TCPIP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Check the devices on each end of the connection to determine why they are sending incorrect state information. For more information about valid connection states for TCPIP, see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference

**Module:** varies

**Procedure Name:** varies

---

**Note:** This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

---

**EZA8680I** Buffer space available

**Explanation:** TCPIP has received notification that buffer space is available to send or receive data.

**Note:** This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** varies

**Procedure Name:** varies
EZA8681I  Connection state changed
Explanation:  TCPIP has received notification that the state of a connection has changed.

Note:  This message displays notifications returned by the function SayNotEn, which is used to display event
tonifications sent by the TCPIP address space.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
Procedure Name:  varies

EZA8682I  Data delivered
Explanation:  TCPIP has received notification that data has been delivered.

Note:  This message displays notifications returned by the function SayNotEn, which is used to display event
tonifications sent by the TCPIP address space.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
Procedure Name:  varies

EZA8683I  User-defined notification
Explanation:  TCPIP has received a user-defined notification.

Note:  This message displays notifications returned by the function SayNotEn, which is used to display event
tonifications sent by the TCPIP address space.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
Procedure Name:  varies

EZA8684I  Datagram space available
Explanation:  TCPIP has received notification that space is available to send or receive data grams.

Note:  This message displays notifications returned by the function SayNotEn, which is used to display event
tonifications sent by the TCPIP address space.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
Procedure Name:  varies
EZA8685I  Urgent pending

Explanation: TCPIP has received notification that an urgent transmission is about to be sent.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event
notifications sent by the TCPIP address space.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

EZA8686I  UDP data delivered

Explanation: TCPIP has received notification that UDP data has been delivered.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event
notifications sent by the TCPIP address space.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

EZA8687I  UDP datagram space available

Explanation: TCPIP has received notification that space is available to send or receive UDP datagrams.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event
notifications sent by the TCPIP address space.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

EZA8688I  Other external interrupt received

Explanation: TCPIP has received an external interrupt from the operating system. The appropriate interrupt handler
is called to deal with the external interrupt.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event
notifications sent by the TCPIP address space.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies
EZA8689I  User delivers line
Explanation:  A user has sent data to TCPIP. The data is received and processed.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event
notifications sent by the TCPIP address space.

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
Procedure Name:  varies

EZA8690I  User wants attention
Explanation:  A user has requested service from TCPIP. TCPIP delivers the requested service to the user.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event
notifications sent by the TCPIP address space.

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
Procedure Name:  varies

EZA8691I  Timer expired
Explanation:  A timer has expired on a process or event.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event
notifications sent by the TCPIP address space.

System action:  Processing resumes. TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
Procedure Name:  varies

EZA8692I  FSend response
Explanation:  A client has sent notification that it is using the procedure TcpFSend to push data over a TCP
connection. The data is sent.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event
notifications sent by the TCPIP address space.

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
Procedure Name:  varies
EZA8693I  Receive error

Explanation: A client was unable to receive data because the connection to which the data was sent was not in the correct state to receive it. TCPIP will handle the resulting interrupt and retransmit the data.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8694I  RawIP packets delivered

Explanation: Raw IP packets have been delivered to a client.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8695I  RawIp packet space available

Explanation: TCPIP has received notification that buffer space is available to receive raw IP packets.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8696I  IUCV interrupt

Explanation: TCPIP has received an interrupt from the inter&hyphen user communication vehicle (IUCV). The IUCV interrupt handler is called to deal with the interrupt.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies
EZA8697I  I/O interrupt
Explanation:  TCPIP has received an input/output (I/O) interrupt. The I/O interrupt handler is called to deal with the interrupt.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
Procedure Name:  varies

EZA8698I  Resources available for TcpOpen
Explanation:  The necessary resources are currently available for the procedure TcpOpen, which opens a connection to TCP.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
Procedure Name:  varies

EZA8699I  Resources available for UdpOpen
Explanation:  The necessary resources are available for the procedure UdpOpen, which opens a connection to UDP.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action:  A UDP connection is opened. TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
Procedure Name:  varies

EZA8700I  Ping response or timeout
Explanation:  TCPIP has received a response from a PING request, used to check connectivity across the network. If the response was not a timeout, it indicates that the host to which the PING was directed is reachable over the network.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
EZA8701I • EZA8708I

Procedure Name: varies

**EZA8701I**  SMASH received

Explanation: A short message has been received and queued to the appropriate connection.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

**EZA8706E**  *** Invalid notification: ord = notification ***

Explanation: SayNotEn has received a notification that it does not recognize. The notification is ignored.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Check the device that sent the notification to determine why it is sending incorrect notifications.

Module: varies

Procedure Name: varies

**EZA8707I**  Routine

Explanation: TCPIP has received a packet with a precedence value of routine.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

**EZA8708I**  Priority

Explanation: TCPIP has received a packet with a precedence value of priority.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8709I  Immediate
Explanation: TCPIP has received a packet with a precedence value of immediate.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: varies
Procedure Name: varies

EZA8710I  Flash
Explanation: TCPIP has received a packet with a precedence value of flash.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: varies
Procedure Name: varies

EZA8711I  Flash override
Explanation: TCPIP has received a packet with a precedence value of flash override.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: varies
Procedure Name: varies

EZA8712I  Critic/ECP
Explanation: TCPIP has received a packet with a precedence value of Critic/ECP.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
EZA8713I • EZA8717E

System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8713I  Internetwork control
Explanation: TCPIP has received an internetwork control packet.
Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer’s Guide and Reference.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8714I  Network control
Explanation: TCPIP has received an network control packet.
Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer’s Guide and Reference.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8717E  *** Invalid precedence: ord = precedence ***
Explanation: TCPIP has received a packet with a precedence value that it does not recognize. The packet is discarded.
Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer’s Guide and Reference.
System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Check the sending device to determine why it is sending packets with an incorrect precedence value.
Module: varies
Procedure Name: varies

Note: The following messages display the protocol type returned by the function SayProTy, which is called to determine the protocol type of an incoming packet.
EZA8718I ICMP

Explanation: TCPIP has received a packet with a protocol type of internet control message protocol (ICMP).

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8724I TCP

Explanation: TCPIP has received a transmission control protocol (TCP) packet.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8734I UDP

Explanation: TCPIP has received a user datagram protocol (UDP) packet.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8736I protocol

Explanation: TCPIP has received a message with the indicated protocol.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
EZA8737I • EZA8745E

Procedure Name: varies

EZA8737I Specific authorization
Explanation: A packet has been received with a specific authorization.

Note: This message displays the authority returned by the function SayVmcAu, which is called to determine the authority level of a packet transmitted by the virtual machine communication facility (VMCF).

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8738I Priority
Explanation: A packet has been received with a priority authorization.

Note: This message displays the authority returned by the function SayVmcAu, which is called to determine the authority level of a packet transmitted by the virtual machine communication facility (VMCF).

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8739I Allow short message facility
Explanation: A packet has been received authorizing use of the short message facility of the virtual machine communication facility (VMCF).

Note: This message displays the authority returned by the function SayVmcAu, which is called to determine the authority level of a packet transmitted by the virtual machine communication facility (VMCF).

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8745E *** Invalid authorization: authority ***
Explanation: The virtual machine communication facility (VMCF) has received a packet with an authority that it does not recognize.

Note: This message displays the authority returned by the function SayVmcAu, which is called to determine the authority level of a packet transmitted by the virtual machine communication facility (VMCF).

System action: The packet is ignored. TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Check the device that sent the packet to determine why it is sending packets with incorrect authorities.
Module: varies
Procedure Name: varies

EZA8746I  Authorize
Explanation: The virtual machine communication facility has received an authorize call from a client.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8747I  Unauthorize
Explanation: The virtual machine communication facility (VMCF) has received an unauthorize function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8748I  Send
Explanation: The virtual machine communication facility (VMCF) has received a send function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8749I  Send/Receive
Explanation: The virtual machine communication facility (VMCF) has received a send/receive function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference
EZA8750I • EZA8752I

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

---

EZA8750I  SendX

Explanation: The virtual machine communication facility (VMCF) has received a sendx function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

---

EZA8751I  Receive

Explanation: The virtual machine communication facility (VMCF) has received a receive function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

---

EZA8752I  Cancel

Explanation: The virtual machine communication facility (VMCF) has received a cancel function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies
EZA8753I  Reply

Explanation: The virtual machine communication facility (VMCF) has received a reply function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8754I  Quiesce

Explanation: The virtual machine communication facility (VMCF) has received a quiesce function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8755I  Resume

Explanation: The virtual machine communication facility (VMCF) has received a resume function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8756I  Identify

Explanation: The virtual machine communication facility (VMCF) has received an identify function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8757I  Reject
Explanation: The virtual machine communication facility (VMCF) has received a reject function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8758E  *** Invalid VMCF function: function ***
Explanation: The virtual machine communication facility (VMCF) has received a call for a function it does not recognize. The call is ignored.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Check the sending device to determine why it is making incorrect VMCF function calls.
Module: varies
Procedure Name: varies

EZA8915I  version: version
Explanation: This message displays the internet addressing protocol being used.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8916I  Internet Header Length: length = number bytes
Explanation: This message displays the internet header length being used for IP packets and the equivalent length in bytes.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
EZA8917I  EZA8925I

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** varies

**Procedure Name:** varies

---

**EZA8917I**  Type of Service: Precedence = precedence, performance_emphasis, *** garbage in reserved bits = incorrect_data

**Explanation:** These messages indicate the type of service being delivered by an IP datagram, the precedence value, and the performance emphasis. The performance emphasis can be either low delay, high throughput, or high reliability. The message “garbage in reserved bits” is displayed only if incorrect data is encountered in a reserved field of the IP header. The data will be ignored.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](#).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** varies

**Procedure Name:** varies

---

**EZA8924I**  Total Length: number bytes

**Explanation:** This message displays the total length of the IP datagram.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](#).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** varies

**Procedure Name:** varies

---

**EZA8925I**  Identification: identification Flags: don’t fragment/may fragment, more fragments/last fragment fragment offset: length = number bytes

**Explanation:** This message displays the identification of an IP datagram and fragmentation information for that datagram.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](#).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

Chapter 8. EZA8xxx messages
EZA8933I  Time To Live:  time
Protocol:    protocol
Header Checksum:  checksum
Source Address:  address
Destination Address:  address

Explanation:  This message gives the time to live, protocol type, header checksum, and source and destination addresses for an IP datagram.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com/support/knowledgecenter/SBAB18_1.10.0/com.ibm.zos.v1r10.bab.doc/)..  

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
Procedure Name:  varies

EZA8936I  Protocol:  protocol

Explanation:  This message indicates the protocol being used by TCPIP.

Note:  For more information about this message, see the message EZA\textit{nnnn}, where \textit{nnnn} is the 4-digit number in parentheses at the end of this message.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com/support/knowledgecenter/SBAB18_1.10.0/com.ibm.zos.v1r10.bab.doc/).

