About this document

This document describes the Internet Protocol (IP) messages that occur in z/OS® Communications Server. The information in this document supports both IPv6 and IPv4. Unless explicitly noted, information describes IPv4 networking protocol. IPv6 support is qualified within the text.

For information about how to set up, initialize, and customize your Transmission Control Protocol/Internet Protocol (TCP/IP) services system, see the z/OS Communications Server: IP Configuration Reference and the z/OS Communications Server: IP Configuration Guide and the z/OS Communications Server: IP Programmer’s Guide and Reference. For information about how to use the applications on your TCP/IP system, see z/OS Communications Server: IP User’s Guide and Commands.

This document refers to Communications Server data sets by their default SMP/E distribution library name. Your installation might, however, have different names for these data sets where allowed by SMP/E, your installation personnel, or administration staff. For instance, this document refers to samples in SEZAINST library as simply in SEZAINST. Your installation might choose a data set name of SYS1.SEZAINST, CS390.SEZAINST or other high level qualifiers for the data set name.

Who should read this document

This document assists TCP/IP operators, system programmers, and users to:

- Analyze a problem
- Classify the problem as a specific type
- Describe the problem to the IBM® Software Support Center

Familiarity with TCP/IP concepts and terms is assumed.

How this document is organized

The messages are listed in alphanumerical order by message ID. For each message ID, the books contain the text and a description of the message. This book contains the following chapters:

- Chapter 1, “EZA0xxxx messages,” on page 1 contains messages in the EZA0xxxx range.
- Chapter 2, “EZA1xxxx messages,” on page 23 contains messages in the EZA1xxxx range.
- Chapter 3, “EZA2xxxx messages,” on page 53 contains messages in the EZA2xxxx range.
- Chapter 4, “EZA3xxxx messages,” on page 173 contains messages in the EZA3xxxx range.
- Chapter 5, “EZA4xxxx messages,” on page 195 contains messages in the EZA4xxxx range.
- Chapter 6, “EZA5xxxx messages,” on page 273 contains messages in the EZA5xxxx range.
- Chapter 7, “EZA6xxxx messages,” on page 421 contains messages in the EZA6xxxx range.
Chapter 8, “EZA8xxxx messages,” on page 519 contains messages in the EZA8xxxx range.

Chapter 9, “EZA9xxxx messages,” on page 599 contains messages in the EZA9xxxx range.

Chapter 10, “EZAINxx messages,” on page 647 contains messages in the EZAINxx range.

Chapter 11, “EZAOPxx messages,” on page 649 contains messages in the EZAOPxx range.

Appendix A, “Additional information about remote procedure call (RPC) messages,” on page 653 contains information about remote procedure call messages.

"Related protocol specifications (RFCs)” lists the related protocol specifications for TCP/IP.

"Accessibility” describes accessibility features to help users with physical disabilities.

"Notices” contains notices and trademarks used in this document.

"Bibliography” contains descriptions of the documents in the z/OS Communications Server library.

How to use this document

To use this document, you should be familiar with z/OS TCP/IP Services and the TCP/IP suite of protocols.

Determining whether a publication is current

As needed, IBM updates its publications with new and changed information. For a given publication, updates to the hardcopy and associated BookManager® softcopy are usually available at the same time. Sometimes, however, the updates to hardcopy and softcopy are available at different times. The following information describes how to determine if you are looking at the most current copy of a publication:

• At the end of a publication’s order number there is a dash followed by two digits, often referred to as the dash level. A publication with a higher dash level is more current than one with a lower dash level. For example, in the publication order number GC28-1747-07, the dash level 07 means that the publication is more current than previous levels, such as 05 or 04.

• If a hardcopy publication and a softcopy publication have the same dash level, it is possible that the softcopy publication is more current than the hardcopy publication. Check the dates shown in the Summary of Changes. The softcopy publication might have a more recently dated Summary of Changes than the hardcopy publication.

• To compare softcopy publications, you can check the last two characters of the publication’s file name (also called the book name). The higher the number, the more recent the publication. Also, next to the publication titles in the CD-ROM booklet and the readme files, there is an asterisk (*) that indicates whether a publication is new or changed.

How to contact IBM service

For immediate assistance, visit this website: http://www.software.ibm.com/network/commsserver/support/
Most problems can be resolved at this website, where you can submit questions and problem reports electronically, as well as access a variety of diagnosis information.

For telephone assistance in problem diagnosis and resolution (in the United States or Puerto Rico), call the IBM Software Support Center anytime (1-800-IBM-SERV). You will receive a return call within 8 business hours (Monday – Friday, 8:00 a.m. – 5:00 p.m., local customer time).

Outside the United States or Puerto Rico, contact your local IBM representative or your authorized IBM supplier.

If you would like to provide feedback on this publication, see “Communicating your comments to IBM” on page 689.

Conventions and terminology that are used in this document

Commands in this book that can be used in both TSO and z/OS UNIX environments use the following conventions:
• When describing how to use the command in a TSO environment, the command is presented in uppercase (for example, NETSTAT).
• When describing how to use the command in a z/OS UNIX environment, the command is presented in bold lowercase (for example, netstat).
• When referring to the command in a general way in text, the command is presented with an initial capital letter (for example, Netstat).

All the exit routines described in this document are installation-wide exit routines. The installation-wide exit routines also called installation-wide exits, exit routines, and exits throughout this document.

The TPF logon manager, although included with VTAM®, is an application program; therefore, the logon manager is documented separately from VTAM.

Samples used in this book might not be updated for each release. Evaluate a sample carefully before applying it to your system.

For definitions of the terms and abbreviations that are used in this document, you can view the latest IBM terminology at the IBM Terminology website.

Clarification of notes

Information traditionally qualified as Notes is further qualified as follows:
Note Supplemental detail
Tip Offers shortcuts or alternative ways of performing an action; a hint
Guideline Customary way to perform a procedure
Rule Something you must do; limitations on your actions
Restriction Indicates certain conditions are not supported; limitations on a product or facility
Requirement Dependencies, prerequisites
Result Indicates the outcome

Prerequisite and related information

z/OS Communications Server function is described in the z/OS Communications Server library. Descriptions of those documents are listed in “Bibliography” on page 685, in the back of this document.

Required information

Before using this product, you should be familiar with TCP/IP, VTAM, MVS™, and UNIX System Services.

Softcopy information

Softcopy publications are available in the following collections.

<table>
<thead>
<tr>
<th>Titles</th>
<th>Order Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>z/OS V1R13 and Software Products DVD Collection</td>
<td>SK3T-4271</td>
<td>This collection includes the libraries of z/OS (the element and feature libraries) and the libraries for z/OS software products in both BookManager format and PDF files. This collection combines SK3T-4269 and SK3T-4270.</td>
</tr>
<tr>
<td>IBM System z® Redbooks Collection</td>
<td>SK3T-7876</td>
<td>The Redbooks® selected for this CD series are taken from the IBM Redbooks inventory of over 800 books. All the Redbooks that are of interest to the zSeries® platform professional are identified by their authors and are included in this collection. The zSeries subject areas range from e-business application development and enablement to hardware, networking, Linux, solutions, security, parallel sysplex, and many others.</td>
</tr>
</tbody>
</table>

Other documents

For information about z/OS products, refer to (SA22-7500). The Roadmap describes what level of documents are supplied with each release of z/OS Communications Server, as well as describing each z/OS publication.

Relevant RFCs are listed in an appendix of the IP documents. Architectural specifications for the SNA protocol are listed in an appendix of the SNA documents.

The following table lists documents that might be helpful to readers.

The z/OS Basic Skills Information Center

The z/OS Basic Skills Information Center is a web-based information resource intended to help users learn the basic concepts of z/OS, the operating system that runs most of the IBM mainframe computers in use today. The Information Center is designed to introduce a new generation of Information Technology professionals to basic concepts and help them prepare for a career as a z/OS professional, such as a z/OS system programmer.

Specifically, the z/OS Basic Skills Information Center is intended to achieve the following objectives:
- Provide basic education and information about z/OS without charge
- Shorten the time it takes for people to become productive on the mainframe
- Make it easier for new people to learn z/OS

To access the z/OS Basic Skills Information Center, open your web browser to the following website, which is available to all users (no login required):
http://publib.boulder.ibm.com/infocenter/zoslnctr/v1r7/index.jsp

Using LookAt to look up message explanations

LookAt is an online facility that lets you look up explanations for most of the IBM messages you encounter, as well as for some system abends and codes. Using LookAt to find information is faster than a conventional search because in most cases LookAt goes directly to the message explanation.

You can use LookAt from these locations to find IBM message explanations for z/OS elements and features, z/VM®, z/VSE®, and Clusters for AIX® and Linux:
- The Internet. You can access IBM message explanations directly from the LookAt website at
  www.ibm.com/systems/z/os/zos/bkserv/lookat/
• Your z/OS TSO/E host system. You can install code on your z/OS systems to access IBM message explanations using LookAt from a TSO/E command line (for example: TSO/E prompt, ISPF, or z/OS UNIX System Services).

• Your Microsoft Windows workstation. You can install LookAt directly from the (SK3T-4269) or the z/OS and Software Products DVD Collection (SK3T-4271) and use it from the resulting Windows graphical user interface (GUI). The command prompt (also known as the DOS > command line) version can still be used from the directory in which you install the Windows version of LookAt.

• Your wireless handheld device. You can use the LookAt Mobile Edition from www.ibm.com/systems/z/os/zos/bkserv/lookat/lookatm.html with a handheld device that has wireless access and an Internet browser.

You can obtain code to install LookAt on your host system or Microsoft Windows workstation from:
• A CD in the (SK3T-4269).
• The z/OS and Software Products DVD Collection (SK3T-4271).
• The LookAt website (click Download and then select the platform, release, collection, and location that suit your needs). More information is available in the LOOKAT.ME files available during the download process.
Summary of changes

This document contains terminology, maintenance, and editorial changes, including changes to improve consistency and retrievability. Technical changes or additions to the text and illustrations are indicated by a vertical line to the left of the change.

Changes made in z/OS Communications Server Version 1 Release 13, as updated April 2012

This document contains information previously presented in z/OS Communications Server: IP Messages Volume 1 (EZA), SC31-8783-13, which supports z/OS Version 1 Release 13.

New information:
• EZA6409I
• EZA6410I

Changes made in z/OS Communications Server Version 1 Release 13

This document contains information previously presented in z/OS Communications Server: IP Messages Volume 1 (EZA), SC31-8783-11 and SC31-8783-12, which support z/OS Version 1 Release 12.

New information:
• EZA5208E
• EZAOP60I

Changed information:
• EZA5544E
• EZAOP47I

Changes made in z/OS Communications Server Version 1 Release 12, as updated April 2011

This document contains information previously presented in z/OS Communications Server: IP Messages Volume 1 (EZA), SC31-8783-11, which supports z/OS Version 1 Release 12.

Changed information:
• EZA2536I
• EZA5128I
• EZA5213I
• EZA5214I
• EZA5215I
• EZA5527I
Changes made in z/OS Communications Server Version 1 Release 12

This document contains information previously presented in z/OS Communications Server: IP Messages Volume 1 (EZA), SC31-8783-10, which supports z/OS Version 1 Release 11.

New information:
• EZA5132I

Chapter 1. EZAOxxxx messages

EZA0519E Unable to read dataset dataset, rc=rc

Explanation:  TCPIP could not read the data set. The data set name is indicated along with a return code reason. There might be an earlier message that explains the error.

rc should be one of the following return codes. If rc is not one of the following return codes, then an unexpected return code was encountered.

1 Data set is empty
8 System error trying to obtain format 1 DSCB
12 Data set is migrated
16 Volume is not mounted
20 Volume is not direct access
24 Data set is VSAM
28 Invalid data set organization (DSORG) or record format (RECFM)

System action:  MAKESITE halts. TCPIP continues.

Operator response:  Check that correct access to the indicated data set is available before continuing. If rc is an unexpected return code, contact the System Programmer.

System programmer response:  If rc is an unexpected return code, contact the IBM Support Center with the message.

Module:  CMMAKSI
Procedure Name:  StartUp

EZA0521W Warning: line number truncated to number characters

Explanation:  A line has been truncated because it is longer than the MaxLine constant. The MaxLine constant is the maximum number of characters that can be specified on a single entry line. Comments are ignored when determining the length of a line.

System action:  TCPIP continues.

Operator response:  If this truncation condition is unacceptable, correct the error before continuing. All entries to the HOSTS.LOCAL data set should be specified on a single line of up to a maximum of 512 characters per line. See z/OS Communications Server: IP Configuration Reference for more information.

System programmer response:  No action is needed.

Module:  CMMAKSI
Procedure Name:  GetLine

EZA0522E Line line: bad address syntax

Explanation:  An incorrect IP address was found in the input data set. The program procedure found a value different from the required IP address in dotted decimal notation.

System action:  TCPIP continues.

Operator response:  Correct the error identified on the indicated line and continue.

System programmer response:  No action is needed.

Module:  CMMAKSI
Procedure Name:  GetAddress
**EZA0523E • EZA0527W**

---

**EZA0523E**  
**Line number: only number fields**

**Explanation:** The indicated number of field terminators was less than the required minimum of three for the indicated line number in the input data set.

**System action:** TCPIP continues.

**Operator response:** Correct the error identified on the indicated line and continue.

**System programmer response:** No action is needed.

**Module:** CMMAKSI

**Procedure Name:** ParseLine

---

**EZA0524E**  
**Line number: no type specified**

**Explanation:** The indicated line number in the input data set had a null type field.

**System action:** TCPIP continues.

**Operator response:** Correct the error identified on the indicated line and continue.

**System programmer response:** No action is needed.

**Module:** CMMAKSI

**Procedure Name:** ParseLine

---

**EZA0525E**  
**Line number: unknown type type**

**Explanation:** The indicated line number in the input data set was not null and did not contain HOST, GATEWAY, or NET in the type field.

**System action:** TCPIP continues.

**Operator response:** Correct the error identified on the indicated line and continue.

**System programmer response:** No action is needed.

**Module:** CMMAKSI

**Procedure Name:** ParseLine

---

**EZA0526E**  
**Line number: no address specified**

**Explanation:** The indicated line number in the input data set did not contain a valid address.

**System action:** TCPIP continues.

**Operator response:** Correct the error identified on the indicated line and continue.

**System programmer response:** No action is needed.

**Module:** CMMAKSI

**Procedure Name:** ParseLine

---

**EZA0527W**  
**Warning: line number has too many addresses; only the first address will be stored.**

**Explanation:** The data set contained more addresses than the number allowed by the indicated MAXsiteADDRESSES variable.

**System action:** TCPIP continues.

**Operator response:** Correct the error identified in the indicated line of the HOSTS.LOCAL data set and continue. See z/OS Communications Server: IP Configuration Reference for more information.

**System programmer response:** No action is needed.

**Module:** CMMAKSI

---
Procedure Name: ParseLine

EZA0528E Line number: no name field
Explanation: The indicated line number in the input data set did not contain a name field.
System action: TCPIP continues.
Operator response: Correct the error identified on the indicated line and continue.
System programmer response: No action is needed.
Module: CMMAKSI
Procedure Name: ParseLine

EZA0529W Warning: line number has too many names; only the first name will be stored.
Explanation: The indicated line number in the input data set contained more names than the number allowed by the indicated hbound(names) variable.
System action: TCPIP continues.
Operator response: Correct the error identified in the indicated line and continue.
System programmer response: No action is needed.
Module: CMMAKSI
Procedure Name: ParseLine

EZA0530E Line number: hash table overflow
Explanation: Data contained in the indicated line number of the input data set caused a hash table overflow because the SiteTableSize variable was exceeded. The size of the table entries is specified in the userid.HOSTS.LOCAL or the HOSTS.LOCAL data set. This message is followed by another message indicating that this is an irrecoverable error condition.
System action: TCPIP continues.
Operator response: Correct the error identified on the indicated line of the HOSTS.LOCAL data set and continue. The maximum length for a host entry allowed in the HOST tables is 24 characters. However, the name server does not have maximum character length. If the error persists, contact the IBM Software Support Center.
System programmer response: No action is needed.
Module: CMMAKSI
Procedure Name: LookUp

EZA0531I H value, Tries number, Pos address, address, K value

EZA0532I Index@address, address, K address
Explanation: These messages provide additional information values after a table overflow has occurred. These messages are written to an output file and are displayed with EZA0530E.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: See EZA0530E for more information.
Module: CMMAKSI
Procedure Name: LookUp
EZA0533S  **** Fatal error: MakeSite aborted

Explanation: This message follows EZA0530E which explains the specific cause of the error.

System action: MAKESITE halts. TCPIP continues.

Operator response: Correct the error identified in the indicated line and continue. The maximum length for a host allowed in the HOST tables is 24 characters. However, the name server does not have maximum character length. If the error persists, contact the IBM Software Support Center.

System programmer response: No action is needed.

Module: CMMAKSI

Procedure Name: LookUp

EZA0534W  Warning: name1 agrees with name2 in the first CMSword_limit characters

Explanation: This message indicates a possible PseudoDuplicate name condition. This message is issued only if the WarnMe flag has been set to true with the WARN option. PseudoDuplicate indicates that the first displayed number of characters of the first host name are the same as the first number of characters of the second host name.

System action: TCPIP continues.

Operator response: If this condition is unacceptable, correct the error in the HOSTS.LOCAL data set before continuing.

System programmer response: No action is needed.

Module: CMMAKSI

Procedure Name: LookUp

EZA0535E  Address hash table overflow on host

Explanation: The procedure MergeNames, which takes host names from the old HOST data set and adds them to the new HOST data set, was not successful because the AddrTableSize variable was exceeded for the host address hash table. This message is displayed with EZA0538W.

System action: TCPIP continues.

Operator response: Correct the error identified on the indicated line and continue. The maximum length for a host allowed in the HOST tables is 24 characters. If the error persists, contact the IBM Software Support Center.

System programmer response: No action is needed.

Module: CMMAKSI

Procedure Name: Insert

EZA0537W  Warning name lost: name

Explanation: The indicated host name was lost during the generation of the user_id.HOSTS.SITEINFO and the user_id.HOSTS.ADDRINFO data sets because the length of the host name was longer that the field specified. The maximum length for a host allowed in the HOST tables is 24 characters. This message is issued only if the WarnMe flag has been set to true with the WARN option.

System action: TCPIP continues.

Operator response: Reenter the host name in the HOSTNAME parameter of the HOSTS.LOCAL data set and restart the process. See z/OS Communications Server: IP Configuration Reference for more information.

System programmer response: No action is needed.

Module: CMMAKSI

Procedure Name: ProcessAdr
**EZA0538W**  Warning name lost: *name*

**Explanation:** The indicated name was lost during program processing. This message is issued only if the WarnMe flag has been set to true with the WARN option. This message is displayed with EZA0535.

**System action:**  TCPIP continues.

**Operator response:**  See message number EZA0535W for information.

**System programmer response:**  No action is needed.

**Module:**  CMMAKSI

**Procedure Name:**  MergeNames

---

**EZA0539I**  Merge A into B:

**Explanation:** The operation performed a merge between the new address of A and existing addresses of B to form a current index.

**System action:**  TCPIP continues.

**Operator response:**  No action is needed.

**System programmer response:**  No action is needed.

**Module:**  CMMAKSI

**Procedure Name:**  MainProg

---

**EZA0540I**  A =

**Explanation:** This message precedes the display of new addresses to be added to the current index.

**System action:**  TCPIP continues.

**Operator response:**  No action is needed.

**System programmer response:**  No action is needed.

**Module:**  CMMAKSI

**Procedure Name:**  MainProg

---

**EZA0542I**  B =

**Explanation:** This message displays the old addresses that are currently present in the index. The address information from A will be merged with the addresses of B to produce a current data set index.

**System action:**  TCPIP continues.

**Operator response:**  No action is needed.

**System programmer response:**  No action is needed.

**Module:**  CMMAKSI

**Procedure Name:**  MainProg

---

**EZA0543I**  Computing tables ...

**Explanation:** The site tables are now being executed for the MAKESITE program.

**System action:**  TCPIP continues.

**Operator response:**  No action is needed.

**System programmer response:**  No action is needed.

**Module:**  CMMAKSI

**Procedure Name:**  MainProg
EZA0544I  Merged current into Index \textit{index = name}.  
\textbf{Explanation:} This message gives the current Index number and the name of the index.  
\textbf{System action:} TCPIP continues.  
\textbf{Operator response:} No action is needed.  
\textbf{System programmer response:} No action is needed.  
\textbf{Module:} CMMAKSI  
\textbf{Procedure Name:} MainProg

EZA0545I  Line line: the name ‘\textit{names}’ is a duplicate.  
\textbf{Explanation:} This message displays the addresses contained in the site table that are duplicate entries. The line number indicates the destination of the duplicate name.  
\textbf{System action:} TCPIP continues.  
\textbf{Operator response:} To correct the problem, edit the HOST.LOCAL data set. Discard any duplicate names and reissue MAKESITE.  
\textbf{System programmer response:} No action is needed.  
\textbf{Module:} CMMAKSI  
\textbf{Procedure Name:} MainProg

EZA0546I  Merged Index \textit{index = name} into Current  
\textbf{Explanation:} The current index number and name are to be added to the current index.  
\textbf{System action:} TCPIP continues.  
\textbf{Operator response:} No action is needed.  
\textbf{System programmer response:} No action is needed.  
\textbf{Module:} CMMAKSI  
\textbf{Procedure Name:} MainProg

EZA0547I  Writing out \textit{datasetname}  
\textbf{Explanation:} The MAKESITE program is generating the data set name specified in the message text. For more information see \href{z/OS Communications Server: IP Configuration Reference}{z/OS Communications Server: IP Configuration Reference}.  
\textbf{System action:} TCPIP continues.  
\textbf{Operator response:} No action is needed.  
\textbf{System programmer response:} No action is needed.  
\textbf{Module:} CMMAKSI  
\textbf{Procedure Name:} MainProg

EZA0548I  Writing out \textit{datasetname}  
\textbf{Explanation:} The MAKESITE program is formatting information to the data set specified in the message text.  
\textbf{System action:} TCPIP continues.  
\textbf{Operator response:} No action is needed.  
\textbf{System programmer response:} No action is needed.  
\textbf{Module:} CMMAKSI  
\textbf{Procedure Name:} MainProg
**EZA0549I  % STATISTICS**

**Explanation:** This message is a header for the specific statistics to follow. This message will be followed by a series of messages indicating the HOSTS.LOCAL, HOSTS.SITEINFO, and HOSTS.ADDRINFO data sets.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMMASKI

**Procedure Name:** DumpStatistics

---

**EZA0550I  Dataset: datasetname**

**Explanation:** This message header is followed by statistics describing the data set specified in the message text.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMMASKI

**Procedure Name:** DumpStatistics

---

**EZA0551I  Total lines: lines**

**Explanation:** This message indicates the total number of lines in the HOSTS.LOCAL data set.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMMASKI

**Procedure Name:** DumpStatistics

---

**EZA0552W  Bad lines: (skipped) duplicates**

**Explanation:** This message shows the number of lines that are not added to the HOSTS.LOCAL data set, because these lines are either duplicates or not readable.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMMASKI

**Procedure Name:** DumpStatistics

---

**EZA0553I  Duplicate names: duplicates**

**Explanation:** This message indicates the number of address names conflicting with address names that exist in the data set.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMMASKI

**Procedure Name:** DumpStatistics
EZA0554I Conflicts in first 8 letters: duplicates

Explanation: If conflicts or duplicates occur in the first 8 letters, this message will be displayed.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMMASKI
Procedure Name: DumpStatistics

EZA0555I total networks, total gateways, total hosts

Explanation: This message shows how many networks, gateways, and hosts are defined in your HOSTS.LOCAL data set.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMMASKI
Procedure Name: DumpStatistics

EZA0556I Dataset: name

Explanation: This header message will be followed by other messages with specific details concerning the data set name specified in the message text.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMMASKI
Procedure Name: DumpStatistics

EZA0557I % Table Size: size.

EZA0558I % Total Entries: entries.

EZA0559I % Distinct Names: names.

EZA0560I Collisions: collisions.

EZA0561I Average probes/name: 1.0 + collisions/namesfound.

Explanation: These messages are displayed when the MAKESITE command is invoked. Each title states the HOSTS.SITEINFO data set required in your HOSTS.SITEINFO data set.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMMASKI
Procedure Name: DumpStatistics
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMMASKI
Procedure Name: DumpStatistics

**EZA0562I** Dataset: FullDataSetName

**EZA0563I** Table Size: AddrTableSize

**EZA0564I** Total entries: AddrInserts

**EZA0565I** Collisions: AddrCollisions

**EZA0566I** Names dropped: AddrNamesLost

Explanation: Message EZA0562I is followed by other messages with specific details concerning the data set name specified in the message text. Each message provides an indication of the setting for your HOSTS.ADDRINFO data set.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMMASKI
Procedure Name: DumpStatistics

**EZA0567I** MVS TCP/IP Makesite

Explanation: This message identifies the operating system and the application.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMMASKI
Procedure Name: DumpStatistics

**EZA0568W** Size of SITE table exceeds the capacity of MAKESITE.

**EZA0569W** Maximum size of SITE table: number

**EZA0570W** Computed SITE table size: size.

Explanation: The size of the HOSTS.SITEINFO must be within the range of the MAKESITE program. Each entry should be specified on a single line of no more than 512 characters. The sizes of the tables currently in the HOSTS.SITEINFO data sets are shown. For more information on the HOSTS.LOCAL data set, see the z/OS Communications Server: IP Configuration Guide.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMMASKI
Procedure Name: StartUp
EZA0571W  Size of Addr table exceeds the capacity of MAKESITE.

EZA0572W  Maximum size of ADDR table: number

EZA0573W  Computed ADDR table size: size

Explanation: The size of the HOSTS.ADDINFO must be within the range of the MAKESITE program. Each entry should be specified on a single line of no more than 512 characters. The sizes of the tables currently in the HOSTS.ADDINFO data sets are shown.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMMASKI

Procedure Name: StartUp

EZA0574E  MAKESITE Terminating Abnormally.

Explanation: Data contained in the SITE table or the ADDR table exceeded the capacity of the MAKESITE program and caused an error.

System action: MAKESITE halts.

Operator response: Edit the HOSTS.LOCAL data set. Once you have access, edit the data set line number and name correctly and within range of the MAKESITE program. For more information on MAKESITE see z/OS Communications Server: IP Configuration Reference.

System programmer response: No action is needed.

Module: CMMASKI

Procedure Name: DumpStatistics

EZA0575I  MakeSite Parameters passed - parameters.

Explanation: This message shows the parameters passed by the MAKESITE program. If the parameters are not correct, an error message will follow this message.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMMASKI

Procedure Name: StartUp

EZA0576E  MakeSite Parameter ERROR - error.

Explanation: The parameter you have selected was not recognized by the MAKESITE program.

error is the unrecognized parameter.

System action: TCPIP continues.

Operator response: MAKESITE does not allow continuation lines; entries should be made on a single line of no more than 512 characters. Reissue the command using a valid parameter. For more information on MAKESITE parameters see z/OS Communications Server: IP Configuration Reference.

System programmer response: No action is needed.

Module: CMMASKI

Procedure Name: ParmExtract
EZA0578E  Output data set file allocation ERROR: dataset

Explanation: The allocation of the HOSTS.SITEINFO data set failed. The following causes are typical causes of this failure:

- An existing data set cannot be opened for modification because another user has it allocated.
- A new data set cannot be allocated because there is not sufficient space on the volume.
- The user does not have the authority to create the data set.

System action: MAKESITE halts.

Operator response: Notify the system programmer to correct the error.

System programmer response: Ensure that another user does not have the HOSTS.SITEINFO data set open for modification and that there is space available on the volume to create or expand the HOSTS.SITEINFO data set. Also ensure that the user has sufficient authority to access or create the HOSTS.SITEINFO data set.

Module: CMMASKI

Procedure Name: StartUp

---

EZA0579E  Proceed Flag is OFF --HALT--.

Explanation: This message will display if the data set specified in message EZA0578E is incorrect. This causes the procedure to discontinue until the error is corrected.

System action: MAKESITE halts.

Operator response: Make sure the syntax of the data set is correctly specified and MAKESITE is able to read the HOSTS.LOCAL data set.

System programmer response: No action is needed.

Module: CMMASKI

Procedure Name: getstate

---

EZA0580I  Proceed Flag is ON -- Using default attributes.

Explanation: This message indicates the procedure has continued and default attributes are being initialized. For more information about MAKESITE, see _z/OS Communications Server: IP Configuration Reference_.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMMASKI

Procedure Name: StartUp

---

EZA0581I  testname

Explanation: Indicates the gateway, host, or net name for which a TESTSITE command was entered.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMTSITE

Procedure Name: PrintSite
**EZA0591I** Name:

**Explanation:** Prompts you to enter the gateway, host, or net name for which you need to enter the TESTSITE command.

**System action:** The TESTSITE program waits for your input. TCPIP continues.

**Operator response:** Enter the gateway, host, or net name to be verified.

**System programmer response:** No action is needed.

**Module:** CMTSITE

**Procedure Name:** DoIt

---

**EZA0592I** No host named host

**Explanation:** There are no HOST entries for the specified name in the HOSTS.ADDRINFO and user_id.v3r1.HOSTS.SITEINFO data sets.

**System action:** TCPIP continues and prompts the user for the next name.

**Operator response:** Correct the HOSTS.LOCAL data set and rebuild the HOSTS.ADDRINFO and user_id.v3r1.HOSTS.SITEINFO data sets with MAKESITE, as necessary.

**System programmer response:** No action is needed.

**Module:** CMTSITE

**Procedure Name:** DoIt

---

**EZA0593I** No gateway named gateway

**Explanation:** There are no GATEWAY entries for the specified name in the HOSTS.ADDRINFO and user_id.v3r1.HOSTS.SITEINFO data sets.

**System action:** TCPIP continues and prompts the user for the next name.

**Operator response:** Correct the HOSTS.LOCAL data set and rebuild the HOSTS.ADDRINFO and user_id.v3r1.HOSTS.SITEINFO data sets with MAKESITE, as necessary.

**System programmer response:** No action is needed.

**Module:** CMTSITE

**Procedure Name:** DoIt

---

**EZA0594I** No net named net

**Explanation:** There are no NET entries for the specified name in the HOSTS.ADDRINFO and user_id.HOSTS.SITEINFO data sets.

**System action:** TCPIP continues and prompts the user for the next name.

**Operator response:** Correct the HOSTS.LOCAL data set and rebuild the HOSTS.ADDRINFO and user_id.HOSTS.SITEINFO data sets with MAKESITE, as necessary.

**System programmer response:** No action is needed.

**Module:** CMTSITE

**Procedure Name:** DoIt

---

**EZA0595I** MVS TCP/IP Testsite.

**Explanation:** Indicates that TESTSITE has been invoked. This is the first message displayed after issuing the TESTSITE command.

**System action:** TCPIP continues.

**Operator response:** No action is needed.
**System programmer response:** No action is needed.

**Module:** CMTSITE

**Procedure Name:** TestSiteInfo

---

**EZA0596I** Testsite checks site names against HOST.SITEINFO

**EZA0597I** Prompting for each name until told 'quit'. For each

**EZA0598I** name, Testsite describes the corresponding internet

**EZA0599I** type (HOST, GATEWAY, NET) and internet addresses.

**Explanation:** This group of messages is displayed after each site name you enter has been verified against the names found in HOSTS.SITEINFO. These messages are continually displayed until you issue a QUIT command.

**System action:** TESTSITE continues. TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMTSITE

**Procedure Name:** TestSiteInfo

---

**EZA0600I** To quit, type ‘quit’.

**Explanation:** The Testsite utility received a response to its prompt for a site name (see messages EZA0596I - EZA0599I) that was not valid. The only other valid response, other than a site name, is ‘quit’.

**System action:** TCPIP continues.

**Operator response:** If you need to quit, enter QUIT and press ENTER.

**System programmer response:** No action is needed.

**Module:** CMTSITE

**Procedure Name:** TestSiteInfo

---

**EZA0601E** Error obtaining Userid.

**Explanation:** The user ID entered was not found.

**System action:** TCPIP is unsuccessful.

**Operator response:** Reissue the user ID, make sure it is correct.

**System programmer response:** No action is needed.

**Module:** HOMETEST

**Procedure Name:** Test

---

**EZA0602I** TCP Host Name is: *MVSA.TCP.Raleigh.IBM.COM*

**Explanation:** This message indicates the name of the TCP host.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** HOMETEST

**Procedure Name:** Test
EZA0604E  Cannot use TCP/IP:  errmsg (msgnum)
Explanation:  TCPIP is not available because of the indicated reason.
errmsg is the text of the message that describes the error.
msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAnmsgnum.
System action:  TCPIP halts.
Operator response:  Determine the nature of the error, correct it, and try again.
System programmer response:  Respond as indicated by the message EZAnmsgnum.
Module:  HOMETEST
Procedure Name:  Test

EZA0605I  Using name server to resolve:  MVSA.TCP.RALEIGH.IBM.COM
Explanation:  This message indicates that the program is using a blank.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  HOMETEST
Procedure Name:  Test

EZA0609E  Error:  Found no IP addresses corresponding to TCP Host Name:  name
Explanation:  The indicated TCP host name could not be resolved because there are no corresponding IP addresses.
System action:  The program continues.
Operator response:  Correct the HOSTNAME variable in the TCPIP.DATA data set or the records in the name server or sites tables, and rerun HOMETEST. See z/OS Communications Server: IP Configuration Guide for more information on TCPIP.DATA data set.
System programmer response:  No action is needed.
Module:  HOMETEST
Procedure Name:  Test

EZA0610E  name
Explanation:  This message appears with message EZA0609E and indicates that no addresses were found for the entered host name.
System action:  TCPIP is unsuccessful.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  HOMETEST
Procedure Name:  Test

EZA0611I  The following IP addresses correspond to TCP Host Name:  name
Explanation:  This message gives a list of Internet Protocol addresses that correspond to the TCP Host Name. These addresses are checked against the HOME list and defined in the hlq.PROFILE.TCPIP data set Host Name.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response: No action is needed.
Module: HOMETEST
Procedure Name: Test

EZA0612I  list
Explanation: This message displays with EZA0611I producing a list of the IP addresses that correspond to the TCP Host Name.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: HOMETEST
Procedure Name: Test

EZA0614I The following IP addresses are the HOME IP addresses defined in the hlq.PROFILE.TCPIP data set.
Explanation: The internet protocol addresses corresponding to your site host name are checked against the HOME list and defined in the hlq.PROFILE.TCPIP data set. A warning message is issued if any addresses are missing from the HOME list.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: HomeTest
Procedure Name: Test

EZA0615I  list
Explanation: This message displays with EZA0614I providing a list of the HOME addresses defined in the hlq.PROFILE.TCPIP data set.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: HOMETEST
Procedure Name: Test

EZA0617E Error: address is not in the HOME List
Explanation: The indicated IP address could not be found in the HOME list in hlq.PROFILE.TCPIP. data set.
System action: The program continues.
Operator response: Correct the IP address in the HOME list in the hlq.PROFILE.TCPIP data set, the name server, or the site tables, and rerun HOMETEST. See z/OS Communications Server: IP Configuration Guide for more information on hlq.PROFILE.TCPIP data set.
Module: HOMETEST
Procedure Name: Test
EZA0618I All IP addresses for name are in the HOME list!

**Explanation:** This message indicates that all the internet protocol addresses were found in the HOME list.

**System action:** TCPIP continues processing.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** HOMETEST

**Procedure Name:** Test

---

EZA0619I Running IBM MVS TCP/IP V3R1 TCP/IP Configuration Tester

**Explanation:** This message indicates the version and level of the data set being tested on the TCPIP system with the HOMETEST statement.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** HOMETEST

**Procedure Name:** HomeTest

---

EZA0621I The FTP configuration parameter file used will be data set.

**Explanation:** The initial FTP configuration parameters used during operation of TCPIP are from the indicated source data set. This can be the SYSFTPD DD statement, the configuration data set, or an error message.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** HOMETEST

**Procedure Name:** Test

---

EZA0622I Hometest was successful - all Tests Passed!

**Explanation:** All of the configuration data sets have passed the configuration tests.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** HOMETEST

**Procedure Name:** Test

---

EZA0623W Warning: no TCP/IP system parameter file was available for use.

**Explanation:** The TCPIP.DATA data set is not found.

**System action:** HOMETEST ends. Other error messages may occur with this one.

**Operator response:** Contact the system programmer.

**System programmer response:** Specify a TCPIP.DATA data set for TCP/IP. For more information, see z/OS Communications Server: IP Configuration Reference.

**Module:** HOMETEST

**Procedure Name:** Test
EZA0624I * * * Hometest failed - configuration error * * *

EZA0625I Please correct your TCP/IP configuration and run this program again.

Explanation: These messages appear together to show that there is a configuration error and requests that the error be fixed, and the HOMETEST command reissued.

System action: HOMETEST halts. TCPIP continues.

Operator response: Correct the error in the configuration data set and rerun the program. For more information, see z/OS Communications Server: IP Configuration Reference.

System programmer response: No action is needed.

Module: HOMETEST

Procedure Name: HomeTest

EZA0626E InitEmulation failed, try again with ECMODE ON

Explanation: This message is displayed when there is an error in the input data.

System action: TCPIP is unsuccessful.

Operator response: Turn on ECMODE and reissue the HOMETEST command.

System programmer response: No action is needed.

Module: HOMETEST

Procedure Name: Test

EZA0627E Error: Name resolution via Nameserver was unsuccessful.

Explanation: The TCP host name could not be resolved using the name server for the indicated reason.

System action: The program continues.

Operator response: Determine why HOMETEST cannot communicate with the name server, and rerun HOMETEST.

System programmer response: No action is needed.

Module: HOMETEST

Procedure Name: Test

EZA0628E Reason: errmsg (msgnum)

Explanation: This message indicates that the HOMETEST command was unsuccessful.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmmsgnum.

System action: TCPIP is unsuccessful.

Operator response: No action is needed.

System programmer response: Respond as indicated by the message EZAmmsgnum.

Module: HOMETEST

Procedure Name: Test
EZA0640E  **Usage: CONVXLAT InputDsname OutputDsname [ KANJI | HANGEUL | TCHINESE ] -CODEFILE-**

**Explanation:** Invalid syntax was specified for the CONVXLAT command.

**System action:** The program halts. No output data set is produced.

**Operator response:** Reenter the command using valid syntax. See [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/SSLTBW_2022.svc/doc) for more information about customizing DBCS/SBCS translation tables using CONVXLAT.

**System programmer response:** No action is needed.

**Module:** CMCONVXL PASCAL

**Procedure Name:** GetParameters,DoIt

---

EZA0641E  **Input dataset dataset not found**

**Explanation:** The CONVXLAT command specified an input data set that does not exist.

**System action:** The program halts. No output data set is produced.

**Operator response:** Reenter the command specifying an existing data set for the InputDsname parameter. Make sure the data set contains valid translation tables. See [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/SSLTBW_2022.svc/doc) for more information about customizing DBCS/SBCS translation tables using CONVXLAT.

**System programmer response:** No action is needed.

**Module:** CMCONVXL PASCAL

**Procedure Name:** DoIt

---

EZA0642E  **Premature EOF on input dataset dataset**

**Explanation:** The CONVXLAT command specified an SBCS input data set that ended prematurely, before the output translation table was completed.

**System action:** The program halts. An invalid output data set is produced.

**Operator response:** Reenter the command specifying a valid data set for the InputDsname parameter. Make sure the data set contains valid SBCS translation tables. See [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/SSLTBW_2022.svc/doc) for more information about customizing DBCS/SBCS translation tables using CONVXLAT.

**System programmer response:** No action is needed.

**Module:** CMCONVXL PASCAL

**Procedure Name:** DoOneTable

---

EZA0643E  **Error in input line: “input record”**

**Explanation:** The CONVXLAT command specified an SBCS input data set that contained a data error in the specified line. The line did not contain valid hexadecimal codes.

**System action:** The program halts. An invalid output data set is produced.

**Operator response:** Reenter the command specifying a valid data set for the InputDsname parameter. Make sure the data set contains valid SBCS translation tables. See [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/SSLTBW_2022.svc/doc) for more information about customizing DBCS/SBCS translation tables using CONVXLAT.

**System programmer response:** No action is needed.

**Module:** CMCONVXL PASCAL

**Procedure Name:** DoOneTable
EZA0644E  Input contains wrong number of bytes: “input record”

Explanation: The CONVXLAT command specified an SBCS input data set that contained a data error in the specified line. The line did not contain 16 valid hexadecimal codes.

System action: The program halts. An invalid output data set is produced.

Operator response: Reenter the command specifying a valid data set for the InputDsname parameter. Make sure the data set contains valid SBCS translation tables. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables using CONVXLAT.

System programmer response: No action is needed.

Module: CMCONVXL PASCAL

Procedure Name: DoOneTable

EZA0646E  Output data set DSORG=PO. Execution is HALTed

Explanation: The output file submitted for the CONVXLAT command is a partitioned data set. The CONVXLAT command will not delete a partitioned data set.

System action: The command is not executed. TCPIP continues.

Operator response: Resubmit the CONVXLAT command with a valid output file. For more information about the CONVXLAT command, see z/OS Communications Server: IP User’s Guide and Commands.

System programmer response: Assist the user as necessary.

Module: CMCONVXL

Procedure Name: DoIt

EZA0647E  Output dataset is invalid. Execution is HALTed

Explanation: The output data set specified for the CONVXLAT command was incorrect.

System action: The command is not executed. TCPIP continues.

Operator response: Resubmit the CONVXLAT command with a valid output file. For more information about the CONVXLAT command, see z/OS Communications Server: IP User’s Guide and Commands.

System programmer response: Assist the user as necessary.

Module: CMCONVXL

Procedure Name: DoIt

EZA0649E  Output dataset not found. Cannot allocate PDS.

Explanation: The output data set for the CONVXLAT command did not exist when the CODEFILE option was used. The CONVXLAT program is unable to allocate the partitioned data set required for generation of the codefiles.

System action: The program halts. No output data set is produced.

Operator response: For more information about the error, contact the system programmer.

System programmer response: Make sure that the output data set for the codefiles is a correctly allocated partitioned data set. See z/OS Communications Server: IP Configuration Reference for more information about allocating a PDS for CONVXLAT codefile generation.

Module: CMCONVXL PASCAL

Procedure Name: DoIt
EZA0650W  DBCS code is defined more than once - code_index. Continuing ...

Explanation: The error occurred during processing of DBCS translation data from the input data set. A DBCS code index was defined more than once.

System action: The program continues. The DBCS code defined more than once will have the value first assigned to it in the input data set.

Operator response: For more information, contact the system programmer.

System programmer response: Make sure that all DBCS codes in the data set are defined only once. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module: CMCONVXL PASCAL

Procedure Name: DoDbcsBinFile, DoCodeFiles

EZA0651W  DBCS code index - code_index - out of order. Continuing ...

Explanation: The error occurred during processing of DBCS translation data from the input data set. A DBCS code index was found that was numerically less than the previous code index. The output data set may contain unpredictable results and should not be used.

System action: The program continues.

Operator response: For more information, contact the system programmer.

System programmer response: Make sure that all DBCS codes in the data set are defined in numerical order from the lowest value to the highest. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module: CMCONVXL PASCAL

Procedure Name: DoDbcsBinFile, DoCodeFiles

EZA0652I  Current code set is - code_file

Explanation: This message is displayed when the CODEFILE option of CONVXLAT is used. It indicates which codefile is currently being generated.

System action: The program continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMCONVXL PASCAL

Procedure Name: DoCodeFiles

EZA0653W  SBCS code is defined more than once - code_index. Continuing ...

Explanation: The error occurred during processing of SBCS translation data from the input data set. An SBCS code index was defined more than once. This SBCS code index will have the value first assigned to it in the input data set.

System action: The program continues.

Operator response: For more information, contact the system programmer.

System programmer response: Make sure that all SBCS codes in the data set are defined only once. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module: CMCONVXL PASCAL

Procedure Name: DoDbcsBinFile, DoCodeFiles
EZA0654W  SBCS code index - code_index - out of order. Continuing ...

Explanation: The error occurred during processing of SBCS translation data from the input data set. An SBCS code index was found that was numerically less than the previous code index. The output data set will contain unpredictable results and should not be used.

System action: The program continues.

Operator response: For more information, contact the system programmer.

System programmer response: Make sure that all SBCS codes in the data set are defined in numerical order from the lowest value to the highest. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module: CMCONVXL PASCAL

Procedure Name: DoDbcsBinFile, DoCodeFiles

EZA0655E  No SBCS input data in input dataset dataset

Explanation: The input data set contained only DBCS code point mappings and did not contain the associated SBCS data. The output data set will not be complete and should not be used.

System action: The program halts.

Operator response: For more information, contact the system programmer.

System programmer response: Make sure that the input data set contains appropriate SBCS code point mappings. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module: CMCONVXL PASCAL

Procedure Name: DoDbcsBinFile, DoCodeFiles

EZA0656E  Empty input dataset dataset

Explanation: The input data set existed but contained no data. The output data set will be empty.

System action: The program halts.

Operator response: For more information, contact the system programmer.

System programmer response: Make sure that the input data set contains the appropriate translation table data. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module: CMCONVXL PASCAL

Procedure Name: DoDbcsBinFile, DoCodeFiles

EZA0657E  Error in first line of translation data: input_record

Explanation: The first line of translation data in the input data set was in error. This error may be caused by an incorrect number of translation data columns or by incorrect (for example, too long, too short, not hex data and so on) data in the columns. The first line of data must contain correct and complete data for processing to continue. The output data set will be empty.

System action: The program halts.

Operator response: For more information, contact the system programmer.

System programmer response: Make sure that the input data set contains the appropriate translation data in the first line of uncommented data. See z/OS Communications Server: IP Configuration Reference for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

Module: CMCONVXL PASCAL

Procedure Name: DoDbcsBinFile, DoCodeFiles
**EZA0658E**  
Error in DBCS input line: input_record

**Explanation:**  
An error was found processing a line of DBCS translation data from the input data set. Incorrect data was found in one of the columns of the input line. The output data set will contain invalid data and should not be used.

**System action:**  
The program halts.

**Operator response:**  
For more information, contact the system programmer.

**System programmer response:**  
Make sure that the input data set contains valid translation data in all DBCS data lines. See [Z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/docs/en/zos/1.7) for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

**Module:**  
CMCONVXL PASCAL

**Procedure Name:**  
DoDbcsBinFile, DoCodeFiles

---

**EZA0659E**  
Error in SBCS input line: input_record

**Explanation:**  
An error was found processing a line of SBCS translation data from the input data set. Incorrect data was found in one of the columns of the input line. The output data set will contain invalid data and should not be used.

**System action:**  
The program halts.

**Operator response:**  
For more information, contact the system programmer.

**System programmer response:**  
Make sure that the input data set contains valid translation data in all SBCS data lines. See [Z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/docs/en/zos/1.7) for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

**Module:**  
CMCONVXL PASCAL

**Procedure Name:**  
DoDbcsBinFile, DoCodeFiles

---

**EZA0660E**  
Output file is not a PS dataset

**Explanation:**  
The output file specified for the CONVXLAT command was not a sequential data set. The files are not translated.

**System action:**  
TCPIP continues.

**Operator response:**  
Resubmit the CONVXLAT command specifying a sequential data set for the output file.

**System programmer response:**  
Assist the user as necessary.

**Module:**  
CMCONVXL

**Procedure Name:**  
GetParameters

---

**EZA0661E**  
Error in SBCS input data. Incorrect number of code point mappings.

**Explanation:**  
The input data set for the CONVXLAT command did not contain 256 single byte code point mappings. An output data set is produced but is not valid.

**System action:**  
The program halts.

**Operator response:**  
For more information about the error, contact the system programmer.

**System programmer response:**  
The SBCS translation data must contain exactly 256 code point mappings when using CONVXLAT options KANJI, HANGEUL or TCHINESE. Make sure that the input data set has the correct number of single byte code point mappings. See [Z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/docs/en/zos/1.7) for more information about customizing DBCS/SBCS translation tables for use by CONVXLAT.

**Module:**  
CMCONVXL PASCAL
Chapter 2. EZA1xxx messages

EZA1450I IBM FTP version
Explanation: This message indicates which version of File Transfer Protocol (FTP) is running on the system.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCY

EZA1451E Cannot load translate table specified by TRANSLATE parameter name
Explanation: The FTP client was started with the TRANSLATE name or -t name parameter on the FTP command. FTP used the name specified to search for a data set containing binary translate tables, but was unable to find a usable data set.
System action: FTP Client exits.
Operator response: Notify the system programmer of the error.
System programmer response: Reissue the FTP command with the TRACE or -d parameter to enable tracing which will display the results of each attempt in the search order. Respond to the error indicated.
Module: EZAFTPNX

EZA1456I Connect to ?
Explanation: This is a prompt for the user to enter the name or IP address of the host system he wants to connect to. Port number is optional.
System action: Processing continues.
Operator response: Enter host name or IP address.
System programmer response: No action is needed.
Module: EZAFTPCY

EZA1457I You must first issue the 'OPEN' command
Explanation: The OPEN subcommand must be issued to establish a connection to the other host's FTP server.
System action: FTP continues.
Operator response: Issue the OPEN subcommand with a host name. See the z/OS Communications Server: IP User's Guide and Commands for information about the open subcommand.
System programmer response: No action is needed.
Module: EZAFTPCL, EZAFTPPC

EZA1458I You must first issue the 'USER' command
Explanation: The USER subcommand must be issued to identify you to the other host after opening a connection. Your password on the other host can also be specified on the USER subcommand.
System action: FTP continues.
Operator response: Issue the USER subcommand with your logon name on the other host. See the z/OS Communications Server: IP User’s Guide and Commands for information about the user subcommand.
System programmer response: No action is needed.
**EZA1459I • EZA1471E**

---

**EZA1459I**  
**NAME** *host user*  
**Explanation:** This is a prompt for the user ID on the target host system.  
**System action:** None.  
**Operator response:** Type the user ID for the target system or press enter to use the same user ID that you are using on the client system.  
**System programmer response:** No action is needed.  
**Module:** EZAFTPCZ

---

**EZA1460I**  
**Command:**  
**Explanation:** The system is prompting you to enter a command.  
**System action:** The system waits for you to enter a command.  
**Operator response:** Enter the command you want to process.  
**System programmer response:** No action is needed.  
**Module:** EZAFTPCU

---

**EZA1464I**  
**Missing parm after TRANSLATE**  
**Explanation:** A nonstandard translation table name (*data set_name*) must be specified on the FTP command TRAnslate parameter. FTP uses the translation table in the *user_id.data set_name.TCPXLBIN* rather than the standard translation table provided with TCPIP for MVS.  
**System action:** FTP continues.  
**Operator response:** Specify the data set name of the translate table you want to take precedence.  
**System programmer response:** No action is needed.  
**Module:** EZAFTPCY

---

**EZA1465I**  
**FTP: tcp parameter requires an address space name.**  
**Explanation:** When the TCP parameter is specified on the FTP command, an address space name must be specified.  
**System action:** FTP terminates.  
**Operator response:** Specify an address space name on the TCP parameter of the FTP command.  
**System programmer response:** No action is needed.  
**Module:** EZAFTPCY

---

**EZA1466I**  
**FTP: using *name***  
**Explanation:** FTP is using the tcip stack named *name*. If neither the *-p* nor the (TCP start parameter was used to specify a tcip stack name, this stack name came from TCPIPJOBNAME in TCPIP.DATA.  
**System action:** FTP continues.  
**Operator response:** No action is needed.  
**System programmer response:** No action is needed.  
**Module:** EZAFTPCY

---

**EZA1471E**  
**Open of INPUT data set failed**  
**Explanation:** The FTP Client attempted to open the data set allocated to the INPUT or SYSIN DD statement and encountered an error.  
**System action:** The FTP Client terminates.
Operator response: Correct the error with the data set.
System programmer response: No action is needed.
Module: EZAFTPCY

EZA1472I Ambiguous (command)
Explanation: FTP encountered a command during processing that is ambiguous. The command is displayed in the message.
System action: FTP continues.
Operator response: Enter a valid command.
System programmer response: No action is needed.
Module: EZAFTPPC

EZA1473W LRECL irecl is incompatible with RECFM recfm
Explanation: The LRECL value is incompatible with the RECFM. This value might have come from FTP.DATA, as the result of a LOCSITE command, or from MVS as a default.

irecl is the length of the record.
recfm is the Record format.
System action: The file transfer ends.
Module: EZAFTPCG
Procedure Name: RECVDATA()

EZA1475I Connection with foreignhost terminated
Explanation: The connection to the foreign host is closed.
System action: FTP Client halts.
Operator response: Reestablish a connection with the foreign host’s FTP server by using the OPEN subcommand.
System programmer response: No action is needed.
Module: EZAFTPSC

EZA1478I GetReply returns replycode
Explanation: This message indicates the reply code from the specified host (control connection).
System action: FTP continues.
Operator response: If an error occurred in the connection process, the reply code indicates the error. Correct the error according to the reply code. Otherwise, no action is necessary.
System programmer response: No action is needed.

EZA1479I File transfer might be incomplete - Last record received without EOL sequence
Explanation: The user requested a file from the server. The FTP client was receiving the file while ENCODING was set to MBCS. The server sent the file without appending <CRLF>, the FTP end of line (EOL) sequence, to the last record. The FTP client configured MBREQUIRELASTEOL TRUE, so the client considers this to be an error. The file transfer might not be complete.
Examples:
EZA1460I Command:
locsite mbrequierlasteol
EZA1460I Command:
get /tmp/test8.txt 'user1.test8.txt'
EZA1701I >>> PORT 9,42,105,36,4,42
200 Port request OK.
EZA1701I >>> RETR /tmp/trash/test8.txt
125 Sending data set /tmp/trash/test8.txt
EZA1490I Error writing to data set
EZA1479I File transfer might be incomplete - Last record received without EOL sequence
>>>ABOR
426 Connection closed; transfer aborted.
226 Abort successful.
EZA2108I Confidence=Low for GET of USER1.TEST8.TXT
EZA1460I Command:

System action: The FTP client sends an ABOR command to the server. The FTP client continues.

Operator response: No action needed.

User response: Inspect the file to determine if the transfer was complete. If the transfer is not complete, contact the system programmer

System programmer response: If the sender of the file was not a z/OS CS FTP server, consult the vendor of that product for more information. If the vendor indicates that the last record does not include an EOL marker, use the LOCSTite subcommand with the NOMBREQUIRELASTEOL parameter set to change the MBREQUIRELASTEOL setting, then get the file again. If the problem continues, contact the vendor.

If the sender of the file was a z/OS CS FTP server, the transfer is incomplete. z/OS FTP appends an EOL marker to the final file record of multibyte files unless you have overridden the sender's EOL marker using the server's MBSENDEOL configuration option. Use the stat subcommand to query the server's MBSENDEOL setting. If MBSENDEOL is not CRLF, use the site subcommand with the MBSENDEOL=CRLF parameter set to change the server's MBSENDEOL setting, then get the file again. If MBSENDEOL is CRLF, save the output from the stat subcommand and the LOCSTat subcommand, and contact the IBM support center.

See the information about the MBREQUIRELASTEOL and MBSENDEOL configuration options in z/OS Communications Server: IP Configuration Reference. See the information about using the stat, site, LOCSTat, or LOCSIte subcommands in z/OS Communications Server: IP User's Guide and Commands.

For z/OS FTP products, see the information about support for MBCS languages in z/OS Communications Server: IP User's Guide and Commands for information about configuring z/OS FTP for multibyte transfers. For other FTP implementations, consult your vendor for more information.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: FTP

Module: Not applicable.

Routing code: Not applicable.

Descriptor code: Not applicable.

EZA1480I Invalid argument string

Explanation: The program detected a single quotation mark inside the argument string. This is not valid.

System action: FTP continues.

Operator response: Correct the argument string by removing the single quotation mark from within the string.

System programmer response: No action is needed.
EZA1481I  Cannot find closing quote in command string

Explanation: The program cannot find the quotation mark at the end of the command string.

System action: FTP continues

Operator response: Correct the command string by adding a single quotation mark at the end of the command string.

System programmer response: No action is needed.

Module: EZAFTCP, EZAFTPCG

EZA1485I number bytes transferred - interval second interval rate num_transferred_interval KB/sec - Overall transfer rate num_transferred_overall KB/sec

Explanation: This message indicates the total number of bytes of binary data transferred to or from the FTP client along with the current rate of transfer.

number is the total number of bytes transferred since the transfer started.

interval is the length of the measured transfer interval in seconds. This rate is set using LOCSITE PROGRESS or the PROGRESS statement in the FTP.DATA file.

num_transferred_interval is the number of KBs (KB equals 1000 bytes) transferred per second in this interval.

num_transferred_overall is the number of KBs (KB equals 1000 bytes) transferred per second since the transfer started.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPMR

EZA1489I Cannot allocate buffer space

Explanation: The FTP client attempted to allocate a work buffer and failed. Buffer requirements are moderate so this is unlikely.

System action: The program ends abnormally.

Operator response: Increase REGION below the line to 2M.

System programmer response: No action is needed.

Module: EZAFTPCY

EZA1490I Error writing to data set

Explanation: Data could not be written to the data set. FTP frees the buffer space.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCG

EZA1491I Cannot find end of record character in data stream.

Explanation: FTP cannot find an end of record character in the data it is transmitting. FTP issues this message and message EZA1492I and frees the data buffer.

System action: FTP continues.

Operator response: See the response for message EZA1492I.

System programmer response: See the response for message EZA1492I.
EZA1492I  Maximum record length supported in EBCDIC/ASCII mode is 64K

Explanation: FTP could not find an end of record character in the data it is transmitting. The maximum length for an EBCDIC or ASCII mode transmission is 64 KB. FTP does not write the whole buffer and moves any remaining data to the beginning of the buffer. FTP starts getting data at the beginning of the free space in the buffer.

System action: FTP continues.

Operator response: Make sure the appropriate end of record character is in the data to be transmitted.

System programmer response: No action is needed.

EZA1534I  *** Control connection with ForeignHost dies.

Explanation: The connection to the other host no longer exists.

System action: The local host waits for the other host to close the connection and then closes the local host end of the connection.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPSC

EZA1542I  Usage: usage

Explanation: This is a brief description of the usage of an FTP subcommand.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

EZA1543I  Please type a longer prefix of the command name

Explanation: The command prefix you entered is not complete enough to distinguish it from other commands.

System action: The system waits for your response.

Operator response: Enter more characters of the command and resubmit the request.

System programmer response: No action is needed.

Module: EZAFTPPC

EZA1544I  TSO Command

Explanation: This message indicates the TSO command that is being processed by FTP.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

EZA1550E  You are already connected to host

Explanation: You are already connected to the host name you specified, host.

System action: Open command processing terminates.

Operator response: Quit or close the current FTP session before attempting to begin a new session.

System programmer response: No action is needed.

Module: EZAFTPCZ
EZA1551I  Unknown host: *host*

Explanation: The host name you have requested a connection to is not a valid host name or is not known to TCPIP.

System action: TCPIP allows you to specify another host name and will attempt to establish a connection using that host name.

Operator response: There are several possible causes. The name may have been entered incorrectly. The name server may not be responding. The resolver may not be querying the correct name server.

System programmer response: Ensure that the host name is accessible via a name server, or defined in HOSTS.SITEINFO and HOSTS.ADDRINFO. See the z/OS Communications Server: IP Configuration Guide for information on domain name systems or HOSTS.SITEINFO and HOSTS.ADDRINFO data sets.

Module: EZAFTPSC

EZA1552I  Nonnumeric port designation: *portname*

Explanation: The port was specified with the nonnumeric value indicated in this message.

System action: TCPIP allows you to specify another port name and will attempt to establish a connection using that port name.

Operator response: Specify a numeric port name. Valid numeric port names are 16 bits long. The well-known port number for FTP is 21; this is the default.

System programmer response: No action is needed.

Module: EZAFTPSC

EZA1553E  Invalid port number. Open fails.

Explanation: The Open command cannot continue because a specified port number is less than 0 or too large. Port numbers can be a maximum of 16 bits long. The specified number, indicated in this message, exceeds this maximum.

Operator response: Specify a port name with a maximum length of 16 bits.

System action: Open command processing terminates.

System programmer response: No action is needed.

Module: EZAFTPSC

EZA1554I  FTP Connecting to: *name* *port* *number*

Explanation: FTP client is attempting to connect to specified host system.

System action: No action is needed.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPSC

EZA1559I  Internal debug options disabled

Explanation: Internal debug options are not set on. The flag, DebugFlag, has been set so that no debugging options are active and no extra debugging commands are allowed.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL
EZA1560I Internal debug options enabled
Explanation: The internal debug options are set on. The flag, DebugFlag, has been set so that debugging options are active and extra debugging commands are allowed. Additionally, tracing is active.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

EZA1567I Unknown command: name
Explanation: FTP does not recognize the command specified.
System action: FTP continues.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA1568I You must first connect to some foreign server
Explanation: You must be connected to a remote host before using this HELP command.
System action: FTP continues.
Operator response: Establish a connection to a remote host by issuing the FTP command. z/OS Communications Server: IP User's Guide and Commands describes the FTP command.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA1569I {} encloses optional parameters; | separates choices:
Explanation: In the response information for the HELP ALL command, braces enclose optional parameters, and a vertical bar separates choices in the command syntax.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA1570I use purpose
Explanation: This is a more detailed description of the use of an FTP subcommand. This is the subcommand syntax, usage, and explanation of the subcommand.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA1571I Usage: value
Explanation: The specified FTP subcommand is no longer valid. The message also tells which subcommand to use in its place.
System action: FTP continues.
Operator response: Specify the indicated subcommand.

System programmer response: No action is needed.

Module: EZAFTPCL

---

**EZA1572I**  
*purpose*  

Explanation: This message is issued in response to an incorrectly specified FTP subcommand. It indicates how to get more information about the indicated subcommand.

System action: FTP continues.

Operator response: Specify the indicated HELP command for syntax information about the subcommand you issued.

System programmer response: No action is needed.

Module: EZAFTPCL

---

**EZA1573I**  
*This command can only be used when 'debug' has been turned on*  

Explanation: The command for which you have requested help may only be used when the debug facility is active.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

---

**EZA1574I**  
Usage: *value*  

Explanation: This is a brief description of the usage of an FTP subcommand.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

---

**EZA1575I**  
*purpose*  

Explanation: This message provides a more detailed description of the use of an FTP subcommand.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

---

**EZA1576I**  
User-FTP understands these commands  

Explanation: This message is concatenated to message EZA1577I which lists the valid FTP commands.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL
**EZA1577I**  
**command**

**Explanation:** This message indicates the FTP commands that are valid for use in the FTP environment.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

---

**EZA1578I**  
Specify a command by any unambiguous prefix

**Module:** EZAFTPCL

---

Specify a local data set by qualifier.qualifier... with optional

**Module:** EZAFTPCL

---

**EZA1580I**  
member as (member). Enclose fully qualified names in quotes

**Module:** EZAFTPCL

---

**EZA1581I**  
For information about a particular command, say ‘HELP command’

**Explanation:** These messages provide information about how to specify FTP commands and how to request help for commands using the HELP command. These are issued in response to a HELP request.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

---

**EZA1582I**  
The foreign server has this help:

**Explanation:** This message precedes the help information from the remote host. FTP receives the help information from the remote host and displays it to you.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

---

**EZA1583I**  
Note: no password was requested

**Explanation:** The remote host does not require a password to log on.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

---

**EZA1584I**  
Note: no account was requested

**Explanation:** The remote host does not require account information before you can access files on it. Some hosts do require account information.

**System action:** FTP continues.

**Operator response:** No action is needed.
**System programmer response:** No action is needed.

**EZA1585I** leaving dologin  
**Explanation:** The DoLogin routine has completed processing. This message is issued when tracing is turned on.  
**System action:** FTP continues.  
**Operator response:** No action is needed.  
**System programmer response:** No action is needed.

**EZA1598I** Maximum record length supported is 64K  
**Explanation:** The character string being transmitted in binary format exceeds the maximum of 65 535 bytes. FTP sets a return code to indicate that the transfer was not successful.  
**System action:** FTP continues.  
**Operator response:** Ensure that the maximum record length of the data you are transmitting is no more than 65 535 bytes and attempt the transfer again.  
**System programmer response:** No action is needed.

**EZA1599I** File delimiter is value  
**Explanation:** The indicated value is the file delimiter in use by the FTP client. If the current working directory is a z/OS UNIX file system directory, the delimiter is a forward slash (/); otherwise, the delimiter is a period (.).  
**System action:** FTP continues.  
**Operator response:** No action is needed.  
**System programmer response:** No action is needed.  
**Module:** EZAFTPCL

**EZA1600I** Trace: trace, Send Port: port  
**Explanation:** This message is issued in response to the LOCSTAT subcommand. The trace value indicates whether the TRACE setting is true or false. True indicates that tracing is set on. The port value indicates whether the SENDPORT setting is true or false. True indicates that automatic sending of the PORT command will take place.  
**System action:** FTP continues.  
**Operator response:** No action is needed.  
**System programmer response:** No action is needed.  
**Module:** EZAFTPCK

**EZA1601I** Send Site with Put command: value  
**Explanation:** This message is issued in response to the LOCSTAT subcommand. The value specified indicates whether the SENDSITE value is set to true or false. True indicates that FTP will send a SITE command that contains record format information for the file or data set when you issue the PUT or MPUT subcommand.  
**System action:** FTP continues.  
**Operator response:** No action is needed.  
**System programmer response:** No action is needed.  
**Module:** EZAFTPCK
EZA1602I Connected to host, Port: port, logged in

Explanation: This message is issued in response to the LOCSTAT subcommand. The host is the remote host to which you are connected. The port is the port number of the remote host.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA1603I Connected to host, Port: port, not logged in

Explanation: This message is issued in response to the LOCSTAT subcommand. The host is the remote host to which you are connected. The port is the port number of the remote host.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA1605I Local Port: port

Explanation: This message is issued in response to the LOCSTAT subcommand. The indicated port is the port number of the local host.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA1606I Data type: format, Transfer mode: mode, Structure: structure

Explanation: This message is issued in response to the LOCSTAT subcommand. It indicates the FTP data type (ASCII, EBCDIC, image or DBCS), the transfer mode (stream, block, or compressed), and the structure (file or record).

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA1609I Usage of PORT command is OFF

Explanation: The PORT command has been toggled off. The SENDPORT subcommand is used to toggle the PORT command off and on. FTP does not send PORT commands for data transfer when you disable PORT commands by toggling off the function.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL
Usage of PORT command is ON

Explanation: The PORT command has been toggled on. The SENDPORT subcommand is used to toggle the PORT command on and off. By default, the SENDPORT subcommand is turned on when you start the system. Each time you use the SENDPORT subcommand, the PORT command is turned alternately on and off. FTP uses a PORT command, by default, when establishing a connection for each data transfer. FTP does not send PORT commands for data transfer when you disable PORT commands by toggling off the function.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

Usage of SITE command with PUT is OFF

Explanation: The SENDSITE command setting is false, or toggled off. When SENDSITE is off, the automatic sending of SITE commands is off. This means that when you issue the PUT command, FTP will not automatically send a SITE command containing record format information for the file or data set.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

Usage of SITE command with PUT is ON

Explanation: The SENDSITE command setting is true, or toggled on. When SENDSITE is on, the automatic sending of SITE commands is on. This means that when you issue the PUT command, FTP automatically sends a SITE command containing record format information for the file or data set.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

Internal debug tracing disabled

Explanation: Debug tracing has been turned off. When the DEBUG subcommand is issued, debug tracing is toggled on or off.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Internal debug tracing enabled

Explanation: Debug tracing has been turned on. When the DEBUG subcommand is on, FTP displays each command that is sent to the remote host and the response that is received from the remote host.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
EZA1615I Debug tracing not available

Explanation: The FTP debug tracing facility is not available. The DEBUG option is off. DEBUG is off by default, unless the TRACE parameter was specified on the FTP command.

System action: FTP continues.

Operator response: Issue the DEBUG subcommand to toggle on the debug option.

System programmer response: No action is needed.

EZA1616I Aborting connection

Explanation: The data transfer is being ended. The data connection is closing. An FTP reply code 226 is returned indicating that the data connection is closing, and the requested file action was successful. If an FTP reply code 426 is also returned, it indicates that the connection is closed, and that the transfer ended abnormally and was not successful.

System action: FTP continues.

Operator response: If the data transfer was not successful, reestablish the control connection and attempt the data transfer again.

System programmer response: No action is needed.

EZA1617I number bytes transferred in number seconds. Transfer rate value Kbytes/sec.

Explanation: This message indicates the number of bytes transferred and the rate of transfer for a data transfer to or from the other host.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

EZA1618I Unknown command 'command'

Explanation: The command you entered is not known to FTP. This message is concatenated to message EZA1619I.

System action: FTP continues.

Operator response: Enter a valid FTP command or subcommand. See message EZA1619I for more information. See z/OS Communications Server: IP User’s Guide and Commands for the syntax and descriptions of FTP commands and subcommands.

System programmer response: No action is needed.

Module: EZAFTPPC

EZA1619I For a list of the available commands, say HELP

Explanation: This message instructs you to use the FTP HELP facility to get information about valid FTP commands.

System action: FTP continues.

Operator response: Use the FTP HELP facility by entering HELP, to find information about the command or subcommand you want to use. Enter a valid FTP command or subcommand. See z/OS Communications Server: IP User’s Guide and Commands for the syntax and descriptions of FTP commands and subcommands.

System programmer response: No action is needed.

Module: EZAFTPPC
EZA1624W Local file file not found

Explanation: The FTP client was unable to locate the indicated local data set. This indicates that either the data set name was incorrect or the data set no longer exists.

System action: FTP continues.

Operator response: Check the syntax and resubmit the last command. If the data set was specified correctly, use the LS command to list the local data sets to make sure the data set exists. For more information about the LS command, see the z/OS Communications Server: IP User’s Guide and Commands.

System programmer response: No action is needed.

Module: EZAFTPCG

EZA1625I Store unique is OFF

Explanation: The SUNIQUE subcommand is off. When SUNIQUE is off, FTP uses a store command (STOR) with the PUT and MPUT subcommands to store files on the remote host. When STOR is used, the remote host will overwrite an existing data set or file, if you try to store a data set or file with the same name.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

EZA1626I Store unique is ON

Explanation: The SUNIQUE subcommand is on. When SUNIQUE is on, FTP uses a store unique command (STOU) with the PUT and MPUT subcommands and prevents you from overwriting or erasing the existing data set or file on the remote host if you attempt to store a data set or file with the same name. The created foreign data set or file is stored with a unique name. FTP sends the name of the created remote data set or file to the local host, where the data set or file name is displayed on your terminal.

System action: FTP continues.

Operator response: Make a note of the unique name that FTP returns to your terminal for the created data set or file.

System programmer response: No action is needed.

Module: EZAFTPCL

EZA1636I *** I can't open a data-transfer connection:

Explanation: FTP cannot establish a data connection. The system displays the specific condition that prevented the connection from being established. FTP closes the socket that was acquired for this connection.

System action: FTP will exit, if the exit parameter has been specified.

Operator response: Reissue the FTP command to reestablish the data connection.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

EZA1638I Store unique will send name

Explanation: A name parameter will be included when the store unique command (STOU) is sent to the server.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL
EZA1639I  Store unique will not send name
Explanation:  A name parameter will not be included when the store unique command (STOU) is sent to the server.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  EZAFTPCL

EZA1643I  Data set dsname was not replaced.
Explanation:  The specified data set was not replaced during data transfer. A local file already exists. If you want to replace the local file, specify GET with the (REPLACE option.
System action:  FTP continues.
Operator response:  If you want to replace the local file with the file that is being transferred, specify the GET command with the (REPLACE option.
System programmer response:  No action is needed.
Module:  EZAFTPCG

EZA1645I  LRECL lrecl is invalid for RECFM recfm
Explanation:  After processing the LOCSITE LRECL=lrecl command, the client cross checked the new values of the RECFM and LRECL variables and found them to be set to a combination that is invalid for the MVS operating system.
System action:  The LRECL value is changed to the nearest value that is compatible with the record format. This message should be followed by EZA2791I, indicating the new value of the LRECL.
Operator response:  If the new value for the LRECL is acceptable, no action is necessary, otherwise change the RECFM and LRECL to valid values.
System programmer response:  Use LOCSITE to set the correct values for RECFM or LRECL. See z/OS DFSMS Using Data Sets for information about selecting valid values for BLOCKSIZE, LRECL, and RECFM.
Module:  EZAFTPMK

Procedure Name:  SiteCheck®

EZA1680W  Member names must be specified with partitioned data sets
Explanation:  A file member was specified incorrectly. File members must be specified using partitioned data sets such as the PROFILE.TCPIP data set. The file set is not accepted.
System action:  FTP continues.
Operator response:  Correct the syntax and resubmit the command.
System programmer response:  No action is needed.
Module:  EZAFTPCG, EZAFTPCP

EZA1681W  Local file already exists
Module:  EZAFTPCG

EZA1682W  To replace it, use the command with the (REPLACE option
Explanation:  This message indicates that a file to be transferred has the same name as a local file. The file is not transferred.
System action:  FTP continues.
Operator response: Rename the local file and resubmit the command, or resubmit the command with the (REPLACE option, as shown in the following example:
get filename (Replace

System programmer response: No action is needed.

Module: EZAFTPCG

---

EZA1684W Local file not found
Explanation: A local file that was to be transferred was not found. The file is not transferred.
System action: FTP continues.
Operator response: Correct the file name and resubmit the command. If the error persists, check the local directory using the LS command to make sure the file exists. For more information about the LS command, see the z/OS Communications Server: IP User’s Guide and Commands.
System programmer response: No action is needed.
Module: EZAFTPCG, EZAFTPCP

---

EZA1685W Invalid local file identifier
Explanation: A local file that was to be transferred has an incorrect file identifier. The file is not transferred.
System action: FTP continues.
Operator response: Correct the file identifier and resubmit the command.
System programmer response: No action is needed.
Module: EZAFTPCG, EZAFTPCP

---

EZA1686W Invalid character in local file identifier
Explanation: A local file that was to be transferred was submitted with an incorrect character in the file identifier. The file is not transferred.
System action: FTP continues.
Operator response: Resubmit the command with the correct file identifier.
System programmer response: No action is needed.

---

EZA1687W Failure attempting to store a member of a partitioned data set
Explanation: FTP was unable to store a member of a partitioned data set because the name was typed incorrectly or because the member no longer exists. The file is not transferred.
System action: FTP continues.
Operator response: Check to make sure that the member is still in storage. If the member is still in storage, resubmit the command with the correct name.
System programmer response: No action is needed.

---

EZA1690W Failure attempting to close the local data set
Explanation: FTP was unable to close the local data set because the data set name was given incorrectly or the data set no longer exists.
System action: FTP continues.
Operator response: Check to make sure that the data set exists. If so, resubmit the command with the correct data set name.
System programmer response: No action is needed.
EZA1691I  srestart not supported for structure  

**Explanation:** An *srestart* subcommand was issued to restart a file transfer, but the structure setting is not *file*.

*structure* is the current structure setting.

**System action:** FTP stops processing *srestart* and prompts for another subcommand.

**Operator response:** If file structure was in effect during the original file transfer, use the structure file subcommand to change the structure to *file* and issue *srestart* again. If file structure was not in effect during the original file transfer, you cannot use *srestart* to restart the file transfer.

**System programmer response:** No action is needed.

Module: EZAFTPCG

Procedure Name: srestart()

---

EZA1692I  srestart not supported for mode  

**Explanation:** An *srestart* subcommand was issued to restart a file transfer, but the current mode is not valid for *srestart*. Only stream mode is valid for *srestart*.

*mode* is the current mode.

**System action:** FTP stops processing *srestart* and prompts for another subcommand.

**Operator response:** If stream mode was in effect during the original file transfer, issue the mode stream subcommand to change the mode to stream and issue *srestart* again. If stream mode was not in effect during the original file transfer, you cannot use *srestart* to restart the file transfer.

**System programmer response:** No action is needed.

Module: EBAFTPCB

Procedure Name: srestart()

---

EZA1693I  srestart not supported for filetype  

**Explanation:** An *srestart* subcommand was issued to restart a file transfer, but the current file type is not valid for *srestart*. Only filetype=SEQ is valid for *srestart*.

*type* is the current file type setting.

**System action:** FTP stops processing *srestart* and prompts for another subcommand.

**Operator response:** If the SEQ file type was in effect during the original file transfer, issue the site filetype=SEQ subcommand to change the file type to SEQ and issue *srestart* again. If SEQ file type was not in effect during the original file transfer, you cannot use *srestart* to restart the file transfer.

**System programmer response:** No action is needed.

Module: EZAFTPCG

Procedure Name: srestart()

---

EZA1694I  srestart not supported for option sunique  

**Explanation:** An *srestart* subcommand was issued to restart a file transfer, but the sunique (store-unique) option is in effect.

**System action:** FTP stops processing *srestart* and prompts for another subcommand.

**Operator response:** Use the *get* or *put* subcommands instead of *srestart* to transfer the file.

**System programmer response:** No action is needed.

Module: EZAFTPCG
Procedure Name: `srestart()`

**EZA1695I**  
`srestart` not supported for data type `type`

**Explanation:** An `srestart` subcommand was issued to restart a file transfer, but the current data type is not valid for `srestart`. Valid data types for `srestart` are I (binary), A (ASCII), and E (EBCDIC).

`type` is the current data transfer type as described in the `z/OS Communications Server: IP User’s Guide and Commands`.

**System action:** FTP stops processing `srestart` and prompts for another subcommand.

**Operator response:** Set the data type to the data type in effect during the original file transfer, then issue `srestart` again. If the data type in effect during the original file transfer is not valid for `srestart`, you cannot use `srestart` to restart the file transfer. You must use the `get` or `put` subcommands to transfer the file.

**System programmer response:** No action is needed.

Module: EZAFTPCB

Procedure Name: `srestart()`

**EZA1696I**  
`srestart` option failed - issue `subcommand`

**Explanation:** An `srestart` subcommand was issued to restart a file transfer, but `ftp` could not restart file transfer. `option` is the option specified on the `srestart` subcommand. `subcommand` is the subcommand suggested by `FTP` to transfer the file.

**System action:** FTP stops processing `srestart` and prompts for another subcommand.

**Operator response:** Issue the `subcommand` to transfer the file.

**System programmer response:** If the `FTP` trace was active, you can check the `FTP` trace output for error messages related to `srestart` option. See the following publications for more information about the `FTP` trace:

- `z/OS Communications Server: IP User’s Guide and Commands`
- `z/OS Communications Server: IP Configuration Guide`
- `z/OS Communications Server: IP Configuration Reference`
- `z/OS Communications Server: IP Diagnosis Guide`

Module: EZAFTPCB

Procedure Name: `srestart()`

**EZA1698I**  
`srestart` failed - SIZE response is not valid

**Explanation:** An `srestart` subcommand was issued to resume a file transfer from the client to the `FTP` server. The client sent a SIZE command to the server to determine how many bytes had already been transferred. The SIZE response returned by the server is not valid, possibly because it points past the end of the client file. The client could not complete the request.

**System action:** FTP stops processing the current subcommand and prompts for the next subcommand.

**Operator response:** Report the error to the system programmer.

**System programmer response:** Verify that the source and destination files have not changed since the original file transfer was interrupted, and that the `srestart` subcommand was valid for restarting the file transfer. See the `z/OS Communications Server: IP User’s Guide and Commands` for information about the `srestart` subcommand. If the files have not changed, and `srestart` was used correctly, report the error to the administrator of the `FTP` server.

Module: EZAFTPCP

Procedure Name: `hfs_sndFile()`
EZA1699I  SRESTART { put localfile [remotefile] | get remotefile [localfile]}

Explanation: This message displays the correct format for the srestart subcommand, which is used to restart a stream mode file transfer. See the z/OS Communications Server: IP User's Guide and Commands for more information about the srestart command.

System action: None.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

Procedure Name: usage()

EZA1700I  restart a stream mode file transfer

Explanation: This message displays the purpose of the srestart subcommand. See the z/OS Communications Server: IP User's Guide and Commands for more information about the srestart command.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

Procedure Name: dohelp()

EZA1701I  >>>

Explanation: This message precedes echoes such as PASS ******** and ACCT ******** to acknowledge user-submitted data.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

EZA1702W  Transmission mode mode not implemented for type B.

Explanation: The data type B (double Byte) is not supported while in block or compress transmission mode.

System action: FTP continues.

Operator response: Either change to mode s (stream) or change the data type to EBCDIC and reissue the command.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

EZA1719I  subcommand not supported for UNIXFILETYPE=FIFO

Explanation: A subcommand was issued to restart a file transfer to or from a file in the client z/OS UNIX file system, but the value currently configured for the UNIXFILETYPE parameter is not valid for the subcommand. Only UNIXFILETYPE FILE is valid for a subcommand when the local file is a z/OS UNIX file.

See the information about the UNIXFILETYPE statement in z/OS Communications Server: IP Configuration Reference and the LOCSite subcommand in z/OS Communications Server: IP User’s Guide and Commands for information about the UNIXFILETYPE configuration option.

In the message text:

subcommand

The subcommand that you entered to restart a file transfer.

Examples:
EZA1460I Command:
srerestart get /etc/hosts
EZA1719I srerestart not supported for UNIXFILETYPE=FIFO
EZA1696I srerestart get failed - issue get
EZA1460I Command:

System action: FTP stops processing the subcommand specified by the subcommand value and prompts you to enter another subcommand.

Operator response: Not applicable.

User response: If UNIXFILETYPE FILE was configured during the original file transfer, you can issue the LOCSite subcommand to change the UNIXFILETYPE value back to FILE and issue the specified subcommand again or you can start the interrupted file transfer from the beginning.

If UNIXFILETYPE FIFO was configured during the original file transfer, you cannot resume the interrupted file transfer with a RESStart or SRestart subcommand. See the information about restarting a failed data transfer in z/OS Communications Server: IP User’s Guide and Commands.

System programmer response: None.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: FTP
Module: ezaftpcb
Routing code: 10
Descriptor code: 12
Automation: Not applicable for automation.

---

EZA1720I REPLACE option not allowed for UNIXFILETYPE=FIFO

Explanation: You entered a get or mget subcommand, specifying the REPLACE option and a z/OS UNIX local file when UNIXFILETYPE= FIFO was configured. The REPLACE option is not valid for z/OS UNIX files when UNIXFILETYPE=FIFO is configured. If the local file is a z/OS UNIX named pipe, you cannot overwrite the contents of the named pipe. Writing into a named pipe always appends to the contents of the named pipe.

Examples:
EZA1460I Command:
get /etc/hosts /tmp/trash/x (rep
EZA1720I REPLACE option not allowed for UNIXFILETYPE=FIFO
EZA1460I Command:

System action: FTP stops processing the current subcommand and prompts you to enter another subcommand.

Operator response: Not applicable.

User response: If the local file is a z/OS UNIX regular file, issue the LOCSite subcommand with the UNIXFILETYPE=FILE parameter. Then issue the original subcommand again.

If the local file is a z/OS UNIX named pipe, issue the subcommand without the REPLACE parameter. The incoming data will be appended to the contents of the named pipe.

System programmer response: None.

Problem determination: To determine whether a z/OS UNIX file is a regular file or a named pipe, use the z/OS UNIX ls command. See the information about the long output format in z/OS UNIX System Services Command Reference.

Source: z/OS Communications Server TCP/IP: FTP
Module: ezaftpcg.c
Routing code: 10
Descriptor code: 12
Automation: Not applicable for automation.
EZA1721W Server not responding, closing connection.

Explanation: The FTP client is closing the connection to the FTP server because the server is not responding.

System action: FTP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Use the Ping command to make sure that the server is accessible to the system. If the server is accessible, check to make sure it is executing FTP properly. See the z/OS Communications Server: IP System Administrator’s Commands for more information about the Ping command.

EZA1722I UNIXFILETYPE=FIFO requires FILETYPE=SEQ

Explanation: You attempted to transfer to or from a file in the z/OS UNIX file system when UNIXFILETYPE=FIFO was configured. The current FILETYPE value is not SEQ. This combination of values is not supported.

Examples:
Command:
get /etc/hosts /tmp/x
UNIXFILETYPE=FIFO requires FILETYPE=SEQ
Command:

System action: FTP stops processing the current subcommand, and prompts you to enter the next subcommand.

Operator response: None.

User response: Do one of the following to set a valid combination of parameters.

- If the local file is a z/OS UNIX regular file, issue the LOCSIte subcommand with the UNIXFILETYPE=FILE parameter to change the UNIXFILETYPE value.
- If the local file is a z/OS UNIX named pipe, issue the LOCSIte subcommand with the FILETYPE=SEQ parameter to change FILETYPE.

Then reissue the file transfer subcommand.

System programmer response: None.

Problem determination: To determine whether a z/OS UNIX file is a regular file or a named pipe, use the z/OS UNIX ls command. See the information about the long output format in z/OS UNIX System Services Command Reference.

Source: z/OS Communications Server TCP/IP: FTP

Module: ezaftpcg.c, ezaftpcp.c

Routing code: 10

Descriptor code: 12

Automation: Not applicable.

EZA1725I subcommand fails -- localFile is not a named pipe

Explanation: The subcommand that you issued specified a file in the client z/OS UNIX file system as the local file. The local file is not a z/OS UNIX named pipe, and UNIXFILETYPE=FIFO is configured. A local file in the z/OS UNIX file system must be a named pipe when UNIXFILETYPE=FIFO is configured.

For more information about the UNIXFILETYPE configuration option, see the following sources:

- The UNIXFILETYPE statement in z/OS Communications Server: IP Configuration Reference
- The LOCSIte subcommand in z/OS Communications Server: IP User’s Guide and Commands
- The information about using z/OS UNIX System Services named pipes in z/OS Communications Server: IP User’s Guide and Commands

In the message text:
subcommand
The subcommand that failed.
localFile

The local file in the client's z/OS UNIX file system.