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
Procedure Name:  varies

EZA8937I  Header CheckSum:  checksum

Explanation:  This message displays the header checksum from a packet. The header checksum is used to check packet integrity.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com/support/knowledgecenter/SBAB18_1.10.0/com.ibm.zos.v1r10.bab.doc/).

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
Procedure Name:  varies

EZA8938I  Source Address:  address

Explanation:  This message displays the address from which a packet was sent.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com/support/knowledgecenter/SBAB18_1.10.0/com.ibm.zos.v1r10.bab.doc/).
**EZA8939I**  
**Destination Address:** address

**Explanation:** This message displays the address to which a packet was sent.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcf, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/docs/en/zos/2.4.0?topic=zos-communications-server-ixref).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** varies

**Procedure Name:** varies

---

**EZA8961I**  
**net address = address, port = port_type**

**Explanation:** This message displays the internet address and port type of a port.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcf, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/docs/en/zos/2.4.0?topic=zos-communications-server-ixref).

**System programmer response:** No action is needed.

**Module:** varies

**Procedure Name:** varies

---

**EZA8966I**  
**Connection: connection**

**Explanation:** This message displays the current connection.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcf, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/docs/en/zos/2.4.0?topic=zos-communications-server-ixref).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** varies

**Procedure Name:** varies
EZA8967I  Open Attempt Timeout: time

Explanation: The current connection will wait for the indicated length of time for the other side of the connection to respond to an open request.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8968I  Wait Forever

Explanation: The value of the OpenAttemptTimeout is WAITForever, indicating that the host will wait for a connection until the connection is opened.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8969I  openattempttimeout

Explanation: This message displays the value of the OpenAttemptTimeout, which indicates the length of time, in seconds, that the host will wait for a connection to be opened before cancelling the attempt.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8970I  Security: security

Explanation: This message gives the security status of a connection.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
EZA8971I • EZA8974I

System programmer response:  No action is needed.
Module: varies
Procedure Name: varies

EZA8971I  Compartment: compartment
Explanation:  This message indicates the compartment to which a connection is assigned.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module: varies
Procedure Name: varies

EZA8972I  Precedence: precedence
Explanation:  This message displays the precedence type of an IP datagram.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module: varies
Procedure Name: varies

EZA8973I  Bytes To Read: number
Explanation:  This message displays the number of bytes to be read in an IP datagram.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module: varies
Procedure Name: varies

EZA8974I  Unacked Bytes: number
Explanation:  This message displays the number of unacknowledged bytes in an IP datagram.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action:  TCPIP continues.
EZA8975I  •  EZA8981I

Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

**EZA8975I**  Connection State: *connection_state*  Local Socket: *socket*  Foreign Socket: *socket*

**Explanation:** This message displays the connection state for the current connection and the local and foreign sockets being used for the connection. For more information about the connection state, see the message **EZA****nnnn**, where *nnnn* is the 4-digit number in parentheses displayed in this message.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](z/OS%20Communications%20Server%3A%20IP%20Programmer%2527s%20Guide%20and%20Reference). For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](z/OS%20Communications%20Server%3A%20IP%20Programmer%2527s%20Guide%20and%20Reference).

**System action:** TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

**EZA8980I**  V1: *vmcf_response_code*

**Explanation:** This message displays the response code taken from the packet header of an external virtual machine communication facility (VMCF) packet. The response code indicates the status of the external end of the VMCF connection. For more information about VMCF response codes, see the [z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference](z/OS%20Communications%20Server%3A%20IP%20Sockets%20Application%20Programming%20Interface%20Guide%20and%20Reference).

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](z/OS%20Communications%20Server%3A%20IP%20Programmer’s%20Guide%20and%20Reference).

**System action:** TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

**EZA8981I**  V1: VCMPFLG1

**Explanation:** This message displays the VCMPFLG1, which is used to specify options associated with a particular function. The flag byte can be set to the following values:

**Flag Value**

**Indicates:**

**VMCPAUTS (X'80')**
An AUTHORIZE SPECIFIC request.

**VMCPPRTY (X'40')**
For SEND, SEND/RECV, SENDX, and IDENTIFY requests, a PRIORITY message request. For an AUTHORIZE request, it indicates an AUTHORIZE PRIORITY request. PRIORITY messages cannot be sent to another machine unless it has been authorized to receive them.

**VMCPMSMSG (X'20')**
The virtual machine accepts messages sent via the SMSG command.
Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** varies

**Procedure Name:** varies

---

**EZA8982I**  V2: VCMPFLG2

**Explanation:** This message displays the hexadecimal value indicating the virtual machine communication facility (VMCF) function request taken from the VMCF packet header. The flag is reserved, and therefore should be X'00' initially.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** varies

**Procedure Name:** varies

---

**EZA8983I**  Function: VMCF_function

**Explanation:** This message displays the virtual machine communication facility (VMCF) function taken from the VMCF packet header. For more information about VMCF functions, see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** varies

**Procedure Name:** varies

---

**EZA8984I**  Message ID: message_identifier

**Explanation:** This message displays the message identifier taken from the virtual machine communication facility (VMCF) packet header. For more information about VMCF message identifiers, see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.
EZA8985I  Login name: name

Explanation: This message displays the login name associated with a virtual machine communication facility (VMCF) packet. For more information about VMCF, see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8986I  Vaddress A: address

Explanation: This message displays the VMCPVADA register taken from the virtual machine communication facility (VMCF) packet header. This register contains one of four addresses, depending on which VMCF function is requested.

For SEND, SEND/RECV, and SENDX requests, VMCPVADA contains the address of the source address space data. For RECEIVE requests, VMCPVADA contains the address of a sink address space RECEIVE buffer. For REPLY requests, VMCPVADA contains the address in sink address space where REPLY data is located. For an AUTHORIZE request, VMCPVADA contains the address of an external interrupt buffer.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8987I  Length A: length

Explanation: This message specifies the length of the type of data specified by Vaddress A.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies
Explanation: This message displays the contents of the VMCPVADB register taken from the virtual machine communication facility (VMCF) packet header. This register contains the address of a source address space’s REPLY buffer. The length of the buffer is specified by VMCPLENB.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

Explanation: This message displays the VMCPLENB register taken from the virtual machine communication facility (VMCF) packet header. This register indicates the length of the REPLY buffer specified in VMCPVADB.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

Explanation: The meaning of the value displayed in AnInteger depends on the type of virtual machine communication facility (VMCF) function call contained in the packet:

For the function:
AnInteger represents:

PINGreq
The value of the timeout being used for the PING request.

PINGresponse
The return code from the PING procedure.

UDPdatagramDELIVERED
The length of the entire datagram excluding the UDP header.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Chapter 9. EZA9xxx messages

EZA9000I  V1: vmcf_response_code

Explanation: This message displays the response code taken from the packet header of an external virtual machine communication facility (VMCF) packet. The response code indicates the status of the external end of the VMCF connection. For more information about VMCF response codes, see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

EZA9001I  V1: VCMPFLG1

Explanation: This message displays the VCMPFLG1, which is used to specify options associated with a particular function. The flag byte can be set to the following values:

VMCPAUTS (X'80') An AUTHORIZE SPECIFIC request.
VMCPPRTY (X'40') For SEND, SEND/RECV, SENDX, and IDENTIFY requests, a PRIORITY message request. For an AUTHORIZE request, it indicates an AUTHORIZE PRIORITY request. PRIORITY messages cannot be sent to another machine unless it has been authorized to receive them.
VMCPMSG (X'20') The virtual machine accepts messages sent via the SMSG command.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

EZA9002I  V2: VCMPFLG2

Explanation: This message displays the hexadecimal value indicating the virtual machine communication facility (VMCF) function request taken from the VMCF packet header. The flag is reserved, and therefore should be X'00' initially.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA9004I  Message ID: message_identifier

Explanation: This message displays the message identifier taken from the virtual machine communication facility (VMCF) packet header. For more information about VMCF message identifiers, see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA9005I  Login name: name

Explanation: This message displays the login name associated with a virtual machine communication facility (VMCF) packet. For more information about VMCF, see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies
EZA9006I  Vaddress A: address

Explanation: This message displays the VMCPVADA register taken from the virtual machine communication facility (VMCF) packet header. This register contains one of four addresses, depending on which VMCF function is requested.

For SEND, SEND/RECV, and SENDX requests, VMCPVADA contains the address of the source address space data. For RECEIVE requests, VMCPVADA contains the address of a sink address space RECEIVE buffer. For REPLY requests, VMCPVADA contains the address in sink address space where REPLY data is located. For an AUTHORIZE request, VMCPVADA contains the address of an external interrupt buffer.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

EZA9007I  Length A: length

Explanation: This message specifies the length of the type of data specified by Vaddress A.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.

Procedure Name: varies

EZA9080I SayVmcFu(function) ->directory_name V1=VMCPFLG1 ID=message_id VadA=VMCPVADA LenA=length_of_VMCPVADA VadB=VMCPVADB LenB=length_of_VMCPVADB Conn=connection Call=call_code Return=SayCalRe(return_code)

Explanation: This message displays the contents of a virtual machine communication facility (VMCF) packet. V1 is a flag byte used to specify options associated with a particular function. The flag byte can be set to the following values:

VMCPAU TS(X'80') An AUTHORIZE SPECIFIC request.
VMCPPRTY(X'40') For SEND, SEND/RECV, SENDX, and IDENTIFY requests, a PRIORITY message request. For an AUTHORIZE request, it indicates an AUTHORIZE PRIORITY request. PRIORITY messages cannot be sent to another address space unless that address space has been authorized for PRIORITY messages. The SEND and RESPONSE external interrupts for a PRIORITY message are queued ahead of pending nonpriority external interrupts.
VMCPMS MSG(X'20') The virtual machine accepts messages sent via the SMSG command.

The ID value is the message identifier.

VadA contains one of four addresses, depending upon which VMCF function is requested.
For SEND, SEND/RECV, and SENDX requests, VMCPVADA contains the address of the source address space data. For RECEIVE requests, VMCPVADA contains the address of a sink address space RECEIVE buffer. For REPLY requests, VMCPVADA contains the address in sink address space where REPLY data is located. For an AUTHORIZE request, VMCPVADA specifies the address of the interrupt buffer.

LenA contains the length of data sent by a user, the length of a RECEIVE buffer, or the length of an external interrupt buffer, whichever is specified in the field VMCPVADA.

VMCPVADB contains the address of a source address space’s REPLY buffer for a SEND/RECV request. When the sink address space issues a REPLY in response to a SEND/RECV from the source address space, the REPLY data is moved in this buffer.

LenB specifies the length of the buffer being used to move the data indicated in the field VMCPVADB.

Conn specifies the connection being used to send and receive VMCF packets.

Call displays the call code associated with the packet.

Return indicates whether the packet was sent and received successfully.

Note: For more information about this message, see the message EZA\texttt{nnnn}, where \texttt{nnnn} is the 4-digit number in parentheses at the end of this message.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcfU, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the \cite{z/OS Communication Server: IP Programmer’s Guide and Reference}.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** Respond as indicated by the message EZA\texttt{nnnn} where \texttt{nnnn} is the 4-digit number in parentheses at the end of this message.

**filename data set name**

**Explanation:** This is the data set name of the message file being used by Falprint to hold text for messages that Falprint generates as write to operator (WTO) messages, which are written to the operator’s console. This allows messages from TCPIP or MVS be to displayed even if an overlying application is being used. This message is displayed with message EZA9228I.
Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the "z/OS Communications Server: IP Programmer’s Guide and Reference".

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: FAL@PRTC
Procedure Name: prtmsgw

EZA9203E MSG message number not defined

Explanation: The specified message number is not defined in the message data set.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the "z/OS Communications Server: IP Programmer’s Guide and Reference".

System action: TCPIP continues.
Operator response: Insert the message ID and message text in the message data set.
System programmer response: No action is needed.
Module: FAL@PRTC
Procedure Name: printmsgw

EZA9204I findmsg&colon; try again

Explanation: The message specified was not properly linked to the Falprint message repository. Falprint creates a repository of TCPIP messages that are not displayed while an application is being run on TCPIP and converts them to write to operator (WTO) messages, allowing them to be displayed without interference from an overlying application.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the "z/OS Communications Server: IP Programmer’s Guide and Reference".

System action: The program retries and continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: FAL@PRTC
Procedure Name: findmsg

EZA9205I searching for weak link: data_set_name msg_file

Explanation: Falprint is searching for a weak link between the data set from which message text is being taken and the message file, which is used by Falprint to generate write to operator (WTO) messages, which are written to the operator’s console if necessary. A weak link indicates that a message needed by Falprint from the current data set is not duplicated in the message file.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the "z/OS Communications Server: IP Programmer’s Guide and Reference".

System action: The program continues.
Operator response: No action is needed.
System programmer response: No action is needed.
EZA9206I • EZA9208I

Module: FAL@PRTC
Procedure Name: varies

---

EZA9206I  Found weak link for message file name

Explanation: A message in the indicated data set did not correspond to a message in the message file being constructed by Falprint, creating a weak link between the message files. Falprint builds a message file containing message text from TCPIP and MVS messages that will not be displayed if an application is being run over TCPIP and converts them to write to operator (WTO) messages, allowing them to be displayed.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: The program continues.
Operator response: Notify the system programmer of this message.
System programmer response: Check the message file and the source data set to determine where the weak link occurred and add the necessary message to the message file.

Module: FAL@PRTC
Procedure Name: isweakmsg

---

EZA9207I findmsg: looking for message number message number

Explanation: The findmsg function, which finds a specific message in a message file, is searching the file for the specified message.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: The program continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: FAL@PRTC
Procedure Name: findmsg

---

EZA9208I  Reading message file: message file

Explanation: Falprint is in the process of reading the specified message file. Falprint creates a message file to hold the message identifiers and message text from messages from TCPIP and MVS that will not be displayed due to an application that is being run and converts the messages to write to operator (WTO) messages, which are written to the operator’s console, allowing them to be displayed.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: The program continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: FAL@PRTC
Procedure Name: initmsgs
EZA9209I  initmsgs read message message_text message_delimiter
Explanation:  The indicated message text did not contain a delimiter indicating the end of the text. Falprint appends the message delimiter “-n’ to the text to indicate the end of the text.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  FAL@PRTC
Procedure Name:  initmsgs

EZA9210I  Opened dataset data set
Explanation:  Falprint is using the indicated data set to create a message file containing the message identifiers and message texts for messages from TCPIP and MVS that will not be displayed by normal means due to interference from an application currently running. Falprint converts these messages to write to operator (WTO) messages, allowing them to be displayed while the application is running.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action:  The program continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  RES@MVS
Procedure Name:  mvsfopen

EZA9213I  EZACISSP not found
Explanation:  The program was unable to find the communications interface system (CIS) server.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action:  The program continues.
Operator response:  Notify the system programmer of this message.
System programmer response:  Make sure that the CIS server is started and online. Make sure that the CIS server is reachable through the network.
Module:  FAL@PRTC
Procedure Name:  initmsgs

EZA9214W  extra quote
Explanation:  There is an incorrect number of quotation marks at the end of a line in the message data set.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action:  TCPIP continues.
Operator response: Fix the message data set by removing the excess quotation marks.

System programmer response: No action is needed.

Module: FAL@PRTC

Procedure Name: initmsgs

---

EZA9215W  Duplicate message file name name

Explanation: This message indicates the name specified has already been used for a message data set name.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the "z/OS Communications Server: IP Programmer's Guide and Reference"

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: FAL@PRTC

Procedure Name: initmsgs

---

EZA9218E  Can't open message file or message text name: data set name

Explanation: There was a problem opening the message data set or message text name.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the "z/OS Communications Server: IP Programmer's Guide and Reference"

System action: TCPIP continues.

Operator response: Verify the name of the message data set and retry.

System programmer response: No action is needed.

Module: FAL@PRTC

Procedure Name: initmsgs

---

EZA9219E  Invalid MARGINS statement in message file.

Explanation: In the MARGIN statement of the message file, the second margin was smaller than the first margin, or the first margin was assigned a value smaller than 1. This message is also displayed if the MARGINS statement was not in the following form: MARGINS(first margin second margin)

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the "z/OS Communications Server: IP Programmer's Guide and Reference"

System action: The program continues.

Operator response: Correct the MARGINS statement in the message file.

System programmer response: No action is needed.

Module: FAL@PRTC

Procedure Name: initmsgs
EZA9220E  Can’t allocate storage for messages

Explanation: There was an error allocating dynamic storage for the messages.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: Increase the region size.

Module: FAL@PRTC

Procedure Name: initmsgs

EZA9221E  Missing product in message file: data set name

Explanation: The product field is missing from the message data set. The product field contains a 3 letter combination. For example:
PRODUCT EZA
PRODUCT EZB
PRODUCT EZY

For more information on the original message file, ask the system programmer.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: See the originally shipped version of the specified data set and verify the name of the product.

Module: FAL@PRTC

Procedure Name: initmsgs

EZA9222E  Missing component in message file: data set name

Explanation: There was a component field missing from the message data set. The component field is a combination of 3 letters representing individual components. For example:
COMPONENT DNS

For more information on the message facility, ask the system programmer.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: See the originally shipped version of the specified data set and verify the name of the component.

Module: FAL@PRTC

Procedure Name: initmsgs
EZA9223E • EZA9226E

EZA9223E  **** Duplicate Message number ****: message number
Explanation:  This message indicates that there are 2 or more messages with the same message number in the message data set.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action:  TCPIP continues.
Operator response:  Delete 1 of the message’s text and its corresponding number so there is 1 version of each.
System programmer response:  No action is needed.
Module:  FAL@PRTC
Procedure Name:  initmsgs

EZA9224I  Original message: message text
Explanation:  This message displays the first occurrence of the message with the duplicate message number.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  FAL@PRTC
Procedure Name:  initmsgs

EZA9225I  Duplicate message: message text
Explanation:  This message displays the second occurrence of the message with the duplicate message number.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  FAL@PRTC
Procedure Name:  initmsgs

EZA9226E  Can’t allocate storage for message text
Explanation:  There was an error allocating dynamic storage for the message text.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  Increase the size of the region.
Module: FAL@PTRC
Procedure Name: initmsgs

EZA9227E  Can’t allocate storage for message code
Explanation: There is not enough dynamic storage for the message code.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer's Guide and Reference](#).

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: Increase the size of the region.

Module: FAL@PTRC
Procedure Name: initmsgs

EZA9228I  message number message number text text
Explanation: This message displays all the messages in the message file and the corresponding message numbers.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer's Guide and Reference](#).

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: FAL@PTRC
Procedure Name: prtmsgs, prtmsgw

EZA9229I  Message message number not found
Explanation: The message number specified was not in the message list, but was called in the source code.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer's Guide and Reference](#).

System action: TCPIP continues.
Operator response: Verify the existence of the message ID and text, and retry.
System programmer response: No action is needed.

Module: FAL@PTRC
Procedure Name: fflush

EZA9230E  Processed maximum number of message data sets.
Explanation: The maximum number of message data sets have been processed. The maximum number of message data sets is 256. Processing is no longer an option.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer's Guide and Reference](#).

System action: TCPIP continues.
EZA9231I  •  EZA9234I

Operator response:  Do not attempt to process any more message data sets.
System programmer response:  No action is needed.
Module:  FAL@PRTC
Procedure Name:  find_msgtxt, update_msgfn

EZA9231I  fal@prt: isdupfn
Explanation:  This message is displayed while debugging is enabled and the isdupfn function is invoked. This function determines if there are duplicate message data sets.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  FAL@PRTC
Procedure Name:  isdupfn

EZA9232I  fal@prt: isdupfn file already processed
Explanation:  The function that determines if there are duplicate message file names has already been successful.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  FAL@PRTC
Procedure Name:  isdupfn

EZA9234I  fal@prt: dotimestamp
Explanation:  This message is displayed when debugging is enabled and upon the invocation of the dotimestamp function. This function changes the type of time stamping of all messages.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  FAL@PRTC
Procedure Name:  dotimestamp
EZA9235I  fal@prt: initprt

Explanation: This message is displayed when debugging is enabled and upon the invocation of the initprt function. This function determines the status of the message data set.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com/www/serverfa...).

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: FAL@PRTC
Procedure Name: initprt

EZA9236I  Message file data_set_name rc return_code

Explanation: This message displays the name of the processed message data set and the return code.

*return_code* is the return code from message initialization. If it is zero, then message initialization was successful. If it is a negative number, then a preceding message should have explained the error.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com/www/serverfa...).

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: FAL@PRTC
Procedure Name: initprt

EZA9237E  EZAMSGL command exceeds number-byte buffer: command

Explanation: The EZAMSGL command, which is invoked by a user-specified command, exceeded the size of the allocated buffer.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com/www/serverfa...).

System action: The program continues.
Operator response: Correct the size of the command in the user-specification. For more information about the EZAMSGL command, see the [z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference](https://www.ibm.com/www/serverfa...).
System programmer response: No action is needed.
Module: FAL@PRTC
Procedure Name: EZAMSGL

EZA9241I  Using pre-loaded message file message file name accessed via EZAMSGP.

Explanation: Falprint is using the default message library included in the Falprint code FAL@PRTC.C, accessed through the function EZAMSGP, which controls the format of the displayed message. Falprint loads the message file.
Note: This message displays the virtual machine communication facility (VMCF) function call returned by
the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information
about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference

System action: Falprint continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: FAL@PRTC

Procedure Name: initprt

Using pre-loaded message file message file name accessed via EZAMSGW.

Explanation: Falprint is using the default message library included in the Falprint code FAL@PRTC.C, accessed
through the function EZAMSGW, which controls the format of the displayed message.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the
function SayVmcFu, which is called to determine the type of a VMCF function call. For more information
about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference

System action: The program continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: FAL@PRTC

Procedure Name: initprt

StartTcpIpService: JOBNAME name is not the TCPIP address space.

Explanation: The specified NETSTAT TCP JOBNAME does not match the JOBNAME of the TCPIP address space.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the
function SayVmcFu, which is called to determine the type of a VMCF function call. For more information
about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference

System action: NETSTAT ends with error message EZA0216I. TCPIP continues.