Examples:
EZA1460I Command:
locsite unixfiletype=fifo
EZA1460I Command:
put /etc/hosts
EZA1725I put fails -- /etc/hosts is not a named pipe
EZA1726I local file must be a named pipe when UNIXFILETYPE=FIFO
EZA1460I Command:

EZA1460I Command:
get /etc/hosts
EZA1725I Get fails -- /etc/hosts is not a named pipe
EZA1726I local file must be a named pipe when UNIXFILETYPE=FIFO
EZA1460I Command:

System action: FTP stops processing subcommand, and prompts you to enter the next subcommand.

Operator response: None.

User response: If you intended to specify a named pipe, do one of the following:
• Reissue the subcommand with a z/OS UNIX named pipe specified as the local file.
• If the subcommand is get or mget, reissue the subcommand and specify a name that does not yet exist in the z/OS UNIX file system.

If you did not intend to specify a named pipe, issue the LOCsite subcommand with the UNIXFILETYPE=FILE parameter. Then issue the subcommand again.

System programmer response: None.

Problem determination: To determine whether a z/OS UNIX file is a regular file or a named pipe, use the z/OS UNIX ls command.

To create a named pipe, use the z/OS UNIX mkfifo or mknod command.

See the information about the long output format in z/OS UNIX System Services Command Reference.

---

**EZA1733I** waiting up to `seconds` seconds for process `process` to open `localNamedPipe`

**Explanation:** You issued a subcommand that specified a z/OS UNIX named pipe as the local file. The FTP client must wait for another process to open the named pipe before it can continue processing.

In the message text:

- `seconds`:
  The number of seconds that the FTP client will wait for another process to open the named pipe. You can use the `FIFOOPENTIME` configuration option to change this value.

- `process`:
  Indicates whether the other process must open the named pipe for writing or reading. Valid values are:
  - `read`
    FTP expects another process to open the named pipe for reading.
  - `write`
    FTP expects another process to open the named pipe for writing.

- `localNamedPipe`:
  The z/OS UNIX named pipe that you specified. See the information about using z/OS UNIX System Services named pipes in z/OS Communications Server: IP User’s Guide and Commands.

**Examples:** In the first example, the user set the `UNIXFILETYPE` configuration option to FIFO and the `FIFOOPENTIME` configuration option to 30. The user issued a PUT subcommand that specified the `/tmp/sample.fifo` named pipe. FTP waited for another process to open the named pipe for writing. When another process opened the named pipe, FTP was able to continue processing the PUT subcommand.

```plaintext
EZA1460I Command: 
locsite unixfiletype=fifo fifoopentime=30
EZA1460I Command: 
put /tmp/sample.fifo
EZA1733I waiting up to 30 seconds for write process to open /tmp/sample.fifo
EZA1701I >>> PORT 9,42,105,36,4,10
200 Port request OK.
EZA1701I >>> STOR sample.fifo
125 Storing data in the Null directory (*dev.null). 
250 Transfer completed successfully.
EZA1617I 787 bytes transferred in 1.260 seconds. Transfer rate 0.62 Kbytes/sec.
EZA1460I Command: 
```

In this example, the user entered a PUT subcommand that specified the `/tmp/sample.fifo` named pipe. FTP waited for 30 seconds for another process to open the named pipe for writing. No other process opened the named pipe. FTP issued message EZA1734I to indicate that it stopped waiting.

```plaintext
EZA1460I Command: 
put /tmp/sample.fifo
EZA1733I waiting up to 30 seconds for write process to open /tmp/sample.fifo
EZA1734I timer expired waiting for write process to open /tmp/sample.fifo
EZA1460I Command: 
```

**System action:** The FTP client waits up to the number of seconds specified by the `seconds` value for another process to open the named pipe. If another process opens the named pipe as expected, FTP continues processing the current
subcommand. If another process does not open the named pipe within the time specified, FTP issues message EZA1734I and stops processing the current subcommand.

**Operator response:** None.

**User response:** None.

**System programmer response:** Start the process that will read from or write to the named pipe.

**Problem determination:** See the user response.

**Source:** z/OS Communications Server TCP/IP: FTP

**Module:** ezaftpcg.c, ezaftpcp.c

**Routing code:** 10

**Descriptor code:** 12

**Automation:** Not applicable.

---

**EZA1734I** timer expired waiting for **process** process to open **localFile**

**Explanation:** The FTP client tried to open a named pipe in the z/OS UNIX file system. The client waited for the number of seconds specified by the FIFOOPENTIME configuration option. The FIFOOPENTIME time limit expired before another process opened the named pipe.

In the message text:

**process**
Indicates whether FTP was waiting for another process to open the named pipe for writing or reading. Valid values are:

**read**
FTP was trying to open the named pipe for writing as part of inbound file transfer. The FTP client cannot write to a named pipe until another process on the client host opens the named pipe for reading.

**write**
FTP was trying to open the named pipe for reading as part of outbound file transfer. The FTP client cannot read from a named pipe until another process on the client host opens the named pipe for writing.

**localFile**
The name of the named pipe.

Message EZA1733I precedes this message, and indicates how long the FTP client waits for another process to open a named pipe.

See information about the UNIXFILETYPE (FTP client and server) statement and the FIFOOPENTIME (FTP client and server) statement in z/OS Communications Server: IP Configuration Reference

**Examples:**

EZA1460I Command:
get /etc/hosts /tmp/sample.fifo
EZA1733I waiting up to 30 seconds for read process to open /tmp/sample.fifo
EZA1734I timer expired waiting for read process to open /tmp/sample.fifo
EZA1460I Command:

put /tmp/sample.fifo
EZA1733I waiting up to 30 seconds for write process to open /tmp/sample.fifo
EZA1734I timer expired waiting for write process to open /tmp/sample.fifo
EZA1460I Command:

**System action:** FTP stops processing the current subcommand, and prompts for another subcommand.

**Operator response:** None.

**User response:** Perform the following steps:

1. Consider increasing the FIFOOPENTIME configured value before attempting the file transfer again.
   a. Inspect message EZA1733I to determine the FIFOOPENTIME configured value.
b. Issue the LOCSIte subcommand with the FIFOOPENTIME parameter to specify a larger value.

See the information about the LOCSIte subcommand in z/OS Communications Server: IP User's Guide and Commands for information about the FIFOOPENTIME configuration option.

2. Start the file transfer again. If restarting the file transfer does not solve the problem, notify the System Programmer.

System programmer response: Start a process at the FTP client host:
- When the process value is write, start the process that will write to the named pipe.
- When the process value is read, start the process that will read from the named pipe.

After you start the process, attempt the file transfer again.

Problem determination: None.

Source: z/OS Communications Server TCP/IP: FTP
Module: ezatifpg, ezatifpcp
Routing code: 10
Descriptor code: 12
Automation: Not applicable.

EZA1735I Std Return Code = rc, Error Code = ec

Explanation: FTP has ended with an error only because the user has specified EXIT as a start parameter. Normally FTP would continue.

rc is the standard return code. rc is in the format yyyyy, where

yy the subcommand code, which is a number from 0 to 99.

xxx This is the last reply code received from the FTP server. If a subcommand failed before a reply was received from the server, this value is 000.

ec is the client error code set by the FTP client.

System action: The FTP client ends.

Operator response: To determine the cause of the error, see FTP return codes in z/OS Communications Server: IP User's Guide and Commands for information about FTP return codes, including subcommand codes, client error codes, and reply codes.

System programmer response: No action is needed.

Module: EZAFTPCX

EZA1736I Argument

Explanation: FTP is echoing valid arguments from user-submitted data or indicating a QUIT command was generated by unexpected end of file.

System action: FTP continues when echoing valid arguments or terminates when unexpected end of file is encountered.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCU
Module: EZAFTPCX
EZA1737E  Command input too long.

Explanation:  The FTP command input line exceeds the expected length.

System action:  FTP bypasses the command and continues.

Operator response:  Correct the input command stream.

System programmer response:  No action is needed.

Module:  EZAFTPCU

EZA1739I  subcommand failed - timer expired while reading from named pipe

Explanation:  While the FTP client was sending data from the named pipe to the FTP server, it tried to read from a named pipe in the client z/OS UNIX file system. The client waited for the number of seconds specified by the FIFOIOTIME configured value for the read to complete. One reason for this timeout is that the process that is writing to the named pipe stopped writing data without closing the named pipe.

Any data that was sent from the client to the server before the timer expired has been permanently removed from the named pipe.

See the following sources:

- The information about the FIFOIOTIME (FTP client and server) statement in z/OS Communications Server: IP Configuration Reference
- The information about the LOCSIte subcommand in z/OS Communications Server: IP User’s Guide and Commands
- The information about using z/OS UNIX System Services named pipes in z/OS Communications Server: IP User’s Guide and Commands

In the message text:

subcommand

The subcommand that failed because FTP could not read from the named pipe.

Examples:

put /tmp/sample.fifo
EZA1733I waiting up to 60 seconds for write process to open /tmp/sample.fifo
EZA1701I >>> PORT 9,42,105,36,4,36
200 Port request OK.
EZA1701I >>> STOR sample.fifo
125 Storing data set /u/user1/sample.fifo

EZA1739I put failed -- timer expired while reading from named pipe
250 Transfer completed successfully.

EZA1460I Command:

EZA1460I Command:

appe /tmp/sample.fifo /u/user1/sample.fifo
EZA1733I waiting up to 60 seconds for write process to open /tmp/sample.fifo
EZA1701I >>> PORT 9,42,105,36,4,42
200 Port request OK.
EZA1701I >>> APPE /u/user1/sample.fifo
125 Appending to data set /u/user1/sample.fifo
EZA1739I append failed -- timer expired while reading from named pipe
250 Transfer completed successfully.

EZA1460I Command:

System action:  FTP stops processing the current subcommand, and prompts for the next subcommand.

Operator response:  None.

User response:  Report the problem to the system programmer.
System programmer response: Perform the following steps:

1. Consider increasing the FIFOIOTIME configured value.
   a. Use the LOCSTat subcommand and specify the FIFOIOTIME parameter to query the current FIFOIOTIME value.
   b. Use the LOCSIte subcommand and specify the FIFOIOTIME parameter to increase the FIFOIOTIME value.

   If you anticipate long idle periods, consider increasing local timers to prevent connection timeouts. See the information about the DATACTTIME (FTP client) statement, the FTPKEEPALIVE (FTP client and server) statement, and the DATAKEEPALIVE (FTP client and server) statement in z/OS Communications Server: IP Configuration Reference for more information about FTP client timers.

2. Determine why the process that writes to the named pipe stopped writing data, but did not close the named pipe.

3. Reissue the subcommand. Any data that was sent from the client to the server before the timer expired has been removed from the named pipe. You must take this into consideration before repeating the file transfer.

Problem determination: See the system programmer response.

Automation: Not applicable.

---

EZA1764W  FTP: ExitCode 'code' is out of range.
Explanation: The ExitCode is out of range. The correct range is from 0 to 4095.
System action: FTP halts.
Operator response: Correct the value specified for the EXIT= start parameter.
System programmer response: No action is needed.
Module: EZAFTPCY

EZA1767I  Source IP address address is not valid
Explanation: The address specified on the -s parameter of the FTP command is not valid. The address must be a valid IPv4 or IPv6 address and cannot be INADDR_ANY, IN6ADDR_ANY, or an IPv4-mapped IPv6 address.
In the message text:

  address

  The IP address specified for the -s parameter on the FTP command.

Examples:
EZA1767I Source IP address 0.0.0.0 is not valid
System action: The FTP command fails.
Operator response: No action is needed.
User response: Reissue the FTP command specifying a valid source IP address.
System programmer response: No action is needed.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: FTP
Module: EZAFTPCY
Routing code: 10
Descriptor code: 12
EZA1768I  Timeout 'timeout' out of range. Must be between 15 and 86400. Default used.

Explanation: The timeout value specified is not in the valid range of 15 - 86400. The default timeout value is used instead.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCY

EZA1770I  Source IP address is missing

Explanation: The -s parameter was specified on the FTP command but the IP address was omitted.

Examples:
EZA1770I Source IP address is missing

System action: The FTP command fails.

Operator response: No action is needed.

User response: Reissue the FTP command, specifying a valid source IP address. See the information about the FTP command in z/OS Communications Server: IP User’s Guide and Commands

System programmer response: No action is needed.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: FTP

Module: EZAFTPCY

Routing code: 10

Descriptor code: 12

EZA1772I  FTP: EXIT has been set.

Explanation: An exit has been set. FTP will exit the session for certain FTP errors with a nonzero MVS return code. See the z/OS Communications Server: IP User’s Guide and Commands for information about FTP EXIT Return Codes.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCY

EZA1784E  Data to be written exceeds maximum file LRECL; source ASCII file probably lacks record delimiters.

Explanation: This message is issued when an FTP GET subcommand converts an ASCII format source file to an EBCDIC format destination file if the number of bytes waiting to be written to the disk exceeds the maximum supported logical record length (LRECL), and the NOWRAPrecord parameter was specified for the LOCSITE command, preventing the client from automatically wrapping longer than allowable records to the next line. The file transfer is not completed. No data is written to disk.

System action: If FTP was invoked with the EXIT option, the session is ended with return code 16150. Otherwise, FTP continues and waits for the next user command.

Operator response: If necessary, restart FTP. Before attempting to transfer the file again, submit the LOCSITE command, specifying the WRAPrecord parameter, allowing the FTP client to wrap longer than allowable records onto a new line, then resubmit the GET command.

System programmer response: No action is needed.
EZA1787W  Not authorized to access requested local file.

**Explanation:**  The user is not authorized to access the requested local file. Access can be granted by the file owner. Otherwise, the file cannot be accessed.

**System action:**  FTP continues.

**Operator response:**  Contact the administrator for the file and request access.

**System programmer response:**  No action is needed.

**Module:**  EZAFTPCG, EZAFTPCP

---

EZA1788I  ACCOUNT

**Explanation:**  This is a prompt for accounting information from the target host system.

**System action:**  None.

**Operator response:**  No action is needed.

**System programmer response:**  No action is needed.

**Module:**  EZAFTPCZ

---

EZA1865I  Command not Supported. Translation Table not Loaded.

**Explanation:**  A valid FTP client TYPE subcommand was entered to change the current transfer type, but the DBCS translation table required for that transfer type is not loaded. The current FTP transfer type is unchanged.

**System action:**  The program continues.

**Operator response:**  Consult the system programmer.

**System programmer response:**  Configure a valid DBCS binary translate table data set in the search order hierarchy for the required DBCS translation table, and specify LOADDBCSTABLES in TCPIDATA for the required DBCS translation table. See [z/OS Communications Server: IP Configuration Reference](http://www.ibm.com/support/docview.wss?uid=ssg1S1005381) for more information about the loading and customizing of DBCS translation tables.

**Module:**  EZAFTPCT
Chapter 3. EZA2xxx messages

EZA2063I  Local directory is partitioned data set directory
Explanation: The name of the partitioned data set. A partitioned data set (PDS) is a data set in direct access storage that is divided into partitions called members, each of which can contain a program, part of a program, or data.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

EZA2064I  Local directory is directory
Explanation: The current local directory.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA2065I  Local directory is null string.
Explanation: No local directory name has been specified.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA2070I  Invalid local directory name entered - Too large.
Explanation: The length of the local directory name is larger than the field specified. The directory name cannot be more than 8 characters in length.
System action: FTP continues.
Operator response: Enter the command with correct syntax and try it again. See the z/OS Communications Server: IP User’s Guide and Commands for more information.
System programmer response: No action is needed.
Module: EZAFTPCD

EZA2071I  Mismatched quotes on directory name “name”
Explanation: You entered a subcommand with name as the directory name parameter. The syntax used in the directory name parameter is incorrect.
System action: FTP continues.
Operator response: Enter the subcommand with the correct syntax and try it again. To override the existing directory rather than append a qualifier to that directory, enclose the qualifier in single quotation marks. For example: LCD ‘FTP.FILES’. See the z/OS Communications Server: IP User’s Guide and Commands for more information.
System programmer response: No action is needed.
Module: EZAFTPCD
EZA2072I Final directory name is too large.

Explanation: The directory name is larger than the field specified. The directory name cannot be more than 8 characters in length.

System action: FTP continues.

Operator response: Enter the command with the correct syntax and try it again. See the [z/OS Communications Server: IP User's Guide and Commands](https://publib.boulder.ibm.com/infocenter/zos/v1r13/topic/com.ibm.zos.r13_msgs_ref/zosipmsgref_zosipmsgref.htm) for more information.

System programmer response: No action is needed.

EZA2073I A qualifier in pathname begins with an invalid character.

Explanation: You entered a subcommand with the pathname parameter pathname. The pathname specified in the subcommand is incorrect.

System action: FTP continues.

Operator response: Enter the subcommand with a valid pathname and try it again.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2076I Directory is already null. ".." operand ignored.

Explanation: An attempt was made to back up one directory level, when the local directory is already null. The local directory remains the null directory.

System action: FTP continues.

Operator response: None

System programmer response: None

Module: EZAFTPCD

EZA2080I Data sets will be allocated on volume

Explanation: This message displays the list of volumes on which new data sets will be allocated during an FTP session.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2081I Local directory name set to partitioned data set directory

Explanation: The name of the local directory in the partitioned data set. A partitioned data set (PDS) is a data set in direct access storage that is divided into partitions called members, each of which can contain a program, part of a program, or data.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCD, EZAFTPCL
EZA2082I  Local directory name set to directory

Explanation: This message displays the name of the local directory.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2083I  Local directory set to null string.

Explanation: No local directory has been specified. The local directory field has been set to null. A null string is a character or bit string with a length of 0.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2090I  directory is a migrated data set and Noautorecall is specified. Local directory name not changed.

Explanation: The directory specified is a migrated data set. A migrated data set is a data set that has been moved from one hierarchy of storage to another. The local directory name is not changed. See the z/OS Communications Server: IP User’s Guide and Commands for more information about the LCD - Changing the Working Level Qualifier - subcommand.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2091I  Error recalling directory. Local directory name not changed.

Explanation: The directory name specified could not be recalled. The directory name remains unchanged.

System action: FTP continues.

Operator response: Enter the command with the correct syntax and try it again. See the z/OS Communications Server: IP User’s Guide and Commands for more information.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2092I  directory is on a direct access volume that is not mounted and Noautomount is specified.

Explanation: The local directory remains unchanged because the directory name specified was not found in the mounted direct access volume. The NOAUTOMount parameter can be specified in the SITE or LOCSITE subcommands. NOAUTOMount prevents automatic mounting of direct access volumes.

System action: FTP continues.

Operator response: Enter the command with the correct syntax and try it again. See the z/OS Communications Server: IP User’s Guide and Commands for more information.

System programmer response: No action is needed.

Module: EZAFTPCD
EZA2093I  Error mounting volume for directory. Local directory name is not changed.

Explanation: An unexpected condition occurred in trying to mount the direct access volume for the directory name specified. The local directory name remains unchanged.

System action: FTP continues.

Operator response: Enter the command with the correct syntax and try it again. See the [z/OS Communications Server: IP User’s Guide and Commands](http://www.ibm.com/support/docview.wss?uid=swg27008102) for more information about the LCD subcommand.

System programmer response: No action is needed.

Module: EZAFTPCD

---

EZA2097I  No automatic recall of migrated data sets.

Explanation: No automatic recall has been specified for migrated data sets. The NOAUTORecall parameter can be specified in the SITE and LOCSITE subcommand. NOAUTORecall prevents automatic recall of a migrated hierarchical storage manager (HSM) data set. See the [z/OS Communications Server: IP User’s Guide and Commands](http://www.ibm.com/support/docview.wss?uid=swg27008102) for more information.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2098I  Automatic recall of migrated data sets.

Explanation: The AUTORecall parameter has been specified. The AUTORecall permits automatic recall of migrated hierarchical storage manager (HSM) data sets. This parameter is specified in the SITE and LOCSITE subcommand.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2099I  No automatic mount of direct access volumes.

Explanation: No automatic mount of direct access volumes has been specified. The NOAUTOMount parameter can be specified in the SITE or LOCSITE subcommands. NOAUTOMount prevents automatic mounting of direct access volumes. See the [z/OS Communications Server: IP User’s Guide and Commands](http://www.ibm.com/support/docview.wss?uid=swg27008102) for more information.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2100I  Automatic mount of direct access volumes.

Explanation: Automatic mount of direct access volumes has been specified. The AUTOMount parameter can be specified in the SITE or LOCSITE subcommands. AUTOMount permits automatic mounting of direct access volumes. See the [z/OS Communications Server: IP User’s Guide and Commands](http://www.ibm.com/support/docview.wss?uid=swg27008102) for more information.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK
EZA2101I  Data set mode. (Do not treat each qualifier as a directory.)

Explanation: The DATASetmode option has been specified for the SITE or LOCSITE subcommand. DATASetmode specifies that all the data set qualifiers below the current directory are treated as entries in the directory. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2102I  Directory mode. (Treat each qualifier as a directory.)

Explanation: Directory mode has been specified. The directory mode is declared in the Directorymode parameter of the SITE and LOCSITE subcommands. This parameter specifies that only the data set qualifier immediately below the current directory is treated as an entry in the directory. In directory mode, this qualifier is only used by the MPUT, MGET, LS, and DIR subcommands. See the z/OS Communications Server: IP User's Guide and Commands for more information.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2103I  FileType is SEQ (Sequential - the default).

Explanation: This message is displayed when you issue a LOCSTAT command.

EZA2104I  UTF-8 encoding is used on the control connection

Explanation: This message indicates UTF-8 encoding is used on the control connection for this session.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

Procedure Name: LOCSTAT

EZA2105I  FileType is SQL (Query to perform).

Explanation: This message is displayed when you issue a LOCSTAT command.

EZA2106I  srestart option not supported for MVS data sets

Explanation: An srestart subcommand was entered to restart a file transfer involving an MVS data set. The srestart option is not supported for MVS data sets.

option is the srestart subcommand option entered.

System action: FTP stops processing the current subcommand, and prompts for the next subcommand.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCB

Procedure Name: srestart_get(), srestart_put()
**EZA2107I**  
*option option is not supported for a proxy subcommand*

**Explanation:** You entered a proxy subcommand that is valid for proxy sessions, but you included a subcommand option that is not supported for proxy sessions.

*option* is the option that is not supported.

**System action:** The FTP client rejects the subcommand. Processing continues.

**Operator response:** Either issue the proxy subcommand without the option, or log in to the proxy server as your primary session and issue the subcommand as a primary session command.

**System programmer response:** No action is needed.

**Module:** ezafpcr

**Procedure Name:** mkdir()

---

**EZA2108I**  
*Confidence=confidence_level for action of name*

**Explanation:** This message is issued to report the level of confidence the FTP client has in the successful completion of a data transfer when CHKCONFIDENCE TRUE is specified or defaulted in the client’s FTP.DATA data set.

*confidence_level* is the level of confidence that the FTP client has in the completion of the transfer. Values for *confidence_level* are:

- **High**  
  While successful completion of the transfer cannot be guaranteed, the FTP client detected no reason to doubt the successful completion of the transfer.

- **NoEOF**  
  The FTP client detected a missing EOF marker in a STRU R or MODE B or C inbound file. This level is not reported when another problem is detected.

- **Low**  
  The FTP client detected a problem with completion of the transfer such as failure of the server to respond after the transfer or another reported error. Low overrides NoEOF if both conditions are present.

*action* is the action taken on the file or data set. Values for *action* are:

- **APPEND**  
  File or data set is being appended by the FTP client.

- **GET**  
  File or data set is being retrieved by the FTP client.

- **MGET**  
  Files or data sets are being retrieved by the FTP client.

- **MPUT**  
  Files or data sets are being sent by the FTP client.

- **PUT**  
  File or data set is being sent by the FTP client.

- **RESTART (OF GET)**  
  Retrieval of file or data set by FTP client restarted.

- **RESTART (OF PUT)**  
  Sending of file or data set by FTP client restarted.

- **SRESTART GET**  
  Stream mode retrieval of file or data set by FTP client restarted.

- **SRESTART PUT**  
  Stream mode sending of file or data set by FTP client restarted.

*name* is the name of the file or data set being transferred.

**System action:** FTP continues.

**Operator response:** Check to see whether the transfer completed successfully and try again if necessary.

**System programmer response:** No action is needed.

**Module:** EZAFTPCG, EZAFTPCP

**Procedure Name:** hfs_rcvFile, mvs_rcvFile, sndFile
EZA2109I  Confidence level of data transfers is checked and reported

Explanation:  This message is issued in response to the LOCSTAT subcommand when CHKCONFIDENCE TRUE is coded in the client's FTP.DATA. It means that the confidence level in the successful completion of transfers from or to the FTP client will be determined and reported in message EZA2108I.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPCL

Procedure Name:  locstat

EZA2110I  Confidence level of data transfers is neither checked nor reported

Explanation:  This message is issued in response to the LOCSTAT subcommand when CHKCONFIDENCE FALSE is coded in the client's FTP.DATA. This means that the confidence level in successful completion of data transfers will not be determined or reported. This does not disable error reporting.

System action:  FTP continues.

Operator response:  If you want to activate confidence checking and reporting, see the information about the [CHKCONFIDENCE statement](https://www.ibm.com/support/knowledgecenter/POWER8/p55257/frp55257.html) in *z/OS Communications Server: IP Configuration Reference* for information about coding the CHKCONFIDENCE statement in FTP.DATA.

System programmer response:  No action is needed.

Module:  EZAFTPCL

Procedure Name:  locstat

EZA2111I  Outbound SBCS ASCII data uses \texttt{lt\_chars} line terminator

Explanation:  This message is issued in response to the LOCSTAT subcommand. Each line of single-byte data being transferred to the server and translated to ASCII in the FTP client will use the displayed line terminator. This value is determined by the LOCSITE SBSENDEOL parameter or the SBSENDEOL FTP.DATA statement.

\texttt{lt\_chars} is the line terminator that will be used. Values for \texttt{lt\_chars} are:

- \texttt{CRLF}: Single-byte data translated to ASCII will use the combination of a carriage return (x'0D') and line feed (x'0A') to terminate each line. This is the default and the standard line terminator defined by RFC 959. The z/OS server and client can receive ASCII data only in this format.

- \texttt{CR}: Single-byte data translated to ASCII will use a carriage return (x'0D') only to terminate each line.

- \texttt{LF}: Single-byte data translated to ASCII will use a line feed (x'0A') only to terminate each line.

- \texttt{no}: Single-byte data translated to ASCII will use no line terminator characters.

System action:  FTP continues.

Operator response:  If it is necessary to change the \texttt{lt\_chars} setting, use the LOCSITE subcommand with the SBSENDEOL parameter, or code an SBSENDEOL statement in FTP.DATA.

System programmer response:  No action is needed.

Module:  EZAFTPCL

Procedure Name:  locstat

EZA2112I  Outbound MBCS ASCII data uses \texttt{lt\_chars} line terminator

Explanation:  This message is issued in response to the LOCSTAT subcommand. Each line of multi-byte data being transferred to the server and translated to ASCII in the FTP client will use the displayed line terminator. This value is determined by the LOCSITE MBSENDEOL parameter or the MBSENDEOL FTP.DATA statement.

\texttt{lt\_chars} is the line terminator that will be used. Values for \texttt{lt\_chars} are:

- \texttt{CRLF}: Multi-byte data translated to ASCII will use the combination of a carriage return (x'0D') and line feed (x'0A')
to terminate each line. This is the default and the standard line terminator defined by RFC 959. The z/OS server and client can receive ASCII data only in this format.

CR Multi-byte data translated to ASCII will use a carriage return (x'0D') only to terminate each line.
LF Multi-byte data translated to ASCII will use a line feed (x'0A') only to terminate each line.
no Multi-byte data translated to ASCII will use no line terminator characters.

System action: FTP continues.

Operator response: Change the setting, if necessary, using the LOCSITE MBSENDEOL parameter or the MBSENDEOL FTP:DATA statement.

System programmer response: No action is needed.

Module: EZAFTPCL
Procedure Name: locstat

EZA2117I Client SBSENDEOL must be CRLF for stream mode restart of put

Explanation: This message is displayed when the SRESTART PUT subcommand is issued while SBSENDEOL is not set to CRLF. The client cannot reliably restart a PUT operation unless the SBSENDEOL setting was CRLF during the interrupted PUT or APPEND subcommand. Therefore, SRESTART PUT is disabled for the remainder of this FTP login session. See the information about the SBSENDEOL statement in the z/OS Communications Server: IP Configuration Reference for more information about SBSENDEOL settings.

System action: The FTP client stops processing the SRESTART PUT subcommand.

Operator response: The file transfer must be started again from the beginning. If you continue to experience this error, report the error to the system programmer.

System programmer response: Most servers do not require an SBSENDEOL setting other than the default, CRLF. If SBSENDEOL is coded as a different value in FTP:DATA or you use the LOCSITE subcommand to set the value to anything other than CRLF, users will not be able to issue an SRESTART PUT command to restart a file transfer in stream mode. If your users require the alternate SBSENDEOL value for only certain servers, specify SBSENDEOL CRLF in the client FTP:DATA data set and instruct the users to issue the LOCSITE SBSENDEOL subcommand only after logging in to those servers to allow the users to restart outbound stream mode file transfers to the servers that do not require the alternate SBSENDEOL value.

Consider whether block or compressed mode file transfers would be appropriate for your installation. Block and compressed mode transfers can be restarted if you initiated checkpointing before the file transfer. See the information about restarting a failed data transfer in z/OS Communications Server: IP User's Guide and Commands.

Module: EZAFTPCB
Procedure Name: None.

EZA2118I srestart failed - file transferred while SBSENDEOL not CRLF

Explanation: You issued an SRESTART PUT subcommand to resume a stream mode, type ASCII, SBCS file transfer. Previously, while Mode was Stream, Type was ASCII, Encoding was SBCS, and SBSENDEOL was a value other than CRLF, you sent or tried to send a file with a PUT, MPUT, or APPEND subcommand. The FTP client disabled the SRESTART subcommand for the rest of the session because stream mode file transfer restarts are not reliable under these conditions.

System action: The FTP client prompts for another subcommand.

Operator response: Issue the PUT subcommand to send the file again. If this error occurs often, contact the System Programmer.

System programmer response: For file transfers to servers that do not require an alternate SBSENDEOL value, code the default SBSENDEOL value to be CRLF, and instruct the users to issue the LOCSITE subcommand to change the value only after logging into those servers that support alternate SBSENDEOL values for inbound mode stream, type ASCII file transfers. For file transfers to servers that do require an alternate SBSENDEOL value, do not attempt to SRESTART (stream mode restart) Type ASCII outbound transfers.

See the information about the SBSENDEOL statement in the z/OS Communications Server: IP Configuration Reference for
See the information about the LOCSITE subcommand, the SRESTART subcommand, and the PUT subcommand in z/OS Communications Server: IP User's Guide and Commands.

Module: EZAFTPCB
Procedure Name: srestart_put()
EZA2121I Command (ee-ss-cccc-rrr):

Explanation: The FTP client is prompting the FTP callable API for another subcommand. The FTP client is also providing the FTP callable API with information about the previous command processed.

- ee is the 2-digit decimal client error code for the subcommand (00 if no error). The FTP Client Error Codes can be found in z/OS Communications Server: IP User's Guide and Commands.
- ss is the 2-digit decimal code of the FTP client subcommand (all blanks if none). The FTP subcommand codes can be found in z/OS Communications Server: IP User's Guide and Commands.
- cccc is the 4-character FTP command sent to the server (all blanks if no command was sent).
- rrr is the 3-digit decimal server reply to the FTP command (all blanks if no command was sent).

The following example is a prompt message that is sent after a GET subcommand completes successfully:

EZA2121I Command (00-16-RETR-250):

System action: The FTP client waits for the next subcommand.
Operator response: Enter the next subcommand.
System programmer response: No action is needed.
Module: EZAFTPCU
Procedure Name: promptCallableAPI

EZA2123I FtpStop (ee-ss-cccc-rrr):

Explanation: This is the final message sent by the FTP client to the FTP Callable API, which indicates that the FTP client has ended and provides the FTP Callable API with information about the last subcommand (if any).

- ee is the 2-digit decimal client error code for the subcommand (00 if no error). The FTP Client Error Codes can be found in z/OS Communications Server: IP User's Guide and Commands.
- ss is the 2-digit decimal code of the FTP client subcommand (all blanks if none). The FTP subcommand codes can be found in z/OS Communications Server: IP User's Guide and Commands.
- cccc is the 4-character FTP command sent to the server (all blanks if no command was sent).
- rrr is the 3-digit decimal server reply to the FTP command (all blanks if no command was sent).

The following example is a message that is sent after a QUIT subcommand completes successfully:

EZA2123I FtpStop(00-29-QUIT-221):

System action: The FTP client process ends.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCX
Procedure Name: stopCallableAPI

EZA2125I Data sets will be allocated like data set 'name'

Explanation: All new data sets will be allocated the same as the displayed data set name. The data set name can be specified in the DCbdsn=data set_name parameter of the SITE or LOCSITE subcommands. There is no hard-coded default.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK
EZA2126I  Primary allocation value blocks, Secondary allocation value blocks.
Explanation: This message is displayed when you issue a LOCSTAT command.

EZA2127I  Primary allocation value blocks, Secondary allocation value block.
Explanation: This message is displayed when you issue a LOCSTAT command.

EZA2128I  Primary allocation value block, Secondary allocation value blocks.
Explanation: This message is displayed when you issue a LOCSTAT command.

EZA2129I  Primary allocation value block, Secondary allocation value block.
Explanation: The primary and secondary allocations that have been specified for the Primary=nnn
and Secondary=nnn parameter of the SITE or LOCSITE subcommands. These parameters indicate the amount of primary
and secondary allocation. This message also indicates that the BLocks parameter has been declared. This parameter
specifies that primary and secondary allocation are in blocks. Depending on the values assigned to these parameters,
only one of these messages will be displayed.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2130I  Primary allocation value cylinders, Secondary allocation value cylinders.
Explanation: This message is displayed when you issue a LOCSTAT command.

EZA2131I  Primary allocation value cylinders, Secondary allocation value cylinder.
Explanation: This message is displayed when you issue a LOCSTAT command.

EZA2132I  Primary allocation value cylinder, Secondary allocation value cylinders.
Explanation: This message is displayed when you issue a LOCSTAT command.

EZA2133I  Primary allocation value cylinder, Secondary allocation value cylinder.
Explanation: The primary and secondary allocations that have been specified for the Primary=nnn
and Secondary=nnn parameter of the SITE or LOCSITE subcommands. These parameters indicate the amount of primary
and secondary allocation. This message also indicates that the CYlinders parameter has been declared. This parameter
specifies that primary and secondary allocation are in cylinders. Depending on the values assigned to these parameters,
only one of these messages will be displayed.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2134I  Primary allocation value tracks, Secondary allocation value tracks.
Explanation: This message is displayed when you issue a LOCSTAT command.
EZA2135I Primary allocation value tracks, Secondary allocation value track.
Explanation: This message is displayed when you issue a LOCSTAT command.

EZA2136I Primary allocation value track, Secondary allocation value tracks.
Explanation: This message is displayed when you issue a LOCSTAT command.

EZA2137I Primary allocation value track, Secondary allocation value track.
Explanation: The primary and secondary allocations that have been specified for the PRimary=nnn and SECondary=nnn parameter of the SITE or LOCSITE subcommands. These parameters indicate the amount of primary and secondary allocation. This message also indicates that the TRacks parameter has been declared. This parameter specifies that primary and secondary allocation are in tracks. Depending on the values assigned to these parameters, only one of these messages will be displayed.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2138I Partitioned data sets will be created with value directory blocks
Explanation: The value represents the number of directory blocks to be allocated for the directory of a PDS. This message is issued only if a valid value has been specified.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2139I Data sets will be allocated using unit name
Explanation: All new data sets will be allocated using the displayed data set name as a model.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2140I FEATURE
Explanation: This message displays the correct format for the FEATURE subcommand which is used to retrieve status information from a remote host. For more information about the FEATURE subcommand, see the z/OS Communications Server: IP User’s Guide and Commands.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: usage()
EZA2141I  Number of access method buffers is **value**.

**Explanation:** The number of buffers can be specified in the BUFNO=**nn** parameter of the SITE or LOCSITE subcommand. This parameter specifies the number of access method buffers to be used during data transfer. Valid values are in the range of 1 - 255.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

EZA2142I  Mgmtclass for new data sets is **value**

**Explanation:** The value of the management class assigned to newly allocated data sets. The management class can be specified in the MGmtclas=**class** parameter of the SITE or LOCSITE subcommands. This parameter specifies the SMS management class assigned to newly allocated data sets.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

EZA2143I  Storclass for new data sets is **value**

**Explanation:** This message indicates the value of the stor class assigned to newly allocated data sets.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

EZA2144I  Dataclass for new data sets is **value**

**Explanation:** The value of the data class assigned to newly allocated data sets.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

EZA2145I  RDW's from VB/VBS files are discarded.

**Explanation:** Variable record descriptors (RDW) are discarded from variable-length blocked records and variable-length blocked spanned records. The RDW information can be specified in the NORDW parameter of the SITE or LOCSITE subcommand. This parameter specifies that variable record descriptors (RDWs) are discarded during FTP transmission of variable record length / blocked records (VB) or variable record length / blocked records / spanned records (VBS) data sets in other than block mode.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK
EZA2146I  RDW's from VB/VBS files are retained as part of data.

Explanation: The variable record descriptors (RDW) parameter has been declared for the SITE and LOCSITE subcommand. This parameter specifies that RDWs are treated as if they were part of the record and not discarded during FTP transmission of variable record length / blocked records (VB) or variable record length / blocked records / spanned records (VBS) data sets in other than block mode.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2147I  Retention period is days

Explanation: The number of days that a newly allocated data set will be retained. The retention period can be specified in the RETPD=nnn parameter of the SITE or LOCSITE subcommands. This parameter specifies the number of days that a newly allocated data set should be retained. This value is used to calculate the expiration date associated with the data set.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2148I  DB2 subsystem name is name

Explanation: The name of the DB2® subsystem. The DB2 subsystem is specified in the DB2=db2_name parameter of the SITE or LOCSITE subcommands.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2149I  SQL output sent in SPREADsheet format.

Explanation: The output generated is sent in spreadsheet format for this SQL file type. This output format is specified in the SPread parameter of the SITE or LOCSITE subcommands.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2150I  SQL output sent in report (NOSPREAD) format.

Explanation: The output generated is not in spreadsheet format for this SQL file type. This information is specified in the NOSPread parameter of the SITE or LOCSITE subcommands. This parameter indicates that the output is not in spreadsheet format when the file type is SQL.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK
**Explanation:** The SQLCol parameter has been specified in the SITE or LOCSITE subcommands. The SQLCol=type parameter indicates the column headings of the output file. The following list describes each type:

<table>
<thead>
<tr>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Names</td>
<td>Names are the column headings. The labels are ignored. This is the hard-coded default.</td>
</tr>
<tr>
<td>Labels</td>
<td>Uses the labels of the SQL table columns. If any of the columns do not have labels, the corresponding column heading in the output file is given a heading of COLnnn.</td>
</tr>
<tr>
<td>Any</td>
<td>The label is the first choice for column heading, but if there is no label, the name becomes the column heading.</td>
</tr>
</tbody>
</table>

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK
EZA2187I • EZA2192I

EZA2187I  Free Free Largest Free

EZA2188I  Volume Unit Free Cyls Trks Cyls-Trks Exts Address Use Attr

Explanation: These messages display the headers for the information provided when the Qdisk parameter has been specified for the LOCSITE subcommand. This message is displayed with EZA2191.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2189I  Volume disk could not be found.

Explanation: The volume serial specified in the Qdisk parameter of the LOCSITE subcommand could not be found.

System action: FTP continues.

Operator response: Check for the correct command syntax and volume serial number and try the command again. See the z/OS Communications Server: IP User’s Guide and Commands for more information.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2190I  No storage volumes could be found.

Explanation: The Qdisk parameter was entered without a specific volume serial. When this parameter is left blank, statistics about all storage volumes are displayed. No storage volumes were found.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2191I  volume unit amount value value value value value vary address attr1 attr2

Explanation: The Qdisk parameter has been specified for the LOCSITE subcommand. This parameter provides statistics about the available space on the specified volume. If Qdisk is entered without a specific volume serial, statistics about available space on all storage volumes are displayed. This message is displayed with EZA2187I and EZA2188I.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2192I  Percent Free Free Largest Free

Explanation: You entered the FTP client LOCSite subcommand and specified the QDISK parameter to display space statistics for one or more volumes. This message is the first line of a header for a group of messages that is displayed to report space statistics. See message "EZA2194I" on page 70 for more information.

Examples:

**Descriptor code:** 12

**Automation:** Not applicable for automation.
**EZA2194I**

**Explanation:** You entered the FTP client LOCSIte subcommand and specified the QDISK parameter to display space statistics for one or more volumes. This message is part of a group of messages that is displayed to report space statistics. One EZA2194I message is displayed for each volume that you requested.

In the message text:

- `volume_serial`  
  The volume serial number of a volume on the FTP client host.

- `percent_free`  
  The percent of free space on the volume that is identified by the `volume_serial` value.

- `free_cylinders`  
  The number of free cylinders on the volume that is identified by the `volume_serial` value.

- `free_tracks`  
  The number of free tracks on the volume that is identified by the `volume_serial` value.

- `l_cylinders`  
  The number of cylinders in the largest free extent on the volume that is identified by the `volume_serial` value.

- `l_tracks`  
  The number of tracks in the largest free extent on the volume that is identified by the `volume_serial` value.

- `free_extents`  
  The number of free extents on the volume that is identified by the `volume_serial` value.

- `use_attribute`  
  The use attribute of the volume that is identified by the `volume_serial` value.

**Examples:**

- **EZA1460I Command:**
  locsite qdisk=a72aaa

- **EZA1921I**
  Percent Free Free Largest Free

- **EZA193I**
  Volume Free Cyls Trks Cyls-Trks Exts Use Attr

- **EZA194I**
  A72AAA 5 124 23 101 0 5 Private

- **EZA1460I Command:**
  locsite qdisk

  **System action:** Processing continues.

  **Operator response:** No action is needed.

  **User response:** No action is needed.

EZA2216W   SQLCOL parameter (value) is not valid.

Explanation: The value submitted for the SQLCOL parameter, which is used to determine the column headings of the output file, was not valid. Valid values for the SQLCOL parameter are:

<table>
<thead>
<tr>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Names</td>
<td>Uses the names of the DB2 SQL table columns. The labels are ignored.</td>
</tr>
<tr>
<td>Labels</td>
<td>Uses the labels of the SQL table columns. If any of the columns do not have labels, the corresponding column heading in the output file is given a heading of COLnnn.</td>
</tr>
<tr>
<td>Any</td>
<td>The label of the DB2 SQL table column is the first choice for column heading in the output file. If there is no label, the column name is used.</td>
</tr>
</tbody>
</table>

System action: The SQLCOL parameter is ignored. FTP continues.

Operator response: Resubmit the SITE command with a valid value for the SQLCOL parameter. For more information about the SITE command, see the z/OS Communications Server: IP User’s Guide and Commands.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2224I   LANGUAGE [language [-subtag]]

Explanation: This message displays the correct format for the LANGUAGE subcommand. Use the LANGUAGE subcommand to set the language for FTP replies. For more information about the LANGUAGE subcommand, see the z/OS Communications Server: IP User’s Guide and Commands.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

Procedure Name: usage()

---

EZA2225I   ask the server which features and extensions it supports

Explanation: This message displays the purpose of the FEATURE subcommand. For more information about the FEATURE subcommand, see the z/OS Communications Server: IP User’s Guide and Commands.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

Procedure Name: usage()

---

EZA2226I   request server replies in another language, or reset language to the default

Explanation: This message displays the purpose of the LANGUAGE subcommand. For more information about the LANGUAGE subcommand, see the z/OS Communications Server: IP User’s Guide and Commands.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

Procedure Name: usage()
EZA2227I subcommand rejected. UTF-8 translation table is not available

Explanation: FTP could not process the current subcommand because the UTF-8 translation table is required to complete the command. The UTF-8 translation table is not available to FTP.

System action: FTP stops processing the current subcommand and prompts the user for the next subcommand.

Operator response: Contact the system programmer with the error.

System programmer response: Verify that the National Language Resources component of z/OS Language Environment® is installed, and that all data sets and files pertinent to UCS-2 and UTF-8 conversion are installed. See the z/OS XL C/C++ Programming Guide.

Module: EZAFTPCR
Procedure Name: lang()

EZA2228I subcommand not available - client is not configured for UTF-8 encoding

Explanation: FTP cannot process the current subcommand because the subcommand is not valid unless the FTP client is configured for UTF-8 encoding.

System action: FTP stops processing the current subcommand and prompts for the next subcommand.

Operator response: Contact the system programmer with the error message.

System programmer response: Determine whether UTF-8 encoding is appropriate for your installation. If you want UTF-8 encoding, code EXTENSIONS UTF8 in the client's FTP.DATA. See the z/OS Communications Server: IP Configuration Reference for more information about the EXTENSIONS statement.

Module: ezaftpcr
Procedure Name: lang()

EZA2229I UTF-8 encoding has been disabled for this client.

Explanation: The user issued a LANGuage subcommand. The client is not allowed to send a LANG command to the server unless it supports UTF-8 encoding of the control connection. The user had earlier issued an FTP client LOCSITE CTRLCONN or LOCSITE CCXLATE subcommand, which caused UTF-8 encoding for the control connection to be disabled.

System action: The LANGUAGE subcommand is ignored. FTP continues processing.

Operator response: If you want to use the language subcommand, exit the FTP client program and start the client again, without issuing LOCSITE subcommands to specify a code page for the control connection. If you want the FTP client to use a specific code page for the control connection, you cannot issue the LANGuage subcommand.

System programmer response: No action is needed.

Module: ezaftpcr
Procedure Name: language()

EZA2230I Error allocating storage for catalog search

Explanation: The command was entered to list MVS files. FTP was unable to get the necessary storage for the catalog list.

System action: Command processing ends. FTP continues with the next command.

Operator response: Try the command again. If the problem persists, contact the system programmer.

System programmer response: Allocate additional storage for the address space.

Module: EZAFTPMR.
Procedure Name: PSLIST
The SOCKS server rejected the connection to ip_address with reply_field

Explanation: The FTP client attempted to connect to an FTP server. The client is configured to access the FTP server using a SOCKS server. The SOCKS server will not allow the client to connect to the requested FTP server.

ip_address is the IP address of the requested FTP server.

reply_field is a decimal value describing why the SOCKS server rejected the connect request. When SOCKS V4 protocols are in use, the value is the CD field, or result code, from the CONNECT reply as defined in the document SOCKS: A protocol for TCP proxy across firewalls by Ying-Da Lee. The following excerpt is from that document listing the possible return codes and explanations.

91 The request rejected or failed.
92 The request rejected because SOCKS server cannot connect to identd on the client.
93 The request rejected because the client program and identd report different user IDs.

When SOCKS V5 protocols are in use, the value is the REP field, or reply value, from the CONNECT reply as defined in RFC 1928. See Appendix B, “Related protocol specifications,” on page 655 for information about accessing RFCs.

System action: FTP stops trying to connect to the indicated IP address through the SOCKS server.

Operator response: Contact the system programmer with the error message.

System programmer response: You can obtain more detailed information about why the SOCKS server rejected the connection by using the FTP client debug and dump subcommands to activate tracing, and attempting the connection again.

SOCKS V4 or SOCKS V5 protocols are specified in the file or data set indicated by the SOCKSCONFIGFILE statement in FTP.DATA.

For the SOCKS V5 protocol, the reply value is one of the following:

2 The SOCKS server is configured to reject attempts to connect to the FTP server. Follow the procedure for SOCKS V4 protocol and CD field 91.

all other reply values
Contact the administrator of the SOCKS server with the error.

For the SOCKS V4 protocol, the CD field is one of the following:

91 A probable cause is that the SOCKS server is configured to reject attempts to connect to the FTP server. If you want to allow the FTP client to connect to the target FTP server, either ask the administrator of the configured SOCKS server to allow connections to the FTP server, or change the FTP client SOCKS configuration. You can configure the client to use a different SOCKS server, or you can configure the client to connect to the FTP server without using a SOCKS server.

92, 93 The SOCKS server requires inetd authentication but inetd authentication is not supported by the FTP client. Change the FTP client SOCKS configuration to use a SOCKS server that does not require identd authentication, or ask the administrator of the SOCKS server to allow the connection without identd authentication.

See the z/OS Communications Server: IP Configuration Guide and the z/OS Communications Server: IP Configuration Reference for information about configuring the FTP client to use SOCKS servers.

Module: ezaftpsc

Procedure Name: connectV4(), connectV5().

SOCKS server rejected authentication method method

Explanation: The FTP client tried to connect to an FTP server via a SOCKS server using SOCKS V5 protocols. The SOCKS server rejected the authentication method requested by the client.

method is a hexadecimal value representing the authentication method requested by the FTP client. The values for method are defined in RFC 1928. A value of zero signifies NO AUTHENTICATION REQUIRED. See Appendix B.
**EZA2233I**

The SOCKS server rejected the BIND to `ip_address` with `reply_field`

**Explanation:** The FTP client tried to establish a data connection to the FTP server through a SOCKS server. The SOCKS server rejected a SOCKS BIND request from the client.

`ip_address` is the address of the FTP server.

`reply_field` is a decimal value describing why the SOCKS server rejected the BIND request. When SOCKS V4 protocols are in use, the value is the CD field, or result code, from the BIND reply as defined in the document *SOCKS: A protocol for TCP proxy across firewall* by Ying-Da Lee. The following excerpt is from that document listing the possible return codes and explanations.

- **91** The request rejected or failed.
- **92** The request rejected because SOCKS server cannot connect to identd on the client.
- **93** The request rejected because the client program and identd report different user IDs.

When SOCKS V5 protocols are in use, the value is the REP field, or reply value, from the BIND reply as defined in RFC 1928. See [Appendix B, “Related protocol specifications,” on page 655](#) for information about accessing RFCs.

**System action:** FTP stops trying to access the FTP server through the SOCKS server.

**Operator response:** Contact the system programmer with the error.

**System programmer response:** Contact the system programmer with the error.

**SOCKS V4 or SOCKS V5 protocols are specified in the file or data set indicated by the SOCKSCONFIGFILE statement in FTP.DATA.**

For the SOCKS V5 protocol, the reply value is one of the following:

- **2** The SOCKS server has been configured to reject connections to the target IP address. Follow the procedure for SOCKS V4 protocol and CD field 91.
- **all other reply values** Contact the administrator of the SOCKS server with the error.

For the SOCKS V4 protocol, the CD field is one of the following:

- **91** A possible explanation is that the SOCKS server is configured to reject connections to the target IP address. If you want to allow the FTP client to connect to the target FTP server, either ask the administrator of the configured SOCKS server to allow connections to the FTP server, or change the FTP client SOCKS configuration. You can configure the client to use a different SOCKS server, or you can configure the client to connect to the FTP server without using a SOCKS server. It is also possible that a general SOCKS server failure occurred. Contact the administrator of the SOCKS server with the error.

- **92, 93** The SOCKS server requires inetd authentication but inetd authentication is not supported by the FTP client.
Change the FTP client SOCKS configuration to use a SOCKS server that does not require identd authentication, or ask the administrator of the SOCKS server to allow the connection without identd authentication.

See the z/OS Communications Server: IP Configuration Guide and the z/OS Communications Server: IP Configuration Reference for information about configuring the FTP client to use SOCKS servers.

**Module:** ezafptsc

**Procedure Name:** bindV4(), bindV5()

---

**EZA2243I** Partitioned data set may not be created within a partitioned data set.

**Explanation:** A partitioned data set (PDS) cannot be created within an existing partitioned data set. To create a PDS on the local host, the LMKDIR subcommand is used. A PDS is created with either the fully qualified name or FTP appends the current working directory as the first part of the name.

**System action:** FTP continues.

**Operator response:** Enter the command with the correct syntax and try it again. See the z/OS Communications Server: IP User’s Guide and Commands for more information.

**System programmer response:** No action is needed.

**Module:** EZAFTPCD

---

**EZA2244I** Data set name already exists.

**Explanation:** The data set name specified in the directory parameter of the MKDIR subcommand already exists.

**System action:** FTP continues.

**Operator response:** Check for the correct directory name to be created. See the z/OS Communications Server: IP User’s Guide and Commands for more information.

**System programmer response:** No action is needed.

**Module:** EZAFTPCD

---

**EZA2245I** data set name created.

**Explanation:** The data set name specified in the LMKDIR subcommand has been created. The LMKDIR creates a partitioned data set (PDS) on the local host.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCD

---

**EZA2247I** Volume number is not mounted and NoAutoMount specified.

**Explanation:** The data set name specified in the LMKDIR subcommand is in a volume that is not mounted. NOAUTOMount has been specified in the SITE or LOCSITE subcommand. The NOAUTOMount parameter prevents automatic mounting of data sets on volumes that are not mounted.

**System action:** FTP continues.

**Operator response:** Specify AUTOMount in the SITE and LOCSITE subcommand to permit automatic mounting of data sets on volumes that are not mounted. See the z/OS Communications Server: IP User’s Guide and Commands for more information.

**System programmer response:** No action is needed.

**Module:** EZAFTPCD
EZA2250I  

_data set name_ is a VSAM data set. DCBDsn parameter ignored.

_Explanation:_ The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The name specified in DCBDsn is a Virtual Storage Access Method (VSAM) data set.

_System action:_ FTP continues.

_Operator response:_ No action is needed.

_System programmer response:_ No action is needed.

_Module:_ EZAFTPCD, EZAFTPGU

---

EZA2251I  

_data set name_ is not a valid file. DCBDsn parameter ignored.

_Explanation:_ The data set name specified in the DCBDsn parameter is incorrect. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

_System action:_ FTP continues.

_Operator response:_ Check for the correct data set name and try the command again. See the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/docview.wss?uid=swg21385734) for more information.

_System programmer response:_ No action is needed.

_Module:_ EZAFTPCD, EZAFTPGU

---

EZA2252I  

_data set name_ does not exist. DCBDsn parameter ignored.

_Explanation:_ The data set name specified in the DCBDsn parameter was not found. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

_System action:_ FTP continues.

_Operator response:_ Check for the correct data set name and reissue the command. See the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/docview.wss?uid=swg21385734) for more information.

_System programmer response:_ No action is needed.

_Module:_ EZAFTPCD, EZAFTPGU

---

EZA2253I  

Error recalling _data set name_. DCBDsn parameter ignored.

_Explanation:_ The File Transfer Protocol (FTP) was unsuccessful in accessing the data set name specified in the DCBDsn parameter. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

_System action:_ FTP continues.

_Operator response:_ Check for the correct data set name and issue the DCBDsn parameter again. See the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/docview.wss?uid=swg21385734) for more information.

_System programmer response:_ No action is needed.

_Module:_ EZAFTPCD, EZAFTPGU

---

EZA2254I  

_data set name_ is migrated data set and Noautorecall is specified.

_Explanation:_ The data set name specified in the DCBDsn parameter is a migrated data set. A migrated data set is a data set that has been moved from one hierarchy of storage to another. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

_System action:_ FTP continues.

_Operator response:_ Check for the correct data set name and issue the command again. See the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/docview.wss?uid=swg21385734) for more information.

_System programmer response:_ No action is needed.

_Module:_ EZAFTPGU
EZA2255I  Error mounting volume for data set name. DCBDsn parameter ignored.

**Explanation:** The File Transfer Protocol (FTP) was unsuccessful in mounting the volume where the data set name specified in the DCBDsn parameter is located. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

**System action:** FTP continues.

**Operator response:** Check for the correct volume serial number in the VOLume parameter of the SITE and LOCSITE subcommand, correct the data set name, and issue the command again. See the [z/OS Communications Server: IP User's Guide and Commands](https://www.ibm.com/support/docview.zhtml?docid=367594) for more information.

**System programmer response:** No action is needed.

**Module:** EZAFTPCD, EZAFTPGU

---

EZA2256I  data set name is on a direct access volume that is not mounted and Noautomount is specified.

**Explanation:** The data set name specified in the DCBDsn parameter is located on a volume that has not been mounted. Noautomount has been specified. The NOAUTOMount parameter prevents automatic mounting of data sets on volumes that are not mounted. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

**System action:** FTP continues.

**Operator response:** Specify AUTOMount in the SITE and LOCSITE subcommands to permit automatic mounting of data sets on volumes that are not mounted. See the [z/OS Communications Server: IP User's Guide and Commands](https://www.ibm.com/support/docview.zhtml?docid=367594) for more information.

**System programmer response:** No action is needed.

**Module:** EZAFTPCD, EZAFTPGU

---

EZA2257I  data set name is not on a direct access volume. DCBDsn parameter ignored.

**Explanation:** The data set name specified in the DCBDsn parameter is not located on a direct access volume. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

**System action:** FTP continues.

**Operator response:** Check for the correct volume serial number in the VOLume parameter of the SITE and LOCSITE subcommand, correct the data set name, and issue the command again. See the [z/OS Communications Server: IP User's Guide and Commands](https://www.ibm.com/support/docview.zhtml?docid=367594) for more information.

**System programmer response:** No action is needed.

**Module:** EZAFTPCD, EZAFTPGU

---

EZA2258I  Error locating file data set name. DCBDsn parameter ignored.

**Explanation:** The File Transfer Protocol (FTP) was unsuccessful in locating the data set name specified in the DCBDsn parameter. The DCBDsn parameter specifies the name of the data set to be used as a model for allocation of new data sets. The parameter is ignored.

**System action:** FTP continues.

**Operator response:** Check for correct command syntax and data set name and issue the command again. See the [z/OS Communications Server: IP User's Guide and Commands](https://www.ibm.com/support/docview.zhtml?docid=367594) for more information.

**System programmer response:** No action is needed.

**Module:** EZAFTPCD, EZAFTPGU
EZA2269I Lrecl=X Recfm=VBS BLKSIZE=size

Explanation: The record format and block size of a data set specified in the RECfm=format and BLocksize=nnn parameters of the SITE and LOCSITE subcommands. VBS indicates variable record length and blocked and spanned records. See the z/OS Communications Server: IP User’s Guide and Commands for more information.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

EZA2270I Lrecl=X Recfm=VS BLKSIZE=size

Explanation: The record format and block size of a data set specified in the RECfm=format and BLocksize=nnn parameters of the SITE and LOCSITE subcommands. VS indicates variable record length and spanned records. See the z/OS Communications Server: IP User’s Guide and Commands for more information.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

EZA2279W BLOCKSIze and LRecl must be equal for recfm data sets. BLOCKSIze set to value.

Explanation: The LOCSITE subcommand was entered with one or more of the LRecl, RECFm, and BLockSIze parameters, and the resulting parameter values caused a mismatch between the LRecl, RECFm, and BLockSIze parameters. The Record Format, recfm, requires that LRecl and BLockSIze be equal, but the values for BLockSIze and LRecl were not the same.

System action: The BLockSIze parameter is set to value.

Operator response: If necessary, reissue the LOCSITE subcommand with a valid LRecl, RECFm, and BLockSIze combination. See the Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2280W BLOCKSIze must be a multiple of LRecl for recfm data sets. BLOCKSIze set to value.

Explanation: The LOCSITE subcommand was entered with one or more of the LRecl, RECFm, and BLockSIze parameters, and the resulting parameter values caused a mismatch between the LRecl, RECFm, and BLockSIze parameters. The Record Format, recfm, requires that BLockSIze be a multiple of LRecl, but it was not.

System action: The BLockSIze parameter is set to value.

Operator response: If necessary, reissue the LOCSITE subcommand with a valid LRecl, RECFm, and BLockSIze combination. See the Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2281W BLOCKSIze must be four larger than LRecl for recfm data sets. LRecl set to value.

Explanation: The LOCSITE subcommand was entered with one or more of the LRecl, RECFm, and BLockSIze parameters, and the resulting parameter values caused a mismatch between the LRecl, RECFm, and BLockSIze parameters. The Record Format, recfm, requires that BLockSIze be at least 4 more than LRecl, but the value specified for LRecl would not allow BLockSIze to be four more than LRecl and still be within its valid range of values.

System action: The LRecl parameter is set to value.
Operator response: If necessary, reissue the LOCSITE subcommand with a valid LRecl, RECfm, and BLOCKSIZe combination. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2282W BLOCKSIZe must be four larger than LRecl for recfm data sets. LRecl set to value. BLOCKSIZe set to value.

Explanation: The LOCSITE subcommand was entered with one or more of the LRecl, RECfm, and BLOCKSIZe parameters, and the resulting parameter values caused a mismatch between the LRecl, RECfm, and BLOCKSIZe parameters. The Record Format, recfm, requires that BLOCKSIZe be at least four more than LRecl, but the value specified for LRecl would not allow BLOCKSIZe to be four more than LRecl and still be within the valid range of values.

System action: The BLOCKSIZe parameter is set to value.

Operator response: If necessary, reissue the LOCSITE subcommand with a valid LRecl, RECfm, and BLOCKSIZe combination. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2283W BLOCKSIZe must be four larger than LRecl for recfm data sets. LRecl set to value. BLOCKSIZe set to value.

Explanation: The LOCSITE subcommand was entered with one or more of the LRecl, RECfm, and BLOCKSIZe parameters, and the resulting parameter values caused a mismatch between the LRecl, RECfm, and BLOCKSIZe parameters. The Record Format, recfm, requires that BLOCKSIZe be at least 4 more than LRECL, but the value of BLOCKSIZe did not meet this criteria.

System action: The BLOCKSIZe parameter is set to value.

Operator response: If necessary, reissue the LOCSITE subcommand with a valid LRecl, RECfm, and BLOCKSIZe combination. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2294I value

Explanation: The value of the output buffer. This buffer contains characters in ASCII form that are being read from the File Transfer Protocol (FTP) connection.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

EZA2294I Proxy connected through SOCKS server at IP_address

Explanation: The user issued a LOCSTat FTP subcommand to display client status. The client has a proxy session established with an FTP server through a SOCKS server.

For a connection through a SOCKS server, the FTP client always connects to port 1080 of the SOCKS server’s IP_address instead of connecting to the IP address and port number of the FTP server; the SOCKS server relays data
between the FTP client and the FTP server. The IP address and port number of the FTP proxy server are also displayed by the LOCSTat subcommand.

IP_address is the IP address of the SOCKS server.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: ezaftpcl

Procedure Name: locstat()
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: FTP
Module: EZAFTPCY
Routing code: 1
Descriptor code: 2

EZA2320I temp is a migrated data set and Noautorecall is specified.

Explanation: The named file was sent with AUTORECALL set to false. This prevents automatic recall of the migrated Hierarchical Storage Manager (HSM) data sets.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCG, EZAFTPCP

EZA2321I Error recalling temp (rc=value)

Explanation: The file displayed cannot be recalled.
System action: FTP rejects the current subcommand. Processing continues.
Operator response: Reissue the command. If the problem persists, contact the system programmer.
System programmer response: Additional messages might be issued by your hierarchical storage manager (HSM) product. See the documentation for that product to interpret those messages.
Module: EZAFTPCG, EZAFTPCP

EZA2322I temp is on a direct access volume that is not mounted and Noautomount is specified.

Explanation: The value for the FTP AUTOMOUNT parameter is set to NOAUTOMOUNT, preventing automatic mounting of volumes. The data set temp is on a volume that has not been mounted.
System action: FTP rejects the current subcommand. Processing continues.
Operator response: If possible, issue the LOCSIte subcommand to change the automount setting. Otherwise, ask the system programmer to mount the volume containing name. Issue the subcommand again. See z/OS Communications Server: IP User’s Guide and Commands for information about the LOCSIte subcommand.
System programmer response: No action is needed.
Module: EZAFTPCG, EZAFTPCP

EZA2323I Error mounting volume for temp

Explanation: FTP is unable to mount the volume for the data set temp.
System action: FTP rejects the current subcommand. Processing continues.
Operator response: Issue the subcommand again. If the problem persists, contact the system programmer with the error.
System programmer response: Determine why the requested volume cannot be mounted to the MVS system.
Module: EZAFTPCD, EZAFTPCG, EZAFTPCP

EZA2326I Error allocating data set name

Explanation: The data set name displayed is not valid.
System action: FTP continues.
Operator response: Check the DCBDSN statement in the hlq.FTP.DATA data set and verify that the data set name is
correct. For more information on the DSBDSN, see the

/z/OS Communications Server: IP User’s Guide and Commands

System programmer response: FTP continues.
Module: EZAFTPCD

---

**EZA2329I**  No files match the pattern *name*

Explanation: There are no files or data sets that match the pattern.
System action: FTP continues.
Operator response: Try the command again with the correct pattern.
System programmer response: No action is needed.
Module: EZAFTPMR

---

**EZA2331I**  "*name*" contains an asterisk ("*") but it is not the last character.

Explanation: The data set name is not valid.
System action: FTP continues.
Operator response: Check the /z/OS Communications Server: IP User’s Guide and Commands for information on naming requirements of data sets. Try the command again with the correct name.
System programmer response: No action is needed.

---

**EZA2332I**  Patterns ("%" and "**") may only be specified in the last qualifier when in directory mode.

Explanation: DIRECTORYMODE specifies that only the data set qualifier immediately below the current directory is treated as an entry in the directory. Since you are not in DIRECTORYMODE, pattern matching cannot be used.
System action: FTP continues.
Operator response: If you would like to use pattern matching, switch to DIRECTORYMODE. Check the /z/OS Communications Server: IP User’s Guide and Commands for information on setting FTP parameters.
System programmer response: No action is needed.

---

**EZA2333I**  ** must be preceded and followed by a period or blank

Explanation: The LIST (DIR) or NLST (LS) command was entered with the ** global file-name character in the pathname, but the ** was either not preceded by or not followed by a period (.) or blank. The ** character is used to replace zero or more complete qualifiers in the name.
System action: FTP continues.
System programmer response: No action is needed.

---

**EZA2337I**  temp is not a valid file.

Explanation: The file displayed is not valid.
System action: FTP continues.
Operator response: Reissue the command with a valid file name.
System programmer response: No action is needed.
Module: EZAFTPCG, EZAFTPCP
EZA2338I  temp is not a partitioned data set.

Explanation: The name displayed is not a partitioned data set.

System action: FTP continues.

Operator response: Reissue the command with the correct data set name. For more information on partitioned and sequential data sets, check the z/OS Communications Server: IP User’s Guide and Commands.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

EZA2339I  temp is a non-existent partitioned data set. Use LMKDIR to create it.

Explanation: The data set name displayed does not exist. Create the data set using LMKDIR.

System action: FTP continues.

Operator response: To create a partitioned data set, type LMKDIR followed by the data set name. Naming requirements for a PDS are as follows:

- No part of the name can start with a number.
- No part of the name can be more than 8 characters in length.
- Each part of the name is separated by a period.
- If single quotation marks are not used when specifying the PDS name, FTP appends the current working directory as the first part of the name.

For more information on naming conventions for partitioned data sets, see the z/OS Communications Server: IP User’s Guide and Commands.

System programmer response: FTP continues.

Module: EZAFTPCG

EZA2340I  temp is a VSAM data set. VSAM is not supported.

Explanation: The data set name displayed is a Virtual Storage Access Method (VSAM) data set. VSAM data sets are not supported by TCP/IP.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

EZA2358W Unrecognized option 'parameter=operand' on locsite command.

Explanation: The LOCSITE subcommand was entered with the option parameter, but parameter was not a valid LOCSITE subcommand parameter.

System action: The parameter is ignored. FTP continues.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2359W Operand required on parm option. Option ignored.

Explanation: The option parm appeared on a LOCSITE subcommand without an operand. The option is ignored.

System action: FTP continues.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2360W  Operand not allowed on parm option. Option ignored.

Explanation: The parameter parm appeared on a LOCSITE subcommand in incorrect format. No operand is allowed for this parameter. The parameter is ignored.

System action: FTP continues.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2370W  DCbsdsl already specified. "parameter=value" ignored.

Explanation: DCbsdsl parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

System action: parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.

Operator response: If you want to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2372W  LRecl parameter already specified. "parameter=value" ignored.

Explanation: LRecl parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

System action: parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.

Operator response: If you want to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2373W  LRecl parameter (value) is not numeric.

Explanation: The LOCSITE command was specified with the LRecl parameter, but the value, value, specified for the LRecl parameter was not a numeric value.

System action: The LRecl parameter is ignored.

System programmer response: No action is needed.
Module: EZAFTPCK

**EZA2374W**  PRImary parameter already specified. “parameter=value” ignored.

**Explanation:** PRImary parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

**System action:** parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.

**Operator response:** If you want to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

**System programmer response:** No action is needed.

Module: EZAFTPCK

**EZA2375W**  PRImary parameter (value) is not numeric.

**Explanation:** The LOCSITE command was specified with the PRImary parameter, but the value, value, specified for the PRImary parameter was not a numeric value.

**System action:** The PRImary parameter is ignored.

**Operator response:** Reissue the command with a valid value. See the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/docview.ws/docuid/pe-b2c50a7d3) or [z/OS Communications Server: IP Configuration Guide](https://www.ibm.com/support/docview.ws/docuid/pe-b2c50a7d3) for information on FTP in general and to [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/docview.ws/docuid/pe-b2c50a7d3) for information on the parameters of the LOCSITE subcommand.

**System programmer response:** No action is needed.

Module: EZAFTPCK

**EZA2376W**  SECondary parameter already specified. ’parameter=value’ ignored.

**Explanation:** SECondary parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

**System action:** parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.

**Operator response:** If you want to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

**System programmer response:** No action is needed.

Module: EZAFTPCK

**EZA2377W**  SECondary parameter (value) is not numeric.

**Explanation:** The LOCSITE command was specified with the SECondary parameter, but the value, value, specified for the SECondary parameter was not a numeric value.

**System action:** The SECondary parameter is ignored.

**Operator response:** Reissue the command with a valid value. See the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/docview.ws/docuid/pe-b2c50a7d3) or [z/OS Communications Server: IP Configuration Guide](https://www.ibm.com/support/docview.ws/docuid/pe-b2c50a7d3) for information on FTP in general and to [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/docview.ws/docuid/pe-b2c50a7d3) for information on the parameters of the LOCSITE subcommand.

**System programmer response:** No action is needed.

Module: EZAFTPCK
EZA2378W  VOLume parameter already specified. "parameter=value" ignored.

Explanation:  VOLume parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

System action:  parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.

Operator response:  If you want to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

System programmer response:  No action is needed.

Module:  EZAFTPCK

EZA2379W  value is not a valid VOLume parameter.

Explanation:  The LOCSITE command was specified with the VOLume parameter, but the value, value, specified for the VOLume parameter was not a valid value. The parameter may not be more than 6 characters.

System action:  The VOLume parameter is ignored.

Operator response:  Reissue the command with a valid value. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response:  No action is needed.

Module:  EZAFTPCK

EZA2380W  RECFm parameter already specified. "parameter=value" ignored.

Explanation:  RECFm parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

System action:  parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.

Operator response:  If you want to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

System programmer response:  No action is needed.

Module:  EZAFTPCK

EZA2381W  RECFm parameter (value) is not valid.

Explanation:  The LOCSITE command was specified with the RECFm parameter, but value, specified for the RECFm parameter, was not a valid value.

System action:  The RECFm parameter is ignored.

Operator response:  Reissue the command with a valid value. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response:  No action is needed.

Module:  EZAFTPCK

EZA2383W  BLOCKSIze parameter already specified. "parameter=value" ignored.

Explanation:  BLOCKSIze parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.
System action: parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.

Operator response: If you want to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2384W  BLOCKSzize parameter (value) is not numeric.

Explanation: The LOCSITE command was specified with the BLOCKSzize parameter, but the value, value, specified for the BLOCKSzize parameter was not a numeric value.

System action: The SECondary parameter is ignored.

Operator response: Reissue the command with a valid value. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2385W  DIRectory parameter already specified. "parameter=value" ignored.

Explanation: DIREctory parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

System action: parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.

Operator response: If you want to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2386W  Directory parameter (value) is not numeric.

Explanation: The LOCSITE command was specified with the DIRECTORY parameter, but the value, value, specified for the DIRECTORY parameter was not a numeric value.

System action: The DIRECTORY parameter is ignored.

Operator response: Reissue the command with a valid value. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2388W  value is not a valid Qdisk parameter.

Explanation: The LOCSITE command was specified with the Qdisk parameter, but the value, value, specified for the Qdisk parameter was not a valid value. The parameter may not be more than 6 characters.

System action: The Qdisk parameter is ignored.

Operator response: Reissue the command with a valid value. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.
System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA2394I  Invalid format data set name “name”. DCBDSN parameter ignored.
Explanation:  The data set name displayed is not valid, and therefore is ignored.
System action:  FTP continues.
Operator response:  The DCBDSN parameter specifies the name of the data set to be used as a model for allocation of new data sets. Reissue the command with the correct data set name. For more information on DCBDSN, see the z/OS Communications Server: IP User’s Guide and Commands.
System programmer response:  No action is needed.
Module:  EZAFTPCK, EZAFTPGU

EZA2395W  LRecl must be between 0 and 32760. LRecl parameter ignored.
Explanation:  The record size should be between 0 and 32760. The default is 256.
System action:  FTP continues.
Operator response:  Reissue the LOCSITE LRecl command with a record size between 0 and 32760.
System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA2396W  BLOCKSIZe must be between 0 and 32760. BLOCKSIZe parameter ignored
Explanation:  The block size of a data set should be between 0 and 32760. The default is 6233.
System action:  FTP continues.
Operator response:  Reissue the LOCSITE BLOCKSIZe command with a block size between 0 and 32760.
System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA2397W  Unit parameter already specified. parameter ignored.
Explanation:  The unit name specifying the unit type for allocation of data sets has already been set. The unit name displayed is ignored.
System action:  FTP continues.
Operator response:  To change the unit type, specify the unit name in the hlq. FTP.DATA data set. The unit name parameter can be used to specify either direct access or tape device types.
System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA2398W  parameter is not a valid unit parameter.
Explanation:  The unit parameter is not valid.
System action:  FTP continues.
Operator response:  Reissue the unit name command with the correct parameter.
System programmer response:  FTP continues.
Module:  EZAFTPCK
EZA2399W  FILEtype parameter already specified. “\texttt{parameter=value}” ignored.

Explanation:  The LOCSITE subcommand was entered with the filetype parameter more than once. The file type displayed is ignored.

System action:  FTP continues.

Operator response:  Issue another LOCSITE subcommand to change the data set file type. Specify the filetype value you want to use on the filetype parameter. See the \texttt{z/OS Communications Server: IP User’s Guide and Commands} for more information about the LOCSITE subcommand and the filetype parameter. The default file type is SEQ.

System programmer response:  No action is needed.

Module:  EZAFTPCK

---

EZA2400W  FileType parameter \texttt{parameter} is not valid.

Explanation:  The file type displayed is not a valid file type for a data set.

System action:  FTP continues.

Operator response:  Reissue the FILETYPE command with a valid file type. The default is SEQ (sequential data set). See message EZA2399 for a list of valid file types.

System programmer response:  No action is needed.

Module:  EZAFTPCK, EZAFTPEP

---

EZA2403I  Using control connection address \texttt{ipaddr} for data connection

Explanation:  The client sent a PASV command to the server to establish a data connection. By default, an FTP client connects to the IP address and port number specified in the PASV reply to complete the data connection. However, because PASSIVEIGNOREADDR is set to TRUE, the FTP client ignores the IP address in the PASV reply. The FTP client will connect to the port number specified in the PASV reply, at the IP address it used to log in to the server, to complete the data connection.

In the message text:

\texttt{ipaddr}

The IP address that the FTP client used when it logged in to the FTP server.

Examples:

Command:
\> put /etc/hosts
\> \texttt{PASV}
\> \texttt{227 Entering Passive Mode (129,42,17,103,19,136)}
\> EZA2403I Using control connection address 9.155.11.97 for data connection
\> \texttt{STOR hosts}
\> \texttt{125 Storing data in the Null directory (*dev.null).}
\> 250 Transfer completed successfully.
\> 41 bytes transferred in 0.005 seconds. Transfer rate 8.20 Kbytes/sec.

Command:

System action:  The FTP client ignores the IP address in the PASV reply from the server and connects to the same address that it used to log in to the server.

Operator response:  Not applicable

User response:  No response is necessary if you intend for the FTP client to use the same IP address for the data connection that it used to log in to the FTP Server. If you want the client to use the IP address specified in the PASV reply, configure PASSIVEIGNOREADDR FALSE by modifying the client FTP.DATA file, or by issuing the LOCSITE subcommand with the NOPASSIVEIGNOREADDR parameter.

See the information about the \texttt{PASSIVEIGNOREADDR (FTP client) statement} in \texttt{z/OS Communications Server: IP Configuration Reference}. See the information about the \texttt{LOCSITE subcommand} in \texttt{z/OS Communications Server: IP User’s Guide and Commands}.

System programmer response:  Not Applicable
Problem determination:  Not Applicable

**EZA2406W**  MGmtclass parameter already specified. “parameter=value” ignored.

Explanation:  The MGmtclass parameter has already been specified. The parameter displayed is ignored.
System action:  FTP continues.
Operator response:  The Storage Management System (SMS) has been used to set certain defaults for the hlq.FTP.DATA data set. The defaults for space and RECFM are set by MGmtclass. The values for these parameters take precedence over any values you specify using the individual storage attributes parameter with the LOCSITE command or the hlq.FTP.DATA data class. To change any of the parameters, see your systems administrator.
System programmer response:  No action is needed.
Module:  EZAFTPCK

---

**EZA2407W**  Mgmtclass parameter parameter is not valid.

Explanation:  The MGmtclass parameter displayed is not valid.
System action:  FTP continues.
Operator response:  The Storage Management System (SMS) has been used to set certain defaults for the hlq.FTP.DATA data set. The defaults for space and RECFM are set by MGmtclass. The values for these parameters take precedence over any values you specify using the individual storage attributes parameter with the LOCSITE command or the hlq.FTP.DATA data class. To change any of the parameters, see your systems administrator.
System programmer response:  No action is needed.

---

**EZA2408W**  STOrclass parameter already specified. “parameter=value” ignored.

Explanation:  The STOrclass parameter has already been specified. The parameter displayed is ignored.
System action:  FTP continues.
Operator response:  The Storage Management System (SMS) has been used to set certain defaults for the hlq.FTP.DATA data set. The defaults for unit and DCBDSN are set by STOrclass. The values for these parameters take precedence over any values you specify using the individual storage attributes parameter with the LOCSITE command or the hlq.FTP.DATA data class. To change any of the parameters, see your systems administrator.
System programmer response:  No action is needed.
Module:  EZAFTPCK

---

**EZA2409W**  STORclass parameter (parameter) is not valid.

Explanation:  The STORclass parameter displayed is not valid.
System action:  FTP continues.
Operator response:  The Storage Management System (SMS) has been used to set certain defaults for the hlq.FTP.DATA data set. The defaults for unit and DCBDSN are set by STORclass. The values for these parameters take precedence over any values you specify using the individual storage attributes parameter with the LOCSITE command or the hlq.FTP.DATA data class. To change any of the parameters, see your systems administrator.
System programmer response:  No action is needed.
DATAclass parameter already specified. “parameter=value” ignored.

**Explanation:** The DATAclass parameter has already been specified. The parameter displayed is ignored.

**System action:** FTP continues.

**Operator response:** The Storage Management System (SMS) has been used to set certain defaults for the hlq.FTP.DATA data set. The defaults for space, RECFM, BLKSIZE, and LRECL are set by DATACLASS. The values for these parameters take precedence over any values you specify using the individual storage attributes parameter with the LOCSITE command or the hlq.FTP.DATA data class. To change any of the parameters, see your systems administrator.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

DATAclass parameter parameter is not valid.

**Explanation:** The DATAclass parameter displayed is not valid.

**System action:** FTP continues.

**Operator response:** The Storage Management System (SMS) has been used to set certain defaults for the hlq.FTP.DATA data set. The defaults for space, RECFM, BLKSIZE, and LRECL are set by DATACLASS. The values for these parameters take precedence over any values you specify using the individual storage attributes parameter with the LOCSITE command or the hlq.FTP.DATA data class. To change any of the parameters, see your systems administrator.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

NoRDW already specified. RDW ignored.

**Explanation:** RDW (record descriptor word) has been set to false and therefore, discarded during FTP transmission of VB (variable blocked) or VBS (variable blocked spanned) data sets in other than block mode.

**System action:** FTP continues.

**Operator response:** Set RDW to true in the hlq.FTP.DATA data set if you do not want the RDW to be discarded.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

RDW already specified. NoRdw ignored.

**Explanation:** Setting RDW to true specifies that the record descriptor words are treated as if they were part of the record and not discarded during FTP transmission of VB (variable block) or VBS (variable blocked spanned) data sets in other than block mode. RDW information is stored in binary. Transfer files in binary mode to avoid translation problems that can occur if you transfer this binary field in EBCDIC or ASCII.

**System action:** FTP continues.

**Operator response:** To discard RDW during FTP transmission, set RDW to false in the hlq.FTP.DATA data set.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

RETpd parameter already specified. “parameter=value” ignored.

**Explanation:** The RETpd parameter has already been set, therefore, the parameter displayed is ignored.

**System action:** FTP continues.

**Operator response:** The RETpd parameter for MVS specifies the number of days that a newly allocated data set should be retained. The maximum is 9999.

**System programmer response:** No action is needed.
Module: EZAFTPCK

EZA2415W  RETpd parameter (value) is not valid.
Explanation: The RETpd parameter displayed is not valid.
System action: FTP continues.
Operator response: The RETpd parameter for MVS specifies the number of days that a newly allocated data set should be retained. The maximum is 9999. Reissue the parameter with a valid numeric.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2416W  DB2 parameter (db2name) is more than 4 characters.
Explanation: The db2name specified for the DB2 parameter on an FTP LOCSITE command is too long.
System action: The DB2 parameter is ignored. FTP continues.
Operator response: Correct the name of the DB2 subsystem, and issued the LOCSITE command again.
System programmer response: None
Module: EZAFTPCK

EZA2417W  READTAPEFormat value is not supported - READTAPEFormat ignored
Explanation: The value specified for the READTAPEFormat parameter on a LOCSITE command is not supported. Valid values are F (for Fixed), V (for Variable), S (for Spanned), X (for Lrecl X), or blank (unspecified).
System action: The READTAPEFormat parameter is ignored. FTP continues.
Operator response: Change value to one of the supported formats.
System programmer response: No action is needed.
Module: EZAFTPCK
Procedure Name: locsite

EZA2421W  NORESTGet already specified. RESTGet ignored.
Explanation: NORESTGet cmd was follow by a RESTGet cmd within the same LOCSITE request.
System action: FTP continues.
Operator response: If the setting is not what you want, reissue the LOCSITE command with the correct values.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2422W  RESTGet already specified. NORESTGet ignored.
Explanation: RESTGet cmd was follow by a NORESTGet cmd within the same LOCSITE request.
System action: FTP continues.
Operator response: If the setting is not what you want, reissue the LOCSITE command with the correct values.
System programmer response: No action is needed.
Module: EZAFTPCK
EZA2423W  CHKPTPREFIX value must be Home, Local or Userid.

Explanation:  While processing the FTP.DATA file, the server encountered an incorrect CHKPTPREFIX parameter. The valid values for the CHKPTPREFIX parameter are:
- Home
- Local
- Userid

System action:  The line containing the error is ignored. Processing of the FTP.DATA file continues with the next line in the file.

Operator response:  Contact the System programmer with the error message to have the FTP.DATA file corrected.

System programmer response:  Correct the CHKPTPREFIX parameter in the FTP.DATA file.

Module:  EZAFTPSM

Procedure Name:  read_ftpdata()

EZA2424W  CHKptint parameter (parameter) is not valid

Explanation:  The value specified for the CHKptint parameter of the LOCSITE command contained non-numeric characters.

System action:  FTP continues.

Operator response:  Reissue the LOCSITE command with valid values.

System programmer response:  No action is needed.

Module:  EZAFTPCK

EZA2428I  CHKPTPrefix uses value to determine the HLQ of the FTP.CHECKPOINT file

Explanation:  This is the result of a LOCSTAT command.

One of three possible valid values for CHKPTPREFIX:
- Home  The TSO prefix or the z/OS UNIX file system path
- Userid  The FTP user ID
- Local  The current directory from the LCD command

System action:  None.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPCL

Procedure Name:  locstat()

EZA2477I  Secure port port_number does not allow the subcommand_name subcommand

Explanation:  The user entered an FTP subcommand while the FTP client was connected to the secure port. The secure port is the port number defined by the TLSPORT statement in the client’s FTP.DATA file. FTP connections to the secure port are implicitly secured. The subcommand is not valid for TLS-secured sessions that are implicitly secured by connecting to the server using the TLSPORT port.

In the message text:

port_number
  The port number configured with the TLSPORT statement in the client’s FTP.DATA file, or the default TLSPORT number when no TLSPORT statement was coded in FTP.DATA.

subcommand_name
  The subcommand that the user entered.

Examples:  In this example, assume that no TLSPORT statement is coded in the client’s FTP.DATA file, but that the
client has connected to the FTP server at port 990, the default value for the TLSPORT statement.

The user enters the ccc subcommand in response to the FTP client prompt:

Command: ccc
EZA24771 Secure port 990 does not allow the ccc subcommand.

System action: The subcommand is ignored.

Operator response: No action is needed.

User response: Contact the system programmer.

System programmer response: If the subcommand is necessary on a TLS-secured session, do not connect to the TLSPORT. Instead, perform the steps for customizing the FTP client for TLS in [z/OS Communications Server: IP Configuration Guide] to secure the session for TLS without using the TLSPORT. See the information about the TLSPORT FTP client and server in [z/OS Communications Server: IP Configuration Reference] for more information about subcommands.

Problem determination: See the system programmer response.

Source: z/OS Communications Server TCP/IP: FTP

Module: Not applicable.

Routing code: 10

Descriptor code: 12

---

EZA2491I Compressed mode implemented with type EBCDIC only.

Explanation: Compressed file transfers are implemented in EBCDIC format only.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

---

EZA2494I Checkpoint interval is interval

Explanation: The interval for generating checkpoint markers is displayed.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCCK

---

EZA2500W No valid checkpoint data available

Explanation: A RESTART command was issued, but there is no valid checkpoint data available.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCB

---

EZA2501W Restart requires EBCDIC data type

Explanation: A RESTART command was issued, but the representation type is not EBCDIC.