Operator response: Reenter NETSTAT with the correct TCPIPJOBNAME as specified in the TCPIP.DATA data set.

System programmer response: No action is needed.

Module: CMERUPT

Procedure Name: StartTcpIpService

TcpWaitOpen got unexpected state change: SayConSt(new_state)

Explanation: The procedure TcpWaitOpen, which opens a TCP connection for a client when one becomes available,
received an unexpected state changed on a connection being monitored. For more information about the new state,
see message EZAnnnn where nnnn is the four-digit number in parenthesis at the end of this message.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the
function SayVmcFu, which is called to determine the type of a VMCF function call. For more information
about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: Respond as indicated by the message EZAnnnn where nnnn is the four-digit number
in parenthesis at the end of this message.

Module: CMERUPT
**EZA9283I**  TcpNameChange called after TcpIp service has begun.

**Explanation:** The procedure TcpNameChange, which changes the default directory name to be used by TCPIP, was called after TCPIP service had begun. The default directory name cannot be changed after TCPIP service has begun.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://pubs.opengroup.org/onlinepubs/9699919/mini/xsh09283i.html).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** TcpNameChange

---

**EZA9284I**  StartTcpIpService: Error SayCalRe(result) from GetIdentity

**Explanation:** The procedure GetIdentity, which was called to determine the ID of the address space calling the procedure StartTcpIpService, was unsuccessful. The reason is indicated by the SayCalRe portion of this message.

**Note:** For more information about this message, see the message **EZA9mmn**, where **mmmn** is the 4-digit number in parentheses at the end of this message.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://pubs.opengroup.org/onlinepubs/9699919/mini/xsh09283i.html).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** Respond as indicated by the message **EZA9mmn** where **mmmn** is the 4-digit number in parentheses at the end of this message.

**Module:** CMERUPT

**Procedure Name:** StartTcpIpService

---

**EZA9285I**  TIMER TRACE:

**Explanation:** This message precedes the printing of a timer trace.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://pubs.opengroup.org/onlinepubs/9699919/mini/xsh09283i.html).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** PrintTimers
**EZA9286I** Timer: delta = `timer_change` Datum = `timer_associated_notification`

**Explanation:** This message displays the elapsed time from an internal timer set by TCPIP. The Datum in this message is the notification associated with the timer.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function `SayVmcFu`, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](#).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** PrintTimers

---

**EZA9288I** RemoveTimer: Elapsed time is `time`

**Explanation:** The procedure `RemoveTimer` has been called to remove a timer that has been running for the indicated length of time.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function `SayVmcFu`, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](#).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** RemoveTimer

---

**EZA9290I** Inserting timer: Time = `seconds` Data = `timer_associated_notification`

**Explanation:** The procedure `InsertTimeout` is inserting a new timer to replace one that has expired or has been removed. The length of time the timer will run is displayed in the message. The Data displayed in this message is the timer associated notification from the timer that has been removed or has expired.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function `SayVmcFu`, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](#).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** InsertTimeout

---

**EZA9292I** SetTimer: Elapsed time is `time`

**Explanation:** This message is sent to the trace file if the TIMERdebug option was specified. The timer queue is periodically adjusted to reflect the time that has elapsed since the clock comparator was last set. The elapsed time displayed in this message is the time since the clock comparator was last set.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function `SayVmcFu`, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](#).
EZA9293I  Setting timeout for number Seconds

Explanation: This message is sent to the trace file if the TIMERdebug option was specified. It indicates that a new timer is being created and set to run for the indicated length of time.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMERUPT
Procedure Name: SetTimer

EZA9294I  InHeader.V2 is header

Explanation: This message indicates that the procedure MonQuery, which queries the system monitor, has received an error from the virtual machine communication facility (VMCF) indicating that no buffer space is available to receive the query. The query will be resent when buffer space is available to receive it.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: MonQuery halts. TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMERUPT
Procedure Name: MonQuery

EZA9295I  Severe error: Insufficient virtual memory available for TCP-IP client

Explanation: No virtual storage was available to open a connection to a TCPIP client. The connection is refused and the client will not receive TCPIP service.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: The TCPIP address space continues.
Operator response: Notify the system programmer of the error.
System programmer response: Increase the amount of virtual storage available to the host TCPIP address space and restart the connection.
Module: CMERUPT
Procedure Name: NoRoom
**Explanation:** The PA2 or CLEAR key has been pressed. The Full-Screen Package (FSP) returns to CP READ and clears the screen when one of these keys is pressed.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMFSCRN

**Procedure Name:** ReadEnded

---

**Explanation:** The CLIENTconsistency has been set for full-screen tracing mode.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMFSCRN

**Procedure Name:** FsIoBegRupt

---

**Explanation:** Indicates the bit number in HighTwoBits. This number can be a number in the range 0 - 64.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMFSCRN

**Procedure Name:** FsIoBegRupt

---

**Explanation:** The indicated terminal model number is not supported on this system.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

**System action:** TCPIP ends.

**Operator response:** See the z/OS Communications Server: IP Configuration Reference for more information about technical requirements for TCP/IP for MVS and restart TCPIP.

**System programmer response:** No action is needed.
**EZA9356I**  **EZA9403I**

**Module:** CMFSCRN  
**Procedure Name:** FsStartUp

---

**EZA9356I**  **About to begin**

**Explanation:** This message displays when the debug option is used. The full screen mode has been requested and is about to begin its display.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://publib.boulder.ibm.com/infocenter/tcip/v3r1/topic/com.ibm.net.tcpip.doc/topics/ggsb8001.htm).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMFSCRN  
**Procedure Name:** FsStart

---

**EZA9403I**  **data set name not found.**

**Explanation:** The displayed data set name could not be found. When you make changes to your HOSTS.LOCAL data set, you must generate and install new HOSTS SITEINFO and HOSTS ADDRINFO data sets.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://publib.boulder.ibm.com/infocenter/tcip/v3r1/topic/com.ibm.net.tcpip.doc/topics/ggsb8001.htm).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** Use the MAKESITE statement as either a TSO command or a batch job to generate the new data sets. See the [z/OS Communications Server: IP Configuration Reference](https://publib.boulder.ibm.com/infocenter/tcpip/v3r1/topic/com.ibm.net.tcpip.doc/topics/ggsb8001.htm) for more information.

**Module:** CMHOSTN  
**Procedure Name:** GetSiteEntry

---

**EZA9404I**  **value.value.value.value**

**Explanation:** Indicates the host’s IP address as specified in the NSINTERADDR statement of the TCPIP.DATA data set. This message is displayed with other messages indicating the port number for this IP address. See the [z/OS Communications Server: IP Configuration Reference](https://publib.boulder.ibm.com/infocenter/tcpip/v3r1/topic/com.ibm.net.tcpip.doc/topics/ggsb8001.htm) for more information.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://publib.boulder.ibm.com/infocenter/tcip/v3r1/topic/com.ibm.net.tcpip.doc/topics/ggsb8001.htm).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMHOSTN  
**Procedure Name:** PrintHost

---

Chapter 9. EZA9xxxx messages  615
EZA9409E  Syntax or other errors found in file file, continuing.

Explanation: This message is issued when the parser did not find a valid keyword. Syntax or other specification errors were found in the indicated file. The parser state is set to IgnoreState.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcfu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: Processing continues.

Operator response: The operator should check that the TCPIP.DATA configuration data set contains the correct syntax and valid information. Correct the input file for correct program operation. See the z/OS Communications Server: IP Configuration Reference for a complete list of the valid keywords.

Module: CMHOSTN

Procedure Name: ReadTCPIPdataFILE

EZA9410E  See string line line number on or before column column number

Explanation: An error has occurred in the indicated line number of the TCPIP.DATA data set.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcfu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: Correct the error in the indicated line number and reinitialize TCPIP. See the z/OS Communications Server: IP Configuration Reference for more information.

System programmer response: No action is needed.

Module: CMHOSTN

Procedure Name: ReadTCPIPdataFILE

EZA9411E  Unable to allocate/open dataset file, continuing.

Explanation: The application was unable to allocate or unable to open the indicated data set. The reason is indicated by additional messages.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcfu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: Check the indicated data set to make sure that it is properly formatted and in storage accessible to the host.

System programmer response: No action is needed.

Module: FTBMVSUB, CMHOSTN

Procedure Name: varies

EZA9412I  Unable to allocate/open data set name file, continuing.

Explanation: The attempt to open the HOSTS.SITEINFO data set was unsuccessful. This data set must be generated and installed when changes are made to the HOSTS.LOCAL data set.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcfu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: FTBMVSUB, CMHOSTN

Procedure Name: varies
Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action:  TCPIP continues.

Operator response:  No action is needed.

System programmer response:  Use the MAKESITE statement as either a TSO command or a batch job to generate the new data set. See the z/OS Communications Server: IP Configuration Reference for more information.

Module:  CMHOSTN

Procedure Name:  GetSiteEntry

---

EZA9416E  Failure in procedure getstate for data_set

Explanation:  The procedure getstate, which is called to determine the status of a connection, was unsuccessful for the indicated data set. This indicates that the data set might not have a connection. The parameter list contained in the indicated data set is not passed to MAKESITE.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action:  TCPIP continues.

Operator response:  Notify the system programmer of the error.

System programmer response:  Check the indicated data set to make sure that it is in storage accessible to the host.

Module:  CMMAKSI

Procedure Name:  StartUp

---

EZA9417E  System error trying to obtain format 1 DSCB for data_set

Explanation:  The host was unable to determine the format for the data set control block (DSCB) for the indicated data set. CMMAKSI received a return code of 8 from the procedure getstate, which is called to determine the status of a connection. The data set is not read.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action:  TCPIP continues.

Operator response:  Notify the system programmer of the error.

System programmer response:  Make sure the DSCB is correctly formatted and resubmit the command.

Module:  CMMAKSI

Procedure Name:  StartUp

---

EZA9418E  Failure using dataset, data set is migrated.

Explanation:  The application was unable to use the indicated data set because the data set has been migrated and is inaccessible to the host.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action:  The indicated data set is not accessed. TCPIP continues.

Operator response:  Recall the indicated data set. Make sure that it is properly formatted and in storage accessible to the host.
EZA9419E • EZA9421E

System programmer response:  No action is needed.
Module:  FTSMVSUB, CMMAKSI, CMHOSTN
Procedure Name:  varies

EZA9419E  Failure using data_set, volume is not mounted.
Explanation:  The MAKESITE command was unable to extract a parameter list from the indicated data set because the volume containing the data set is not mounted.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the "z/OS Communications Server: IP Programmer’s Guide and Reference"

System action:  TCPIP continues.
Operator response:  Mount the correct volume and resubmit the command.
System programmer response:  Assist the user as necessary.
Module:  CMMAKSI
Procedure Name:  StartUp.