System action: FTP continues.

Operator response: Change the representation type to EBCDIC and reissue the RESTART command.
System programmer response: No action is needed.
Module: EZAFTPCB

---

EZA2502W Restart requires Block or Compressed transfer mode
Explanation: A RESTART command was issued, but the transfer mode is not block or compressed.
System action: FTP continues.
Operator response: Change the transfer mode to block or compressed and reissue the RESTART command.
System programmer response: No action is needed.
Module: EZAFTPCB

---

EZA2508E Block or Compressed Mode requires Type E (EBCDIC)
Explanation: Block or compressed mode file transfer requires a transfer type of EBCDIC. No other transfer type is supported for block or compressed mode file transfer.
System action: No files are transferred.
Operator response: Use the TYPE command to change the transfer type to E (EBCDIC), or the MODE command to change the mode to stream. For more information about these commands, see the [z/OS Communications Server: IP User's Guide and Commands](https://www.ibm.com/support/knowledgecenter/SSEQFP_1.14.0/com.ibm.zos.v1r14.commandref/aftp_toc.html).
System programmer response: No action is needed.
Module: EZAFTPCG, EZAFTPCP

---

EZA2509I number megabytes transferred - interval second interval rate num_transferred_interval KB/sec - Overall transfer rate num_transferred_overall KB/sec
Explanation: This message indicates the total number of bytes of binary data transferred to or from the FTP client and the current rate of transfer.

*number* is the total number of megabytes transferred since the transfer started. Megabyte is defined as 1024*1024 bytes.

*interval* is the length of the measured transfer interval in seconds. This rate is set using LOCSITE PROGRESS or the PROGRESS statement in the FTP.DATAR file.

*num_transferred_interval* is the number of KBs (KB equals 1000 bytes) transferred per second in this interval.

*num_transferred_overall* is the number of KBs (KB equals 1000 bytes) transferred per second since the transfer started.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPMR

---

EZA2511I Checkpoint data set will be opened for GET
Explanation: The message is issued in response to a LOCSTAT subcommand to indicate that a checkpoint data set will be opened for all GET subcommands if type is E and mode is B or C.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat
EZA2512I  Checkpoint data set will not be opened for GET

**Explanation:** The message is issued in response to a LOCSTAT subcommand to indicate that a checkpoint data set will not be opened for any GET subcommands.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

**Procedure Name:** locstat

---

EZA2515W  NOTRUNCate already specified. TRUNCate ignored.

**Explanation:** A LOCSITE command was issued with both NOTRUNCATE and TRUNCATE options specified. Only the first option is accepted.

**System action:** None.

**Operator response:** Reenter the LOCSITE command to change the option.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

**Procedure Name:** locsite()

---

EZA2516I  Truncated records will be treated as an error and

**Explanation:** This message is issued as the result of the LOCSTAT command when NOTRUNCATE is set. If a record is discovered that is longer than LRECL and NOWRAPRECORD is set, an error will be returned and the file transfer will fail.

**System action:** None.

**Operator response:** If this is not the intended result, issue the LOCSITE TRUNCate command.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

**Procedure Name:** locstat()

---

EZA2517I  the file transfer will fail.

**Explanation:** This message is issued as the result of the LOCSTAT command when NOTRUNCATE is set. If a record is discovered that is longer than LRECL and NOWRAPRECORD is set, an error will be returned and the file transfer will fail.

**System action:** None.

**Operator response:** If this is not the intended result, issue the locsite TRUNCate command.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

**Procedure Name:** locstat()

---

EZA2518I  Records on input tape are unspecified format

**Explanation:** This message is part of the LOCSTAT output. It means that no value has been specified for READTAPEFormat and the record format for an input tape will not be known until the data set is opened.

**System action:** FTP continues.

**Operator response:** No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat

EZA2519I Records on input tape are fixed format

Explanation: This message is part of the LOCSTAT output. It means that a value of F was specified for READTAPEFormat and the record format for an input tape is expected to be fixed. This value must be consistent with the tape label when the data set is opened.

System action: FTP continues
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat

EZA2520I Records on input tape are variable format

Explanation: This message is part of the LOCSTAT output. It means that a value of V was specified for READTAPEFormat and the record format for an input tape is expected to be variable. This value must be consistent with the tape label when the data set is opened.

System action: FTP continues
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat

EZA2521I Records on input tape are spanned format

Explanation: This message is part of the LOCSTAT output. It means that a value of S was specified for READTAPEFormat and the record format for an input tape is expected to be spanned. This value must be consistent with the tape label when the data set is opened.

System action: FTP continues
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat

EZA2522I Records on input tape are lrecl X format

Explanation: This message is part of the LOCSTAT output. It means that a value of X was specified for READTAPEFormat and the record format for an input tape is expected to be lrecl X. This value must be consistent with the tape label when the data set is opened.

System action: FTP continues
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat
READTAPEFormat value is value but input tape is format

Explanation: A put was issued for a data set on tape and a non-blank value was specified for READTAPEFormat. The READTAPEFormat specification does not match the tape label.

value can be one of the following:

- F Format was to be fixed
- V Format was to be variable
- S Format was to be spanned
- X Format was to be lrecl X

If value is X, format is:

lrecl nnnnn — tape label shows logical record length nnnnn

If value is F, V, or S, format is:

lrecl X — tape label shows lrecl X format

System action: The request is rejected. FTP continues.

Operator response: Either specify the matching READTAPEFormat or change it to unspecified and try the request again. See the z/OS Communications Server: IP User’s Guide and Commands for the description of the LOCSITE command for guidelines on using READTAPEFormat.

System programmer response: No action is needed.

Module: EZAFTPCP

Procedure Name: sndFile

READTAPEFormat value is value but input tape is spanned

Explanation: A put was issued for a data set on tape and a non-blank value was specified for READTAPEFormat. The READTAPEFormat specification does not match the tape label.

value is one of the following:

- F Format was to be fixed
- V Format was to be variable

System action: The request is rejected. FTP continues.

Operator response: Either specify the matching READTAPEFormat or change it to unspecified and try the request again. See the z/OS Communications Server: IP User’s Guide and Commands for the description of the LOCSITE command for guidelines on using READTAPEFormat.

System programmer response: No action is needed.

Module: EZAFTPCP

Procedure Name: sndFile

READTAPEFormat value is value but input tape is not spanned

Explanation: A put was issued for a data set on tape and a non-blank value was specified for READTAPEFormat. The READTAPEFormat specification does not match the tape label.

value is one of the following:

- S Format was to be spanned

System action: The request is rejected. FTP continues.

Operator response: Either specify the matching READTAPEFormat or change it to unspecified and try the request again. See the z/OS Communications Server: IP User’s Guide and Commands for the description of the LOCSITE command for guidelines on using READTAPEFormat.
System programmer response: No action is needed.

Module: EZAFTPCP

Procedure Name: sndFile

---

EZA2526E READTAPEFormat value is value but input tape is format format

Explanation: A put was issued for a data set on tape and a non-blank value was specified for READTAPEFormat. The READTAPEFormat specification does not match the tape label.

value can be one of the following:
- F   Format was to be fixed
- V   Format was to be variable

format is the record format string determined from the tape label, such as VB, FBA, etc.

System action: The request is rejected. FTP continues.

Operator response: Either specify the matching READTAPEFormat or change it to unspecified and try the request again. See the z/OS Communications Server: IP User's Guide and Commands for the description of the LOCSITE command for guidelines on using READTAPEFormat.

System programmer response: No action is needed.

Module: EZAFTPCP

Procedure Name: sndFile

---

EZA2527W TRUNcate already specified. NOTRUNcate ignored.

Explanation: Both the TRUNCATE and NOTRUNCATE options have been entered on a LOCSITE command. Only the first option is accepted.

System action: None.

Operator response: Reenter the LOCSITE command to change the option.

System programmer response: No action is needed.

Module: EZAFTPCP

Procedure Name: locsite()

---

EZA2529I Truncated records will not be treated as an error.

Explanation: This message will be issued as the result of the LOCSTAT command when the TRUNCATE option is set. The WRAPRECORD option controls whether records are truncated or wrapped into the next record. The file transfer continues.

System action: None.

Operator response: If this is not the intended result, issue the LOCSITE NOTRUNcate command.

System programmer response: No action is needed.

Module: EZAFTPCP

Procedure Name: locstat()

---

EZA2530I Record format: format, Blocksize: size

Explanation: This message displays the record format that will be used when a new data set is created. It also displays the block size that will be used.

System action: FTP continues.

Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2531I Record format: format.
Explanation: This message displays the record format that will be used when a new data set is created.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2532I Record format: format, Lrecl: X
Explanation: This message displays the record format that will be used when a new data set is created. It also displays the logical record length X that indicates that records may exceed 32768 bytes.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2533I Record format: format, Lrecl: length
Explanation: This message displays the record format that will be used when a new data set is created. It also displays the logical record length.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2534I Record format: format, Lrecl: X, Blocksize: size
Explanation: This message displays the record format that will be used when a new data set is created. It also displays the logical record length X that indicates that records may exceed 32768 bytes and the block size.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2535I Record format: format, Lrecl: length, Blocksize: size
Explanation: This message displays the record format that will be used when a new data set is created. It also displays the logical record length and block size.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK
EZA2536I  

**Explanation:** This message indicates the number of bytes transferred, and the rate of transfer for a data transfer to or from the other host. If the number of bytes transferred is less than four Gigabytes, message EZA1617I is displayed.

**Note:** For smaller files (less than 360 KB), the reported time (and calculated rate) value reflects the amount of time to transfer the file to the TCP transport layer more than it reflects the network rates.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCG, EZAFTPCP

---

EZA2537E  

**Explanation:** Options NOTRUNCATE and NOWRAPRECORD are set. The file being transferred contains records that are longer than the LRECL of the new file.

**System action:** The transfer is ended. FTP continues.

**Operator response:** Increase the value of LRECL for the new file or change the LOCSITE options.

**System programmer response:** No action is needed.

**Module:** EZAFTPCG

**Procedure Name:** rcvfile()
EZA2544I  Data set dsname is migrated and NoAutoRecall is specified.
Explanation:  A command was issued to process a data set, but the data set is migrated and FTP is currently in NoAutoRecall mode.
System action:  The command is rejected.
Operator response:  Issue the LOCSITE AUTORECALL command to allow the data set to be recalled, and then reissue the FTP command.
System programmer response:  No action is needed.
Module:  EZAFTPMR

EZA2545I  Error mounting volume containing data set dsname
Explanation:  The volume containing the requested data set was not mounted to the FTP system. FTP attempted to have the volume mounted, but was unable to get the volume mounted.
System action:  The command is rejected.
Operator response:  Reissue the command. If the problem persists, contact the system programmer.
System programmer response:  Determine why the requested volume cannot be mounted to the MVS system.
Module:  EZAFTPMR

EZA2546I  Volume containing dsname is not mounted and NoAutoMount specified.
Explanation:  The command requested MVS data set dsname, but the volume containing dsname was not mounted to the system and FTP was currently in No Automount mode.
System action:  The command is rejected.
Operator response:  If possible, issue the LOCSITE AUTOMOUNT command to allow the volume containing the data set to be automatically mounted; otherwise, contact the system operator to mount the volume to the system. Then reissue the command.
System programmer response:  No action is needed.
Module:  EZAFTPMR

EZA2547I  Partitioned data set 'path name' does not exist.
Explanation:  The command requested that members of a partitioned data set be listed, but the requested data set could not be found.
System action:  The command is rejected.
Operator response:  Verify that the PDS name was entered correctly.
System programmer response:  No action is needed.
Module:  EZAFTPMR

EZA2548I  'data_set(member)' requests members but data_set is not a partitioned data set.
Explanation:  The command was entered using the MVS syntax data_set(member), which indicates that members of the PDS data_set are to be listed; however, data_set is not a partitioned data set.
System action:  The command is rejected.
Operator response:  Verify that the correct data set name was entered. Reissue the command with the correct data set name.
System programmer response:  No action is needed.
Module: EZAFTPMR

EZA2549I  Error opening data_set_name

Explanation: The command requested members of a PDS, but FTP was unable to open the PDS to read the directory. This can be a temporary problem, for example the data set is currently in use, or it can be a permanent error with the data set.

System action: The command is rejected.

Operator response: Reissue the command. If the problem persists, contact the system programmer.

System programmer response: Correct the problem with the data set.

Module: EZAFTPMR

EZA2550W  Name length error for filename name

Explanation: The pathname provided for a data transfer (get, put, append), delete, or rename request is too long. The name, when combined with the current working directory, must adhere to the following maximum lengths:
- 44 for a physical sequential data set
- 55 for a member of a PDS (includes the parentheses for the member name)
- 1023 for a file in the hierarchical file system.

Note: The maximum length for a file name is 255 -- the total pathname maximum length is 1023.

System action: The request is not performed.

Operator response: Reissue the request with a name that meets the limits for the type of data set or file.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

EZA2551W  Unknown HOME directory for filename name

Explanation: A command was issued that required the client to resolve the user’s HOME directory name (for example, a file name was entered that began with the directory notation ~/) but the client was unable to determine the user’s HOME directory.

System action: The command is rejected. FTP continues.

Operator response: Verify that the OMVS user ID has a HOME directory. If necessary, define a HOME directory for the user ID.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

EZA2552W  Nonexistent GDG data set dsname

Explanation: The relative generation number for the Generation Data Group (GDG) data set is invalid. The number should be a negative integer, a positive integer (for a store command only), or a 0, enclosed in parentheses.

System action: FTP continues.

Operator response: Reissue the command with a valid relative number for the data set.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

EZA2553W  Unable to send dsname

Explanation: The named data set is for a generation data group (GDG) that does not exist.

System action: The data set is not sent. FTP continues.

Operator response: Ensure that the GDG exists.
EZA2554W  cmd fails: filename is a directory.

Explanation: The file that is named is a directory. The get, put, and append commands do not support file transfer for a directory file.

System action: The command is rejected. FTP continues.

Operator response: Reissue the command specifying a name of a file that is not a directory.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

EZA2555W  cmd fails: filename is a pipe or FIFO.

Explanation: The file that is named is a pipe or FIFO special file. The file transfer subcommands do not support files of this type.

System action: The command is rejected. FTP continues.

Operator response: Reissue the command specifying a name of a file that is not a pipe or FIFO special file.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

EZA2556W  cmd fails: filename is a character special file.

Explanation: The file that is named is a character special file. The file transfer subcommands do not support files of this type.

System action: The command is rejected. FTP continues.

Operator response: Reissue the command specifying a name of a file that is not a character special file.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

EZA2557W  cmd fails: filename is an unknown type.

Explanation: The file that is named is an unknown type. The file transfer subcommands do not support files of this type.

System action: The command is rejected. FTP continues.

Operator response: Reissue the command specifying a name of a file that is not an unknown file type.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

EZA2558W  cmd fails: filename does not exist.

Explanation: The file that is named does not exist. The put and append subcommands require that the file exists.

System action: The command is rejected. FTP continues.

Operator response: Reissue the command specifying a name of a file exists.

System programmer response: No action is needed.

Module: EZAFTPCP
EZA2560W  Volume is not ready and automatic tape mounts are not allowed.

Explanation: A request to read from a data set or write to a data set on a tape volume was received. The tape volume is not mounted and you have requested NoAutoTapeMount.

System action: The request is not performed.

Operator response: Request that the tape be mounted by the operator and then reissue the request. Also, you can code the FTP.DATA statement AUTOTAPEMOUNT to allow automatic tape mounts to occur.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

EZA2561W  Error allocating tape data set dsname

Explanation: The client attempted to allocate to a data set on a tape volume. The dynamic allocation was unsuccessful.

System action: The command is rejected. FTP continues.

Operator response: No action is needed.

System programmer response: Examine the trace and look for trace messages with the tag alloc_tape. These trace messages provide the reason codes for the dynamic allocation error.

Module: EZAFTPCG, EZAFTPCP

EZA2562W  Allocation of dsn failed (error code s99error info code s99info S99ERSN s99ersn)

Explanation: The client attempted to allocate to a data set on a DASD or tape volume. The dynamic allocation was unsuccessful.

In the message text:

ds
The data set name.

s99error
The hexadecimal Error Reason Code from an SVC 99 request or a DYNALLOC request. See the information about Interpreting Error Reason Codes from DYNALLOC in z/OS MVS Programming: Authorized Assembler Services Guide.

s99info
The hexadecimal Information Reason Code from an SVC 99 request. See the information about Interpreting Information Reason Codes from DYNALLOC in z/OS MVS Programming: Authorized Assembler Services Guide.

s99ersn
The hexadecimal SMS Reason Code from SVC 99 request. See the information about S99RBX fields in z/OS MVS Programming: Authorized Assembler Services Guide for more information about SMS Reason Codes.

Examples: Not applicable.

System action: The command is rejected. FTP continues.

Operator response: No action is needed.

User response: Contact the system programmer.

System programmer response: Examine the trace and look for trace messages with the tag alloc_dasd. These trace messages provide the reason codes for the dynamic allocation error.

Problem determination: Look up the S99ERROR, S99INFO, and S99ERSN codes information as described in the explanation and take the actions recommended there. If the FTP client trace was enabled at the time of failure, and at least option FSC was enabled, you might be able to obtain more information by inspecting trace output for messages with the tag alloc_dasd. See the information about diagnosing FTP client problems with tracing in z/OS Communications Server: IP Diagnosis Guide for more information about using traces.

Source: z/OS Communications Server TCP/IP: FTP
EZA2563W  Data set dsname used exclusively by someone else.
Explanation: A data transfer (get, put or append) of a partitioned data set (PDS) was requested and the member requested is currently in use.
System action: The operation is not performed.
Operator response: Try the operation later when no one else is using the member of the PDS.
System programmer response: No action is needed.
Module: EZAFTPCG, EZAFTPCP

EZA2564W  Open of dsname failed.
Explanation: The data set cannot be opened.
System action: The requested operation is terminated. FTP continues.
Operator response: Rerun the FTP with tracing turned on. Contact the system programmer.
System programmer response: Look at the trace and find one of the following trace entry sequences:
- seq_open_file: xyz -> ...
  seq_open_file: failed (aa): bbbb

  The first line describes open mode with values x, y, and z that are defined as follows:
  x = I --> Input
  x = O --> Output
  y = S --> Stream I/O
  y = R --> Record I/O
  z = B --> Binary stream
  z = T --> Text stream

  The second line describes the error that occurred. aa is the errno value returned from the fopen of file. bbbb is the text associated with the errno value. See the following values and text that could be observed:

<table>
<thead>
<tr>
<th>errno</th>
<th>Text</th>
</tr>
</thead>
<tbody>
<tr>
<td>61</td>
<td>Error trying to define file</td>
</tr>
<tr>
<td>80a</td>
<td>The file is already opened.</td>
</tr>
<tr>
<td>10</td>
<td>File is already opened.</td>
</tr>
<tr>
<td>10</td>
<td>Command not recognized.</td>
</tr>
</tbody>
</table>

  The second line describes the error which occurred on the open. Use the return code (rc) and reason code to determine why the error occurred.

  For return code 80a, reason code 10, or return code 4, FTP was unable to obtain storage to open the data set. Increase the region size for the FTP job or user.

Module: EZAFTPCG, EZAFTPCP

EZA2565W  Command fails for dsname. User not authorized.
Explanation: The command was issued to read a data set. The requested data set is protected by a security system such as RACF, and the user is not authorized to read the data set.
System action: The data set is not sent. FTP continues.
Operator response: Contact the owner of the data set for authorization to read the data set.

System programmer response: No action is needed.

Module: EZAFTPCP

EZA2566E Requested action not taken: invalid REST parameter.

Explanation: A command is being processed as part of a restart of a checkpointed command. Before the command was sent, a REST command was processed and a restart marker was saved. The restart marker is incorrect.

System action: The command is rejected.

Operator response: No action is needed.

System programmer response: Look at the trace to determine the error that occurred when the repositioning was done.

Module: EZAFTPCG, EZAFTPCP

EZA2567E Record structure requires stream mode (mode S)

Explanation: Record structure transfers require the stream transmission mode (mode S). No other transmission mode is supported for record structure file transfers.

System action: No files are transferred.

Operator response: Use the STREAM command or MODE S command to change the transmission mode to stream mode. For more information about these commands, see the z/OS Communications Server: IP User’s Guide and Commands.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

EZA2568E Transfer aborted: attempt to connect to db2name failed (sql_rc)

Explanation: FTP attempted to process a SQL request, but was unable to connect to the DB2 subsystem named db2name.

(sql_rc) is the SQL return code. See DB2 Messages and Codes for a complete description of SQL return codes.

System action: No data is sent. FTP continues.

Operator response: If the DB2 subsystem name (db2name) is incorrect, issue a 'locsite db2=' command for the correct DB2 subsystem name, and resubmit the SQL query. If the DB2 subsystem name is correct, contact the system programmer for FTP.

System programmer response: Ensure that the DB2 subsystem has been started.

Module: EZAFTPCP

EZA2569E Transfer aborted: SQL not available. Attempt to open plan plan_name failed (sql_rc)

Explanation: FTP attempted to process a SQL request, but was unable to open the FTP DB2 subsystem plan named plan_name.

(sql_rc) is the SQL return code. See DB2 Messages and Codes for a complete description of SQL return codes.

System action: No data is sent. FTP continues.

Operator response: If FTP SQL support should be available, contact the system programmer for FTP. If a SQL query was not intended, issue locsite filetype= command to change the file type from SQL to SEQ before the next FTP put command.

System programmer response: Ensure that a BIND was done for plan plan_name and that execute authorization was granted for the plan.

If you used a plan name other than EZAFTPMPQ for the EZAFTPMPQ DBRM, your FTP DATA file must contain a DB2PLAN statement to specify the plan name that the FTP client is to use.
Module: EZAFTPCP

EZA2570E  Transfer aborted: SQL PREPARE/DESCRIBE failure
Explanation: DB2 encountered an error while processing a SQL statement submitted through FTP. The FTP output file contains the error message from DB2.
System action: FTP continues.
Operator response: Correct the error indicated in the output file, and resubmit the SQL request.
System programmer response: No action is needed.

Module: EZAFTPCP

EZA2571E  Transfer aborted: SQL CURSOR DECLARE failure
Explanation: DB2 encountered an error while processing a SQL statement submitted through FTP. The FTP output file contains the error message from DB2.
System action: FTP continues.
Operator response: If possible, correct the error indicated in the output file and resubmit the SQL request. Otherwise, contact the system programmer for FTP.
System programmer response: Correct the error indicated by the message contained in the output file. For a detailed explanation of DB2 error codes, see DB2 Messages and Codes.

Module: EZAFTPCP

EZA2572E  Transfer aborted: SQL CURSOR OPEN failure
Explanation: DB2 encountered an error while processing a SQL statement submitted through FTP. The FTP output file contains the error message from DB2.
System action: FTP continues.
Operator response: If possible, correct the error indicated in the output file and resubmit the SQL request. Otherwise, contact the system programmer for FTP.
System programmer response: Correct the error indicated by the message contained in the output file. For detailed explanation of DB2 error codes, see DB2 Messages and Codes.

Module: EZAFTPCP

EZA2573E  Transfer aborted: unsupported SQL statement
Explanation: FTP retrieved a file (or data set) while the local file type was SQL, but the file contains an SQL statement that is not supported by FTP.
System action: The PUT command is rejected.
Operator response: If an SQL query was intended, issue the PUT command for a file that contains an SQL SELECT statement. If an SQL query was not intended, issue a site filetype= command to change the current setting of filetype.
System programmer response: No action is needed.

Module: EZAFTPCP

EZA2574E  Transfer aborted: SQL FETCH error (sql_rc)
Explanation: A SQL query was submitted through FTP, but DB2 has encountered an error retrieving the data. Data retrieval for this query is discontinued. Data in the output file may be incomplete. code indicates the reason for the failure.
(sql_rc) is the SQL return code. See DB2 Messages and Codes for a complete description of SQL return codes.
System action: FTP continues.
Operator response: Resubmit the query. If the problem persists, contact the system programmer for FTP.

System programmer response: Correct the problem described in (sql_rc). See DB2 Messages and Codes for a complete description of SQL return codes.

Module: EZAFTPCP

---

EZA2575E Transfer aborted: insufficient storage to process SQL request

Explanation: A SQL query was being attempted through FTP, but there is not enough system storage available for FTP to complete the request.

System action: No data is sent. FTP continues.

Operator response: Try again. If the problem persists, contact the system programmer for the FTP client.

System programmer response: Determine why FTP is unable to acquire dynamic storage and correct the problem.

Module: EZAFTPCP

---

EZA2576E Transfer aborted: internal error while processing SQL request

Explanation: FTP has encountered an internal error while processing a SQL request. No data is sent.

System action: FTP continues.

Operator response: Try again. If the problem persists, contact the system programmer for FTP.

System programmer response: If the problem occurs repeatedly, use the client’s debug facility to get a trace of the FTP operation and contact the IBM Support Center.

Module: EZAFTPCP

---

EZA2578I Local directory name set to hierarchical file directory

Explanation: The name of the local directory is a hierarchical file directory. Files are grouped in a directory, which is a special kind of file consisting of the names of a set of files and other information about them.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

---

EZA2580E cmd cmd failed: error_description

Explanation: The FTP user issued the command cmd. While processing the command, the FTP client issued a C runtime library function that did not complete successfully.

error_description describes error.

System action: The command cmd is not executed.

Operator response: Reissue the command. If the problem persists, contact the system programmer with the error message.

System programmer response: Correct the error indicated by error_description.

Module: EZAFTPCD

---

EZA2581I HFS directory directory is the current working directory

Explanation: The user has issued the LCD command to change the current working directory. The LCD command has completed successfully and has changed the current working directory to the z/OS UNIX file system (HFS) directory indicated by the directory value.
EZA2582E • EZA2587E

System action: The current working directory is changed to the new directory.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCD

EZA2582E  cmd failed: Unknown HOME directory
Explanation: A command was issued that required the client to resolve the user’s HOME directory name (for example, a pathname was entered that began with the directory notation ~/) but the client was unable to determine the user’s HOME directory.
System action: The command is rejected. FTP continues.
Operator response: Verify that the OMVS user ID has a HOME directory. If necessary, define a HOME directory for the user ID.
System programmer response: No action is needed.
Module: EZAFTPCD

EZA2583I  Working Directory for GET is NULL Device
Explanation: The user has entered the LCD *DEV:NULL command to change the current working directory of the client to the NULL directory. When the current working directory is the NULL directory, data transferred to the client from the server (GET or RETR), will not be stored at the client, but will be received and discarded. The NULL directory is used only for data transferred from the server to the client. Data transferred from the client to the server (PUT) will continue to use the working directory which was in effect prior to the issuance of the LCD *DEV:NULL command. The directory which will be used for the PUT command is described in the message that follows this one:
• EZA2584I for PUT is “directory” partitioned data set
• EZA2585I for PUT is the z/OS UNIX file system directory directory
• EZA2586I for PUT is “directory” name prefix.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCD, EZAFTPCL

EZA2584I  for PUT is “directory” partitioned data set.
Explanation: This message is part of a group. See EZA2583I for message group information.

EZA2585I  for PUT is HFS directory directory
Explanation: This message is part of a group. See EZA2583I for message group information.

EZA2586I  for PUT is “directory” name prefix.
Explanation: This message is part of a group. See EZA2583I for message group information.

EZA2587E  LCD ../ only valid for HFS directories
Explanation: The LCD command was entered with a pathname of ../ to back up one directory level, but the current working directory was either an MVS partitioned data set, or an MVS high level qualifier. The “../” notation is only valid when the current working directory is a z/OS UNIX file system directory.
System action: The LCD command is rejected.
Operator response: Reissue the LCD command with the corrected pathname.
System programmer response: No action is needed.
Module: EZAFTPCD

EZA2588E Unable to connect to alternate TCPIP name
Explanation: Error returned from setibmopt routine.
System action: None.
Operator response: If the TCPIP start parameter is used, check the spelling of the parameter. If the spelling is correct, check that the stackname specified in the start parameter matches the TCPIPJOBNAME specified in the TCPIP.DATA configuration file. For more information about the TCPIP.DATA configuration file, see the z/OS Communications Server: IP Configuration Reference.
System programmer response: No action is needed.
Module: EZAFTPCY

EZA2589E Connection to server interrupted or timed out. operation
Explanation: The FTP server is no longer responding to the FTP client or the user has caused an interrupt (for example, Cnt1-c).

operation is the operation that was in progress at the time of the interruption. Possible values are:

Initial connection
During initial connection to a non-IPv6 server.

Initial IPv6 connection
During initial connection to an IPv6 server.

Waiting for data connection
Waiting for the server to establish the data connection.

Sending a command
Sending a command to the server on the control connection.

Sending ABORT command
Sending the ABORT command to the server.

Receiving data
Receiving data on the data connection.

Sending data
Sending data on the data connection.

Waiting for reply
Waiting for a reply from the server.

Sending command to SOCKS server
Sending a command to a SOCKS server.

Waiting for reply from SOCKS server
Waiting for a reply from a SOCKS server.

Establishing data connection through SOCKS server
While trying to establish a data connection through a SOCKS server.

Initial connection to SOCKS server
During initial connection to a SOCKS server.

System action: The current subcommand is ended.

Operator response: The server may not be responding because of traffic in the network. In this case a retry may be successful. The server may have crashed, in which case it will need to be restarted before attempting communications again. A complete description of each operation's relevant client timers and recommended steps for diagnosis can be found in the section on diagnosing FTP transfer failures with EZA2589E in z/OS Communications Server: IP Diagnosis Guide. If the problem continues, contact the system programmer.

System programmer response: Possible sources of the failure include the client, server, network, firewall, and configuration errors. See the section on diagnosing FTP transfer failures with EZA2589E in z/OS Communications Server: IP Diagnosis Guide for recommended actions to diagnose the failure.
EZA2590E  function error from location - error

Explanation: The FTP client has issued a socket call and received an error return code.

function is the C library function that failed and returned an error.

location is the location in the FTP client.

error is the C run-time library error message for the failure. For more information, see z/OS Language Environment Run-Time Messages.

System action: Communications are interrupted. The current operation is ended.

Operator response: Try the operation again. If the problem persists, contact the system programmer.

System programmer response: If the problem persists, report the contents of the message to the IBM Software Support center.

Module: EZAFTPSC

EZA2591I Waiting for recall of “dsname”

Explanation: You issued a subcommand which referenced the data set dsname, which has been migrated.

System action: The client attempts to recall the data set.

Operator response: No action is needed.

System programmer response: If you do not want the FTP client to recall migrated data sets, use the LOCSite subcommand to set the autorecall mode to noautorecall. See z/OS Communications Server: IP User’s Guide and Commands for information about the LOCSite subcommand.

Module: EZAFTPCD

EZA2592I Waiting for mount for “dsname”

Explanation: You issued a subcommand which references dsname, an existing data set which is cataloged on a volume which is not mounted. The client is attempting to mount the volume so it can complete the request.

System action: The client waits for the volume to be mounted.

Operator response: If you do not want the FTP client to mount unmounted volumes, use the LOCSite subcommand to set automount mode to noautomount. See z/OS Communications Server: IP User’s Guide and Commands for information about the LOCSite subcommand.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2593I HFS directory “directory” created.

Explanation: The indicated the z/OS UNIX file system (HFS) directory has been created.

System action: The directory is created. FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2594E LMKDIR failed. Unit=unit_name invalid for PDS.

Explanation: The LMKDIR command was issued to create a new PDS, but the current setting of the LOCSITE UNIT parameter was not valid for a PDS (for example, the LOCSITE UNIT was set to TAPE and a PDS cannot be allocated on a tape).

System action: The LMKDIR command is rejected.
Operator response: Issue the LOCSITE command with the UNIT parameter to change the setting of the UNIT parameter to a unit that is valid for a PDS, then reissue the LMKDIR command.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2595E  LMKDIR failed. DCBDsn data set dcbdsn_name has a recfm of recfm which is invalid for a PDS.

Explanation: The LMKDIR command was issued to create a new PDS. The LOCSITE DCBDsn parameter was in effect specifying that all new data sets be created with the same characteristics as the data set dcbdsn_name. However, the model data set dcbdsn_name had a record format recfm that is not valid for a PDS. Record formats FBS, VBS, and VS are not valid record formats for a PDS.

System action: The LMKDIR command is rejected.

Operator response: Use the LOCSITE command to either specify a different DCBDsn data set, or to specify the data set characteristics without using the DCBDsn model data set parameter. Or use a combination of DCBDsn and RECFM LOCSITE parameters to use all of the characteristics of the model DCBDsn data set except the record format, which will be overridden by the RECFM parameter. After changing the appropriate LOCSITE parameters, reissue the LMKDIR command.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2596E  LMKDIR fails: new_directory. User not authorized

Explanation: The LMKDIR command was issued to create the new PDS new_directory. However, some part of the high-level qualifiers for new_directory were protected by a security system, such as RACF, and the user did not have sufficient authority to create a data set by this name.

System action: The LMKDIR command is rejected.

Operator response: Contact the security administrator to get the necessary authorization for creating the data set.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2597E  LMKDIR failed. Volume=serial is a tape and is invalid for a PDS.

Explanation: The LMKDIR command was issued to create a new PDS. The LOCSITE VOLUME parameter was in effect, specifying that all new data sets be allocated on volume serial. serial was determined to be a tape, and partitioned data sets cannot be allocated to tape.

System action: The LMKDIR command is rejected.

Operator response: Issue the LOCSITE VOLUME command to change or reset the volume serial for new data sets to a direct access volume, then reissue the LMKDIR command.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2598E  LMKDIR failed. Recfm recfm is invalid for a PDS.

Explanation: The LMKDIR command was issued to create a new PDS. The LOCSITE RECFM parameter had a value of recfm, which is not a valid record format for a PDS.

System action: The LMKDIR command is rejected.

Operator response: Issue the LOCSITE RECFM command to change the setting of RECFM to a record format that is valid for a PDS, then reissue the LMKDIR command. Incorrect record formats are FBS, VBS, and VS).

System programmer response: No action is needed.

Module: EZAFTPCD
EZA2599W  ftp_data file, line line_number: NCP obsolete: parameter not required.

Explanation: While processing the FTP.DATA file, the FTP client encountered the NCP keyword. This keyword is no longer required. Access method buffer information is computed internally.

Operator response: No action is needed.

System programmer response: If the FTP.DATA file is used only by the FTP server and client for z/OS UNIX System Services MVS, and is not shared with another server or client that needs the keyword, remove the keyword from the FTP.DATA file. See the z/OS Communications Server: IP Configuration Reference for information on the parameters of the FTP.DATA file.

Module: EZAFTPEP

EZA2600E  Command command name is not a valid proxy command.

Explanation: The indicated command was not a valid command that can be sent to the proxy server. For example, local client commands cannot be sent to the proxy server.

System action: The command is rejected.

Operator response: Reissue the command without the proxy prefix, or enter a valid command for the proxy server.

System programmer response: No action is needed.

Module: EZAFTPPC

EZA2601W  NOWRTAPEFastio already specified. WRTAPEFastio ignored.

Explanation: The NOWRTAPEFastio parameter was already specified on this LOCSITE subcommand. The WRTAPEFastio parameter is ignored.

System action: FTP Continues

Operator response: Issue the LOCSITE subcommand again with the required setting.

System programmer response: No action is needed.

EZA2602E  Error reading the file

Explanation: The local file could not be read.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCP

EZA2603E  Error sending the file

Explanation: The local file could not be sent.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCP

EZA2604I  DSORG=DA requires structure: FILE, mode: STREAM, and transfer type: IMAGE.

Explanation: A command was issued that required the server to transfer an MVS data set which had a dsorg of DA (Direct Access). Data sets with a dsorg of DA can only be transferred in stream mode with the transfer type set to image (binary).

System action: The command is rejected. FTP continues.
Operator response: Set the structure to FILE, the mode to STREAM, the transfer type to IMAGE, and reissue the command.

System programmer response: No action is needed.

EZA2605W Local data set is full (value)
Explanation: FTP was unable to write to the local data set because it is full. One of the following explicit values was received when the write failed:
19 An unrecoverable error has permanently marked the data set in error.
33 An attempt was made to extend a non-extendable file.
65 A write system error occurred.

System action: FTP continues.
Operator response: Request a larger space allocation for the local data set and try the transfer again.
System programmer response: No action is needed.
Module: EZAFTPCG

EZA2606W File I/O error value
Explanation: FTP experienced a file I/O error when reading from or writing to a data set or file.
value is an unrecognized error value from the file I/O request.

System action: FTP continues.
Operator response: Notify the system programmer about the error.
System programmer response: Activate the debug option and reenter the request. Contact the IBM Software Support Center.
Module: EZAFTPCG

EZA2607W Transfer aborted due to receive error (file_status)
Explanation: The transfer of data ended because of an error receiving data from the data connection.
file_status is an FTP error number. The message immediately following this one gives the complete description of the error.

System action: FTP continues.
Operator response: Notify the system programmer about the error.
System programmer response: Correct the error described in file_status.
Module: EZAFTPCG

EZA2617W parameter2 already specified. parameter1 ignored.
Explanation: The LOCSITE subcommand parameters parameter1 and parameter2 are mutually exclusive and cannot be specified on the same LOCSITE subcommand. parameter2 has already been encountered on this LOCSITE subcommand, causing parameter1 to be rejected.

System action: parameter2 is used instead of parameter1. FTP continues.
Operator response: If you want to use parameter1, issue a LOCSITE subcommand specifying parameter1, but not parameter2. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information about FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information about the parameters of the LOCSITE subcommand.
System programmer response: No action is needed.
Module: EZAFTPCG
EZA2624W  WRTAPEFastio already specified. NOWRTAPEFastio ignored.

Explanation: The WRTAPEFastio parameter was already specified on this LOCSITE subcommand. The NOWRTAPEFastio parameter is ignored.

System action: FTP continues.

Operator response: Issue the LOCSITE subcommand again with the required setting.

System programmer response: No action is needed.

EZA2625W  Invalid format data set name “name”. Dcbdsn parameter ignored.

Explanation: The data set name specified for the DCbdsn parameter of the LOCSITE command, which is used to specify the name of the data set to be used as a model for allocation of new data sets, has an incorrect format. The data set name must conform to MVS data set naming conventions.

System action: The DCbdsn parameter is ignored. FTP continues.

Operator response: Reissue the LOCSITE command with a valid MVS data set name. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: Assist the user as necessary.

EZA2627I  Internal debug option value enabled

Explanation: The internal debug options are set on. If value is 1, regular tracing is on. If value is 2, detailed tracing is on.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

EZA2628W parm parameter’s value (value) must be between low value and high value. The parameter is ignored.

Explanation: The LOCSITE command was specified with the parm parameter, but the value, value, specified for the parm parameter was outside the valid range.

System action: The parm parameter is ignored.

Operator response: Reissue the command with a valid value. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2631W  CHKptint parameter (value) is larger than a 4 byte integer. Chkptint ignored.

Explanation: The value of the CHKptint parameter, value, was larger than the maximum value allowed for a 4 byte integer.

System action: The value in error is ignored.

Operator response: Reissue the LOCSITE command with a valid value specified for the CHKptint parameter. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.
Module: EZAFTPCK

EZA2632I Data set name too long. Use MVS or HFS naming conventions.
Explanation: A command was entered with a data set name that was longer than the MVS maximum of 44 characters or the z/OS UNIX file system (HFS) maximum of 1023 characters.
System action: The command is rejected.
Operator response: Reissue the command with the correct data set or z/OS UNIX file name.
System programmer response: No action is needed.
Module: EZAFTPMR

EZA2633I File name too long. Use HFS naming conventions.
Explanation: The command was entered with a file name that was longer than the z/OS UNIX file system (HFS) maximum of 1023 characters.
System action: The command is rejected.
Operator response: Reissue the command with the correct z/OS UNIX file name.
System programmer response: No action is needed.
Module: EZAFTPMR

EZA2634I cmd failed: Unknown HOME directory
Explanation: A command was issued that required FTP to resolve the user’s HOME directory name (for example, a pathname was entered that began with the directory notation ~/) but FTP was unable to determine the user’s HOME directory.
System action: The command is rejected. FTP continues.
Operator response: Verify that the OMVS user ID has a HOME directory. If necessary, define a HOME directory for the user ID.
System programmer response: No action is needed.
Module: EZAFTPMR

EZA2635I Member name too long. Use MVS naming conventions.
Explanation: The command was entered with a data set name and member name requested, but the member name was longer than the MVS maximum length of 8 characters.
System action: The command is rejected.
Operator response: Reissue the command with the correct member name syntax.
System programmer response: No action is needed.
Module: EZAFTPMR

EZA2636E TSO Command failed with return code value
Explanation: The TSO command requested completed in error.
System action: The command fails.
Operator response: Correct the command and reissue. If the command is correct but still fails, turn on debug and reissue the command. Give the debug output to the system programmer.
System programmer response: The debug output from the TSO command shows the return code and reason code from the IKJEFTSR service facility routine, which is used to invoke the TSO command from FTP. See z/OS TSO/E Programming Services for a list of return codes and reason codes for the IKJEFTSR service facility routine.
Module: EZAFTPCU
EZA2637I  No data sets found

Explanation: The command requested a listing of one or more data sets, but FTP could not find any data sets that matched the requested pathname.

System action: The command is rejected.

Operator response: Verify that the correct data set name or path was entered.

System programmer response: No action is needed.

Module: EZAFTPMR

EZA2638I  error reading PDS directory

Explanation: The command requested members of a partitioned data set, but FTP was unable to read the directory of the PDS.

System action: The command is rejected.

Operator response: Reissue the command. If the problem persists, contact the system programmer.

System programmer response: Correct the problem with the data set.

Module: EZAFTPMR

EZA2639I  Qualifier too long. Use MVS naming conventions.

Explanation: A command was entered with a data set name that contained a qualifier that was longer than the MVS maximum of 8 characters.

System action: The command is rejected.

Operator response: Correct the data set name and reissue the command.

System programmer response: No action is needed.

Module: EZAFTPMR

EZA2640I  Error allocating storage for list

Explanation: FTP was not able to allocate the storage necessary to process the command.

System action: The command is rejected.

Operator response: Reissue the command. If the problem persists, contact the system programmer.

System programmer response: FTP might need to be started with a larger region size.

Module: EZAFTPMR

EZA2641I  Patterns (% and *) may only be specified in the last qualifier when in directory mode

Explanation: The command was entered with a pathname that contained the global file-name characters % and *. The global file-name characters were not in the last qualifier of the pathname, and the MVS server was currently in directory mode. The global file-name characters can only be used in the last qualifier when in directory mode.

System action: The command is rejected.

Operator response: Either correct the pathname to have the global file-name characters in the last qualifier and reissue the command in directory mode, or issue the LOCSITE/SITE DATASETMODE command to change the server to data set mode and then reissue the command as is.

System programmer response: No action is needed.

Module: EZAFTPMR
EZA2643I  Unable to obtain data set list
Explanation:  A service call was issued to obtain the list of requested data sets from the MVS system, but the service call was unsuccessful.
System action:  The command is rejected.
Operator response:  Try the command again. If the problem persists, contact the system programmer.
System programmer response:  If necessary, re-create the problem with FTP traces turned on. Locate the last occurrence of the trace message pslist: reason code rc from CSI. This trace message will contain the reason code from the service call that was unsuccessful. Determine the cause and correct the problem.
Recommend Trace:  UTL
Module:  EZAFTPMR

EZA2644I  No members found.
Explanation:  The command requested members of a partitioned data set, but no members were found in the PDS that matched the requested name.
System action:  The command is rejected.
Operator response:  Verify that the member name or path was entered correctly.
System programmer response:  No action is needed.
Module:  EZAFTPMR

EZA2658W  parm parameter (value) is not valid. parm ignored.
Explanation:  The LOCSITE command was entered with the parm parameter, but the value specified, value, was not a valid value. Valid values for the parm parameter are Catlg and Delete.
System action:  The parm parameter is ignored.
System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA2659W  parm parameter (value) is not numeric. parm ignored.
Explanation:  The LOCSITE command was specified with the parm parameter, but the value, value, specified for the parm parameter was not a numeric value.
System action:  The parm parameter is ignored.
System programmer response:  No action is needed.
Module:  EZAFTPCK

EZA2660I  Workarea allocation failed.
Explanation:  The allocation of the workarea for qdisk failed.
System action:  FTP continues.
Operator response:  No action is needed.
System programmer response: No action is needed.

Module: EZAFTPCK

EZA2661W  Restart requires file structure

Explanation: A RESTART command was issued, but the structure is not file structure.

System action: FTP continues.

Operator response: Change the structure to file (issue file or structure f) and reissue the RESTART command.

System programmer response: No action is needed.

Module: EZAFTPCB

EZA2662W  NCP parameter obsolete: Parameter ignored.

Explanation: The NCP parameter is obsolete. It is no longer required because values are computed internally.

System action: FTP continues.

Operator response: None required, the parameter is ignored.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2663W  parameter not allowed when user not logged in. parameter ignored.

Explanation: The LOCSITE subcommand was issued with the parameter, but the user was not currently logged on to the server with a valid user ID. The user must first log in with a valid user ID and password before issuing the LOCSITE subcommand with the parameter parameter.

System action: FTP continues.

Operator response: Login to the server using the USER and PASS subcommands, then reissue the LOCSITE subcommand with the parameter parameter.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2664W  CHMod invalid syntax. Specify CHMod mode filename. CHMod ignored.

Explanation: The CHMod parameter of the LOCSITE command was entered incorrectly. The correct syntax of the CHmod parameter of the LOCSITE subcommand is LOCSITE CHMod mode filename where mode is the new permission bit setting for the file, and filename is the name of the file to change.

System action: The CHMod parameter is ignored.

Operator response: Reissue the LOCSITE command with the correct syntax for the CHmod parameter. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2665W  CHMod invalid filename filename

Explanation: The file name specified by the CHMod parameter of the LOCSITE subcommand was longer than the z/OS UNIX file name maximum of 1023 characters. If the file name operand of the CHMod parameter began with a forward slash (/), then the filename value is the file name operand used “as is”; otherwise, the filename value is the file name operand appended to the current working directory.

filename is the name of the file that is not valid.

System action: The CHMod parameter is ignored.
Operator response: Reissue the LOCSITE command with a valid value specified for the file name on the CHMOD parameter. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2667W  CHMod filename is not a valid HFS file. CHMod ignored

Explanation: The file name specified on the CHMod parameter of the LOCSITE subcommand was not an z/OS UNIX (HFS) file. The CHMod parameter is valid only for z/OS UNIX files.

System action: The CHMod parameter is ignored.

Operator response: Reissue the LOCSITE command with a valid value specified for the file name on the CHMod parameter. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.

Module: EZAFTPCK

---

EZA2668W  CHMod cannot access file filename: error_description

Explanation: The FTP client encountered an error while attempting to obtain the file information for filename. error_description describes the C runtime library error that was encountered while accessing filename.

System action: The CHMod parameter is ignored.

Operator response: Reissue the LOCSITE command with a valid value specified for the file name on the CHMod parameter. If the problem persists, contact the system programmer.

System programmer response: If necessary, correct the error indicated by error_description.

Module: EZAFTPCK

---

EZA2669W  CHMod failed: error_description

Explanation: The FTP client encountered an error while attempting to change the permission bits of the file. error_description describes the C runtime library error that was returned in response to the chmod() request.

System action: The CHMod parameter is ignored.

Operator response: Contact the system programmer.

System programmer response: Correct the error indicated by error_description

Module: EZAFTPCK

---

EZA2670W  CHMod mode value invalid. Specify mode as a 1-3 digit octal value, or as {u|g|o|a}={|+|-}{r|w|x|rw|wx|rwx}. CHMod ignored

Explanation: The LOCSITE command was entered with the CHMod parameter, but the mode operand of the CHMod parameter was incorrect. The mode operand specifies the permission bit settings of the file, and should be expressed as either a 1-3 digit octal number (for example, 666 for permission setting rw-rw-rw-), or as a mnemonic indicating the changed bits, (for example a+x to turn on the execute bit for user, group, and other).

System action: The CHMod parameter is ignored.

Operator response: Reenter the LOCSITE subcommand, specifying the correct value for the mode operand. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2671W  CHMod parameters missing. Specify CHMod mode filename. CHMod ignored

Explanation: The LOCSITE subcommand was entered with the CHMod parameter, but the syntax of the CHMod parameter was incorrect. One or more of the operands required on the CHMod parameter were missing. The syntax of the CHMod parameter is LOCSITE CHMod mode filename.

System action: The CHMod parameter is ignored.

Operator response: Reenter the LOCSITE subcommand, specifying the correct operands. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.
Module: EZAFTPCK

EZA2672W  UMask invalid syntax. Specify UMask umask_value. UMask ignored

Explanation: The LOCSITE command was issued with the UMask parameter, but the syntax of the UMask parameter was incorrect. The correct syntax is LOCSITE UMask umask_value, where umask_value is a 3 character octal number representing file permission bits.

System action: The UMask parameter is ignored. FTP continues.

Operator response: Reissue the LOCSITE command with a valid value for the UMask parameter. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.

System programmer response: Assist the user as necessary.
Module: EZAFTPCK

EZA2673I  parameter parameter not allowed when the control connection is not secured

Explanation: You entered an FTP client subcommand during a secure session while the control connection was not secured. The subcommand parameter is not allowed while the control connection is not secured.

In the message text:

parameter

The subcommand parameter that is not allowed when the control connection is not secured.

If the subcommand parameter is TLSRFCLEVEL=DRAFT, the user is trying to transition the client to the Internet draft level of RFC 4217, On Securing FTP with TLS. However, the Internet draft level of RFC 4217 implemented by z/OS FTP does not support a TLS-secured session with an unsecured control connection.

Examples:
Command: ccc
>>>CCC
200 CCC command successful
locsite TLSRFCLEVEL=DRAFT NOFWFRIENDLY
EZA2673I parameter TLSRFCLEVEL=DRAFT is not allowed when control connection is not secured

System action: FTP ignores the subcommand parameter.

Operator response: No action is needed.

User response: If you are trying to switch the client from using TLSRFCLEVEL=RFC4217 to using TLSRFCLEVEL=DRAFT, use the AUth subcommand with the TLS parameter to secure the control connection, and try switching the client again. See the information about the AUth subcommand in z/OS Communications Server: IP User’s Guide and Commands.

System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: FTP
Module: Not applicable.
Routing code: 10
Descriptor code: 12

EZA2674W  UMask value invalid. Specify UMask value as 1 - 3 octal digits

Explanation: The LOCSITE command was issued with the UMask parameter, but the value specified for the UMask parameter was invalid. The value specified for UMask should be a 1 to 3 character octal number representing file permission bits.
System action: The UMask parameter is ignored. FTP continues.
Operator response: Reissue the LOCSITE command with a valid value for the UMask parameter. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.
System programmer response: Assist the user as necessary.
Module: EZAFTPCK

EZA2675W  200-UMask value missing. Specify UMask value as 1 - 3 octal digits

Explanation: The LOCSITE command was issued with the UMask parameter, but no value was specified for the UMask parameter. The value specified for UMask should be a 1 to 3 character octal number representing file permission bits.
System action: The UMask parameter is ignored. FTP continues.
Operator response: Reissue the LOCSITE command with a valid value for the UMask parameter. See the z/OS Communications Server: IP User’s Guide and Commands or z/OS Communications Server: IP Configuration Guide for information on FTP in general and to z/OS Communications Server: IP User’s Guide and Commands for information on the parameters of the LOCSITE subcommand.
System programmer response: Assist the user as necessary.
Module: EZAFTPCK

EZA2676I  Connected to: host, Port:FTP control (21), logged in

Explanation: This message is issued in response to the LOCSTAT subcommand. The host is the remote host to which you are connected. The port is the default FTP control port, 21, on the remote host.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2677I  Connected to: host, Port:FTP control (21), not logged in

Explanation: This message is issued in response to the LOCSTAT subcommand. The host is the remote host to which you are connected. The port is the default FTP control port, 21, on the remote host.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK
EZA2689I  Prompting: prompt, Globbing: glob

Explanation: This message is issued in response to the LOCSTAT subcommand. The prompt value indicates whether the PROMPT setting is on or off. On indicates that interactive prompting on multiple commands is on. The glob value indicates whether the GLOB setting is on or off. On indicates that character expansion of local file names is on.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2690I  Invalid response to prompt. Try again.

Explanation: You entered an invalid response to an interactive prompt.

System action: FTP continues.

Operator response: Enter one of the valid responses that are displayed in the prompt message.

System programmer response: No action is needed.

Module: EZAFTPAC

EZA2691I  Globbing on

Explanation: File-name parameters for the multiple commands (mdelete, mget, and mput) are expanded. That is, the asterisk is used as a wildcard.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

EZA2692I  Globbing off

Explanation: File name parameters for the multiple subcommands (mdelete, mget, and mput) are not expanded. That is, the asterisk (*) is not used as a wildcard.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

EZA2693I  Interactive mode is on

Explanation: FTP subcommands will prompt for verification before deleting, retrieving, or sending multiple files during the mdelete, mget, and mput subcommands. One of the following four values must be entered for each prompt:

Y (Yes) execute the subcommand
N (No) do not execute the subcommand
Q (Quit) quit processing the subcommand immediately
S (Stop prompting) do not prompt anymore for this subcommand.

Note: Pressing the enter key with no value is not a valid response.

System action: FTP continues.
Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

---

**EZA2694I** Interactive mode is off

**Explanation:** FTP commands will not prompt for verification before deleting, retrieving, or sending multiple files during the mdelete, mget, and mput commands.

**System action:** FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

---

**EZA2695I** Mdelete filename(Yes | No | Quit | Stop prompting)?

**Explanation:** The prompt is displayed for each file before it is deleted when the mdelete subcommand is being processed.

filename is the name of the file or data set that FTP is about to delete.

You must enter one of the following values before processing continues:

- **Y (Yes)** Delete the file or data set indicated by filename. FTP will prompt you with a new file name if it finds another data set or file to delete.
- **N (No)** Do not delete the file or data set indicated by filename. FTP will prompt you with a new file name if it finds another data set or file to delete.
- **Q (Quit)** Quit processing the subcommand immediately (do not delete any more files or data sets).
- **S (Stop prompting)** Delete filename. Continue deleting data sets or files, but stop prompting before each file or data set deletion.

**Notes:**
1. Only the first character of the entered value is interrogated. That is, entering yyyyy has the same effect as entering yes.
2. Pressing the enter key with no value is not a valid response.
3. If you do not want to see the prompt the next time you issue the mdelete subcommand, use the prompt subcommand to toggle the interactive mode to off.

**System action:** FTP waits for your reply. The subsequent action depends on how you reply to the prompt.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPPCA

---

**EZA2696I** Mget filename(Yes | No | Quit | Stop prompting)?

**Explanation:** The prompt is displayed for each file before it is retrieved when the mget subcommand is being processed.

Filename is the name of the file or data set FTP is about to retrieve.

You must enter one of the following values before processing continues:

- **Y (Yes)** Retrieve filename. FTP will prompt you with another filename if it finds another file or data set to retrieve.
- **N (No)** Do not retrieve filename. FTP will prompt you with another filename if it finds another file or data set to retrieve.
Q (Quit)
   Quit processing the subcommand immediately (do not retrieve any more files or data sets).

S (Stop prompting)
   Retrieve filename. Continue retrieving files or data sets, but do not prompt before retrieving each file.

Notes:
1. Only the first character of the entered value is interrogated. That is, entering yyyy has the same effect as
   entering yes.
2. Pressing the enter key with no value is not a valid response.
3. If you do not want to see the prompt the next time you issue the mget subcommand, use the prompt
   subcommand to toggle the interactive mode to off.

System action: FTP waits for your reply. The subsequent action depends on how you reply to the prompt.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPSC

---

Explanation: The prompt is displayed for each file before it is sent when the mput command is being processed.
filename is the name of the file or data set that FTP is about to send to the server.

You must enter one of the following values before processing continues:

Y (Yes)       Send filename. FTP will prompt you with another filename if it finds another file or data set to send.
N (No)        Do not send filename. FTP will prompt you with another filename if it finds another file or data set
to send.
Q (Quit)      Quit processing the subcommand immediately (do not send any more files or data sets).
S (Stop prompting) Send filename. Continue sending files or data sets to the server, but do not prompt before sending
each file.

Notes:
1. Only the first character of the entered value is interrogated. That is, entering yyyy has the same effect as
   entering yes.
2. Pressing the enter key with no value is not a valid response.
3. If you do not want to see the prompt the next time you issue the mput subcommand, use the prompt
   subcommand to toggle the interactive mode to off.

System action: FTP waits for your reply. The subsequent action depends on how you reply to the prompt.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPSC

---

Proxy connection to host, Port: port, logged in

Explanation: This message is issued in response to the LOCDATA subcommand. A proxy connection to a remote
host exists. The host is the remote host to which you are connected. The port is the port number of the remote host.
This message is only displayed if a proxy connection exists.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK
EZA2699I Proxy connection to host, Port: port, not logged in

Explanation: This message is issued in response to the LOCSTAT subcommand. A proxy connection to a remote host exists. The host is the remote host to which you are connected. The port is the port number of the remote host. This message is only displayed if a proxy connection exists.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2700I Proxy connection to host, Port: FTP control (21), logged in

Explanation: This message is issued in response to the LOCSTAT subcommand. A proxy connection to a remote host exists. The host is the remote host to which you are connected. The port is the default FTP control port, 21, on the remote host. This message is only displayed if a proxy connection exists.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2701I Connected to host, Port: FTP control (21), not logged in

Explanation: This message is issued in response to the LOCSTAT subcommand. A proxy connection to a remote host exists. The host is the remote host to which you are connected. The port is the default FTP control port, 21, on the remote host. This message is only displayed if a proxy connection exists.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2702I Proxy Local Port: port

Explanation: This message is issued in response to the LOCSTAT subcommand. The indicated port is the port number of the local host for the proxy connection. This message is only displayed if a proxy connection exists.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2703I Valid proxy commands are:

Explanation: This message is issued in response to the HELP PROXY subcommand. Following it are a list of commands which are valid on the PROXY subcommand.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL
EZA2704I  For more information about proxy commands, say 'HELP ALL PROXY'

Explanation: This message provides information about how to request help for PROXY commands using the HELP command. This message is issued in response to a HELP PROXY request.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCL

EZA2705E  Command not available. Unable to load Japanese translation tables in filename; return code: code

Explanation: The FTP client encountered an error while attempting to load the indicated translation table. Possible return codes are:
1  No storage for the translation table
2  Unable to find the translation table header
3  Error reading the file

System action: FTP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Respond as indicated by the return code displayed in the message.

Module: EZAFTPNC

EZA2706E  Command not available. Unable to access Japanese translation tables.

Explanation: The FTP client cannot open the indicated translation table.

System action: FTP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Make sure that the translation table is properly specified and loaded in storage accessible to the FTP client.

Module: EZAFTPNC

EZA2707E  Command not available. Unable to load Korean translation tables in filename; return code: code

Explanation: The FTP client encountered an error while attempting to load the indicated translation table. Possible return codes are:
1  No storage for the translation table
2  Unable to find the translation table header
3  Error reading the file

System action: FTP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Respond as indicated by the return code displayed in the message.

Module: EZAFTPNC

EZA2708E  Command not available. Unable to access Korean translation tables.

Explanation: The FTP client cannot open the indicated translation table.

System action: FTP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Make sure that the translation table is properly specified and loaded in storage accessible to the FTP client.

Module: EZAFTPNC
EZA2709E Command not available. Unable to load traditional Chinese translation tables in filename; return code: code

Explanation: The FTP client encountered an error while attempting to load the indicated translation table. Possible return codes are:
1 No storage for the translation table
2 Unable to find the translation table header
3 Error reading the file

System action: FTP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Respond as indicated by the return code displayed in the message.

Module: EZAFTPNC

EZA2710E Command not available. Unable to access traditional Chinese translation tables.

Explanation: The FTP client cannot open the indicated translation table.

System action: FTP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Make sure that the translation table is properly specified and loaded in storage accessible to the FTP client.

Module: EZAFTPNC

EZA2711E Command not available. Unable to load simplified Chinese translation tables in filename; return code: code

Explanation: The FTP client encountered an error while attempting to load the indicated translation table. Possible return codes are:
1 No storage for the translation table
2 Unable to find the translation table header
3 Error reading the file

System action: FTP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Respond as indicated by the return code displayed in the message.

Module: EZAFTPNC

EZA2712E Command not available. Unable to access simplified Chinese translation tables.

Explanation: The FTP client cannot open the indicated translation table.

System action: FTP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Make sure that the translation table is properly specified and loaded in storage accessible to the FTP client.

Module: EZAFTPNC

EZA2713I Language: name characteristics

Explanation: This message is issued in response to the LOCSTAT subcommand when the FTP data transfer type is 'B' (DBCS). It displays the name of the particular DBCS data type, followed by any SO/SI characteristics that were specified when this data type was specified.

System action: FTP continues.

Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2714I  Proxy Command:
Explanation: The system is prompting you to enter a proxy command.
System action: The system waits for you to enter a proxy command.
Operator response: Enter the command you want to process.
System programmer response: No action is needed.
Module: EZAFTPCC

EZA2715I  No primary connection
Explanation: You entered a proxy command that requires both a primary and a secondary connection. The OPEN subcommand must be issued to establish a connection to the primary FTP server.
System action: FTP continues.
Operator response: Issue the OPEN subcommand with a host name.
System programmer response: No action is needed.
Module: EZAFTPAC, EZAFTPCCG, EZAFTPCC

EZA2716I  Replace option is invalid for a proxy command
Explanation: You entered a proxy get or mget command with the replace option. The option is not supported.
System action: FTP continues.
Operator response: Issue the command without replace.
System programmer response: No action is needed.
Module: EZAFTPAC, EZAFTPCCG

EZA2717E  PROXY and NOTYPE are conflicting specifications.
Explanation: You entered a proxy command with the notype option. A proxy command is normally sent to the secondary server but the notype option indicates the corresponding type command should not be sent to the server.
System action: The command is ignored. FTP continues.
Operator response: Issue the command without notype, or not as a proxy command.
Operator response: If you intended the command for the secondary server, reissue the command without the notype option. If you intended this command for the client only, reissue it without specifying proxy.
System programmer response: No action is needed.
Module: EZAFTPCT

EZA2718I  ASA control characters transferred as C control character sequences
Explanation: This message is issued in response to the LOCSTAT subcommand. ASA control characters in ASA files opened for text processing will be converted to C control character sequences during file transfer.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK
EZA2719I ASA control characters transferred as ASA control characters

Explanation: This message is issued in response to the LOCSTAT subcommand. ASA control characters in ASA files opened for text processing will be transferred as ASA control characters.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2720I New data sets catalogued if a store operation terminates abnormally

Explanation: This message is issued in response to the LOCSTAT subcommand. New data sets will be cataloged if a store operation terminates abnormally.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2721I New data sets deleted if a store operation terminates abnormally

Explanation: This message is issued in response to the LOCSTAT subcommand. New data sets will be deleted if a store operation terminates abnormally.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2722I Single quotes will override the current working directory

Explanation: This message is issued in response to the LOCSTAT subcommand. Single quotes will override the current working directory.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2723I Single quotes will be treated as part of the filename

Explanation: This message is issued in response to the LOCSTAT subcommand. Single quotes will be treated as part of the file name.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK
EZA2724I  UMASK value is \textit{umask}

\textbf{Explanation:} This message is issued in response to the LOCSTAT subcommand. Specifies the octal umask to be used when allocating new z/OS UNIX files.

\textbf{System action:} FTP continues.

\textbf{Operator response:} No action is needed.

\textbf{System programmer response:} No action is needed.

\textbf{Module:} EZAFTPCK

---

EZA2734W  Sbdataconn invalid syntax. Specify SBDATACONN=(value1,value2) or SBDATACONN=dsn. SBDATACONN ignored.

\textbf{Explanation:} A LOCSITE subcommand has been entered with a SBDATACONN parameter that has incorrect syntax. The SBDATACONN parameter must be either a pair of code set names (the first must be an EBCDIC code set name, and the second must be an ASCII code set name), or the fully qualified name of an MVS data set or z/OS UNIX file containing translate tables generated by the CONVXLAT utility.

\textbf{System action:} FTP continues.

\textbf{Operator response:} Resubmit the LOCSITE subcommand with corrected syntax.

\textbf{System programmer response:} No action is needed.

\textbf{Module:} EZAFTPCK

---

EZA2735W  Sbdataconn parameter is too long. Maximum length for code page name is \textit{length}. SBDATACONN ignored.

\textbf{Explanation:} A LOCSITE subcommand has been entered with an SBDATACONN parameter specifying a invalid code page name. The SBDATACONN parameter is ignored.

\textbf{System action:} FTP continues.

\textbf{Operator response:} See the \textit{z/OS XL C/C++ Programming Guide} for information on supported code set converters and valid code set names. Resubmit the corrected LOCSITE subcommand.

\textbf{System programmer response:} No action is needed.

\textbf{Module:} EZAFTPCK

---

EZA2736W  No conversion available between \textit{parm1} and \textit{parm2}. SBDATACONN ignored.

\textbf{Explanation:} A LOCSITE subcommand has been entered with an SBDATACONN parameter, but there is no supported code set converter for the code sets \textit{parm1} and \textit{parm2}. The SBDATACONN parameter is ignored.

\textbf{System action:} FTP continues.

\textbf{Operator response:} See the \textit{z/OS XL C/C++ Programming Guide} for information on supported code set converters and valid code set names. Resubmit the corrected LOCSITE subcommand, with the EBCDIC code set name as the first SBDATACONN value, followed by the ASCII code set name.

\textbf{System programmer response:} No action is needed.

\textbf{Module:} EZAFTPCK

---

EZA2737W  Unable to set up conversion between \textit{parm1} and \textit{parm2}. SBDATACONN ignored.

\textbf{Explanation:} A LOCSITE subcommand has been entered with an SBDATACONN parameter. A code set convertor was successfully opened, but FTP was unable to set up single-byte translate tables using the requested code sets. The SBDATACONN parameter is ignored.

\textbf{System action:} FTP continues.

\textbf{Operator response:} Ensure that the requested code set names are for single-byte code pages. SBDATACONN is not
supported for double-byte. See the z/OS XL C/C++ Programming Guide for information on supported code set converters and valid code set names.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

**EZA2738W**  Translate file 'file' not found. SBDATACONN ignored.

**Explanation:** A LOCSITE subcommand has been entered with an SBDATACONN parameter that specified a file name, but FTP was unable open file. The SBDATACONN parameter is ignored.

**System action:** FTP continues.

**Operator response:** Ensure that the file name specified on the SBDATACONN parameter is a fully qualified name of an existing MVS data set or z/OS UNIX file.

**System programmer response:** If the file name is correct, use the FTP client's debug facility to determine why FTP cannot open the file.

**Module:** EZAFTPCK

---

**EZA2739W**  Translate file 'file' invalid. SBDATACONN ignored.

**Explanation:** A LOCSITE subcommand has been entered with an SBDATACONN parameter that specified a file name, but FTP encountered an error while trying to load its translate tables using file. Possible errors include an invalid header record or incorrect file length. (The file must contain exactly 768 bytes of data.) The SBDATACONN parameter is ignored.

**System action:** FTP continues.

**Operator response:** Ensure that the file name specified is correct. It must be a fully qualified name, and the file must contain translate tables in the format generated by the CONVXLAT utility.

**System programmer response:** Use the client's debug facility to help determine why the file cannot be used.

**Module:** EZAFTPCK

---

**EZA2740E**  SQL query not available. Can't load CAF routines.

**Explanation:** FTP was unable to load the CAF (Call Access Facility) modules it uses to provide support for SQL queries.

**System action:** The command is rejected. FTP continues.

**Operator response:** If FTP SQL support is required, ensure that the appropriate DSNLOAD library is included in the STEPLIB for the FTP client. (If FTP is started from the UNIX shell, the STEPLIB environment variable must be set.) Restart the FTP client session.

If FTP SQL support was not intended, issue a locsite filetype= command to change the file type from its current setting of SQL to SEQ.

**System programmer response:** Ensure that the appropriate DSNLOAD library is accessible.

**Module:** EZAFTPMQ

---

**EZA2741W**  Ctrlconn invalid syntax. Specify CTRLCONN=ascii_code_page_name or CTRLCONN=7BIT. CNTRLCONN ignored.

**Explanation:** A LOCSITE subcommand has been entered with a CTRLCONN parameter whose value begins with '('.
The syntax for the CTRLCONN parameter does not use parentheses. The CTRLCONN parameter is ignored.

**System action:** FTP continues.

**Operator response:** Reenter the LOCSITE command with corrected syntax.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK
EZA2742W  parameter=operand  ignored.  Requested conversion is not supported.

Explanation:  A CTRLCONN parameter was entered on a LOCSITE subcommand, but there is no conversion available between the FTP client's code page and operand.  The CTRLCONN parameter is ignored. The translate tables for the control connection are not changed.

System action:  FTP continues.

Operator response:  Reissue the LOCSITE command, specifying either '7bit' or the name of an ASCII code page supported by iconv. See the [z/OS XL C/C++ Programming Guide] for a list of the code pages supported by iconv. The code page name must be entered exactly as shown in the list (for example: IBM-850 or ISO8859-1).

System programmer response:  None

Module:  EZAFTPCK

EZA2743W  keyword=value  ignored.  Unable to set up requested conversion.

Explanation:  A CTRLCONN parameter was entered on a LOCSITE subcommand, but FTP was unable to build the single-byte translate tables for the control connection. The CTRLCONN parameter is ignored. The translate tables for the control connection are not changed.

Note:  If the FTP client is running in a double-byte environment, the CTRLCONN parameter cannot be used to change the translate tables for the control connection.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  If the FTP client is running in a double-byte code set, the CTRLCONN parameter is not supported. The tables used for the control connection are set at client initialization from either a TCPXLBIN file, or from FTP's internal default single-byte tables.

If the client is running in a single-byte environment, an internal error has occurred. If this occurs repeatedly, contact the IBM Support Center with an FTP trace.

Module:  EZAFTPCK

EZA2744W  parameter parameter already specified. "parameter=value" ignored.

Explanation:  parameter parameter was already specified on the LOCSITE command. This parameter can only be issued once per LOCSITE command. All occurrences of the parameter after the first occurrence are ignored.

System action:  parameter is set to the value specified the first time the parameter was encountered. The value specified for this occurrence of parameter is ignored.

Operator response:  If you want to change the parameter value to the value specified by parameter=value, reissue the LOCSITE command with parameter=value as the only occurrence of the parameter on the LOCSITE command.

System programmer response:  No action is needed.

Module:  EZAFTPCK

EZA2745I  Error trying to delete the new file.

Explanation:  FTP attempted to delete the new file that was created but the delete failed. One possible reason for a delete failure is that the data set has an unexpired retention period.

System action:  No action is needed.

Operator response:  The data set can be deleted with the data set utilities of the operating system.

System programmer response:  No action is needed.

Module:  EZAFTPCG
EZA2746E  A qualifier in name begins with an invalid character.

Explanation: You entered a subcommand with name as a parameter. A data set qualifier specified in name begins with an invalid character.

System action: No action is needed.

Operator response: Reissue the subcommand with a valid data set name.

System programmer response: No action is needed.

Module: EZAFTPGU

EZA2747E  A qualifier in name is more than 8 characters.

Explanation: A data set qualifier specified on the LCD or LMKDIR command is longer than 8 characters.

System action: No action is needed.

Operator response: Reissue the command with a valid data set name.

System programmer response: No action is needed.

Module: EZAFTPGU

EZA2748E  A qualifier in name contains an invalid character.

Explanation: A data set qualifier specified on the current subcommand contains an invalid character.

System action: FTP rejects the subcommand. Processing continues.

Operator response: Reissue the subcommand with a valid data set name.

System programmer response: No action is needed.

Module: EZAFTPGU

EZA2749E  Cannot establish conversion between codeset and UCS-2.

Explanation: While processing the FTP.DATA file, the value for the UCSHOSTCS parameter was not a valid code set name. An attempt to set up a conversion table between codeset and UCS-2 failed.

System action: The line containing the error is ignored. Processing of the FTP.DATA file continues with the next line in the file.

Operator response: Contact the System programmer with the error message to have the FTP.DATA file corrected.

System programmer response: Correct the FTP.DATA file to contain the correct code set for UCSHOSTCS. See the z/OS Communications Server: IP Configuration Reference for information on the parameters of the FTP.DATA file.

Module: EZAFTPCT, EZAFTPEP

EZA2756W  Unable to setup conversion between UCS-2 and codeset. UCSHOSTCS ignored.

Explanation: A conversion between the codeset specified on the LOCSITE UCSHOSTCS command and UCS-2 could not be completed.

System action: The UCSHOSTCS parameter on the LOCSITE command is ignored. FTP continues.

Operator response: Reissue the LOCSITE command with a valid code set name.

System programmer response: No action is needed.

Module: EZAFTPCK
EZA2757I  Host code set for TYPE U transfer code_set

Explanation:  This message is issued in response to the LOCSTAT subcommand when the FTP data transfer type is 'U' (UCS-2). It displays the name of the EBCDIC code set used for EBCDIC to UCS-2 conversion and UCS-2 to EBCDIC conversion.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPCK

EZA2773E  TYPE U transfer is not supported in mode mode

Explanation:  FTP has retrieved or sent an UCS-2 file (or data set) but the current mode is not set to Stream. Stream mode is required for UCS-2 data.

System action:  The GET or PUT subcommand is rejected.

Operator response:  Change the mode to stream using the STREAM command.

System programmer response:  No action is needed.

Module:  EZAFTPCK, EZAFTPCP

EZA2774E  TYPE U transfer is only supported in stream mode

Explanation:  To transfer a UCS-2 file, stream mode must be used. See EZA2773E for more information.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPCK, EZAFTPCP

EZA2775E  Record structure is not supported for TYPE U transfer

Explanation:  FTP has retrieved or sent an UCS-2 file (or data set) but the current structure is set to Record. File structure is required for UCS-2 data.

System action:  The GET or PUT command is rejected.

Operator response:  Change the structure to FILE using the STRUCT=F command.

System programmer response:  No action is needed.

Module:  EZAFTPCK, EZAFTPCP

EZA2776E  TYPE U transfer is not supported for filetype type

Explanation:  FTP has retrieved or sent an UCS-2 file (or data set) but the current file type is not set to SEQ. Sequential file is required for UCS-2 data. JES or SQL files cannot be transferred as UCS-2 data.

System action:  The GET or PUT command is rejected.

Operator response:  If the file is not JES or SQL, change the file type to SEQ using the LOCSITE FILETYPE=SEQ command.

System programmer response:  No action is needed.

Module:  EZAFTPCK, EZAFTPCP
EZA2777I TYPE U transfer is only supported for filetype SEQ
Explanation: An UCS-2 transfer failed because the file type was not sequential. See EZA2776E for more information.
System action: FTP continues.
Operator response: None
System programmer response: None
Module: EZAFTPCG, EZAFTPCP

EZA2778E Transfer of RDWs is not supported for TYPE U. Use 'LOCSITE NORDW'
Explanation: FTP has sent an UCS-2 file (or data set) and RDWs is currently ON. RDWs must be off when sending UCS-2 data.
System action: The PUT command is rejected.
Operator response: Turn RDWs off using the LOCSITE NORDW command.
System programmer response: No action is needed.
Module: EZAFTPCP

EZA2779E Transfer of trailingblanks is not supported for TYPE U. Use 'LOCSITE NOTRAILINGBLANKS'
Explanation: FTP has sent an UCS-2 file (or data set) and TRAILINGBLANKS is currently ON. TRAILINGBLANKS must be off when sending UCS-2 data.
System action: The PUT command is rejected.
Operator response: Turn TRAILINGBLANKS off using the LOCSITE NOTRAILINGBLANKS command.
System programmer response: No action is needed.
Module: EZAFTPCP

EZA2780E NOASATRANS is not supported for TYPE U. Use 'LOCSITE ASATRANS'
Explanation: FTP has retrieved or sent an UCS-2 file (or data set) and ASATRANS is currently set to OFF. ASATRANS must be ON when storing UCS-2 data in EBCDIC format into a ASA data set.
System action: The GET or PUT command is rejected.
Operator response: Turn ASATRANS on using the LOCSITE ASATRANS command.
System programmer response: No action is needed.
Module: EZAFTPCG, EZAFTPCP

EZA2781E Transfer aborted: conversion failure
Explanation: FTP has retrieved or sent an UCS-2 file (or data set), but was unable to convert it to/from EBCDIC.
System action: The GET or PUT command is rejected.
Operator response: Turn on debug and issue GET or PUT again. Give the output to the system programmer.
System programmer response: Check the debug messages to determine the errno and errnojr being returned from the iconv system call.
Module: EZAFTPCG, EZAFTPCP

EZA2782E Transfer aborted: substitution occurred for TYPE U transfer
Explanation: FTP has retrieved or sent an UCS-2 file (or data set) that contained a UCS-2 character that could not be converted to EBCDIC. The EBCDIC substitution character would need to be used to convert the UCS-2 character.
System action: The GET or PUT command is rejected.
Operator response: To allow the file to be stored in EBCDIC, substitution must be allowed. Issue LOCSITE UCSSUB to turn ON UCS-2 substitution.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

---

EZA2783E  Transfer aborted: uneven number of bytes received for TYPE U transfer

Explanation: FTP has retrieved or sent an UCS-2 file (or data set) that contained an uneven number of bytes.

System action: The GET or PUT command is rejected.

Operator response: No action is needed.

System programmer response: Make sure the UCS-2 file is not corrupt. By definition UCS-2 is double byte, which should result in the file length being an even number of bytes.

Module: EZAFTPCG

---

EZA2784I  Conversion from Unicode to EBCDIC resulted in number substitutions.

Explanation: FTP has received a Unicode file. Some characters were replaced with the EBCDIC substitution character.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCG, EZAFTPCP

---

EZA2785E  WRAPRECORD is not supported for TYPE U. Use 'LOCSITE NOWRAPRECORD'

Explanation: FTP has retrieved an UCS-2 file (or data set) and WRAPRECORD is currently ON. WRAPRECORD must be off when storing UCS-2 data in EBCDIC format.

System action: The GET command is rejected.

Operator response: Turn WRAPRECORD off using the LOCSITE NOWRAPRECORD command.

System programmer response: No action is needed.

Module: EZAFTPCG

---

EZA2786E  TYPE U transfer requires variable format data set

Explanation: FTP has retrieved an UCS-2 file (or data set) but the target data set is not variable format.

System action: The GET command is rejected.

Operator response: Change the target data set to a variable format data set.

System programmer response: No action is needed.

Module: EZAFTPCG

---

EZA2787E  Transfer aborted: truncation occurred for TYPE U transfer

Explanation: FTP has retrieved an UCS-2 file (or data set) and converted it to EBCDIC. Some of the records were truncated. Also UCSTRUNC is currently set to NO.

System action: The GET command is rejected.

Operator response: Either set UCSTRUNC to YES using the LOCSITE UCSTRUNC command, or increase the logical record length of the retrieved file.

System programmer response: No action is needed.

Module: EZAFTPCG
EZA2788I Command ! may only be issued when the client is running in the z/OS UNIX shell.

Explanation: This message is issued when the ! subcommand was issued while not under the z/OS UNIX System Services shell. The ! subcommand is not supported in a batch, EXEC, TSO, or Callable API environment.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA2789E DSORG=DA requires structure: FILE, mode: STREAM, and transfer type: IMAGE.

Explanation: A PUT command was issued for a DSORG=DA data set, but one or more of the following conditions are not met: FILE structure, STREAM mode, and IMAGE transfer type.

System action: FTP continues.
Operator response: If you intend to transfer a DSORG=DA file, use the LOCSTAT command to display the current status for the FTP client. Then use the STRUCT F, MODE S, and/or TYPE I commands as required.
System programmer response: No action is needed.
Module: EZAFTPCP

EZA2790E LRECL X valid only for RECFM of U or variable length spanned.

Explanation: The LOCSITE command was issued with LRECL=X, but the record format is not U or variable length spanned.

System action: FTP continues.
Operator response: If you intend to set LRECL=X, use the LOCSITE command to set the record format to U or variable length spanned.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2791I LRECL being reset to lrecl.

Explanation: The LOCSITE command was issued with LRECL=X, but the record format is not U or variable length spanned. LRECL is being reset to the previous value or 256 if the previous value was invalid.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK

EZA2792I LRECL being reset to site default of 'not used'.

Explanation: The LOCSITE command was issued with LRECL=X, but the record format is not U or variable length spanned. LRECL is being reset to the default value of 'not used'.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCK
**EZA2793I**  
**UCS Substitution:** ucsub, **UCS Truncation:** ucstrunc

**Explanation:** This message is issued in response to the LOCSTAT subcommand if the transfer type is UCS-2. The ucsub value indicates whether substitution is allowed when converting between UCS-2 and EBCDIC. The ucstrunc value indicates whether truncation is allowed when converting between UCS-2 and EBCDIC.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

**EZA2794I**  
Both CCTRANS and CTRLCONN were specified. Using CTRLCONN. CCTRANS will be ignored.

**Explanation:** The FTP client has encountered both CCTRANS and CTRLCONN keywords in FTP.DATA. The CCTRANS keyword is supported only to aid migration; the CTRLCONN keyword is the preferred keyword. When both keywords are present in FTP.DATA, the CTRLCONN value will be used for the client configuration and the CCTRANS value will be ignored.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** To avoid this message, remove the CCTRANS statement from the FTP.DATA file.

**Module:** EZAFTPEP

---

**EZA2795I**  
Both SBTRANS and SBDATACONN were specified. Using SBDATACONN. SBTRANS will be ignored.

**Explanation:** The FTP client has encountered both SBTRANS and SBDATACONN keywords in FTP.DATA. The SBTRANS keyword is supported only to aid migration; the SBDATACONN keyword is the preferred keyword. When both keywords are present in FTP.DATA, the SBDATACONN value will be used for the client configuration and the SBTRANS value will be ignored.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** To avoid this message, remove the SBTRANS statement from the FTP.DATA file.

**Module:** EZAFTPEP

---

**EZA2798I**  
**Byte Order:** byte_order

**Explanation:** This message is issued in response to the LOCSTAT subcommand if the transfer type is UCS-2. The byte_order indicates whether the UCS-2 files sent by the client are encoded using big-endian or little-endian.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCK

---

**EZA2799W**  
The data set is allocated to another job and is unavailable.

**Explanation:** The client was unable to allocate the data set because it is already allocated to another job.

**System action:** No action is needed.

**Operator response:** Try again later.

**System programmer response:** No action is needed.

**Module:** EZAFTPCP, EZAFTPCG
EZA2800E The FTP client is not available because the TCP/IP Base feature of OS/390 is not enabled.

Explanation: The FTP client attempted to register as product=OS/390 feature=TCP/IP_BASE but IFAPRDxx parmlib member does not indicate that the feature TCP/IP_BASE is enabled. This FTP client will only run if TCP/IP_BASE is enabled.

System action: The FTP initialization is terminated.

Operator response: Contact the system programmer.

System programmer response: Correct the IFAPRDxx parmlib member if it is in error and restart the FTP client. If TCP/IP_BASE is not part of your system there is no action to take and this FTP client cannot be used.

Module: EZAFTPCY

EZA2801I Data not wrapped into next record.

Explanation: Data that does not fit within the target record will be truncated.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2802I Data was truncated.

Explanation: A data transfer has completed, but FTP was not able to store all the data because the logical record size for the receiving data set was not large enough. Some data has been lost.

System action: FTP continues.

Operator response: If truncation is not acceptable, redo the data transfer to an existing data set that has a larger record size, or you can use the LOCSITE LRECL parameter to specify a particular record size that is larger and redo the data transfer to a new data set.

System programmer response: No action is needed.

Module: EZAFTPCG

EZA2803I Lines were wrapped.

Explanation: A data transfer has completed. One or more lines of data were longer than the record size of the receiving data set; those lines were continued in the next record.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCK

EZA2804W Data set is out of space.

Explanation: A data transfer has failed because there is not enough space in the data set.

System action: FTP continues.

Operator response: See message EZA2805W for the system completion code and reason code and take actions appropriate for the failure.

System programmer response: No action is needed.

Module: EZAFTPCG
**EZA2805W**  System completion code and reason: cc-rc

**Explanation:** A file I/O operation failed with the system completion code cc and the reason code rc.

cc-rc is the hexadecimal system completion code and the return code. See the [z/OS MVS System Codes](#) for the descriptions of the system completion codes. Return codes are described as part of the system completion codes.

**System action:** FTP continues.

**Operator response:** See the [z/OS MVS System Codes](#) publication for suggested actions for the specified failure code.

**System programmer response:** No action is needed.

**Module:** EZAFTPCG, EZAFTPCP

---

**EZA2806I**  DBCS conversion to EBCDIC encountered invalid input (number errors)

**Explanation:** The FTP client encountered input errors during conversion of type B data.

**System action:** FTP continues.

**Operator response:** For more specific information about the errors, issue the DEBUG subcommand and then reissue the GET subcommand. Check the source data and correct any errors. If you are creating a pure DBCS local file, ensure that the source data does not contain any single-byte data. Resubmit the data transfer.

**System programmer response:** No action is needed.

**Module:** EZAFTPCG

---

**EZA2807I**  Executing under single stack configuration. Specified TCPIP name tcpipname ignored.

**Explanation:** The FTP client was started with the -p or (TCP start parameter that specified TCPIP stack tcpipname was to be used. The client is running in an INET (single-stack) configuration and this start parameter applies only to a CINET (multi-stack) configuration.

**System action:** The parameter is ignored. FTP client continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCC

---

**EZA2808W**  File has unsupported DSORG.

**Explanation:** Requested file has a DSORG that is not supported by FTP.

**System action:** The file transfer request is terminated. FTP continues.

**Operator response:** Check DSORG for the file.

**System programmer response:** No action is needed.

**Module:** EZAFTPCP

---

**EZA2809I**  CCONNTIME is cconntime

**Explanation:** CCONNTIME is the amount of time to wait after attempting to close a control connection before terminating the control connection and reporting an error.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL
DATACTTIME is \textit{datacttime}

Explanation: \textit{DATACTTIME} is the amount of time to wait after attempting to send or receive data before terminating the data connection and reporting an error to the user.

**System action:** FTP continues.
**Operator response:** No action is needed.
**System programmer response:** No action is needed.
**Module:** EZAFTPCL

DCONNTIME is \textit{dconntime}

Explanation: \textit{DCONNTIME} is the amount of time to wait after attempting to close a data transfer connection before terminating the data connection and reporting an error.

**System action:** FTP continues.
**Operator response:** No action is needed.
**System programmer response:** No action is needed.
**Module:** EZAFTPCL

INACTTIME is \textit{inacttime}

Explanation: \textit{INACTTIME} is the amount of time to wait for an expected response from the server, on either the control or the data connection, before closing the session.

**System action:** FTP continues.
**Operator response:** No action is needed.
**System programmer response:** No action is needed.
**Module:** EZAFTPCL

MYOPENTIME is \textit{myopentime}

Explanation: \textit{MYOPENTIME} is the amount of time to wait for a session to open before terminating the attempt and reporting an error.

**System action:** FTP continues.
**Operator response:** No action is needed.
**System programmer response:** No action is needed.
**Module:** EZAFTPCL

UCOUNT is \textit{ucount}

Explanation: \textit{UCOUNT} is the unit count for new allocations.

**System action:** FTP continues.
**Operator response:** No action is needed.
**System programmer response:** No action is needed.
**Module:** EZAFTPCL

VCOUNT is \textit{vcount}

Explanation: \textit{VCOUNT} is the volume count for new allocations.

**System action:** FTP continues.
**Operator response:** No action is needed.
System programmer response: EZAFTPCL
Module: No action is needed.

EZA2816I No automatic mount of tape volumes.
Explanation: NOAUTOMOUNT was specified. NOAUTOMOUNT is the default value.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA2817I Automatic mount of tape volumes.
Explanation: AUTOMOUNT was specified.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA2818I Data connections for the client are firewall friendly.
Explanation: This message is issued in response to the LOCSTAT subcommand. It indicates that when a data connection is set up, the client will be the active end of the data connection and therefore firewall friendly.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA2819I Data connections for the client are not firewall friendly.
Explanation: This message is issued in response to the LOCSTAT subcommand. It indicates that when a data connection is set up, the client will be the passive end of the data connection and therefore not firewall friendly.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL

EZA2822W NOFWFriendly already specified. FWFriendly ignored.
Explanation: NOFWFriendly was already specified on this LOCSITE command, FWFriendly is ignored.
System action: FTP continues.
Operator response: Specify one option, FWFriendly or NOFWFriendly on the LOCSITE command.
System programmer response: No action is needed.
Module: EZAFTPCK
EZA2823W  FWFriendly already specified. NOFWFriendly ignored.

Explanation:  FWFriendly was already specified on this LOCSITE command, NOFWFriendly is ignored.

System action:  FTP continues.

Operator response:  Specify one option, FWFriendly or NOFWFriendly on the LOCSITE command.

System programmer response:  No action is needed.

Module:  EZAFTPCK

EZA2824W  Open of filename failed due to incorrect BLKSIZE or LRECL. Use SITE LRECL or BLKSIZE

Explanation:  An incorrect block size or logical record length was specified for the file.

filename is the name of the file that could not be opened.

System action:  The requested operation is ended. FTP continues.

Operator response:  Override the incorrect BLKSIZE/LRECL by issuing a SITE command with the correct settings.

System programmer response:  No action is needed.

Module:  EZAFTPCP

Procedure Name:  sndfile

EZA2825E  File contains records that are too long to be processed

Explanation:  The FTP client cannot process the received data because a record delimiter was not found in the data and the FTP client is not configured to wrap records. The FTP client expects to find a record delimiter, such as a Carriage Return and Line Feed (CRLF) in ASCII mode or a Newline(NL) in EBCDIC mode, to denote the end of a record.

System action:  The file is not transferred.

Operator response:  Ensure that the ASCII or EBCDIC file being received has proper delimiters in the data or configure the FTP client to wrap records using the wraprecord parameter. See z/OS Communications Server: IP User’s Guide and Commands for information about configuring wraprecord.

System programmer response:  No action is needed.

Module:  EZAFTPCG

Procedure Name:  mvs_rcvFile()

EZA2826E  Volume=volume_serial_list contains a tape volume.

Explanation:  The LMKDIR subcommand was issued to create a new PDS. The LOCSITE VOLUME parameter was in effect, specifying that all new data sets will be allocated on volumes volume_serial_list. One of the volumes in volume_serial_list was determined to be a tape, and partitioned data sets cannot be allocated to tape.

System action:  The LMKDIR subcommand is rejected.

Operator response:  Issue the LOCSITE VOLUME command to change the volume serial list for new data sets to DASD volumes, then reissue the LMKDIR subcommand. See z/OS Communications Server: IP User’s Guide and Commands for more information on the LOCSITE subcommand.

System programmer response:  No action is needed.

Module:  EZAFTPSCD

Procedure Name:  lmkdir()
**EZA2827I**  
Error mounting one of these volumes: volume_serial_list.

**Explanation:**  
The LMKDIR subcommand was issued to create a new PDS. The LOCSITE VOLUME parameter was in effect, specifying that all new data sets will be allocated on volumes volume_serial_list. FTP was not able to mount one of the volumes in volume_serial_list.

**System action:**  
The LMKDIR subcommand is rejected.

**Operator response:**  
Ask the operator to mount all volumes required. Reissue the LMKDIR command. If this does not correct the problem, report the error to the system programmer.

**System programmer response:**  
Check the MVS console for messages related to the volumes in volume_serial_list. Correct the errors, and reissue LMKDIR.

**Module:**  
EZAFTPCD

**Procedure Name:**  
lmkdir()

---

**EZA2828I**  
Volume=volume_serial_list contains a volume that is not mounted.

**Explanation:**  
The LMKDIR subcommand was issued to create a new PDS. The LOCSITE VOLUME parameter was in effect, specifying that all new data sets will be allocated on volumes volume_serial_list. One or more or the volumes in volume_serial_list was not mounted, and NOAUTOMOUNT was in effect. NOAUTOMOUNT prevents automatic mounting of volumes that are not mounted.

**System action:**  
The LMKDIR subcommand is rejected.

**Operator response:**  
Ask the operator to mount all required volumes, or issue the LOCSITE AUTOMOUNT subcommand to permit automatic mounting of volumes that are not mounted. Reissue the LMKDIR subcommand. See the [z/OS Communications Server: IP User's Guide and Commands](https://www.ibm.com/support/docview.ws?rs=110&uid=swg27032960) for more information on the LOCSITE subcommand.

**System programmer response:**  
No action is needed.

**Module:**  
EZAFTPCD

**Procedure Name:**  
lmkdir()

---

**EZA2829W**  
UCOUNT value (value) must be P, or an integer from minimum through maximum.

**Explanation:**  
The LOCSITE subcommand was issued with the UCOUNT parameter. The value, value, specified for the UCOUNT parameter was not an integer from minimum through maximum, nor was it the letter P.

**System action:**  
The UCOUNT parameter is ignored.

**Operator response:**  
Reissue the command with a valid value.

**System programmer response:**  
No action is needed.

**Module:**  
EZAFTPCK

**Procedure Name:**  
locsite()
EZA2831E  EMAILADDRCHECK value must be NO, WARNING or FAIL

Explanation: While processing the FTP.DATA file, the server encountered the EMAILADDRCHECK parameter with a parameter value that was not NO, WARNING or FAIL. The only valid values for the EMAILADDRCHECK parameter are NO, WARNING or FAIL.

System action: The line containing the error is ignored. Processing of the FTP.DATA file continues with the next line in the file.

Operator response: Contact the System programmer with the error message to have the FTP.DATA file corrected.

System programmer response: Correct the FTP.DATA file to contain the correct value for the specified parameter. See the z/OS Communications Server: IP Configuration Reference for information on the parameters of the FTP.DATA file.

Module: EZAFTPSEP

EZA2832I  Load module transfer requires FILETYPE = SEQ

Explanation: The user has requested a file transfer that might involve load modules and the client's local file type is not SEQ.

System action: Load module transfer processing ends and base processing continues.

Operator response: If you want load module transfer processing to be performed, issue a LOCSITE FILETYPE=SEQ subcommand.

System programmer response: No action is needed.

Module: EZAFTPCC

EZA2833I  Load module transfer does not support load module rename

Explanation: The user has requested a file transfer that might involve load modules and has requested that the files be renamed. Load module transfer processing does not support renaming of load modules.

System action: Load module transfer processing ends and base processing continues. Any MVS load modules transferred will not be executable on the target system.

Operator response: If you want load module transfer processing to be performed, issue a transfer subcommand that does not include a rename of the files.

System programmer response: No action is needed.

Module: EZAFTPCC

EZA2834I  Load module transfer supports member names only

Explanation: The user has requested a file transfer that might involve load modules but has specified either an z/OS UNIX file name or a fully qualified MVS data set name. Load module transfer only supports transfer of members of the PDS or PDSE which is the current working directory.

System action: Load module transfer processing ends and base processing continues. Any MVS load modules transferred will not be executable on the target system.

Operator response: If you want load module transfer processing to be performed, reissue the transfer subcommand without using quotes or slashes.

System programmer response: No action is needed.

Module: EZAFTPCC

EZA2835I  Load module transfer requires local directory to be PDS or PDSE

Explanation: The user has requested a file transfer that might involve load modules but the current working directory is not a PDS or a PDSE. Load module transfer requires the current working directory to be a PDS or a PDSE.
System action: Load module transfer processing ends and base processing continues. Any MVS load modules transferred will not be executable on the target system.

Operator response: If you wanted load module transfer processing to be performed, change the local directory to a load library (a PDS or a PDSE with RECFM=U).

System programmer response: No action is needed.

Module: EZAFTPCC

EZA2836I  No members of the data set match the selection pathnames

Explanation: The user has requested a PUT or MPUT that might involve load modules but the PDS or PDSE current working directory does not contain any members that match the local file name provided.

System action: FTP waits for the next subcommand.

Operator response: Check the file name specified on the PUT or MPUT subcommand.

System programmer response: No action is needed.

Module: EZAFTPCC

EZA2837I  Could not build a file list

Explanation: While performing load module transfer, the FTP client was unable to build a list of file names to transfer.

System action: Load module transfer processing ends and base processing continues. Any MVS load modules transferred will not be executable on the target system.

Operator response: No action is needed.

System programmer response: Verify adequate storage available for memory files.

Module: EZAFTPCC

EZA2838I  Load module transfer syntax error

Explanation: An unexpected or incorrectly formatted load module transfer response was sent from the FTP server to the FTP client. This is a violation of the load module transfer protocol.

System action: Load module transfer processing is ended and the file transfer is completed using base processing. Any MVS load modules transferred will not be executable on the target system.

Operator response: Contact the system programmer.

System programmer response: Ensure that the server and client are both at a supported level of Communications Server. If not, contact the vendor of the non-IBM FTP program for service.

Module: EZAFTPCC

EZA2839I  Reload of the load library failed

Explanation: While processing a GET or MGET command for one or more load modules, the client failed to reload the unloaded load module from the temporary data set into the load library.

System action: The transfer is ended, and no files will be transferred. FTP waits for the next subcommand.

Operator response: Contact the system programmer.

System programmer response: Verify that sufficient free space exists in the load library to receive the load modules. Look for console messages from the file system or the IEBCOPY system utility. If none were provided, get an FTP client trace of the operation.

Module: EZAFTPCC
EZA2840I Unload of the load library failed

Explanation: While processing a PUT or MPUT command for one or more load modules, the client failed to unload the load module from the load library into a temporary data set.

System action: The transfer is ended, and no files will be transferred. FTP waits for the next subcommand.

Operator response: Contact the system programmer.

System programmer response: Verify sufficient free space exists in the file system for a temporary file to hold the unloaded load modules. Look for console messages from the file system or the IEBCOPY utility. If none were provided, get an FTP client trace of the operation.

Module: EZAFTPCC

EZA2841I Local directory might be a load library

Explanation: As a result of the LCD subcommand, the FTP client local directory is a PDS or a PDSE with RECFM=U. This might be a load library, and load module transfer processing might be attempted for this directory.

System action: FTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: EZAFTPCD

EZA2842I System service invoked for load module transfer failed: IEBCOPY rc=rc

Explanation: While performing a load module transfer, the client invoked the IEBCOPY system utility to unload load modules into a temporary data set (for PUT or MPUT) or to reload unloaded load modules from temporary data set into the target load library (for GET or MGET). IEBCOPY failed.

rc is the decimal return code provided by IEBCOPY. IEBCOPY return codes are documented in z/OS DFSMSdfp Utilities.

System action: Load module transfer ends. No files will be transferred. The FTP client waits for the next subcommand.

Operator response: Contact the system programmer

System programmer response: Use the z/OS DFSMSdfp Utilities manual to determine the corrective action for the IEBCOPY return code.

Module: EZAFTPMd

EZA2843E Incorrect format data set name dsn

Explanation: The FTP server was parsing keywords in the FTPDATA file. The data set name specified, dsn, was not a valid MVS data set name. The keyword is ignored. The FTP server continues with the next keyword.

System action: FTP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Correct the data set name in the FTPDATA file. See the z/OS Communications Server: IP Configuration Reference for information on the parameters of the FTPDATA file.

Module: EZAFTPEP

EZA2844I ISPFSTAT is set to ispfsstat

Explanation: ISPFSTAT can be set to either TRUE or FALSE. When ISPFSTAT is set to TRUE, ISPF Statistics of a PDS member that has been transferred to the FTP client will be updated or created. The default setting is FALSE.

ispfsstat is either TRUE or FALSE.

System action: FTP Continues.
EZA2845I • EZA2850E

Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat()

---

EZA2845I  Statistics have been updated for the PDS member that was transferred

Explanation: Statistics had to be updated for the PDS member that was transferred because the PDS member that it replaced had statistics. ISPFSTAT setting of FALSE was ignored.

System action: FTP continues
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPMR
Procedure Name: pds_stats_update()

---

EZA2846E  Lrecl X transfer not supported with condition

Explanation: A put was issued for a data set with Lrecl X and an incorrect condition was detected.

condition can be one of the following:

- **MODE C**
  Compressed mode

- **TYPE U 2**
  Data type U 2

- **FILETYPE=SQL**
  SQL

- **NOASATRANS**
  NOASATrans cannot be specified with Lrecl X w/ASA

- **STRUCT R**
  Record structure

System action: The request is rejected. FTP continues.
Operator response: Send the Lrecl X data set using the correct FILETYPE, MODE, STRUCT, TYPE, or ASATRANS setting.
System programmer response: No action is needed.
Module: EZAFTPCP
Procedure Name: sndFile

---

EZA2850E  Lrecl X transfer not supported with Record I/O

Explanation: A put was issued for a data set with lrecl X and Record I/O has been requested. The condition is unexpected.

System action: The request is rejected. FTP continues.
Operator response: Contact the system programmer.
System programmer response: Collect an FTP Client trace that includes the failure and call the IBM Support Center.
Module: EZAFTPCP
Procedure Name: sndFile
EZA2852I  Parameters not supported: value_1 ... value_n

Explanation:  This is a list of the values entered on a DEBUG or a DUMP subcommand that are not supported.

System action:  The unsupported values are ignored. FTP continues.

Operator response:  See the z/OS Communications Server: IP User’s Guide and Commands for information about FTP Subcommands and the supported values for the DEBUG and DUMP subcommands.

System programmer response:  No action is needed.

Module:  EZAFTPCL
Procedure Name:  debug

EZA2858I  Message IDs are not displayed when running in system UNIX

Explanation:  This message is generated after the VERBOSE subcommand to the FTP client. It indicates that VERBOSE mode is toggled off and client messages will be displayed without their message ID numbers. The VERBOSE setting is applicable only when the FTP client is running in a UNIX environment.

system is the name of the operating system (for example, z/OS).

System action:  FTP continues.

Operator response:  Reissue the VERBOSE subcommand to toggle the setting on, if necessary.

System programmer response:  No action is needed.

Module:  EZAFTPCL
Procedure Name:  verbose()

EZA2859I  Message IDs are displayed when running in system UNIX

Explanation:  This message is generated after the VERBOSE subcommand to the FTP client. It indicates that VERBOSE mode is toggled on and client messages will be displayed with their message ID numbers. The VERBOSE setting is applicable only when the FTP client is running in a UNIX environment.

system is the name of the operating system (for example, z/OS).

System action:  FTP continues.

Operator response:  Reissue the VERBOSE subcommand to toggle the setting off, if necessary.

System programmer response:  No action is needed.

Module:  EZAFTPCL
Procedure Name:  verbose()

EZA2860I  Secure Hostname is: level

Explanation:  This message is issued in response to the LOCSTAT subcommand. It indicates whether host name verification in the server’s certificate is required or optional.

In the message text:
level

The setting for the SECURE_HOSTNAME statement in the FTP.DATA file. The possible levels for the secure host name are REQUIRED or OPTIONAL. OPTIONAL is the default.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPCL
Procedure Name:  locstat
Using `socks_configuration_file` for SOCKS server configuration

**Explanation:** The FTP client identified a file or data set containing SOCKS server configuration information. `socks_configuration_file` is the z/OS UNIX file or MVS data set containing SOCKS configuration information.

**System action:** The FTP client continues processing. The SOCKS configuration will be referenced for any attempt to connect the client to an FTP server. The SOCKS configuration might cause the FTP client to connect to FTP servers through a SOCKS server, instead of connecting directly to the FTP server.

**Operator response:** If `socks_configuration_file` is the correct file to use for the SOCKS server configuration, no action is needed. Otherwise, contact the system programmer.

**System programmer response:** If `socks_configuration_file` is the correct file to use for the SOCKS server configuration, no action is needed. If you want to use a different file for the SOCKS configuration, see the `z/OS Communications Server: IP Configuration Reference` manual for information about configuring the FTP client for SOCKS.

**Module:** ezafpcl

**Procedure Name:** locstat()

---

Errors parsing SOCKS configuration file file on line line_number - use of SOCKS has been disabled.

**Explanation:** The FTP client located the specified SOCKS configuration file, but encountered syntax errors when parsing the information.

`file` is the name of the z/OS UNIX file or MVS data set containing the SOCKS configuration file.

`line_number` is the line of file where the error was encountered.

**System action:** The FTP client continues, but disables use of any SOCKS server for this session.

**Operator response:** Contact the system programmer.

**System programmer response:** Correct the error in the SOCKS configuration file or data set. See the `z/OS Communications Server: IP Configuration Reference` manual for information about configuring the FTP client for SOCKS.

**Module:** ezafpcl

**Procedure Name:** ftpSocks()

---

Error `error` opening SOCKS configuration file `socks_configuration_file` - use of SOCKS has been disabled

**Explanation:** The FTP client encountered an error while attempting to open the SOCKS configuration file.

`error` is the C run-time library error message returned for the failing fopen() call. For more information, see `z/OS Language Environment Run-Time Messages`.

`socks_configuration_file` is the name of the file that failed to open.

**System action:** The FTP client continues. It will not be configured to use a SOCKS server.

**Operator response:** Specify the correct `socks_configuration_file` or contact the system programmer.

**System programmer response:** Specify the correct `socks_configuration_file` or correct the error indicated by `error`.

**Module:** EZAFTPCY

**Procedure Name:** findSocks()

---

Error `error` reading SOCKS configuration file `socks_configuration_file` - use of SOCKS has been disabled

**Explanation:** The FTP client encountered an error while attempting to read the SOCKS configuration file.

`error` is the C run-time library error message returned. For more information, see `z/OS Language Environment Run-Time Messages`.

`socks_configuration_file` is the name of the file that had the read error.
**System action:** The FTP client continues. It will not be configured to use a SOCKS server.

**Operator response:** Specify the correct `socks_configuration_file` or contact the system programmer.

**System programmer response:** Specify the correct `socks_configuration_file` or correct the error indicated by `error`.

**Module:** EZAFTPCY

**Procedure Name:** ftpSocks()

---

**EZA2865I** Tape write is allowed to use BSAM I/O.

**Explanation:** When processing ASCII data in stream mode for GET and writing to tape, the FTP Client is allowed to use the BSAM I/O routine instead of the LE Run-Time Library. The WRTAPEFastio option has been set in the FTP.DATA data set or in a LOCSITE subcommand. The option is honored unless a request that contradicts it has been made (such as ASATRANS for a data set with ASA control characters).

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

---

**EZA2866I** Tape write is not allowed to use BSAM I/O.

**Explanation:** When processing ASCII data in stream mode for GET and writing to tape, the FTP Client must use the LE Run-Time Library `fwrite()` function. This is the default setting and is changed by specifying `WRTAPEFastio TRUE` in the FTP.DATA data set or by specifying `WRTAPEFastio` on a LOCSITE subcommand.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

---

**EZA2870I** TLS security mechanism negotiation failed - data connection closed

**Explanation:** The FTP client and server failed during the negotiation step (also known as the handshake) to protect a data connection with the TLS mechanism.

**System action:** No action is needed.

**Operator response:** Activate the FTP client and server traces as follows:

```
SITE DEBUG=(NONE,ACC,SOC(3))
DEBUG NONE ACC SOC(3)
```

Try the subcommand again and contact the system programmer with the error message.

If you are not allowed to issue the SITE command to change the server trace options, ask the system programmer to set the options, close the session to the server, enter FTP again and try the failing subcommand.

**System programmer response:** Use the FTP client and server traces to determine the cause of the error and correct the problem.

**Module:** EZAFTPCA, EZAFTPCC, EZAFTPCG, EZAFTPCP

**Procedure Name:** getList, rcvXLMT, sndXLMT, rcvFile, rcvNullDir, sndFile

---

**EZA2889I** Authentication mechanism: `mechanism`

**Explanation:** This message is issued in response to the LOCSTAT subcommand. It indicates that the FTP session is protected by the authentication mechanism that is displayed.

The supported mechanisms are GSSAPI or TLS.

**System action:** FTP continues.

**Operator response:** No action is needed.
EZA2890I • EZA2892I

System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat

EZA2890I  Control connection protection: level
Explanation: This message is issued in response to the LOCSTAT subcommand. It indicates that the control connection has the security level that is displayed.
The possible security levels for the GSSAPI security mechanism are Clear, Safe, or Private.
The security level for the TLS security mechanism is always Private.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat

EZA2891I  Data connection protection: level
Explanation: This message is issued in response to the LOCSTAT subcommand. It indicates that the data connection has the security level that is displayed.
The possible security levels for the GSSAPI security mechanism are Clear, Safe, or Private.
The possible security levels for the TLS and TLS-P security mechanisms are Clear and Private.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat

EZA2892I  Secure port port_number does not support the -a or -r start parameter
Explanation: You issued the ftp command with the port_number parameter and the -a or -r parameter. The port number you specified was the secure port. The -a and -r start parameters are not allowed when you specify the port indicated by the port_number value.

In the message text:
port_number
  The port number on the remote host to which you specified that the FTP client should be connected.
Examples: Your client FTP.DATA contains this statement:
  TLSPORT 990
This statement sets the secure port to 990. You attempt to connect to the FTP server at port 990 on the host specified hostname value. You specify the -a parameter also:
  /rpcbind ftp -v -a tls hostname 990
EZA2892I Secure port 990 does not allow the -a or -r start parameter

Message EZA2892I is issued because you specified the -a parameter while trying to connect to the secure port.
System action: The FTP client ends.
Operator response: No action is needed.
User response: Issue the ftp command without the -a or -r start parameter to log into the server using the secure port.
port. Or, log into the server using the -a or -r start parameter with another port number.

**System programmer response:** No action is needed.

**Problem determination:** Not applicable.

**Source:** z/OS Communications Server TCP/IP: FTP

**Module:** Not applicable.

**Routing code:** 10

**Descriptor code:** 12

---

**EZA2894I Security mechanism **\textit{mechanism}** is not valid and is ignored**

**Explanation:** You specified the mechanism on the -a or the -r parameter on the FTP command. The mechanism \textit{mechanism} is not one of the supported mechanisms.

**System action:** FTP continues.

**Operator response:** If a security mechanism is required, stop FTP and start again with one of the supported security mechanisms. The supported security mechanisms are GSSAPI or TLS.

**System programmer response:** No action is needed.

**Module:** EZAFTPCY

**Procedure Name:** processStartParms

---

**EZA2895I Authentication negotiation succeeded**

**Explanation:** A security mechanism was requested to protect the session. The client and server have successfully negotiated to protect the session.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCY

**Procedure Name:** ftpOpen

---

**EZA2896I Unable to set control connection protection to required level **\textit{level}****

**Explanation:** The client was unable to set the control connection protection to the required level as specified on the SECURE_CTRLCONN statement in the client’s FTP.DATA file. The server does not support the protection level for the control connection.

**System action:** FTP continues. The connection to the FTP server ends.

**Operator response:** Contact the system programmer with the error message to have the FTP.DATA file corrected.

**System programmer response:** Correct the FTP.DATA file to set the SECURE_CTRLCONN statement to a level supported by the server. See the [z/OS Communications Server: IP Configuration Guide](https://www.ibm.com/support/docview/31181) for information about configuring FTP.

**Module:** EZAFTPCY

**Procedure Name:** ftpOpen

---

**EZA2897I Authentication negotiation failed**

**Explanation:** The client was unable to negotiate authentication with the server.

**System action:** FTP continues.

**Operator response:** Activate the FTP client and server traces as follows:

- SITE DEBUG=(NONE,SEC,SOC(3))
EZA2898I • EZA2900I

• DEBUG NONE SEC SOC(3)

Try the connection again and contact the system programmer with the error message.

If you are not allowed to issue the SITE command to change the server trace options, ask the system programmer to set the options, close the session to the server, enter FTP again and try the failing subcommand.

**System programmer response:** Use the MODIFY command to set the tracing options for the server.

**Module:** EZAFTPCZ

**Procedure Name:** ftpOpen

---

**EZA2898I** Unable to successfully negotiate required authentication

**Explanation:** The client was unable to successfully negotiate the required authentication with the server.

**System action:** The connection with the server ends. FTP continues.

**Operator response:** Activate the FTP server and client traces as follows:

• SITE DEBUG=(NONE,ACC,SOC(3))

• DEBUG NONE ACC SOC(3)

Try the connection again and contact the system programmer with the error message.

If you are not allowed to issue the SITE command to change the server trace options, ask the system programmer to set the options. Then close the session to the server, restart FTP, and try the failing subcommand.

If the server is not the z/OS FTP server, get servers traces as defined by the operating system of the FTP server.

**System programmer response:** Contact your IBM Support Representative and provide the client and server traces for diagnosis.

**Module:** EZAFTPCZ

**Procedure Name:** ftpOpen

---

**EZA2899I** Request to import name name failed

**Explanation:** The call to the gss_import_name() function failed to import name. This message is preceded by the messages EZA2912I and EZA2913I. See those messages for further diagnosis.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** See [z/OS Integrated Security Services Network Authentication Service Programming](https://www.ibm.com/support/knowledgecenter/SG2479_1.3.0/com.ibm.zos.v1r3.0.security.ssec_ref.doc/) for an explanation of the gss_import_name() function.

**Module:** EZAFTPFC

**Procedure Name:** ftpAuth

---

**EZA2900I** Request to initialize the security context failed

**Explanation:** The call to the gss_init_sec_context() function failed. This message is preceded by the messages EZA2912I and EZA2913I. See those messages for further diagnosis.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** See [z/OS Integrated Security Services Network Authentication Service Programming](https://www.ibm.com/support/knowledgecenter/SG2479_1.3.0/com.ibm.zos.v1r3.0.security.ssec_ref.doc/) for an explanation of the gss_init_sec_context() function.

**Module:** EZAFTPFC

**Procedure Name:** ftpAuth
EZA2903I  The subcommand is not valid when there is no active security mechanism

Explanation:  You entered a subcommand that is not valid when no security mechanism is active.

System action:  FTP continues.

System programmer response:  No action is needed.

Module:  EZAFTPFC

Procedure Name:  setclevel, setdlevel

---

EZA2904I  Cannot set protection level to level

Explanation:  The protection was not set to the requested level. This might happen because the FTP.DATA file SECURE_CTRLCONN or SECURE_DATACONN statements do not support the requested level or because the server denied the request.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPFC

Procedure Name:  setclevel, setdlevel

---

EZA2905I  Control connection protection is level

Explanation:  This message displays the current level of protection for the control connection.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPFC

Procedure Name:  setclevel

---

EZA2906I  Data connection protection is level

Explanation:  This message displays the current level of protection for the data connection.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  EZAFTPFC

Procedure Name:  setdlevel

---

EZA2907I  Attempt to encrypt data failed

Explanation:  The call to the gss_wrap() function failed. This message is preceded by the messages EZA2912I and EZA2913I. See those messages for further diagnosis.

System action:  FTP continues.

Operator response:  No action is needed.

System programmer response:  See [z/OS Integrated Security Services Network Authentication Service Programming] for an explanation of the gss_wrap() function.

Module:  EZAFTPFC
Procedure Name: gss_secure_command

EZA2909I  Cannot base 64 decode reply: error
Explanation: A reply from the server was unable to be Base 64 decoded.
error will be one of the following:

1  Bad character in encoding: An invalid character was received from the server as part of a base 64 encoded string. The valid characters in a base 64 encoded string are the letters A - Z, the letters a - z, the numbers 0 - 9, the plus sign (+), and the forward slash (/).

2  Encoding not properly padded: An invalid base 64 encoded string was received from the server. The string was not padded with equal signs to extend the length of the string to a multiple of four characters.

3  Decoded number of bits not a multiple of 8: An invalid base 64 encoded string was received from the server. The string was unable to be decoded because it did not decode into a multiple of eight bits.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPFC
Procedure Name: gss_secure_reply

EZA2910I  Attempt to decrypt data failed
Explanation: The call to the gss_unwrap() function failed. This message is preceded by messages EZA2912I and EZA2913I. See those messages for further diagnosis.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: See z/OS Integrated Security Services Network Authentication Service Programming for an explanation of the gss_unwrap() function.
Module: EZAFTPFC
Procedure Name: gss_secure_reply

EZA2911I  Received unprotected reply - Current protection level: level
Explanation: An unprotected reply was received from the server, but the current level of protection on the control connection required protection.
level is the current level of protection on the control connection and will be either Safe or Private.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPFC
Procedure Name: gss_secure_reply

EZA2912I  GSSAPI error major status code: value - text
Explanation: This message displays the status code returned from a GSSAPI function call. This message is followed by message EZZ2913I and a message indicating the failing GSSAPI function call.
value is the hexadecimal value of the major status code.
text is the text describing the status code obtained by calling the gss_display_status() function.

System action: FTP continues.
Operator response: No action is needed.

System programmer response: See z/OS Integrated Security Services Network Authentication Service Programming for an explanation of the major status code.

Module: EZAFTPFC
Procedure Name: gss_user_error

---

EZA2913I GSSAPI error minor status code: value - text

Explanation: This message displays the minor status code returned from a GSSAPI function call. This message is preceded by message EZZ2912 and is followed by a message indicating the failing GSSAPI function call.

value is the hexadecimal value of the minor status code.

text is the text describing the status code obtained by calling the gss_display_status() function.

System action: FTP continues.
Operator response: No action is needed.
System programmer response: See z/OS Integrated Security Services Network Authentication Service Programming for an explanation of the minor status code.

Module: EZAFTPFC
Procedure Name: gss_user_error

---

EZA2915I Length length of received buffer is greater than PBSZ size

Explanation: An encrypted message was received whose length was greater than the negotiated protection buffer size as specified on the SECURE_PBSZ statement in FTP.DATA.

length is the length of the received encrypted message.

size is the maximum length of an encrypted message as negotiated with the server.

System action: FTP continues. The message is discarded.
Operator response: Increase the SECURE_PBSZ value in the FTP.DATA file.
System programmer response: No action is needed.
Module: EZAFTPFC
Procedure Name: gss_receive_data

---

EZA2916I local site variable statement_name is set to value

Explanation: This message is displayed as part of the LOCSTat subcommand output.

statement_name is the name of the statement coded in the client FTP.DATA file.

value is the current setting of statement_name. It is the default value assigned by FTP, or what you specified in the FTP.DATA file, or the most recent value you assigned with a LOCSEt subcommand. You can use the LOCSEt subcommand to change value. See the z/OS Communications Server: IP User’s Guide and Commands and the z/OS Communications Server: IP Configuration Reference for information about the statement_name statement in the client FTP.DATA file.

System action: Processing continues.
Operator response: If you want to change the setting of statement_name temporarily, use the LOCSEt subcommand. See the z/OS Communications Server: IP User’s Guide and Commands for information about the LOCSEt subcommand. If you want to make a permanent change to statement_name, see the z/OS Communications Server: IP Configuration Reference for information about coding the statement_name statement.
System programmer response: No action is needed.
Module: ezaftpcl
Procedure Name: locstat()
EZA2917I  PROXY OPEN is not supported with security mechanisms

*Explanation:* The FTP session is protected by the GSSAPI security mechanism or the TLS security mechanism. FTP does not allow a second session to be opened using PROXY OPEN while the primary session is protected.

*System action:* FTP continues.

*Operator response:* If proxy transfers are needed, close the primary connection and open a connection that does not have a security mechanism protecting the session. Then the PROXY OPEN can be issued.

*System programmer response:* No action is needed.

*Module:* EZAFTPCZ

*Procedure Name:* ftpOpen

---

EZA2918I  Filetype SQL requires type A (ASCII) or E (EBCDIC)

*Explanation:* The user issued a PUT or APPEND subcommand. The file type that is specified by the LOCSITE subcommand or in the FTP .DATA file is SQL. An SQL transfer from the client requires that the data type of the connection is ASCII or EBCDIC.

*System action:* The PUT or APPEND subcommand is not performed.

*Operator response:* Change the data type by issuing the ASCII or EBCDIC subcommand and reissue the put or append subcommand.

*System programmer response:* No action is needed.

*Module:* EZAFTPCP

*Procedure Name:* sndFile

---

EZA2919I  Session starts with protection on the data connection

*Explanation:* The data connection is protected for secure data transfers.

*System action:* FTP continues.

*Operator response:* No action is needed.

*System programmer response:* No action is needed.

*Module:* EZAFTPCZ

*Procedure Name:* ftpOpen

---

EZA2920I  SECURE_DATACONN NEVER configuration statement is ignored

*Explanation:* The mechanism TLS-P started with an implied protection level of PRIVATE which is inconsistent with the statement SECURE_DATACONN NEVER that is specified in the FTP .DATA file. The statement is ignored and a statement of SECURE_DATACONN CLEAR is assumed for this connection.

*System action:* FTP continues.

*Operator response:* No action is needed.

*System programmer response:* No action is needed.

*Module:* EZAFTPCZ

*Procedure Name:* ftpOpen

---

EZA2922I  Active client dumpIDs - id_1 ... id_n

*Explanation:* This is a display of the active FTP extended trace IDs (dumpIDs).

*System action:* FTP continues.

*Operator response:* No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: dump

EZA2923I       Active client traces - name_1 ... name_n

Explanation: This message displays the active FTP client general traces. This message is issued when a debug subcommand is used to change or display the values for the FTP general trace.

name_x can be one of the following:
FLO  function flow
CMD  command trace
PAR  parser details
INT  program initialization and termination
ACC  access control (logging in)
UTL  utility functions
FSC(1)  file services -- level 1
FSC(2)  file services -- level 2
FSC(3)  file services -- level 3
FSC(4)  file services -- level 4
FSC(5)  file services -- level 5
FSC(6)  file services -- level 6
FSC(7)  file services -- level 7
FSC(8)  file services -- level 8
SOC(1)  socket services -- level 1
SOC(2)  socket services -- level 2
SOC(3)  socket services -- level 3
SOC(4)  socket services -- level 4
SOC(5)  socket services -- level 5
SOC(6)  socket services -- level 6
SOC(7)  socket services -- level 7
SOC(8)  socket services -- level 8
SQL   SQL processing

If no trace is active, NONE is displayed.
System action: FTP continues.
Operator response: No action is needed.
System programmer response: None
Module: EZAFTPCL
Procedure Name: debug
EZA2926I  The subcommand is not valid for the mechanism security mechanism

Explanation: The user entered an FTP subcommand during a session that was protected with a security mechanism. The subcommand is not valid while the session is secured.

In the message text:

mechanism

The security mechanism used to secure the session. Valid values are TLS and GSSAPI.

Examples:

Command: safe
EZA2926I The subcommand is not valid for the TLS security mechanism.

System action: The command is ignored.

Operator response: No action is needed.

User response: When the mechanism value is GSSAPI, either do not enter the subcommand, or report the error to the system programmer.

When the mechanism value is TLS, use the LOCStat subcommand to display the TLSRFCLEVEL configuration option value, and report the error to the system programmer.

System programmer response: When the mechanism value is GSSAPI, secure the session using a different security mechanism, do not secure the session, or instruct the user to refrain from entering the subcommand.

When the mechanism value is TLS, more subcommands are permitted during a TLS-secured session when the TLSRFCLEVEL parameter value is RFC4217 than when the TLSRFCLEVEL parameter value is DRAFT. If the TLSRFCLEVEL parameter value is DRAFT, consider setting the TLSRFCLEVEL parameter value to RFC4217.

For more information, see the following sources:

- The information about the steps for customizing the FTP client for TLS in z/OS Communications Server: IP Configuration Guide.
- The information about the TLSRFCLEVEL (FTP client and server) in z/OS Communications Server: IP Configuration Reference.

If the value TLSRFCLEVEL RFC4217 is not acceptable, or if using that value does not solve the problem, do one of the following:

- Do not secure the session
- Secure the session with a different mechanism
- Instruct the user to refrain from using the subcommand

Problem determination: If the FTP server is z/OS V1R9 or later, you can display the server’s TLSRFCLEVEL value with the stat subcommand. The server must be configured to use the value TLSRFCLEVEL RFC4217 to allow the client the full range of RFC 4217 functionality.

Source: z/OS Communications Server TCP/IP: FTP

Module: Not applicable.

Routing code: 10

Descriptor code: 12

EZA2927I  SJISKANJI (NOTYPE requires type A (ASCII)

Explanation: A SJISKANJI subcommand was entered with a parameter of (NOTYPE. This parameter requires that the server be set to ASCII. For more information about the SJISKANJI command, see the z/OS Communications Server: IP User’s Guide and Commands.

System action: The request is rejected. FTP continues.
Operator response: Issue the Type A command prior to entering the SJISKANJI (NOTYPE command.

System programmer response: No action is needed.

Module: EZAFTPCT
Procedure Name: cliDBOpt, sjisk

---

**EZA2928I** File contains binary data - enter binary subcommand before entering transfer subcommand

**Explanation:** FTP has determined that the local file is tagged as a binary file. FTP will transfer this file only if the data type is set to binary.

**System action:** FTP continues.

**Operator response:** Enter the binary or TYPE I subcommand and reenter the transfer request.

**System programmer response:** No action is needed.

Module: EZAFTPCT
Procedure Name: hfs_sndFile

---

**EZA2929I** File contains ASCII data - enter ASCII subcommand before entering transfer subcommand

**Explanation:** FTP has determined that the local file is tagged as an ASCII file. FTP will transfer this file only if the data type is set to ASCII.

**System action:** FTP continues.

**Operator response:** Enter the ASCII or TYPE A subcommand and reenter the transfer request.

**System programmer response:** No action is needed.

Module: EZAFTPCT.
Procedure Name: hfs_sndFile

---

**EZA2930I** Transfer failed because data cannot be translated

**Explanation:** The data cannot be translated using the current translate table. The translate table was built from the code sets that are specified by the SBDATACONN parameter on LOCSITE or an SBDATACONN statement in the FTP.DDATA file. At the time the table was built, one or more of the codepoints was reported as untranslatable for specific data codepoints. The data in this transfer has one or more of the codepoints.

**System action:** FTP continues.

**Operator response:** Use LOCSITE SBDATACONN to build or select a translation table that can translate the codepoints in the data.

**System programmer response:** No action is needed.

Module: EZAFTP CG, EZAFTPCT
Procedure Name: hfs_rcvFile, sndFile

---

**EZA2937I** SBDatconn codeset names: codeset_1, codeset_2

**Explanation:** This message is issued in response to the LOCSTAT subcommand.

*codeset_1* and *codeset_2* are the names of the code sets used to define the data connection translate table specified by the SBDATACONN statement in the FTP.DDATA file or by the LOCSITE SBDATACONN subcommand.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

Module: EZAFTPCL
Procedure Name: locstat
EZA2938I  Tagged type file translated with table built using file system codepage_1, network transfer codepage_2

**Explanation:** The FTP client detected that the local file is tagged with a coded character set ID (ccsid). A translation table is built for this data transfer using the codepage that corresponds to the ccсид.

type is either ASCII or EBCDIC.

codepage_1 is the codepage of the file.

codepage_2 is the codepage that was specified for the network transfer codepage on LOC_SITE SBDATACONN or on the SBDATACONN statement in the FTP.DATA file.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCP

**Procedure Name:** hfs_sndFile

---

EZA2939I  Tagged type file translated with current data connection translation table

**Explanation:** The FTP client detected that the local file is tagged with a coded character set ID (ccsid). The data connection translate table is not defined with the SBDATACONN=(file_system_cp,network_transfer_cp) method. Without a network transfer codepage, the client cannot build a translate table using the ccсид of the file. The FTP client uses the translate table defined for the data connection.

type is either ASCII or EBCDIC.

**System action:** FTP continues.

**Operator response:** If you do not want to use the current data connection translate table, issue a LOCSITE SBDATACONN=(file_system_cp,network_transfer_cp) subcommand to provide a codepage to be used to build a translate table.

**System programmer response:** No action is needed.

**Module:** EZAFTPCP

**Procedure Name:** hfs_sndFile

---

EZA2943I  SBSUB is set to sbsub

**Explanation:** SBSUB can be set to either TRUE or FALSE.

sbsub is one of the following:

TRUE  A substitution character is used when untranslatable characters are encountered during the data transfer.

FALSE  The data transfer will fail because of an untranslatable character. FALSE is the default setting.

**System action:** FTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZAFTPCL

**Procedure Name:** locstat()

---

EZA2944I  SBSUBCHAR is set to sbsubchar

**Explanation:** During the data transfer, untranslatable characters will be replaced by the substitution character, sbsubchar. If SPACE is specified, then the ASCII or EBCDIC representation of a blank will be substituted. The SBSUBCHAR setting is ignored when SBSUB is set to FALSE.

sbsubchar is either SPACE or a substitution character in hexadecimal.

**System action:** FTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: EZAFTPCL
Procedure Name: locstat()

**EZA2946I** SBSUBChar parameter `sbsubchar` is not valid - SBSUBChar ignored

Explanation: The SBSUBChar parameter must be either a hexadecimal number or SPACE. `sbsubchar` is not a valid substitution character.

System action: The parameter is ignored.

Operator response: Reissue the LOCSITE command with a valid value specified for the SBSUBChar parameter. See the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com) in the chapter about transferring data using the file transfer protocol for information about the parameters of the LOCSITE subcommand.

System programmer response: No action is needed.
Module: EZAFTPCK
Procedure Name: locsite

**EZA2947I** One or more characters were substituted during the transfer

Explanation: During a data transfer, one or more untranslatable characters were found and were replaced by the substitution character (SBSUBCHAR). For single byte transfers the substitution character specified by SBSUBCHAR will be used. See the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com) and the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com) for information about specifying and displaying the SBSUBCHAR value.

System action: FTP continues.

Operator response: No action is needed.
System programmer response: No action is needed.
Module: ezafpcc, ezafpcp
Procedure Name: hfs_recvFile(), sndFile()

**EZA2950I** usage: `uuid@gen {-[pcPC]}`

Explanation: This message displays the correct format and syntax for the UUID command. For more information about the UUID command, see the [Network Computing System Reference Manual](https://www.ibm.com).

System action: TCPIP continues.

Operator response: Correct the format and syntax as indicated and resubmit the command.
System programmer response: Assist the user as necessary.
Module: UUID@GEN
Procedure Name: main

**EZA2956E** GLBD: unable to listen on type address family

Explanation: The Global Location Broker Daemon (GLBD), which controls the Global Location Broker database, which helps clients locate servers on the network, is unable to listen on a socket. The Berkeley socket concept is used for the Network Computing System (NCS), of which the GLBD is a part. Sockets are identified by a socket address composed of an address family, which defines the structure of the address, network address (host address), and port number (endpoint address). This message indicates that the GLBD cannot find a socket address for the indicated address family. No requests can be received over the socket.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.
System programmer response: Check the physical connections between the host and the network. Check to make sure that the indicated socket is available to the GLBD. For more information about the GLBD, see the z/OS Communications Server: IP Configuration Reference.

Module: GLBD

Procedure Name: register_server

EZA2957E GLBD: unable to listen on any address families

Explanation: The remote procedure call to the Global Location Broker Daemon (GLBD) did not include any active address families. The Berkeley socket concept is used for the Network Computing System, of which the GLBD is a part. It can listen to more than one socket identified by a socket address composed of an address family, which defines the structure of the address, the network (host) address, and port number (endpoint address). Without an active address family, the GLBD is unable to receive requests over a connection.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Check the remote procedure call used to invoke the GLBD to make sure that it contains active address families. For more information about the GLBD, see the z/OS Communications Server: IP Configuration Reference.

Module: GLBD

Procedure Name: main

EZA2961I LLBD: (find_socket) called with no ready sockets

Explanation: The procedure find_socket, which finds an available socket for a Local Location Broker Daemon (LLBD) connection, was called, but found no sockets ready to open a connection. A connection is not established.

System action: TCPIP continues.

Operator response: Resubmit the request when a socket is available.

System programmer response: Assist the user as necessary.

Module: LLBD

Procedure Name: find_socket

EZA2962I info name [port]

Explanation: This message provides information about the use of a port.

Processing Request port The indicated port has been used to submit a request that is now being processed.

Listening On port NCS is listening on the indicated port for user requests.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: LLBD

Procedure Name: print_socket_info

EZA2963I LLBD: (use_family) Can't create socket

Explanation: The function use_family, which is called to set up a socket for a connection, was unable to create a socket. No connection is established.

System action: TCPIP continues.

Operator response: Resubmit the command when storage is available to create the socket.

System programmer response: Assist the user as necessary.
Module: LLBD
Procedure Name: use_family

**EZA2964I** LLBD: (use_family) Can't bind socket

Explanation: The function use_family, which is called to set up a socket for a connection to Local Location Broker Daemon (LLBD), was unable to bind the socket because the bind request was rejected by the remote host. No connection is established.

System action: TCPIP continues.

Operator response: Resubmit the command when a socket is available on the remote host.

System programmer response: Check the remote host to determine why it is rejecting the LLBD BIND request.

Module: LLBD
Procedure Name: use_family

**EZA2965I** LLBD: Unable to obtain type family port

Explanation: The Local Location Broker Daemon (LLBD) was unable to obtain a port for the indicated address family. The LLBD uses the Berkeley socket concept, allowing it to listen on multiple sockets, each of which has an address family, which defines the structure of the address, a network (host) address, and a port address. This message indicates the address family type for which the LLBD is unable to get a port. No connection is established.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Check the host to determine why no port can be allocated.

Module: LLBD
Procedure Name: open_sockets

**EZA2966E** LLBD: Unable to obtain any sockets

Explanation: The Local Location Broker Daemon (LLBD) is unable to obtain any sockets for communication with the network. The LLBD uses sockets to listen for requests and to send replies.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Make sure that the LINK and DEVICE statements for the LLBD are configured properly and that the socket allocation requests submitted by LLBD specify valid, available sockets. Check the physical connections between the host and the network. Make sure that one or more ports are available to handle the sockets. For more information about socket errors, see the z/OS Communications Server: IP Programmer's Guide and Reference.

Module: LLBD
Procedure Name: main

**EZA2970I** usage lb@admin -n[q]

Explanation: This message displays the correct format and syntax for the lb@admin command, which is used to invoke the location broker.

System action: TCPIP continues.

Operator response: Correct the syntax and resubmit the command.

System programmer response: Assist the user as necessary.

Module: LB@ADMIN
Procedure Name: main
EZA2971E Unknown command: command

Explanation: The indicated command is not supported by the location broker. The command is not processed.

System action: TCPIP continues.

Operator response: Correct the syntax and resubmit the command. For more information about commands supported by the location broker, see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.

System programmer response: Assist the user as necessary.

Module: LB@ADMIN

Procedure Name: main

EZA2972E Unknown option 'option'

Explanation: The indicated option is not supported by the location broker. The command is not processed.

System action: TCPIP continues.

Operator response: Correct the option and resubmit the command. For more information about options supported by the location broker, see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.

System programmer response: Assist the user as necessary.

Module: LB@ADMIN

Procedure Name: main

EZA2973I Usage: unregister OBJ TYPE INTERFACE LOCATION

Explanation: This message gives the format and syntax for the unregister command, which is used to remove an identifier from the location broker database. For more information about the unregister command, see the Network Computing System Reference Manual. The command is not processed.

System action: TCPIP continues.

Operator response: Correct the syntax and resubmit the command.

System programmer response: Assist the user as necessary.

Module: LB@ADMIN

Procedure Name: process_registerparms

EZA2974I Usage: register OBJ TYPE INTERFACE LOCATION ANNOTATION {global | local}

Explanation: This message displays the format and syntax for the register command, which is used to add an identifier to the location broker database. The command is not processed. For more information about the register command, see the Network Computing System Reference Manual.

System action: TCPIP continues.

Operator response: Correct the syntax and resubmit the command.

System programmer response: Assist the user as necessary.

Module: LB@ADMIN

Procedure Name: main

EZA2975I Usage: set_broker {local | global} LOCATION

Explanation: This message displays the format and syntax for the set_broker command, which is used to start the Location Broker Daemon. The command is not processed. For more information about the set_broker command, see the Network Computing System Reference Manual.
System action: TCPIP continues.
Operator response: Correct the syntax and resubmit the command.
System programmer response: Assist the user as necessary.
Module: LB@ADMIN
Procedure Name: main

EZA2976I Usage: set_broker {local | global} LOCATION
Explanation: This message displays the format and syntax for the set_broker command, which is used to start the Location Broker Daemon. The command is not processed. For more information about the set_broker command, see the z/OS Communications Server: IP Programmer’s Guide and Reference.
System action: TCPIP continues.
Operator response: Correct the syntax and resubmit the command.
System programmer response: Assist the user as necessary.
Module: LB@ADMIN
Procedure Name: main

EZA2977E specification - illegal broker specification
Explanation: The set_broker command contained an incorrect broker specification. The command is not processed. For more information about the specifications for set_broker command, see the Network Computing System Reference Manual.
System action: TCPIP continues.
Operator response: Correct the specification and resubmit the command.
System programmer response: Assist the user as necessary.
Module: LB@ADMIN
Procedure Name: main

EZA2948I Usage: set_broker local | global
Explanation: This message displays the format and syntax for the use_broker command, which is used to specify the location broker to be used. For more information about the use_broker command, see the Network Computing System Reference Manual.
System action: TCPIP continues.
Operator response: Correct the syntax and resubmit the command.
System programmer response: Assist the user as necessary.
Module: LB@ADMIN
Procedure Name: main

EZA2979I No entries match.
Explanation: No entries were found matching the location broker found in the use_broker command. The command is not processed.
System action: TCPIP continues.
Operator response: Resubmit the use_broker command, specifying a valid location broker. For more information about the use_broker command, see the Network Computing System Reference Manual.
System programmer response: Assist the user as necessary.
Module: LB@ADMIN
Procedure Name: main

EZA2991I id=id

EZA2992I Bindings for id @ hash_table_position
Explanation: These messages display information from the server's name table in a readable form.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: NAMETBL
Procedure Name: NAMETBL_dump_tab

EZA2994I Unexpected (or unimplemented) type ("
EZA2995I ) encountered in label

EZA2996I ; exiting.
Explanation: The function BACKEND_init, which initializes the code for the BACKEND procedure, encountered a type that it does not recognize in the indicated label. The function exits the label containing the unrecognized type.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: BACKEND
Procedure Name: BACKEND_init

EZA2997I name address is "name"
Explanation: This message translates a name table entry to a readable name.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: BACKEND
Procedure Name: NAMETABLE_id_to_string

EZA2998I NIDL compiler invoked
Explanation: This message indicates that the Network Interface Definition Language (NIDL) compiler has been invoked.
System action: The NIDL compiler is initialized. TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MAIN
Procedure Name: main
EZA2999I   NIDL compiler ended

Explanation:  The Network Interface Definition Language compiler (NIDL) has ended.

System action:  The NIDL compiler ends. TCPIP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  MAIN

Procedure Name:  main
Chapter 4. EZA3xxxx messages

EZA3000I unexpected EOF inside a comment at line line

Explanation: The Network Interface Definition Language (NIDL) compiler encountered an unexpected end of file in a comment at the indicated line in the current file. Processing of the file halts.

System action: TCPIP continues.

Operator response: Notify the system programmer of the problem.

System programmer response: Remove the end of file marker from the comment and recompile. For more information about NIDL, see the z/OS Communications Server: IP Programmer’s Guide and Reference

Module: LEX_YY

Procedure Name: main

EZA3001E Illegal option ftype in getflags: ftype

Explanation: The Network Interface Definition Language (NIDL) compiler encountered an incorrect option in the procedure getflags, which is used to set processing flags for the compiler. The option is not processed.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Correct the indicated option and recompile. For more information about NIDL compiler options, see the z/OS Communications Server: IP Programmer’s Guide and Reference

Module: GETFLAGS

Procedure Name: main

EZA3002E Unknown flag (flag) in getflags

Explanation: The Network Interface Definition Language (NIDL) compiler encountered an option that it does not recognize. The option is not processed.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Correct the indicated option and recompile. For more information about NIDL compiler options, see the z/OS Communications Server: IP Programmer’s Guide and Reference

Module: GETFLAGS

Procedure Name: main

EZA3003E Options table:

Explanation: This message precedes the printing of the options table for the Network Interface Definition Language (NIDL) compiler in response to an incorrect option.

System action: The options table is displayed. TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Correct the options as necessary and recompile.

Module: GETFLAGS

Procedure Name: printflags
**EZA3004E**  
*option*

**Explanation:** The indicated option for the Network Interface Definition Language (NIDL) compiler is incorrect. The compiler halts.

**System action:** The compiler halts. TCPIP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Correct the option and recompile. For information on NIDL compiler options, see the [Network Computing System Reference Manual](#).

**Module:** GETFLAGS

**Procedure Name:** printflags

---

**EZA3005E**  
*illegal option in printflags: option*

**Explanation:** The indicated option for the Network Interface Definition Language (NIDL) compiler is either incorrect or not allowed.

**System action:** The compiler halts. TCPIP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Correct the option and recompile. For more information about NIDL compiler options, see the [Network Computing System Reference Manual](#).

**Module:** GETFLAGS

**Procedure Name:** printflags

---

**EZA3006E**  
*flag*

**Explanation:** The indicated INTARG flag for the Network Interface Definition Language (NIDL) compiler is incorrect.

**System action:** The compiler halts. TCPIP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Correct the flag and recompile. For more information about NIDL compiler flags, see the [Network Computing System Reference Manual](#).

**Module:** GETFLAGS

**Procedure Name:** printflags

---

**EZA3007E**  
*STRARG_flag*

**Explanation:** The indicated STRARG flag for the Network Interface Definition Language (NIDL) compiler is incorrect.

**System action:** The compiler halts. TCPIP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Correct the flag and recompile. For more information about flags for the NIDL compiler, see the [Network Computing System Reference Manual](#).

**Module:** GETFLAGS

**Procedure Name:** printflags

---

**EZA3008E**  
*flag*

**Explanation:** The indicated Network Interface Definition Language (NIDL) flag, which is either a TOGGLEARG flag or an ASSERTARG flag, is incorrect.

**System action:** The NIDL compiler halts. TCPIP continues.
Operator response: Notify the system programmer of the error.

System programmer response: Correct the flag and recompile. For more information about NIDL compiler flags, see the Network Computing System Reference Manual.

Module: GETFLAGS
Procedure Name: printflags
**EZA3013E**  •  **EZA3014E**

**EZA3013E**  usage: NIDL fileName [flags]

**Explanation:** The NIDL command, which is used to invoke the Network Interface Definition Language (NIDL) compiler, was incorrect. The command is not processed. This message gives the correct format and syntax for the NIDL command. For more information about the NIDL compiler, see the *Network Computing System Reference Manual*.

**System action:** TCPIP continues.

**Operator response:** Correct the NIDL command and resubmit it.

**System programmer response:** Assist the user as necessary.

**Module:** FRONTEND

**Procedure Name:** explain_args

**EZA3014E**  -ansi is no longer needed.

**Explanation:** The NIDL command, which is used to invoke the Network Interface Definition Language (NIDL) compiler, was submitted with the ansi option specified. The ansi option is no longer necessary. The command is not processed.

**System action:** TCPIP continues.

**Operator response:** Resubmit the command without specifying the ansi option.

**System programmer response:** Assist the user as necessary.

**Module:** FRONTEND

**Procedure Name:** NIDL_init

**EZA3030E**  (alloc_socket) Can't create socket, errno=errno

**Explanation:** The procedure alloc_socket, which is called to allocate a socket, was unable to create a new socket. *errno* is the UNIX System Services Return Code. These return codes are listed and described in the *z/OS UNIX System Services Messages and Codes*.

**System action:** TCPIP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Use the *errno* displayed in this message to determine the cause of the error and respond as indicated.

**Module:** RPC@C

**Procedure Name:** alloc_socket

**EZA3031E**  (alloc_socket) Can't bind socket, errno=errno

**Explanation:** The function alloc_socket, which is called to allocate a socket, was unable to bind a socket to open communications. *errno* is the UNIX System Services Return Code. These return codes are listed and described in the *z/OS UNIX System Services Messages and Codes*.

**System action:** TCPIP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Use the *errno* displayed in this message to determine the cause of the error and respond as indicated.

**Module:** RPC@C

**Procedure Name:** alloc_socket
EZA3032E  (send_pkt) cannot enable broadcast, status=status

Explanation: The function send_pkt, which is called to send packets to clients, is unable to broadcast a packet over the network because the socket from which the packet is to be sent does not have the correct status.

System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Determine the reason the socket has an incorrect status and respond as indicated.
Module: RPC@C
Procedure Name: send_pkt

EZA3033E  (send_pkt) cannot enable broadcast, errno=errno

Explanation: The function send_pkt, which is called to send a packet, could not send a broadcast message. No packet is sent.

errno is the UNIX System Services Return Code. These return codes are listed and described in the z/OS UNIX System Services Messages and Codes.

System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Use the errno displayed in this message to determine the cause of the error and respond as indicated.
Module: RPC@C
Procedure Name: send_pkt

EZA3034E  (recv_pkt/client) Rcvd packet from wrong place; wanted "address"

EZA3035E  (recv_pkt/client) got "address"

Explanation: The function recv_pkt/client, which is called to receive a packet, received a packet from an address other than the one it expected. The packet is discarded.

System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Check the client and both indicated addresses to determine why the client is receiving packets from an incorrect address.
Module: RPC@C
Procedure Name: recv_pkt/client

EZA3036I  (recv_pkt/client) Rcvd callback (ptype=packet_type)

Explanation: The function recv_pkt/client, which is called to receive a packet, received a callback from a client indicating that the last packet sent to that client has been received.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@C
Procedure Name: recv_pkt/client
EZA3037I  (recv_pkt/client) Rcvd packet not for my activity

Explanation: The host received a packet that does not match the host's current activity. If the sequence number of the packet is correct, the packet will be acknowledged, preventing retransmission of the packet. Otherwise the packet will be discarded, causing the client to resend the packet when the acknowledgment time out expires.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@C

Procedure Name: recv_pkt/client

---

EZA3038I  (recv_pkt/client) Rcvd packet with bad seq (should be number, is number ptype=packet_type)

Explanation: The host has received a packet with an incorrect sequence number. The packet is discarded without acknowledgment, causing the client to resend the packet after the acknowledgment time out has expired. The actual sequence number, expected sequence number, and packet type are displayed in this message.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@C

Procedure Name: recv_pkt/client

---

EZA3039I  (ack_replies) Acing [address, sequence_number]

Explanation: The function ack_replies, which is called to send acknowledgments for packets that have been received, is sending an acknowledgment to the indicated address for the packet with the indicated sequence number.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@C

Procedure Name: ack_replies

---

EZA3040E  (ack_replies) Can't send ACK, errno=errno

Explanation: The function ack_replies, which is called to acknowledge packets that have been received, is unable to send an acknowledgment.

errno is the UNIX System Services Return Code. These return codes are listed and described in the z/OS UNIX System Services Messages and Codes.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Use the errno given in this message to determine the cause of the error and respond as indicated.

Module: RPC@C

Procedure Name: ack_replies
EZA3041I  (await_reply) timeout

Explanation: The host is currently in a time out initiated by the procedure await_reply, which is called to put the host in a wait state to receive packets.

System action: After the timeout, the host resumes processing. TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@C

Procedure Name: await_reply

EZA3042I  (await_reply) timeout (EINTR)

Explanation: A request from the function await_reply, which waits for a reply to a packet, to the operating system was interrupted. The request will be resubmitted to the system.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@C

Procedure Name: await_reply

EZA3043I  (rpc_sar) Starting to ping

Explanation: The host is sending a PING packet to check for the existence of other hosts on the network. For more information about the PING function, see the z/OS Communications Server: IP System Administrator’s Commands.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@C

Procedure Name: rpc__sar

EZA3044I  (rpc_sar) Too many pings...signaling

Explanation: The local host has sent the maximum number of PING packets to check for the existence of another host on the network. The local host assumes that the host it is seeking does not exist. No more PING packets are sent.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@C

Procedure Name: rpc__sar

EZA3045I  (rpc__sar) Rcvd “working” during frag send!

Explanation: The host received a “working” packet, but the host is sending fragmented packets, disrupting data transmission. The packet is acknowledged.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.
Module: RPC@C  
Procedure Name: rpc__sar

EZA3046I (rpc__sar) Rcvd “working” pkt; seq=number  
Explanation: The host has received a “working” packet with the indicated sequence number. The packet is acknowledged.  
System action: TCPIP continues.  
Operator response: No action is needed.  
System programmer response: No action is needed.

Module: RPC@C  
Procedure Name: rpc__sar

EZA3047I (rpc__sar) Got “fack” for non-large request!  
Explanation: The host received a fragmentation acknowledgment packet for a request that was not large enough to need fragmentation. This indicates that the client is configured to receive a smaller maximum transmission unit (MTU) than the host is configured to send. The packet is transmitted in fragments to allow the client to receive it.  
System action: TCPIP continues.  
Operator response: Notify the system programmer of the error.  
System programmer response: Check the client to determine why it is acknowledging fragmentation when none is necessary.

Module: RPC@C  
Procedure Name: rpc__sar

EZA3048I (rpc__sar) Got “response” during frag recv!  
Explanation: The host received a response packet while sending a fragmented packet. The response packet is received and acknowledged after sending of the fragmented packet is completed.  
System action: TCPIP continues.  
Operator response: No action is needed.  
System programmer response: No action is needed.

Module: RPC@C  
Procedure Name: rpc__sar

EZA3049I (rpc__sar) Got non-frag “response” during frag send!  
Explanation: The host received a non-fragmented response packet while sending a fragmented packet. The response will be accepted and acknowledged after the host is through sending the fragmented packet.  
System action: TCPIP continues.  
Operator response: No action is needed.  
System programmer response: No action is needed.
EZA3050E  (use_family) Can't create socket

Explanation: The function use_family, which is used to create and register a socket for listening, was unable to create a socket. This prevents the host from receiving requests over the connection.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Check the host to determine why it is unable to create a socket, and respond as indicated. For more information about socket errors, see the /OS Communications Server: IP Programmer’s Guide and Reference.

Module: RPC@S

Procedure Name: use_family

------------------

EZA3051E  (use_family) Can't bind socket, errno=errno

Explanation: The function use_family, which is used to create and register a socket for listening, could not bind a socket to open a connection, preventing the host from receiving requests over that connection.

errno is the UNIX System Services Return Code. These return codes are listed and described in the /OS UNIX System Services Messages and Codes.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Use the errno displayed in this message to determine the cause of the error and respond as indicated.

Module: RPC@S

Procedure Name: use_family

------------------

EZA3052E  (rpc__use_family) Can't getsockname, errno=errno

Explanation: The function getsockname, which is used by the function rpc__use_family to get the name of a socket to be used for listening, was unsuccessful. The connection is not established.

errno is the UNIX System Services Return Code. These return codes are listed and described in the /OS UNIX System Services Messages and Codes.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Use the errno displayed in this message to determine the cause of the error and respond as indicated.

Module: RPC@S

Procedure Name: use_family

------------------

EZA3053E  (rpc__use_family) Can't get my netaddr

Explanation: The function rpc__use_family, which uses a socket to listen for requests from clients, was unable to get the network address for the socket. The socket is closed.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Check the host to determine why the network address was not passed to rpc__use_family. For more information about this function, see the Network Computing System Reference Manual.

Module: RPC@S

Procedure Name: rpc__use_family
EZA3054E  (rpc__use_family) Can't get socket

Explanation: The function rpc__use_family, which uses a socket to listen for requests, was unable to get a socket. The connection is not established.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Check the host to determine why no socket is available and respond as indicated. For more information about socket errors, see the z/OS Communications Server: IP Programmer's Guide and Reference.

Module: RPC@S
Procedure Name: rpc__use_family

EZA3055I  (scan_activities) Freeing passive connection

Explanation: The function scan_activities, which retransmits unacknowledged replies and frees old activities, is freeing the indicated passive connection.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S
Procedure Name: scan_activities

EZA3056I  (scan_activities) Passivating idle connection

Explanation: The function scan_activities, which retransmits unacknowledged replies and frees old activities, is changing the state of the indicated connection from idle to passive open.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S
Procedure Name: scan_activities

EZA3057I  (scan_activities) Dropping reply [identifier, sequence_number]

Explanation: The function scan_activities, which retransmits unacknowledged replies and frees old activities, is dropping the indicated packet because it has been sent the maximum allowable number of times.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S
Procedure Name: scan_activities

EZA3058I  (scan_activities) Retransmitting reply (state=state) [id, reply_packet_sequence_header_]

Explanation: The function scan_activities, which retransmits unacknowledged replies and frees old activities, is resending the indicated packet.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.
Module: RPC@S
Procedure Name: scan_activities

EZA3059I (ping_common) Working (ptype=packet_type) [id, sequence_number]
Explanation: The function ping_common, which is used to process request and PING packets whose sequence numbers indicated that they are current, is processing the indicated packet.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: ping_common

EZA3060I (ping_common) Resending reply (state=state, ptype=packet_type, frag=fragmentation_number) [id, sequence_number]
Explanation: The function ping_common, which is used to process request and PING packets whose sequence number indicates that they are current, is resending the indicated reply packet.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: ping_common

EZA3061I (ping_common) No call (state=state, ptype=packet_type) [id, sequence_number]
Explanation: The function ping_common, which is used to process request and PING packets whose sequence numbers indicate that they are current, received a packet that did not contain a call for a service.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: ping_common

EZA3062I (who_are_you) Doing callback
Explanation: The function who_are_you, which is used to determine the identity of a client, is doing a callback to the client.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: who_are_you
EZA3063I (who_are_you) Can't bind to client, st=status

Explanation: The function who_are_you, which is used to determine the identity of a client, is unable to bind a socket for communication with the client. The reason is indicated by the status displayed in this message.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Respond as indicated by the status displayed in this message.

Module: RPC@S

Procedure Name: who_are_you

EZA3064I (who_are_you) fault, st=status

Explanation: The function who_are_you, which is used to determine the identity of a client, has encountered an error. The connection to the client is not established. The reason is indicated by the status displayed in this message.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Respond as indicated by the status displayed in this message.

Module: RPC@S

Procedure Name: who_are_you

EZA3065I (who_are_you) who_are_you failed, st=status

Explanation: The function who_are_you, which is used to determine the identity of a client, was unsuccessful. The reason is indicated by the status displayed in this message. The connection is closed and the function rpc__free_handle is called to free the socket.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Respond as indicated by the status displayed in this message.

Module: RPC@S

Procedure Name: who_are_you

EZA3066I (do_request_frag) Bad initial frag

Explanation: The function do_request_frag, which is called to handle fragmented request packets, received an initial fragment other than the one that was expected.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S

Procedure Name: do_request_frag

EZA3067I (do_request_frag) Out of order frag; expecting number [packet_type, sequence_number]

Explanation: The function do_request_frag, which is used to handle fragmented request packets, received a fragment other than the one that is expected. The fragment is not acknowledged, prompting the sending client to resend the fragment after the acknowledgment timeout.

System action: TCPIP continues.

Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_request_frag

EZA3068I (do_request) Unknown interface [packet_type, sequence_number]
Explanation: The function do_request, which accepts and handles client request packets, received a packet from an interface that is not registered with a location broker. The packet is refused and the request is not processed.
System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Register the interface with the location broker and resubmit the request. For more information about registering an interface with a location broker, see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.
Module: RPC@S
Procedure Name: do_request.

EZA3069I (do_request) Opnum out of range [id, sequence_number]
Explanation: The function do_request, which accepts and handles client request packets, received a packet whose operation number was outside the valid range. The packet is rejected, prompting the sending client to create a new packet to send the request.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_request.

EZA3070I (do_request) Got inappropriate request (state=state) [id, sequence_number]
Explanation: The function do_request, which accepts and handles client requests, received a request packet during the processing of a duplicate request. Processing of the old request halts. The new request is returned, prompting the client to retransmit the request and allowing the host time to shut down processing of the old request.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_request.

EZA3071I (do_request) Old sequence, previous=sequence_number [id, sequence_number]
Explanation: The function do_request, which accepts and handles client request packets, received a packet whose sequence number indicates that it is not current. The packet is rejected.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_request.
EZA3072I  (do_request) Mismatch sequence during frag reassembly [id, sequence_number]

Explanation: The function do_request, which accepts and handles client request packets, received a packet with an incorrect sequence number during the reassembly of a fragmented packet. The fragment is rejected. The fragmented packet is reassembled.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_request.

EZA3073E  (do_request) Protocol error [id, sequence_number]

Explanation: The function do_request, which accepts and handles client request packets, encountered a protocol error caused by an out of sequence packet. The packet is not processed.

System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Check the sending device to determine why it is sending out of sequence packets.
Module: RPC@S
Procedure Name: do_request.

EZA3074E  (do_request) Fault while executing request, st=status

Explanation: The function do_request, which accepts and handles client request packets, encountered an error while processing a request. The reason is indicated by the status displayed in this message.

System action: Processing halts. TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Respond as indicated by the status portion of this message.
Module: RPC@S
Procedure Name: do_request.

EZA3075I  (do_ping) No call (no activity for this call) [id, sequence_number]

Explanation: The function do_ping, which handles PING packets, received a packet that did not contain a request for an activity.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_ping.

EZA3076I  (do_ping) No call (higher numbered ping), ahint=activity_number, previous=old*us.sequence_number [id, sequence_number]

Explanation: The function do_ping, which handles PING packets, received a packet with a sequence number higher than the sequence number of the current activity, indicating that the “quit” packet for that activity has been lost. The current activity is stopped.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_ping

EZA3077I (do_ping) Drop ping [id, sequence_number]
Explanation: The function do_ping, which is called to handle PING packets, is dropping the indicated PING packet.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_ping

EZA3078I (do_ack) No or incorrect ahint in ack, ahint=activity_number [id, sequence_number]
Explanation: The function do_ack, which handles acknowledgment packets, received a packet with a missing or incorrect activity number. The packet is dropped, then resent.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_ack

EZA3079I (do_fack) No or incorrect ahint in fack, ahint=activity_number [id, sequence_number]
Explanation: The function do_fack, which handles fragmented acknowledgment packets, received a packet with a missing or incorrect activity number for a fragmented packet. The packet is dropped, the packet is resent.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_fack

EZA3080I (do_fack) Anomalous fack, state=state, prev_seq=sequence_number, frag=fragment_number, [id, sequence_number]
Explanation: The function do_fack, which handles fragmented acknowledgment packets, received a packet with a state, sequence number, or fragmentation number other than what was expected.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: do_fack
EZA3081I (do_quit) No call (no activity for this call) [id, sequence_number]

Explanation: The function do_quit, which handles quit packets, received a packet that did not contain an activity number.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S

Procedure Name: do_quit

EZA3082I (do_bad_pkt) Bad pkt, ptype=packet_type [id, sequence_number]

Explanation: The function do_bad_pkt, which handles incorrect packets, has been called for the indicated packet.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S

Procedure Name: do_bad_pkt

EZA3083I (rpc__listen_dispatch) Trash ahint (activity_number)

Explanation: The function rpc__listen_dispatch, which does server-side processing for one incoming packet, received a packet with an activity number that is greater than the range of valid activity numbers. The packet is discarded.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S

Procedure Name: rpc__listen_dispatch

EZA3084I (rpc__listen_dispatch) Trashi ihint (activity_number)

Explanation: The function rpc__listen_dispatch, which does server-side processing for one packet, received a packet with an IP address outside the valid range. The packet is discarded.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RPC@S

Procedure Name: rpc__listen_dispatch

EZA3085I (rpc__listen_dispatch) Server boot time mismatch

Explanation: The function rpc__listen_dispatch, which handles server-side processing for one packet at a time, received a packet with a server boot time field that does not match the current server. This indicates that the server has been rebooted since the last communication with this client. The packet is rejected, prompting the client to update their tables with the correct boot time. The packet will be resent by the client.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.
Module:    RPC@S
Procedure Name:  rpc__listen_dispatch

EZA3086I (check_for_pkt) Rcvd (ptype= type) [id, sequence_number]

Explanation: The function check_for_pkt, which checks all sockets for data and processes any non-request packets, received the indicated packet.

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.

Module:    RPC@S
Procedure Name:  check_for_pkt

EZA3087I (check_for_pkt) Waiting...

Explanation: The function check_for_pkt, which checks all sockets for data and processes any non-request packets, is currently in a waiting state.

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.

Module:    RPC@S
Procedure Name:  check_for_pkt

EZA3088I (check_for_pkt) Checking for pkts...

Explanation: The function check_for_pkt, which checks all sockets for data and processes any non-request packets, is checking all sockets for data.

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.

Module:    RPC@S
Procedure Name:  check_for_pkt

EZA3089I (listen) task task_number

Explanation: The function listen, which listens for requests from clients, received a packet with a request for the indicated task.

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.

Module:    RPC@S
Procedure Name:  listen

EZA3090I (listen) Spurious quit activity fault ignored

Explanation: The function listen, which listens for requests from clients, received a quit request for an activity that has already been stopped. The request is ignored.

System action:  TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: listen

EZA3091I (listen) wait failed status
Explanation: The function listen, which listens for requests from clients, did not receive data after entering a wait state to wait for data.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: listen

EZA3092I (listen) Spurious quit activity fault ignored
Explanation: The function listen, which listens for requests from clients, received a quit request for an activity that has already been stopped. The request is ignored.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RPC@S
Procedure Name: listen

EZA3093E (rpc) *** FATAL ERROR “error” at file\line ***
Explanation: The server has encountered an error in the indicated data set at the indicated line.
System action: Processing of the data set halts. TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Correct the data set as indicated and resubmit it for processing.
Module: RPC@UTIL
Procedure Name: rpc__die

EZA3094E (rpc__lock) Can’t get lock lock at file\line
Explanation: The function rpc__lock, which is used to make sure that only one processing thread is occurring during many RPC runtime routines, was unable to lock the indicated data set at the indicated line.
System action: Processing of the data set halts. TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Correct the indicated line in the data set and resubmit the data set for processing.
Module: RPC@UTIL
Procedure Name: rpc__lock
EZA3095E  (rpc__recvfrom) Error in recv, errno=errno

Explanation:  The function rpc__recvfrom, which is used to receive a packet from a socket, was unable to receive a packet.

errno is the UNIX System Services Return Code. These return codes are listed and described in the z/OS UNIX System Services Messages and Codes.

System action:  TCPIP continues.

Operator response:  Notify the system programmer of the error.

System programmer response:  Use the errno displayed in this message to determine the cause of the error and respond as indicated.

Module:  RPC@UTIL

Procedure Name:  rpc__recvfrom

EZA3096E  (rpc__recvfrom) Bad RPC version (version)

Explanation:  The function rpc__recvfrom, which receives a packet from a socket, received a packet sent by an incompatible RPC version. The packet is not processed.

System action:  TCPIP continues.

Operator response:  Notify the system programmer of the error.

System programmer response:  Replace the incompatible RPC version with a compatible one. For more information about RPC versions, see the Network Computing System Reference Manual.

Module:  RPC@UTIL

Procedure Name:  rpc__recvfrom

EZA3097E  (rpc__recvfrom) Bad pkt type (type)

Explanation:  The function rpc__recvfrom, which receives a packet from a socket, received a packet with an incorrect type. The packet is not processed.

System action:  TCPIP continues.

Operator response:  Notify the system programmer of the error.

System programmer response:  Check the sending device to determine why it is sending incorrect packet types.

Module:  RPC@UTIL

Procedure Name:  rpc__recvfrom

EZA3098E  (rpc__recvfrom) Packet too short: is length data length is length

Explanation:  The function rpc__recvfrom, which receives a packet from a socket, received a packet that is too small. The packet is not processed.

System action:  TCPIP continues.

Operator response:  Notify the system programmer of the error.

System programmer response:  Check the sending device to determine why it is sending packets that are smaller than allowed.

Module:  RPC@UTIL

Procedure Name:  rpc__recvfrom
EZA3099E  (rpc__sendto) sento failed, errno=errno

Explanation:  The function rpc__sendto, which sends a packet to a socket, was unsuccessful.

errno is the UNIX System Services Return Code. These return codes are listed and described in the z/OS UNIX System Services Messages and Codes.

System action:  TCPIP continues.

Operator response:  Notify the system programmer of the error.

System programmer response:  Use the errno displayed in this message to determine the cause of the error and respond as indicated.

Module:  RPC@UTIL

Procedure Name:  rpc__sendto

---

EZA3100E  (periodic_task) “task” task exited, status=status

Explanation:  A task that is called periodically has been exited, rather that entering a wait state until the next call. The status displayed in this message indicates the reason.

System action:  The task is exited. TCPIP continues.

Operator response:  Notify the system programmer of the error.

System programmer response:  Use the status displayed in this message to determine the cause of the error and respond as indicated.

Module:  RPC@UTIL

Procedure Name:  periodic_task

---

EZA3101I  rpcVers: version

---

EZA3102I  xptype: packet_type (type)

---

EZA3103I  flags: header_flags

---

EZA3104I  int_rep: integer_representation

---

EZA3105I  char_rep: character_representation

---

EZA3106I  float_rep: floating_decimal_representation

Explanation:  These messages display information about the RPC version being used.

System action:  TCPIP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  RPC@UTIL

Procedure Name:  rpc__dump_pkt_hdr

---

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** `RPC@UTIL`

**Procedure Name:** `rpc__dump_pkt_hdr`

### EZA3950I  
**NDB Port Manager for MVS Version 3 started**

**Explanation:** This message is printed to job log output when the NDB port manager is started. It displays the current level, version, and release of code being used.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** `NDBPS`

**Procedure Name:** `NDBPS`

### EZA3951E  
**Cannot create type service.**

**Explanation:** NDB uses remote procedure call (RPC) to handle requests between the NDB port manager, NDB servers and NDB clients. NDBPS was trying to establish the indicated type of service via RPC, but it failed.

**System action:** The NDB port manager ends.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Check job log output for related RPC error messages. Correct any errors reported. Make sure that the portmapper is started and restart the procedure PORTS.

**Module:** `NDBPS`

**Procedure Name:** `NDBPS`
EZA3952E Unable to register (PORTS_PROG, PORTS_VERS, string).

**Explanation:** NDB uses remote procedure call (RPC) to handle requests between the NDB port manager, NDB servers and NDB clients. NDBPS was trying to register either a TCP or UDP service transport handle, as indicated by string with the local Portmapper via the RPC call svc_register, but it failed.

**System action:** The NDB port manager ends.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Check job log output for related RPC error messages. Correct any errors reported. Make sure the portmapper is started and restart the procedure PORTS.

**Module:** NDBPS

**Procedure Name:** NDBPS

---

EZA3953E Unable to free arguments

**Explanation:** NDB uses remote procedure call (RPC) to handle requests between the NDB port manager, NDB servers and NDB clients. NDBPS was trying to free storage previously allocated for argument decoding via the RPC call svc_freeargs, but it failed.

**System action:** The NDB port manager ends.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Check job log output for related RPC error messages. Correct any errors reported. Make sure the Portmapper is started and restart the procedure PORTS.

**Module:** NDBPS

**Procedure Name:** NDBPS
Chapter 5. EZA4xxxx messages

EZA4000I  PORTCLNT for MVS Version 3 started

Explanation:  This message is printed to job log output when the NDB port client first starts to indicate that the NDB port client is started and to display the current host, level, and version of code being used.

System action:  TCPIP continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  PORTCLNT

Procedure Name:  PORTCLNT

EZA4001E  Parameters to be specified are: HOMEID USERID DB2SSID NUMSRV TRACE

Explanation:  This message is printed to job log output when the NDB port client finds it has an incorrect number of startup parameters. It lists the possible parameters that PORTCLNT will accept. The first 3 are required. If NUMSRV is not specified, it is set to 1, and PORTCLNT continues. TRACE is an optional parameter and is usually turned off.

System action:  NDB port client startup terminates.

Operator response:  Correct the parameters and restart the procedure PORTCLNT.

System programmer response:  No action is needed.

Module:  PORTCLNT

Procedure Name:  PORTCLNT

EZA4002E  MALLOC failed for storage for SSCB (PCb) fields

Explanation:  PORTCLNT tried to obtain storage for an SSCB type of internal control block but was unsuccessful.

System action:  NDB port client startup terminates.

Operator response:  Notify the system programmer of the error.

System programmer response:  Increase the region size and restart the application.

Module:  PORTCLNT

Procedure Name:  PORTCLNT

EZA4003E  Caller is neither the NDB Server nor NDB Client. Exit(4).

Explanation:  PORTCLNT acknowledges communications from two places, one of the NDB servers or from an NDB client. A communication has been received that did not come from one of these sources.

System action:  NDB port client startup terminates.

Operator response:  Make sure that NDB is properly installed. If the error persists, notify the system programmer.

System programmer response:  Obtain trace information and contact the IBM Software Support Center.

Module:  PORTCLNT

Procedure Name:  PORTCLNT
EZA4004E DB2 subsystem name, *name*, is longer than is allowed by DB2.

**Explanation:** The parameter DB2SSID contained a DB2 subsystem name that was longer than 4 bytes.

**System action:** NDB port client startup terminates.

**Operator response:** Verify the DB2 subsystem name, correct it on the JCL, and restart the procedure PORTC.

**System programmer response:** No action is needed.

**Module:** PORTCLNT

**Procedure Name:** PORTCLNT

---

EZA4005E NUMSRV contains an incorrect value. value is: *value*

**Explanation:** The parameter NUMSRV contained a value other than a number 1 through 20. This message displays the value PORTCLNT received for the parameter NUMSRV. The parameter is set to 1 and processing continues.

**System action:** The NDB port client continues.

**Operator response:** Correct the parameter and restart the procedure PORTC.

**System programmer response:** No action is needed.

**Module:** PORTCLNT

**Procedure Name:** PORTCLNT

---

EZA4006E NUMSRV is not between 1-20. defaulting to 1.

**Explanation:** The parameter NUMSRV contained a value other than a number 1 through 20; the value in NUMSRV is reset to 1 by PORTCLNT.

**System action:** The NDB port client continues.

**Operator response:** Correct the value of NUMSRV and restart the procedure PORTC.

**System programmer response:** Assist the user as necessary.

**Module:** PORTCLNT

**Procedure Name:** PORTCLNT

---

EZA4007I Number of NDB Servers being started is *number*

**Explanation:** This message is printed to job log output during NDB port client startup. It indicates the number of NDB servers being started by PORTCLNT.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** PORTCLNT

**Procedure Name:** PORTCLNT

---

EZA4008E MTF function *function* failed. RC is *rc*

**Explanation:** PORTCLNT uses the C/370™ Multitasking Facility to startup multiple NDB servers. While trying to execute the indicated MTF function an error was encountered, as specified by *rc* portion of this message.

**System action:** The NDB port client ends.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Use the return code displayed in this message and the list of return codes in the C/370 Programming Guide or the header file MTF.H to determine the cause of the error, and respond as indicated.

**Module:** PORTCLNT
**Procedure Name:** PORTCLNT

**EZA4009E** RPC error occurred during ports_msg_1 call. Exit(7).

**Explanation:** NDB uses remote procedure call (RPC) to handle requests between NDB clients and NDB servers. It is also used by the NDB port client to register each NDB server started with the NDB port manager (the NDB component that assigns NDB servers to clients). During the RPC call from the NDB port client to the NDB port manager to register this NDB server, an RPC failure occurred.

**System action:** The NDB port client ends.

**Operator response:** Check job log output for related RPC error messages. Correct any errors reported. Make sure the Portmapper and NDB port manager are started and restart PORTC.

**System programmer response:** Assist the user as necessary.

**Module:** PORTCLNT

**Procedure Name:** PORTCLNT

**EZA4010E** All the ports are busy. Please try again later.

**Explanation:** The NDB port manager can handle up to 20 NDB servers. This is because it has 20 program numbers reserved in the ETCRPC member of the SEZAINST data set. These program numbers become associated with a port when an NDB client requests an NDB server and one is assigned. Currently, all ports are in use.