EZA9420E  Failure using data_set, data set is not direct access.
Explanation:  The MAKESITE command was unable to extract a parameter list from the indicated data set because the data set is not a direct access data set. The parameter list is not transferred.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the "z/OS Communications Server: IP Programmer’s Guide and Reference"

System action:  TCPIP continues.
Operator response:  Convert the data set to a direct access data set and resubmit the command.
System programmer response:  Assist the user as necessary.
Module:  CMMAKSI
Procedure Name:  StartUp

EZA9421E  Failure using data_set, data set is VSAM.
Explanation:  The MAKESITE command was unable to extract a parameter list from the indicated data set because it is a Virtual Storage Access Method (VSAM) data set.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the "z/OS Communications Server: IP Programmer’s Guide and Reference"

System action:  The parameter list is not transferred. TCPIP continues.
Operator response:  Make sure that the data set was specified correctly and resubmit the command.
System programmer response:  Assist the user as necessary.
Module:  CMMAKSI
Procedure Name:  StartUp
EZA9422E  Failure obtaining data_set or invalid data_set organization (DSORG)
Explanation: The MAKESITE command was unable to extract a parameter list from the indicated data set because the data set was specified incorrectly or had an incorrect data set organization. The parameter list is not transferred.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: Make sure that the data set was specified correctly and that it is a sequential data set.
System programmer response: Assist the user as necessary.
Module: CMMAKSI
Procedure Name: StartUp

EZA9423E  Failure locating data_set or invalid record format (RECFM).
Explanation: The MAKESITE command was unable to extract a parameter list from the indicated data set because the data set was specified incorrectly or had the wrong record format. The MAKESITE command requires a fixed record length. The parameter list is not transferred.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: Make sure that the data set was specified correctly and has the proper record format. Correct the record format if necessary.
System programmer response: Assist the user as necessary.
Module: CMMAKSI
Procedure Name: StartUp

EZA9424E  Error on open of data_set, sense code = sense_code.
Explanation: CMMAKSI encountered an error in opening the indicated data set. The reason for this error is indicated by the sense code displayed in this message. The data set is not opened.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Use the sense code displayed in this message and the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference to determine the cause of the error.
Module: CMMAKSI
Procedure Name: StartUp

EZA9431I  FTP.DATA file not found. Using hardcoded default values.
Explanation: When the FTPDATA file is not being used, this message indicates that hardcoded defaults are in effect.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference
EZA9475I  Detected trouble decoding indrected name:

Explanation: The client was unable to decode an indirected name returned from the Domain Name Server because it exceeded the maximum allowable length. The name is not decoded.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcF, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Check the configuration of the Domain Name Server to determine why it is sending names that are longer than the maximum allowable length.
Module: FTBMVSB
Procedure Name: Exist

EZA9476I  Detected trouble decoding name:

Explanation: The client was unable to decode a name returned from the Domain Name Server because it exceeded the maximum allowable length. The name is not decoded.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcF, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Check the configuration of the Domain Name Server to determine why it is sending names that are longer than the maximum allowable length.
Module: CMRESOL
Procedure Name: GetName

EZA9486I  A

Explanation: The resource record for which SayRRTy was called is an address record. The address record contains the dotted-decimal notation internet address for the domain name identifying the record.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcF, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRType

EZA9487I  NS
Explanation: The resource record for which SayRRType was called is a name server record. The name server record contains the domain name of a name server for the current zone.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRType

EZA9488I  MD
Explanation: The resource record for which SayRRType was called was an MD record. For more information about this experimental record type, see RFC 1034. See Appendix C, “Related protocol specifications,” on page 649 for information about accessing RFCs.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRType

EZA9489I  MF
Explanation: The resource record for which SayRRType was called is an MF record.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRType
EZA9490I  CNAME

**Explanation:** The resource record for which SayRRType was called is a canonical name record. The canonical name record is used to provide alias or alternative name information for a domain name. The domain name specified in the first field of the record is an alternative to the canonical or real name specified in the data field.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com).  

**System action:** TCPIP continues.  

**Operator response:** No action is needed.  

**System programmer response:** No action is needed.  

**Module:** CMRESOL  

**Procedure Name:** SayRRType

EZA9491I  SOA

**Explanation:** The resource record for which SayRRType was called is a start of authority record. The SOA record is unique to a zone and contains administrative details of the zone, including:  
- The domain name of the name server responsible for the zone.  
- The mail address of the user responsible for the zone.  
- The serial number of the zone database, which identifies the current revision of the data.  
- The refresh interval, which indicates the length of time, in seconds, you must allow between the refreshing of a database from a remote name server.  
- The retry interval, which indicates the length of time, in seconds, you must allow before retrying a failed attempt.  
- The expiration time-to-live (TTL), which indicates the maximum time, in seconds, for records to be valid in the zone database.  
- The minimum TTL, which indicates the minimum time, in seconds, for records to be valid in the zone database.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com).  

**System action:** TCPIP continues.  

**Operator response:** No action is needed.  

**System programmer response:** No action is needed.  

**Module:** CMRESOL  

**Procedure Name:** SayRRType

EZA9492I  MB

**Explanation:** The resource record for which SayRRType was called is a mailbox record. The mailbox record is an experimental record with no RFCs that define specific rules for this data type.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com).  

**System action:** TCPIP continues.  

**Operator response:** No action is needed.  

**System programmer response:** No action is needed.  

**Module:** CMRESOL  

**Procedure Name:** SayRRType
EZA9493I  MG

Explanation: The resource record for which SayRRType was called is a mail group member record. The mail group member record specifies the mail address of a person belonging to the mail group specified in the domain name field. Mail group records are experimental and have no RFCs that define specific rules for this data type.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the \[z/OS Communications Server: IP Programmer’s Guide and Reference\]

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRType

EZA9494I  MR

Explanation: The resource record for which SayRRType was called is a mail rename name record. The mail rename name record specifies a mailbox that is a rename of the mailbox specified in the domain name field. The mail rename name record is an experimental record. There are no RFCs that define specific rules for this data type.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the \[z/OS Communications Server: IP Programmer’s Guide and Reference\]

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRType

EZA9495I  NULL

Explanation: The resource record for which SayRRType was called is a null resource record. The null resource record contains any information, providing it is less than 65 535 octets in length. The null resource record is an experimental record type. There are no RFCs that define specific rules for this data type.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the \[z/OS Communications Server: IP Programmer’s Guide and Reference\]

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRType

EZA9496I  WKS

Explanation: The resource record for which SayRRType was called is a well-known services record. The well-known services record stores the protocol numbers of multiple services in a single record. See RFC 1060 for more detailed information. See Appendix C, “Related protocol specifications,” on page 649 for information about accessing RFCs.
Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.
System programmer response: No action is needed.

**EZA9499I • EZA9499I**

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRType

---

EZA9500I MX

Explanation: The resource record for which SayRRType was called is a mail exchanger record. The mail exchanger record defines a host that can act as a mail exchange for the domain specified in the domain name field. A mail exchange runs a mail agent that delivers or forwards mail for the domain name specified in the first field.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRType

---

EZA9501I TXT

Explanation: The resource record for which SayRRType was called is a text string record. The text string record contains descriptive text.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRType

---

EZA9502I Unknown RR Type

Explanation: SayRRType did not recognize the type of the resource record for which it was called.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Check the appropriate name server to determine why it is sending incorrect resource records.
Module: CMRESOL
Procedure Name: SayRRType
EZA9507I  IN
Explanation: This message displays the network class. The IN class represents the internet class (most Domain Name Servers support only this class). You can use the wildcard value ANY to match any class. For more information on the network class, see the z/OS Communications Server: IP Configuration Reference.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRClass

EZA9508I  CS
Explanation: This message displays the network class. The CS class represents the CHAOS class. For more information on the network class of resource records, see the z/OS Communications Server: IP Configuration Reference.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRClass

EZA9509I  CH
Explanation: This message displays the network class. The CH class represents the CHAOS class. For more information on the network class of resource records, see the z/OS Communications Server: IP Configuration Reference.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRClass

EZA9510I  HS
Explanation: This message displays the network class. HS represents the Hesoid class. You can use the wildcard ANY to match any class. For more information on the network class, see the z/OS Communications Server: IP User's Guide and Command Reference.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.
name_server
A response has been received for a name server query. The response contains the address of the local name server.

SOA_address
A response has been received for a start of address query. The response contains the address of the start of the table of authority for this zone, and displays the contents of the SOA record.

For more information about these fields, see the z/OS Communications Server: IP User's Guide and Commands.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA9546I Question
Explanation: This message displays that the question query option is specified. This option specifies whether to print the question section of the response. The question section contains the original query.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: PrintRR

EZA9547I Answer
Explanation: This message displays that the answer option is one of the query options. This option specifies whether to print the answer section of the response. The answer section contains the set of all resource records from the name server database that satisfy the query.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: PrintRR
Authority

Explanation: Displays that the authority option is specified as one of the query options. This option specifies whether to print the authoritative section of the response. The authoritative section contains the set of all resource records that specify the address of an authoritative name server for the query. This section is used when the name server queried cannot provide an authoritative answer.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: PrintRR

Additional.

Explanation: This message displays that the additional query option is specified. This option specifies whether to print the additional section of the response. The additional section contains resource records that have not been explicitly requested, but could be useful.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: PrintRR

Beginning of Message

Explanation: This is the beginning of the message.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: PrintMessage

Query Id: query id

Explanation: This message displays the query ID.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

**Procedure Name:** initscr

---

**EZA9565E** Invalid row coordinate: row

**Explanation:** TCPIP encountered an incorrect screen row coordinate during a full-screen setup.

**Note:** The NETSTAT INTERVAL option is valid only for 3278-type terminals.
Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: The NETSTAT program continues.

Operator response: Tell the system programmer the type of terminal on which you encountered the error.

System programmer response: Modify the TCPIP LOGMODE tables to correctly specify the full-screen characteristics of the terminal type on which the user encountered the error.

For information about TCPIP LOGMODE tables, see z/OS Communications Server: IP Configuration Reference.

Module: CMSCRNS

Procedure Name: Move

EZA9657E Invalid column coordinate: column

Explanation: TCPIP encountered an incorrect screen column coordinate during a full-screen setup.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: The NETSTAT program halts and exits.

Operator response: Tell the system programmer the type of terminal on which you encountered the error.

Note: The NETSTAT INTERVAL option is valid only for 3278-type terminals.

System programmer response: Modify the TCPIP LOGMODE tables to correctly specify the full-screen characteristics of the terminal type on which the user encountered the error.

For information about TCPIP LOGMODE tables, see z/OS Communications Server: IP Configuration Reference.

Module: CMSCRNS

Procedure Name: Move

EZA9689I DbcsEtoA : First Double Byte Character Invalid ord(firstchar)

Explanation: EBCDIC double-byte characters are being converted to ASCII. The first character of a double-byte character, with the specified ordinal value, is not in the valid range for EBCDIC double-byte characters. For translation modes containing both single-byte and double-byte data, the erroneous character will be converted using single-byte EBCDIC to ASCII conversion tables. Data will continue to be converted in this manner until an EBCDIC shift-out character is encountered. If the translation mode uses shift-out and shift-in characters or escape sequences to delimit single-byte and double-byte ASCII data, a shift-in character or escape sequence will be added before the converted erroneous character.