**System action:** The NDB port client ends.

**Operator response:** Wait for a free port before trying to establish a connection.

**System programmer response:** No action is needed.

**Module:** PORTCLNT

**Procedure Name:** PORTCLNT

**EZA4011I** Server number started. Prognum is program number(Hex), program number(Dec).

**Explanation:** This message is printed to job log output when the NDB port client has started up an NDB server. The program number from the ETCRPC member of the SEZAINST data set assigned to this NDB server is reported in hexadecimal and decimal.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** PORTCLNT

**Procedure Name:** PORTCLNT

**EZA4012I** PORTCLNT exit. Normal shutdown completed.

**Explanation:** This message is printed to job log output when the NDB port client is stopped.

**System action:** PORTCLNT ends.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** PORTCLNT

**Procedure Name:** PORTCLNT
EZA4150I  NDB Server program number (HEX) started, accessing name

Explanation: This message is printed to job log output when an NDB server is started by the NDB port client. The program number from the ETCRPC member of the SEZAINST data set assigned to this NDB Server is reported in hexadecimal. The DB2 subsystem that can be accessed by this NDB Server is specified in name.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: NDBSS
Procedure Name: NDBSS

EZA4151I  host NDB Server received a call from host userid userid

Explanation: This message is printed to job log output when an NDB server is called by an NDB client. host is MVS or VM, indicating the version of NDB server code being used and the host user ID provided by the user of the NDB client is also displayed.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: NDBSS
Procedure Name: NDBSS

EZA4152E  MALLOC of string failed in function string

Explanation: NDBSS tried to obtain storage for whatever is specified in the first string but was unsuccessful. The function trying to do the MALLOC is named in the second string.

System action: The NDB server terminates the current request.
Operator response: Notify the system programmer of the error.
System programmer response: Increase the region size for the indicated function.
Module: NDBSS
Procedure Name: NDBSS

EZA4153E  Invalid NDBC control block. Reason: string.

Explanation: The NDB server and the NDB client use a control block, NDBC, to transfer information to each other. Several fields of NDBC are used as validity checks also. This message indicates that one of these fields contains an incorrect value.

System action: The NDB server terminates the current request.
Operator response: Notify the system programmer of the error.
System programmer response: Get the member NDBCLTC from the SEZAINST data set again and rename it according to the client platform. For more information, see the z/OS Communications Server: IP Configuration Reference.
Module: NDBSS
Procedure Name: NDBSRV

EZA4154E  Cannot create type service.

Explanation: NDB uses remote procedure call (RPC) to handle requests between NDB clients and NDB servers. NDBSS was trying to establish either a TCP or UDP (as specified by type) service transport handle via RPC, but it was unsuccessful.

System action: The NDB server terminates.

Operator response: Check job log output for related RPC error messages. Correct any errors reported. Make sure the Portmapper and NDB port manager are started and restart PORTC.

System programmer response: Assist the user as necessary.

Module: NDBSS
Procedure Name: NDBSS

EZA4155E  Unable to register (NETDB_PROG, NETDB_VERS, type).

Explanation: NDB uses remote procedure call (RPC) to handle requests between NDB clients and NDB servers. NDBSS was trying to register either a TCP or UDP service transport handle, as indicated by type, with the local portmapper via the RPC call svc_register, but it was unsuccessful.

System action: The NDB server terminates.

Operator response: Check job log output for related RPC error messages. Correct any errors reported. Make sure the portmapper and NDB port manager are started and restart PORTC.

System programmer response: Assist the user as necessary.

Module: NDBSS
Procedure Name: NDBSS

EZA4156E  Error occurred for SQL CLOSE CURSOR string. SQLCODE is number.

Explanation: The indicated function encountered an error while doing an SQL CLOSE CURSOR statement. The type of error is indicated by the SQLCODE displayed in the message.

System action: The NDB Server continues processing

Operator response: Notify the system programmer of the error.

System programmer response: Use the SQLCODE displayed in the message and the list of codes in DB2 Messages and Codes to determine the cause of the error, and respond as indicated.

Module: NDBSS
Procedure Name: DBUTIL2

EZA4157E  Error occurred for SQL string. SQLCODE is number.

Explanation: A DB2 error condition was encountered while processing an SQL statement. The SQL statement and the function reporting the error are indicated by string, and the DB2 error code reported in the SQLCA field SQLCODE is indicated by number.

System action: The NDB Server terminates the current request.

Operator response: Notify the system programmer of the error.

System programmer response: Use the SQLCODE displayed in the message and the list of codes in DB2 Messages and Codes to determine the cause of the error and respond as indicated.

Module: NDBSS
Procedure Name: DBUTIL2
EZA4158E   Single row of query data is larger than reply buffer. Query ended.

Explanation: The length of one row of data to be returned from the current query is greater than the length of the NDB reply buffer. The size of the NDB reply buffer is specified in the NDBC field NDBRPDLN.

System action: The NDB Server terminates the current query.

Operator response: Retrieve fewer columns per query either by issuing multiple queries or by making the query more restrictive in the number of columns requested, or increase the size of the NDB reply buffer. For more information on increasing the size of the reply buffer, see the z/OS Communications Server: IP User's Guide and Commands.

System programmer response: Assist the user as necessary.

Module: NDBSS

Procedure Name: DBUTIL2

---

EZA4159E   Unable to free arguments

Explanation: NDB uses remote procedure call (RPC) to handle requests between NDB clients and NDB servers. NDBSS was trying to free storage previously allocated for argument decoding via the RPC call svc_freeargs, but it failed.

System action: The NDB Server terminates.

Operator response: Check job log output for related RPC error messages. Correct any errors reported. Make sure the portmapper and NDB port manager are started and restart PORTC.

System programmer response: Assist the user as necessary.

Module: NDBSS

Procedure Name: NDBSS

---

EZA4160E   Host userid or password is not valid

Explanation: The user ID or password supplied to the NDB server from the NDB client on behalf of the user was not accepted by the security facility (such as RACF).

System action: The NDB Server terminates the current request.

Operator response: Make sure that you are specifying a valid host user ID and password when you invoke the NDB client.

System programmer response: Assist the user as necessary.

Module: NDBSS

Procedure Name: NDBSRV

---

EZA4161E   CAF error: Wrong number of parms or end-of-list bit off

Explanation: The NDB servers use the DB2 Call Attachment Facility (CAF) to establish a connection with DB2. NDB uses two services of CAF, one to open the plan in DB2 used by NDB and called EZAND320, establishing a connection to DB2; and another to close the plan EZAND320 and end the connection. While making one of these calls, CAF reported to NDB that an error has occurred. The error was that an incorrect number of parameters was specified on the call to CAF by NDB or that the end-of-list bit, which should have been on, was set to off.

System action: The NDB server terminates the current request.

Operator response: Make sure that the Call Attachment Facility is properly installed and DB2 is started, and restart your NDB Client session. If the error persists, notify the system programmer of the error.

System programmer response: Obtain trace information and contact the IBM Software Support Center.

Module: NDBSS

Procedure Name: NDBSRV
EZA4162E  CAF error: Unrecognized function parameter

**Explanation:** The NDB servers use the DB2 Call Attachment Facility (CAF) to establish a connection with DB2. NDB uses two services of CAF, one to open the plan in DB2 used by NDB and called EZAND320, establishing a connection to DB2; and another to close the plan EZAND320 and end the connection. While making one of these calls, CAF reported to NDB that an error has occurred. The error was that the service NDB requested of CAF was not a supported function, such as OPEN or CLOSE.

**System action:** The NDB Server terminates the current request.

**Operator response:** Make sure that the Call Attachment Facility is properly installed and that DB2 is started. If the error persists, notify the system programmer.

**System programmer response:** Obtain trace information and contact the IBM Software Support Center.

**Module:** NDBSS  
**Procedure Name:** NDBSRV

---

EZA4163E  CAF error: Access two different DB2 subsystems, one TCB

**Explanation:** The NDB servers use the DB2 Call Attachment Facility (CAF) to establish a connection with DB2. NDB uses two services of CAF, one to open the plan in DB2 used by NDB and called EZAND320, establishing a connection to DB2; and another to close the plan EZAND320 and end the connection. While making one of these calls, CAF reported to NDB that an error has occurred. The error was that CAF received two calls from one NDB server, each call requesting to access a different DB2 subsystem.

**System action:** The NDB Server terminates the current request.

**Operator response:** Make sure that the Call Attachment Facility is properly installed and that DB2 is started. If the error persists, notify the system programmer.

**System programmer response:** Obtain trace information and contact the IBM Software Support Center.

**Module:** NDBSS  
**Procedure Name:** NDBSRV

---

EZA4164E  CAF error: Release level mismatch between DB2 and CAF

**Explanation:** The NDB servers use the DB2 Call Attachment Facility (CAF) to establish a connection with DB2. NDB uses two services of CAF, one to open the plan in DB2 used by NDB and called EZAND320, thereby also establishing a connection to DB2; and another to close the plan EZAND320 and end the connection. While making one of these calls, CAF reported to NDB that an error has occurred. The error was that the level of DB2 currently executing and the level of CAF currently executing are not the same.

**System action:** The NDB server terminates the current request.

**Operator response:** Make sure the Call Attachment Facility is properly installed and that DB2 is started and restart the NDB client session. If the error persists, notify the system programmer.

**System programmer response:** Obtain trace information and contact the IBM Software Support Center.

**Module:** NDBSS  
**Procedure Name:** NDBSRV

---

EZA4165E  CAF system error: Probable error in the attach or DB2

**Explanation:** The NDB servers use the DB2 Call Attachment Facility (CAF) to establish a connection with DB2. NDB uses two services of CAF, one to open the plan in DB2 used by NDB and called EZAND320, thereby also establishing a connection to DB2; and another to close the plan EZAND320 and end the connection. While making one of these calls, CAF reported to NDB that an error has occurred. The error was that CAF detected an error it could not identify.

**System action:** The NDB server terminates the current request.

**Operator response:** Make sure the Call Attachment Facility is properly installed and that DB2 is started and restart the NDB client session. If the error persists, notify the system programmer.
System programmer response: Obtain trace information and contact the IBM Software Support Center.
Module: NDBSS
Procedure Name: NDBSRV

EZA4166E  CAF string DB failed. Return code = number. Reason code = hex number(Hex)
Explanation: The NDB servers use the DB2 Call Attachment Facility (CAF) to establish a connection with DB2. NDB uses two services of CAF, one to open the plan in DB2 used by NDB and called EZAND320, thereby also establishing a connection to DB2; and another to close the plan EZAND320 and end the connection. While making one of these calls, CAF reported to NDB that an error has occurred.
System action: The NDB server terminates the current request.
Operator response: Make sure the Call Attachment Facility is properly installed and that DB2 is started and restart your NDB client session. If the error persists, notify the system programmer.
System programmer response: Use the codes displayed in this message and [DB2 Messages and Codes] to determine the cause of the error and respond as indicated.
Module: NDBSS
Procedure Name: NDBSRV

EZA4167E  NDB server could not do CAF OPEN DB; DB2
Explanation: The NDB servers use the DB2 Call Attachment Facility (CAF) to establish a connection with DB2. NDB uses two services of CAF, one to open the plan in DB2 used by NDB and called EZAND320, establishing a connection to DB2; and another to close the plan EZAND320 and end the connection. The NDB server was unable to make a CAF OPEN call, because the name of the DB2 subsystem to be used was missing.
System action: The NDB server terminates the current request.
Operator response: Make sure that the DB2 subsystem name was provided when PORTC JCL was started. Check the PORTC job log console for previous error messages. If the error persists, notify the system programmer.
System programmer response: Obtain trace information and contact the IBM Software Support Center.
Module: NDBSS
Procedure Name: NDBSRV

EZA4168E  Load of CAF modules failed. Return code is rc.
Explanation: The NDB servers use the DB2 Call Attachment Facility (CAF) to establish a connection with DB2. NDB uses two services of CAF, one to open the plan in DB2 used by NDB and called EZAND320, establishing a connection to DB2; and another to close the plan EZAND320 and end the connection. While trying to load the CAF modules needed to make these calls, an error occurred because DB2 was unable to load the modules.
System action: The NDB server terminates the current request.
Operator response: Make sure the Call Attachment Facility is properly installed and that DB2 is started, and restart your NDB client session. If the error persists, notify the system programmer.
System programmer response: Use the return code displayed in this message and [DB2 Messages and Codes] to determine the cause of the error and respond as indicated.
Module: NDBSS
Procedure Name: NDBSRV

EZA4169E  Privilege to execute plan EZAND320 not granted to this user or to public
Explanation: During NDB installation, a job, NDBSETUP, was to have been run that would bind a DBRM to DB2 that is used by NDB and is called EZAND320. NDBSETUP also granted the DB2 execute, or run, privilege to all users (PUBLIC) on EZAND320. If a customer chose to restrict use of NDB, they could modify NDBSETUP to grant to only a select set of user IDs or could have done the bind of EZAND320 and grant to select users through DB2.
facilities. The current user is not authorized to use EZAND320, and therefore cannot use NDB.

**System action:** The NDB server terminates the current request.

**Operator response:** Contact the system administrator for authorization to use DBUTIL2.

**System programmer response:** Grant access to DBUTIL2 in accordance with current internal guidelines.

**Module:** NDBSS

**Procedure Name:** NDBSRV

---

**EZA4170E** DB2 Subsystem is unavailable. DB2 not active at OPEN DB.

**Explanation:** The NDB servers use the DB2 Call Attachment Facility (CAF) to establish a connection with DB2. NDB uses two services of CAF, one to open the plan in DB2 used by NDB and called EZAND320, establishing a connection to DB2; and another to close the plan EZAND320 and end the connection. While making an OPEN call, CAF reported to NDB that the DB2 subsystem specified in the call was not active.

**System action:** The NDB server terminates the current request.

**Operator response:** Start the DB2 subsystem that was specified in the DB2SSID parameter at PORTC startup.

**System programmer response:** Assist the user as necessary.

**Module:** NDBSS

**Procedure Name:** NDBSRV

---

**EZA4171E** ‘Should never occur’ error number number has occurred.

**Explanation:** This message indicates a possible programming error.

**System action:** The NDB server terminates the current request.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Make sure that DB2, TCP/IP, and NDB are installed correctly. If so, obtain trace information and contact the IBM Software Support Center.

**Module:** NDBSS

**Procedure Name:** NDBSRV

---

**EZA4172E** SQLCA error tokens are string

**Explanation:** This message follows message EZA4156E or EZA4157E when the SQLCA contains error tokens. The SQLCA error tokens are displayed.

**System action:** The NDB server terminates the current request.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Use the SQLCA tokens, the SQLCODE from the previous message, and the list of codes in the [DB2 Messages and Codes](DB2%20Messages%20and%20Codes) to determine the cause of the error. Respond as indicated.

**Module:** NDBSS

**Procedure Name:** DBUTIL2

---

**EZA4173E** Error during host userid/password validation. SAF RC is rc, security RC is rc, security reason code is code.

**Explanation:** The installed host security system detected an error while attempting to validate the specified user ID and password. The return code from the MVS Security Access Facility (SAF), as well as the host security system return code and reason code, are displayed.

**System action:** The NDB server terminates the current NDB session.

**Operator response:** Make sure that you are specifying a valid host user ID and password when you invoke the NDB client.
System programmer response: Locate the specified return codes and reason code in your installed host security system's Messages and Codes manual to determine the cause of the error. Respond as indicated. For RACF, see the z/OS Security Server RACF Messages and Codes.

Module: NDBSS
Procedure Name: NDDBSRV

EZA4250E  couldn't do udp_create
Explanation: The svcudp_create() call which creates a UDP-based service transport to which it returns a pointer, was unsuccessful.
System action: Portmapper stops.
Operator response: Inform the system programmer of this message.
System programmer response: Check for storage availability, check that all the udp_create parameters have been correctly specified and restart the program.
Module: PORTMAP
Procedure Name: Main()

EZA4251E  couldn't do tcp_create
Explanation: The svctcp_create() call, which creates a TCP-based service transport to which it returns a pointer, was unsuccessful.
System action: Portmapper stops.
Operator response: Inform the system programmer of this message.
System programmer response: Check for storage availability, check that all the tcp_create parameters have been correctly specified, and restart the program.
Module: PORTMAP
Procedure Name: Main()

EZA4252I  portmap: started
Explanation: The portmapper process has been initiated. Portmapper is the software that supplies client programs with the port numbers of server programs.
System action: Portmapper continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: PORTMAP
Procedure Name: reg_portmapper

EZA4253E  svc_run returned unexpectedly
Explanation: The procedure svc_run, which accepts RPC requests and calls the appropriate service using svc_getreq(), was unsuccessful.
System action: Portmapper stops.
Operator response: Inform the system programmer of this message.
System programmer response: Check for the correct PORTMAP specifications in the hlq.PROFILE.TCPIP configuration data set, restart PORTMAP, and run the program again. If the error persists, call the IBM Software Support Center.
Module: PORTMAP
Procedure Name: svc_run
EZA4254I  portmap: procedure procedure called from address

Explanation: Indicates the procedure that has been called and the address where the call was issued. This message is written to an output file.

System action: Portmapper continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: PORTMAP

Procedure Name: reg_srv

EZA4255E  svc_sendreply

Explanation: The procedure svc_sendreplay(), which is called by the service dispatch routine to send the results of the call to the caller, was unsuccessful.

System action: Portmapper stops.

Operator response: Inform the system programmer of this message.

System programmer response: Check for the correct PORTMAP specifications in the hlq.PROFILE.TCPIP configuration data set, restart PORTMAP, and run the program again. If the error persists, call the IBM Software Support Center.

Module: PORTMAP

Procedure Name: reg_srv

EZA4256I  PORTMAPPER STARTED

Explanation: The UNIX System Services Portmapper issues this message when it has completed initialization and is ready to accept requests.

System action: Portmapper continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: portmap

Procedure Name: main(), svc_run()

EZA4257I  application STOPPED

Explanation: The UNIX System Services application specified by the application value issues this message just before it exits in response to a stop command from the operator.

In the message text:

application

The name of the application specified.

System action: The application stops.

Operator response: No action is needed.

System programmer response: Restart the application as needed.

Module: portmap or rpcbind

Procedure Name: main()
EZA4258I  RPCBIND INITIALIZATION COMPLETED AT time ON date

Explanation: The UNIX System Services rpcbind server issues this message when it has completed initialization and is ready to accept requests.

In the message text:

- **time**: The time that the initialization was completed, in local time.
- **date**: The date that the initialization was completed, in local time.

Examples:
EZA4258I RPCBIND INITIALIZATION COMPLETED AT 16:15:48 ON 11/01/05.

System action: rpcbind continues.

Operator response: If time and date are accurate in local time, no action is required. Otherwise, notify the system programmer.

User response: No action required.

System programmer response: If time and date do not reflect the current local time and date, correct the configuration and start rpcbind again. Local time is affected by time zone information such as:
- The TZ environment variable
- The _TZ environment variable
- The LC_TOD category

See the information about building a locale in z/OS XL C/C++ Programming Guide for a description of LC_TOD, which is a nonstandard z/OS C/C++ proprietary locale category. See the information about setting your local time zone in z/OS UNIX System Services User’s Guide or the information about customizing a time zone in z/OS XL C/C++ Programming Guide for information about customizing the local time zone.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: rpcbind

Module: oco part

Routing code: 11

Descriptor code: 0

---

EZA4259I  RPCBIND BIND() TO stack protocol PORT portnum FAILED ERRNO = errno ERRNO2 = errnojr

Explanation: The rpcbind server attempted to use the C/C++ bind() API using protocol to stack on portnum. The interface returned -1 with a decimal errno and hexadecimal errnojr. See the z/OS XL C/C++ Run-Time Library Reference to determine the reason for the returned value of the bind() call. The most common returned value is EADDRINUSE. This means that another application is listening on the specified port. Use the Netstat command netstat -p stack -P portnum in the z/OS UNIX environment, or NETSTAT TCP stack (PORT portnum in the TSO environment to determine what application is listening on the specified port.

In the message text:

- **stack**: The name of the TCP/IP stack.
- **protocol**: The value is either TCP or UDP.
- **portnum**: The port number, usually 111, that RPCBIND tried to bind to a socket.
- **errno**: The UNIX System Services return code. These return codes are listed in and described in the return codes (errnos) chapter in z/OS UNIX System Services Messages and Codes. The most likely errno value for this error is EADDRINUSE.
errnojr

The hexadecimal UNIX System Services reason code. The format of the 4-byte reason code is explained in the introduction to the reason codes (errnojr) chapter of the z/OS UNIX System Services Messages and Codes, where the reason codes are listed. The most likely errnojr value for this error is 0xXXXX7232, JrBindAddrInUsed.

Examples:
EZA4259I RPCBIND BIND() TO TCPCS UDP PORT 111 FAILED ERRNO = 1115 ERRNO2 = 0X74637232

System action: rpcbind terminates.

Operator response: Contact the system programmer.

User response: Not applicable.

System programmer response: If the errno is 1115 (EADDRINUSE), use the netstat -P portnum command to determine which application is using the specified port. End the application's use of the port and restart rpcbind. If the errno is not 1115, see z/OS UNIX System Services Messages and Codes to determine the reason for the returned values. Determine and correct the failure. Restart rpcbind.

If the errno is 1115 for EADDRINUSE, you can use the Netstat command's port report to determine which application is already using port 111. In the following example, the PORTMAP address space already has port 111 and needs to be stopped before starting RPCBIND.

netstat -p TCPCS -P 111
MVS TCP/IP NETSTAT CS VIRB TCPIP Name: TCPCS 09:06:27
User Id Conn State
------- ---- -----
PORTMAP 000000A1 Listen
   Local Socket: 0.0.0.0.111
   Foreign Socket: 0.0.0.0.0
PORTMAP 000000A0 UDP
   Local Socket: 0.0.0.0.111
   Foreign Socket: *.*

Problem determination: Not applicable.

Descriptor code: Not applicable.

EZA4260I UNSUPPORTED MODIFY COMMAND PARAMETER text.

Explanation: The UNIX System Services rpcbind server issues this message when it receives a syntactically incorrect modify request from the MVS operator. A correct modify request is in the form TRACE=keyword. The valid keywords can be found in z/OS Communications Server: IP System Administrator’s Commands.

In the message text:

text
   The unrecognized text entered after the procedure name.

Examples:
EZA4260I F RPCBIND,TRACE=XXXX EZA4260I UNSUPPORTED MODIFY COMMAND PARAMETER XXXX.

System action: rpcbind continues. The modify request is ignored.

Operator response: Contact the system programmer.

User response: Not applicable.

System programmer response: See the information about the MODIFY command -- RPCBIND in z/OS Communications Server: IP System Administrator’s Commands to correct the syntax of the modify request.

Problem determination: Not applicable.

Source: Not applicable.
Module: rpcbind.c
EZA4261I  RPCBIND KEYWORD  keyword  SET  status

Explanation: The UNIX System Services rpcbind server issues this message in response to the MVS modify
RPCBIND TRACE request. The message displays the setting of a TRACE keyword. See the information about the
MODIFY command -- RPCBIND in z/OS Communications Server: IP System Administrator's Commands to set the
keyword.

In the message text:

keyword
The type of trace. The values for keyword are FLOW, ERROR, LOG, XDR.

status
The value is either ON or OFF.

Examples:
f rpcbind,trace=*
EZA4261I  RPCBIND KEYWORD FLOW SET ON
EZA4261I  RPCBIND KEYWORD ERROR SET ON
EZA4261I  RPCBIND KEYWORD LOG SET ON
EZA4261I  RPCBIND KEYWORD XDR SET ON

System action: rpcbind continues.

Operator response: Contact the system programmer.

User response: Not applicable.

System programmer response: Verify that the TRACE settings are set correctly. See the information about the
MODIFY command -- RPCBIND in z/OS Communications Server: IP System Administrator's Commands to set the
keyword.

Problem determination: Not applicable.

EZA4262I  THE RPCBIND PID FILE  rpcbind.pid  CANNOT BE WRITTEN TO DIRECTORY  dir - reason

Explanation: The UNIX System Services rpcbind server issues this message when it tries to write the PID file,
rpcbind.pid, to the specified directory. The directory might not exist or it might be mounted as read only.

In the message text:

dir
The directory specified with the rpcbind -i option, or the default directory /etc if no -i option was specified.

reason
The reason the PID file cannot be written to the directory specified by the dir value.

Examples: EZA4262I THE RPCBIND PID CANNOT BE WRITTEN TO DIRECTORY '/XXX' - DIRECTORY DOES NOT EXIST

System action: rpcbind stops.

Operator response: Contact the system programmer.

User response: Not applicable.

System programmer response: If the specified reason is DIRECTORY DOES NOT EXIST, create the directory using
the mkdir command with the specified directory name from the UNIX shell. If the specified reason is DIRECTORY IS
READ ONLY, ensure that the file system on which the directory is mounted is read/write. Correct the problem
indicated by reason, or use the -i option of the rpcbind command to specify a different directory.
Problem determination: Not applicable.

EZA4263I  RPCBIND COULD NOT BE RUN AS NONSWAPPABLE

Explanation: The UNIX System Services rpcbind server issues this message when the -n option was specified and the user ID associated with rpcbind does not have READ access to resource BPX.STOR.SWAP in the FACILITY class.
Examples: EZA4263I RPCBIND COULD NOT BE RUN AS NONSWAPPABLE
System action: rpcbind stops.
Operator response: Contact the system programmer
User response: Not applicable.
System programmer response: Ensure that rpcbind has READ access to the BPX.STOR.SWAP resource in the FACILITY class before restarting rpcbind with the -n option.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: rpcbind
Module: rpcbind.c
Routing code: 11
Descriptor code: 0

EZA4264I  INCORRECT RPCBIND OPTION option SPECIFIED

Explanation: The UNIX System Services rpcbind server issues this message when it receives an incorrect option. One possible reason for the error is that options are case sensitive even though messages that appear on the z/OS console are uppercase. Therefore, if an option appears to be correct in a message, verify that the option was specified in the correct case when it was issued.

In the message text:

    option
        The option specified on the rpcbind command.

Examples: EZA4264I INCORRECT RPCBIND OPTION -X SPECIFIED
System action: rpcbind stops.
Operator response: Contact the system programmer.
User response: Not applicable.
System programmer response: Restart rpcbind with a valid option. See the information about the [RPCBIND in z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/SSS7N0_9.1.0/com.ibm.zos.v9r1.doc/c_rpchelp.html) for more information.
Problem determination: Not applicable.

Routing code: 11
Descriptor code: 0
EZA4265I  RPCBIND api FAILED ERRNO = errno ERRNO2 = errnojr

Explanation: The rpcbind server attempted to use the API specified by C/C++. The interface returned -1 with errno and errnojr.

In the message text:

api
The failing C/C++ run-time library call name.

errno
The UNIX System Services return code. These return codes are listed in and described in the return codes (errnos) chapter in z/OS UNIX System Services Messages and Codes.

errnojr
The hexadecimal UNIX System Services reason code. The format of the 4-byte reason code is explained in the introduction to the reason codes (errnojrs) chapter of the z/OS UNIX System Services Messages and Codes, where the reason codes are listed.

Examples: RPCBIND BIND() FAILED ERRNO = 1115 ERRNO2 = 0X74637232

System action: None.

Operator response: Contact the system programmer.

User response: Not applicable.

System programmer response: See z/OS XL C/C++ Run-Time Library Reference to determine the reason for the returned value of the specified API. Determine and correct the API failure. Restart rpcbind.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: rpcbind

Module: rpcbind.c

Routing code: Not applicable.

Descriptor code: Not applicable.

EZA4266I  LOST STATISTICS FOR PROGRAM = program VERSION = version PROC = proc

Explanation: The rpcbind server received a request to pass a call to another server on the rpcbind host. The rpcbind server processed the request and tried to save statistics about the call. However, the rpcbind server was not able to save the statistics for that call.

If you use the rpcinfo utility from another host to query the rpcbind server statistics, the statistics reported will not include the program (program), version (version), or procedure (proc) information about this call. Likewise, if a program sends an RPCBPROC_GETSTAT request to the rpcbind server, the statistics reported will not include the program (program), version (version), or procedure (proc) information about this call.

In the message text:

program
The program number of the target program that was requested.

version
The version of the program that was requested.

proc
The procedure implemented by the program that was requested.

Examples: EZA4266I LOST STATISTICS FOR PROGRAM= 200000 VERSION = 3 PROC=12

System action: Processing of the request completes. Statistics regarding the call are not saved.

Operator response: Save the system log for problem determination and contact the system programmer.

User response: Not applicable.

System programmer response: Obtain the system log and contact the IBM Support Center.
The rpcbind start option, -s, allows you to specify the number of statistics entries per binding protocol that the rpcbind server will maintain. Specifying a larger value for the -s option when starting rpcbind prevents the loss of statistics.

See the information about [starting the rpcbind address space in z/OS Communications Server: IP Configuration Guide](z/OS Communications Server: IP Configuration Guide) for more information about the -s parameter.

For more information about the RPCBPROC_GETSTAT request and about statistics regarding rpcbind calls to other servers, see RFC 1833. See Appendix B, “Related protocol specifications,” on page 655 for information about accessing RFCs.

**Problem determination:** Not applicable.

**Source:** z/OS Communications Server TCP/IP: rpcbind

**Module:** rpcbind.c

**Routing code:** 1

**Descriptor code:** 2

---

**EZA4267I**  
PARAMETER parameter NOT VALID - VALUE MUST BE IN THE RANGE OF low - high.

**Explanation:** You specified a parameter with a value that is not valid when you started the rpcbind server.

In the message text:

- **parameter**  
The name of the specified parameter.

- **low**  
The lowest value allowed for the specified parameter.

- **high**  
The highest value allowed for the specified parameter.

**Examples:**

EZA4267I PARAMETER -s NOT VALID - VALUE MUST BE IN THE RANGE OF 113 - 500.

**System action:** The rpcbind server exits.

**Operator response:** Contact the system programmer.

**User response:** Not applicable.

**System programmer response:** See the information about [starting the rpcbind address space in z/OS Communications Server: IP Configuration Guide](z/OS Communications Server: IP Configuration Guide) for more information about the specified parameter. Ensure that the operator specifies a value within the acceptable range when starting the rpcbind server.

**Problem determination:** Not applicable.

**Source:** z/OS Communications Server TCP/IP: RPCBIND

**Module:** Not applicable.

**Routing code:** 11

**Descriptor code:** 0

---

**EZA4275E**  
auth_unix.c - Fatal marshalling problem

**Explanation:** The procedure authunix_create(), which creates and returns a handle that contains UNIX-based authentication information, was unsuccessful.

**Examples:** Not Applicable.

**System action:** authunix_create() call fails.

**Operator response:** No action is needed.

**User response:** Not applicable.
System programmer response: Check for the correct description in the authentication parameters of the authunix_create() and restart the program. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

Problem determination: See System Programmer Response.

Source: z/OS Communications Server TCP/IP: RPC

Module: auth@uni.c
Routing code: 11
Descriptor code: 0

EZA4276E  get_myaddress: socket

Explanation: The function get_myaddress(), which puts the local host's IP address into the addr parameter, was unsuccessful because of a negative return value received from the socket() system call. The socket() system call creates an endpoint for communication and returns a socket descriptor representing the endpoint.

System action: The calling program ends.

Operator response: No action is needed.

System programmer response: Check for the correct entries declared in the domain, type, and protocol parameters of the socket() call and the addr parameter of the get_myaddress() call, and restart the program. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

Module: PMAP@CLN
Procedure Name: get_myaddress()

EZA4277E  get_myaddress: ioctl (get interface configuration)

Explanation: The function get_myaddress(), which puts the local host's IP address into addr, was unsuccessful because of a negative return value received from the ioctl() system call. The ioctl() system call controls the operating characteristics of sockets.

System action: The calling program ends.

Operator response: No action is needed.

System programmer response: Check for the correct entries declared in the s, cmd, and arg parameters of the ioctl() system call and the addr parameter of the get_myaddress() call, check that the network interface configuration is defined in an ifconf structure of the IF.H data set, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module: PMAP@CLN
Procedure Name: get_myaddress()

EZA4278E  get_myaddress: ioctl

Explanation: The function get_myaddress(), which puts the local host's IP address into addr, was unsuccessful because of a negative return value received from the ioctl() system call. The ioctl() system call controls the operating characteristics of sockets.

System action: The calling program ends.

Operator response: No action is needed.

System programmer response: Check for the correct entries declared in the s, cmd, and arg parameters of the ioctl() system call and the addr parameter of the get_myaddress() call, check that the network interface flags are defined in an ifreq structure of the IF.H data set, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module: PMAP@CLN
Procedure Name: get_myaddress()
**EZA4279E** broadcast: ioctl (get interface configuration)

**Explanation:** The procedure `getbroadcastnets()`, which gets the address of a network to broadcast a remote procedure, was unsuccessful because of a negative return code received from the `ioctl()` system call. The `ioctl()` call controls the operating characteristics of sockets.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Check for the correct entries declared in the `s`, `cmd`, and `arg` parameters of the `ioctl()` system call and the parameters of the `clnt_broadcast()` call, check that the network interface configuration is defined in an `ifconf` structure of the `IF.H` data set, and restart the program. See the [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com) for more information.

**Module:** PMAP@RMT

**Procedure Name:** `getbroadcastnets()`

---

**EZA4280E** broadcast: ioctl (get interface destination address)

**Explanation:** The procedure `getbroadcastnets()`, which gets the address of a network to broadcast a remote procedure, was unsuccessful because of a negative return code received from the `ioctl()` system call. The `ioctl()` call controls the operating characteristics of sockets.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Check for the correct entries declared in the `s`, `cmd`, and `arg` parameters of the `ioctl()` system call and the parameters of the `clnt_broadcast()` call, check that the network interface destination address is defined in an `ifreq` structure of the `IF.H` data set, and restart the program. See the [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com) for more information.

**Module:** PMAP@RMT

**Procedure Name:** `getbroadcastnets()`

---

**EZA4281E** broadcast: ioctl (get interface broadcast address)

**Explanation:** The procedure `getbroadcastnets()`, which gets the address of a network to broadcast a remote procedure, was unsuccessful because of a negative return code received from the `ioctl()` system call. The `ioctl()` call controls the operating characteristics of sockets.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Check for the correct entries declared in the `s`, `cmd`, and `arg` parameters of the `ioctl()` system call and the parameters of the `clnt_broadcast()` call, check that the network interface broadcast address is defined in an `ifreq` structure of the `IF.H` data set, and restart the program. See the [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com) for more information.

**Module:** PMAP@RMT

**Procedure Name:** `getbroadcastnets()`

---

**EZA4282E** Cannot create socket for broadcast rpc

**Explanation:** The procedure `clnt_broadcast()`, which broadcasts the remote procedure described by `prognum`, `versnum`, and `procnum` to all locally connected broadcast network, was unsuccessful because of a negative return code received from the `socket()` system call. The `socket()` call creates an endpoint for communication and returns a socket descriptor representing the endpoint.

**System action:** An error is returned to the calling program.

**Operator response:** No action is needed.

**System programmer response:** Check for the correct entries declared in the `clnt_broadcast()` and the `socket()`
parameters and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module: PMAP@RMT

Procedure Name: clnt_broadcast()

---

EZA4283E Cannot send broadcast packet

Explanation: The procedure clnt_broadcast was unsuccessful because of a negative return code received from the sendto() system call. Destruction usually involves freeing private data structures associated with the stream. The sendto() system call sends datagrams on the socket with the descriptor s. This call applies to any datagram socket, whether connected or unconnected.

System action: An error is returned to the calling program.

Operator response: No action is needed.

System programmer response: Check for the correct entries declared in the parameters of the xdr_destroy() and sendto() calls and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module: PMAP@RMT

Procedure Name: clnt_broadcast

---

EZA4284E Broadcast select problem

Explanation: The broadcast of a remote procedure to all locally connected broadcast network was unsuccessful because of a negative return code received from the select() system call. The select() call monitors activity on a set of sockets to see if any of the sockets are ready for reading, writing, or have an exceptional condition pending.

System action: An error is returned to the calling program.

Operator response: No action is needed.

System programmer response: Check for the correct entries declared in the parameters of the select(), xdr_destroy(), and clnt_broadcast() calls and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module: PMAP@RMT

Procedure Name: xdr_destroy()

---

EZA4285E Cannot receive reply to broadcast

Explanation: The broadcast of a remote procedure to all locally connected broadcast network was unsuccessful because of a negative return code received from the recvfrom() system call. The recvfrom() call receives data on a socket with descriptor s and stores it in a buffer. This call applies to any datagram socket, whether connected or unconnected.

System action: An error is returned to the calling program.

Operator response: No action is needed.

System programmer response: Check for the correct entries declared in the parameters of the recvfrom(), xdr_destroy(), and clnt_broadcast() calls and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module: PMAP@RMT

Procedure Name: clnt_broadcast

---

EZA4286E svc_run: - select failed

Explanation: The function svc_run(), which accepts RPC requests and calls the appropriate service, was unsuccessful because of a negative return code received from select() system call. The select() call monitors activity on a set of sockets to see if any of the sockets are ready for reading, writing, or have an exceptional condition pending.
System action:  Svc_run() returns to the caller.

Operator response:  No action is needed.

System programmer response:  Check for the correct entries declared in the nfds, readfds, writefds, exceptfds, and timeout parameters of the select() system call and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module:  SVC@RUN

Procedure Name:  svc_run()

---

EZA4287E - svtcp_.c - tcp socket creation problem

Explanation:  The function svtcp_create(), which creates a TCP-based service transport, was unsuccessful because of a negative return code received from the socket() system call. The socket() call creates an endpoint for communication and returns a socket descriptor representing the endpoint. When RPC_ANYSOCK is specified in the sock parameter of the svtcp_create() call, a new socket is created. If the socket is not bound to a local TCP port, it is bound to an arbitrary port.

System action:  An error is returned to the calling program.

Operator response:  No action is needed.

System programmer response:  Check for the correct entries declared in the parameters of the svtcp_create() and socket() calls, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module:  SVC@TCP

Procedure Name:  svtcp_create()

---

EZA4288E - svtcp_.c - cannot getsocketname or listen

Explanation:  The function svtcp_create(), which creates a TCP-based service transport, was unsuccessful because of a negative return code received from the getsockname() or the listen() system call. The getsockname() call stores the current name for the socket specified by the s parameter into the structure pointed to by the name parameter. It returns the address of the socket that has been bound. The listen() call applies only to stream sockets. This call completes the binding necessary for a socket and it creates a connection request queue to queue incoming connection requests.

System action:  An error is returned to the calling program.

Operator response:  No action is needed.

System programmer response:  Check for the correct entries declared in the parameters of the svtcp_create(), getsockname(), and listen() calls, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module:  SVC@TCP

Procedure Name:  svtcp_create()

---

EZA4289E - svcudp_create: socket creation problem

Explanation:  The function svcudp_create(), which creates a UDP-based service transport, was unsuccessful because of a negative return code received from the socket() system call. The socket() call creates an endpoint for communication and returns a socket descriptor representing the endpoint. When RPC_ANYSOCK is specified in the sock parameter of the svcudp_create() call, a new socket is created.

System action:  An error is returned to the calling program.

Operator response:  No action is needed.

System programmer response:  Check for the correct entries declared in the parameters of the svcudp_create() and socket() calls, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module:  SVC@UDP
**EZA4290E  svcudp_bufcreate()**

**Explanation:** The function svcudp_create(), which creates a UDP-based service transport, was unsuccessful because of a negative return code received from the getsockname(). The getsockname() call stores the current name for the socket specified by the s parameter into the structure pointed to by the name parameter. It returns the address of the socket that has been bound.

**System action:** An error is returned to the calling program.

**Operator response:** No action is needed.

**System programmer response:** Check for the correct entries declared in the parameters of the svcudp_create(), getsockname(), and listen() calls, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

**Module:** SVC@UDP

**Procedure Name:** svcudp_bufcreate()

---

**EZA4291E  broadcast: ioctl (get interface flags)**

**Explanation:** The procedure getbroadcastnets(), which gets the address of a network to broadcast a remote procedure, was unsuccessful because of a negative return code received from the ioctl() system call. The ioctl() call controls the operating characteristics of sockets.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Check for the correct entries declared in the s, cmd, and arg parameters of the ioctl() system call and the parameters of the clnt_broadcast() calls, check that the network interface flags are defined in an ifreq structure of the IF.H data set, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

**Module:** PMAP@CLN

**Procedure Name:** getbroadcastnets()
Procedure Name: Main()

EZA4303I  [-c | -h | -l | -m] [-o fn ft fm] [in fn in ft [in fm]]
Explanation: The command line syntax was incorrect. This message indicates the correct syntax for this command.
System action: RPCGEN continues.
Operator response: Enter the command using the correct syntax and try it again. See the z/OS Communications Server: IP User’s Guide and Commands for more information.
System programmer response: No action is needed.
Module: RPCMAIN
Procedure Name: main()

EZA4304I  command [-c | -h | -l | -m] [-o outfile] [infile]
Explanation: The command line syntax was incorrect. This message indicates the correct syntax for this command.
System action: RPCGEN continues.
Operator response: Enter the command using the correct syntax and try it again. See the z/OS Communications Server: IP User’s Guide and Commands for more information.
System programmer response: No action is needed.
Module: RPCMAIN
Procedure Name: main()

EZA4306I  command [-s udp | tcp] * [-o outfile] [infile]
Explanation: The command line syntax was incorrect. This message indicates the correct syntax for this command.
System action: RPCGEN continues.
Operator response: Enter the command using the correct syntax and try it again. See the z/OS Communications Server: IP User’s Guide and Commands for more information.
System programmer response: No action is needed.
Module: RPCMAIN
Procedure Name: main()

EZA4307E  command: output would overwrite file
Explanation: The specified output file would overwrite the input file. The output file name should be different from the input file name.
System action: RPCGEN exits.
Operator response: Change the output file name and restart.
System programmer response: No action is needed.
Module: RPCMAIN
Procedure Name: Open_output()

EZA4308E  command: unable to open file rc
Explanation: RPCGEN was unable to open the output file.
System action: RPCGEN exits.
Operator response: Determine from the error code why the file is unavailable. Possible reasons include: file missing, out of storage, and wrong pointer.
System programmer response: No action is needed.
Module: RPCMAIN
Procedure Name: Open_output()

EZA4309E  line file, line number: preprocessor error
Explanation: RPCGEN encountered a preprocessor error while searching for the null at the end of the number and spaces. A non-null character was found at the end of the number and spaces.
System action: RPCGEN exits.
Operator response: Correct the program and restart; or tell the system programmer about the error.
System programmer response: Correct the program.
Module: RPCSCAN
Procedure Name: Docppline()

EZA4310E  line file, line number: constant or identifier expected
Explanation: RPCGEN expected a constant or identifier at this point in the source file.
System action: RPCGEN exits.
Operator response: Correct the program and restart; or tell the system programmer about the error.
System programmer response: No action is needed.
Module: RPCSCAN
Procedure Name: Scan_num()

EZA4311E  line file, line number: illegal character in file
Explanation: RPCGEN encountered an incorrect character in the source file.
System action: RPCGEN exits.
Operator response: Correct the program and restart; or tell the system programmer about the error.
System programmer response: Correct the program.
Module: RPCSCAN
Procedure Name: Get_token()

EZA4312E  line file, line number: unterminated string constant
Explanation: RPCGEN encountered an unterminated string constant. The string should be terminated with a null character (\0 or X'00'). The program could be overwriting data.
System action: RPCGEN exits.
Operator response: Correct the program and restart; or tell the system programmer about the error.
System programmer response: Examine the program data for an unterminated string or an incorrect pointer. Correct the program.
Module: RPCSCAN
Procedure Name: Findstrconst()

EZA4313E  line file, line number: preprocessor error
Explanation: RPCGEN encountered an error during preprocessing. This message indicates the data set name and the line number where the error occurred.
System action: RPCGE continues.
Operator response: No action is needed.

System programmer response: Correct the line number, specified in this message, in the source data set and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.

Module: RPCSCAN

Procedure Name: docppline()

---

**EZA4314E** Too many files!

**Explanation:** The number of open files exceeds the maximum permitted. The maximum number of files allowed is 4. The program depends upon the C compiler to clear the variable nfiles to 0. If C does not clear nfiles to 0, the message occurs unpredictably.

**System action:** RPCGEN exits.

Operator response: No action is needed.

System programmer response: If the compiler does not provide a reset to nfiles, add a software reset to nfiles.

Module: RPCUTIL, RPCMAIN

Procedure Name: Record_open(), main()

---

**EZA4318E** line file, line number: definition keyword expected

**Explanation:** RPCGEN expected a definition keyword at this point in the source file.

**System action:** RPCGEN exits.

Operator response: Correct the source file and restart.

System programmer response: No action is needed.

Module: RPCPARSE

Procedure Name: Get_definition()

---

**EZA4319E** line file, line number: illegal result type

**Explanation:** RPCGEN encountered an incorrect result type, Opaque, on this line of the source file.

**System action:** RPCGEN exits.

Operator response: Correct the source file and restart.

System programmer response: No action is needed.

Module: RPCPARSE

Procedure Name: Def_program()

---

**EZA4320E** line file, line number: illegal argument type

**Explanation:** RPCGEN encountered an incorrect argument type, Opaque, on this line of the source file.

**System action:** RPCGEN exits.

Operator response: Correct the source file and restart.

System programmer response: No action is needed.

Module: RPCPARSE

Procedure Name: Def_program()
EZA4321E  line file, line number: no array-of-pointer declarations — use typedef

Explanation: RPCGEN encountered an incorrect array-of-pointer declaration at this line in the source file. RPCGEN does not allow arrays of pointers, but they can be implemented by means of typedef.

System action: RPCGEN exits.

Operator response: Do a typedef of the array-of-pointers, or tell the system programmer about the error.

System programmer response: Do a typedef of the array-of-pointers and restart.

Module: RPCPARSE

Procedure Name: Get_declaration()

EZA4322E  line file, line number: array declaration expected

Explanation: RPCGEN expected an array declaration at this line of the source file.

System action: RPCGEN exits.

Operator response: Correct the program and restart; or tell the system programmer about the error.

System programmer response: Correct the program.

Module: RPCPARSE

Procedure Name: Get_declaration()

EZA4323E  line file, line number: variable-length array declaration expected

Explanation: RPCGEN expected a variable-length array declaration at this point in the source file.

System action: RPCGEN exits.

Operator response: Correct the input program and restart; or tell the system programmer about the error.

System programmer response: Correct the input program.

Module: RPCPARSE

Procedure Name: Get_declaration()

EZA4324E  line file, line number: voids allowed only inside union and program definitions

Explanation: RPCGEN encountered an inappropriate void type at this line in the source file.

System action: RPCGEN exits.

Operator response: Correct the program and restart; or tell the system programmer about the error.

System programmer response: Correct the program.

Module: RPCPARSE

Procedure Name: Get_type()

EZA4325E  line file, line number: expected type specifier

Explanation: RPCGEN expected a type specifier at this point in the source file.

System action: RPCGEN exits.

Operator response: Correct the program and restart; or tell the system programmer about the error.

System programmer response: Correct the program.

Module: RPCPARSE

Procedure Name: Get_type()
EZA4326I  Program *program* is not available

**Explanation:** The program name specified in the *prognum* parameter of the clntudp_create() procedure is not available. This procedure call creates a client transport handle for the remote program (*prognum*). UDP is used as the transport.

**System action:** The system continues.

**Operator response:** No action is needed.

**System programmer response:** Specify the correct program name in the *prognum* parameter of the clntudp_create() procedure call, check that the program name specified is available in storage and resubmit the call. See the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://publib.boulder.ibm.com/infocenter/mindaep/v1r7m1/index.jsp) for more information.

**Module:** RPCINFO

**Procedure Name:** udpping()

---

EZA4327I  Program *number version version* is not available

**Explanation:** The indicated program is not ready.

**System action:** The system continues.

**Operator response:** Start the server that uses the required program number.

**System programmer response:** No action is needed.

**Module:** RPCINFO

**Procedure Name:** Pmapdump()

---

EZA4328I  Program *number version version* ready and waiting

**Explanation:** The indicated program is ready.

**System action:** The system continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** RPCINFO

**Procedure Name:** Pmapdump()

---

EZA4329X  Rrpcinfo: can't contact portmapper (EZA4329)

**Explanation:** RPCINFO encountered an error establishing a TCP connection to Portmapper. See [z/OS Communications Server: IP and SNA Codes](https://publib.boulder.ibm.com/infocenter/mindaep/v1r7m1/index.jsp) for more information on System Return Codes.

**System action:** RPCINFO exits.

**Operator response:** Correct the problem identified in the error response. A typical error is that the Portmapper is not running on the host. Start PORTMAP. PING the host to determine that Portmapper is running and available on the network.

**System programmer response:** No action is needed.

**Module:** RPCINFO

**Procedure Name:** Pmapdump(), clnt_call() brdcst(), clnt_broadcast()

---

EZA4330I  No remote programs registered.

**Explanation:** No remote programs have been registered on the Portmapper to be retrieved by RPCINFO.

**System action:** RPCINFO continues.

**Operator response:** Start a server that registers a procedure on the Portmapper.
System programmer response: No action is needed.

Module: RPCINFO

Procedure Name: pmapdump()

EZA4331E Usage: rpcinfo -n portnum u host prognum versnum

EZA4332I rpcinfo -n portnum t host prognum versnum

EZA4333I rpcinfo p host

EZA4334I rpcinfo -b prognum versnum

Explanation: The command line syntax is displayed to indicate that the user invoked RPCINFO with incorrect arguments.

System action: RPCINFO exits.

Operator response: Reenter RPCINFO with the correct control parameter syntax.

System programmer response: No action is needed.

Module: RPCINFO

Procedure Name: Usage()

EZA4335E Rpcinfo: service is unknown service

Explanation: The program number specified on the command line does not correspond to a known service.

System action: RPCINFO exits.

Operator response: Correct the program number. Check that the server is running and that it registers the correct number. Rerun.

System programmer response: No action is needed.

Module: rpcinfo

Procedure Name: Getprognum(), getrpcbyname()

EZA4336E Rpcinfo: host is unknown host

Explanation: You specified an unrecognized host on the RPCINFO command line. The name server might be down. The host name might have been changed to another network. The hlq.HOSTS.LOCAL, hlq.HOSTS.ADDRINFO, or hlq.HOSTS.SITEINFO data sets might be incorrect. You might need to run MAKESITE.

System action: RPCINFO exits.

Operator response: PING the host. Determine whether the host name is correct and whether the name server is running.

System programmer response: Make any necessary changes to the hlq.HOSTS.LOCAL data set and run MAKESITE.

Module: RPCINFO

Procedure Name: Get_net_address(), udpping(), socket() udpping(), tcpping()

EZA4337E Rpcinfo: broadcast failed: rc

Explanation: RPCINFO encountered an error issuing a broadcast.

System action: RPCINFO exits.

Operator response: Use err in the message to determine the probable cause. There are many possible return codes. See clnt_stat in z/OS Communications Server: IP Programmer’s Guide and Reference.
System programmer response: No action is needed.
Module: RPCINFO
Procedure Name: Brdcst(), clnt_broadcast()

EZA4338E procedure: out of memory
Explanation: The procedure specified was unsuccessful because of insufficient storage allocated for completion.
System action: TCPIP continues.
Operator response: Inform the system programmer of this message.
System programmer response: Increase the region size of the application executing the remote procedure call (RPC).
Module: AUTH@UNI, CLNT@TCP, CLNT@UDP, SVC@SIMP, SVC@TCP, SVC@UDP, XDR, XDR@ARRA, XDR@REC, XDR@REFE, XDR@STR
Procedure Name: authunix_create(), clnttcp_create(), mem_alloc(), clntudp_bufcreate(), registerrpc(), malloc(), makefd_xprt(), svcudp_bufcreate(), xdr_array(), xdr_bytes(), xdr_reference(), xdr_string(), xdrrec_create()

EZA4339E message
Explanation: The procedure clnt_sperror(), which returns the address of a message indicating why an RPC did not complete, returned the displayed message. This procedure receives pointers previously declared in the clnt parameter of the clnt_create(), clntudp_create(), clnttcp_create(), or clntraw_create() procedures. The clnt parameter is the pointer to a client handle that was obtained using one of the above procedures. Depending on the location where the procedure stopped, only one of these messages will be displayed.
System action: TCPIP continues.
Operator response: Inform the system programmer of this message.
System programmer response: Possible responses for this message are:
Message | Response
--- | ---
RPC: Success | None.
RPC: Can't encode arguments | Check for the correct XDR procedure name in the inproc parameter of the callrpc() call and restart the program.
RPC: Can't decode result | Check for the correct XDR procedure name in the outproc procedure of the callrpc() call and restart the program.
RPC: Unable to send | Check for the correct parameter entries in the callrpc() call and restart the program.
RPC: Unable to receive; errno = value, error list | Check for the correct parameter entries in the callrpc() call and restart the program.
RPC: Timed out | Restart the program if required.
RPC: Incompatible versions of RPC; low version = version, high version = version | Check for the correct remote program version number in the versnum parameter of the callrpc() call and restart the program.
RPC: Authentication error; why = reason | Check for the correct entries in the authentication parameters of the authunix_create() call.
RPC: Authentication error; why = unknown authentication error - value | Check for the correct entries in the authentication parameters of the authunix_create() call.
RPC: Program unavailable | Check for the correct program number in the prognum parameter of the callrpc()
call, register the program using the registerrpc() call, or contact the remote system administrator to obtain access to the program and restart the program.

RPC: Program/version mismatch; low version = version, high version = version
Check for the correct remote program number and version in the progsnum and versnum parameters of the callrpc() and restart the program.

RPC: Procedure unavailable
Check for the correct procedure number in the procnum parameter of the callrpc() call and restart the program.

RPC: Server can't decode arguments
Check for the correct XDR routine in the inproc parameter of the svc_freeargs() call and restart the program.

RPC: Remote system error errcode
Use the system error code displayed in this message and the list of system error codes in z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference to determine the cause of the error and inform the remote system administrator.

RPC: Unknown host
Check for the correct host ID in the host parameter of the callrpc() call and restart the program.

RPC: Unknown protocol
Check for the transport protocol in the -s transport parameter of the RPCGEN command and verify that both TCP and UDP are specified in the /etc/protocol directory. TCP and UDP are the supported transports. A sample copy of the /etc/protocol directory is shipped in the /usr/lpp/tcpip/samples/protocol directory.

RPC: Port mapper failure
Check that the tcpip.SEZAINST(ETCRPC) data set contains an entry for the portmapper procedure name and restart the program.

RPC: Program not registered
Check for the correct program number in the progsnum parameter of the svc_register() call. This parameter specifies the program number to be registered.

RPC: Failed (unspecified error)
Contact the IBM Software Support Center.

RPC: default; sl=value, s2=value, message, message
Contact the IBM Software Support Center.

See Appendix A, “Additional information about remote procedure call (RPC) messages,” on page 653 for more information about tcperror return codes. For more information about the RPC and XDR protocols, see the Sun Microsystems publication, Networking on the Sun Workstation: Remote Procedure Call Programming Guide.

Module: CLNT@PER
Procedure Name: clnt_sperror

EZA4340E  clnt_raw.c - Fatal header serialization error.

Explanation: The procedure call clntraw_create, which creates a dummy RPC client for the remote program, was unsuccessful because a call issued to xdrmem_create() returned an incorrect return code. The xdrmem_create() call initializes an XDR stream in local storage.

System action: TCPIP continues.

Operator response: Inform the system programmer of this message.

System programmer response: Check for the correct remote program number and version in the progsnum and versnum parameters of the clntraw_create() call and the parameters specified in the xdrmem_create() call, and restart the program.

Module: CLNT@RAW
Procedure Name: clntraw_create
EZA4341I  clnt_tcp: readtcp: read returns=value

Explanation: The procedure clnttcp, which creates a remote procedure call (RPC) client transport handle for the remote program specified in the prognum, versnum parameters, has received the specified return value from the readtcp procedure. The readtcp() reads data contained in the TCP data buffer. This procedure is an interface between the external data representation (xdr) serializer and the TCP connection. TCP is used as the transport layer.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CLNT@TCP

Procedure Name: readtcp

EZA4342I  clnt_tcp: attempting to write number bytes

Explanation: The procedure clnttcp, which creates a remote procedure call (RPC) client transport handle for the remote program specified in the prognum, versnum parameters, is trying to write the specified number of bytes received from TCP. These parameters specify the remote program number and the version number of the remote program. This procedure is an interface between the external data representation (XDR) serializer and the TCP connection. TCP is used as the transport layer.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CLNT@TCP

Procedure Name: readtcp

EZA4344E  Can't reassign procedure number procedure

Explanation: The registerrpc() call registers a procedure with the local portmapper, and creates a control structure to remember the server procedure and its external data representation (XDR) routine. Because of an incorrect procedure number specified in the procnum parameter, this call did not complete.

System action: TCPIP continues.

Operator response: Inform the system program about this message.

System programmer response: Check for the correct procedure number and restart the program. Procedures registered using registerrpc() are accessed using the UDP transport layer. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information.

Module: SVC@SIMP

Procedure Name: registerrpc()

EZA4345E  Couldn't create an rpc server

Explanation: A request to create an RPC server was unsuccessful because of an incorrect pointer declared in the sockp parameter of the svcudp_create() call. This parameter specifies the pointer to the socket associated with the service transport handle. If sockp is RPC_ANYSOCK, a new socket is created. This procedure creates a UDP-based service transport to which it returns a pointer. The UDP transport layer is used to access the procedures registered in the registerrpc() call.

System action: TCPIP continues.

Operator response: Inform the system programmer of this message.

System programmer response: Specify the correct pointer in the sockp parameter of the svcudp_create() call. See the
Module: SVC@SIMP
Procedure Name: registerrpc()

EZA4346E  Couldn’t register prog number vers number
Explanation: A request to have RPC register this program and version was unsuccessful because portmapper might not be running or sufficient storage might not be available.
System action: TCPIP continues.
Operator response: Inform the system programmer of this message.
System programmer response: Use PING and RPCINFO to determine whether portmapper is running, allocate more storage if necessary, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.
Module: SVC@SIMP
Procedure Name: pmap_unset

EZA4347E  svc_sendreply failed
Explanation: The svc_sendreply(), which is called by the service dispatch routine to send the results of the call to the caller, was unsuccessful.
System action: TCPIP continues.
Operator response: Inform the system programmer of this message.
System programmer response: Remove unneeded tasks to free storage, check for an incorrect pointer, or check that storage is sufficient, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.
Module: SVC@SIMP
Procedure Name: universal()

EZA4348E  Trouble replying to prog number
Explanation: The procedure svc_sendreply, which is called by the service dispatch routine to send the results of the call to the caller, was unsuccessful because of an incorrect pointer declared in the xprt parameter or not enough storage was allocated for the procedure to complete. The xprt parameter is the pointer to the caller’s transport handle.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: Specify the correct pointer in the xprt parameter of the svc_sendreply procedure, check whether the task has adequate storage, and restart the program. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.
Module: SVC@SIMP
Procedure Name: universal()

EZA4349E  Never registered prog number
Explanation: An attempt was made to communicate with an unregistered program.
System action: TCPIP continues.
Operator response: Inform the system programmer of this message.
System programmer response: Use PING and RPCINFO to determine whether the host is up and the program is registered. If the program is not registered, register it on the target host. See the z/OS Communications Server: IP Programmer’s Guide and Reference for more information.
Module: SVC@SIMP
Procedure Name: universal()

EZA4350E  Bad auth_len gid length str length auth length
Explanation: An RPC server received authorization credentials of an incorrect length. Authorization is denied. This message indicates the length specified in the len parameter of the authunix_create() call. This parameter is the length of the information pointed to by aup_gids.
System action: TCPIP continues.
Operator response: Inform the system programmer of this message.
System programmer response: Check for the correct authorization credentials entries in the authunix_create() call and restart the program.
Module: SVC@AUUN
Procedure Name: Svcauth_unix()

EZA4351I  xdr_u_long decode gets value, returns value
Explanation: The procedure xdr_u_long(), which translates between C unsigned long integers and their external representations, has been initiated. This message indicates the value that has been decoded.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: XDR
Procedure Name: xdr_u_long

EZA4352I  xdr_u_long encode adds value, returns value
Explanation: The procedure xdr_u_long(), which translates between C unsigned long integers and their external representations, has been initiated. This message indicates the value that has been encoded.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: XDR
Procedure Name: xdr_u_long

EZA4353I  Alarm called with argument: value; old value = value.
Explanation: A timer has been set by the svc_run function. This message indicates the value supplied to this function for use in a select() system call. When the timeout parameter of the select() call is not a NULL pointer, it specifies a maximum interval to wait for the selection to complete.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SVC@RUN
Procedure Name: svc_run()
**EZA4354I**  
svc_run: call select with timeout = *time*

**Explanation:** The timeout value points to the time to wait for the select() system call to complete. When the *timeout* parameter is not a NULL pointer, it specifies a maximum interval to wait for the selection to complete. The select call then returns either when a new client request arrives, or when the *time* value ends, whichever occurs first.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SVC@RUN

**Procedure Name:** svc_run

---

**EZA4355I**  
svc_run: calling select with no timeout.

**Explanation:** No timeout has been set by the svc_run for the select call. When the *timeout* parameter is a NULL pointer, the select call blocks until a socket becomes ready.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SVC@RUN

**Procedure Name:** svc_run()

---

**EZA4356I**  
svc_run: select returns value *time / NULL*

**Explanation:** Indicates the value of the *timeout* parameter returned by the select() system call. The select() call monitors activity on a set of sockets to see if any of the sockets are ready for reading, writing, or have an exceptional condition pending. Depending on the value specified only one of these variables will be displayed.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SVC@RUN

**Procedure Name:** svc_run()

---

**EZA4359I**  
sigsetmask: new mask = *value*, old mask = *value*

**Explanation:** Indicates the value of the old and new masks that have been set by the sigsetmask() function. This function is called when the pointer specified in the *timeout* parameter of the select() system call expires.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** RSIGNAL

**Procedure Name:** sigsetmask

---

**EZA4360I**  
sigblock: arg = *value*, new mask = *value*, old mask = *value*.

**Explanation:** The function sigblock, which adds the specified signals to the current mask, has been initiated with the displayed values.

**System action:** TCPIP continues.

**Operator response:** No action is needed.
System programmer response: No action is needed.
Module: RSIGNAL
Procedure Name: sigblock

EZA4361I raise: arg = value.

Explanation: The raise function, which invokes the specified signal handler synchronously, has been initiated. This function is called when the time specified in the timeout parameter of the select() system call returns a value of 0 indicating that a timeout has occurred.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RSIGNAL
Procedure Name: raise

EZA4375E rexecd: fread: rc

Explanation: An error was detected while the spool data set was being read. This message indicates the return code received for this procedure.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: Check the REXEC command format when submitting REXEC as a batch job. See the z/OS Communications Server: IP Configuration Reference for more information.
Module: MVRSHD
Procedure Name: main

EZA4376E rshd: remuser too long

Explanation: The user ID specified in the -l user/password parameter of the RSH command is too long. The connection is closed. The maximum length for this parameter is 15 characters. This parameter specifies the user ID on the remote host.

System action: Processing continues.
Operator response: Check for the correct user ID in the -l user/password parameter of the RSH command and resubmit the command. See the z/OS Communications Server: IP Configuration Reference for more information.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main

EZA4377E rexecd: username too long

Explanation: The user ID specified in the -l user_id parameter of the REXEC command is too long. The connection is closed. The maximum length for this parameter is 15 characters. This parameter specifies the user ID on the remote host.

System action: Processing continues.
Operator response: Check for the correct user ID in the -l user_id parameter of the REXEC command and resubmit the command. See the z/OS Communications Server: IP Configuration Reference for more information.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main
EZA4378E  rshd: username too long

Explanation: The user ID specified in the -l user_id parameter of the REXEC command is too long. The connection is closed. The maximum length for this parameter is 15 characters. This parameter specifies the user ID on the local host.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Check for the correct user ID in the -l user_id parameter of the REXEC command and resubmit the command. See the z/OS Communications Server: IP Configuration Reference for more information.

Module: MVRSHD

Procedure Name: main

---

EZA4379E  rexec: password too long

Explanation: The password declared in the -p password parameter of the REXEC command or the -l user/password parameter of the RSH command is too long. The connection is closed. This parameter specifies the password for the user ID on the remote host. The maximum length is 15 characters.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Check for the correct password in the -p password parameter of the REXEC command or the -l user/password parameter of the RSH command and resubmit the command. See the z/OS Communications Server: IP Configuration Reference for more information.

Module: MVRSHD

Procedure Name: main

---

EZA4380E  rshd: Host unknown.

Explanation: The IP address of the machine issuing the RSH command could not be resolved to a hostname. getnameinfo() failed.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Ensure that the IP address and host name of remote clients can be determined by resolver services. Restart the connection if required, and resubmit the command. See the z/OS Communications Server: IP Configuration Reference for more information.

Module: MVRSHD

Procedure Name: doit

---

EZA4381I  Accept socket_number from remote_address on local_address

Explanation: The server has accepted a connection on the specified socket from the remote IP address to the local IP address.

In the message text:

socket_number
  The number of the socket from which the connection was being made.

remote_address
  The remote IP address and port number.

local_address
  The local IP address and port number.

Examples:
EZA4381I Accept 2 from 9.44.36.163:1023 on 9.42.105.158:514
System action: Processing continues.
Operator response: No action is needed.
User response: No action is needed.
System programmer response: No action is needed.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: RSHD
Module: MVRSHD
Routing code: 10
Descriptor code: 12
Automation: Not applicable for automation.

EZA4382I Connecting on socket number to remote_address from local_address

Explanation: The server is opening a connection on the specified socket to the remote IP address from the local IP address.

In the message text:
socket_number
The number of the socket from which the connection was being made.
remote_address
The remote IP address and port number.
local_address
The local IP address and port number.

Examples:
EZA4382I Connecting on 4 to 9.44.36.163:3291 from 9.42.105.158:1037

System action: Processing continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: RSHD
Module: MVRSHD
Routing code: 10
Descriptor code: 12
Automation: Not applicable for automation.

EZA4383I SSCSARAY jobid flag

Explanation: The progress of the job is being tracked. This message indicates the job name and the value of the flag. The 2-digit number following the job name is a byte with the following bit pattern:

1 Job is currently active
1 Job is waiting for processing
1 Job is on the output queue
1 Job is held in its current queue
1 Job has a second-level message
1 Job active in NJE
11 Unused

System action: Processing continues.
Operator response: No action is needed.

System programmer response: No action is needed.

Module: MVRSHD

Procedure Name: main

EZA4384I SSSR: rc jobname job ID

Explanation: A cancel request has been received. This message displays the return code, the job name, and the job ID of the job currently running or waiting to be run. The job name and ID are the same as the job to be submitted.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MVRSHD

Procedure Name: main

EZA4385I SSSORT(CTRL): rc

Explanation: Displays the return code from an SSSO request with the CTRL bit on. This request is used to tell JES that RSHD is starting to look for output from a job. SSSO is the subsystem option block extension for processing SYSOUT data sets.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MVRSHD

Procedure Name: main

EZA4386E rshd: Permission denied.

Explanation: This message is displayed for one of the following reasons:

- The RSH command issued from the client did not include a valid password.
- The userid.RHOSTS.DATA data set does not exist or was inaccessible to the REXEC Daemon.
- The userid.RHOSTS.DATA data set does not contain the host name and user ID for the client host where the command was issued.

A message is sent to the RSH connection and the connection is closed.

System action: Processing continues.

Operator response: Issue the RSH command with a valid password, or make sure that the userid.RHOSTS.DATA data set exists and contains both the host name and user ID of the client system.

System programmer response: No action is needed.

Module: MVRSHD

Procedure Name: Not applicable.

EZA4387I SSSSORT(del): rc

Explanation: Displays any nonzero return codes received when output from a previous job, which might be interpreted as output for this job, is found. These files are deleted when found.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main

EZA4388I SSSORT(fail): rc
Explanation: The output data set could not be opened. The job that was submitted is purged. This message indicates the return code received after this procedure.
System action: Processing continues.
Operator response: Check for the correct parameters declared in the output data set and submit the job again. See the z/OS Communications Server: IP Configuration Reference for more information.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main

EZA4389I SSSORT(init): rc
Explanation: Displays the return code received after looking for the first output to be directed back to the terminal. If there is no output, either this is an old job with the same name, or the output for the correct job is not available yet.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main

EZA4390I SSSORT(next): rc
Explanation: Checking to see if there is any more work to be done. This is usually the last message you will see and indicates that the return code was nonzero. The various possibilities for the return code are:
0 Successful completion - request went to the subsystem.
4 Subsystem does not support this function. This is the one that is expected when there is no more work to do.
8 Subsystem exists, but is not up.
12 Subsystem does not exist.
16 Function not completed - irrecoverable error.
20 Logical error (for example, incorrect SSOB format, length.)
System action: Processing continues.
Operator response: If the return code is other than 0 or 4, contact the system programmer.
System programmer response: If the return code is other than 0 or 4, determine the cause of the error using the return codes above. If the error persists, contact the IBM Software Support Center.
Module: MVRSHD
Procedure Name: main

EZA4391I SSSORT(tso): rc
Explanation: Indicates the return code received after a TSO command has been encountered.
System action: Processing continues.
Operator response: No action is needed.
EZA4392I • EZA4395E

System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main

EZA4392I  S99: rc destination-class job-name data-set-name
Explanation: The return code from an SVC 99 where the data set is being allocated is listed first, followed by the destination class, the job name, and the SYSOUT data set name in that order.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main

EZA4393I  S99: rc
Explanation: This message posts the return code for the SVC 99 deallocation of the data set that was named in message EZA4392I.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main

EZA4394I  Writing record record, bytes bytes.
Explanation: While attempting to write data to the socket an error occurred. This is most likely an internal processing error.
System action: Processing continues.
Operator response: Inform the system programmer of the error.
System programmer response: If the error can be repeated, contact the IBM Software Support Center with the console log from the server.
Module: MVRSHD
Procedure Name: main

EZA4395E  Syntax error: error
Explanation: A command has been entered that contains a syntax error.
System action: Processing continues with the previously defined options.
Operator response: Enter the command with the correct syntax and resubmit the command. See the z/OS Communications Server: IP Configuration Reference for more information.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: process_options
EZA4396E MAXCONN parameter may not be set after START.

Explanation: A MAXCONN parameter was specified with a MODIFY command after the server had already been started. MAXCONN specifies the maximum number of open sockets at any one time. Usually, each client requires 2 sockets while the command is being processed and the output is being returned. The default is 512. MAXCONN must be specified when the server is started.

System action: Processing continues with the value declared for the MAXCONN parameter at the time of initialization.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MVRSHD

Procedure Name: process_options

EZA4397E Insufficient storage

Explanation: There is not enough storage for the allocation of the fd_table to complete.

System action: The program ends. Processing continues.

Operator response: No action is needed.

System programmer response: Increase the region size of the application or lower the number of open sockets in the MAXCONN= parameter. See the z/OS Communications Server: IP Configuration Reference for more information.

Module: MVRSHD

Procedure Name: main

EZA4398E Host unknown: client name; tracing ALLCLIENTS

Explanation: The TRACE=client name parameter has been specified for the indicated client. However, the client name cannot be resolved by the name server or found in the HOSTS.SITEINFO data set.

System action: Tracing is set to ALLCLIENTS. Processing continues.

Operator response: Check for the correct client name and resubmit the command. See the z/OS Communications Server: IP Configuration Reference for more information.

System programmer response: No action is needed.

Module: MVRSHD

Procedure Name: Process_options

EZA4399E Invalid trace option value

Explanation: An incorrect option has been specified for the TRACE= parameter. The following list provides the valid options for this parameter:

- LOG/NOLOG
- SEND/NOSEND
- CLIENT=client
- ALLCLIENTS
- RESET

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Specify the correct option for the TRACE= parameter. If more than one option is specified, enclose the options in parentheses. These trace options can be changed with a MODIFY command. See the z/OS Communications Server: IP Configuration Reference for more information.

Module: MVRSHD

Procedure Name: process_options
**Explanation:** Indicates the options that have been specified for the TRACE= parameter and that are in effect for the REXECD server.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** MVRSHD

**Procedure Name:** process_options

---

**Explanation:** Indicates the options that have been specified for the TRACE= parameter and that are in effect for the REXECD server.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** MVRSHD

**Procedure Name:** process_options

---

**Explanation:** An incorrect option has been specified for the TRACE= parameter. The following list provides the valid options for this parameter:

- LOG/NOLOG
- SEND/NOSEND
- CLIENT=client
- ALLCLIENTS
- RESET

The default values for the TRACE= parameter are used.

**System action:** Processing continues.

**Operator response:** Specify the correct option for the TRACE= parameter. If more than one option is specified, enclose the options in parentheses. These trace options can be changed with a MODIFY command. See the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/S5513A_1.3.0/com.ibm.zos.IP/ICF/omm3ps00.htm) for more information.

**System programmer response:** No action is needed.

**Module:** MVRSHD

**Procedure Name:** process_options

---

**Explanation:** Indicates the values that have been specified for the parameters of the RXSERVE cataloged procedure. The following list provides a description of these parameters:

- **EXIT=** Name of user exit routine to inspect and alter JOB and EXEC parameters prior to submission of TSO batch jobs initiated by remote commands.

- **TSOPROC=** The name of the TSO batch procedure. The default is IKJACCNT. The name IKJACCNT can be modified in the exit routine specified with the EXIT parameter.

- **MSGCLASS=** The MSGCLASS parameter for TSO batch jobs submitted to execute remote commands. The parameter must not be altered by the EXIT routine.

---

236  z/OS V1R13.0 Comm Svr: IP Messages Volume 1 (EZA)
TSCLASS= The SYSOUT class for the SYSTSPRT DD statement for submitted jobs. It should be different from the MSGCLASS parameter and the class specified for other SYSOUT data sets in the specified PROC.

MAXCONN= The maximum number of open sockets at any one time. Usually, each client requires 2 sockets while the command is being processed and the output is being returned. The default is 512.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MVRSHD

Procedure Name: process_options

---

EZA4404I Parameters: MSGCLASS=class, TSCLASS=class, TSOPROC=value, MAXCONN=value, NOEXIT

Explanation: Indicates the values that have been specified for the parameters of the RXSERVE cataloged procedure. The following list provides a description of these parameters:

EXIT= Name of user exit routine to inspect and alter JOB and EXEC parameters prior to submission of TSO batch jobs initiated by remote commands. In this case, there is no user exit routine.

TSOPROC= The name of the TSO batch procedure. The default is IKJACCNT. The name IKJACCNT can be modified in the exit routine specified with the EXIT parameter.

MSGCLASS= The MSGCLASS parameter for TSO batch jobs submitted to execute remote commands. The parameter must not be altered by the EXIT parameter.

TSCLASS= The SYSOUT class for the SYSTSPRT DD statement for submitted jobs. It should be different from the MSGCLASS parameter and the class specified for other SYSOUT data sets in the specified PROC.

MAXCONN= The maximum number of open sockets at any one time. Usually, each client requires 2 sockets while the command is being processed and the output is being returned. The default is 512.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MVRSHD

Procedure Name: process_options

---

EZA4405E rexed: command line exceeds 246 character limit; request denied.

Explanation: The remote execution server has submitted a job to the MVS system. However, because the command line is longer than 246 characters, the job will fail with a JCL error. The server will not process the requested command.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Decrease the size of the command to 246 characters or less.

Module: MVRSHD

Procedure Name: main

---

EZA4406I rexed: Too many matching jobnames exist for output to be returned.

Explanation: An REXEC command was issued to an MVS REXEC server requesting remote execution. Jobnames are formed by concatenating 4 fixed character bytes with the socket number the request was presented on via the REXEC command. When an attempt was made to return the output, a request for a list of matching jobnames was specified.
The data area for this request was too small to contain the list of all jobs matching the specification. Output from the job remains on the output spool.

**System action:** Processing continues.

**Operator response:** Determine which jobnames are duplicated and purge the duplicate job output.

**System programmer response:** No action is needed.

**Module:** MVRSHD

**Procedure Name:** main.

---

**EZA4407I**  Too many matching jobnames exist for output to be purged.

**Explanation:** An REXEC command was issued to an MVS REXEC server requesting remote execution. Jobnames are formed by concatenating 4 fixed character bytes with the socket number the request was presented on via the REXEC command. When an attempt was made to purge the output, a request for a list of matching jobnames was specified. The data area for this request was too small to contain the list of all jobs matching the specification. Output from the job remains on the output spool.

**System action:** Processing continues.

**Operator response:** Determine which jobnames are duplicated and purge the duplicate job output.

**System programmer response:** No action is needed.

**Module:** MVRSHD

**Procedure Name:** main.

---

**EZA4413E**  rexecd: non-valid parameter JES=x specified JES=2 or JES=3 must be specified.

**Explanation:** JES= was specified in the parameter list to the REXEC server. The JES= parameter only permits JES=2 or JES=3 to be specified.

**System action:** The REXEC server ends execution.

**Operator response:** Restart the REXEC server specifying JES=2 if your facility uses JES2, or JES=3 if your facility uses JES3.

**System programmer response:** Verify the JES= parameter is correct.

**Module:** RSHD

---

**EZA4414I**  rexecd: Initialization using JES=X selected by Y

**Explanation:** This message indicates how the JES= parameter was determined. It could have been specified in the parameter or it could have been automatically detected.

X will be 2 on JES2 or 3 on JES3 systems.

Y will be:

- *Automatic Specification* if JES=x was not specified in the parameters.
- *Parameter Specification* if JES=x was specified in the parameters.

**System action:** The REXEC server continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** RSHD
rexecd: Required resources are unavailable to process your request. Please try again later.

**Explanation:** There are currently 9999 rexec jobs running. REXECD cannot submit any more jobs.

**System action:** Processing continues.

**Operator response:** Wait and then reissue the REXEC request.

**System programmer response:** No action is needed.

**Module:** MVUSHD

**Procedure Name:** main

---

rexecd: Required resources are unavailable to process request for `userid`.

**Explanation:** There are currently 9999 rexec jobs running. REXECD cannot submit any more jobs.

`userid` is the user ID of the submitter of the request.

**System action:** Processing continues.

**Operator response:** Wait and then reissue the REXEC request.

**System programmer response:** No action is needed.

**Module:** MVUSHD

**Procedure Name:** main

---

`function rhosts = fd`

**Explanation:** This is issued when trace is turned on.

`function` is the function being performed on the rhost file.

`fd` is the file descriptor of the rhost file.

**System action:** Processing continues.

**Operator response:** Wait and then reissue the REXEC request.

**System programmer response:** No action is needed.

**Module:** MVUSHD

**Procedure Name:** main

---

rexecd: Jobname was Not Found.

**Explanation:** The server has detected the situation where a job that it was waiting for cannot be found.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** MVRSHD

**Procedure Name:** main

---

chkpass failed: `safrc=rcode1, racfr=rcode2, racfre=reason`

**Explanation:** The call to the chkpass function failed. Chkpass is called to validate a user ID and password with the system authorization facility (SAF). `rcode1` is the system authorization facility return code, `rcode2` is the RACF return code, and `reason` is the RACF reason code. This message is only written to the trace log.

**System action:** Message EZA4386E will be sent to the RSH client or message EZA4422E will be sent to the REXEC client. The connection to the client will be closed.

**Operator response:** See response for message EZA4386E if using RSH or EZA4422E if using REXEC.
System programmer response: Check the system authorization facility documentation to determine the cause of the failure. If RACF is installed, check the return codes for RACROUTE REQUEST=VERIFY in the z/OS Security Server RACROUTE Macro Reference.

Module: MVRSHD
Procedure Name: main

EZA4422E  rexed: Permission Denied.
Explanation: Either the user ID or the password specified for the user ID is not valid on the remote system.
System action: Processing continues.
Operator response: Check the -l and -p parameters on REXEC and make sure that they are correct. If the user ID or the password, or both are being retrieved from a NETRC file, check the user ID and password in the NETRC file.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: main

EZA4423I  Parameters: PURGE = purge,PREFIX = prefix, IPV6=ipv6, SECLABEL = seclabel
Explanation: This message is a continuation of EZA4403I or EZA4404I. It indicates the values that have been specified for the parameters of the RXSERVE cataloged procedure.

purge The values for purge are Y or N. Y indicates the job output from the jobs submitted by the server should be purged immediately after the job execution and N indicates that the job output will be held in the output queue.

prefix A four-character value to be used as the first four characters in the jobname of the jobs that are submitted by the server. The remaining characters of the jobname are a sequential number between 1 and MAXCONN.

ipv6 The values for ipv6 are Y or N. If N is specified, RXSERVE will not attempt to communicate over an IPv6 network. Only connections from IPv4 clients will be accepted. If this parameter is not specified or Y is specified, RXSERVE will attempt to communicate over an IPv6 network.

seclabel The values for seclabel are Y or N. If this parameter is not specified or N is specified, RXSERVE does not attempt to add a security label to the job card. If Y is specified, RXSERVE adds a security label (if one exists) to the job card following the message class parameter. For information about using the remote execution server in an MLS environment, see the section on preparing for TCP/IP networking in a multilevel security environment in z/OS Communications Server: IP Configuration Guide.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: process_options

EZA4424E  PURGE = value is not valid
Explanation: This message indicates that an invalid value was specified for the PURGE option.
value is the value that was incorrectly specified.
System action: Processing continues. The option is ignored.
Operator response: Reissue the option with a correct value.
System programmer response: No action is needed.
Module: MVRSHD
Procedure Name: process_options
**EZA4425E**  PREFIX parameter may not be set after START.

**Explanation:** A PREFIX parameter was specified with a MODIFY command after the server had been started. PREFIX specifies the first four characters of a job submitted by the server. PREFIX must be specified when the server is started.

**System action:** Processing continues with the value declared for the PREFIX parameter at the time of initialization.

**Operator response:** If new PREFIX value is required then stop the server and start it again with the new PREFIX value.

**System programmer response:** No action is needed.

**Module:** MVRSHD

**Procedure Name:** process_options

---

**EZA4426E**  Load of user exit *user_exit* failed

**Explanation:** The remote execution server was unable to load the user exit specified on the EXIT= start parameter. *user_exit* is the start parameter specified.

**System action:** Processing continues with no user exit in effect.

**Operator response:** Contact the Systems Programmer.

**System programmer response:** The remote execution server will issue a fetch() command to load the user exit. This message indicates that the fetch() command failed. See the [z/OS XL C/C++ Run-Time Library Reference](https://www.ibm.com/support/knowledgecenter/SSLTBW_2.1.0/com.ibm.zos.v2r10.bunk3_2a/zos/ixxref_zming.html) for more information about the fetch() command.

**Module:** MVRSHD

**Procedure Name:** process_options

---

**EZA4427I**  User exit *user_exit* loaded at *address*

**Explanation:** This message indicates that *user_exit* was successfully loaded.

*user_exit* is the specified start parameter.

*address* is the hexadecimal address where *user_exit* is located.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** MVRSHD

**Procedure Name:** process_options

---

**EZA4428I**  rhosts input: local host *host* local user *user*

**Explanation:** This message is issued by the MVS remote execution server when attempting to determine if the user is permitted to execute commands on the remote host. Local host and local user indicate what is being searched for in the *userid*.rhosts.data file.

*host* is the name of the local host.

*user* is the local user ID.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** MVRSHD

**Procedure Name:** doit
EZA4430E No matching entry in userid.rhosts.data - user permission is denied

Explanation: This message is issued when no matching entry is found in the userid.rhosts.data file. See message EZA4428I for an indication of the search values.

userid is the local user ID.

System action: Processing continues but permission for command execution is denied to the user.

Operator response: No action is needed.

System programmer response: Ensure that the rhosts.data file contains correct entries. For a description of the rhosts.data file format, see the information about remote execution in z/OS Communications Server: IP Configuration Guide.

Module: MVRSHD

Procedure Name: doit

EZA4432E IPV6 = value is not valid.

Explanation: This message indicates that an invalid value was specified for the IPv6 option.

value is the invalid value specified.

System action: Processing continues. The option is ignored.

Operator response: Reissue the option with a valid value.

System programmer response: No action is needed.

Module: MVRSHD

Procedure Name: process_options

EZA4433I SECLABEL = value is not valid

Explanation: This message indicates that an invalid value was specified for the SECLABEL option.

value is the invalid value specified.

System action: Processing continues. The option is ignored.

Operator response: Reissue the option with a valid value. Restart RXSERVE.

System programmer response: No action is needed.

Module: MVRSHD

Procedure Name: process_options

EZA4434I rexecd: Number of available job numbers is being depleted

Explanation: REXECD is capable of tracking 9999 jobs. This message is issued when the number of jobs being tracked is 85% of this limit.

Examples: Not applicable.

System action: A job number is assigned to the request and processing continues. This message is issued only once.

Operator response: Issue a modify command to change the PURGE parameter value to Y.

User response: Not applicable.

System programmer response: If the server is running with the PURGE parameter value N, remove jobs that have already been processed from the JES spool. Change the PURGE parameter value to Y in the remote execution cataloged procedure and recycle REXECD. Or use a modify command to change the PURGE parameter value to Y and add PURGE=Y to the remote execution cataloged procedure.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: REXEC
EZA4435E  rexecd: Number of available jobs is depleted

Explanation: REXECD is capable of tracking 9999 jobs. This message is issued when the number of jobs that are being tracked has reached this limit.

Examples: Not applicable.

System action: This message is issued once when REXECD detects that all available job numbers have been used. REXECD attempts to identify a job number that has been assigned but has no output on the JES spool.

- If a job number with no output on the JES spool is found, that job number is re-assigned and processing continues.
- If no job number can be assigned, the request is not processed.

Operator response: Issue a modify command to change the PURGE parameter value to Y.

User response: Not applicable.

System programmer response: If the server is running with the PURGE parameter value N, remove jobs that have already been processed from the JES spool. Change the PURGE parameter value to Y in the remote execution cataloged procedure and recycle REXECD. Or use a modify command to change the PURGE parameter value to Y and add PURGE=Y to the remote execution cataloged procedure.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: REXEC

---

EZA4436I  SSCSARAY\[n\] jobnumber jobstatus ACTIVE

Explanation: This is a trace message that is issued to indicate that the job is active.

In the message text:

- \( n \) The internal array index for the job number.
- \( \text{jobnumber} \) The job number of the job that is being tracked.
- \( \text{jobstatus} \) The status returned by JES, which indicates that the job is currently active.

Examples:

EZA4436I  SSCSARAY[0] J00800131 80 ACTIVE

System action: Processing continues.

Operator response: Not applicable.

User response: Not applicable.

System programmer response: None.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: REXEC

Module: MVRSHD
Routing code: 10
Descriptor code: 12
Automation: Not applicable.

EZA4437I  SSCSRARAY[n] jobnumber jobstatus WAITING

Explanation: This is a trace message that is issued to indicate that the job is on the JES input queue and is waiting to be started.