For translation modes that convert pure double-byte data only, the erroneous character will be inserted without conversion and the conversion routine will move to the next character assuming it to be a valid first double-byte character. A shift-in character or escape sequence will not be inserted for these modes.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: Check the contents of the data being transmitted, to see if it contains valid double-byte characters. EBCDIC double-byte characters are enclosed within shift-out '0E'X and shift-in '0F'X characters.

System programmer response: Assist the user as necessary.

Module: CMDBCSCV PASCAL

Procedure Name: DbcsEtoA
EZA9690I  DbcsEtoA : Second Double Byte Character Invalid ord(firstchar) ord(secondchar)

Explanation: EBCDIC double-byte characters are being converted to ASCII. The second character of a double-byte
character, with the specified ordinal value, is not in the valid range for EBCDIC double-byte characters. For
translation modes containing both single-byte and double-byte data, the erroneous character and the corresponding
first double-byte character will be converted using single byte EBCDIC to ASCII conversion tables. Data will continue
to be converted in this manner until an EBCDIC shift-out character is encountered. If the translation mode uses
shift-out and shift-in characters or escape sequences to delimit single-byte and double-byte ASCII data, a shift-in
character or escape sequence will be added before the converted erroneous characters.

For translation modes that convert pure double-byte data only, the erroneous character and the first double-byte
character will be inserted without conversion and the conversion routine will move to the next character assuming it
to be a valid first double byte character. A shift-in character or escape sequence will not be inserted for these modes.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the
function SayVmCfu, which is called to determine the type of a VMCF function call. For more information
about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.

Operator response: Check the contents of the data being transmitted, to see if it contains valid double-byte
characters. EBCDIC double-byte characters are enclosed within shift-out '0E'X and shift-in '0F'X characters.

System programmer response: Assist the user as necessary.

Module: CMDBSCSV PASCAL

Procedure Name: DbcsEtoA

EZA9691I  DbcsAtoE : Character after ESCAPE Invalid ord(ASCIIEscape) ord(nextchar)

Explanation: ASCII JIS Kanji double-byte characters are being converted to EBCDIC. ASCII JIS Kanji double-byte
characters are enclosed within the shift-out escape sequence ESC $ @ or ESC $ B, and the shift-in escape sequence ESC
( B or ESC ( J. The character after the ESCAPE, with the specified ordinal value, is not valid for a JIS Kanji shift-out
or shift-in sequence. For translation modes containing both single-byte and double-byte data, the erroneous character
and the escape character will be converted using single-byte ASCII to EBCDIC conversion tables. Data will continue
to be converted in this manner until a valid shift-out escape sequence is encountered. An EBCDIC shift-in character
will be inserted before the converted erroneous characters if the error is encountered after a valid double-byte
character.

For translation modes that convert pure double-byte data only, the erroneous character and the escape character will
be inserted without conversion and the conversion routine will move to the next character assuming it to be a valid
first double byte character. An EBCDIC shift-in character will not be inserted for these modes.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the
function SayVmCfu, which is called to determine the type of a VMCF function call. For more information
about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.

Operator response: Check the contents of the data being transmitted, to see if it contains valid JIS Kanji double-byte
characters and escape sequences for the selected conversion type.

System programmer response: Assist the user as necessary.

Module: CMDBSCSV PASCAL

Procedure Name: DbcsAtoE

EZA9692I  DbcsAtoE : Character after $ Invalid ord(ASCIIEscape) ord(ASCII$) ord(nextchar)

Explanation: ASCII JIS Kanji double-byte characters are being converted to EBCDIC. ASCII JIS Kanji double-byte
characters are enclosed within the shift-out escape sequence ESC $ @ or ESC $ B, and the shift-in escape sequence ESC
( B or ESC ( J. The character after the $, with the specified ordinal value, is not valid for a JIS Kanji shift-out
sequence. For translation modes containing both single-byte and double-byte data, the erroneous escape sequence
will be converted using single byte ASCII to EBCDIC conversion tables. Data will continue to be converted in this
manner until a valid Shift-out escape sequence is encountered.

For translation modes that convert pure double-byte data only, the erroneous character and the escape character will be inserted without conversion and the conversion routine will move to the next character assuming it to be a valid first double-byte character.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. **System action:** TCPIP continues.

**Operator response:** Check the contents of the data being transmitted, to see if it contains valid JIS Kanji double-byte characters and escape sequences for the selected conversion type.

**System programmer response:** Assist the user as necessary.

**Module:** CMDBCSCV PASCAL

**Procedure Name:** DbcsAtoE

---

### EZA9693I: Character after ( Invalid ord(AsciiEscape) ord(AsciiBraceL) ord(nextchar) **Explanation:** ASCII JIS Kanji double-byte characters are being converted to EBCDIC. ASCII JIS Kanji double-byte characters are enclosed within the shift-out escape sequence ESC \$ 0 or ESC \$ B, and the shift-in escape sequence ESC \$ B or ESC \$ J. The character after the \(, with the specified ordinal value, is not valid for a JIS Kanji shift-in sequence. For translation modes containing both single-byte and double-byte data, the erroneous escape sequence will be converted using single-byte ASCII to EBCDIC conversion tables. Data will continue to be converted in this manner until a valid shift-out escape sequence is encountered. An EBCDIC shift-in character will be inserted before the erroneous characters.

For translation modes that convert pure double-byte data only, the erroneous character and the escape character will be inserted without conversion and the conversion routine will move to the next character assuming it to be a valid first double-byte character. An EBCDIC shift-in character will not be inserted for these modes.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/support/knowledgecenter/SSEG6A_1.7.1/com.ibm.netserver.zos.v1.7.1.doc/zos/guide/comm/gsgref110406.htm).

**System action:** TCPIP continues.

**Operator response:** Check the contents of the data being transmitted, to see if it contains valid JIS Kanji double-byte characters and escape sequences for the selected conversion type.

**System programmer response:** Assist the user as necessary.

**Module:** CMDBCSCV PASCAL

**Procedure Name:** DbcsAtoE

---

### EZA9694I: Second Double Byte Character Invalid ord(firstchar) ord(secondchar) **Explanation:** ASCII double-byte characters are being converted to EBCDIC. ASCII double-byte characters are indicated when the first character is in the range for ASCII double-byte characters. The second character of a double-byte character, with the specified ordinal value, is not in the valid range for the second byte of double-byte characters. For translation modes containing both single-byte and double-byte data, the erroneous character and the corresponding first double-byte character will be converted using single byte ASCII to EBCDIC conversion tables. Data will continue to be converted in this manner until a valid shift-out character or valid shift-out escape sequence is encountered. An EBCDIC Shift-in character will be inserted before the converted erroneous characters.

For translation modes that convert pure double-byte data only, the erroneous character and the first double-byte character will be inserted without conversion and the conversion routine will move to the next character assuming it to be a valid first double-byte character. An EBCDIC shift-in character will not be inserted for these modes.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/support/knowledgecenter/SSEG6A_1.7.1/com.ibm.netserver.zos.v1.7.1.doc/zos/guide/comm/gsgref110406.htm).

For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://publib.boulder.ibm.com/infocenter/zos/v1r12/topic/com.ibm.zos.doc_1.2.0/zmipgpg/rpmipgpg109457.htm).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

Module: TCMVMISS
Procedure Name: GetSid

**EZA9738I Attempt to send file data set to user**

**Explanation:** This message is displayed upon invocation of the SendUser procedure. This function simply sends a file to a user.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://publib.boulder.ibm.com/infocenter/zos/v1r12/topic/com.ibm.zos.doc_1.2.0/zmipgpg/rpmipgpg109457.htm).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

Module: TCMVMISS
Procedure Name: SendUser

**EZA9742I NSIREP called.**

**Explanation:** This message is displayed upon the invocation of the NSIREP procedure. This message initializes the program check handler.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://publib.boulder.ibm.com/infocenter/zos/v1r12/topic/com.ibm.zos.doc_1.2.0/zmipgpg/rpmipgpg109457.htm).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

Module: MVPMISS
Procedure Name: NSIREP
System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MVPMISS

Procedure Name: nsirep

---

EZA9744I  Lqueryoff called.

Explanation: This message is displayed upon the invocation of the Lqueryoff procedure.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/support/knowledgecenter/en/aix_73/com.ibm.aix.doc/ios/iospsa/iospsa_ch9a.html).

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMMVSUB

Procedure Name: Lqueryoff
Chapter 10. EZAINxx messages

EZAIN11I  ALL TCPIP SERVICES FOR PROC procedure name ARE AVAILABLE.

Explanation:  TCP/IP has successfully initialized and is ready to process requests.

procedure name is the name of the procedure used to start TCP/IP.

System action:  The TCP/IP procedure begins to process user requests.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZBTIINI

EZAIN23I  CTRACE IS ACTIVE FOR jobname WITH OPTIONS OTHER THAN THE DEFAULT OPTIONS

Explanation:  CTRACE is active with options other than the default options (MINIMUM, INIT, OPCMDS, or OPMSGS). See the information about specifying trace options in the z/OS Communications Server: IP Diagnosis Guide.

jobname is the name of the procedure used to start TCP/IP.

System action:  TCP/IP is initialized with CTRACE active.

Operator response:  No action is needed.

System programmer response:  Running TCP/IP with other than the default CTRACE options can cause a performance degradation. Issue the DISPLAY TRACE,COMP=SYSTCPIP,SUB=(jobname) command to display which other CTRACE options are active, and to determine if they need to be set.

Module:  EZBTIINI

Procedure Name:  MAIN
Chapter 11. EZAOP\textsuperscript{xx} messages

**EZAOP41I**  \textquoteleft mvscommand TCPIP\textquoteright COMMAND COMPLETED SUCCESSFULLY

**Explanation:** The system successfully processed the DISPLAY or VARY command.

In the message text:

\textit{mvscommand}

The MVS command verb specified for TCPIP.

**System action:** Processing continues

**User response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAO2CMD

**EZAOP45I** SPECIFIED TCPIP PROCNAME IS NOT RUNNING: \textit{procname}

**Explanation:** The TCPIP procedure name in the command was not active.

In the message text:

\textit{procname}

The TCPIP procedure name for the DISPLAY or VARY command.

**System action:** The command request is not completed.

**User response:** Use the DISPLAY TCPIP command to determine the active TCPIP procedures. Retry the command.

**System programmer response:** No action is needed.

**Module:** EZAO2CMD

**Procedure Name:** Do_V3R3

**EZAOP46I** TCPIP PROCNAME MUST BE SPECIFIED.

**Explanation:** More than one TCPIP is currently active and a TCPIP procedure name must be specified in the DISPLAY or VARY command.

**Examples:**

d tcpip,,n,dev
EZAOP46I TCPIP PROCNAME MUST BE SPECIFIED.

**System action:** The command request is not completed.

**User response:** Use the DISPLAY TCPIP command to determine the active TCPIP procedures. Retry the command.

**System programmer response:** No action is needed.

**Module:** EZAO2CMD

**Procedure Name:** ParseProcName

**EZAOP47I** TCPIP HAS NEVER BEEN STARTED

**Explanation:** This message is issued if TCPIP has never been started.

**Examples:**

display tcip
EZAOP47I TCPIP HAS NEVER BEEN STARTED

**System action:** The command request cannot be completed.
EZAOP49I  EZAOP50I

User response:  Retry this command after one or more TCPIP systems have been started.
System programmer response:  No action is needed.
Module:  EZAO2CMD
Procedure Name:  DoParseStuff

---

EZAOP49I  THERE ARE NO ACTIVE TCPIPS

Explanation:  There are no active TCPIP procedures currently running.
System action:  The command request cannot be completed.
User response:  Retry this command after one or more TCPIP procedures have been started.
System programmer response:  No action is needed.
Module:  EZAO2CMD
Procedure Name:  ParseProcName

---

EZAOP50I  TCPIP STATUS REPORT

Explanation:  This is a heading for the TCPIP status report in response to the DISPLAY TCPIP command.
Examples:
d tcpip
EZAOP50I TCPIP STATUS REPORT
COUNT  TCPIP NAME  VERSION  STATUS
------  ----------  --------  -------------------------
1  TCPIP  CS V1R8  ACTIVE
*** END TCPIP STATUS REPORT ***

System action:  The command is accepted.
User response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAO2DSP
Procedure Name:  OutputTcpStatus

Appendix B. Additional information about remote procedure call (RPC) messages

This appendix contains information about RPCLIB and RPCINFO messages.

RPCLIB messages

To solve remote procedure call (RPC) errors, begin by doing the following:

- Check the system console to make sure that PORTMAP and TCPIP are running.
- Check that sufficient storage is available for tasks. The required heap size varies, but could also be the cause of the problem.
- Compress data sets periodically.

See the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/docs/en/zos) for information about basic RPC procedures and the requirements for RPC parameters. From this reference, you can determine the missing or incorrect information that caused the error. This reference also lists the tcperror and perror codes, and many of the procedures described in this chapter. Other procedures are contained in the source code and are made up of the basic procedures.

Some RPC errors are caused by C language coding problems. The following are common C language coding errors:

- Array subscripts out of bounds.
- Bad pointers in the user source code. Pointers to incorrect addresses can cause a number of different errors, such as protection violations and overwritten storage.
- Not freeing storage at the end of the job.
- Overwriting data or program areas, (can be an unterminated string). Strings require a null (X'00' or \\0) in the last position.
- Pointer misspecification, such as *p, p, &p, in the user source code.
- Unending loops that generate storage usage.

RPCINFO messages

For RPCINFO errors, PING and NETSTAT are important tools. You can use RPCINFO to check procedures registered on local and remote PORTMAPs. PING verifies that local and remote hosts are running with TCPIP. NETSTAT provides the status of socket connections and many other conditions.
Appendix C. Related protocol specifications

This appendix lists the related protocol specifications (RFCs) for TCP/IP. The Internet Protocol suite is still evolving through requests for comments (RFC). New protocols are being designed and implemented by researchers and are brought to the attention of the Internet community in the form of RFCs. Some of these protocols are so useful that they become recommended protocols. That is, all future implementations for TCP/IP are recommended to implement these particular functions or protocols. These become the de facto standards, on which the TCP/IP protocol suite is built.

You can request RFCs through electronic mail, from the automated Network Information Center (NIC) mail server, by sending a message to service@nic.ddn.mil with a subject line of RFC nnnn for text versions or a subject line of RFC nnnn.PS for PostScript versions. To request a copy of the RFC index, send a message with a subject line of RFC INDEX.

For more information, contact nic@nic.ddn.mil or at:

Government Systems, Inc.
Attn: Network Information Center
14200 Park Meadow Drive
Suite 200
Chantilly, VA 22021

Hard copies of all RFCs are available from the NIC, either individually or by subscription. Online copies are available at the following Web address:

See "Internet drafts" on page 664 for draft RFCs implemented in this and previous Communications Server releases.

Many features of TCP/IP Services are based on the following RFCs:

Internet drafts

Internet drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Other groups may also distribute working documents as Internet drafts. You can see Internet drafts at [http://www.ietf.org/ID.html](http://www.ietf.org/ID.html).

Several areas of IPv6 implementation include elements of the following Internet drafts and are subject to change during the RFC review process.
Appendix D. Accessibility

Accessibility features help a user who has a physical disability, such as restricted mobility or limited vision, to use software products successfully. The major accessibility features in z/OS enable users to:

- Use assistive technologies such as screen readers and screen magnifier software
- Operate specific or equivalent features using only the keyboard
- Customize display attributes such as color, contrast, and font size

**Using assistive technologies**

Assistive technology products, such as screen readers, function with the user interfaces found in z/OS. Consult the assistive technology documentation for specific information when using such products to access z/OS interfaces.

**Keyboard navigation of the user interface**

Users can access z/OS user interfaces using TSO/E or ISPF. Refer to z/OS TSO/E Primer, z/OS TSO/E User’s Guide, and z/OS ISPF User’s Guide Vol I for information about accessing TSO/E and ISPF interfaces. These guides describe how to use TSO/E and ISPF, including the use of keyboard shortcuts or function keys (PF keys). Each guide includes the default settings for the PF keys and explains how to modify their functions.

**z/OS information**

z/OS information is accessible using screen readers with the BookServer/Library Server versions of z/OS books in the Internet library at [www.ibm.com/systems/z/os/zos/bkserv/](http://www.ibm.com/systems/z/os/zos/bkserv/)
Notices

IBM may not offer all of the products, services, or features discussed in this document. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user’s responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to:

Such information may be available, subject to appropriate terms and conditions, including in some cases, payment of a fee.

The licensed program described in this information and all licensed material available for it are provided by IBM under terms of the IBM Customer Agreement, IBM International Program License Agreement, or any equivalent agreement between us.

Any performance data contained herein was determined in a controlled environment. Therefore, the results obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems and there is no guarantee that these measurements will be the same on generally available systems. Furthermore, some measurement may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

All statements regarding IBM’s future direction or intent are subject to change or withdrawal without notice, and represent goals and objectives only.

All IBM prices shown are IBM’s suggested retail prices, are current and are subject to change without notice. Dealer prices may vary.

This information is for planning purposes only. The information herein is subject to change before the products described become available.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

COPYRIGHT LICENSE:

This information contains sample application programs in source language, which illustrates programming techniques on various operating platforms. You may copy, modify, and distribute these sample programs in any form without payment to IBM, for the purposes of developing, using, marketing or distributing application
programs conforming to the application programming interface for the operating platform for which the sample programs are written. These examples have not been thoroughly tested under all conditions. IBM, therefore, cannot guarantee or imply reliability, serviceability, or function of these programs. You may copy, modify, and distribute these sample programs in any form without payment to IBM for the purposes of developing, using, marketing, or distributing application programs conforming to IBM’s application programming interfaces.

Each copy or any portion of these sample programs or any derivative work must include a copyright notice as follows:

Copyright © 1995-1998 Eric Young (eay@cryptsoft.com) All rights reserved.

This package is an SSL implementation written by Eric Young (eay@cryptsoft.com).
The implementation was written so as to conform with Netscape’s SSL.

This library is free for commercial and non-commercial use as long as the
following conditions are adhered to. The following conditions apply to all code
found in this distribution, be it the RC4, RSA, lhash, DES, etc., code; not just the
SSL code. The SSL documentation included with this distribution is covered by the
same copyright terms except that the holder is Tim Hudson (tjh@cryptsoft.com).

Copyright remains Eric Young’s, and as such any Copyright notices in the code are
not to be removed. If this package is used in a product, Eric Young should be
given attribution as the author of the parts of the library used. This can be in the form of a textual message at program startup or in documentation (online or textual) provided with the package.

Redistribution and use in source and binary forms, with or without modification, are permitted provided that the following conditions are met:

1. Redistributions of source code must retain the copyright notice, this list of conditions and the following disclaimer.

2. Redistributions in binary form must reproduce the above copyright notice, this list of conditions and the following disclaimer in the documentation and/or other materials provided with the distribution.

3. All advertising materials mentioning features or use of this software must display the following acknowledgement: "This product includes cryptographic software written by Eric Young (eay@cryptsoft.com)". The word 'cryptographic' can be left out if the routines from the library being used are not cryptographic related.

4. If you include any Windows specific code (or a derivative thereof) from the apps directory (application code) you must include acknowledgement:
   "This product includes software written by Tim Hudson (tjh@cryptsoft.com)"

THIS SOFTWARE IS PROVIDED BY ERIC YOUNG "AS IS" AND ANY EXPRESS OR IMPLIED WARRANTIES, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE DISCLAIMED. IN NO EVENT SHALL THE AUTHOR OR CONTRIBUTORS BE LIABLE FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING, BUT NOT LIMITED TO, PROCUREMENT OF SUBSTITUTE GOODS OR SERVICES; LOSS OF USE, DATA, OR PROFITS; OR BUSINESS INTERRUPTION) HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OF THIS SOFTWARE, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGE.

The license and distribution terms for any publicly available version or derivative of this code cannot be changed. i.e. this code cannot simply be copied and put under another distribution license [including the GNU Public License.]

This product includes cryptographic software written by Eric Young.

Permission to use, copy, modify, and distribute this software for any purpose with or without fee is hereby granted, provided that the above copyright notice and this permission notice appear in all copies.

THE SOFTWARE IS PROVIDED "AS IS" AND INTERNET SOFTWARE CONSORTIUM DISCLAIMS ALL WARRANTIES WITH REGARD TO THIS SOFTWARE INCLUDING ALL IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS. IN NO EVENT SHALL INTERNET SOFTWARE CONSORTIUM BE LIABLE FOR ANY SPECIAL, DIRECT, INDIRECT, OR CONSEQUENTIAL DAMAGES OR ANY DAMAGES WHATSOEVER RESULTING FROM LOSS OF USE, DATA OR PROFITS, WHETHER IN AN ACTION OF CONTRACT, NEGLIGENCE OR OTHER TORTIOUS ACTION, ARISING OUT OF OR IN CONNECTION WITH THE USE OR PERFORMANCE OF THIS SOFTWARE.
Policy for unsupported hardware

Various z/OS elements, such as DFSMS, HCD, JES2, JES3, and MVS, contain code that supports specific hardware servers or devices. In some cases, this device-related element support remains in the product even after the hardware devices pass their announced End of Service date. z/OS may continue to service element code; however, it will not provide service related to unsupported hardware devices. Software problems related to these devices will not be accepted for service, and current service activity will cease if a problem is determined to be associated with out-of-support devices. In such cases, fixes will not be issued.

Trademarks

IBM, the IBM logo, and ibm.com are trademarks or registered trademarks of International Business Machines Corp., registered in many jurisdictions worldwide. Other product and service names might be trademarks of IBM or other companies. A current list of IBM trademarks is available on the Web at Copyright and trademark information at www.ibm.com/legal/copytrade.shtml.