A job might be in this state for the following reasons:
• A JES initiator was not started to process the submitted job class.
• Other jobs might be running in this class that are preventing this job from starting.

In the message text:

n The internal array index for the job.

jobnumber The job number of the job that is being tracked.

jobstatus The status returned by JES, which indicates the job is waiting.

Examples:
EZA4437I SSCSRARAY[0] JOB00131 40 WAITING

System action: Processing continues.
Operator response: Not applicable.
User response: Not applicable.
System programmer response: None.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: REXEC
Module: MVRSHD
Routing code: 10
Descriptor code: 12
Automation: Not applicable.

EZA4438I  SSCSRARAY[n] jobnumber jobstatus COMPLETED

Explanation: This is a trace message that is issued to indicate that the job has completed processing.

In the message text:

n The internal array index for the job.

jobnumber The job number of the job that is being tracked.

jobstatus The status returned by JES, which indicates the job has completed processing.

Examples:
EZA4439I SSCSRARAY[0] JOB00131 20 COMPLETED

System action: Processing continues.
Operator response: Not applicable.
User response: Not applicable.
System programmer response: None.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: REXEC
Module: MVRSHD
Routing code: 10
Descriptor code: 12
Automation: Not applicable.

EZA4439I SSCSARAY[n] jobnumber jobstatus HELD

Explanation: This is a trace message that is issued to indicate that the job is on the JES spool and is being held and is not available for processing.

In the message text:

n The internal array index for the job.

jobnumber The job number of the job that is being tracked.

jobstatus The status status returned by JES, which is indicates that the job is being held.

Examples:
EZA4439I SSCSARAY[0] JOB00131 10 HELD

System action: Processing continues.
Operator response: Not applicable.
User response: Not applicable.
System programmer response: None.
Problem determination: Not applicable.

EZA4440I Closing connection with remoteaddress from localaddress

Explanation: The connection to the remote IP address from the local IP address is being closed.

In the message text:

remoteaddress The remote IP address and port number.

localaddress The local IP address and port number.

Examples:
EZA4440I Closing connection with 9.44.36.163:1023 from 9.42.105.158:514

System action: Processing continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: Not applicable.
EZA4442I • EZA4726I

Source: z/OS Communications Server TCP/IP: RSHD
Module: MVRSHD
Routing code: 10
Descriptor code: 12
Automation: Not applicable.

EZA4442I SSORT(next): 00000004 NO MORE OUTPUT ON JES SPOOL

Explanation: While processing the output for a job, JES returned a 00000004 return code. This trace message is issued to indicate that there is no more output on the JES spool for the specified job. Message EZA4392I that was issued earlier for the same socket identified the job that was being processed.

Examples:
socket 4: EZA4392I S99ret: 00000000, T RSHD USER1.RSHD3.JOB00049.D0000102.?
socket 4: EZA4393I S99ret: 00000000
socket 4: EZA4442I SSSORT(next): 00000004 NO MORE OUTPUT ON JES SPOOL

System action: Processing continues.
Operator response: Not applicable.
User response: Not applicable.
System programmer response: None.
Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: REXEC
Module: MVRSHD
Routing code: 10
Descriptor code: 12
Automation: Not applicable.

EZA4726I Usage: rexec -? -d -b <tab> -l <usr> -p <pwd> -n -s <port> -t <fn> Fhost cmd

Explanation: This message is the first message of a group of messages that is posted when REXEC is entered without any parameters, with the -? parameter, or under certain conditions that are not valid.

Examples:
EZA4726I Usage: rexec -? -d -b <tab> -l <usr> -p <pwd> -n -s <port> -t <fn> Fhost cmd
EZA47271 options: -
EZA4728I -? display this message.
EZA4729I -d turn on debug tracing.
EZA4814I -m prefix '09'x to machine control output.
EZA4811I -b <tab> specifies tab value,
EZA4813I valid range 1 - 12 (default 1).
EZA4730I -l <usr> specifies remote userid.
EZA4731I -p <pwd> specifies remote password.
EZA4732I -n prevent automatic login.
EZA4733I -s <port> specifies server port (default 512).
EZA4802I -t <fn> specifies translation table name.
EZA4734I Example: rexec -d -l guest -p guest hostname ls

System action: REXEC ends.
Operator response: No action is needed.
System programmer response: No action is needed.
Procedure Name: usage

EZA4727I options: -
Explanation: This message is part of a group of messages. The first message is “EZA4726I” on page 246. See that message for a complete description of the group.

EZA4728I -? display this message.
Explanation: This message is part of a group of messages. The first message is “EZA4726I” on page 246. See that message for a complete description of the group.

EZA4729I -d turn on debug tracing.
Explanation: This message is part of a group of messages. The first message is “EZA4726I” on page 246. See that message for a complete description of the group.

EZA4730I -l usr specifies remote userid.
Explanation: This message is part of a group of messages. The first message is “EZA4726I” on page 246. See that message for a complete description of the group.

EZA4731I -p pwd specifies remote password.
Explanation: This message is part of a group of messages. The first message is “EZA4726I” on page 246. See that message for a complete description of the group.

EZA4732I -n prevent automatic login.
Explanation: This message is part of a group of messages. The first message is “EZA4726I” on page 246. See that message for a complete description of the group.

EZA4733I -s port specifies server port (default 512)
Explanation: This message is part of a group of messages. The first message is “EZA4726I” on page 246. See that message for a complete description of the group.

EZA4734I Example: rexec -d -l guest -p guest hostname ls
Explanation: This message is part of a group of messages. The first message is “EZA4726I” on page 246. See that message for a complete description of the group.

EZA4736I close error con # errconn
Explanation: An error has occurred on the port listed and the port is being closed.

System action: REXEC ends.
Operator response: Message EZA4779I precedes this message and explains what needs to be corrected prior to rerunning the job.

Note: This is a normal message if the foreign host closed the connection, as shown by CONNECTIONstateCHANGED to sending prior to receiving this message.

System programmer response: No action is needed.
Module: REXEC
Procedure Name: close
EZA4737I  close active con # actconn

Explanation:  REXEC is in the process of ending and the port is being closed.

System action:  REXEC ends.

Operator response:  Message EZA4779I precedes this message and explains what needs to be corrected prior to rerunning the job.

System programmer response:  No action is needed.

Module:  REXEC

Procedure Name:  close

---

EZA4738I  getnextnote until DD

Explanation:  The program has entered the procedure recv_notices.

System action:  REXEC continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  REXEC

Procedure Name:  recv_notices

---

EZA4739I  SayNotEn(string)

Explanation:  This message ID can have any one of several messages. A listing of the messages and their descriptions follows. The operator and system response will vary depending on what the message is. Look at the message and the description to determine the action to take. If you still do not understand the problem contact the IBM Support Center for assistance.

Buffer space available (8680)  
This notification is given when buffer space becomes available for a connection on which a TCP send request was previously rejected due to insufficient resources.

Connection state changed (8681)  
This notification is given when a TCP connection receives information from the network that causes the state of the connection to change. Such changes arise when the remote client opens, closes, or ends the connection.

Data delivered (8682)  
This notification is given when the client buffer indicated in an earlier TcpReceive request now contains data.

User-defined notification (8683)  
For use by user-written programs.

Datagram space available (8684)  
This notification is given when buffer space becomes available for a datagram on which an IP send request was previously rejected due to insufficient resources.

Urgent pending (8685)  
This notification is given when the TCP/IP service is informed by the foreign site that there is urgent data not yet delivered to the client.

UDP datagram delivered (8686)  
This notification is given when the client buffer indicated in an earlier UdpReceive request now contains a datagram.

UDP datagram space available (8687)  
This notification is given when buffer space becomes available for a datagram on which an UDP send request was previously rejected due to insufficient resources.
Other external interrupt received (8688)
This special notification is returned when a non-VMCF external interrupt arrives for the client. Typically, this external interrupt will be CPexternalCOMMAND and will be interpreted by the client as a directive to abend.

User delivers line (8689)
The user has entered a line of data at the terminal.

User wants attention (8690)
The user has pressed an attention key, such as PF key.

Timer expired (8691)
A timer has expired.

Fsend response (8692)
Response has been received for TcpFSend call.

FReceive error (8693)
This notification is given when a TcpFReceive call resulted in an error, instead of a DATAdelivered notification. Every TcpFReceive call will eventually generate either DATAdelivered or RECEIVEerror.

RawIP packets delivered (8694)
This notification is given when the client buffer indicated in an earlier RawIpReceive request now contains data.

RawIP space available (8695)
This notification is given when buffer space becomes available for a datagram on which a RawIpSend request was previously rejected due to insufficient resources.

IUCV interrupt (8696)
This special notification is returned when an IUCV external interrupt arrives for the client.

I/O interrupt (8697)
This notification is given when an I/O interrupt occurs on a device that the client program has specified in a NotifyIo() call.

Resources available for TcpOpen (8698)
This notification is given to a client who previously tried to do TcpOpen but got ZEROresources. When all resources necessary for open are available (TCB and SCB plus incoming and outgoing data buffer), this notice is given.

Resources available for UdpOpen (8699)
Similar to RESOURCESavailable, for TcpOpen.

Ping response or timeout (8700)
Sent when a PING response is received, or when the request times out.

SMSG receive (8701)
Sent when a CP special message (SMSG) is received.

System action: Varies according to the message displayed.
Operator response: Varies according to the message displayed.
System programmer response: Varies according to the message displayed.
Module: REXEC
Procedure Name: recv_notices

EZA4740I SayConSt(message_string)

Explanation: This message ID can have any one of several message_strings. A list of message_strings and their descriptions follows. The operator and system programmer response will vary depending on what the message_string is. Look at the message_string and the description to determine the action to take. If you still do not understand the problem contact the IBM Support Center for assistance.
Connection closing (8670)
   Data can no longer be transmitted on this connection since the TCP/IP service is in the process of closing
down the connection.

Listening (8671)
   Waiting for a foreign site to open a connection.

Nonexistent (8672)
   The connection no longer exists.

Open (8673)
   Data can go either way on the connection.

Receiving only (8674)
   Data can be received but not sent on this connection because the client has done a one-way close.

Sending only (8675)
   Data can be sent out but not received on this connection. This means that the foreign site has done a
one-way close.

Trying to open (8676)
   Trying to contact a foreign site to establish a connection.

** Invalid state: ord=ord(STATE) (8679)
   The state was not one of the above.

System action: Varies according to message displayed.
Operator response: Varies according to the message displayed.
System programmer response: Varies according to the message displayed.
Module: REXEC
Procedure Name: recv_notices.

EZA4742I Unknown connection state change
Explanation: The CONNECTIONstateCHANGED was not one of the following:
   OPEN
   RECEIVINGonly
   LISTENING
   TRYINGtoOPEN
   SENDINGonly
   CONNECTIONclosing
   NONEXISTENT
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: recv_notices

EZA4743I Bytes in bytes delivered
Explanation: This message indicates the number of bytes that have been received from a TcpReceive. There will be 1
extra byte per line to account for the carriage return.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: recv_notices
EZA4744I  errmsg (msgnum)

Explanation:  REXEC encountered an error.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action:  Varies depending on the message displayed.

Operator response:  Varies depending on the message displayed.

System programmer response:  Respond as indicated by the message EZAmsgnum.

Module:  REXEC

Procedure Name:  recv_notices

---

EZA4745I  tcpreceive error from errcon

Explanation:  This message will be preceded by message EZA4744I, which should be consulted to determine the error. This error message is printed when a TcpReceive has been issued and the return code was something other than OK, NOsuchCONNECTION, or REMOTEclose.

System action:  REXEC continues.

Operator response:  Varies depending on the message EZA4744I.

System programmer response:  Varies depending on the message EZA4744I.

Module:  REXEC

Procedure Name:  recv_notices.

---

EZA4746I  tcpreceive error from actconn

Explanation:  This message will be preceded by message EZA4744, which should be consulted to determine the error. This error message is printed when a TcpReceive has been issued and the return code was something other than OK, NOsuchCONNECTION, or REMOTEclose.

System action:  REXEC continues.

Operator response:  Varies depending on the message EZA4744I.

System programmer response:  Varies depending on the message EZA4744I.

Module:  REXEC

Procedure Name:  recv_notices.

---

EZA4748I  external interrupt code encountered

Explanation:  An external interrupt has been received. If an external interrupt is received, the port is closed in preparation for a shut down.

System action:  REXEC continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  REXEC

Procedure Name:  recv_notices

---
EZA4749I ignoring.

Explanation: If the connection state is not one of the following: CONNECTIONstateCHANGED, DATAdelivered, or EXTERNALinterrupt, then it is ignored.

System action: REXEC continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: recv_notices

EZA4750I unknown notification

Explanation: The connection state message is not one that has been previously defined.

System action: REXEC continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: recv_notices.

EZA4751I Returning from recv_notices

Explanation: The DEBUG option has been specified and processing is complete for the procedure recv_notices.

System action: REXEC continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: recv_notices

EZA4752I Please enter command (or "quit" to exit)

Explanation: A command needs to be entered for the remote host. If "quit" is entered, then REXEC will end.

System action: REXEC awaits input.

Operator response: Enter a command.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: prompt_for_command

EZA4753I PASSWD (fhost: userid)

Explanation: A password needs to be entered for the user ID on the remote host. If quit is entered, REXEC will end.

System action: REXEC awaits input.

Operator response: Enter the password.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: prompt_for_passwd
**EZA4754I**  USERID (*fhost*: *userid*)

Explanation: A user ID needs to be entered for the remote host. If quit is entered REXEC will end.

System action: REXEC awaits input.

Operator response: Enter the user ID.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: prompt_for_userid

---

**EZA4755I**  Please enter host name:

Explanation: A remote host name needs to be entered. If quit is entered REXEC will end.

System action: REXEC awaits input.

Operator response: Enter the remote host name.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: prompt_for_fhost

---

**EZA4756I**  Variables have the following assignments:

Explanation: The DEBUG option has been specified and the variables that have been entered will be displayed in messages EZA4757I - EZA4760I.

System action: REXEC continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: show_variables

---

**EZA4757I**  *fhost*: *fhost*

Explanation: The DEBUG option has been specified and the remote host is displayed. See message EZA4756I.

System action: REXEC continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: show_variables

---

**EZA4758I**  *userid*: *userid*

Explanation: The DEBUG option has been specified and the logon ID is displayed. See message EZA4756I.

System action: REXEC continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: show_variables
EZA4759I  passwd: passwd
Explanation: The DEBUG option has been specified and the password entered is displayed. See message EZA4756I.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: show_variables

EZA4760I  command: cmd
Explanation: The DEBUG option has been specified and the command entered is displayed. See message EZA4756I.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: show_variables

EZA4761I  ALL: theline
Explanation: This is an informational message that displays the line of the NETRC data set that is being read, if DEBUG has been specified.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: from_netrc

EZA4762I  MACHINE: word
Explanation: This message displays the word following MACHINE in the NETRC data set, if DEBUG has been specified.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: from_netrc

EZA4763I  LOGIN: word
Explanation: The word following LOGIN in the NETRC data set is displayed if DEBUG has been specified.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: from_netrc
EZA4764I  PASSWORD: word

Explanation: This is an informational message that displays the word following PASSWORD in the NETRC data set, if debug is set.

System action: REXEC continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: from_netrc

EZA4765I  REJECTED: word

Explanation: This message will be printed if a word is found other than MACHINE and a machine name, LOGIN and login name, and PASSWORD and password. This message will be followed by the following:

EZA4766E
EZA4726I
EZA4727I
EZA4728I
EZA4729I
EZA4730I
EZA4731I
EZA4732I
EZA4733I
EZA4802I
EZA4734I

System action: REXEC ends.

Operator response: Correct the user_id.NETREC.DATA data set.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: from_netrc

EZA4766I  Invalid data set format in netrc_data_set_name

Explanation: During the parameter input data set read procedure, a format error was found in the NETRC.data_set. REXEC does not prompt you for the correct parameter input.

System action: REXEC displays the following group of messages and ends:

EZA4766I
EZA4726I
EZA4727I
EZA4728I
EZA4729I
EZA4730I
EZA4731I
EZA4732I
EZA4733I
EZA4802I
EZA4734I

Operator response: Correct the NETRC.data_set, and restart the program. Otherwise set the -n option for prompted input, or use the execution invocation argument inline parameter input when you rerun the program.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: from_netrc
EZA4767I  -l option required one parameter: alternate login id

Explanation: A parameter for the -l option was missing or not correct.

System action: REXEC prints the following group of messages and ends.
EZA4767I
EZA4726I
EZA4727I
EZA4728I
EZA4729I
EZA4730I
EZA4731I
EZA4732I
EZA4733I
EZA4802I
EZA4734I

Operator response: Reenter the command with a correct logon ID.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: GETPARM

EZA4768I  -p option requires one parameter: passwd

Explanation: A parameter for the -p option was missing or not correct.

System action: REXEC prints the following group of messages and ends.
EZA4768I
EZA4726I
EZA4727I
EZA4728I
EZA4729I
EZA4730I
EZA4731I
EZA4732I
EZA4733I
EZA4802I
EZA4734I

Operator response: Reenter the command with a valid password.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: GETPARM

EZA4769I  -s option requires one parameter: port

Explanation: A parameter for the -s option was missing or not correct.

System action: REXEC prints the following group of messages and ends.
EZA4769I
EZA4726I
EZA4727I
EZA4728I
EZA4729I
EZA4730I
EZA4731I
EZA4732I
EZA4733I
EZA4802I
EZA4734I
Operator response: Reenter the command with a valid port number.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: GETPARM

---

**EZA4771I** Unknown option `word`

**Explanation:** A parameter was entered that could not be parsed.

**System action:** REXEC prints the following group of messages and ends:

- EZA4770I
- EZA4726I
- EZA4727I
- EZA4728I
- EZA4729I
- EZA4730I
- EZA4731I
- EZA4732I
- EZA4733I
- EZA4734I

Operator response: Reenter the command with valid parameters.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: GETPARM

---

**EZA4772I**parms are parameters

**Explanation:** When DEBUG is set on it will list the parameters that were passed to REXEC.

**System action:** REXEC continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: REXEC
Procedure Name: GETParm

EZA4773I REXEC: no command given.
Explanation: This message is displayed if no command was parsed.
System action: REXEC displays the following group of messages and ends.

EZA4773I
EZA4726I
EZA4727I
EZA4728I
EZA4729I
EZA4730I
EZA4731I
EZA4732I
EZA4733I
EZA4734I
EZA4734I

Operator response: Reenter the complete REXEC command.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: GETParm

EZA4774I REXEC invoked;
Explanation: The DEBUG option has been entered and the first statement of procedure REXEC_util has been processed.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: REXEC_util

EZA4775I Calling function rexec_af with: Host: aaa user bbb, cmd ccc, port ddd
Explanation: This message lists the host, user, cmd, and port that are being passed to the rexec_af function that is provided by z/OS UNIX System Services and that does the work of passing the information to the remote server.

aaa is the host that the command is being passed to.
bbb is the logon ID of the user on the remote system.
ccc is the command that is being passed to the remote system.
ddd is the port number.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: REXEC_util
EZA4776I  D2 len length
Explanation: This is the length of the string that is being sent to the remote host.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: REXEC_util

EZA4777I  tcpwaitsend errmsg (msgnum)
Explanation: The function tcpwaitsend encountered an error.
errmsg is the text of the message that describes the error.
msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.
System action: Varies depending on the message displayed.
Operator response: Varies depending on the message displayed.
System programmer response: Respond as indicated by the message EZAmsgnum.
Module: REXEC
Procedure Name: REXEC_util

EZA4778I  returning from REXEC_UTIL
Explanation: The DEBUG option has been entered and the last statement of procedure REXEC_util has been processed.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: REXEC_util

EZA4779I  errmsg (msgnum)
Explanation: REXEC encountered an error.
errmsg is the text of the message that describes the error.
msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.
System action: Varies depending on the message displayed.
Operator response: Varies depending on the message displayed.
System programmer response: Respond as indicated by the message EZAmsgnum.
Module: REXEC
Procedure Name: REXEC_Client
EZA4780I  calling GetHostResol with fhost
Explanation:  REXEC is calling GetHostResol to resolve the remote host name to a dotted decimal address.
System action:  REXEC continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  REXEC
Procedure Name:  REXEC_Client

---

EZA4781I  Host fhost Unknown
Explanation:  The call to GetHostResol has not resolved the name to a dotted decimal address.
System action:  REXEC ends.
Operator response:  Reenter the command using a valid remote host name.
System programmer response:  No action is needed.
Module:  REXEC
Procedure Name:  REXEC_Client

---

EZA4783I  Passive Conn – errmsg (msgnum) on local port localsocket.port
Explanation:  If everything is working correctly, Passive Conn – OK on local port port number will be displayed.  errmsg is the text of the message that describes the error.
msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg.  For more information about this message, see message EZAmmsgnum.
System action:  Varies depending on message displayed.
Operator response:  Varies depending on the message displayed.
System programmer response:  Respond as indicated by the message EZAmmsgnum.
Module:  REXEC
Procedure Name:  REXEC_Client

---

EZA4784I  Unable to open passive port for host host
Explanation:  This message precedes message EZA4779I.  Consult that message for an explanation of why the port was unable to be opened.
System action:  REXEC ends.
Operator response:  Varies depending on the message displayed.
System programmer response:  Varies depending on the message displayed.
Module:  REXEC
Procedure Name:  REXEC_Client

---

EZA4785I  passive open complete on port connection
Explanation:  A passive open has been completed and the connection state has changed to LISTENING.
System action:  REXEC continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  REXEC
### Procedure Name: REXEC_Client

**EZA4786I**  
Active Conn – errmsg (msgnum) on local port localsocket.port

**Explanation:** If everything is working correctly, Active Conn – OK on local port port number will be displayed.  
errmsg is the text of the message that describes the error.  
msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAnmsgnum.

**System action:** Varies depending on the message displayed.

**Operator response:** Varies depending on the message displayed.

**System programmer response:** Respond as indicated by the message EZAnmsgnum.

**Module:** REXEC

**Procedure Name:** REXEC_Client

**EZA4787I**  
Unable to open port TCP_REXEC to host fhost

**Explanation:** This message is preceded by message EZA4779I. Please consult that message for an explanation of why the port was unable to be opened.

**System action:** REXEC ends.

**Operator response:** Varies depending on the message displayed.

**System programmer response:** Varies depending on the message displayed.

**Module:** REXEC

**Procedure Name:** REXEC_Client

**EZA4788I**  
active open complete on port connection

**Explanation:** An active open is complete.

**System action:** REXEC continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** REXEC

**Procedure Name:** REXEC_Client

**EZA4789I**  
REXEC complete

**Explanation:** The REXEC program has ended.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** REXEC

**Procedure Name:** REXEC_Client

**EZA4790I**  
syntax error: unbalanced quotation marks substr(line,position)

**Explanation:** This message is displayed if a quoted string has been entered and there are unbalanced quotation marks. This message will be followed by the following group of messages:

- EZA4726I
- EZA4727I
- EZA4728I
System action:  REXEC ends.
Operator response:  Correct the quoted string and reenter the command.
System programmer response:  No action is needed.
Module:  REXEC
Procedure Name:  TcpQuote

---

EZA4791I  Connecting to fhost

Explanation:  The REXEC is attempting to connect to the foreign host name, the foreign host address, and the remote host port given in the message.
System action:  REXEC continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  REXEC
Procedure Name:  REXEC_Client

---

EZA4801I  MVS TCP/IP REXEC version

Explanation:  The version of REXEC is displayed.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  REXEC
Procedure Name:  GETPARM

---

EZA4802I  -t fn specifies translation table name.

Explanation:  This is one of a group of messages that is posted when REXEC is entered without any parameters, or with the -? parameter, or under certain conditions that are not valid. The first message is EZA4726I on page 246. See that message for a complete description of the group.
System action:  REXEC ends.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  REXEC
Procedure Name:  GETPARM

---

EZA4803I  -t option requires one parameter

Explanation:  A parameter for the -t option was missing or not valid.
System action:  REXEC prints the following group of messages and ends:

EZA4726I
EZA4803I
EZA4726I
Operator response: Correct or enter the required parameter.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: GETPARM

EZA4804I  User specified translation table: table
Explanation: The user-specified translation table has been read in and will be used.

System action: REXEC continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: GETPARM

EZA4805I  Fails to read User specified translation table: table
Explanation: The translate table that was supplied by the user could not be initialized.

System action: REXEC ends.

Operator response: Verify that the data set that has been specified with the -t option is correctly named and available to the system.

See the information about understanding configuration search orders in z/OS Communications Server: IP Configuration Guide for information about REXEC's data set search order.

System programmer response: No action is needed.

Module: REXEC

Procedure Name: GETPARM

EZA4806E  Invalid integer parameter: word
Explanation: The port being read in with the -s option is non-numeric.

System action: REXEC prints the following group of messages and ends.

Operator response: Correct the port parameter.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: GETPARM

Invalid port number number
Explanation: The port number read in was not between the range of 1 and 65535.
System action: REXEC prints the following group of messages and ends:
  EZA4807I
  EZA4726I
  EZA4727I
  EZA4728I
  EZA4729I
  EZA4730I
  EZA4731I
  EZA4732I
  EZA4733I
  EZA4802I
  EZA4734I
Operator response: Correct the port number.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: GETPARM

Fails to read standard table
Explanation: An REXEC command was issued from an MVS REXEC client requesting remote execution. The standard translation table used by the client was found; however, it could not be successfully used.
System action: TCPIP continues. The REXEC client command terminates.
Operator response: Reissue the REXEC command. If the problem persists, seek assistance from appropriate system support personnel.
System programmer response: No action is needed.
Module: EZABBO1T
Procedure Name: Main.

Using NETRC file NETRC_data_set
Explanation: The debug option has been specified and the NETRC data set being used is displayed.
System action: REXEC continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: REXEC
Procedure Name: from_netrc

The call to rexec_af() function failed: description rsn = errnojr
Explanation: The call to the rexec_af() function that will pass the information to the remote host failed.

description describes the error.
errnojr is the hexadecimal UNIX System Services Reason Code. The format of the 4-byte Reason Code is explained in
the introduction to the Reason Code section of the z/OS UNIX System Services Messages and Codes, where the Reason Codes are listed.

**System action:** REXEC ends.

**Operator response:** Examine the command typed and reissue the REXEC command. If the problem persists, contact the system programmer. The most common description is ECONNREFUSED. If this occurs, start the remote execution server on the remote host.

**System programmer response:** Correct the error indicated by *description* and *errnojr*.

**Module:** REXEC

**Procedure Name:** main()

---

**EZA4811I -b tab specify tab value**

**Explanation:** This message is part of message group for REXEC.

In the message text:

- **tab**
  - The fixed tab spacing used to align data when the command response contains a tab character. The *tab* value is in the range of 1-12.

**Examples:**

```
EZA4726I Usage: rexec -d -b tab -l usr -p pwd -n -s port -t fn Fhost cmd
EZA4727I options: -
EZA4728I -? display this message.
EZA4729I -d turn on debug tracing.
EZA4811I -b tab specifies tab value
EZA4813I valid range 1 - 12, (default 1).
EZA4730I -l usr specifies remote userid.
EZA4731I -p pwd specifies remote password.
EZA4732I -n prevent automatic login.
EZA4733I -s port specifies server port (default 512.)
EZA4802I -t fn specifies translation table name.
EZA4734I Example: rexec -d -l guest -p guest hostname ls
```

**System action:** The default value of *tab* is 1.

**Operator response:** Enter a valid value.

**User response:** Not applicable.

**System programmer response:** No action is needed.

**Problem determination:** Not applicable.

**Source:** z/OS Communications Server TCP/IP: REXEC

**Module:** EZAREXC

**Routing code:** 10

**Descriptor code:** 12

---

**EZA4812I A tab value of tabcol is not in the range of 1 - 12**

**Explanation:** The value entered for the tab parameter is outside the valid range.

In the message text:

- **tabcol**
  - The column width specified for the tab.

**Examples:**

```
EZA4812I A tab value of 13 is not in the range of 1 - 12
```

**System action:** The REXEC client exits.
EZA4813I • EZA4987I

Operator response: Enter a valid value and restart the client.
User response: Not applicable.
System programmer response: Not applicable.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: REXEC
Module: EZAREXC
Routing code: 10
Descriptor code: 12

EZA4813I valid range 1 thru 12 (default 1)
Explaination: This message is a continuation of the EZA4811I message.
Examples: See message EZA4811I.
System action: See message EZA4811I.
Operator response: See message EZA4811I.
User response: Not applicable.
System programmer response: See message EZA4811I.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: REXEC
Module: EZAREXC
Routing code: 10
Descriptor code: 12

EZA4814I -m prefix '09'x to machine control output.
Explaination: This message is part of a group of messages. The first message is "EZA4726I" on page 246. See that message for a complete description of the group.

EZA4986I close error con # connection
Explaination: An error has occurred on the port listed and the port is being closed.
System action: RSH ends.
Operator response: Message EZA5029I precedes this message and explains the correction that needs to be made prior to rerunning the job.
System programmer response: No action is needed.
Module: RSH
Procedure Name: close, recv_notices

EZA4987I close active con # connection
Explaination: RSH is in the process of ending and the port is being closed.
System action: RSH ends.
Operator response: Message EZA5029I precedes this message and explains the correction that needs to be made prior to rerunning the job.

Note: This is a normal message if the foreign host closed the connection, as shown by CONNECTION state CHANGED to sending prior to receiving this message.
System programmer response: No action is needed.
Module: RSH
Procedure Name: close

EZA4988I getnextnote until DD
Explanation: The program has entered the procedure recv_notices.
System action: RSH continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RSH
Procedure Name: recv_notices

EZA4989I SayNotEn(string)
Explanation: This message ID can have any one of several messages. A listing of the messages and their meanings
follows. The operator and system programmer response will vary depending on the message displayed. If you still
do not understand the problem, contact the IBM Software Support Center for assistance.
Message
Explanation
Buffer space available (8680)
This notification is given when buffer space becomes available for a connection on which a TCP send request was previously rejected due to insufficient resources.
Connection state changes (8681)
This notification is given when a TCP connection receives information from the network that causes the state of the connection to change. Such changes arise when the remote client opens, closes, or ends the connection.
Data delivered (8682)
This notification is given when the client buffer indicated in an earlier TcpReceive request now contains data.
User-defined notification (8683)
For use by user-written programs.
Datagram space available (8684)
This notification is given when buffer space becomes available for a datagram on which an IP send request was previously rejected due to insufficient resources.
Urgent pending (8685)
This notification is given when the TCPIP service is informed by the foreign site that there is urgent data not yet delivered to the client.
UDP datagram delivered (8686)
This notification is given when the client buffer indicated in an earlier UdpReceive request now contains a datagram.
UDP datagram space available (8687)
This notification is given when buffer space becomes available for a datagram on which an UDP send request was previously rejected due to insufficient resources.
Other external interrupt receive (8688)
This special notification is returned when a non-VMCF external interrupt arrives for the client. Typically, this external interrupt will be CPEXTERNALCOMMAND, which will be interpreted by the client as a directive to abend.
User delivers line (8689)
The user has entered a line of data at the terminal.
User wants attention (8690)
   The user has pressed an attention key, such as a PF key.

Timer expired (8691)
   A timer has expired.

Fsend response (8692)
   Response has been received for TcpFSend call.

FRreceive error (8693)
   This notification is given when a TcpFRreceive call resulted in an error, instead of a DATAdelivered
   notification. Every TcpFRreceive call will eventually generate either DATAdelivered or RECEIVError.

RawIP packets delivered (8694)
   This notification is given when the client buffer indicated in an earlier RawIpReceive request now contains
   data.

RawIP space available (8695)
   This notification is given when buffer space becomes available for a datagram on which a RawIpSend
   request was previously rejected due to insufficient resources.

IUCV interrupt (8696)
   This special notification is returned when an IUCV external interrupt arrives for the client.

I/O interrupt (8697)
   This notification is given when an I/O interrupt occurs on a device that the client program has specified in a
   NotifyIo() call.

Resources available for TcpOpen (8698)
   This notification is given to a client who previously tried to do TcpOpen but got ZEROresources. When all
   resources necessary for open are available (TCB and SCB plus incoming and outgoing data buffer), this
   notice is given.

Resources available for UdpOpen (8699)
   Similar to RESOURCESavailable for TcpOpen.

Ping response or time out (8700)
   Sent when a PING response is received, or when the request times out

SMSG received (8701)
   Sent when a CP special message (SMSG) is received.

System action:  Varies according to the message displayed.

Operator response:  Varies according to the message displayed.

System programmer response:  Varies according to the message displayed.

Module:  RSH

Procedure Name:  recv_notices
Nonexistent (8672)
The connection no longer exists.

Open (8673)
Data can go either way on the connection.

Receiving only (8674)
Data can be received but not sent on this connection, because the client has done a one-way close.

Sending only (8675)
Data can be sent out but not received on this connection. This means that the foreign site has done a one-way close.

Trying to open (8676)
Trying to contact a foreign site to establish a connection.

** Invalid state: ord = ord(STATE) *** (8679)
The state was not one of the above.

System action: Varies depending on the message displayed.
Operator response: Varies depending on the message displayed.
System programmer response: Varies depending on the message displayed.
Module: RSH
Procedure Name: recv_notices

---

EZA4992I Unknown connection state change

Explanation: The CONNECTIONstateCHANGED was not one of the following:

OPEN
RECEIVINGonly
LISTENING
TRYINGtoOPEN
SENDINGonly
CONNECTIONclosing
NONEXISTENT

System action: RSH continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RSH

---

EZA4993I Bytes in bytes

Explanation: This message indicates the number of bytes that have been received from a TcpReceive. There will be 1 extra byte per line to account for the carriage return.

System action: RSH continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RSH
Procedure Name: recv_notices
**EZA4994I**  *errmsg (msgnum)*

**Explanation:** RSH encountered an error.

*errmsg* is the text of the message that describes the error.

*msgnum* is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in *errmsg*. For more information about this message, see message EZA*msgnum*.

**System action:** Varies depending on the message displayed.

**Operator response:** Varies depending on the message displayed.

**System programmer response:** Respond as indicated by the message EZA*msgnum*.

**Module:** RSH

**Procedure Name:** recv_notices, rsh_util, GETPARM

---

**EZA4995I** tcpreceive error from errcon

**Explanation:** This message is preceded by message EZA4994I, which should be consulted to determine the error. This error message is displayed when a TcpReceive has been issued and the return code was something other than OK, NosuchCONNECTION, or REMOTEClose.

**System action:** RSH continues.

**Operator response:** Varies depending on message EZA4994I.

**System programmer response:** Varies depending on message EZA4994I.

**Module:** RSH

**Procedure Name:** recv_notices

---

**EZA4996I** tcpreceive error from actconn

**Explanation:** This message will be preceded by message EZA4994I, which should be consulted to determine the error. This error message is printed when a TcpReceive has been issued and the return code was something other than OK, NosuchCONNECTION, or REMOTEClose.

**System action:** RSH continues.

**Operator response:** Varies depending on information displayed in message EZA4994I.

**System programmer response:** Varies depending on information displayed in message EZA4994I.

**Module:** RSH

**Procedure Name:** recv_notices, Rsh_Client

---

**EZA4998I**  *external interrupt code encountered*

**Explanation:** An external interrupt has been received. If an external interrupt is received, the port is closed in preparation for a shut down.

**System action:** RSH continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** RSH

**Procedure Name:** recv_notices
EZA4999I ignoring

Explanation: If the connection state is not one of the following: CONNECTIONstateCHANGED, DATAdelivered, or EXTERNALinterrupt, then it is ignored.

System action: RSH continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RSH

Procedure Name: recv_notices
Chapter 6. EZA5xxx messages

EZA5000I   unknown notification
Explanation: The connection state message is not one that has been previously defined.
System action: RSH continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RSH
Procedure Name: recv_notices

EZA5001I   Returning from recv_notices
Explanation: The DEBUG option has been specified, and processing is complete for the procedure recv_notices.
System action: RSH continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RSH
Procedure Name: recv_notices

EZA5006I   Variables have the following assignment:
Explanation: The DEBUG option has been specified and the variables that have been entered will be displayed in
the following messages.
System action: RSH continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RSH
Procedure Name: show_variables

EZA5007I   FHOST: fhost
Explanation: The DEBUG option has been specified and the foreign host is displayed.
System action: RSH continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RSH
Procedure Name: show_variables

EZA5008I   USERID: userid
Explanation: The DEBUG option has been specified and the logon ID is displayed.
System action: RSH continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RSH
Procedure Name: show_variables

EZA5010I COMMAND: cmd
Explanation: The DEBUG option has been specified and the command entered is displayed.
System action: RSH continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: RSH
Procedure Name: show_variables

EZA5017I -l option requires one parameter: alternate login id
Explanation: A parameter for the -l option was missing or not correct.
System action: RSH displays the following group of messages and ends:
EZA5017I
EZA5042I
EZA4977I
EZA4978I
EZA4979I
EZA4980I
EZA5050I
EZA5043I
Operator response: Reenter the command with a valid logon ID.
System programmer response: No action is needed.

Module: RSH
Procedure Name: GETPARM

EZA5019I -s option requires one parameter: port
Explanation: A parameter for the -s option was missing or not valid.
System action: RSH displays the following group of messages and ends:
EZA5019I
EZA5042I
EZA4977I
EZA4978I
EZA4979I
EZA4980I
EZA5050I
EZA5043I
Operator response: Reenter the command with a valid port number.
System programmer response: No action is needed.

Module: RSH
Procedure Name: GETPARM

EZA5020I Unknown option word
Explanation: A parameter was entered that could not be parsed.
System action: RSH displays the following group of messages and ends:
EZA5020I
Operator response: Reenter the command with valid parameters.
System programmer response: No action is needed.
Module: RSH
Procedure Name: GETPARM

EZA5022I  parms are parameters
Explanation: When DEBUG is set it will list the parameters that were passed to RSH.
System action: RSH continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RSH
Procedure Name: GETPARM

EZA5025I  Calling function rcmd_af with: Host: AAA user BBB, cmd CCC, port DDD
Explanation: This message lists the host, user, cmd, and port that are being passed to the local rcmd_af function which does the work of passing the information to the remote server. AAA is the host that the command is being passed to, BBB is the logon ID of the user on the remote system, CCC is the command that is being passed to the remote system, and DDD is the port number.
System action: RSH continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RSH
Procedure Name: rsh_util

EZA5026I  D2 len length
Explanation: This is the length of the string that is being sent to the foreign host.
System action: RSH continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RSH
Procedure Name: rsh_util

EZA5027I  tcpwaitsent errmsg (msgnum)
Explanation: The function tcpwaitsend encountered an error.
errmsg is the text of the message that describes the error.
msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.
System action: Varies depending on the message displayed.
Operator response:  Varies depending on the message displayed.

System programmer response:  Respond as indicated by the message EZAmsgnum.

Module:  RSH

Procedure Name:  rsh_util

---

**EZA5029I**  
*errmsg (msgnum)*  

**Explanation:**  RSH encountered an error.

*errmsg* is the text of the message that describes the error.

*msgnum* is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in *errmsg*. For more information about this message, see message EZAmsgnum.

**System action:**  Varies depending on the message displayed.

**Operator response:**  Varies depending on the message displayed.

**System programmer response:**  Respond as indicated by the message EZAmsgnum.

Module:  RSH

Procedure Name:  Rsh_client

---

**EZA5030I**  
*calling GetHostResol with fhost*

**Explanation:**  RSH is calling GetHostResol to resolve the foreign host name to a dotted decimal address.

**System action:**  RSH continues.

**Operator response:**  No action is needed.

**System programmer response:**  No action is needed.

Module:  RSH

Procedure Name:  Rsh_client

---

**EZA5031I**  
*Host fhost Unknown*

**Explanation:**  The call to GetHostResol has failed to resolve the name to a dotted decimal address.

**System action:**  RSH ends.

**Operator response:**  Reenter the command using a valid foreign host name.

**System programmer response:**  No action is needed.

Module:  RSH

Procedure Name:  Rsh_client

---

**EZA5033I**  
*Passive Conn - errmsg (msgnum) on local port localsocket.port*

**Explanation:**  RSH encountered an error on the indicated connection.

*errmsg* is the text of the message that describes the error.

*msgnum* is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in *errmsg*. For more information about this message, see message EZAmsgnum.

**System action:**  Varies depending on the message displayed.

**Operator response:**  Varies depending on the message displayed.

**System programmer response:**  Respond as indicated by the message EZAmsgnum.

Module:  RSH

Procedure Name:  Rsh_client

---

276  z/OS V1R13.0 Comm Svr: IP Messages Volume 1 (EZA)
EZA5034I  Unable to open passive port for host fhost

Explanation:  This message is preceded by message EZA5029I, which should be consulted for an explanation of why the port was unable to be opened.

System action:  RSH ends.

Operator response:  Varies depending on the message displayed.

System programmer response:  Varies depending on the message displayed.

Module:  RSH

Procedure Name:  Rsh_client

---

EZA5035I  Passive open complete on port connection

Explanation:  A passive open is complete and the connection state has been changed to LISTENING.

System action:  RSH continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  RSH

Procedure Name:  Rsh_client

---

EZA5036I  Active Conn - errmsg (msgnum) on local port

Explanation:  RSH encountered an error on the indicated connection.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action:  Varies depending on the message displayed.

Operator response:  Varies depending on the message displayed.

System programmer response:  Respond as indicated by the message EZAmsgnum.

Module:  RSH

Procedure Name:  Rsh_client

---

EZA5037I  Unable to open port port number to host fhost

Explanation:  This message is preceded by message EZA5029I. Consult this message for an explanation of why the port was unable to open.

System action:  RSH ends.

Operator response:  Varies depending on the message displayed.

System programmer response:  Varies depending on the message displayed.

Module:  RSH

Procedure Name:  Rsh_client

---

EZA5038I  Active open complete on port connection

Explanation:  An active open is complete.

System action:  RSH continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.
Module: RSH
Procedure Name: Rsh_client

EZA5041I    Connecting to fhost

Explanation: RSH is attempting to connect to the foreign host name, the foreign host address, and the foreign host
port given in the message.

System action: RSH continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RSH
Procedure Name: Rsh_client

EZA5042I    Usage: rsh -? -d -b tab -l usr -s port fhost cmd

EZA4977I    options: -

EZA4978I    -? display this message.

EZA4979I    -d turn on DEBUG tracing.

EZA4980I    -l usr specifies remote userid.

EZA5050I    -s port specifies server port (default 514)

EZA5043I    Example: rsh -d -l guest hostname is

Explanation: This group of messages is displayed when RSH is entered without any parameters, or, with the -?
parameter, or under certain conditions that are not correct.

System action: RSH ends.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: RSH
Procedure Name: usage, GETPARM, Rsh_Client

EZA5044I    rsh: No foreign host name given.

Explanation: No host name was given.

System action: RSH prints the following group of messages and ends.

EZA5044I
EZA5042I
EZA4977I
EZA4978I
EZA4979I
EZA4980I
EZA5050I

Operator response: Reenter the command with a valid host name.

System programmer response: No action is needed.
Module: RSH
Procedure Name: GETPARM

EZA5045I rsh: no command given.
Explanation: No command was parsed.
System action: RSH displays the following group of messages and ends.
EZA5045I
EZA5042I
EZA4977I
EZA4978I
EZA4979I
EZA4980I
EZA5050I
EZA5043I

Operator response: Reenter the command with a valid host name.
System programmer response: No action is needed.
Module: RSH
Procedure Name: GETPARM x

EZA5046I RSH invoked
Explanation: The DEBUG option has been entered and the first statement of procedure Rsh_util has been processed.
System action: RSH continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RSH
Procedure Name: rsh_util

EZA5047I returning from RSH_UTIL
Explanation: The DEBUG option has been entered and the last statement of procedure rsh_util has been processed.
System action: RSH continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RSH
Procedure Name: rsh_util

EZA5048I RSH complete
Explanation: The program has ended.
System action: RSH continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RSH
Procedure Name: Rsh_Client
EZA5049I  locuser locuser
Explanation: This message displays the local user ID.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: RSH
Procedure Name: show_variables

EZA5051E  The call to rcmd_af procedure failed: description rsn = errnojr
Explanation: The call to the rcmd_af procedure that passes the information to the remote host failed.
description describes the error.
errnojr is the hexadecimal UNIX System Services Reason Code. The format of the 4-byte Reason Code is explained in
the introduction to the Reason Code section of the z/OS UNIX System Services Messages and Codes, where the Reason
Codes are listed.
System action: RSH ends.
Operator response: Examine the command typed and reissue the RSH command. If the problem persists, contact the
system programmer. The most common description is ECONNREFUSED. If this occurs, start the remote shell server
on the remote host.
System programmer response: Correct the error indicated by description and errnojr.
Module: RSH
Procedure Name: main()

EZA5058I  -b tab specify tab value
Explanation: This message is part of a message group for RSH.
Examples:
EZA4977I  options: -
EZA4978I  -? display this message.
EZA4979I  -d turn on debug tracing.
EZA5058I  -b tab specifies tab value,
EZA5060I  valid range 1 - 12, (default 1).
EZA5050I  -s port specifies server port (default 514.)
EZA5043I  Example: rsh -d -l guest hostname ls
System action: The client exits.
Operator response: Enter a valid value.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: RSH
Module: EZATRSH
Routing code: 10
Descriptor code: 12
EZA5059I A tab value of tabcol, is not in the range of 1 - 12.

Explanation: The value entered for the tab parameter is outside the valid range.

In the message text:

`tabcol`

The column width specified for the tab parameter.

Examples:

EZA5059I A tab value of 13 is not in the range of 1 - 12

System action: The RSH client exits.

Operator response: Enter a valid value and restart the client.

User response: Not applicable.

System programmer response: Not applicable.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: RSH

Module: EZATRSH

Routing code: 10

Routing code: 10

Descriptor code: 12

EZA5061I Using user-specified translation table: hlq.mlq.TCPXLBIN

Explanation: The Debug option was specified and the REXEC client is using the user-specified translation table.

In the message text:

`hlq`

The high-level qualifier name used for the translation table.

`mlq`

The middle-level qualifier name used for the translation table.

Examples:

EZA5061I Using user-specified translation table: USER1.FRENCH.TCPXLBIN

System action: The REXEC client uses the user-specified translation table for all data output.

Operator response: Not applicable.
User response: Verify that the correct translation table data set is being loaded and used. If the correct table is not being loaded, change the configuration so that the correct translation table data set is available to the REXEC client. See the information about understanding configuration search orders in z/OS Communications Server: IP Configuration Guide for information about searching for translation table data sets.

System programmer response: Not applicable.

Problem determination: Not applicable.

Descriptor code: Not applicable.

EZA5125I IBM MVS SMTP version on date

Explanation: This message introduces SMTP and displays the version level and the date.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5127I Jobname of SMTP Server: name

Explanation: Displays the name of the Simple Mail Transfer Protocol job. It is usually SMTP.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5128I TCP Network Domain name: name

Explanation: Displays the name of the local host.

In the message text:

name

The first 30 characters of the local host name.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5129I Gateway TCP Network to NJE: path

Explanation: Displays whether TCPIP will gateway mail to and from remote NJE systems.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStream

**EZA5130I** NJE Network Node Name: name

**Explanation:** Displays the name of the NJE node on which the SMTP is running. To change this name, change the SMTPNODE variable in the SEZAINST(SMTPNOTE). For information on customizing this and other members, and for information on the SMTPNODE variables, see the [z/OS Communications Server: IP Configuration Reference](#).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

Module: SMTP
Procedure Name: OpenOutputStream

**EZA5131I** NJE Domain Name: domain name

**Explanation:** Displays the name of the NJE domain if SMTP is running as a mail gateway. To change this name, edit the NJEDOMAIN statement in hlq.SMTP.CONFIG. The default name is the null string. For more information on the NJEDOMAIN statement, see the [z/OS Communications Server: IP Configuration Reference](#).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

Module: SMTP
Procedure Name: OpenOutputStream

**EZA5132I** mm/dd/yy hh:mm:ss Large record detected in spool job spoolid

**Explanation:** A large record that contains at least 1024 bytes was detected in the spool job. The implementation of SMTP is limited to processing 1024 bytes of data.

The mail RFC 821 limits the number of bytes on a data line to 998 bytes (excluding the carriage return and line-feed characters). These long lines of data might get truncated by the remote SMTP server, depending on its implementation.

In the message text:

- **mm/dd/yy**
  - The current date in month/day/year format.

- **hh:mm:ss**
  - The current time in hours:minutes:seconds format.

- **spoolid**
  - The spool job identifier.

**Examples:**

EZA51261  ====================================================================
EZA5125I IBM MVS SMTP CS V1R10 on Mon, 08 Mar 10 13:52:09 EST
EZA55511I 03/08/10 13:52:09 -1< EXITPARMS VER 2 USER TOKEN 0 IPADDR 0 DLEN 0 SAF
EZA55521I 03/08/10 13:52:09 -1> USER EXIT RETCODE 4
EZA56521I 03/08/10 13:52:09 CurrentNumMail: 0 MaxNumMail: 0 at 03/08/10 13:52:08
EZA56541I 03/08/10 13:53:00 Processing spool file JOB00035
EZA5661I 03/08/10 13:53:00 Read spool file JOB00035 sent by a batch job
EZA51321I 03/08/10 13:53:00 Large record detected in spool job JOB00035

**System action:** SMTP continues.

**Operator response:** None.
EZA5133I • EZA5135I

User response:  Not applicable.
System programmer response:  Contact the application provider.
Problem determination:  Not applicable.
Source:  z/OS Communications Server TCP/IP: SMTP
Module:  SMTP
Routing code:  Not applicable.
Descriptor code:  Not applicable.
Automation:  Not applicable.

EZA5133I  Local Delivery Format: punch / netdata

Explanation:  Displays the spool data set format for mail delivery to recipients on the local host. To change the format, change the LOCALFORMAT statement in hlq.SMTP.CONFIG. There are 2 choices for the format: NETDATA and PUNCH. The default format is NETDATA. For more information on the LOCALFORMAT statement, see the z/OS Communications Server: IP Configuration Reference.
System action:  SMTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  SMTP
Procedure Name:  OpenOutputStream

EZA5134I  NJE Delivery Format: punch / netdata

Explanation:  Displays PUNCH or NETDATA as options. Specifies how long the records may be. The PUNCH parameter displayed means that records can be at most 80 characters while the default format, NETDATA, allows records longer than 80 characters and they arrive as MESSAGE-type records. To change the setting, change the NJEFORMAT statement in hlq.SMTP.CONFIG. For more information on the NJEFORMAT statement, see the z/OS Communications Server: IP Configuration Reference.
System action:  SMTP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  SMTP
Procedure Name:  OpenOutputStream

EZA5135I  Possible configuration conflict: RESOLVERUSAGE setting is YES and IPMAILERADDRESS is set.

Explanation:  The default value of the RESOLVERUSAGE statement is YES and that is its current setting. If you set the RESOLVERUSAGE statement to YES, the IP address specified in the IPMAILERADDRESS statement is used only when SMTP queries a Domain Name Server (DNS) and no IP addresses are returned. If the DNS query returns IP addresses, then those addresses are used instead of the specified IP address.

Examples:
EZA5562I Resolver Usage YES Specified
EZA5135I Possible configuration conflict: RESOLVERUSAGE setting is YES and IPMAILERADDRESS is set.

System action:  SMTP continues.
Operator response:  Not Applicable.
User response:  Not Applicable.
System programmer response:  If you use the IPMAILERADDRESS parameter to send all your mail to a specific IP address, you must specify NO on the RESOLVERUSAGE statement in the SMTP configuration file. See the
descriptions of these statements in z/OS Communications Server: IP Configuration Reference and ensure that the statements are set correctly for your environment.

**Problem determination:** Not applicable.

**Source:** z/OS Communications Server TCP/IP: SMTP

**Module:** SMTP

**Routing code:** Not applicable.

**Descriptor code:** Not applicable.

**Automation:** Not applicable.

---

**EZA5136I** Postmaster Address: *address*

**Explanation:** Displays the current address where SMTP delivers all mail addressed to POSTMASTER. To change the address, change the POSTMASTER statement in `hlq.SMTP.CONFIG`. The default postmaster is TCPMAINT. For more information on the POSTMASTER statement, see the **z/OS Communications Server: IP Configuration Reference**.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5137I** Userid for Bad Spool Files: *user id*

**Explanation:** Displays the user ID that receives all the unreadable spool files and looping mail. To change the user ID, change the BADSPOOLFILEID statement in `hlq.SMTP.CONFIG`. The default user ID is TCPMAINT. For more information on the BADSPOOLFILEID statement, see the **z/OS Communications Server: IP Configuration Reference**.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5139I** Port for Server SMTP: *server port*

**Explanation:** Displays the port the SMTP utilizes. The port number 25 is normally reserved in `hlq.PROFILE.TCPIP`. To change the port that SMTP uses, you must change the PORT statement in `hlq.SMTP.CONFIG` and, unless testing, change the data set `hlq.PROFILE.TCPIP`.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5140I** Inactivity Timeout: *seconds seconds*

**Explanation:** Displays the number of seconds until SMTP considers the connection dead. At that time, SMTP closes the connection. To change the amount of time, change the INACTIVE statement in `hlq.SMTP.CONFIG`. The default amount of time for the INACTIVE statement is 180 seconds. For more information on the INACTIVE statement, see the **z/OS Communications Server: IP Configuration Reference**.

**System action:** SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStreams

**EZA5141I Finish Open Timeout: seconds seconds**

Explanation: Displays the number of seconds SMTP waits while trying to establish a connection to a remote site. After the given amount of time, SMTP ends the connection. To change this setting, change the FINISHOPEN statement in hlq.SMTP.CONFIG. The default amount of time for the FINISHOPEN statement is 120 seconds. For more information on the FINISHOPEN statement, see the *z/OS Communications Server: IP Configuration Reference*.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStream

**EZA5142I Retry down sites every: minutes minutes**

Explanation: Displays the number of minutes SMTP waits between attempts to deliver mail to a host that is down. It is adjustable by using the RETRYINT statement in hlq.SMTP.CONFIG. The default time for the RETRYINT statement is 20 minutes. For more information on the RETRYINT statement, see the *z/OS Communications Server: IP Configuration Reference*.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStream

**EZA5143I Return mail older than: days days**

Explanation: Displays the number of days after which SMTP returns mail as undeliverable. SMTP returns the mail to the sender with a note listing recipients that did not receive the mail. To change the number of days, change the RETRYAGE statement in hlq.SMTP.CONFIG. The default number of days for the RETRYAGE statement is 3 days. For more information on the RETRYAGE statement, see the *z/OS Communications Server: IP Configuration Reference*.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStream

**EZA5144I Max Length of Accepted Mail: number bytes**

Explanation: Displays the maximum size, in bytes, of mail that is accepted over a TCP connection. To change the maximum size, change the MAXMAILBYTES statement in hlq.SMTP.CONFIG. The default for MAXMAILBYTES is 524 288 (512K) bytes. For more information on the MAXMAILBYTES statement, see the *z/OS Communications Server: IP Configuration Reference*.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStreams

**EZA5145I**  Translate Table : data set name / Compiled-in. Unable to load: data set name

Explanation: If SMTP is successful in loading the translation table data set, then the data set name is loaded and displayed. Otherwise, the other error message is displayed. See the z/OS Communications Server: IP Configuration Reference for information about managing SMTP translation tables.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStreams

**EZA5156E**  Unrecognized option in configuration file: option

Explanation: The indicated option is an incorrect configuration data set option. See the z/OS Communications Server IP Configuration Reference for information about the valid options.

System action: SMTP ends.
Operator response: No action is needed.
System programmer response: Correct the entry in the configuration data set, and try again.
Module: SMTP
Procedure Name: ProcessConfigFile

**EZA5157E**  Invalid LOG file destination: destination

Explanation: The LOGFILE DD statement is incorrect or absent. SMTP does not log the session.

System action: SMTP continues.
Operator response: Verify the presence of the LOGFILE DD statement in SEZAINST(SMTPPROC) and make sure the data set destination is correct. For more information on the LOGFILE DD statement and hlq.SMTP.CONFIG, see the z/OS Communications Server: IP Configuration Reference.
System programmer response: Assist the user as necessary.
Module: SMTP
Procedure Name: Error

**EZA5158E**  Invalid Address in Restricted List: address

Explanation: SMTP found an incorrect address in the RESTRICT list. Addresses should be in the form user_id@node_id, with the asterisk character (*) representing wild cards.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Correct the entry in the configuration data set, and try again.
Module: SMTP
Procedure Name: ProcessConfigFile
EZA5159E  Invalid Local Delivery Format: format

Explanation: An incorrect delivery format for the LOCALFORMAT option in the configuration data set was specified. The only valid delivery formats are NETDATA and PUNCH.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Correct the configuration data set, and restart SMTP.

Module: SMTP

Procedure Name: ProcessConfigFile

EZA5160E  Invalid NJE Delivery Format: format

Explanation: An incorrect option for the NJEFORMAT option in the configuration data set was specified. The only valid choices for this option are NETDATA or PUNCH.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Correct the configuration data set, and restart SMTP.

Module: SMTP

Procedure Name: ProcessConfigFile

EZA5161E  Invalid Disposition in Restrict command: command

Explanation: The disposition specified with the RESTRICT option is incorrect. Use only the valid options of PURGE, RETURN, and TRANSFERTO with the RESTRICT option.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Correct the entry in the configuration data set, and restart SMTP.

Module: SMTP

Procedure Name: ProcessConfigFile

EZA5162E  Invalid Address for Mailer: address

Explanation: The length of the user ID for the receiving address exceeds 8 characters, which is the maximum allowable MVS user ID length for the MAILER option.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Correct the entry in the configuration data set, and restart SMTP.

Module: SMTP

Procedure Name: ProcessConfigFile

EZA5163E  Invalid Max Mail Bytes: parameter

Explanation: The indicated parameter for the MAXMAILBYTES option was not a positive integer between 1 and 2 147 483 647.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Correct the configuration data set, and restart SMTP.

Module: SMTP
Procedure Name: ProcessConfigFile

EZA5164E   Invalid Post Master Userid: *userid*
Explanation: The indicated user ID does not exist for the POSTMASTER option in the configuration data set.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Check that this user ID exists. Otherwise, correct the SMTP configuration data set, specifying a valid user ID, and restart SMTP.
Module: SMTP
Procedure Name: ProcessConfigFile

EZA5165E   Invalid Badspoolfileid Userid: *userid*
Explanation: The reason for this message can be one of the following:
• The indicated user ID does not exist for the BADSPPOOLFILEID option in the configuration data set.
• The indicated user ID does not have proper authority.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Check that this user ID exists.
• If the user ID does not exist, correct the SMTP configuration data set, specifying a valid user ID, and restart SMTP.
• If the user ID does exist and RACF (or similar product) is used, ensure that the user ID has a security profile with create authority.
Module: SMTP
Procedure Name: ProcessConfigFile

EZA5167E   Invalid Transfer To Userid: *userid*
Explanation: The indicated user ID does not exist for the RESTRICT TRANSFERTO statement in the configuration data set.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Check that this user ID exists. Otherwise, correct the SMTP configuration data set by specifying a valid user ID. Correct any network errors, and restart SMTP.
Module: SMTP
Procedure Name: ProcessConfigFile

EZA5168E   Invalid Mailer Option: *option*
Explanation: The indicated option for the MAILER option in the configuration data set is not valid. See z/OS Communications Server: IP Configuration Reference for valid choices for the MAILER option.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Correct the configuration data set, and restart SMTP.
Module: SMTP
Procedure Name: ProcessConfigFile
EZA5169E  Invalid MailFileDSPrefix Option: option

Explanation: When editing the MAILFILEDSPREFIX statement in hlq.SMTP.CONFIG, the name can have a maximum of 20 characters. The characters must be either alphanumeric, or one of the following symbols: period (.), dollar sign ($), number sign (#), or at sign (@), and the name must meet data set name conventions. The default name for this prefix, used in place of the incorrect name, is the job that is running SMTP. For more information, see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/docs/en/zos?topic=ip-configuration-reference).

System action: SMTP continues.

Operator response: Correct the prefix name in the MAILFILEDSPREFIX statement to one that follows the guidelines specified above.

System programmer response: Assist the user as necessary.

Module: SMTP

Procedure Name: Error

EZA5170E  Invalid MailFileVolume Option: option

Explanation: The MAILFILEVOLUME statement in hlq.SMTP.CONFIG has an incorrect parameter. The name of the volume cannot exceed 6 characters. The option is ignored. For more information on hlq.SMTP.CONFIG and the MAILFILEVOLUME, see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/docs/en/zos?topic=ip-configuration-reference).

System action: SMTP continues.

Operator response: Correct the name of the volume name in the MAILFILEVOLUME statement in hlq.SMTP.CONFIG to have 6 or fewer characters.

System programmer response: Assist the user as necessary.

Module: SMTP

Procedure Name: Error

EZA5171E  Invalid MailFileUnit Option: data set name

Explanation: There are more than 8 characters specified in the name of the unit in the MAILFILEUNIT statement in hlq.SMTP.CONFIG file. For more information on the MAKEFILEUNIT statement and hlq.SMTP.CONFIG, see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/docs/en/zos?topic=ip-configuration-reference).

System action: SMTP continues.

Operator response: Edit the MAILFILEUNIT statement in hlq.SMTP.CONFIG to make the name of the new unit fewer than or equal to 8 characters.

System programmer response: Assist the user as necessary.

Module: SMTP

Procedure Name: Error

EZA5172E  Invalid TIMEZONE specified: time zone

Explanation: The TIMEZONE statement in hlq.SMTP.CONFIG contains an incorrect number of characters. The character string for the TIMEZONE statement can be 1 - 5 characters long. For more information on the TIMEZONE statement and hlq.SMTP.CONFIG, see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/docs/en/zos?topic=ip-configuration-reference).

System action: SMTP continues.

Operator response: Change the TIMEZONE statement in hlq.SMTP.CONFIG to a printable character string that is 1 - 5 characters long.

System programmer response: Assist the user as necessary.

Module: SMTP

Procedure Name: Error
EZA5175I Mail Logging:

Explanation: The LOG statement is present in hlq.SMTP.CONFIG. SMTP is outputting the mail status to the data set named or pointed to by the LOGFILE DD statement in SEZAINST(SMTPPROC).

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5176E LOGFILE DD card missing, NOLOG forced.

Explanation: The LOG statement was present in hlq.SMTP.CONFIG and there was no LOGFILE DD parameter in SEZAINST(SMTPPROC) specifying the name of the data set used for the mail logging. SMTP does not log the mail.

System action: SMTP continues.

Operator response: Change the LOGFILE DD statement in the SEZAINST (SMTPPROC) to a valid data set name. For more information on the LOGFILE DD statement and the configuring process, see the z/OS Communications Server: IP Configuration Reference.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5177E Invalid LocalClass Option: class

Explanation: The class specifies the spool class for local mail delivered by SMTP. The class specified in hlq.SMTP.CONFIG is more than 1 character long.

System action: SMTP continues.

Operator response: Change the LOCALCLASS statement in hlq.SMTP.CONFIG to a single character. This option is site-dependent. Ask the system administrator for site-dependent information.

System programmer response: Provide the user with site-dependent information as necessary. The default setting for the LOCALCLASS statement is B.

Module: SMTP

Procedure Name: Error

EZA5178E Invalid NJEClass Option: class

Explanation: More than 1 character was specified in the NJECLASS statement of hlq.SMTP.CONFIG. There can only be a single character specified. The NJECLASS statement specifies the spool class for mail delivered by SMTP to the NJE network. This option is site-dependent. Check with the system administrator for site-dependent information.

System action: SMTP continues.

Operator response: Change the NJECLASS option in hlq.SMTP.CONFIG to a single character specified by the system administrator. For more information on the NJECLASS statement, see the z/OS Communications Server: IP Configuration Reference.

System programmer response: Provide the user with site-dependent information as necessary. The default setting for the LOCALCLASS statement is B.

Module: SMTP

Procedure Name: Error
EZA5179I Debugging Enabled: yes | no

Explanation: Causes SMTP to record SMTP commands and replies in the data set specified in the SYSDEBUG DD statement. The SMTP connection number is recorded along with each SMTP command or reply. To change the data set pointed to, change the SYSDEBUG statement in SEZAINST(SMTPPROC). For more information on the DEBUG statement and the SYSDEBUG DD statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStreams

EZA5180E SYSDEBUG DD card missing, DEBUG option ignored.

Explanation: The DEBUG statement is present in hlq.SMTP.CONFIG, but there is no SYSDEBUG DD statement in SEZAINST(SMTPPROC). Debug is not enabled.

System action: SMTP continues.
Operator response: Put a SYSDEBUG DD statement in the SEZAINST(SMTPPROC) specifying the data set name for SMTP's replies to the DEBUG commands. For more information on the DEBUG statement, the SYSDEBUG DD statement, and custom configuring, see the z/OS Communications Server: IP Configuration Reference.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStreams

EZA5181E Invalid SpoolPollInterval: seconds

Explanation: The SPOOLPOLLINTERVAL statement has been incorrectly set. The appropriate values for the parameter of this statement are between 5 and 3600. The SPOOLPOLLINTERVAL statement specifies the interval for SMTP to check the spool for incoming spool files.

System action: SMTP continues.
Operator response: Change the parameter for the SPOOLPOLLINTERVAL statement in hlq.SMTP.CONFIG to a number between 5 and 3600. For more information on the SPOOLPOLLINTERVAL statement, see the z/OS Communications Server: IP Configuration Reference.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: Error

EZA5183I Spool Poll Interval: seconds seconds

Explanation: Displays the interval for SMTP to check the spool for incoming spool files. To change this setting, you must change the SPOOLPOLLINTERVAL statement in the hlq.SMTP.CONFIG data set. For more information on the SPOOLPOLLINTERVAL statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStreams
**EZA5185I**  Mail from restricted users: Purge / Return / Transfer To *id*

**Explanation:** Informs the user that they have received mail from a user not allowed to utilize the SMTP services. The mail is not delivered but action taken on the mail is displayed. To make a user unrestricted, delete the RESTRICT statement containing the user ID from `hlq.SMTP.CONFIG`. For more information on the RESTRICT statement and `hlq.SMTP.CONFIG`, see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/S53627_1.4.1.1/com.ibm.zos.v2r12.cics.doc/cics_smtpcfg.html).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5186I** Mail File Dataset Prefix: `prefix`

**Explanation:** Displays the prefix that is added to the SMTP mail data sets. Data sets with this prefix contain mail that is in the process of being received or delivered. All data sets are cataloged. To change the prefix, change the parameter of the MAILFILEPREFIX statement in the `hlq.SMTP.CONFIG` data set. The prefix can be up to 20 characters in length.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5187I** Mail File Unit Name: `unit name`

**Explanation:** Displays the unit where newly created SMTP mail data sets reside. To change this data set name, change the MAILFILEUNIT statement in the `hlq.SMTP.CONFIG` data set. Remember to use the data set naming guidelines in the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/knowledgecenter/S52808_1.4.1.1/com.ibm.zos.v2r12.cics.doc/cics_smtpcfg.html). For more information on the MAILFILEUNIT statement, see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/S53627_1.4.1.1/com.ibm.zos.v2r12.cics.doc/cics_smtpcfg.html).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5188I** Mail File Volume: `volume`

**Explanation:** Displays the volume that newly allocated SMTP mail data set reside. If the name of the volume is not specified, SMTP allocates a storage volume. If your system does not have storage volumes, you must specify a volume name in the `hlq.SMTP.CONFIG` data set. For more information on the MAILFILEVOLUME statement and the `hlq.SMTP.CONFIG` data set, see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/S53627_1.4.1.1/com.ibm.zos.v2r12.cics.doc/cics_smtpcfg.html).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams
EZA5189I  Local Output Class : class

Explanation: Displays the spool class for local mail delivered by SMTP. This option is site-dependent. Change the LOCALCLASS statement in the hlq.SMTP.CONFIG to change this setting. Ask the system administrator before setting to verify all site-dependent information. For more information on the LOCALCLASS statement and hlq.SMTP.CONFIG, see the [z/OS Communications Server: IP Configuration Reference].

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Provide user with all site-dependent information.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5190I  NJE Output Class : class

Explanation: Displays the spool class for mail delivered by SMTP to an NJE network. This option is site-dependent. To change this setting, change the NJECLASS statement in hlq.SMTP.CONFIG. Contact the system administrator before setting all site-dependent information. For more information on the NJECLASS statement and the hlq.SMTP.CONFIG data set, see the [z/OS Communications Server: IP Configuration Reference].

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5191I  REMOTEPORT for SMTP client : RemotePort

Explanation: The REMOTEPORT statement is optional in the SMTP configuration file. If this statement is not coded, then the default value is used by the SMTP client. If this statement is not coded, then the default value (25, which is the well-known port for mail) is used by the SMTP client.

See the information about the REMOTEPORT statement in [z/OS Communications Server: IP Configuration Reference] for more information.

In the message text:

RemotePort

A decimal value in the range 1 - 65534.

Examples: The following example is taken from the output file associated with the SMTP started task:

EZA5317I Listen on Address : Unspecified
EZA5139I Port for Server SMTP : 25
EZA5191I REMOTEPORT for SMTP client : 2000

In this example, the SMTP client will send mail to port 2000 and the local SMTP server will listen on port 25.

System action: SMTP continues.

Operator response: No action is needed.

User response: Not applicable

System programmer response: No action is needed.

Problem determination: None.

Source: z/OS Communications Server TCP/IP: SMTP

Module: SMTP

Routing code: None.
**EZA5192E**  INCORRECT REMOTEPORT SPECIFIED: number

**Explanation:** The number value displayed is the incorrect value, which was specified on the REMOTEPORT statement coded in the SMTP configuration file. This value represents the remote port number that the SMTP client uses to connect to an SMTP server for sending outbound mail. The value specified must be a decimal number in the range 1 - 65534.

In the message text:

*number*

The incorrect value that was specified on the REMOTEPORT statement.

**Examples:** The following is an example of the contents of the system console associated with the start of SMTP when the SMTP configuration file contains the statement REMOTEPORT 0:

```
$HASP373 SMTP STARTED
IEF403I SMTP - STARTED - TIME=15.24.47
EZY1876I SMTP STACK FUNCTIONS STARTED WITH PARAMETER SMTP,PARM=,
ERRFILE(SYSERR),NOSPIE/.
EZA5192E INCORRECT REMOTEPORT SPECIFIED: 0
EZY1877I SMTP STACK FUNCTIONS SHUTDOWN IS COMPLETE, RC = 0.
```

**System action:** SMTP ends.

**Operator response:** Contact the system programmer.

**User response:** Not applicable

**System programmer response:** Check the SMTP configuration file. On the REMOTEPORT statement, specify a decimal number in the range of 1 - 65534. See the information about the REMOTEPORT statement in z/OS Communications Server: IP Configuration Reference for more information.

**Problem determination:** See the system programmer response.

**Source:** z/OS Communications Server TCP/IP: SMTP

**Module:** SMTP

**Routing code:** 2,10

**Descriptor code:** 4

---

**EZA5195I**  Unknown Command: command

**Explanation:** The command that was received on the server is not valid. The following are the valid commands:

- DATA
- EXPN
- HELP
- HELO
- MAIL
- NOOP
- QUEU
- QUIT
- RCPT
- RSET
- SAML
- SEND
- SOML
- TICK
- TURN
- VERB
- VRFY

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** The sender should correct the syntax before resubmitting the command.

**Module:** SMTPCMDS

**Procedure Name:** NoSuchCommand
Explanation: This message is written to the debug data set and is normally accompanied by message EZA5200I. The DEBUG statement is present in hlq.SMTPCONFIG; SMTP is writing the command read to the data set specified by SYSDEBUG DD in SEZAINST(SMTPPROC) from a JES spool file created by the user. The DEBUG statement causes SMTP to record all commands and replies to a data set.

To turn the DEBUG statement on or off, include or exclude the statement in hlq.SMTPCONFIG. See the information about the DEBUG statement in z/OS Communications Server: IP Configuration Reference. Also, a privileged user can turn DEBUG mode on and off interactively by using the SMSG SMTP DEBUG/NODEBUG commands. See the information about the SMSG SMTP command for the privileged user in z/OS Communications Server: IP User’s Guide and Commands.

Tip: Connection number 257 represents the communication between SMTP and the MVS JES spool.

In the message text:

- **mm/dd/yy**
  - The current date in month/day/year format.

- **hh:mm:ss**
  - The current time in hours:minutes:seconds format.

Examples:

EZA5196I 257< mail from:<USER@myhost>
EZA5200I 257> 250 OK

System action: SMTP continues.
Operator response: No action is needed.
User response: No action is needed.
System programmer response: No action is needed.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPCMDS
Routing code: Not applicable.
Descriptor code: Not applicable.

Explanation: The DEBUG statement is present in the hlq.SMTPCONFIG data set and this message indicates that SMTP is writing the command to the data set specified in SEZAINST(SMTPPROC), by the SYSDEBUG statement. The DEBUG statement causes SMTP to record SMTP commands and replies to a data set. For more information on the DEBUG statement and the configuring data sets, see the z/OS Communications Server: IP Configuration Reference.

In the message text:

- **mm/dd/yy**
  - The current date in month/day/year format.

- **hh:mm:ss**
  - The current time in hours:minutes:seconds format.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPCMDS
Procedure Name: PrintResQueue
Module: SMTPUTIL

Procedure Name: SendReply

**EZA5201I**  
*date time Looping Mail Transferred to userid*

**Explanation:** SMTP sends this message to the console error log to show that SMTP encountered a looping mail condition. This condition exists because the number of mailing attempts has exceeded the looping mail threshold limit. The mail in question is transferred to the indicated user ID.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** Examine the piece of looping mail to see which user ID is causing the error. Because this error frequently occurs between the SMTP server and a MAILER, examine both for configuration errors.

Module: SMTPBATCH

Procedure Name: MakeBatchSMTPErrorFile

**EZA5201I**  
*date time Rcpt to unknown host: host*

**Explanation:** An RCPT TO: command was issued to the indicated host machine, and the SMTP server received a negative reply from a Domain Name Server. If the SMTP server is not using a Domain Name Server, the server could not find the indicated host name in the site tables.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** If the host name exists, check the Domain Name Server or site tables for configuration errors, and resend the mail message.

Module: SMTPRES

Procedure Name: ProcessRQR

**EZA5201I**  
*date time Rejecting command line too long*

**Explanation:** The argument string supplied after a command keyword exceeds the maximum allowable argument string length of 512 characters.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** If the error persists, determine which host is sending the incorrect command line, and correct the SMTP server.

Module: SMTPCMDS

Procedure Name: DoCommand

**EZA5201I**  
*date time Syntax Error: args after command command: command_line*

**Explanation:** SMTP sends this message to the server console when SMTP receives an incorrect DATA, QUIT, RSET, NOOP, TURN, or QUEU command. This message shows that the arguments with these commands are incorrect and unnecessary. The incorrect argument string is indicated at the end of the message.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** The sender should either correct the syntax before resubmitting the command, or issue the HELP command.

Module: SMTPCMDS

Procedure Name: DoCommand
DNS response was truncated so a name cannot be resolved

**Explanation:** SMTP received a response to a domain name server (DNS) query. The response was truncated because it was too large to fit in a UDP packet. SMTP supports only the UDP protocol for name resolution. Because the DNS response was incomplete, it was discarded. As a result, the mail messages remain on the resolver queues and will be retried. This message will be generated only the first time the situation is detected.

In the message text:

- **mm/dd/yy**
  - The date (month/day/year) when the DNS response was received.
- **hh:mm:ss**
  - The time (hours:minutes:seconds) when the DNS response was received.

**Examples:** SMTP output file with resolver traces active:

```plaintext
EZA5208E 02/03/11 13:25:08 DNS response was truncated so a name cannot be resolved
```

System console:

```plaintext
$HASP100 SMTP ON STCINRDR
IEF695I START SMTP WITH JOBNAME SMTP IS ASSIGNED TO USER IBMUSER, GROUP SYS1
$HASP373 SMTP STARTED
IEF403I SMTP - STARTED - TIME=13.40.18
EZY1876I SMTP STACK FUNCTIONS STARTED WITH PARAMETER SMTP,PARM=,ERRFILE(SYSERR),NOSPUE.
EZA5208E 02/03/11 13:40:20 DNS response was truncated so a name cannot be resolved
```

**System action:** SMTP continues.

**Operator response:** None.

**User response:** Not applicable.

**System programmer response:** Contact the administrators for the DNS and inform them of the problem. If the problem can be resolved at the DNS, SMTP will automatically recover because it will try the DNS query again. The retry time of the DNS query depends on your SMTP configuration setting. See the RESOLVERRETRYINT statement in z/OS Communications Server: IP Configuration Reference.

If you are using the IPMAILERNAME statement and the problem cannot be resolved at the DNS, you can switch to using the IPMAILERADDRESS statement and you want all the mail sent to that address, set the RESOLVERUSAGE statement to NO. See the SMTP configuration statements IPMAILERNAME and IPMAILERADDRESS in z/OS Communications Server: IP Configuration Reference.

You can determine whether the problem is resolved by entering the TSO command SMSG <SMTP_STARTED_TASK_NAME> QUEUE. If the problem is resolved, the number of mail messages on the resolver queues will decrease.

**Problem determination:** If you are using multiple DNS servers, you might need to determine which server returned this response. You can dynamically activate resolver traces by entering the TSO command SMSG <SMTP_STARTED_TASK_NAME> TRACE. Review the resolver traces in the SMTP output file. Look for message EZA5526I, which contains the DNS query number, to determine which DNS is issuing this response and what name is being resolved.

**Source:** z/OS Communications Server TCP/IP: SMTP

**Module:** SMTPRES

**Routing code:** 2, 10

**Descriptor code:** 4

**Automation:** This message is a candidate for automation. You can use this message to alert you to a DNS problem.
**EZA5209I** Local Time Zone : `time zone`

**Explanation:** Displays the local time zone. To change the time zone, change the TIMEZONE statement in `hlq.SMTP.CONFIG`. The time zone must be exactly 3 characters. The default time zone is LCL. For more information on the TIMEZONE statement, see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/systems/z/os/zos/bkserv.html).

**System action:** SMTP continues.

**Operator response:** No action is needed.

---

**EZA5210E** Bad format SMTPNJE.HOSTINFO file found. Please run SMTPNJE

**Explanation:** The format must be updated, so run SMTPNJE.

**System action:** SMTP continues.

**Operator response:** Run the SMTPNJE program.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** AmpXAloc

---

**EZA5212I** `mm/dd/yy hh:mm:ss connection_number Data arrived while Sending Mail Body:`

**Explanation:** The DEBUG statement is present in `hlq.SMTP.CONFIG` and SMTP is writing this reply to the data set pointed to or named in SEZAINST(SMTPPROC) under the SYSDEBUG DD statement. For more information on the DEBUG statement, see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/systems/z/os/zos/bkserv.html).

In the message text:

- `mm/dd/yy` The current date in month/day/year format.
- `hh:mm:ss` The current time in hours:minutes:seconds format.

**System action:** SMTP continues.

**Operator response:** To view the commands and the responses, view the data set specified or pointed to by SEZAINST(SMTPPROC).

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** MarkForExpirationCheck

---

**EZA5213I** `received_text`

**Explanation:** This message is a continuation of the information in message EZA5212I and contains the data that arrived from the remote server.

In the message text:

- `received_text` The data that was received from the remote server.

**Examples:**

EZA5213I Exceeded bad SMTP command limit, disconnecting.
System action: SMTP continues.
Operator response: None.
User response: Not applicable.
System programmer response: Take action based on the information in the received text.
Problem determination: Not applicable.
Module: SMTP
Routing code: 10
Descriptor code: 12
Automation: Not applicable.

EZA5214I received_text

Explanation: This message is a continuation of the information in message EZA5212I and contains the data that arrived from the remote server.
In the message text:
received text
The data that was received from the remote server

Examples:
EZA5214I Exceeded bad SMTP command limit, disconnecting.
System action: SMTP continues.
Operator response: None.
User response: Not applicable.
System programmer response: Take action based on the information in the received text.
Problem determination: Not applicable.
Module: SMTP
Routing code: 10
Descriptor code: 12
Automation: Not applicable.

EZA5215I received_text

Explanation: This message is a continuation of the information in message EZA5212I and contains the data that arrived from the remote server.
In the message text:
received text
The data that was received from the remote server

Examples:
EZA5215I Exceeded bad SMTP command limit, disconnecting.
System action: SMTP continues.
Operator response: None.
User response: Not applicable.
System programmer response: Take action based on the information in the received text.
Problem determination: Not applicable.
Module: SMTP
EZA5216I • EZA5218E

Routing code: 10
Descriptor code: 12
Automation: Not applicable.

---

**EZA5216I**  
*EZA5218E*  

**Explanation:** SMTP has closed the connection because the time allotted for inactivity has passed. This message is written to the data set specified in the SYSDEBUG DD statement in SEZAINST(SMTPPROC). To change the amount of time given before SMTP closes the connection, change the INACTIVE statement in hlq.SMTP.CONFIG. For more information on the INACTIVE statement, see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/pages/zos-communications-server-ip-configuration-reference).

In the message text:

- **mm/dd/yy**  
  The current date (month/day/year).

- **hh:mm:ss**  
  The current time (hours:minutes:seconds).

**System action:** SMTP closes the connection.

**Operator response:** To use SMTP again, restart the program.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** MarkForExpirationCheck

---

**EZA5217E**  
**Invalid numeric operand found:** *number*

**Explanation:** The number entered was either too large or contained incorrect numbers. The numeric operand cannot have more than 10 digits and it cannot exceed 2 147 483 647. Also, there can be nothing but digits between 0 and 9 composing the operand.

**System action:** SMTP continues.

**Operator response:** Verify that the number entered follows the above guidelines.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** Error

---

**EZA5218E**  
**Invalid ServerPort specified:** *port*

**Explanation:** The port number specified in the PORT statement of the *hlq.PROFILE.TCPIP* and the *hlq.SMTP.CONFIG* data sets must be in the range of 1 - 6 55 3 4 and they must both be of equal value. The default port number for both configuration data sets is 25.

**System action:** SMTP continues.

**Operator response:** Change the PORT statement in the *hlq.PROFILE.TCPIP* or the *hlq.SMTP.CONFIG* data sets to be of equal value. For more information on the PORT statement, the *hlq.PROFILE.TCPIP*, and the *hlq.SMTP.CONFIG* data sets see the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/pages/zos-communications-server-ip-configuration-reference).

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** Error

---

302  
*z/OS V1R13.0 Comm Svr: IP Messages Volume 1 (EZA)*
Explanation: The quit command has been entered, and SMTP is in the process of closing the connection, so the commands issued after it is ignored.

In the message text:

`mm/dd/yy`  
The current date in the month/day/year format.

`hh:mm:ss`  
The current time in the hours:minutes:seconds format.

**System action:** SMTP continues closing the connection.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** MarkForExpirationCheck

---

**EZA5222I mm/dd/yy hh:mm:ss NonExistent: rc**

Explanation: The connection no longer exists for the specified return code reason. The connection could have been dropped because of a software error on the remote SMTP server or because of a routing or connectivity problem in the internet network.

In the message text:

`mm/dd/yy`  
The current date in the month/day/year format.

`hh:mm:ss`  
The current time in the hours:minutes:seconds format.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** Normally, no action is necessary. The mail is delivered automatically at a later time when connectivity is restored. If the error persists, check for a software error in the remote SMTP server or for an error in the piece of mail itself. For example, if a user tries to send a binary piece of SMTP mail, some hosts’ SMTP servers malfunction or abnormally close the connection.

**Module:** SMTPEVNT

**Procedure Name:** CloseCompletedEvent

---

**EZA5222I StoreData: entering “discard” mode**

Explanation: SMTP sends the message to the local console to show that the sender’s mail data set exceeded the maximum length specified by the MAXMAILBYTES option in the hlq.PROFILE.TCPIP data set. The excessively large mail data set is erased. This message is issued before the message that confirms the erasing of the data set.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** Tell the sender to shorten the mail data set or to subdivide the data set into shorter data sets that are within the existing MAXMAILBYTES limitation. Increase the MAXMAILBYTES option value in the SMTPCONFIG configuration data set, and tell the sender to try again.

**Module:** SMTPEVNT

**Procedure Name:** StoreData
**EZA5223I**  StoreData: leaving “discard” mode

**Explanation:** SMTP sends this message to the local console to show that the sender’s mail data set exceeded the maximum length specified by the MAXMAILBYTES option in the hlq.PROFILE.TCPIP data set. This message also verifies that an attempt was made to return a message to the mail sender to inform the sender of a configuration problem on the receiving machine. The mail data set being processed is discarded.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** Tell the sender to shorten the mail data set or to subdivide the data set into shorter data sets that are within the existing MAXMAILBYTES limitation. Increase the MAXMAILBYTES option value in the SMTP.CONFIG configuration data set, and tell the sender to try again.

**Module:** SMTPEVNT

**Procedure Name:** StoreData

---

**EZA5225I**  Resolver tracing : Enabled/Disabled

**Explanation:** Displays the status of the resolver tracer. The tracer causes a complete trace of all queries to and responses from the name server to be written on the user’s console. To toggle between Enabled and Disabled, use the TRACE RESOLVER statement in the TCPIP.DATA file. The TRACE RESOLVER statement is used for debugging purposes only. For more information on the TRACE RESOLVER statement, see the z/OS Communications Server: IP Configuration Reference.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5228I**  Name Resolution Method **method**

**Explanation:** This message displays the method that SMTP uses for name resolution. The method selected is dependent on the value associated with the RESOLVERUSAGE statement in the SMTP configuration file and whether NSINTERADDR statement is coded in the TCPIP.DATA file for a name server.

method is one of the following:

- **Host Tables**
  Indicates that RESOLVERUSAGE is YES and no name server is configured in the TCPIP.DATA file

- **Nameserver, Port port_number**
  Indicates that RESOLVERUSAGE is YES and one or more name servers are configured in the TCPIP.DATA file. port_number is the port number of the name server.