The following terms are trademarks of other companies:

Intel is a registered trademark of Intel Corporation or its subsidiaries in the United States and other countries.

Java and all Java-based trademarks and logos are trademarks of Sun Microsystems, Inc. in the United States, other countries, or both.

Linux is a registered trademark of Linus Torvalds in the United States, other countries, or both.

Microsoft and Windows are trademarks of Microsoft Corporation in the United States, other countries, or both.

PostScript is a registered trademark of Adobe Systems Incorporated in the United States, and/or other countries.

UNIX is a registered trademark of The Open Group in the United States and other countries.

Other company, product, or service names may be trademarks or service marks of others.
Bibliography

This bibliography contains descriptions of the documents in the z/OS Communications Server library.

z/OS Communications Server documentation is available in the following forms:
- In softcopy on CD-ROM collections. See “Softcopy information” on page viii.

z/OS Communications Server library updates

z/OS Communications Server information

z/OS Communications Server product information is grouped by task in the following tables.

### Planning

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: New Function Summary</td>
<td>GC31-8771</td>
<td>This document is intended to help you plan for new IP for SNA function, whether you are migrating from a previous version or installing z/OS for the first time. It summarizes what is new in the release and identifies the suggested and required modifications needed to use the enhanced functions.</td>
</tr>
<tr>
<td>z/OS Communications Server: IPv6 Network and Application Design Guide</td>
<td>SC31-8885</td>
<td>This document is a high-level introduction to IPv6. It describes concepts of z/OS Communications Server's support of IPv6, coexistence with IPv4, and migration issues.</td>
</tr>
</tbody>
</table>

### Resource definition, configuration, and tuning

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: IP Configuration Guide</td>
<td>SC31-8775</td>
<td>This document describes the major concepts involved in understanding and configuring an IP network. Familiarity with the z/OS operating system, IP protocols, z/OS UNIX System Services, and IBM Time Sharing Option (TSO) is recommended. Use this document in conjunction with the z/OS Communications Server: IP Configuration Reference.</td>
</tr>
</tbody>
</table>
### Configuration Reference

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
</table>
| z/OS Communications Server: IP Configuration Reference | SC31-8776 | This document presents information for people who want to administer and maintain IP. Use this document in conjunction with the z/OS Communications Server: IP Configuration Guide. The information in this document includes:  
  - TCP/IP configuration data sets  
  - Configuration statements  
  - Translation tables  
  - SMF records  
  - Protocol number and port assignments |

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: SNA Network Implementation Guide</td>
<td>SC31-8777</td>
<td>This document presents the major concepts involved in implementing an SNA network. Use this document in conjunction with the z/OS Communications Server: SNA Resource Definition Reference.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: SNA Resource Definition Reference</td>
<td>SC31-8778</td>
<td>This document describes each SNA definition statement, start option, and macroinstruction for user tables. It also describes NCP definition statements that affect SNA. Use this document in conjunction with the z/OS Communications Server: SNA Network Implementation Guide.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: SNA Resource Definition Samples</td>
<td>SC31-8836</td>
<td>This document contains sample definitions to help you implement SNA functions in your networks, and includes sample major node definitions.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: IP Network Print Facility</td>
<td>SC31-8833</td>
<td>This document is for system programmers and network administrators who need to prepare their network to route SNA, JES2, or JES3 printer output to remote printers using TCP/IP Services.</td>
</tr>
</tbody>
</table>

### Operation

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: IP User’s Guide and Commands</td>
<td>SC31-8780</td>
<td>This document describes how to use TCP/IP applications. It contains requests that allow a user to log on to a remote host using Telnet, transfer data sets using FTP, send and receive electronic mail, print on remote printers, and authenticate network users.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: IP System Administrator’s Commands</td>
<td>SC31-8781</td>
<td>This document describes the functions and commands helpful in configuring or monitoring your system. It contains system administrator’s commands, such as TSO NETSTAT, PING, TRACERTE and their UNIX counterparts. It also includes TSO and MVS commands commonly used during the IP configuration process.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: SNA Operation</td>
<td>SC31-8779</td>
<td>This document serves as a reference for programmers and operators requiring detailed information about specific operator commands.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: Quick Reference</td>
<td>SX75-0124</td>
<td>This document contains essential information about SNA and IP commands.</td>
</tr>
</tbody>
</table>
## Customization

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
</table>
| z/OS Communications Server: SNA Customization | SC31-6854 | This document enables you to customize SNA, and includes the following:  
- Communication network management (CNM) routing table  
- Logon-interpret routine requirements  
- Logon manager installation-wide exit routine for the CLU search exit  
- TSO/SNA installation-wide exit routines  
- SNA installation-wide exit routines |

## Writing application programs

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference</td>
<td>SC31-8788</td>
<td>This document describes the syntax and semantics of program source code necessary to write your own application programming interface (API) into TCP/IP. You can use this interface as the communication base for writing your own client or server application. You can also use this document to adapt your existing applications to communicate with each other using sockets over TCP/IP.</td>
</tr>
<tr>
<td>z/OS Communications Server: IP CICS Sockets Guide</td>
<td>SC31-8807</td>
<td>This document is for programmers who want to set up, write application programs for, and diagnose problems with the socket interface for CICS using z/OS TCP/IP.</td>
</tr>
<tr>
<td>z/OS Communications Server: IP IMS Sockets Guide</td>
<td>SC31-8830</td>
<td>This document is for programmers who want application programs that use the IMS TCP/IP application development services provided by IBM's TCP/IP Services.</td>
</tr>
<tr>
<td>z/OS Communications Server: IP Programmer's Guide and Reference</td>
<td>SC31-8787</td>
<td>This document describes the syntax and semantics of a set of high-level application functions that you can use to program your own applications in a TCP/IP environment. These functions provide support for application facilities, such as user authentication, distributed databases, distributed processing, network management, and device sharing. Familiarity with the z/OS operating system, TCP/IP protocols, and IBM Time Sharing Option (TSO) is recommended.</td>
</tr>
<tr>
<td>z/OS Communications Server: SNA Programming</td>
<td>SC31-8829</td>
<td>This document describes how to use SNA macroinstructions to send data to and receive data from (1) a terminal in either the same or a different domain, or (2) another application program in either the same or a different domain.</td>
</tr>
<tr>
<td>z/OS Communications Server: SNA Programmer's LU 6.2 Guide</td>
<td>SC31-8811</td>
<td>This document describes how to use the SNA LU 6.2 application programming interface for host application programs. This document applies to programs that use only LU 6.2 sessions or that use LU 6.2 sessions along with other session types. (Only LU 6.2 sessions are covered in this document.)</td>
</tr>
<tr>
<td>z/OS Communications Server: SNA Programmer's LU 6.2 Reference</td>
<td>SC31-8810</td>
<td>This document provides reference material for the SNA LU 6.2 programming interface for host application programs.</td>
</tr>
<tr>
<td>z/OS Communications Server: CSM Guide</td>
<td>SC31-8808</td>
<td>This document describes how applications use the communications storage manager.</td>
</tr>
</tbody>
</table>
### Title Number Description

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: CMIP Services and Topology Agent Guide</td>
<td>SC31-8828</td>
</tr>
</tbody>
</table>

This document describes the Common Management Information Protocol (CMIP) programming interface for application programmers to use in coding CMIP application programs. The document provides guide and reference information about CMIP services and the SNA topology agent.

### Diagnosis

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: IP Diagnosis Guide</td>
<td>GC31-8782</td>
</tr>
</tbody>
</table>

This document explains how to diagnose TCP/IP problems and how to determine whether a specific problem is in the TCP/IP product code. It explains how to gather information for and describe problems to the IBM Software Support Center.

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: ACF/TAP Trace Analysis Handbook</td>
<td>GC23-8588</td>
</tr>
</tbody>
</table>

This document explains how to gather the trace data that is collected and stored in the host processor. It also explains how to use the Advanced Communications Function/Trace Analysis Program (ACF/TAP) service aid to produce reports for analyzing the trace data information.

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: SNA Diagnosis Vol 1, Techniques and Procedures and z/OS Communications Server: SNA Diagnosis Vol 2, FFST Dumps and the VIT</td>
<td>GC31-6850, GC31-6851</td>
</tr>
</tbody>
</table>

These documents help you identify an SNA problem, classify it, and collect information about it before you call the IBM Support Center. The information collected includes traces, dumps, and other problem documentation.

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: SNA Data Areas Volume 1 and SNA Data Areas Volume 2</td>
<td>GC31-6852, GC31-6853</td>
</tr>
</tbody>
</table>

These documents describe SNA data areas and can be used to read an SNA dump. They are intended for IBM programming service representatives and customer personnel who are diagnosing problems with SNA.

### Messages and codes

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: SNA Messages</td>
<td>SC31-8790</td>
</tr>
</tbody>
</table>

This document describes the ELM, IKT, IST, IUT, IVT, and USS messages. Other information in this document includes:

- Command and RU types in SNA messages
- Node and ID types in SNA messages
- Supplemental message-related information

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: IP Messages Volume 1 (EZA)</td>
<td>SC31-8783</td>
</tr>
</tbody>
</table>

This volume contains TCP/IP messages beginning with EZA.

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: IP Messages Volume 2 (EZB, EZD)</td>
<td>SC31-8784</td>
</tr>
</tbody>
</table>

This volume contains TCP/IP messages beginning with EZB or EZD.

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: IP Messages Volume 3 (EZY)</td>
<td>SC31-8785</td>
</tr>
</tbody>
</table>

This volume contains TCP/IP messages beginning with EZY.

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: IP Messages Volume 4 (EZZ, SNM)</td>
<td>SC31-8786</td>
</tr>
</tbody>
</table>

This volume contains TCP/IP messages beginning with EZZ and SNM.

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS Communications Server: IP and SNA Codes</td>
<td>SC31-8791</td>
</tr>
</tbody>
</table>

This document describes codes and other information that appear in z/OS Communications Server messages.
Communicating Your Comments to IBM

If you especially like or dislike anything about this document, please use one of the methods listed below to send your comments to IBM. Whichever method you choose, make sure you send your name, address, and telephone number if you would like a reply.

Feel free to comment on specific errors or omissions, accuracy, organization, subject matter, or completeness of this document. However, the comments you send should pertain to only the information in this manual and the way in which the information is presented. To request additional publications, or to ask questions or make comments about the functions of IBM products or systems, you should talk to your IBM representative or to your IBM authorized remarketer.

When you send comments to IBM, you grant IBM a nonexclusive right to use or distribute your comments in any way it believes appropriate without incurring any obligation to you.

Please send your comments to us in either of the following ways:

• If you prefer to send comments by FAX, use this number: 1+919-254-1258
• If you prefer to send comments electronically, use this address:
  – comsvrcf@us.ibm.com
• If you prefer to send comments by post, use this address:
  
  International Business Machines Corporation
  Attn: z/OS Communications Server Information Development
  P.O. Box 12195, 3039 Cornwallis Road
  Department AKCA, Building 501
  Research Triangle Park, North Carolina 27709-2195

Make sure to include the following in your note:

• Title and publication number of this document
• Page number or topic to which your comment applies.