- **IPMAILERADDRESS or MAILER statement**
  Indicates that RESOLVERUSAGE is NO. The mail is directed to either to the IP address associated with the IPMAILERADDRESS statement or to the mailer associated with the MAILER statement in the SMTP configuration file.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams
EZA5231I Nameserver Address (port number): address

Explanation: Displays the name server's address and its corresponding port number.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5232I Nameserver Response Timeout: seconds seconds.

Explanation: Displays the amount of time that is allotted for the name server to respond before the resolver closes the connection. To change the number displayed, change the RESOLVERTIMEOUT statement in TCPIP.DATA. For more information on the RESOLVERTIMEOUT statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5233I Resolver Retry Interval: minutes minutes

Explanation: Displays the number of minutes SMTP waits between attempts to resolve domain names. To change this value, change the RESOLVERRETRYINT statement in hlq.SMTP.CONFIG. For more information on the RESOLVERRETRYINT statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5234I UDP Retries/Nameserver/Interval: seconds

Explanation: To change this value, change the UDPRETRYINTERVAL command in hlq.NSMAIN.DATA. The UDPRETRYINTERVAL command specifies the amount of time the name server should wait before sending a query to another name server. The default for this command is 5 seconds. For more information on the UDPRETRYINTERVAL command, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5235I RCPT TO: response delay: seconds seconds

Explanation: Displays how long the SMTP server delays responding to the RCPT commands from the sender SMTP, while it is waiting for domain name resolution. If resolution does not occur before the specified time, the server assumes the name resolution is successful and queues the recipient address for asynchronous resolution. SMTP also sends the following message to the sender SMTP: 250 ok. The mail is returned to the sender if SMTP later determines
that the recipient address cannot be resolved. To change this delay, change the RCPTRESPONSEDELAY statement in SMTP/SMTP.CONFIG. For more information on the RCPTRESPONSEDELAY statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5236I Max Temporary Error Retries: Disabled / number

Explanation: Displays the maximum number of times SMTP tries to redeliver mail to a host with a temporary problem. If the number of retries is 0, “Disabled” is displayed. Otherwise, the value for the TEMPERRORRETRIES statement is displayed. To change this value, change the TEMPERRORRETRIES statement in hlq.SMTP.CONFIG. For more information on the TEMPERRORRETRIES statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5240E Option Conflict: SECURE and RESTRICT may not both be specified

Explanation: The options SECURE and RESTRICT cannot be used together because they are incompatible.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Correct the configuration data set, and restart SMTP.

Module: SMTP

Procedure Name: ProcessConfigFile

EZA5241E Invalid DBCS Option: option

Explanation: An invalid option has been specified in the hlq.SMTP.CONFIG data set for the DBCS statement. DBCS conversion is disabled.

System action: SMTP continues.

Operator response: Specify a valid option for the DBCS statement and restart SMTP. See z/OS Communications Server: IP Configuration Reference for more information about configuring DBCS support for the SMTP server.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: Error

EZA5242E Invalid Kanji shift-in Option: option

Explanation: An invalid shift-in option has been specified in the hlq.SMTP.CONFIG data set for the DBCS statement. The valid shift-in options for the JIS78KJ and JIS83KJ conversion types are ASCII and JISROMAN. DBCS conversion is disabled.

System action: SMTP continues.

Operator response: Specify a valid shift-in option for the DBCS statement and restart SMTP. See z/OS Communications Server: IP Configuration Reference for more information about configuring DBCS support for the SMTP server.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: Error
Communications Server: IP Configuration Reference for more information about configuring DBCS support for the SMTP server.

System programmer response: No action is needed.
Module: SMTP
Procedure Name: Error

EZA5243E Too Many ALTTCPHOSTNAME statements - limit is number
Explanation: The number of alternative TCP host name options selected exceeds the maximum number allowed. The maximum number allowed is indicated at the end of the message; the default is 16.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Reduce the number of ALTTCPHOSTNAME statements in the configuration data set, or increase the MaxAltOurNames parameter to the required number. Restart SMTP.
Module: SMTP
Procedure Name: ProcessConfigFile

EZA5256I Alternate TCP Domain Name number: domain name
Explanation: Displays the alternate, fully qualified host name by which SMTP recognizes the local host. To change the alternate domain name, change the ALTTCPHOSTNAME statement in hlq.SMTP.CONFIG. There can be up to 16 alternate host names. For more information on the ALTTCPHOSTNAME statement, see the z/OS Communications Server: IP Configuration Reference.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStreams

EZA5257I Alternate TCP Domain Name number: domain name
Explanation: Displays the alternate, fully qualified host name by which SMTP recognizes the local host. To change the alternate domain name, change the ALTTCPHOSTNAME statement in hlq.SMTP.CONFIG. There can be up to 16 alternate host names. For more information on the ALTTCPHOSTNAME statement, see the z/OS Communications Server: IP Configuration Reference.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: OpenOutputStreams

EZA5258I Protocol Error. I= I Bytes Received = bytes
Explanation: This message is sent to the local console to show that the sender’s mail was not successfully delivered because of a protocol Recoverable error. The SMTP server received the string, \r\n<CR><LF><CR><LF>, followed by additional data. The string, \r\n<CR><LF><CR><LF>, is used to specify the end of the data; thus, the client SMTP server is in error. The data is accepted, and the client SMTP server waits for an additional \r\n<CR><LF><CR><LF> string.
System action: SMTP continues.
Operator response: No action is needed.
**EZA5259I**  •  **EZA5263I**

**System programmer response:** Describe the error to the postmaster of the SMTP server that is sending the incorrectly formatted mail.

**Module:** SMTPEVNT

**Procedure Name:** StoreDataTableErrors

---

**EZA5259I**  **Reply Line too long**

**Explanation:** SMTP sends this message to the server console to show that a remote SMTP server’s response exceeded the 512-byte limitation specified by RFC 821. SMTP accepts the reply and truncates it to 512 bytes. See Appendix B, “Related protocol specifications,” on page 655 for information about accessing RFCs.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** If the error persists, notify the postmaster of the remote SMTP server the SMTP server is sending replies that are greater than the 512-byte limit.

**Module:** SMTPRPLY

**Procedure Name:** DoReply

---

**EZA5260I**  **Rewrite 822 Mail Headers: Enabled using rules from data set/Enabled using default rules/Disabled**

**Explanation:** Displays the status of the REWRITE822HEADER statement in hlq.SMTPE.CONFIG. The REWRITE822HEADER statement specifies whether SMTP should rewrite or print the RFC 822 headers of mail arriving from the NJE side of the mail gateway. There are 3 possible combinations of parameters in this statement. For a description of these combinations, and more information on the REWRITE822HEADER statement, see the z/OS Communications Server: IP Configuration Reference. See Appendix B, “Related protocol specifications,” on page 655 for information about accessing RFCs.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5263I**  **DBCS Conversion: conversion_status**

**Explanation:** This message indicates the DBCS conversion status for the SMTP server at initialization time. The status indicates the DBCS conversion type that will be used when transferring mail, or “disabled,” if DBCS conversion is not configured, or if the required DBCS translation table could not be loaded. DBCS conversion is either enabled, or disabled, according to the displayed status. For a detailed explanation of the DBCS conversion_status, see messages EZA5446N - EZA5456N.

**System action:** SMTP continues.

**Operator response:** If the status is “disabled,” and a DBCS translation table could not be loaded, then configure a valid DBCS binary translate table data set in the search order hierarchy for the required DBCS translation table. See z/OS Communications Server: IP Configuration Reference for more information about the loading and customizing of DBCS translation tables.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams
EZA5264I  Alternate RSCS Domain Name : domain name

Explanation: Displays the alternate domain name of the NJE network when SMTP is running as a mail gateway. It can be specified only once. To change this value, change the ALTNJEDOMAIN statement in hlq.SMTP.CONFIG. For more information on the ALTNJEDOMAIN statement, see z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5265I Warn about mail older than : days days

Explanation: Displays how many days until SMTP returns mail to the sender with a header indicating the mail has been undeliverable for WARNINGAGE days. To change this value, change the WARNINGAGE statement in hlq.SMTP.CONFIG. For more information on the WARNINGAGE statement and hlq.SMTP.CONFIG, see z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5272I Deliver via: punch/netdata SR/NoSR Mailer temp: user ID@node ID local/NJE/unknown Addresses

Explanation: Displays the format, source route status, the mailer state, and the addresses. To change any of these, consult z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5284E Invalid value seconds specified for Inactive. Default used.

Explanation: There is an incorrect value for the INACTIVE statement in hlq.SMTP.CONFIG. The INACTIVE statement specifies the number of seconds of inactivity after which SMTP considers the connection to be dead. The connection is then closed. The correct range for the INACTIVE statement is between 0 and 86 400 seconds. SMTP uses 180 for the INACTIVE statement's value. For more information on the INACTIVE statement, see z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: Change the INACTIVE statement in hlq.SMTP.CONFIG to a correct value.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: DoFinalChecks
EZA5285E    Invalid value seconds specified for FinishOpen. Default used.

Explanation: There is an incorrect value in the FINISHOPEN statement in hlq.SMTP.CONFIG. The value must be between 0 and 86 400 seconds. SMPT uses 120 seconds as the value for FINISHOPEN. This statement specifies the number of seconds SMTP waits while trying to establish a connection to a remote site. After the time has passed, the connection is ended by SMTP. For more information on the FINISHOPEN statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: Change the FINISHOPEN statement in hlq.SMTP.CONFIG to a correct value. If the default value is acceptable, remove the FINISHOPEN statement.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: DoFinalChecks

---

EZA5286E    Invalid value days specified for RetryAge. Default used.

Explanation: An incorrect value for the RETRYAGE statement in hlq.SMTP.CONFIG was used. The value must be between 0 and 365 days. The RETRYAGE statement specifies the number of days after which SMTP returns mail as undeliverable. SMTP uses 3 days as the value for the RETRYAGE statement. For more information on the RETRYAGE statement and hlq.SMTP.CONFIG, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: Change the parameter in the RETRYAGE statement in hlq.SMTP.CONFIG to a correct value.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: DoFinalChecks

---

EZA5287E    Invalid value minutes specified for RetryInt. Default used.

Explanation: The value of the RETRYINT statement must be between 0 and 1440 minutes. The RETRYINT statement specifies the number of minutes SMTP should wait between attempts to deliver the mail to a TCP host that is down. SMPT uses 20 minutes for the value of the RETRYINT statement. For more information on the RETRYINT statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: Change the RETRYINT statement in hlq.SMTP.CONFIG to a correct value.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: DoFinalChecks

---

EZA5288E    Invalid value minutes specified for ResolverRetryInt. Default used.

Explanation: An incorrect value was used for the RESOLVERRETRYINT statement in hlq.SMTP.CONFIG. This statement specifies the number of minutes SMTP waits between attempts to resolve domain names. The value for the RESOLVERRETRYINT statement must be between 0 and 1440 minutes. SMTP uses 20 minutes for the value of the RESOLVERRETRYINT statement. For more information on the RESOLVERRETRYINT statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: Change the RESOLVERRETRYINT statement in hlq.SMTP.CONFIG.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: DoFinalChecks
Invalid value specified for ReptResponseDelay. Default used.

Explanation: The error is caused either by an incorrect value of less than 0 or greater than 86 400, or because NSInterAddr is not coded in the TCPIP.DATA data set. SMTP uses a default of 60.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Correct the SMTP configuration data set or the TCPIP.DATA data set.
Module: SMTP
Procedure Name: ProcessConfigFile

Invalid value specified for TempErrorRetries. Default used.

Explanation: The value of the TEMPERRORRETRIES statement in hlq.SMTP.CONFIG must be either 0 or positive. This statement specifies the number of times SMTP tries to redeliver mail to a host with a temporary problem. SMTP uses the default value for the TEMPERRORRETRIES statement.

System action: SMTP continues.
Operator response: Correct the TEMPERRORRETRIES statement only when mail servers repeatedly terminate abnormally or hang SMTP mail transactions. If a change is necessary, change the TEMPERRORRETRIES statement in hlq.SMTP.CONFIG. For more information on the TEMPERRORRETRIES statement, see the z/OS Communications Server: IP Configuration Reference.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: DoFinalChecks

Invalid value specified for Inactive.

Explanation: The value for the INACTIVE statement was less than 0. This statement specifies the number of seconds of inactivity after which SMTP considers the connection dead. After the specified amount of inactive time, SMTP closes the connection. SMTP continues using the default value for the INACTIVE statement.

System action: SMTP continues.
Operator response: Change the INACTIVE statement in hlq.SMTP.CONFIG to a valid positive number. For more information on the INACTIVE statement, see the z/OS Communications Server: IP Configuration Reference.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: Error

Invalid value specified for FinishOpen.

Explanation: The FINISHOPEN statement specifies the number of seconds SMTP waits while trying to establish a connection to a remote site. After the specified number of seconds, SMTP ends the connection. The parameter for this statement must be between 1 and 86 400 seconds. The default value for this statement is 120 seconds. For more information on the FINISHOPEN statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.
Operator response: Change the FINISHOPEN statement in hlq.SMTP.CONFIG.
System programmer response: No action is needed.
Module: SMTP
Procedure Name: Error
EZA5296E Invalid value number for RetryAge.

Explanation: The RETRYAGE statement in hlq.SMTP.CONFIG must be positive. This statement specifies the number of days after which SMTP returns mail as undeliverable. SMTP uses the default value for the RETRYAGE statement, which is 3 days. For more information on the RETRYAGE statement and hlq.SMTP.CONFIG, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: Change the RETRYAGE statement in hlq.SMTP.CONFIG to a correct value.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: Error

EZA5297E Invalid value minutes specified for RetryInt.

Explanation: The RETRYINT statement in hlq.SMTP.CONFIG must contain a positive value. This statement specifies the number of minutes SMTP should wait between attempts to deliver mail to a TCP host that is down. The range of correct values for the RETRYINT statement is 0 and 1440 minutes. SMTP uses the default for the RETRYINT statement, which is 20 minutes. For more information on the RETRYINT statement and hlq.SMTP.CONFIG, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: Change the RETRYINT statement in hlq.SMTP.CONFIG to a correct value.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: Error

EZA5298E Invalid value minutes specified for ResolverRetryInt.

Explanation: The value for the RESOLVERRETRYINT statement must be a positive number. This statement specifies the number of minutes SMTP waits between attempts to resolve domain names. SMTP uses the default value for the RESOLVERRETRYINT statement, which is 20 minutes. For more information on the RESOLVERRETRYINT statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: Change the RESOLVERRETRYINT statement in hlq.SMTP.CONFIG to a positive, correct value.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: Error

EZA5299E Invalid value number specified for RcptResponseDelay

Explanation: The value for the RCPTRESPONSEDELAY statement must be positive. This statement specifies how long the SMTP server delays responding to the RCPT commands from the sender SMTP. While it is waiting for domain name resolution. If resolution does not complete before the specified period, the SMTP server assumes name resolution is successful and sends a reply code of 250 ok. to the sender SMTP and queues the recipient address for asynchronous resolution. If the name resolution is later determined to be unresolved, the mail is returned to the sender. SMTP uses the default value for the RCPTRESPONSEDELAY statement, which is 60 seconds. For more information on this statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: Change the parameter of the statement to a correct, positive value in hlq.SMTP.CONFIG.

System programmer response: No action is needed.

Module: SMTP
Procedure Name: Error

EZA5300E Invalid value number specified for TempErrorRetries.

Explanation: The value for the TEMPERRORRETRIES in hlq.SMTP.CONFIG must be a positive number. SMTP uses the default settings for the TEMPERRORRETRIES statement. For more information on the TEMPERRORRETRIES statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: Enter a correct, positive number in the TEMPERRORRETRIES statement in hlq.SMTP.CONFIG.

System programmer response: Assist the user as necessary.

Module: SMTP

Procedure Name: Error

EZA5301E Invalid value days specified for WarningAge.

Explanation: An incorrect value was specified for the WARNINGAGE statement. SMTP uses the default setting. For more information on the WARNINGAGE statement and hlq.SMTP.CONFIG see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: Change the WARNINGAGE statement in hlq.SMTP.CONFIG to a valid number.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: Error

EZA5302E OLD Option of Mailer statement no longer supported.

Explanation: This message only occurs when TCPIP parses the hlq.SMTP.CONFIG data set. The OLD parameter to the MAILER statement is no longer valid. If you are updating from an earlier release of TCP/IP, be aware that in Version 3 it is an error to specify OLD in the MAILER statement.

System action: The SMTP server halts until the error is corrected.

Operator response: No action is needed.

System programmer response: Remove the OLD parameter from the MAILER statement in your hlq.SMTP.CONFIG data set and reinitialize SMTP.

Module: SMTP

Procedure Name: Error

EZA5303E Invalid Address in SMSG Authorization List: address

Explanation: A syntax error has been found in the address of the local user ID you entered as a parameter to the SMSGAUTHLIST statement in your hlq.SMTP.CONFIG data set.

System action: The SMTP server halts until the error is corrected.

Operator response: No action is needed.

System programmer response: Correct the address that you entered in the SMSGAUTHLIST statement and reinitialize SMTP.

Module: SMTP

Procedure Name: Error
EZA5311E  LOOPINGMAIL statement no longer valid. Please use the BADSPOOLFILEID statement

Explanation: Earlier versions of TCP/IP used the LOOPINGMAIL statement to specify a user ID on the local system where SMTP transfers unreadable spool files and looping mail. This statement has been replaced by the BADSPOOLFILEID statement in Version 3.

System action: The SMTP server is halted until the statement is corrected.

Operator response: No action is needed.

System programmer response: Replace the LOOPINGMAIL statement with an equivalent BADSPOOLFILEID statement in your hlq.SMTP.CONFIG data set and reinitialize SMTP.

Module: SMTP
Procedure Name: Error

---

EZA5312E  Only one POSTMASTER statement may be specified in SECURE mode

Explanation: If you have entered a SECURE statement in your hlq.SMTP.CONFIG data set, you can only use one POSTMASTER statement, and you can only specify a local user ID as the recipient of mail addressed to POSTMASTER.

System action: The SMTP server is halted until the error is corrected.

Operator response: No action is needed.

System programmer response: Make sure that you list only one POSTMASTER statement in your hlq.SMTP.CONFIG data set. Also make sure that you specify a local user ID instead of a user address. Reinitialize SMTP.

Module: SMTP
Procedure Name: Error

---

EZA5313E  Invalid POSTMASTER address: address

Explanation: The NJE or SMTP address in the POSTMASTER statement of your hlq.SMTP.CONFIG data set is incorrect.

System action: The SMTP server is halted until the error is corrected.

Operator response: No action is needed.

System programmer response: Make sure that you have entered a correct, valid local user ID or a correct, valid NJE or SMTP address as part of your POSTMASTER statement. Reinitialize SMTP.

Module: SMTP
Procedure Name: Error

---

EZA5314E  In SECURE mode, POSTMASTER address must be a valid local userid

Explanation: If you have entered a SECURE statement in your hlq.SMTP.CONFIG data set, then the POSTMASTER statement you use must take the form of a valid local user ID. You cannot enter a user address if you are in the SECURE mode.

System action: The SMTP server is halted until the error is corrected.

Operator response: No action is needed.

System programmer response: Make sure to enter only one valid local user ID in your POSTMASTER statement, then reinitialize SMTP. See also message EZA5312I.

Module: SMTP
Procedure Name: Error
EZA5315E  Expecting ‘PRINT’ or ‘NOPRINT’ after ‘REWRITE822HEADER YES’ statement

Explanation: If you entered a REWRITE822HEADER YES statement in your hlq.SMTP.CONFIG data set, you must also enter the PRINT parameter or the NOPRINT parameter for the RFC 822 headers. See Appendix B, “Related protocol specifications,” on page 655 for information about accessing RFCs.

System action: The SMTP server is halted until the error is corrected.

Operator response: After the REWRITE822HEADER YES statement, enter PRINT or NOPRINT, depending on whether you want the RFC 822 headers to display on your console. For more information, see z/OS Communications Server: IP Configuration Reference.

System programmer response: No action is needed.

Module: SMTP
Procedure Name: Error

EZA5317I  Listen on Address : Unspecified

Explanation: The LISTENONADDRESS configuration statement of the hlq.SMTP.CONFIG data set was used without the IP address specified. The LISTENONADDRESS statement defines which HOME IP address to use for a multihomed system.

System action: SMTP continues.

Operator response: Reissue the LISTENONADDRESS statement specifying a HOME IP address. For more information about the LISTENONADDRESS statement, see the z/OS Communications Server: IP Configuration Reference.

System programmer response: No action is needed.

Module: SMTP
Procedure Name: OpenOutputStreams

EZA5318I  Listen on Address : IP address

Explanation: The LISTENONADDRESS statement of the hlq.SMTP.CONFIG data set is parsed and the indicated IP address is confirmed. For more information about the LISTENONADDRESS statement, see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP
Procedure Name: OpenOutputStreams

EZA5319I  Outbound Open Session Limit : None

Explanation: The OUTBOUNDOPENLIMIT statement limits the number of simultaneous TCP connections in use for mail delivery. The default value is 0. For more information, see z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP
Procedure Name: OpenOutputStreams
**EZA5320I • EZA5324I**

**EZA5320I**  
**Outbound Open Session Limit : outbound open limit**

**Explanation:** If you have specified the number of connections as a parameter to the OUTBOUNDOPENLIMIT statement in your hlq.SMTP.CONFIG data set, this message displays the limit set. The OUTBOUNDOPENLIMIT statement should only be used if limited TCP resources exist on the system and SMTP is using an undue portion of those resources.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5321I**  
**SMSG Authorization List : None**

**Explanation:** You have not authorized any local users to issue privileged SMTP SMSG commands. Only users specified in the SMSGAUTHLIST statement of the hlq.SMTP.CONFIG data set can issue the privileged commands. For more information about these commands, see [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/knowledgecenter/S58GU4_1.1.3.1/en_US/zcomm.html). See also message EZA5322I.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5322I**  
**SMSG Authorization List : Processed**

**Explanation:** TCPIP has processed the user IDs you entered as parameters to the SMSGAUTHLIST statement in your hlq.SMTP.CONFIG data set. Those user IDs are now authorized to issue the privileged SMTP SMSG commands. For more information about the privileged commands, see [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/knowledgecenter/S58GU4_1.1.3.1/en_US/zcomm.html).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5324I**  
**procedure_name Terminating: (return_code)**

**Explanation:** SMTP has received a TCP/IP shutdown return code from the TCP/IP stack; therefore, SMTP will also terminate.

*procedure_name* is the SMTP procedure name.

*(return_code)* is the TCP/IP return code. This return code will always be (8558) which indicates that TCP/IP shutdown.

**System action:** SMTP ends.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPUTIL

**Procedure Name:** CheckResult

---
EZA5325E  Unable to delete existing file fulldatasetname, rc=returncode. SMTP terminating.

Explanation: SMTP failed to delete the data set specified in the error message. Determine if SMTP has authority to delete data sets beginning with the defined MAILFILEDSPREFIX.

fulldatasetname is the fully qualified name of the data set SMTP attempted to delete.

returncode is the return code passed back to SMTP by the utilities doing the I/O to delete the data set.

System action: SMTP ends.

Operator response: No action is needed.

System programmer response: Ensure that SMTP has the proper Security Authorization Facility (SAF) authority to delete data sets beginning with the prefix defined by MAILFILEDSPREFIX. Check for any system error messages that appear concurrently with this error message.

If return code is 208, check to see if there is data set contention for the data set name displayed in the error message. SMTP must have access to all its data sets to perform its function. Therefore, if a defragmentation utility (or any other application) is actively accessing SMTP data sets while the SMTP server is active, a data set contention problem could occur. To avoid this problem, configure the application to bypass data sets with the SMTP high level qualifier. The high level qualifier is set by the SMTP configuration parameter MAILFILEDSPREFIX.

Module: SMTP

Procedure Name: InitializeDeliveryQueue

---

EZA5326E  Unable to allocate new file fulldatasetname, RC=nn, DSPrefix may be invalid. SMTP terminating.

Explanation: SMTP attempts to allocate the data set specified in the error message. Determine whether SMTP has authority to allocate and delete data sets beginning with the defined MAILFILEDSPREFIX value. SMTP receives a return code from the SVC99 call.

fulldatasetname is the data set name that SMTP is using.

nn is an SVC99 return code passed to SMTP.

System action: SMTP ends.

Operator response: No action is needed.

System programmer response:
1. Check the Output file generated under the SMTP started task for any additional message pertaining to this data set.
2. Check the system console for any system error messages that appear concurrently with this error message.
3. Ensure that SMTP has the proper SAF authority to allocate and delete data sets beginning with the prefix defined by MAILFILEDSPREFIX.

Module: SMTP InitializeDeliveryQueue

---

EZA5327E  Terminating: Cannot allocate data set name, rc=return code

Explanation: SMTP was unable to allocate a mail data set beginning with the prefix value specified in the MAILFILEDSPREFIX statement of your hlq.SMTP.CONFIG data set. An MVS operating system error was detected.

System action: SMTP ends.

Operator response: No action is needed.

System programmer response: Make sure that SMTP has the proper SAF authority to create or delete data sets beginning with the prefix defined in MAILFILEDSPREFIX. Check for any MVS system error messages that appear when this message does.

Module: SMTP

Procedure Name: InitializeDeliveryQueue
EZA5328E  date time Terminating: Stop received

Explanation: SMTP received an external “Stop” interrupt from the operating system.

System action: All files are closed and SMTP ends.

Operator response: Contact the system programmer.

System programmer response: Check for any system error messages that appear concurrently with this error message.

Module: SMTP

Procedure Name: MarkForExpirationCheck

EZA5329E  procedure name Terminating: errmsg (msgnum)

Explanation: A condition has occurred that caused SMTP to end.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action: SMTP ends.

Operator response: Notify the system administrator.

System programmer response: Respond as indicated by the message EZAmsgnum.

Module: SMTPUTIL

Procedure Name: CheckResult

EZA5330E  procedure name SMTP TCP Returns: errmsg (msgnum)

Explanation: This message indicates an error in the SMTP/TCP interface, as specified. It generally implies that the connection has been closed by the remote site. This message is generated only if the DEBUG statement is active in the SMTP startup procedure.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action: SMTP continues.

Operator response: Notify the system administrator.

System programmer response: Respond as indicated by the message EZAmsgnum.

Module: SMTPUTIL

Procedure Name: CheckResult

EZA5331E  Local Error in MakeAddrBlok RC = rc

Explanation: SMTP did not have enough free disk space to store an ADDRBLOK data set.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: If the disk is full, delete old data sets, such as SMTP logs, or increase the size of the disk. If the disk is not full, there might be a problem with the ADDRBLOK data set. If the error persists, contact the IBM Software Support Center.

Module: SMTPPVNT

Procedure Name: StoreData
**EZA5332E**  Error occurred copying spool file, return code="return code"

**Explanation:** An error occurred before the spool file finished copying. The spool file is closed.

**System action:** Processing is terminated.

**Operator response:** Use the return code value indicated to determine why the error is occurring and correct the problem or delete the file. Restart SMTP. For more information on return codes, see z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.

**System programmer response:** No action is needed.

**Module:** SMTPBTCH

**Procedure Name:** InformUser

---

**EZA5333E**  data_set ADDRBLOK is in an inconsistent state...repairing

**Explanation:** SMTP sends this message to the server console to show a problem with the ADDRBLOK data set. SMTP attempts to rewrite the ADDRBLOK data set in a correct format.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** Normally, no response is necessary. If SMTP abends while performing this rewrite, the ADDRBLOK might not be recoverable. Rename or discard the ADDRBLOK data set to prevent further abends of SMTP.

**Module:** SMTPQUEU

**Procedure Name:** EnQueueForDelivery

---

**EZA5334E**  Delivery of Note note to address failed RC = rc

**Explanation:** SMTP sends this message to the server console to show that the indicated note was not successfully transferred to the indicated address for the indicated return code reason. This condition occurs if SMTP tries to punch a file to an incorrect user ID, or if SMTP tries to punch a file with a header with more than 80 characters to a mailer running Mailer Old.

**System action:** SMTP continues.

**Operator response:** Contact the system programmer.

**System programmer response:** Message EZA5336E precedes this error message, so follow the information in EZA5336E. Return code = 53 indicates an incorrect user ID or user node. Determine why this was unsuccessful, correct the problem, and try again.

**Module:** SMTPQUEU

**Procedure Name:** DeliverSpoolFile

---

**EZA5335E**  Unable to allocate the file data_set name rc="return code"

**Explanation:** SMTP cannot allocate a data set necessary for it to continue functioning. Look for message EZA5560I in the SMTP output file for more information on why dynamic allocation failed.

`data_set_name` is the fully qualified data set name.

`return_code` is used internally, use message EZA5560I for more information.

**System action:** SMTP halts.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Use the text of message EZA5560I and the documentation describing Dynamic Allocation (DYNALLOC) in z/OS MVS Programming: Authorized Assembler Services Reference ALE-DYN to determine the cause of the error and respond as indicated. Most of these problems are DASD management related so you need to correct the problem, then restart SMTP.
EZA5336E • EZA5339E

Module: SMMVSUB
Procedure Name: svc202

EZA5336E  Error allocating spool, user=user node.user ID, class=output class, rc=return code

Explanation: This message indicates an error in delivering a mail file, either to a local user or to a user on the associated Job Entry Subsystem (JES). It specifies the user node and ID, the spool data set format, and the return code. The spool file is not delivered.

System action: SMTP continues.

Operator response: Contact the system programmer.

System programmer response: This problem usually occurs because the user ID is not a valid JES ID or the user node is not a valid NJE node for your system. Check that the user node was defined correctly to the VMCF subsystem when it was started. See Step 3: Configure VMCF and TNF in z/OS Communications Server: IP Configuration Guide for more information about starting VMCF and TNF. For more information about JES IDs, see the z/OS JES3 Initialization and Tuning Guide. If the ID and node are valid, use the return code value to determine why the error is occurring and correct the problem. Restart SMTP. For more information about spool return codes, see the z/OS JES3 Messages or z/OS V1R13.0 JES2 Messages, depending on which version of JES you are using.

Note: Instead of using defining the JES node during VMCF initialization, you can use the keyword NJENODENAME within your SMTP configuration to specify a valid NJE node. For more information, see NJENODENAME in z/OS Communications Server: IP Configuration Reference.

Module: SMTPQUEU
Procedure Name: DeliverSpoolFile

EZA5337E  SMTP inactive, resource full data set name not available rc=return code

Explanation: SMTP sends this message to the server console to show that SMTP cannot use one of its existing data sets.

System action: SMTP continues.

Operator response: Release the data set that SMTP is trying to use.

System programmer response: No action is needed.

Module: SMMVSUB
Procedure Name: svc202

EZA5338E  SMTP inactive, resource full data set name still not available rc=return code

Explanation: SMTP sends this message to the server console to show that SMTP still cannot use one of its existing data sets.

System action: SMTP continues.

Operator response: Release the data set that SMTP is trying to use.

System programmer response: No action is needed.

Module: SMMVSUB
Procedure Name: svc202

EZA5339E  SMTP active, resource full data set name now available rc=return code

Explanation: SMTP sends this message to the server console to show that SMTP now has the use of the data set for which it was waiting.

System action: SMTP resumes normal operation.
Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMMVSUB

Procedure Name: svc202

EZA5340E SMTP NOTE from userid at nodeid was truncated by hostname

Explanation: This message is generated in the data set associated with the OUTPUT DD card in the SMTP started procedure. The SMTP note is truncated because the note being read from the JES spool is too large and the CHECKSPOOLSIZE statement is enabled. The message is also appended to the truncated SMTP note. The truncated note is sent to its recipients. The MAXMAILBYTES statement in the hlq.SMTP.CONFIG file can be adjusted to change the primary space allocated for the hlq.TEMPNOTE data set. For more information about the configuration statements see z/OS Communications Server: IP Configuration Reference.

In the message text:

userid
   The user identifier that sent the SMTP note to the JES spool using TSO XMIT.

nodeid
   The node identifier where the SMTP note originated.

hostname
   The host where the SMTP mailer (which truncated the SMTP note) is active.

Tip: If the MAXMAILBYTES statement is not coded in the hlq.SMTP.CONFIG file, it has a default of 524288 bytes.

Examples: Your hlq.SMTP.CONFIG file contains the following statements:

MAXMAILBYTES nnnn
CHECKSPOOLSIZE

The following messages are generated in the data set associated with the OUTPUT DD card in the SMTP started procedure after a large note is sent:

EZA5144I Max Length of Accepted Mail : nnnn bytes
EZA5341I CheckSpoolSize : Enabled
EZA5340E SMTP note from USER at MYHOST was truncated by MYHOST.com

Fragment from truncated note:

Received: from MYHOST.com xxx.xxx.xxx.xxx by HOST.COM (IBM VM SMTP Level 440) via TCP with SMTP ; Wed, 02 Nov
Received: from MYHOST by MYHOST.com (IBM MVS SMTP CS V1R8) with BSMTMP id TSU00026; Wed, 02 Nov 05 11:16:13 EST
Date: 2 Nov 05 11:15:27 EST
From: USER@MYHOST.com
To: USER1@HOST.com

<Body of the mail>

EZA5340E SMTP note from USER at MYHOST was truncated by MYHOST.com

System action: SMTP continues to run and large notes are truncated.

Operator response: Notify the system programmer about any truncated notes.

User response: Not applicable.

System programmer response: Review your system DASD resource requirements and adjust the MAXMAILBYTES statement, if appropriate.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: SMTP

Module: SMTPBTCH

Routing code: 2, 10

Descriptor code: 4
EZA5341I CheckSpoolSize : Enabled

Explanation: The CheckSpoolSize statement in the hlq.SMTP.CONFIG file is enabled. If this statement is enabled, SMTP checks the size of the JES spool file and if it is larger than the primary space allocation for the data set hlq.TEMP.NOTE, then that SMTP note is truncated. The default for this statement is disabled. For more information about the CHECKSPOOLSIZE statement see [z/OS Communications Server: IP Configuration Reference](#).

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

---

EZA5342E SMTP NOTE from spool file job ID jobid was truncated by hostname

Explanation: This message is generated in the data set associated with the OUTPUT DD card in the SMTP started procedure. The SMTP note is truncated because the note being read from JES spool is too large and the CHECKSPOOLSIZE statement is enabled. The message is also appended to the truncated SMTP note. The truncated note is sent to its recipients. The MAXMAILBYTES statement in the hlq.SMTP.CONFIG file can be adjusted to change the primary space allocated for the hlq.TEMP.NOTE data set. For more information about the configuration statements see [z/OS Communications Server: IP Configuration Reference](#).

In the message text:

jobid
The spool file job identifier of the SMTP note used by SMTP batch.

hostname
The host where the SMTP mailer that truncated the SMTP note is active.

Tip: If the MAXMAILBYTES statement is not coded in the hlq.SMTP.CONFIG file, it has a default of 524288 bytes.

Examples: Your hlq.SMTP.CONFIG file contains the following statements:

- MAXMAILBYTES nnnn
- CHECKSPOOLSIZE

The following messages are generated in the data set associated with the OUTPUT DD card in the SMTP started procedure after a large note is sent:

EZA5144I Max Length of Accepted Mail : nnnn bytes
EZA5341I CheckSpoolSize : Enabled
EZA5342E SMTP note from spool file job ID J0B000035 was truncated by MYHOST.com

Fragment from truncated note:

```
Received: from MYHOST.com xxx.xxx.xxx.xxx by HOST.COM (IBM VM SMTP Level 440) via TCP with SMTP ; Wed, 02 Nov
Received: from HOST by MYHOST.com (IBM MVS SMTP CS V1R8) with BSMTP id J0B00035; Wed, 02 Nov 05 14:42:06 EST
DATE: 19 DEC 03 08:00:00 GMT
FROM: User
TO: User2
SUBJECT: TEST

<Body of the mail>

EZA5342E SMTP note from spool file job ID J0B000035 was truncated by MYHOST.com
```

System action: SMTP continues to run and large notes are truncated.

Operator response: Notify the system programmer about any truncated notes.

User response: Not applicable.

System programmer response: Review your system DASD resource requirements and adjust the MAXMAILBYTES statement if appropriate.

Problem determination: Not applicable.
EZA5343I Translated ATSIGN symbol: symbol

Explanation: The ATSIGN statement in the hlq.SMTPl CONFIG file has been set. Setting this statement means that SMTP will use this character instead of the at sign (@) between the user ID and host ID fields in addressing strings, for example, userid@hostid. This statement should only be used for specific languages because of translation encodings.

Setting this option might cause problems if notes are being sent between different language sites.

symbol is the input symbol replacing the at sign (@).

For more information about the ATSIGN configuration statement, see the [z/OS Communications Server: IP Configuration Reference](#).

System action: SMTP continues

Operator response: None

System programmer response: None

Module: SMTP

Procedure Name: OpenOutputStreams

---

EZA5344E Incorrect ATSIGN symbol specified: symbol

Explanation: The input symbol replacing the @ symbol must be just one character in length. The specified input symbol is too large.

symbol is the input string replacing the @ symbol.

For more information about the ATSIGN configuration statement, see the [z/OS Communications Server: IP Configuration Reference](#).

System action: SMTP ends.

Operator response: No action is needed.

System programmer response: Change the input string specified in the ATSIGN configuration statement to one character. Restart SMTP.

Module: SMTP

Procedure Name: ProcessConfigFile

---

EZA5345E Option conflict: the ATSIGN symbol and default REWRITE822 headers table cannot both be active

Explanation: The translate ATSIGN and REWRITE822 headers cannot both be activated because the default REWRITE822 header table contains a hardcoded @ symbol that cannot be modified. Therefore, these options cannot be used together.

For more information about the configuration statements, see the [z/OS Communications Server: IP Configuration Reference](#).

System action: SMTP ends.

Operator response: No action is needed.

System programmer response: Select one of the two options to activate in the hlqSMTP.CONFIG file. Restart SMTP.

Module: SMTP

Procedure Name: ProcessConfigFile
**EZA5346E**  Invalid IPMailer Address Specified: *IP address*

**Explanation:** The IP address specified in the IPMAILERADDRESS statement of your hlq.SMTP.CONFIG data set is not correct or not valid.

**System action:** The SMTP server is halted until the problem is corrected.

**Operator response:** No action is needed.

**System programmer response:** Verify the IP address of the batch SMTP server, and correct the IPMAILERADDRESS statement as necessary. For details, see [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/SSEPGG_10.1.0/com.ibm.zos.v1r13.doc/zosip/tcpip/IPMAILERADDRESS.html).

**Module:** SMTP

**Procedure Name:** Error

---

**EZA5347E**  first_statement STATEMENT CONFLICTS WITH second_statement STATEMENT

**Explanation:** The statements in your hlq.SMTP.CONFIG data set are incompatible. These statements perform similar or opposing functions and therefore cannot both be active.

first_statement is the first statement of a pair of statements in conflict.

second_statement is the second statement of the pair that is in conflict.

**Examples:** In the SMTP configuration the IPMAILERADDRESS and IPMAILERNAME statements represent different methods of forwarding mail; therefore, the following message is generated if both statements are coded in the hlq.SMTP.CONFIG data set.

16.58.29  EZY1876I SMTP STACK FUNCTIONS STARTED WITH PARAMETER SMTP,PARM=, ERRFILE(SYSERR),NOSPIE/.
16.58.29  EZA5347E IPMAILERADDRESS STATEMENT CONFLICTS WITH IPMAILERNAME STATEMENT
16.58.31  EZY1877I SMTP STACK FUNCTIONS SHUTDOWN IS COMPLETE, RC = 0.

**System action:** The SMTP server is halted.

**Operator response:** Contact the system programmer.

**User response:** Not applicable.

**System programmer response:** Choose the appropriate statement for your environment and remove the other statement from the hlq.SMTP.CONFIG data set. Restart SMTP.

**Problem determination:** Not applicable.

**Source:** z/OS Communications Server TCP/IP: SMTP

**Module:** SMTP

**Routing code:** 2, 10

**Descriptor code:** 4

---

**EZA5348I**  IP Mailer Address: *IP address*

**Explanation:** This message specifies the current IP address for the IPMAILERADDRESS statement in the hlq.SMTP.CONFIG data set. If only the MAILER statement is used, the IP address is shown as “Disabled.”

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams
EZA5351E  Invalid NJENode Specified: node name

Explanation: An incorrect NJENODENAME statement has been specified in the hlq.SMTP.CONFIG data set.

System action: The SMTP server is halted until the error is corrected.

Operator response: Refer this message to the system programmer.

System programmer response: Correct the NJENODENAME statement in the hlq.SMTP.CONFIG data set and restart SMTP. For more information, see the [z/OS Communications Server: IP Configuration Reference](https://publib.boulder.ibm.com/infocenter/tivihelp/v2r1/topic/com.ibm.zos/v5r4pmc/comm/index.html).

Module: SMTP

Procedure Name: Error

EZA5352I  date time Connection closed at IP addr: ipaddress reason: errmsg (msgnum)

Explanation: The connection was closed either by the local SMTP client or the remote SMTP server. This might occur due to normal networking problems or because the remote SMTP is not active. Depending on the error, SMTP might try to resend the mail at a later time. This message appears in the output file that is associated with the OUTPUT DD statement for the SMTPPROC.

date is the date (month/day/year) that the connection was closed.

time is the time (hours:minutes:seconds) that the connection was closed.

ipaddress is the TCP/IP address of the remote SMTP server.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. See that message for more information.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Respond as indicated by the message EZAmsgnum.

Module: SMTPEVNT

Procedure Name: CloseCompletedEvent

EZA5353E  NJENode was specified after another option used its value. NJENode

Explanation: The NJENODENAME statement from the hlq.SMTP.CONFIG data set was parsed and a value that was previously defined for another statement was encountered. The NJENODENAME statement must be placed before the statement that is using the same value as that assigned to NJENODENAME.

System action: The SMTP server is halted until the error is corrected.

Operator response: Refer this message to the system programmer.

System programmer response: Move the NJENODENAME statement above the statement using the same value as that assigned to NJENODENAME or change the value of either statement to avoid the conflict. Contact the IBM Software Support Center if more information is required.

Module: SMTP

Procedure Name: Error

EZA5355E  GATEWAY specified but SMTPNJE DD card not found.
EZA5356E  NJE gateway facility will not be enabled.

Explanation: The GATEWAY statement was included in the SMTP configuration data set but the input data set for SMTPNJE was not found. The NJE gateway facility is not enabled.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Issue the SMTPNJE command to create the input data set for SMTPNJE. Also, make sure that SMTPNJE is activated by removing the asterisk from the //SMTPNJE DD statement of the SMTP cataloged procedure. For more information, see "Configuring the SMTP Server" in the z/OS Communications Server: IP Configuration Reference.

Module: SMTP
Procedure Name: AmpXAloc

EZA5364I  MVS Debugging : Enabled

Explanation: The MVSDEBUG statement has been entered into the hlq.SMTP.CONFIG data set. This statement causes SMTP to do extensive debugging and should only be used when instructed by the IBM Software Support Center.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP
Procedure Name: OpenOutputStreams

EZA5378I  Mailer : None

Explanation: If the MAILER statement in the hlq.SMTP.CONFIG data set specifies the NONJE parameter, then mail for recipients on the NJE network is spooled directly to the recipients. No batch SMTP server is defined for the associated NJE network.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP
Procedure Name: OpenOutputStreams

EZA5379E  Invalid ListenOnAddress Specified: IP address

Explanation: The IP address specified for the LISTENONADDRESS statement in the hlq.SMTP.CONFIG data set is not valid. The address specified must match an existing HOME IP address as defined in the HOME statement of the hlq.TCPIP.PROFILE data set.

System action: The SMTP server is halted until the error is corrected.

Operator response: Refer this message to the system programmer.

System programmer response: Correct the LISTENONADDRESS statement with a valid HOME IP address or add the IP address defined in the hlq.SMTP.CONFIG data set to the HOME statement of the hlq.TCPIP.PROFILE data set. For details, see z/OS Communications Server: IP Configuration Reference.

Module: SMTP
Procedure Name: MarkForExpirationCheck
Using Default ListenOnAddress: IP address

Explanation: If the IP address parameter of the LISTENONADDRESS statement is not defined in the hlq.SMTPCONFIG data set, this message indicates that SMTP is using the default value. For details see the z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Specify a valid, correct IP address for this statement as necessary.

Module: SMTP

Procedure Name: MarkForExpirationCheck

Syntax Error in POSTMASTER address:

e error message

Explanation: An error exists in user ID or NJE address specified in the POSTMASTER statement of the hlq.SMTPCONFIG data set, as indicated by the error message.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Enter the correct local user ID or NJE or SMTP address to which mail addressed to POSTMASTER should be delivered. For details, see z/OS Communications Server: IP Configuration Reference.

Module: SMTPPARSE

Procedure Name: ReplySyntaxError

Nickname: nickname Address: address

Explanation: SMTP was unable to parse the user ID and node ID you entered in the SMTP NAMES data set. SMTP could not validate the syntax of the resulting user address. The name is not added to the SMTP NAMES data set.

System action: SMTP continues.

Operator response: Verify the user ID and node ID for the intended recipient. For more information, see z/OS Communications Server: IP User’s Guide and Commands.

System programmer response: No action is needed.

Module: SMTPNAME

Procedure Name: ValidateAddress

Ignoring duplicate definition of nickname: nickname

Explanation: A nickname already exists for the user ID and user node specified in your SMTP NAMES entry. SMTP ignores the entry.

System action: SMTP continues.

Operator response: Check your SMTP NAMES data set to verify the user ID and user node. For more information, see z/OS Communications Server: IP User’s Guide and Commands.

System programmer response: No action is needed.

Module: SMTPNAME

Procedure Name: BuildNickNameTable
EZA5388I  InboundOpenLimit: limit_value

Explanation: The INBOUNDOPENLIMIT statement in the hlq.SMTP.CONFIG file has been coded.

limit_value is the maximum number of simultaneous TCP connections to be used by the SMTP server to receive inbound mail. The valid range is 2 - 256 or the value of 0. If 0 is coded then the SMTP server will not open up a listening connection at all and autolog cannot be used to monitor and restart the SMTP started procedure.

See the information about the INBOUNDOPENLIMIT statement in z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5389E  INCORRECT VALUE limit_value SPECIFIED FOR INBOUNDOPENLIMIT STATEMENT - THE DEFAULT VALUE OF 256 WILL BE USED

Explanation: The input parameter on the INBOUNDOPENLIMIT statement in the hlq.SMTP.CONFIG file is invalid. A valid number is in the range of 2 - 256 or the value of 0. If 0 is coded the SMTP server will not open up a listening connection. If the value of 0 is coded then autolog cannot be used to monitor and restart the SMTP started procedure. limit_value is the incorrect value specified.

See the information about the INBOUNDOPENLIMIT statement in z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues and the default value of 256 will be used.

Operator response: Contact the system programmer.

System programmer response: If you do not want to use the default of 256 then specify a correct value. Stop and restart SMTP started procedure to pick up the new setting.

Module: SMTP

Procedure Name: ProcessConfigFile

EZA5390I  STOPONRENF: state

Explanation: The STOPONRENF statement is an option in the SMTP configuration file. This message indicates the state of that option.

state can have the following values:

Active The statement has been coded and the behavior of the SMTP server will be to terminate normally if a RENAME failure occurs on a data set associated with the batch connection (257).

Inactive The SMTP server will try to continue processing the other mail.

See the information about the STOPONRENF configuration statement in z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams
EZA5391E  SMTP TERMINATING DUE TO RENAME FAILURE AND STOPONRENF IS CODED IN CONFIGURATION FILE

Explanation: The SMTP server ended because of a failure to rename a data set associated with the batch connection (257) and the option STOPONRENF is coded in the SMTP configuration file.

Message EZA5544E is generated when a RENAME failure identifies the data set that SMTP was unable to rename. If this data set name is smtphlq.CONNECT257.NOTE, then a note being processed by the batch connection (257) might have been lost.

See the information about the STOPONRENF configuration statement in z/OS Communications Server: IP Configuration Reference.

System action: SMTP stops.

Operator response: Contact the system programmer.

System programmer response: Determine why the RENAME failure is occurring. Check the system console log for messages prior to the EZA5544E message that are associated with the failing data set name. Change the SMTP configuration file if you want SMTP to continue when these types of failures occur.

Module: SMTP

Procedure Name: SMMVSUB

---

EZA5393I  Rule rule number:

Explanation: This message specifies the rule number. The hlq.SMTP.RULES data set contains the rewrite rules for header addresses in SMTP.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPRULE

Procedure Name: DisplayRulePrefix

---

EZA5397I  keyword name

---

EZA5398I  'character string (non-case-sensitive)'

---

EZA5399I  "character string (case-sensitive)"

---

EZA5400I  character string (wildcard token)

Explanation: This is the SMTP RULES keyword. When SMTP parses the rule in message EZA5393I, each string in the keyword is displayed along with one of these messages. As indicated, the specific message you see depends on whether the string is case-sensitive and whether it is a wildcard. Some keywords have special meaning to the rules interpreter. For more information, see z/OS Communications Server: IP Configuration Reference. See also message EZA5416E.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPRULE

Procedure Name: EchoElem
FIELD ALIASES:
  alias name =
  "alias definition (case-sensitive)"
  'alias definition (non-case-sensitive);'

Explanation: These messages list the set of alias names (or field names) defined in the SMTP.RULES data set. As indicated, the specific message you see depends on whether the alias name is case-sensitive. For more information, see z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPRULE
Procedure Name: EchoRules

REWRITE RULES:

(alias name)

Explanation: These messages specify the rewrite rules for the alias name shown in message EZA5407I. They precede the procedure EchoElem, whose output is explained in messages EZA5397I - EZA5400I. EchoElem parses the keywords for each rule for the alias name indicated.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPRULE
Procedure Name: EchoRules

=> NJE to TCPIP address transformation rule

Explanation: This message specifies the rewrite rules for the alias name shown in message EZA5407I when the rule defines an address transformation from NJE to TCPIP. It precedes the procedure EchoElem, whose output is explained in messages EZA5397I - EZA5400I. EchoElem parses the keywords for each rule for the alias name indicated. See also message EZA5417I.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPRULE
Procedure Name: EchoRules

rule line

SMTP RULES ERROR: error message
EZA5415E  Line number  line number

Explanation: The first of these 3 messages shows the line of code in the rule definition section of the SMTP.RULES data set where an error was found. The second message specifies the kind of error that was found, and the third message provides the line number where the error occurred.

System action: The SMTP server is halted until the error is corrected.

Operator response: No action is needed.

System programmer response: Use the information provided by the error messages to correct the syntax of the rule definition. For more information, see [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/SS7215_5.3.0/com.ibm.net.tcpip.doc/)

Module: SMTPRULE

Procedure Name: PrintError

---

EZA5416E  Error

Explanation: If the RULE keyword for the rule number specified in message EZA5393I contains a syntax error, this message appears when SMTP parses the SMTP.RULES data set.

System action: The SMTP server is halted until the error is corrected.

Operator response: No action is needed.

System programmer response: Correct the keyword syntax error. For details, see [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/support/knowledgecenter/SS7215_5.3.0/com.ibm.net.tcpip.doc/).

Module: SMTPRULE

Procedure Name: EchoElem

---

EZA5417I  ->

Explanation: This message specifies the rewrite rules for the alias name shown in message EZA5407I when the rule defines an address transformation from TCPIP to NJE. It precedes the procedure EchoElem, whose output is explained in messages EZA5397I - EZA5400I. This procedure parses the keywords for each rule for the alias name indicated. See also message EZA5409I.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPRULE

Procedure Name: EchoRules

---

EZA5423E  Invalid Record in SMTP SECTABLE (the SMTP Security Table):

Explanation: SMTP encountered a syntax error while processing the security table. The next message output is a listing of the erroneous security table record. This message is followed by one or more other messages that describe specific syntax or logic problems with the record.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Correct the errors in the security table data set, and restart SMTP.

Module: SMTPSEC

Procedure Name: SecurityTableErrors

---
EZA5425E Expecting NodeId but found none.
Explanation: This message indicates the reason for error message EZA5423E. In this case the NJE node ID of the authorized user was omitted from the hlq.DD data set entry. The hlq.DD data set entry is not recognized.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Add the NJE node ID to the security table entry for the authorized user. For more information, see z/OS Communications Server: IP Configuration Reference.
Module: SMTPSEC
Procedure Name: SecurityTableErrors

EZA5426E Primary nickname/mbox mapping must be ‘Y’ or ‘N’ but found: nickname or mbox value
Explanation: The only valid values for the primary nickname and primary mbox parameters in the hlq.DD data set are Y and N. You have specified an incorrect value.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Enter Y or N for the parameter indicated. For more information, see z/OS Communications Server: IP Configuration Reference.
Module: SMTPSEC
Procedure Name: SecurityTableErrors

EZA5430E Unexpected characters found after nickname
Explanation: The syntax of the hlq.DD data set record is incorrect. Extraneous characters or an excess number of characters have been entered after the nickname. See message EZA5426I.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: Correct the syntax of the security table as necessary. For more information, see z/OS Communications Server: IP Configuration Reference.
Module: SMTPSEC
Procedure Name: SecurityTableErrors

EZA5431E Duplicate Primary nickname/mbox mapping detected.
Explanation: Each nickname can have only one primary nickname record set to Y. Each NJE user ID, NJE node ID pair can have only one primary mailbox record set to Y. The duplicate primary nickname or primary mailbox record is ignored.
System action: SMTP continues.
Operator response: No action is needed.
System programmer response: See z/OS Communications Server: IP Configuration Reference for more information.
Module: SMTPSEC
Procedure Name: SecurityTableErrors

EZA5435E Special characters not allowed in nickname
Explanation: The nickname field in the hlq.DD data set data set contains special characters. Only alphanumeric characters are allowed for nicknames.
System action: SMTP continues.
Operator response: No action is needed.

System programmer response: Make sure that nicknames contain no special characters.

Module: SMTPSEC

Procedure Name: SecurityTableErrors

---

**EZA5439S** Fatal Errors found in SMTP Security Table ... Halting!

**Explanation:** Either no primary mapping of the NJE node address is found or no primary mapping of the nickname is found. This message follows one or both of the error messages EZA5437E or EZA5438E.

**System action:** The SMTP server halts until the error is corrected.

**Operator response:** No action is needed.

**System programmer response:** Correct the hlq.DD data set security table, and restart SMTP.

Module: SMTPSEC

Procedure Name: CheckSecurityTable

---

**EZA5440S** Fatal Error: Unable to open SECTABLE DD but SECURE option was specified.

**Explanation:** The SECURE statement is used as a configuration statement in the hlq.SMTP.CONFIG data set, but no corresponding SECTABLE data set definition name is found in the SEZAINST(SMTPPROC) data set.

**System action:** SMTP ends abnormally.

**Operator response:** No action is needed.

**System programmer response:** Make sure that the SECTABLE DD statement name is included in the updated SMTP cataloged procedure SEZAINST(SMTPPROC). This points to the DD data set data set and allows SMTP to operate as a secure mail gateway between TCP network sites and NJE network sites. For more information, see **z/OS Communications Server: IP Configuration Reference**. Reinitialize SMTP.

Module: SMTPSEC

Procedure Name: CheckSecurityTable

---

**EZA5441E** Wildcard “*wildcard*” not allowed in

**EZA5442I** node name

**EZA5443I** nickname

**EZA5444I** field.

**Explanation:** The indicated wildcard token or string entered in either the node ID field or the nickname field of the record (see message EZA5423E for the specific security table record) is not a valid token or string for that field.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** Correct the syntax of the DD data set record as indicated. See **z/OS Communications Server: IP Configuration Reference** for more information.

Module: SMTPSEC

Procedure Name: SecurityTableErrors
EZA5445I  NickName not allowed with wildcard userid field.

Explanation: If the NJE user ID is specified as a wildcard in the DD data set, then the nickname field must be left blank.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Delete the entry from the nicknames field, or change the user ID field in the DD data set to eliminate the wildcard. For details, see z/OS Communications Server: IP Configuration Reference

Module: SMTPSEC

Procedure Name: SecurityTableErrors

EZA5446N  KANJI JIS 1978 shift-in ASCII

Explanation: The SMTP server and client programs access data sets containing data that is usually in extended binary coded decimal interchange code (EBCDIC) format. To transfer these data sets to or from an American National Standard Code for Information Interchange (ASCII) based host requires the use of a translation table. This message indicates that the SMTP client is configured to use the Japan Institute of Standards (JIS) 1978 version if kanji conversion is enabled. ASCII is output when the server converts from JIS kanji code. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5447N  KANJI JIS 1978 shift-in JISROMAN

Explanation: The SMTP server and client programs access data sets containing data that is usually in extended binary coded decimal interchange code (EBCDIC) format. To transfer these data sets to or from an American National Standard Code for Information Interchange (ASCII) based host requires the use of a translation table. This message indicates that the SMTP client is configured to use the Japan Institute of Standards (JIS) 1978 version if kanji conversion is to be performed. JISROMAN is used when the server converts from JIS kanji code. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5448N  KANJI JIS 1983 shift-in ASCII

Explanation: The SMTP client is configured to use the Japan Institute of Standards (JIS) 1983 version if kanji conversion is to be performed. It also indicates that ASCII is used when the SMTP server converts from JIS kanji code. See also message EZA5447I. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams
EZA5449N  KANJI JIS 1983 shift-in JISROMAN

Explanation: The SMTP client is configured to use the Japan Institute of Standards (JIS) 1983 version if kanji conversion is to be performed. It also indicates that JISROMAN is used when the server converts from JIS kanji code. See also message EZA5447I. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5450N  SJISKANJI

Explanation: The SMTP client is configured to use the Japan Institute of Standards (JIS) version if the KANJI statement in the hlq.SMTP.CONFIG data set is enabled. It also indicates that the transfer type for the SMTP server is not changed. See also message EZA5447I. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5451N  EUCKANJI

Explanation: The SMTP client is configured to use the Extended Unix Code kanji transfer type if the KANJI statement in the hlq.SMTP.CONFIG data set is enabled. It also indicates that the transfer type for the SMTP server is not changed. See also message EZA5447I. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5452N  IBMKANJI

Explanation: The SMTP client is configured to use the IBM (EBCDIC) kanji transfer type if the KANJI statement in the hlq.SMTP.CONFIG data set is enabled. It also indicates that the transfer type for the SMTP server is not changed. See also message EZA5447I. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams
EZA5453N  HANGEUL

Explanation: The SMTP client is configured to use the Hangeul transfer type if the KANJI statement in the hlq.SMTP.CONFIG data set is enabled. It also indicates that the transfer type for the SMTP server is not changed. See also message EZA5447I. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5454N  KSC-5601

Explanation: The SMTP client is configured to use the Korean Standard Code KSC-5601 if the KANJI statement in the hlq.SMTP.CONFIG data set is enabled. It also indicates that the transfer type for the SMTP server is not changed. See also message EZA5447I. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5455N  TRADITIONAL CHINESE

Explanation: The SMTP client is configured to use Traditional Chinese (5550) if the KANJI statement in the hlq.SMTP.CONFIG data set is enabled. It also indicates that the transfer type for the SMTP server is not changed. See also message EZA5447I. For more information on configuring the translation tables, see z/OS Communications Server: IP Configuration Reference.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5456N  Disabled. Unable to load: DBCS standard file name.load file type

Explanation: The double-byte character set (DBCS) translation table that you specified cannot be loaded. It is not supported by SMTP.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: See z/OS Communications Server: IP Configuration Reference for the most recent list of DBCS translation data sets supported by SMTP under MVS.

Module: SMTP

Procedure Name: OpenOutputStreams
EZA5457E  Date Time #connection_number DBCSEtoA Conversion Error

Explanation: A DBCS EBCDIC to ASCII conversion error occurred when transferring mail using the specified connection number. The body of the transferred mail contained invalid DBCS characters. DBCS characters in error are transmitted unconverted.

System action: SMTP continues.

Operator response: Use the connection number to determine the originator and destination of the invalid mail. The DEBUG statement may be configured in hlq.SMTP.CONFIG to aid in matching connection number to mail originator or destination. Check the mail body to see if it contains valid DBCS characters for the DBCS conversion type configured for the SMTP server. See z/OS Communications Server: IP Configuration Reference and z/OS Communications Server: IP User’s Guide and Commands for more information about DBCS support in SMTP.

System programmer response: No action is needed.

Module: SMTPRPLY

Procedure Name: ResumeFillingDataBuffer

---

EZA5458E  DBCS conversion specified, but no DBCS tables could be loaded

Explanation: DBCS conversion is configured for the SMTP server, but the required DBCS translation table could not be loaded. DBCS conversion is disabled.

System action: The program continues.

Operator response: Configure a valid DBCS binary translate table data set in the search order hierarchy for the required DBCS translation table. See z/OS Communications Server: IP Configuration Reference for more information about the loading and customizing of DBCS translation tables.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

---

EZA5459E  date time #connection DBCSAtoE Conversion Error

Explanation: A DBCS ASCII to EBCDIC conversion error occurred when transferring mail using the specified connection number. The body of the transferred mail contained invalid DBCS characters. DBCS characters in error are transmitted unconverted.

System action: The program continues.

Operator response: Use the connection number to determine the originator and destination of the invalid mail. The DEBUG statement may be configured in hlq.SMTP.CONFIG to aid in matching the connection number to the mail originator or destination. Check the mail body to see if it contains valid DBCS characters for the DBCS conversion type configured for the SMTP server. See z/OS Communications Server: IP Configuration Reference and z/OS Communications Server: IP User’s Guide and Commands for more information about DBCS support in SMTP.

System programmer response: No action is needed.

Module: SMTPEVNT

Procedure Name: DoDbcsConversion

---

EZA5460I  date time BSMTP Helo Domain: sending host name host reply

Explanation: If logging is turned on in SMTP’s configuration file, this message specifies the domain name of the sending host, along with a reply indicating whether the HELO command is accepted.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.
Module: SMTPCMDS
Procedure Name: DoHelo

**EZA5461I** date time TCP (user domain name) Helo Domain: host domain name user IP address

**Explanation:** If you enter the HELO command while using a TCP connection to SMTP, this message specifies the domain name of your local host, as well as your domain name and IP address.

**System action:** SMTP continues.
**Operator response:** No action is needed.
**System programmer response:** No action is needed.

Module: SMTPCMDS
Procedure Name: DoHelo

**EZA5462I** date time Restricting BSMTP/TCP MAIL FROM/RCPT TO: ‘user name@domain.host name’

**Explanation:** The user is restricted from using SMTP. This message also indicates whether the connection is a batch connection or a TCP connection. For more information about restricted users, see z/OS Communications Server: IP Configuration Reference.

**System action:** SMTP continues.
**Operator response:** No action is needed.
**System programmer response:** No action is needed.

Module: SMTPCMDS
Procedure Name: DoRestricted

**EZA5463E** date time Unregistered BSMTP Spool File from userid@nodeid

**Explanation:** An unregistered batch spool data set was received from the sender at the indicated node ID. This condition occurred because the sender is not registered in the DD data set security table. The BSMTP data set is not delivered.

**System action:** SMTP continues.
**Operator response:** No action is needed.
**System programmer response:** The sender should obtain authorization to use the secure gateway. To do so, the sender should follow the instructions contained in the SECURITY.MEMO data set, which is returned from the SMTP server just before this batch log entry.

Module: SMTPCMDS
Procedure Name: DoMail

**EZA5464E** date time Unregistered BSMTP MAIL FROM: print path

**Explanation:** SMTP sends this message to the batch job log to show that unregistered BSMTP mail was received from the address specified. The condition occurred because the sender is not registered in the DD data set security table. The BSMTP mail is not delivered.

**System action:** SMTP continues.
**Operator response:** No action is needed.
**System programmer response:** The sender should obtain authorization to use the secure gateway. To do so, the sender should follow the instructions contained in the SECURITY.MEMO data set, which is returned from the SMTP server just before this batch log entry.

Module: SMTPCMDS
Procedure Name: DoMail
**EZA5465E**  
*date time* Deleting Spool File from undetermined origin job number (*spoolid*)

**Explanation:** This message is sent to the SMTP batch log to show when a spool data set of an unknown origin is deleted. SMTP cannot accept an NJE spool data set if its origin cannot be determined. This message is generated because either the originator’s user ID or the originator’s node ID was missing. There are two ways to spool a data set to SMTP:

- The TSO XMIT command
- The batch SMTP commands with the IEBGENER utility in TSO/ISPF

*date* is the date (month/day/year) the message was sent.

*time* is the time (hours:minutes:seconds) the message was sent.

*spoolid* is the JES spool identifier (SSSOJOB1).

**System action:** SMTP continues.

**Operator response:** Contact the system programmer.

**System programmer response:** Determine why SMTP is receiving spooled data sets without the originator’s user ID or the originator’s node ID, and correct the error. This type of string (MAIL FROM: <>) is commonly generated by a remote SMTP sending an error notification for undeliverable mail.

If you are using the TSO XMIT command, it must be set up correctly to pass a valid NJE user ID and a valid NJE node ID. For more information about the TSO XMIT command, see the [z/OS TSO/E Command Reference](https://www.ibm.com/docs/en/zos/2.4.0?topic=command-reference).

If you are using the Batch SMTP interface, check your application that generates the SMTP commands for HELO and MAIL FROM. The MAIL FROM command must have the originator’s user ID and the originator’s host ID (equivalent to the originator’s node ID.) See the [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/docs/en/zos/2.4.0?topic=communications-server-ip-user-guide-and-commands) for more information about SMTP commands and batch SMTP.

**Module:** SMTPBTCH

**Procedure Name:** MakeBatchSMTPErrorFile

---

**EZA5466E**  
*date time* Deleting Spool File from userid at nodeid

**Explanation:** The spool data set from the specified user ID and node ID is being deleted because the user ID started with an asterisk (*).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** Determine the origin of the mail. Normally this message can be ignored.

**Module:** SMTPBTCH

**Procedure Name:** MakeBatchSMTPErrorFile

---

**EZA5467E**  
*date time* Rejecting job number (*spool ID*) From userid at nodeid

**Explanation:** The job number was rejected for the indicated user ID and node ID either because the sender’s address is in the RESTRICT list or because the TCP-to-NJE mail gateway is not enabled.

**System action:** SMTP continues.

**Operator response:** Perform the following:

1. Ensure that the JES node name was defined correctly to the VMCF subsystem when it was started.
2. Ensure the IKJTSO00 parmlib has the correct MVS node name specified on the TRANSREC/TRANSMIT statement.
See Step 3: Configure VMCF and TNF in z/OS Communications Server: IP Configuration Guide for more information about starting VMCF and TNF.

**System programmer response:** Run the SMTPNJE program to configure the SMTP server to run as a mail gateway between TCP network users and users located on an NJE network attached to the local host. For more information about the RESTRICT list and the SMTPNJE program, see z/OS Communications Server: IP Configuration Reference.

**Module:** SMTPBATCH

**Procedure Name:** InformUser

---

**EZA5469E**

* mm/dd/yy hh:mm:ss UNABLE TO ACCESS SPOOL FILE spoolid SMTP STOPPED

**Explanation:** SMTP detected a JES spool file that it cannot access. Trying to do I/O functions to this file would have resulted in ABENDs001 in SMTP. SMTP was stopped to allow the system administrator to look at the spool file and correct the application that is generating the spool file. This error might have been caused by an improperly closed file.

*mm/dd/yy* is the date (month/day/year) of the message.

*hh:mm:ss* is the time (hours:minutes:seconds) of the message.

*spoolid* is the JES spool identifier (SSSOJOB).  

**System action:** SMTP halts.

**Operator response:** Contact the System Programmer.

**System programmer response:** Check the application that generated the spool file for SMTP. Delete the current spool file or change the destination to be something other than the SMTP started procedure. If more of these spool files are expected, then SMTP can be configured to automatically delete them. See the z/OS Communications Server: IP Configuration Reference for more information about the configuration statement DELETEBADSPOOLFILE.

**Module:** SMTPBATCH

**Procedure Name:** ServiceReaderMVS

---

**EZA5470E**

* mm/dd/yy hh:mm:ss UNABLE TO ACCESS SPOOL FILE spoolid FILE DELETED

**Explanation:** SMTP detected a JES spool file that it cannot access. Trying to do I/O functions to this file would have resulted in ABENDs001 in SMTP. SMTP was given permission to delete this spool file because the statement DELETEBADSPOOLFILE has been configured. This error might have been caused by an improperly closed file.

*mm/dd/yy* is the date (month/day/year) of the message.

*hh:mm:ss* is the time (hours:minutes:seconds) of the message.

*spoolid* is the JES spool identifier (SSSOJOB).  

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPBATCH

**Procedure Name:** SERVICEREADERMVS

---

**EZA5471I**

DeleteBadSpoolFile : state

**Explanation:** This message indicates whether the DELETEBADSPOOLFILE statement has been coded.

*state* displays the value of Yes or No.

If *state* is No, then the DELETEBADSPOOLFILE statement in the hlq.SMTP.CONFIG file has not been coded. This means that SMTP stops when it tries to access a spool file that would cause an ABENDs001. Message EZA5469E is generated before SMTP stops. Manually delete the spool file or reroute it to another destination before restarting SMTP.

If *state* is Yes, then the DELETEBADSPOOLFILE statement in the hlq.SMTP.CONFIG file has been coded. This
statement permits SMTP to delete a spool file that would cause an ABENDS001 if SMTP were to access it. Message EZA5470E is generated if any deletions occur when SMTP is active.

See the [z/OS Communications Server: IP Configuration Reference](#) for more information about the DELETEBADSPOOLFILE configuration statement.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTP

**Procedure Name:** OpenOutputStreams

---

**EZA5472I**

**date time Generating Note data set name as BSMTP REPLY**

**Explanation:** If the delivery type specified for the note command is “BATCH” and the LOG statement in the hlq.SMTP.CONFIG data set is enabled, SMTP sends a data set containing the note and any error message(s) to the sender when the connection specified cannot be established. This error message is also sent to the SMTP LOGFILE.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** Perform a Resolver Trace for the SMTP server to determine why the connection could not be established. Take corrective actions as necessary, and resend the note. For more information about SMTP traces, see [z/OS Communications Server: IP Diagnosis Guide](#). If more help is required contact the IBM Software Support Center.

**Module:** SMTPQUEU

**Procedure Name:** MakeAddrBlok

---

**EZA5473I**

**date time Generating Note note_name as Error Notification for Undeliverable Mail**

**Explanation:** If the delivery type specified in the note command is not “BATCH” and the LOG statement in the hlq.SMTP.CONFIG data set is enabled, SMTP sends a note containing an error message to the sender. One of the common causes for this message is that the recipient’s address associated with the original note is UNKNOWN. This error message appears in the SMTP log file associated with the LOGFILE DD statement for the SMTPPROC.

*date* is the date (month/day/year) the message was sent.

*time* is the time (hours:minutes:seconds) the message was sent.

*note_name* is the Error Notification identifier.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** If the problem is the recipient’s address, then check the spelling of the recipient’s user ID and domain. If it is spelled correctly, perform a Resolver Trace for the SMTP server to determine why the connection could not be established. Take corrective actions as necessary, and resend the note. For more information about SMTP traces, see [z/OS Communications Server: IP Diagnosis Guide](#).

**Module:** SMTPQUEU

**Procedure Name:** MakeAddrBlok

---

**EZA5474I**

**date time Received Note note_name via BSMTP From printpath bytes bytes**

**Explanation:** If the sender specified the BATCH parameter in the note command and the LOG statement in the hlq.SMTP.CONFIG data set is enabled, this message is sent to the SMTP LOGFILE to indicate that the connection was established and that a data set containing the note of the size specified was received at the indicated date and time.

**System action:** SMTP continues.

**Operator response:** No action is needed.
System programmer response: No action is needed.

Module: SMTPQUEU

Procedure Name: MakeAddrBlok

**EZA5475I**  
*date time*  
**Received Note** *note name*  
via TCP *connection number*  
From *printpath* bytes *Bytes*

**Explanation:** If the sender did not specify the BATCH parameter in the note command and the LOG statement in the hlq.SMTP.CONFIG data set is enabled, this message is sent to the SMTP LOGFILE to indicate that the connection was established and that a note of the size specified was received at the indicated date and time.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

Module: SMTPQUEU

Procedure Name: MakeAddrBlok

**EZA5476I**  
*date time*  
**Delivered Note** *note name*  
to *printpath*

**Explanation:** This message is sent to the SMTP LOGFILE to show that an SMTP note was delivered to the user ID at the node ID specified.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**Explanation:** This debug message is displayed when a mail file is enqueued. The recipient number on the queue and the IP address are displayed. For more information on queued mail, see the [z/OS Communications Server: IP User’s Guide and Commands](https://pubs.opengroup.org/onlinepubs/009695399/basedefs/sol4com.h.html).

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.
Module: SMTPEVNT
Procedure Name: CloseCompletedEvent

EZA5498I  date time#connection 552 Too many hops - threshold exceeded

Explanation: The SMTP file has hopped more than 25 times. The SMTP mail file will not be delivered.
System action: SMTP returns the mail file to the sender and continues.
Operator response: Verify that the recipient exists and resend.

System programmer response: The actual failing piece of mail is saved in a data set with the naming convention of MailFileDSPPrefix.Connxxx.Loopmail, where the value of MailFileDSPPrefix can be found in the SMTP configuration data set and xxx represents the connection number which received the message. Use this data set to determine problems with the recipient address. This data set can then be deleted after the problem has been resolved.

Module: SMTPEVNT
Procedure Name: StoreData

EZA5499I  date time#connection 451 Local error: Disk Full. Data from sender was discarded.

Explanation: The SMTP attempted to receive a mail file, but SMTP was unable to store the mail file because there was not enough disk space available. The remote SMTP may resend the data at a later time. This message appears in both the output file associated with the OUTPUT DD statement and the log file associated with the LOGFILE DD statement for the SMTPPROC.

date is the date (month/day/year) the message was sent.
time is the time (hours:minutes:seconds) the message was sent.
connection is the TCP/IP connection number.
sender is the sender’s email address.

System action: SMTP returns a reply code to the sender and discards the SMTP file.
Operator response: Contact the system programmer.
System programmer response: If the problem continues, increase the volume size for SMTP.

Module: SMTPEVNT
Procedure Name: StoreData

EZA5500I  date time#connection 451 Local error: Allocation Error. Data from sender was discarded.

Explanation: The SMTP attempted to allocate a file and received an allocation error. The remote SMTP may resend the data at a later time. This message appears in both the output file associated with the OUTPUT DD statement and the log file associated with the LOGFILE DD statement for the SMTPPROC.

date is the date (month/day/year) the message was sent.
time is the time (hours:minutes:seconds) the message was sent.
connection is the TCP/IP connection number.
sender is the sender’s email address.

System action: SMTP returns a reply code to the sender and discards the SMTP file.
Operator response: Verify that the volume is available.
System programmer response: No action is needed.

Module: SMTPEVNT
Procedure Name: StoreData
Explanation: The SMTP attempted to receive a mail file that is too large. This message appears in both the output file associated with the OUTPUT DD statement and the log file associated with the LOGFILE DD statement for the SMTPPROC.

date is the date (month/day/year) the message was sent.

time is the time (hours:minutes:seconds) the message was sent.

connection is the TCP/IP connection number.

sender is the sender’s email address.

System action: SMTP returns a reply code to the sender and discards the SMTP file.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPEVNT

Procedure Name: StoreData

Module: SMTPRES
Procedure Name: ProcessRQR

EZA5508I  date time Not Found in Host Table: address
Explanation: SMTP did not find the indicated mail address in its Host Tables. SMTP will attempt to resolve the address.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: HostTableLookUp

EZA5509I  date time Not found in Host Table: host_name
Explanation: SMTP did not find the indicated host name in its Host Table. SMTP will attempt to resolve the host name.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: HostTableLookUp
EZA5510I  date time Found in Host Table: address
Explanation: SMTP found the indicated address in its Host Table.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: HostTableLookUP

EZA5511I  date time Not Found in Host Table: name
Explanation: SMTP could not find the indicated name in the Host Table. SMTP attempts to resolve the name.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: HostTableLookUP

EZA5512I  date time Found in Host Table: name
Explanation: SMTP found the indicated name in the Host Table.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: HostTableLookUP

EZA5513I  date time Canonicalizing To: canonical_name
Explanation: SMTP is converting an address to the indicated canonical name.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: HostTableLookUp

EZA5514I  date time Found in Host Table: host name
Explanation: SMTP found the indicated host name in the host table.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: HostTableLookUp
EZA5515I  date time  Canonicalizing To: canonical_name
Explanation:  SMTP is converting an address to the indicated canonical name.
System action:  Processing continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  SMTPRES
Procedure Name:  HostTableLookUp

EZA5516I  date time  Unknown Host Name: name
Explanation:  SMTP has received mail for the indicated host, but does not have the host name in the host table.
System action:  Processing continues.
Operator response:  No action is needed.
System programmer response:  Correct the SMTP host table if necessary.
Module:  SMTPRES
Procedure Name:  HostTableLookUp

EZA5517I  date time#query_number  Unable to resolve request for number days
Explanation:  SMTP has been unable to resolve a query for an address for the indicated number of days. SMTP returns the query to the sender.
System action:  Processing continues.
Operator response:  Make sure that the host requested exists on the network.
System programmer response:  Assist the user as necessary.
Module:  SMTPRES
Procedure Name:  SendRQR

EZA5518I  date time#query_number  Adding Request to Retry Queue
Explanation:  SMTP was unable to resolve a query, and is placing the query on the queue to be tried again.
System action:  Processing continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  SMTPRES
Procedure Name:  SendRQR

EZA5519I  date time#query_number  Setting Retry Timer: number seconds
Explanation:  SMTP is setting the retry timer, which governs the frequency with which requests are tried again, to the indicated value.
System action:  Processing continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  SMTPRES
Procedure Name:  SendRQR

**query_number**  

**Remote Nameserver down/unable to perform recursion**

**Explanation:** A remote name server to which SMTP sent a query for resolution is either not running or unable to perform recursion. The query is queued and tried again.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Contact the administrator for the remote name server and inform them of the problem.

**Module:** SMTPRES
Procedure Name: NameServerToRQR

EZA5525I date time query_number Discarding Name Server Response with Format Error
Explanation: SMTP received an incorrectly formatted response from a name server. The response is discarded.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: Contact the administrator for the name server and inform them of the problem.
Module: SMTPRES
Procedure Name: NameServerToRQR

EZA5526I date time query_number Truncation Bit set in Nameserver Response
Explanation: SMTP received a response from a name server with a truncation bit indicating that the response has been truncated.
System action: The response is discarded and the query is repeated.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: NameServerToRQR

EZA5527I mm/dd/yy hh:mm:ss query_number Discarding Invalid Nameserver Response case error_number
Explanation: SMTP has received a response to a name server query that either does not contain a valid name or has a data length error on the response. The response is discarded and the query is repeated.
In the message text:

- **mm/dd/yy**
  - The current date (month/day/year).
- **hh:mm:ss**
  - The current time (hours:minutes:seconds).
- **query_number**
  - The query number of the name server.
- **error_number**
  - The type of error detected. The value 1 indicates an invalid name. The values 2 and 3 indicate an invalid length in the response data of the name server.

Examples:
EZA5527I 06/24/10 06:31:02# 139 Discarding Invalid Nameserver Response case 2
System action: SMTP continues.
Operator response: None.
User response: Not applicable.
System programmer response: Contact the administrator for the name server and inform them of the problem.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTP
Routing code: Not applicable.
Descriptor code: Not applicable.
Automation: Not applicable.

EZA5528I  date time#query_number Unable to match Nameserver Response with Query
Explanation: SMTP was unable to match a response from a name server with a query. The response is discarded.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: NameServerToRQR

EZA5529I  date time#query_number Discarding Invalid Nameserver Record
Explanation: SMTP received a response to a name server query that did not contain a valid name. The response is discarded.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: Contact the administrator for the name server and inform them of the problem.
Module: SMTPRES
Procedure Name: NameServerToRQR

EZA5530I  date time#query_number Discarding Invalid CNAME Record
Explanation: SMTP received a response to a mailbox type query that did not contain a valid name. The response is discarded.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: Contact the administrator for the name server and inform them of the problem.
Module: SMTPRES
Procedure Name: NameServerToRQR

EZA5531I  date time#query_number Throwing away circular CNAME record: name
Explanation: SMTP received a circular response to a CNAME type query. A circular response points back to itself, giving the canonical name instead of the address. The response is discarded.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: Contact the administrator for the name server and inform them of the problem.
Module: SMTPRES
Procedure Name: NameServerToRQR

EZA5532I  date time#query_number Canonicalized with: canonical_name
Explanation: SMTP has converted an address to the indicated canonical name.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Discarding Invalid MX Record

**Explanation:** SMTP received a response to a mailbox query that did not contain a valid mailbox name. The response is discarded.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Contact the administrator for the name server and inform them of the problem.

**Module:** SMTPRES

**Procedure Name:** NameServerToRQR

Ignoring Non-Authoritative response

**Explanation:** SMTP received a non-authoritative response to a name server query. Non-authoritative responses point to a name server that has authority for the correct zone. SMTP cannot send mail to the name server, so the non-authoritative answer is ignored. SMTP will send a name server query to determine the proper name server to use.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPRES

**Procedure Name:** NameServerToRQR

Converting dataset ADDR BLOK to new format

**Explanation:** SMTP is converting the address block for the indicated data set to a new format.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPRFMT

**Procedure Name:** ReformatAddrBlok

Restricted SMSG command: command from: userID at: node

**Explanation:** The indicated user issued an authorized SMSG command. The command will be executed.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SMTPSMSG

**Procedure Name:** ProcessSMSG

Ignoring Referral response

**Explanation:** SMTP received a referral response to a name server query. SMTP does not do recursive processing and relies on the name server for recursive processing. The referral is ignored.

**System action:** Processing continues.

**Operator response:** No action is needed.
System programmer response: Inform the name server's administrator of the recursion problem.

Module: SMTPRES

Procedure Name: NameServerToRQR

EZA5543I date time query_number Unable to resolve MX host name hostname

Explanation: SMTP received an MX record for this host but did not receive the A record information. SMTP reissues the request to obtain the A information for the specified host name from the name server.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPRES

Procedure Name: NameServerToRQR

EZA5544E Unable to RENAME file datasetname1 to datasetname2 rc=rc

Explanation: An attempt by SMTP to rename a data set failed. This may cause SMTP to have problems with processing the mail.

In the message text:

datasetname1
The original name of the SMTP data set used on the RENAME function.

datasetname2
The new name of the SMTP data set used on the RENAME function.

rc
The return code from the program that detected the error.

Examples: The following example shows the system console that is associated with this problem. The data set TPOUSER.A0000002.NOTE already exists and is cataloged but is being accessed by another application.

13.54.20 IEC614I SCRATCH FAILED - RC 008, DIAGNOSTIC INFORMATION IS (04080425), SMTP,CPDLB1,TPOUSER.A0000002.NOTE
13.54.20 EZA5544E Unable to RENAME file TPOUSER.CONN257.NOTE to TPOUSER.A0000002.NOTE rc=20
13.54.20 EZA5568E UNABLE TO ALLOCATE ADDRBLK DATA SET CORRECTLY

The following example shows the system console that is associated with this problem. The data set TPOUSER.A0000005.NOTE already exists but is not cataloged.

15.25.07 EZA5544E Unable to RENAME file TPOUSER.CONN257.NOTE to TPOUSER.A0000005.NOTE rc=408
15.25.07 EZA5568E UNABLE TO ALLOCATE ADDRBLK DATA SET CORRECTLY

System action:

• If the STOPONRENF configuration statement is not coded in the SMTP configuration file, processing continues.

• If the STOPONRENF configuration statement is coded and the RENAME failure occurs on a data set associated with the batch connection, the SMTP server stops.

See z/OS Communications Server: IP Configuration Reference for more information about the STOPONRENF statement.

Operator response: Refer this message to the system programmer.

System programmer response: Check the system log for message IEC614I. Use the diagnostic information provided and see MVS/DFP Diagnostic Reference. If message IEC614I is not present, check for return code 408. This return code indicates that the new data set name already exists but is not cataloged. Locate and delete the data set.

Data set contention can cause this problem. Check your system console to ensure that another application or defragmentation utility did not access the SMTP data set while the SMTP server was active. To avoid this problem, configure the application or utility such that it bypasses data sets with the SMTP high-level qualifier.

Problem determination: Not applicable.
EZA5545E • EZA5546E

Module: SMMVSV
Procedure Name: svc202r
Routing code: 2, 10
Descriptor code: 4
Automation: This message is a candidate for automation. You can use this message to ensure that SMTP is processing mail correctly.

EZA5545E  date time addrblokkname.ADDRBLOK does not exist. No Mail Error process is attempted. RC = rc

Explanation: SMTP tried to build an error file, but the original SMTP note, represented by the data set addrblokkname.ADDRBLOK, has not been allocated.

In the message text:

date
   The date in the form mm/dd/yy.

time
   The time in the form hh:mm:ss.

addrblokname
   The name of the SMTP data set.

rc
   The return code from the program that detected the error.

Examples: This message is generated on a test system because the data set TPOUSER.00000006.ADDRBLOK was deleted and one day passed; this causes the mail to be considered undeliverable.
EZA5143I Return mail older than : 1 days
EZA5474I 11/03/05 15:24:59 Received Note 00000006 via BSMTP From <USER1@MVS7> 222 Bytes
EZA5545E 11/04/05 15:32:04 TPOUSER.00000006.ADDRBLOK does not exist. No Mail Error process is attempted. RC = 28

Tip: The ?GETSTATE macro returns RC 28 because the data set does not exist.

System action: SMTP continues.

Operator response: No action is needed.

User response: Not applicable.

System programmer response: Check your system console to ensure that another application or defragmentation utility did not access or delete the SMTP data set while the SMTP server was active. Data set contention can cause this problem. To avoid this problem, configure the application to bypass data sets with the SMTP high-level qualifier.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: SMTP

Module: SMTPUTIL
Routing code: 2, 10
Descriptor code: 4

EZA5546E  date time Zero bytes were read from addrblokkname.ADDRBLOK. No Mail Error process is attempted. RC = rc

Explanation: SMTP tried to build an error file, but the original SMTP note, represented by the data set addrblokkname.ADDRBLOK, is empty. Therefore, the sender’s address cannot be retrieved.

date is the date in the form mm/dd/yy.

time is the time in the form hh:mm:ss.

addrblokname is the name of the SMTP data set.

rc is the return code from the program that detected the error.
System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Check your system console to ensure that another application or defragmentation utility did not access or delete the SMTP data set while the SMTP server was active. Data set contention can cause this problem. To avoid this problem, configure the application to bypass data sets with the SMTP high level qualifier.

Note: Before you start the SMTP server again, delete addrblokname.ADDRBLOK.

Module: SMTPUTIL
Procedure Name: MakeErrorFile

---

```
EZA5547I  date time Processing Path String: pathstring and length = length

Explanation: This message displays the path string built by SMTP. This message will be displayed only if resolver trace is active.

date is the date in the form mm/dd/yy.
time is the time in the form hh:mm:ss.
pathstring is the path string built by SMTP.
length is the path string length. The maximum length allowed is 256 characters.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRES
Procedure Name: PrintPath
```

---

```
EZA5548E Unable to open existing file FullDataSetName, rc= ReturnCode. SMTP Terminating.

Explanation: SMTP attempted to open the data set specified in the error message which already existed and received an error from the operating system.

FullDataSetName is the name of the data set.
ReturnCode is the value of the return code.

System action: SMTP ends.
Operator response: None
System programmer response: If return code is 28, check to see if there is data set contention for the data set name displayed in the error message. SMTP must have access to all its data sets to perform its function. Therefore, if a defragmentation utility (or any other application) is actively accessing SMTP data sets while the SMTP server is active, a data-set contention problem could occur. To avoid this problem, configure the application to bypass data sets with the SMTP high level qualifier. The high level qualifier is set by the SMTP configuration parameter MAILFILEDSPREFIX.

```
date time EXIT REJECTS - CONNECTION connection_number ACTIONCODE action
```

**Explanation:** The user exit has chosen to reject an inbound mail item. This message is written to the logfile, if the logfile option is active.

`date` and `time` indicate when the connection was rejected.

`connection_number` is the unique identifier of this connection.

`action` is the action code that was used when the exit was called. The action codes are defined in the EZBZSMTP macro.

**System action:** The partner SMTP application is notified that service is denied due to a user supplied exit and processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** EZABB020

**Procedure Name:** DoExit

---

**EZA5551I**

```
mm/dd/yy hh:mm:ss connection_number EXITPARMS VER version ACTN actioncode USER TOKEN value IPADDR ipaddr DLEN length SAFTOKEN ADDR safaddr
```

**Explanation:** This parmlist was passed to the user supplied SMTP exit for the connection number specified. This message will be written to the debug file, if the debug option is active. The less than symbol (<) indicates data flowing to the user supplied exit.

In the message text:

`mm/dd/yy`

The current date in the month/day/year format.

`hh:mm:ss`

The current time in the hours:minutes:seconds format.

`connection_number`

The unique identifier of this connection.

`version`

The version number of the parmlist.

`actioncode`

The action code for which the user supplied exit was called. The action codes are defined in the EZBZSMTP macro.

`value`

A 4-byte value supplied by the user.

`ipaddr`

The source IP address of the remote SMTP client for inbound TCP/IP connections.

`length`

The length of the data in the buffer.

`safaddr`

The address of the SAF (security) token associated with the JES spool file for outbound data.

See [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com/docs/en/zoscommunicationsserver) for more information about the EXITDIRECTION configuration statement.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.
Module: EZABB020
Procedure Name: DoExit

EZA5552I  mm/dd/yy hh:mm:ss connection_number> USER EXIT RETCODE returncode

Explanation: The displayed return code was received from the user supplied SMTP exit for the connection number specified. This information is written to the debug file, if the debug option is active.

In the message text:

  mm/dd/yy  
  The current date in the month/day/year format.

  hh:mm:ss  
  The current time in the hours:minutes:seconds format.

  connection_number  
  The unique identifier of this connection.

  returncode  
  A user-supplied value. The return code should be selected from those defined in the EZBZSMTP macro.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: EZABB020
Procedure Name: DoExit

EZA5553I  date time SitePtr = siteptr File_Queue dataset_name NextQueued = next_siteptr

Explanation: This diagnostic message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST(SMTPPROC). This message is generated whenever the TCPDATA file has RESOLVER traces active.

  date  is the current date.

  time  is the current time.

  siteptr  is the pointer to the current site for the mail.

  dataset_name  is the file name pointed to by File_Queue. This data set contains a single piece of mail.

  next_siteptr  is the pointer to the next site for the mail.

System action: SMTP continues.
Operator response: No action is needed.
System programmer response: You can use the dataset_name and other messages generated in the trace to determine if the data set has been placed on the retry queue or is still on the active SMTP queue working with secondary IP address. Review the messages and their sequence to determine if you have a problem. If there is a problem, collect these traces and contact the IBM Software Support Center.

Module: SMTPEVNT
Procedure Name: CloseCompletedEvent

EZA5554I  date time NextSite = nextsite File_Queue dataset_name NextQueued = next_nextsite

Explanation: This diagnostic message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST(SMTPPROC). This message is generated whenever the TCPDATA file has RESOLVER traces active.

  date  is the current date.

  time  is the current time.

  nextsite  is the pointer to the next site for the mail.
dataset_name is the file name pointed to by File_Queue. This data set contains a single piece of mail.

next_nextsite is the pointer to the next site for the mail.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: You can use the dataset_name and other messages generated in the trace to determine if the data set has been placed on the retry queue or is still on the active SMTP queue working with secondary IP address. Review the messages and their sequence to determine if you have a problem. If there is a problem, collect these traces and contact the IBM Software Support Center.

Module: SMTPEVNT

Procedure Name: CloseCompletedEvent

EZA5555I  date time  

Retry_Queue = retryqueue_head  

File_Queue  

dataset_name  

NextQueued = retryqueue_nextsite  

where = timing_sequence

Explanation: This diagnostic message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST(SMTPPROC). This message is generated whenever the TCPDATA file has RESOLVER traces active.

date is the current date.

time is the current time.

retryqueue_head is the pointer to the head of the retry queue for mail.

dataset_name is the file name pointed to by File_Queue. This data set contains a single piece of mail.

retryqueue_nextsite is the pointer to the next site for the mail on the retry queue.

If timing_sequence is 1, this is the retry queue values prior to adding or deleting from the queue. If timing_sequence is 2, this is the retry queue value after changes have been made.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: You can use the dataset_name and other messages generated in the trace to determine if the data set has been placed on the retry queue. timing_sequence applies to both this message and EZA5556I. Review the messages and their sequence to determine if you have a problem. If there is a problem, collect these traces and contact the IBM Software Support Center.

where = timing_sequence

Explanation: This diagnostic message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST(SMTPPROC). This message is generated whenever the TCPDATA file has RESOLVER traces active.

date is the current date.

time is the current time.

SMTPqueue_head is the pointer to the head of the SMTP queue for mail.

dataset_name is the file name pointed to by File_Queue. This data set contains a single piece of mail.

SMTPqueue_nextsite is the pointer to the next site for the mail on the SMTP queue.

If timing_sequence is 1, this is the SMTP queue values prior to adding or deleting from the queue. If timing_sequence is 2, this is the SMTP queue after changes have been made.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: You can use the dataset_name and other messages generated in the trace to determine if the data set has been placed on the active SMTP queue working with secondary IP address. timing_sequence applies to both this message and EZA5558I. Review the messages and their sequence to determine if you have a problem. If there is a problem, collect these traces and contact the IBM Software Support Center.

Module: SMTPEVNT
Procedure Name: CloseCompletedEvent

EZA5558I  
*date* *time* SMTP_QTail = SMTPqueue_tail File_Queue dataset_name NextQueued = SMTPqueue_tail_nextsite

Explanation: This diagnostic message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST(SMTPPROC). This message is generated whenever the TCPDATA file has RESOLVER traces active.

date is the current date.

time is the current time.

SMTPqueue_tail is the pointer to the tail of the SMTP queue for mail.

dataset_name is the file name pointed to by File_Queue. This data set contains a single piece of mail.

SMTPqueue_tail_nextsite is the pointer to the next site for the mail on the SMTP queue tail. This should always be zero.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: You can use the dataset_name and other messages generated in the trace to determine if the data set has been placed on the active SMTP queue working with secondary IP address. This message immediately follows message EZA5557I. Review the messages and their sequence to determine if you have a problem. If there is a problem, collect these traces and contact the IBM Software Support Center.

Module: SMTPEVNT
Procedure Name: CloseCompletedEvent
EZA5591  date time SitePtr = siteptr to be disposed NextQueued = nextsite

Explanation:  This diagnostic message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST(SMTPPROC). This message is generated whenever the TCPDATA file has RESOLVER traces active.

date is the current date.

time is the current time.

siteptr is the pointer currently being disposed of.

nextptr is the pointer to the next site for the mail. Should always be zero.

System action:  SMTP continues.

Operator response:  No action is needed.

System programmer response:  siteptr shows what pointer is being disposed of (freed). Review the messages and their sequence to determine if you have a problem. If there is a problem, collect these traces and contact the IBM Software Support Center.

Module:  SMTPQUEU
Procedure Name:  DisposeSitePtr

EZA5560I  error_message

Explanation:  This diagnostic message is preceded by an SMTP error message. This message displays the text of the Dynamic Allocation (SVC 99 - DYNALLOC) message. This message provides additional information about why the Dynamic Allocation failed. The message might be issued multiple times to include the completer text from Dynamic Allocation.

error_message is text of the message produced by DYNALLOC.

System action:  SMTP might halt or continue depending on the preceding SMTP error message.

Operator response:  Notify the system programmer of the error.

System programmer response:  Use the text of this message and the documentation describing Dynamic Allocation (DYNALLOC) in the z/OS MVS Programming: Authorized Assembler Services Guide to determine the cause of the error and respond as indicated. Most of these problems are DASD management related, so stop the SMTP started task, correct the problem, then restart the task.

Module:  SMMVSUB
Procedure Name:  SMTP_s99error

EZA5561I  RESOLVERUSAGE NO specified without a forwarding mailer

Explanation:  SMTP resolver usage was disabled by the RESOLVERUSAGE NO statement in the hlq.SMTP.CONFIG data set and a remote mailer to handle unknown mail has not been specified. All non-local mail received by SMTP is returned as undeliverable.

System action:  SMTP does not attempt to resolve non-local host names. Any non-local mail received by SMTP is returned as undeliverable.

Operator response:  Notify system the programmer.

System programmer response:  Specify a remote mailer where unknown mail will be forwarded by specifying the IPMAILERADDRESS statement or the MAILER...UNKNOWN statement. For information about the IPMAILERADDRESS and the MAILER...UNKNOWN statements, see the z/OS Communications Server: IP Configuration Guide.

Module:  SMTP
Procedure Name:  DoFinalChecks

362  z/OS V1R13.0 Comm Svr: IP Messages Volume 1 (EZA)
Resolver Usage parm Specified

Explanation: RESOLVERUSAGE was specified in the hlq.SMTP.CONFIG data set. The new value parm will change the current value for this configurable setting.

parm is either YES to attempt resolving non-local host names or NO to inhibit the resolving of non-local host names.

System action: If the final setting is NO, SMTP will not attempt to resolve any non-local host names. Mail will be forwarded if the IPMAILERADDRESS statement or the MAILER...UNKNOWN statement has been specified in the hlq.SMTP.CONFIG data set. For information about the IPMAILADDRESS and the MAILER...UNKNOWN statements, see the z/OS Communications Server: IP Configuration Guide

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: ProcessConfigFile

Incorrect or missing operand associated with statement RESOLVERUSAGE incorrect_operand

Explanation: The only valid operands for the RESOLVERUSAGE statement are YES and NO. Either YES or NO must be specified.

incorrect_operand is the incorrect operand that was found. If no operand was specified, this will be blank.

System action: SMTP ends.

Operator response: Notify the system programmer.

System programmer response: Specify the correct operand for the RESOLVERUSAGE statement and restart the SMTP job to pick up the new settings in the SMTP configuration data set.

Module: SMTP

Procedure Name: Error

date time Processing spool file filename

Explanation: This message is written to the SMTP sysdebug data set specified in the SYSDEBUG statement in SEZAINST(SMTPPROC). This message is generated whenever debug is active and SMTP is processing data from the JES spool.

date is the current date.
time is the current time.
filename is the spool file name being processed by SMTP.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPBTCH

Procedure Name: ServiceReaderMVS

date time Read spool file filename sent by userid at nodeid using TSO XMIT

Explanation: This message is written to the SMTP sysdebug data set specified in the SYSDEBUG statement in SEZAINST(SMTPPROC). This message is generated whenever debug is active and SMTP is processing data from the JES spool. The message indicates that the spool file was sent using the TSO/E TRANSMIT(XMIT) command. This command puts certain information in its headers indicating who and where the XMIT command was issued from. The spool file is transmitted with headers, built by XMIT, that identify the originating node and user ID.

date is the current date.
time is the current time.
filename is the name of the spool file being processed by SMTP.

userid is the user identification taken from the XMIT headers.

nodeid is the NJE node identification taken from the XMIT headers.

System action: SMTP continues

Operator response: If userid or nodeid is incorrect then contact the system programmer.

System programmer response: If userid or nodeid is incorrect then check the XMIT command setup parameters.

Module: SMTPBTCH

Procedure Name: ServiceReaderMVS

EZA5566I date time Read spool file filename sent by a batch job

Explanation: This message is written to the SMTP sysdebug data set specified in the SYSDEBUG statement in SEZAINST(SMTPPROC). This message is generated whenever debug is active and SMTP is processing from the JES spool. The message indicates that the spool file was sent by a batch job.

date is the current date.

time is the current time.

filename is the name of the spool file being processed by SMTP.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPBTCH

Procedure Name: ServiceReaderMVS

EZA5567I filename.ADDRBLOK was incomplete and was deleted.

Explanation: This message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST (SMTPPROC). This message is generated when SMTP detects a partial control block data set (filename.ADDRBLOK) exists. The control block data set must contain the following records:

• record 1 - header information.
• record 2 - sender information.
• record 3 - recipient information. At least one recipient record must be present.

If SMTP detects a partial data set it will delete filename.ADDRBLOK and any corresponding filename.NOTE data set. Partial data sets might be created by failures to get space on the DASD.

filename.ADDRBLOK is the name of the data set being deleted by SMTP.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Ensure that there is enough DASD space available for SMTP to continue.

Module: SMTPQUEU

Procedure Name: EnqueueForDelivery

EZA5568E UNABLE TO ALLOCATE ADDRBLOK DATA SET CORRECTLY.

Explanation: This message is written to the SMTP output data set specified in the OUTPUT statement in SEZAINST (SMTPPROC). SMTP cannot allocate enough space for its control block data set (*.ADDRBLOK). This problem might be caused by not enough available DASD space.

System action: SMTP continues.
Operator response: Contact the system programmer.

System programmer response: If SMTP did not end, then use the MVS stop command to end SMTP. Ensure that the DASD used by SMTP is defined properly and has enough space available. Correct any DASD problem and restart SMTP.

Module: SMTPQUEU

Procedure Name: MakeAddrBlok

EZA5569I  No Source Routing : parameter

Explanation: The NOSOURCEROUTE statement in the hlq.SMTP.CONFIG file has been set. Depending on the parameter following the statement, SMTP will modify its behavior regarding source routing addressing strings that can be passed on both the MAIL FROM: and RCPT TO: SMTP commands.

parameter is an input string whose valid options are DISABLED, MAILCMD, RCPTCMD or ENABLED.

See the z/OS Communications Server: IP Configuration Reference for more information about the NOSOURCEROUTE configuration statement.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5570E  INCORRECT VALUE parameter SPECIFIED FOR NOSOURCEROUTE STATEMENT - THE DEFAULT VALUE OF DISABLED WILL BE USED

Explanation: The input parameter following the NOSOURCEROUTE statement is invalid. The default value of DISABLED will be used instead. This means that the SMTP server will generate and pass source route addressing strings on both the MAIL FROM: and the RCPT TO: SMTP commands.

parameter shows a maximum of 10 characters of the invalid input parameter.

See the z/OS Communications Server: IP Configuration Reference for more information about the NOSOURCEROUTE configuration statement.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: Change the parameter associated with the NOSOURCEROUTE configuration statement to a valid parameter. Stop and restart SMTP to activate the new parameter setting.

Module: SMTP

Procedure Name: ProcessConfigFile

EZA5571E  date time SPOOL FILE jobid WAS DELETED DUE TO RECORD COUNT OF ZERO

Explanation: The JES spool job identified in this message was intentionally deleted by the SMTP code because it contained a total record count (SSSOLNCT) of zero. See the z/OS MVS Using the Subsystem Interface for more information about the JES interface used by SMTP.

date is the current date stamp.

time is the current time stamp.

jobid is the JES spool identifier (SSSOJOB1).

System action: SMTP deletes the JES spool file. Processing continues.

Operator response: No action is needed.

System programmer response: Check the applications that use the JES spool for SMTP. The most probable cause for
these files being created with a zero record count is an application abend.

Module: ServiceReaderMVS
Procedure Name: SMTPBTCH

**EZA5573I  RcptReply452 Active : state**

**Explanation:** Indicates whether the RCPTREPLY452 statement was present in the hlq.SMTP.CONFIG file.

*state* is one of the following:

- **YES**  The RCPTREPLY452 statement was present. The SMTP client interprets the 452 reply code received during RCPT command processing to mean 'too many recipients'.
- **NO**  The RCPTREPLY452 statement was not present. The SMTP client interprets the 452 reply code received during command processing to mean 'insufficient system storage' and the mail processing is halted.

See [z/OS Communications Server: IP Configuration Reference](#) for more information about the RCPTREPLY452 configuration statement.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

Module: SMTP
Procedure Name: OpenOutputStreams

**EZA5574I  SMTP ExitDirection : direction saf**

**Explanation:** The EXITDIRECTION statement in the hlq.SMTP.CONFIG file has been set. Depending on the parameters following the statement, SMTP will modify its behavior regarding when to call the customer supplied SMTP exit program.

*direction* is the direction when the exit program is called. Valid options are INBOUND or BOTH.

*saf* indicates if SAF information is requested. saf appears only if *direction* is BOTH. Valid options are SAFYES or SAFNO

See [z/OS Communications Server: IP Configuration Reference](#) for more information about the EXITDIRECTION configuration statement.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

Module: SMTP
Procedure Name: OpenOutputStreams

**EZA5575E  NO DESTINATION SPECIFIED FOR NOTE**

**Explanation:** The user attempted to send a note using the SMTPNOTE EXEC without specifying a destination. Without a destination, the note cannot be delivered.

**System action:** SMTP continues.

**Operator response:** Specify a destination and resend the note.

**System programmer response:** Assist the user as necessary.

Module: SMTPNOTE
Procedure Name: main
EZA5576E  UNABLE TO ALLOCATE TEMPORARY DATASET 'data_set'

Explanation: SMTPNOTE is unable to allocate the indicated temporary data set, which is used to hold a current note, because of lack of available storage.

System action: SMTPNOTE EXEC halts. SMTP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Increase the region size and restart SMTPNOTE.

Module: SMTPNOTE

Procedure Name: main

EZA5577I  NOTE CANCELLED

Explanation: A note created using SMTPNOTE has been canceled by the user.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPNOTE

Procedure Name: main

EZA5578I  UNABLE TO EDIT TEMPORARY DATASET 'data_set'

Explanation: SMTPNOTE is unable to edit the indicated temporary data set, which is used to hold a note being created. This message will be accompanied by messages from the operating system giving further information about the reason.

System action: SMTP continues.

Operator response: Notify the system programmer of this message.

System programmer response: Increase the region size and restart SMTPNOTE.

Module: SMTPNOTE

Procedure Name: main

EZA5579E  UNABLE TO TRANSMIT DATA TO 'name' AT 'node'

Explanation: SMTPNOTE is unable to transmit a note to the indicated user at the indicated address.

name is the name of the SMTP server started task. For SMTPNOTE CLIST the customization variable is SMTPJOB whose value is used for name.

node is the NJE node on which the SMTP server is running. For SMTPNOTE CLIST the customization variable is SMTPNODE whose value is used for node.

System action: The data is not transmitted. SMTPNOTE stops.

Operator response: Notify the system programmer of the error.

System programmer response: Check that the name is correct for the SMTP server started task. Check that the node is correct NJE node name where the SMTP server is running. Check that the node exists in the data set IKJTSOxx for the TRANSREC parameter (NODESMF). Make any changes to the SMTPNOTE customization variables or IKJTSOxx data set and try SMTPNOTE again. For more information about the customization of SMTPNOTE see z/OS Communications Server: IP Configuration Guide.

Module: SMTPNOTE

Procedure Name: main
EZA5580E UNABLE TO DELETE TEMPORARY DATASET ‘data_set’

Explanation: SMTPNOTE is unable to delete the temporary data set used to hold notes being created. This message will be accompanied by messages from the operating system indicating the reason for the error.

System action: SMTP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Use the messages displayed by the operating system to determine the cause of the error, and respond as indicated.

Module: SMTPNOTE

Procedure Name: main

---

EZA5581E CONFLICTING PARAMETERS ‘DATASET’ AND ‘REUSE’

Explanation: The REUSE parameter, which is used to reuse an existing temporary data set to hold notes being created by SMTPNOTE, was specified, but no temporary data set currently exists. The REUSE parameter is ignored and a new temporary data set is created.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPNOTE

Procedure Name: main

---

EZA5582E UNABLE TO USE DATASET ‘data_set’

Explanation: SMTPNOTE is unable to access the indicated data set. This message is accompanied by messages from the operating system indicating the reason for the error.

System action: SMTP continues.

Operator response: Verify that the data set is protected. Use the DATESET parameter passed to SMTPNOTE to specify a different data set to be used. If that is not the problem, notify the system programmer of the error.

System programmer response: SMTPNOTE uses the TSO allocation (alloc) command to create a temporary data set similar to the data set passed on the DATESET parameter. The allocation command is failing. Use the messages issued by the operating system to determine the cause of the error and respond as indicated. For more information, see the z/OS TSO/E Command Reference.

Module: SMTPNOTE

Procedure Name: main

---

EZA5583E UNABLE TO USE DATASET ‘data_set’, COPYING ERRORS DETECTED

Explanation: SMTPNOTE cannot use the indicated data set because it is a protected data set.

System action: SMTP continues.

Operator response: Verify that the data set logical record (LRECL) attribute is 243 or less. Also, verify that the data set is not being shared with other users when SMTPNOTE is executed. If this is not the problem, notify the system programmer of the error.

System programmer response: SMTPNOTE used the TSO REPRO command to copy the user’s data into a temporary data set. This command is failing. Use the messages issued by the operating system to determine the cause of the error and respond as indicated. For more information, see the z/OS DFSMS Access Method Services for Catalogs.

Module: SMTPNOTE

Procedure Name: main
EZA5584E INVALID PARAMETER, parameter

Explanation: SMTPNOTE has received an incorrect parameter. The only valid parameters for SMTPNOTE are BATCH, DEBUG, and REUSE.

System action: SMTP continues.

Operator response: Specify a valid parameter for SMTPNOTE. For more information, see the z/OS Communications Server: IP User’s Guide and Commands.

System programmer response: No action is needed.

Module: SMTPNOTE

Procedure Name: main

EZA5585E BATCH PARAMETER REQUIRES DATASET PARAMETER

Explanation: The BATCH parameter was submitted without a data set name. The BATCH parameter requires a data set name to be imported into the note.

System action: SMTP continues.

Operator response: Resubmit the SMTPNOTE command, specifying a valid data set to be imported into the note using the BATCH parameter. For more information, see the z/OS Communications Server: IP User’s Guide and Commands.

System programmer response: No action is needed.

Module: SMTPNOTE

Procedure Name: main

EZA5586E CONFLICTING PARAMETERS ‘CC’ AND ‘NOCC’

Explanation: Both the CC parameter, which specifies addresses to be copied on a note, and the NOCC parameter, which specifies that no addresses are to be copied on the note, were specified. These parameters are mutually exclusive.

System action: SMTP continues.

Operator response: Submit only one of these parameters when using SMTPNOTE.

System programmer response: No action is needed.

Module: SMTPNOTE

Procedure Name: main

EZA5587E NO VALUE FOR PARAMETER ‘TO’

Explanation: No address or user ID was specified in the TO field of the note being created by SMTPNOTE. Without a note or user ID in this field, the note cannot be sent.

System action: SMTP continues.

Operator response: Specify an address or user ID to receive the note in the TO field of the note. For more information, see the z/OS Communications Server: IP User’s Guide and Commands.

System programmer response: No action is needed.

Module: SMTPNOTE

Procedure Name: main
EZA5588E • EZA5593I

EZA5588E  NO VALUE FOR PARAMETER ‘CC’

Explanation: The CC parameter was specified, indicating that one or more addresses are to be copied on the current note, but no addresses or user IDs were specified. Without an address or user ID, no copies of the note can be sent.

System action: SMTP continues.

Operator response: Resubmit the SMTPNOTE command, supplying an address or user ID to receive a copy of the note using the CC parameter. For more information, see the z/OS Communications Server: IP User’s Guide and Commands.

System programmer response: No action is needed.

Module: SMTPNOTE

Procedure Name: main

EZA5589E  NO VALUE FOR PARAMETER ‘DATASET’

Explanation: The DATASET parameter, which indicates that a data set is to be imported into the note, was specified without a data set name. Without a data set name, no data set can be imported.

System action: SMTP continues.

Operator response: Resubmit the SMTPNOTE command, specifying a data set to be included in the note using the DATASET parameter. For more information, see the z/OS Communications Server: IP User’s Guide and Commands.

System programmer response: No action is needed.

Module: SMTPNOTE

Procedure Name: main

EZA5590S  UNKNOWN ERROR CODE ‘errcode’

Explanation: SMTPNOTE has encountered an error that it does not recognize.

System action: SMTP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Obtain a trace log for the SMTP host and use this information to determine the cause of the error. If no error is apparent, contact the IBM Software Support Center for assistance.

Module: SMTPNOTE

Procedure Name: main

EZA5593I  SMSG HELP Output

Explanation: A MODIFY smtpprocname,SMSG,HELP command was issued. This message displays the output from the SMSG HELP command, which provides a list of valid MODIFY SMTP SMSG commands.

Examples:
EZA5593I SMSG HELP Output 376
Valid SMSG Commands:
 Queues,max=xxxx - for mail queue lengths
 NUMQueue - for total number of mail messages currently queued
 Stats - for operating statistics
 Help - to get this message
 Trace - to enable resolver tracing
 NOTrace - to disable resolver tracing
 Debug - to enable session debugging
 NODebug - to disable session debugging
 Expire,a.b.c.d - to expire the domain name resolution for mail queued for delivery to this IP address
 SHutdown - to terminate the SMTP server
 STARTEXIT- start/restart the user exit
 STOPEXIT - stop the user exit
System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

EZA5594I SMSG QUEUE Output

Explanation: You issued a MODIFY smtpprocname,SMSG,QUEUE command. This message displays the output from the SMSG QUEUE command, which provides information about the mail queued on the various SMTP mail delivery queues.

See the information about the Modify command-SMSG in z/OS Communications Server: IP System Administrator’s Commands for more information about this output.

Examples:
EZA5594I SMSG QUEUE Output
------- Mail Queues -------
Spool Queue : 0
Undeliverable Queue: 0
--- Resolver Queues ---
Process Queue: 0
Send Queue: 0
Wait Queue: 0
Retry Queue: 0
Completed Queue: 0
Error Queue: 0

System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

EZA5595I SMSG STATS Output

Explanation: You issued a MODIFY smtpprocname,SMSG,STATS command. This message displays the output from the SMSG STATS command. This display provides operating statistics about the SMTP server since the SMTP server was started.

Examples:
EZA5595I SMSG STATS Output 618
Last Up Time: Sat, 29 Jul 06 17:07:10 EST
Statistics : 07/29
From TCP : 0
From Spool : 0
BSMTP Logs : 0
Error Mail : 0
To Local : 0
To RSCS : 0
To TCP : 0
Passive Opns: 0
Active Opens: 0

Highest num queued: 0
High reached at: Date: Sat, 29 Jul 06 17:07:09 EST

System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

**EZA5596I**  SMSG NUMQUEUE Output - Current Number of Mail Queued is `{number}`

**Explanation:** You issued a MODIFY `smtpprocname,SMSG,NUMQUEUE` command. This message displays the output from the command. This display provides information about the number of pieces of mail currently queued in SMTP.

In the message text:

`number`

The current number of pieces of mail that are queued in SMTP.

**Examples:**

EZA5596I SMSG NUMQUEUE Output - Current Number of Mail Queued is 50

System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

**EZA5597I**  SMSG DEBUG Output - Session Debugging Enabled

**Explanation:** You issued a MODIFY `smtpprocname,SMSG,DEBUG` command. This message displays the output from the command. This command enables the connection to the SMTP:DEBUG data set, if the connection is not already enabled, and starts the collection of debugging and tracing information. The MODIFY `smtpprocname,SMSG,DEBUG` command has the same effect as adding the DEBUG option to the SMTP:CONFIG data set.

**Examples:** None.

System action: SMTP continues. Debug information is being collected.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

EZA5598I SMSG EXPIRE Output - ipaddr - Mail queued for re-resolution

Explanation: You issued a MODIFY smtpprocname,SMSG,EXPIRE command. This message displays the output from the command. The domain name resolution for the mail queued for delivery to this IP address expires when this command is issued. SMTP tries to resolve the IP addresses for mail again if the mail is still within the retry time window.

The mail was queued for re-resolution

In the message text:

ipaddr

The address for which the EXPIRE command has been issued.

Examples: None.

System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

EZA5599I SMSG NODEBUG Output - Session Debugging Disabled

Explanation: You issued a MODIFY smtpprocname,SMSG,NODEBUG command. This message displays the output from the command. This command disables connection debugging and tracing.

Examples: None.

System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTP
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.
EZA5600I  Correct form is:

EZA5602I  SmtpNJE MVSDSName <( SpoolSystemType>

EZA5603I  where MVSDSName is the dataset name (including membername, if

EZA5604I  any) of the JES2 or JES3 initialization stream, which is used as

EZA5605I  input to SMTPNJE. This dataset must be cataloged. If the

EZA5606I  dataset is not enclosed in quotes, the userid will prepended

EZA5607I  to it. SmtpNJE will create the file: userid.SMTPNJE.HOSTINFO as

EZA5608I  output, which should be renamed to the dataset name pointed to by

EZA5609I  the SMTPNJE DD of the SMTP server.

Explanation: This is the combined help message displayed when a question mark (?) is entered on the command
line with SMTPNJE. This message is also displayed when an incorrect data set name is specified, or if there is a
problem opening a data set. Finally, it is also displayed when incorrect form is used when specifying an optional
parameter while initiating SMTPNJE. For more information about SMTPNJE, see the

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPRSCS

Procedure Name: GiveHelp

EZA5611E  Unrecognized parameters: 'parameter'

Explanation: The data set name and any additional parameters should be separated by an open parenthesis [(

System action: SMTPNJE continues.

Operator response: No action is needed.

System programmer response: Rerun the SMTPNJE program using the correct, specified format. See the

Module: SMTPRSCS

Procedure Name: ProcessCommandLine

EZA5612E  Unable to find input file: data_set

Explanation: The data set name specified as the program invocation argument cannot be found on any MVS
volume.

System action: SMTPNJE halts.

Operator response: No action is needed.

System programmer response: Check that SMTPNJE has access to the data set on one of the MVS volumes.

Module: SMTPRSCS

Procedure Name: ProcessCommandLine
EZA5613W  Warning: Duplicate entry: node
Explanation:  A duplicate name exists in the input data set being processed. The duplicate is ignored.
System action:  SMTPNJE continues.
Operator response:  No action is needed.
System programmer response:  If the input data set is in error, remove the duplicate name entry.
Module:  SMTPRSCS
Procedure Name:  Insert

EZA5614E  Invalid system type specified: type
Explanation:  An incorrect optional SpoolSystemType was entered at the command line. The only valid options are RSCS, JES2, or JES3. Use the form SMTPNJE data_set_name ( JES2 or JES3. The default is JES2.
System action:  SMTPNJE continues.
Operator response:  No action is needed.
System programmer response:  Reenter the command with a valid SpoolSystemType and the correct form.
Module:  SMTPRSCS
Procedure Name:  ParseOptionalPart

EZA5615E  Unrecognized options: option
Explanation:  SMTPNJE found additional characters in the option string after a valid option was found.
System action:  SMTPNJE continues.
Operator response:  No action is needed.
System programmer response:  Rerun the SMTPNJE program using the correct specified format. See the z/OS Communications Server: IP Configuration Reference for information.
Module:  SMTPRSCS
Procedure Name:  ParseOptionalPart

EZA5616E  Invalid DSName Specifications: data set
Explanation:  A data set name was entered that exceeds 44 characters in length. The incorrect data set name is indicated at the end of the message.
System action:  SMTPNJE halts.
Operator response:  No action is needed.
System programmer response:  Correct the data set name, and rerun the program.
Module:  SMTPRSCS
Procedure Name:  ProcessCommandLine

EZA5617I  Entries in the NJE Hash Table: number of entries
Explanation:  Displays the number of nodes listed in the hash table.
System action:  SMTPNJE continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  SMTPRSCS
Procedure Name:  AmpxFree
EZA5618I Length of Hash Table: length
Explanation: Displays the length of the hash table.
System action: SMTPNJE continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRSCS
Procedure Name: AmpxFree

EZA5619I Average seeks per Entry: result
Explanation: Displays the number of searches for a name in the hash table per number of entries.
System action: SMTPNJE continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRSCS
Procedure Name: AmpxFree

EZA5620I Hash Table is: percent% Full
Explanation: Shows how full the hash table is in percentage.
System action: SMTPNJE continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SMTPRSCS
Procedure Name: AmpxFree

EZA5622E Unable to find input file: data set
Explanation: The data set specified as the program invocation argument cannot be found on any MVS volume.
System action: SMTPNJE halts.
Operator response: Verify that the data set exists and that the user has access to it.
System programmer response: No action is needed.
Module: SMTPRSCS
Procedure Name: GiveHelp

EZA5624E Maximum number of NJE nodes found. SMTPNJE only supports up to maxnodes.
Explanation: SMTPNJE found more that the specified number of JES2 or JES3 nodes allowed by the MaxNodes constant.
System action: SMTPNJE continues.
Operator response: No action is needed.
System programmer response: Increase the MaxNodes constant in the SMTPRSCS Pascal program to the required value, recompile the source, relink-edit the executable module, and run SMTPNJE again.
Module: SMTPRSCS
Procedure Name: EndofGame

EZA5627W JES Destination: oldnode to : newnode

Explanation: The specified JES node name is greater than the maximum of 8 characters and was truncated to the indicated name.

System action: SMTPNJE continues.

Operator response: No action is needed.

System programmer response: Correct the JES node name to be 8 characters or fewer. See the z/OS Communications Server: IP Programmer's Guide and Reference for more information about the JES node name.

Module: SMTPNJE

Procedure Name: ParseJES2InitFile

EZA5628W JES Destination: oldnode truncated to: newnode

Explanation: The JES3 node name after NAME= is greater than the maximum of 8 characters and was truncated to the indicated name.

System action: SMTPNJE continues.

Operator response: No action is needed.

System programmer response: Correct the JES3 node name to be 8 characters or fewer.

Module: SMTPRSCS

Procedure Name: ParseJES3InitFile

EZA5629E Error opening input file: data set name

Explanation: There was an error opening the specified data set on the command line when using the SMTPNJE data set name command.

System action: SMTPNJE halts.

Operator response: Verify the name of the data set specified and that it is accessible.

System programmer response: No action is needed.

Module: SMTPRSCS

Procedure Name: ProcessCommandLine

EZA5630E Error opening output file: set name

Explanation: There was an error opening the file userid.SMTPNJE.HOSTINFO, which will be the data set containing the hash table. The attempt to allocate the file was unsuccessful.

System action: SMTPNJE halts.

Operator response: Verify the type of access you have to this data set. If necessary, ask the data set's owner for access.

System programmer response: No action is needed.

Module: SMTPRSCS

Procedure Name: AmpxFree

EZA5631E No nodes found in set name. SMTPNJE data set will not be created.

Explanation: There are no node names specifying which user's mail is supported, so SMTPNJE cannot create a hash table.

System action: SMTPNJE continues.
Operator response: Edit the data set that contains the names of the nodes. Verify that the data set contains NJE node definitions. For more information see the z/OS Communications Server: IP Configuration Reference.

System programmer response: No action is needed.

Module: SMTPRNJE

Procedure Name: Insert

---

EZA5632I SMTPNJE version

Explanation: Indicates the version of SMTPNJE in use.

System action: SMTPNJE continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPRSCS

Procedure Name: AmpxFree

---

EZA5633I Generic node ID not supported, ignoring group_node RSCS_token

Explanation: The system will not accept any node with an asterisk (*).

System action: SMTPNJE continues.

Operator response: Reenter a node that does not contain an asterisk.

System programmer response: No action is needed.

Module: SMTPRSCS

Procedure Name: ProcessNode

---

EZA5641E IMBED not supported on MVS

Explanation: An IMBED statement was encountered while processing an RSCS style configuration data set. The IMBED is ignored.

System action: SMTPNJE continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTPRSCS

Procedure Name: IMBEDstatement

---

EZA5642E INCORRECT VALUE parameter SPECIFIED FOR EXITDIRECTION STATEMENT - THE DEFAULT VALUE OF INBOUND WILL BE USED

Explanation: The input parameter on the EXITDIRECTION statement is invalid. The default value of INBOUND will be used instead. This means that the SMTP server will call the customer supplied SMTP exit program to process inbound data from a TCP/IP connection.

parameter shows a maximum of 10 characters of the invalid input parameter. If the parameter is shown as <NULL>, the parameter is missing and needs to be coded.

See z/OS Communications Server: IP Configuration Reference for more information about the EXITDIRECTION configuration statement.

System action: SMTP continues

Operator response: No action is needed.

System programmer response: Change the parameter associated with the EXITDIRECTION configuration statement.
to a valid one. If EXITDIRECTION is BOTH then you must also code SAFYES or SAFNO. Stop and restart SMTP to activate the new parameter setting.

**Module:** SMTP  
**Procedure Name:** ProcessConfigFile

---

**EZA5643I**  
Disallowed Commands : number

**Explanation:** The DISALLOWCMD statement in the hlq.SMTP.CONFIG file has been set. Depending on the parameter following the statement, SMTP will modify its behavior regarding what SMTP commands are supported. number is a decimal number indicating which SMTP commands are not allowed. A valid decimal number parameter is in the range of 1 - 31. To disable multiple commands add the individual command numbers together. The following numbers are assigned to each command:

- 2 VERB
- 2 QUEU
- 4 HELP
- 8 VRFY
- 16 EXPN

See the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com) for more information about the DISALLOWCMD configuration statement.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

---

**EZA5644E**  
INCORRECT VALUE parameter SPECIFIED FOR DISALLOWCMD STATEMENT

**Explanation:** The input parameter on the DISALLOWCMD statement is invalid. The default behavior of SMTP server will be to allow these SMTP commands. The parameter must be a decimal number in the range of 1 - 31. To disable multiple commands add the individual command numbers together. The following numbers are assigned to each command:

- 1 VERB
- 2 QUEU
- 4 HELP
- 8 VRFY
- 16 EXPN

parameter shows up to 10 characters of the input parameter that is in error.

See the [z/OS Communications Server: IP Configuration Reference](https://www.ibm.com) for more information about the DISALLOWCMD configuration statement.

**System action:** SMTP continues.

**Operator response:** No action is needed.

**System programmer response:** Change the parameter associated with the DISALLOWCMD configuration statement to a valid one. Stop and restart SMTP to activate the new parameter setting.

**Module:** SMTP  
**Procedure Name:** ProcessConfigFile
Explanation: The IPMAILERNAME statement in the hlq.SMTP.CONFIG file has been set. Depending on the parameters following the statement, SMTP will modify its behavior regarding when to forward non-local mail destined for the IP network to the IP mailer name specified.

mailername is the fully qualified name of a mail server in the IP network. The length of the string being displayed is limited to 100 characters.

scope indicates whether the IP mail name should be used for all non-local mail destined for the IP network or just mail where the recipient's host is unknown to the domain name servers responding to SMTP queries. Possible values are ALL or UNKNOWN.

See z/OS Communications Server: IP Configuration Reference for more information about the IPMAILERNAME configuration statement.

System action: SMTP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SMTP

Procedure Name: OpenOutputStreams

EZA5646E INCORRECT VALUE parameter SPECIFIED FOR IPMAILERNAME STATEMENT

Explanation: The input parameters on the IPMAILERNAME statement are not valid. There are two required parameters that must be coded. The first parameter is the IP mailer fully qualified name or host name. The first parameter must not end with a period. The second parameter is the usage scope, which must be either ALL or UNKNOWN.

In the message text:

parameter shows the first 10 characters of the input parameter that is not valid. If the parameter value is shown as <NULL>, the parameter is missing and needs to be coded. See the information about the IPMAILERNAME configuration statement in z/OS Communications Server: IP Configuration Reference.

Examples: The following statement is coded in the hlq.SMTP.CONFIG data set. This statement contains the error that the string MYHOST. has an ending period:

IPMAILERNAME MYHOST. UNKNOWN

The following messages are generated when you try to start SMTP:

EZY1876I SMTP STACK FUNCTIONS STARTED WITH PARAMETER SMTP,PARM=,
ERRFILE(SYSERR),NOSPIE/.
EZA5646E INCORRECT VALUE MYHOST. SPECIFIED FOR IPMAILERNAME STATEMENT
EZY1877I SMTP STACK FUNCTIONS SHUTDOWN IS COMPLETE, RC = 0.

The following statement is coded in the hlq.SMTP.CONFIG data set. This statement contains the error that the second parameter is not ALL or UNKNOWN:

IPMAILERNAME MYHOST. BADPARM

The following messages are generated when you try to start SMTP:

EZY1876I SMTP STACK FUNCTIONS STARTED WITH PARAMETER SMTP,PARM=,
ERRFILE(SYSERR),NOSPIE/.
EZA5646E INCORRECT VALUE BADPARM SPECIFIED FOR IPMAILERNAME STATEMENT
EZY1877I SMTP STACK FUNCTIONS SHUTDOWN IS COMPLETE, RC = 0.

System action: The SMTP server is halted.

Operator response: Contact the system programmer.

User response: Not applicable.
System programmer response: Change the parameter associated with the IPMAILERNAME configuration statement to a valid one. Restart SMTP.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: SMTP

Module: SMTP

Routing code: 2, 10

Descriptor code: 4

---

**EZA5647E**  
*date time POTENTIAL LOOP DETECTED USING IPMAILERNAME ipmailername*

**Explanation:** The IPMAILERNAME statement has been configured in the hlq.SMTP.CONFIG data set. SMTP has resolved the IPMAILERNAME statement and the only IP address in the IP address list is a home IP address for the system currently running SMTP. This configuration is not valid, and can cause mail to loop or to be delivered to the wrong mailbox.

In the message text:

**date**  
The date when the message is issued.

**time**  
The time when the message is issued.

**ipmailername**  
The fully qualified name of a mail server in the IP network. The length of the string being displayed is limited to 100 characters.

**Examples:** The following statement is coded in the hlq.SMTP.CONFIG data set. This statement contains the error that the string MVS7 is also the name of the system running the SMTP:

```
IPMAILERNAME MVS7 ALL
```

The following messages are generated after you start SMTP and the first note is being processed. When SMTP resolves the name MVS7 it will have the same IP addresses as the home list for this system. Because the ALL parameter is coded, all the mail will be forwarded. The mailer cannot forward mail to itself, therefore, the SMTP is terminated:

```
IEF6951I START SMTP WITH JOBNAMESMTP IS ASSIGNED TO USER IBMUSER GROUP SYS1
$HASP373 SMTP STARTED
IEF403I SMTP - STARTED - TIME=14.20.40
EZY1876I SMTP STACK FUNCTIONS STARTED WITH PARAMETER SMTP, PARM=,,, ERRFILE(SYSERR), NOSPIE/
IEA631I OPERATOR USER1 NOW INACTIVE, SYSTEM=MVS7, LU=L7201A
EZA5647E 11/03/05 14:22:51 POTENTIAL LOOP DETECTED USING IPMAILERNAME
MVS7.TCP.RALEIGH.IBM.COM
EZY1877I SMTP STACK FUNCTIONS SHUTDOWN IS COMPLETE, RC = 0.
```

**System action:** There are two possible system actions when a home IP address is the only address in the IP list:

- If the IPMAILERNAME statement has the parameter ALL configured, SMTP terminates.
- If the IPMAILERNAME statement has the parameter UNKNOWN configured, SMTP continues. The mail becomes undeliverable.

**Operator response:** No action is needed.

**User response:** Not applicable.

**System programmer response:** Check that the IP mailer name is correct. If the name is correct, then activate resolver traces in SMTP to understand how SMTP is resolving the ipmailername value. Remove the home IP address from the list of addresses associated with the IPMAILERNAME in the DNS data base or local host tables. See the information about the [SMTP RESOLVER trace](https://www.ibm.com) in z/OS Communications Server: IP Diagnosis Guide

**Problem determination:** Not applicable.

**Source:** z/OS Communications Server TCP/IP: SMTP

Descriptor code: 4

EZA5648I MaxMsgSent : number

Explanation: This message indicates the maximum number of messages that can be sent on a single TCP/IP connection. This value is set on the MAXMSGSENT statement, which is optional, in the SMTP configuration file. The number 0 indicates that no limit is set, 0 is the default if the statement is not coded. Setting this value might affect performance. Lower values might cause slower mail processing.

In the message text:

number

A decimal value in the range 0 - 2 147 483 647.

See the information about the MAXMSGSENT in z/OS Communications Server: IP Configuration Reference.

Examples: EZA5648I MaxMsgSent : 20

This message would be generated in the file associated with the OUTPUT DD card for SMTP started task when MAXMSGSENT 20 is specified in the SMTP configuration file and SMTP is started.

System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: Not applicable.

Module: SMTP
Routing code: Not applicable.
Descriptor code: Not applicable.

EZA5649E INVALID MAXMSGSENT VALUE: value

Explanation: An incorrect value was specified on the MAXMSGSENT statement coded in the SMTP configuration file. This value represents a limit on the number of messages that the SMTP client can send over a single TCP/IP connection.

In the message text:

Value

The incorrectly specified value.

Examples: EZA5649E INVALID MAXMSGSENT VALUE: 5F6

This message displayed on the console and also generated in the file associated with the OUTPUT DD card for the SMTP started task when MAXMSGSENT 5F6 is specified in the SMTP configuration file and SMTP is started. The value for MAXMSGSENT must be a decimal number.

System action: SMTP ends.
Operator response: Contact the system programmer.
User response: Not applicable.
System programmer response: Check the SMTP configuration file and specify a valid decimal number in the range 0 - 2 147 483 647 on the MAXMSGSENT statement. The value 0 indicates that no limit is set; 0 is the default if the statement is not coded. Setting this value might effect performance. Lower values might cause slower mail processing.

See the information about the MAXMSGSENT in z/OS Communications Server: IP Configuration Reference.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTP
Routing code: 2, 10
Descriptor code: 4

EZA5652I currentdate currenttime CurrentNumMail: currentnumber MaxNumMail: maxnumber at maxdate maxtime

Explanation: This message is issued when debugging is on. The message displays the number of pieces of mail that are currently queued in SMTP, and the maximum number of pieces of mail that has been queued in SMTP has been. This display also indicates the time and date when the maximum limit occurred.

In the message text:

- **currentdate**: The date this message was displayed.
- **currenttime**: The time this message was displayed.
- **currentnumber**: The number of pieces of mail currently queued up in SMTP.
- **maxnumber**: The maximum number of pieces of mail that has been queued in SMTP.
- **maxdate**: The date when the maximum number of pieces of mail was queued in SMTP.
- **maxtime**: The time when the maximum number of pieces of mail was queued in SMTP.

Examples:
EZA5652I 05/30/06 14:50:44 CurrentNumMail: 50 MaxNumMail: 100 at 05/30/06 12:14:23

System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTP
Routing code: 10
Descriptor code: 12
Recalculating number of current mail queued due to error with addrblok - CurrentNumMail: currentnumber

Explanation: This message is written when debugging is turned on. This message indicates that SMTP encountered an error with an address block (addrblok) and needs to recalculate how much mail is queued in SMTP.

In the message text:

date
The date when this message was issued.

time
The time when this message was issued.

currentnumber
The number of pieces of mail that are currently queued in SMTP.

Examples:
EZA5653I 05/30/06 12:21:20 Recalculating number of current mail queued due to error with addrblok - CurrentNumMail: 5

System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: Not applicable.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTP
Routing code: 10
Descriptor code: 12

SMGS NOTRACE Output - Resolver Tracing Disabled

Explanation: You issued a MODIFY smtpprocname,SMSG,NOTRACE command. This message displays the output from the command. This command disables resolver tracing.

Examples: Not applicable.

System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

SMGS SHUTDOWN Output - Stopping SMTP

Explanation: You issued a MODIFY smtpprocname,SMSGSHUTDOWN command. This message displays the output from the command. The SMTP server to stops when this command is issued.

Examples:
EZA5655I SMSG SHUTDOWN Output - Stopping SMTP
System action: SMTP ends.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

EZA5656I SMSG STARTEXIT Output - Exit started

Explanation: You issued a MODIFY smtpprocname,SMSG,STARTEXIT command. This message displays the output from the command. This command causes SMTP to enable a user exit program by issuing the initialization call to the user exit program, if one exists.

See the information about designing an SMTP exit to inspect and filter unwanted mail in z/OS Communications Server: IP Configuration Guide for more information about user exit programs.

Examples: No action is needed.
System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

EZA5657I SMSG STOPEXIT Output - Exit Stopped

Explanation: You issued an SMSG smtpprocname,SMSG,STOPEXIT command. This message displays the output from the command. This command causes SMTP to disable a currently running user exit program by issuing the termination call to the user exit program, if one exists.

See the information about designing an SMTP exit to inspect and filter unwanted mail in z/OS Communications Server: IP Configuration Guide for more information about user exit programs.

Examples: EZA5657I SMSG STOPEXIT Output - Exit Stopped
System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
EZA5658I SMSG TRACE Output - Resolver Tracing Enabled

Explanation: You issued a MODIFY smtpprocname,SMSG,TRACE command. This message displays the output from the command. This command enables resolver tracing. The output of the resolver trace is sent to the SMTP console. The MODIFY smtpprocname,SMSG,TRACE command has the same effect as adding the TRACE RESOLVER option to the TCPIP.DATA data set.

Examples:
EZA5658I SMSG TRACE Output - Resolver Tracing Enabled

System action: SMTP continues.
Operator response: No action is needed.
User response: Not applicable.
System programmer response: No action is needed.
Problem determination: No action is needed.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

EZA5659I SMSG Command is not valid - command

Explanation: You issued a MODIFY smtpprocname,SMSG command that is not valid.

In the message text: command
The command that is not valid.

Examples:
EZA5659I SMSG Command abcd is not valid

System action: SMTP continues.
Operator response: Fix the error and issue the command again. For a list of valid SMSG commands, issue the MODIFY smtpprocname,SMSG,HELP command.
User response: Not applicable.
System programmer response: Fix the error and issue the command again. For a list of valid SMSG commands, issue the MODIFY smtpprocname,SMSG,HELP command.
Problem determination: See the system programmer response.
Source: z/OS Communications Server TCP/IP: SMTP
Module: SMTPSMSG
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

EZA5690I SMSG DEBUG Output - Session Debugging Not Enabled

Explanation: SMTP attempted to allocate SYSDEBUG, but SYSDEBUG does not exist in the SMTP procedure.

Examples: None.
System action: SMTP continues.
Operator response: Contact the system programmer.
**User response:** Not applicable.

**System programmer response:** Add a SYSDEBUG DD statement in the SMTP procedure and restart SMTP. See the sample procedure SMTPPROC in SEZAINST for an example of how to implement this change.

**Problem determination:** See the system programmer response.

**Source:** z/OS Communications Server TCP/IP: SMTP

**Module:** SMTPSMSG

**Routing code:** Output is returned to the user.

**Descriptor code:** Output is returned to the user.

---

**EZA5691I**

**MSG EXPIRE Output - Syntax not Valid - Expecting an IP address**

**Explanation:** The EXPIRE command expects an IP address.

**Examples:** None.

**System action:** SMTP continues.

**Operator response:** Fix the syntax error and re-issue the command. The correct syntax is MODIFY smtpprocname,SMSG,EXPIRE,ipaddr.

**User response:** Not applicable.

**System programmer response:** Not applicable.

**Problem determination:** None.

**Source:** z/OS Communications Server TCP/IP: SMTP

**Module:** SMTPSMSG

**Routing code:** Output is returned to the user.

**Descriptor code:** Output is returned to the user.

---

**EZA5692I**

**MSG EXPIRE Output - ipaddr - No Mail Found**

**Explanation:** You issued a MODIFY smtpprocname,SMSG,EXPIRE command. This message displays the output from the command. The domain name resolution for mail queued for delivery to this IP address expires when this command is issued. SMTP tries to resolve the IP addresses for mail again if the mail is still within the retry time period. In this case, there is no mail queued for that IP address.

In the message text:

`ipaddr`

The address for which the EXPIRE command has been issued.

**Examples:**

EZA5692I MSG EXPIRE Output - 123.123.123.123 - No Mail Found

**System action:** SMTP continues.

**Operator response:** No action is needed.

**User response:** Not applicable.

**System programmer response:** No action is needed.

**Problem determination:** None.

**Source:** z/OS Communications Server TCP/IP: SMTP

**Module:** SMTPSMSG

**Routing code:** Output is returned to the user.

**Descriptor code:** Output is returned to the user.
EZA5693I       SMSG EXPIRE Output - ipaddr - Try Later

Explanation: You issued a MODIFY smtpprocname,SMSG,EXPIRE command. This message displays the output from the command. This command causes the domain name resolution for mail queued for delivery to this IP address to expire. SMTP will again try to resolve the IP addresses for mail if the mail is still within the retry time window. Mail needs to be on the retry queue for the EXPIRE command to work.

In the message text:

ipaddr
   The address for which the EXPIRE command has been issued.

Examples:
EZA5693I SMSG EXPIRE Output - 123.123.123.123 - Try Later

System action: SMTP continues.

Operator response: Try again later when the mail for that IP address is in the retry queue. Use the MODIFY smtpprocname,SMSG,QUEUE command to determine when the mail is on the retry queue.

User response: Not applicable.

System programmer response: Not applicable.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: SMTP

Module: SMTPSMSG

Routing code: Output is returned to the user.

Descriptor code: Output is returned to the user.

EZA5694I       SMSG STOPEXIT Output - Exit previously stopped

Explanation: You issued an SMSG smtpprocname,SMSG,STOPEXIT command. This message displays the output from the command. This command causes SMTP to disable a currently running user exit program by issuing the termination call to the user exit program, if one exists.

See information about designing an SMTP exit to inspect and filter unwanted mail in z/OS Communications Server: IP Configuration Guide for more information about user exit programs.

Examples: None.

System action: SMTP continues

Operator response: No action is needed.

User response: Not applicable.

System programmer response: Not applicable.

Problem determination: None.

Source: z/OS Communications Server TCP/IP: SMTP

Module: SMTPSMSG

Routing code: Output is returned to the user.

Descriptor code: Output is returned to the user.

EZA5695I       SMSG STARTEXIT Output - Exit previously started

Explanation: You issued a MODIFY smtpprocname,SMSG,STARTEXIT command. This message displays the output from the command. This command causes SMTP to enable a user exit program by issuing the initialization call to the user exit program, if one exists.

See information about designing an SMTP exit to inspect and filter unwanted mail in z/OS Communications Server: IP Configuration Guide for more information about user exit programs.
Examples: None.

System action: SMTP continues.

Operator response: No action is needed.

User response: Not applicable.

System programmer response: No action is needed.

Problem determination: None.

Source: z/OS Communications Server TCP/IP: SMTP

Module: SMTPSMSG

Routing code: Output is returned to the user.

Descriptor code: Output is returned to the user.

EZA5696I SMSG STARTEXT Output - Error encountered starting exit

Explanation: You issued a MODIFY smtpprocname,SMSG,STARTEXT command. This message displays the output from the command. This command causes SMTP to enable a user exit program by issuing the initialization call to the user exit program, if one exists.

See information about designing an SMTP exit to inspect and filter unwanted mail in z/OS Communications Server: IP Configuration Guide for more information about user exit programs.

Examples: None.

System action: SMTP continues.

Operator response: Contact the system programmer.

User response: Not applicable.

System programmer response: See the information about diagnosing SMTP problems in z/OS Communications Server: IP Configuration Reference for more information about why the exit could not be started.

Problem determination: See the system programmer response.

Source: z/OS Communications Server TCP/IP: SMTP

Module: SMTPSMSG

Routing code: Output is returned to the user.

Descriptor code: Output is returned to the user.

EZA5697I Maximum number of SMSG commands queued to SMTP

Explanation: Twenty SMSG commands are currently queued in SMTP. Wait for SMTP to process the current SMSG commands before issuing more MODIFY smtpprocname,SMSG commands or TSO SMSG commands.

Examples: None.

System action: SMTP continues.

Operator response: Attempt to issue the next MODIFY smtpprocname,SMSG or TSO SMSG command later. If SMTP still does not accept MODIFY smtpprocname,SMSG or TSO SMSG commands, contact the system programmer.

User response: Not applicable.

System programmer response: Determine whether SMTP is currently processing a large JES spool file. If SMTP is not processing a large JES spool file, collect the SMTP joblog, take a dump of the SMTP address space and contact IBM service support. See the information about diagnosing SMTP problems in z/OS Communications Server: IP Configuration Reference for more information.

Problem determination: None.

Source: z/OS Communications Server TCP/IP: SMTP

Module: EZBPAINT
Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

**EZA5698I** SMSG Option not valid - option

**Explanation:** An option of the SMSG command was not valid

**Examples:**
EZA5698I SMSG Option not valid - abcd

**System action:** SMTP continues.

**Operator response:** Fix the error and issue the command again. For a list of valid SMSG commands, issue the MODIFY smtpprocname,SMSG,HELP command.

**User response:** Not applicable.

**System programmer response:** Fix the error and issue the command again. For a list of valid SMSG commands, issue the MODIFY smtpprocname,SMSG,HELP command.

**Problem determination:** See the System Programmer Response

**Source:** z/OS Communications Server TCP/IP: SMTP

**Module:** SMTPSMSG

Routing code: Output is returned to the user.
Descriptor code: Output is returned to the user.

---

**EZA5775I** Usage: SNALINK tcpipname applid

**Explanation:** SNALINK was invoked with incorrect command line parameters. Correct command line syntax is shown.

**System action:** SNALINK exits.

**Operator response:** Try the command again with the correct parameters.

**System programmer response:** No action is needed.

**Module:** SNALINK

**Procedure Name:** Main

---

**EZA5776E** Invalid max RU size code

**Explanation:** An optional third argument to SNALINK is the maximum RU size code. This parameter was specified on the command line, but is not valid. See z/OS Communications Server: SNA Programming for more information.

**System action:** SNALINK exits.

**Operator response:** Try the command again with the correct parameters.

**System programmer response:** No action is needed.

**Module:** SNALINK

**Procedure Name:** Main

---

**EZA5777E** Can not obtain storage for path index table

**Explanation:** SNALINK could not allocate storage for the path index table.

**System action:** SNALINK continues to attempt opening the ACB until the open succeeds or it is stopped.

**Operator response:** No action is needed.

**System programmer response:** Check that the SNALINK address space is defined correctly.

**Module:** SNALINK
Procedure Name: Main

EZA5778E  Error error in DLC INIT call
Explanation: SNALINK encountered an error issuing a DLC INIT request to initialize DLC.
System action: SNALINK abends.
Operator response: No action is needed.
System programmer response: Contact the IBM Software Support Center.
Module: SNALINK
Procedure Name: Main

EZA5779E  Error error IN VTAM OPEN
Explanation: SNALINK encountered an error issuing a VTAM OPEN request.
System action: SNALINK abends.
Operator response: Check that VTAM is operational.
System programmer response: Check the SNALINK parameters for the correct VTAM_APPL_ID. Contact your
VTAM administrator.
Module: SNALINK
Procedure Name: Main

EZA5780I  Init complete, APPL id, TCPIP id
Explanation: SNALINK is running.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: pendconn

EZA5781I  Maximum RU size is value
Explanation: This message displays the hexadecimal value of the maximum RU size.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: Main

EZA5782S  TPEND exit called with reason value
Explanation: SNALINK exits with the indicated reason code.
System action: SNALINK exits.
Operator response: No action is needed.
System programmer response: Correct the error indicated by the reason code.
Module: SNALINK
Procedure Name: Main
EZA5783I • EZA5788E

EZA5783I  date time [luname]  I Received STOP command or HALT sub-command, shutting down

Explanation: The operator has entered a MODIFY command specifying HALT or a STOP command. SNALINK begins to shut down normally.

System action: SNALINK terminates.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK ASSEMBLE
Procedure Name: PROCCONS/PROCMODF

EZA5784E  Can not free path index table storage

Explanation: SNALINK encountered an error while freeing storage.

System action: SNALINK exits.
Operator response: No action is needed.
System programmer response: Check the MVS system for system problems.
Module: SNALINK
Procedure Name: Main

EZA5785E  Unexpected iptype type received

Explanation: SNALINK received an IUCV interrupt with an unexpected or out-of-range type.

System action: SNALINK abends.
Operator response: No action is needed.
System programmer response: This error indicates a probable TCPIP code problem. Contact the IBM Software Support Center.
Module: SNALINK
Procedure Name: prociucv

EZA5787E  Can’t find CONNBLOK for severed path path

Explanation: SNALINK received a SEVER interrupt from TCPIP, but could not find the associated connection in its tables. The connection is severed.

System action: SNALINK continues processing.
Operator response: No action is needed.
System programmer response: This message indicates a probable TCPIP code problem. Contact the IBM Software Support Center.
Module: SNALINK
Procedure Name: sever

EZA5788E  PENDCONN received from wrong TCPIP id id

Explanation: SNALINK received a Connection Pending interrupt from a TCPIP ID other than the one specified on the command line. The pending connection is severed.

System action: SNALINK continues processing.
Operator response: No action is needed.
System programmer response: Check TCPIP parameters (MVS) for the correct TCPIP data set.
Module: SNALINK
Procedure Name: pendconn

**EZA5789E** Cannot connect to LU name — No more CONNBLOKs!

Explanation: SNALINK does not have enough data structures (CONNBLOKs) allocated to service a pending connection. The pending connection is severed. If existing connections are later closed, resources are freed to allow SNALINK to service this connection.

System action: SNALINK continues processing.

Operator response: No action is needed.

System programmer response: Increase the maximum connections allowed.

Module: SNALINK

Procedure Name: pendconn

**EZA5790S** Severing pending conn because existing session not killed

Explanation: SNALINK received a Connection Pending interrupt for this LU. However, a connection already exists for this LU. The pending connection is severed.

System action: SNALINK continues processing.

Operator response: No action is necessary if the connection you want is up; otherwise, stop and restart SNALINK.

System programmer response: This error indicates that TCPIP is out of sync or that there is a code problem.

Module: SNALINK

Procedure Name: pendconn

**EZA5795E** Unexpected GENTYPE value found

Explanation: SNALINK encountered an incorrect GENTYPE value when processing a VTAM exit.

System action: SNALINK abends.

Operator response: No action is needed.

System programmer response: This error indicates a possible TCPIP code problem. Contact the IBM Software Support Center.

Module: SNALINK

Procedure Name: procvtam

**EZA5796E** Unexpected control field value IN SCIP exit

Explanation: SNALINK encountered an incorrect control field in a SCIP information block, while SNALINK was either acting as an SLU for a connection and waiting for the PLU to establish the connection, or receiving an UNBIND request.

System action: SNALINK ignores the SCIP exit and resumes processing.

Operator response: Tell your VTAM administrator.

System programmer response: No action is needed.

Module: SNALINK

Procedure Name: vtamscip

**EZA5797E** Rejecting bind from plu - no DLC found

Explanation: SNALINK received a BIND request from the indicated primary LU. It is rejecting the BIND request because it cannot find an associated pending DLC connection in its tables.

System action: The BIND request is rejected.
**EZA5798E • EZA5801I**

Operator response: Use the NETSTAT command to check that TCPIP started SNALINK.

System programmer response: No action is needed.

Module: SNALINK

Procedure Name: scipbind

---

**EZA5798E  Rejecting bind - already have receive session**

Explanation: SNALINK received a BIND request for an LU on which it has already established communication.

System action: The BIND request is rejected.

Operator response: Tell your VTAM administrator.

System programmer response: This error indicates a possible VTAM problem.

Module: SNALINK

Procedure Name: scipbind

---

**EZA5799I  Received BIND request for SNA receive session**

Explanation: A BIND request has been received.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SNALINK

Procedure Name: scipfoun

---

**EZA5800E  Error in MODCB NIB for receive session. R15 value R0 value**

Explanation: SNALINK encountered an error modifying a network information block in preparation for an OPNSEC call to accept a BIND for this LU.

System action: The BIND request is rejected.

Operator response: Tell your VTAM administrator.

System programmer response: This error indicates a possible TCPIP code problem. Contact the IBM Software Support Center.

Module: SNALINK

Procedure Name: scipfoun

---

**EZA5801I  Got UNBIND for receive session**

Explanation: An UNBIND request has been received.

System action: The session is brought down.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SNALINK

Procedure Name: scipunbd
EZA5802I  Got UNBIND for send session
Explanation:  An UNBIND request has been received.
System action:  The session is brought down.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  SNALINK
Procedure Name:  scipunbd

EZA5803E  Zero user word in SCIP exit for UNBIND
Explanation:  SNALINK encountered a user word containing zero in an UNBIND request, indicating a null connection block address.
System action:  The UNBIND request is not processed.
Operator response:  No action is needed.
System programmer response:  This error indicates a possible TCPIP or VTAM code problem. Tell your VTAM administrator.
Module:  SNALINK
Procedure Name:  scipunbd

EZA5804E  CID in SCIP UNBIND parm list not found
Explanation:  SNALINK received an UNBIND request that was not associated with either the send or receive session on its LU.
System action:  The UNBIND request is not processed.
Operator response:  No action is needed.
System programmer response:  This error indicates a possible VTAM or TCPIP code problem. See the VTAM console for more information.
Module:  SNALINK
Procedure Name:  scipunbd

EZA5805I  TESTCB shows send session not established
Explanation:  SNALINK received a VTAM OPNDST EXIT interrupt specifying a session that has not been established.
System action:  SNALINK ends the connection.
Operator response:  No action is needed.
System programmer response:  This error indicates a possible VTAM or TCPIP code problem.
Module:  SNALINK
Procedure Name:  vtamopnd

EZA5806E  OPNDST exit can’t find CONNBLOK. RPL addr address
Explanation:  SNALINK received a VTAM OPNDST EXIT interrupt for which it has no associated connection block.
System action:  SNALINK abends.
Operator response:  No action is needed.
System programmer response:  This error indicates a possible VTAM or TCPIP code problem.
Module:  SNALINK
Procedure Name: vtamopnd

EZA5807I  SNA send session established
Explanation: An SNA send session was established.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: vtamopnd

EZA5808I  TESTCB shows receives session not established
Explanation: SNALINK received a VTAM OPNSEC EXIT interrupt specifying a session that has not been established.
System action: SNALINK ends the connection.
Operator response: No action is needed.
System programmer response: This error indicates a possible VTAM or TCPIP code problem. Tell your VTAM administrator.
Module: SNALINK
Procedure Name: vtamopns

EZA5809E  OPNSEC exit can’t find CONNBLOK. RPL addr address
Explanation: SNALINK received a VTAM OPNSEC EXIT interrupt for which it has no corresponding connection block. SNALINK abends.
System action: SNALINK abends.
Operator response: No action is needed.
System programmer response: This error indicates a possible VTAM or TCPIP code problem.
Module: SNALINK
Procedure Name: vtamopns

EZA5810I  SNA receive session established
Explanation: An SNA receive session was established.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: vtamopnd

EZA5811E  SEND exit finds zero RPLUSFLD
Explanation: SNALINK received a VTAM SEND EXIT interrupt with a null connection block pointer.
System action: SNALINK abends.
Operator response: No action is needed.
System programmer response: This error indicates a possible VTAM or TCPIP error.
Module: SNALINK
Procedure Name: vtamsend

**EZA5812E**  
**RECEIVE-ANY shows RESPOND value CONTROL control RH value**

**Explanation:** SNALINK handled a RECEIVE-ANY interrupt with the indicated fields.

**System action:** SNALINK ends the connection, if one exists. Otherwise, the interrupt is ignored.

**Operator response:** No action is needed.

**System programmer response:** Tell your VTAM administrator.

**Module:** SNALINK

**Procedure Name:** rcvisany

---

**EZA5813E**  
**Chaining err: Flags flag Buffer buffer Pointer pointer**

**Explanation:** SNALINK encountered an inconsistency in its buffer chain.

**System action:** SNALINK ends the connection.

**Operator response:** No action is needed.

**System programmer response:** This error indicates a possible TCPIP code problem.

**Module:** SNALINK

**Procedure Name:** rcvchker

---

**EZA5814E**  
**RECEIVE exit finds zero RPLUSFLD**

**Explanation:** SNALINK encountered a VTAM RECEIVE EXIT interrupt with a null connection block pointer.

**System action:** SNALINK abends.

**Operator response:** No action is needed.

**System programmer response:** This error indicates a possible VTAM or TCPIP problem.

**Module:** SNALINK

**Procedure Name:** vtamrcv

---

**EZA5815I**  
**RECEIVE-ANY shows RESPOND value CONTROL control RH value**

**Explanation:** SNALINK handled a RECEIVE-ANY interrupt with the indicated fields.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SNALINK

**Procedure Name:** vtamrcv

---

**EZA5816E**  
**CLSDST exit can’t find CONNBLOK. RPL addr address**

**Explanation:** SNALINK received a VTAM CLSDST EXIT interrupt with an incorrect connection block pointer.

**System action:** SNALINK abends.

**Operator response:** Restart SNALINK.

**System programmer response:** This error indicates a possible VTAM or TCPIP code problem. See the VTAM console for more information.

**Module:** SNALINK

**Procedure Name:** vtamclsd
**EZA5817E** TERMSESS exit can’t find CONNBLOK. RPL addr *address*

Explanation: SNALINK received a VTAM TERMSESS EXIT interrupt with an incorrect connection block pointer.

System action: SNALINK abends.

Operator response: Tell your VTAM administrator.

System programmer response: No action is needed.

Module: SNALINK

Procedure Name: vtamterm

---

**EZA5818I** LOSTERM reason *rc* for receive session

Explanation: SNALINK received a VTAM LOSTERM EXIT interrupt, which indicates that this LU lost its receive session for the indicated reason code.

System action: SNALINK ends the connection.

Operator response: Check your hardware or VTAM for errors.

System programmer response: No action is needed.

Module: SNALINK

Procedure Name: vtamlost

---

**EZA5819I** LOSTERM reason *rc* for send session

Explanation: SNALINK received a VTAM LOSTERM EXIT interrupt, which indicates that this LU lost its receive session for the indicated reason code.

System action: SNALINK ends the connection.

Operator response: Check your hardware or VTAM for errors.

System programmer response: No action is needed.

Module: SNALINK

Procedure Name: vtamlost

---

**EZA5820I** Zero CONNBLOK ptr in LOSTERM exit, reason *rc*

Explanation: SNALINK received a VTAM LOSTERM EXIT interrupt with a null connection block pointer.

System action: SNALINK abends.

Operator response: No action is needed.

System programmer response: This error indicates a possible VTAM or TCPIP problem. Tell your VTAM administrator.

Module: SNALINK

Procedure Name: vtamlost

---

**EZA5821I** CID in LOSTERM parm list not found, reason *rc*

Explanation: SNALINK received a VTAM LOSTERM EXIT interrupt for which it has no parameter list.

System action: SNALINK ignores the interrupt.

Operator response: No action is needed.

System programmer response: This error indicates a possible VTAM or TCPIP code problem. See the VTAM console for more information.

Module: SNALINK
Procedure Name: vtamlost

EZA5822I  NSEXIT CLEANUP request for receive session
Explanation: SNALINK received a VTAM NSEXIT interrupt with a cleanup request for this LU’s receive session.
System action: SNALINK ends the connection.
Operator response: Check your hardware or VTAM for errors.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: vtamns

EZA5823I  NSEXIT CLEANUP request for send session
Explanation: SNALINK received a VTAM NSEXIT interrupt with a cleanup request for this LU’s send session.
System action: SNALINK ends the connection.
Operator response: Check your hardware or VTAM for errors.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: vtamns

EZA5824E  Zero CONNBLOK ptr in NSEXIT exit
Explanation: SNALINK received a VTAM NSEXIT interrupt with a null connection block pointer.
System action: SNALINK abends.
Operator response: No action is needed.
System programmer response: This error indicates a possible VTAM or TCPIP problem. Tell your VTAM administrator.
Module: SNALINK
Procedure Name: vtamns

EZA5825E  CID in NSEXIT parm list not found
Explanation: SNALINK received a VTAM NSEXIT interrupt for which an associated parameter list could not be found.
System action: SNALINK ignores the interrupt.
Operator response: No action is needed.
System programmer response: This error indicates a possible VTAM or TCPIP code problem. See the VTAM console for more information.
Module: SNALINK
Procedure Name: vtamns

EZA5826I  Sending BIND request for SNA send session
Explanation: SNALINK is trying to establish the connection. The other side should have a DLC path pending.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: dovttopnd

EZA5827E  Error in MODCB NIB for send session. R15 *value* R0 *value*
Explanation: SNALINK received a VTAM OPNDST interrupt but encountered an error when processing the OPNDST. An error indication is returned to the caller.
System action: The BIND request is rejected.
Operator response: Tell your VTAM administrator.
System programmer response: This error indicates a possible TCPIP code problem.
Module: SNALINK
Procedure Name: dovttopnd

EZA5828I  Cannot issue OPNDST - Previous OPNDST active
Explanation: SNALINK encountered an error processing a VTAM OPNDST request. The associated request parameter list (RPL) is in use, indicating a previous OPNDST is active.
System action: SNALINK does not process the VTAM OPNDST request.
Operator response: No action is needed.
System programmer response: This error indicates a possible TCPIP code problem.
Module: SNALINK
Procedure Name: dovttopnd

EZA5829I  Accepting DLC path
Explanation: A BIND was received. SNALINK accepts a DLC connection to TCPIP.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: doiucc

EZA5830E  Error *error* accepting DLC path
Explanation: SNALINK encountered an error in a DLC ACCEPT request.
System action: SNALINK ends the current connection and returns to its caller.
Operator response: No action is needed.
System programmer response: This error indicates a possible TCPIP code problem.
Module: SNALINK
Procedure Name: Main

EZA5831E  Error *error* sending on DLC path
Explanation: SNALINK encountered an error sending data on a DLC path.
System action: SNALINK ends the current connection.
Operator response: No action is needed.
System programmer response: This error indicates a possible system problem.
Module: SNALINK
Procedure Name: doiucsnd

EZA5832E  Error *error* receiving on DLC path
Explanation: SNALINK encountered an error receiving data on a DLC path.
System action: SNALINK ends the current connection.
Operator response: Check that TCPIP is operational.
System programmer response: This error indicates a possible TCPIP code problem.
Module: SNALINK
Procedure Name: doiucrcv

EZA5833E  Error *error* severing DLC path
Explanation: SNALINK encountered an error severing a DLC path.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: Respond as indicated by the *error* portion of this message.
Module: SNALINK
Procedure Name: dosever

EZA5834E  Error *error* in VTAM CLOSE
Explanation: SNALINK encountered an error closing an ACB.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: Respond as indicated by the *error* portion of this message.
Module: SNALINK
Procedure Name: closeacb

EZA5835E  Error in GENCB RPL. R15 value R0 value
Explanation: SNALINK received an error from a GENCB RPL call.
System action: SNALINK resumes processing. More errors can result.
Operator response: No action is needed.
System programmer response: Check the error indication.
Module: SNALINK
Procedure Name: setupcon

EZA5836E  Error in GENCB NIB. R15 value R0 value
Explanation: SNALINK received an error from a GENCB NIB call.
System action: SNALINK resumes processing. More errors can result.
Operator response: No action is needed.
System programmer response: Check the error indication.
Module: SNALINK
Procedure Name: setupcon
**EZA5837E**  
*function err. R15 value R0 value RTNCD rc FDBK2 value*

**Explanation:** SNALINK encountered an error in the indicated function. The associated sense code returned by VTAM is displayed.

**System action:** Based on the sense code, TCPIP either tries again, ends the session, or ignores the error and continues processing.

**Operator response:** No action is needed.

**System programmer response:** Tell your VTAM administrator.

**Module:** SNALINK  
**Procedure Name:** prtrpler

---

**EZA5838E**  
*function CHECK err. R15 value R0 value RTNCD rc FDBK2 value*

**Explanation:** SNALINK encountered an error in the indicated function. The associated sense code returned by VTAM is displayed.

**System action:** Based on the sense code, TCPIP either tries again, ends the session, or ignores the error and continues processing.

**Operator response:** No action is needed.

**System programmer response:** Tell your VTAM administrator.

**Module:** SNALINK  
**Procedure Name:** prtrchker

---

**EZA5839E**  
*function sense: SSENSEI, SSENSMU, USENsei: value date time {lu} : SSENSEO, SSENSM0, USENSEO: value*

**Explanation:** This message lists the sense fields from a SNALINK RPL.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SNALINK  
**Procedure Name:** prtsense

---

**EZA5840E**  
*SSENSEO, SSENSM0, USENSEXO: value*

**Explanation:** This message displays Sense information.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SNALINK  
**Procedure Name:** prtsense

---

**EZA5841E**  
*ANALYZE returns value*

**Explanation:** ANALYZE returned the specified value.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SNALINK
Procedure Name: analyze

EZA5842E  The session type, type, invalid. Valid values are: SINGLE, DUAL or blank
Explanation: The session type that you entered is not valid.
System action: SNALINK abends.
Operator response: Check the SNALINK parameters, and correct them as needed. See z/OS Communications Server: IP Configuration Reference for more information.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: chkmod

EZA5843I  Using DUAL LU0 sessions
Explanation: This mode is compatible with previous versions of SNALINK.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: chkmod

EZA5844I  Using SINGLE LU0 sessions
Explanation: This mode is not compatible with previous versions of SNALINK.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: chkmod

EZA5845I  Got UNBIND for session
Explanation: An UNBIND request was received for a single session.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: scipunbd

EZA5846I  Received BIND request for SNA session
Explanation: A BIND request was received for a single session.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: scipfoun
EZA5847I  •  EZA5851E

EZA5847I  SNA session established
Explanation:  A single session was established.
System action:  Processing continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  SNALINK
Procedure Name:  vtamopnd

EZA5848E  LOSTERM received, reason rc
Explanation:  A LOSTERM request was received.
System action:  SNALINK ends the connection.
Operator response:  Check your hardware or VTAM for problems.
System programmer response:  No action is needed.
Module:  SNALINK
Procedure Name:  vtamlost

EZA5849E  NSEXIT CLEANUP request for session
Explanation:  A VTAM NSEXIT interrupt with cleanup request was received.
System action:  SNALINK ends the connection.
Operator response:  Check your hardware or VTAM for problems.
System programmer response:  No action is needed.
Module:  SNALINK
Procedure Name:  vtamns

EZA5850I  Sending SNA BIND request
Explanation:  A connection is being established.
System action:  Processing continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  SNALINK
Procedure Name:  vtamlgon

EZA5851E  Rejecting logon attempt from id -no DLC found
Explanation:  There is no corresponding DLC connection to TCPIP for the indicated ID. No connection is established.
System action:  Processing continues.
Operator response:  Check that the SNALINK device is running.
System programmer response:  No action is needed.
Module:  SNALINK
Procedure Name:  vtamlgon
EZA5852E   Rejecting logon attempt - already have a session with id
Explanation: A BIND request was received for an LU that has already established a connection.
System action: The BIND is not accepted.
Operator response: Tell your VTAM administrator.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: vtamlgon

EZA5853I   Processing LOGON exit
Explanation: The requested logon is being processed.
System action: A BIND request is sent.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: vtamlgon

EZA5854E   Invalid number of sessions, using default of 6 sessions
Explanation: The maximum session parameter is not valid.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: To avoid this error, correct the maximum session parameter.
Module: SNALINK
Procedure Name: main

EZA5855E   Invalid delay interval, using default of 15 minutes
Explanation: The retry interval parameter is not valid.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: To avoid this error, correct the retry interval parameter.
Module: SNALINK
Procedure Name: main

EZA5856I   REPLY X TO SHUT DOWN
Explanation: SNALINK is shutting down.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SNALINK
Procedure Name: main
**EZA5864I**  
Max Sessions value : Retry Interval value

**Explanation:** This message displays the values set for the maximum number of sessions and the retry interval being used by SNALINK.

**System action:** Processing continues.

**Operator response:** Correct the values if necessary.

**System programmer response:** No action is needed.

**Module:** SNALINK

**Procedure Name:** main

---

**EZA5866W**  
date time {luname} | Command is too long, truncating

**Explanation:** The operator has entered a MODIFY command that is longer than 254 characters. If the first 254 characters of the command are syntactically correct then the command is executed with no additional messages. Otherwise, additional messages will be generated.

**System action:** Processing continues.

**Operator response:** The command should be reentered as several shorter commands.

**System programmer response:** No action is needed.

**Module:** SNALINK ASSEMBLE

**Procedure Name:** PROCMOD

---

**EZA5867E**  
date time {luname} | Invalid MODIFY sub-command.

**Explanation:** The operator has entered a MODIFY command with a subcommand which was neither HALT nor PKTTRACE. The command is ignored.

**System action:** Processing continues.

**Operator response:** Specify the MODIFY command with either the HALT or PKTTRACE subcommand.

**System programmer response:** No action is needed.

**Module:** SNALINK ASSEMBLE

**Procedure Name:** PROCMODF

---

**EZA5868W**  
date time {luname} | START CIB not freed, MODIFY Commands restricted

**Explanation:** An error occurred during the initialization of MODIFY command processing. The command input buffer (CIB) containing the START command was not freed from the task CIB chain. This is an internal error. It will not cause a system problem.

**System action:** SNALINK continues.

**Operator response:** No action is needed.

**System programmer response:** Contact the IBM Software Support Center to report this error. MODIFY commands may result in IEE342I messages from the MVS operating system. See z/OS MVS System Messages, Vol 7 (IEB-IEE) for an explanation of the IEE342I message.

**Module:** SNALINK ASSEMBLE

**Procedure Name:** MAIN

---

**EZA5869E**  
date time {luname} | PKTTRACE Disabled, TCP/IP links not connected

**Explanation:** The operator has attempted to issue a PKTTRACE subcommand before TCPIP has connected to SNALINK.

SNALINK receives link information from TCPIP before establishing VTAM sessions. Packet tracing is enabled when
link information has been received from TCPIP. The PKTTRACE subcommand is ignored.

**System action:** Processing continues.

**Operator response:** Wait for the IUCV connection between TCPIP and SNALINK to be established and reenter the command.

**System programmer response:** No action is needed.

**Module:** SNALINK ASSEMBLE

**Procedure Name:** PROCMODF

---

**EZA5926I**  LU62CFG: Starting Pass `value of value`

**Explanation:** The indicated pass number of the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG has just been started. If errors are not detected in earlier passes, the data set is parsed by way of the number of indicated passes.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** LU62INIT

**Procedure Name:** RLCFG#P1, RLCFG#P2

---

**EZA5927I**  LU62CFG: No Errors Detected - Initialization will Continue

**Explanation:** No errors were detected in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

**System action:** Initialization continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** LU62INIT

**Procedure Name:** L62ENTRY

---

**EZA5928I**  LU62CFG: Errors Detected - Address Space will Terminate

**Explanation:** One or more errors were detected during the parsing of the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

**System action:** The address space shuts down immediately.

**Operator response:** No action is needed.

**System programmer response:** See the previous console messages and messages written to the SYSPRINT data set to determine the exact nature of the errors. Correct the errors, and restart the SNALINK LU6.2 interface.

**Module:** LU62INIT

**Procedure Name:** L62ENTRY

---

**EZA5929I**  Address Space `address` Already Active - this Address Space will Terminate

**Explanation:** The indicated address space is already running; each instance of a SNALINK LU6.2 interface should have a unique address space name.

**System action:** This address space shuts down immediately.

**Operator response:** No action is needed.

**System programmer response:** If multiple SNALINK LU6.2 address spaces are required, each one should have a unique name.
Module: LU62INIT
Procedure Name: L62ENTRY

EZA5930I Errors Detected in VTAM Initialization - Address Space will Terminate
Explanation: One or more errors were detected during the initialization of the interface with the VTAM subsystem.
System action: The address space shuts down immediately.
Operator response: No action is needed.
System programmer response: See the previous console messages and messages written to the SYSPRINT data set to determine the exact nature of the errors. If possible, correct the errors, and restart the SNALINK LU6.2 interface. Otherwise, if the previous error messages indicate a potential program logic error, contact the IBM Software Support Center.
Module: LU62INIT
Procedure Name: L62ENTRY

EZA5931I Errors Detected in DLC Initialization - Address Space will Terminate
Explanation: One or more errors were detected during the initialization of the DLC interface between the SNALINK LU6.2 address space and the TCPIP address space.
System action: The address space shuts down immediately.
Operator response: No action is needed.
System programmer response: See the previous console messages and messages written to the SYSPRINT data set to determine the exact nature of the errors. If possible, correct the errors, and restart the SNALINK LU6.2 interface. Otherwise, if the previous error messages indicate a potential program logic error, contact the IBM Software Support Center.
Module: LU62INIT
Procedure Name: L62ENTRY

EZA5932I Initialization complete - Applid: application TCP/IP: address
Explanation: The initialization of the SNALINK LU6.2 interface has been successfully completed. The indicated application ID is used for VTAM-related communication, and DLC connections are only accepted from the indicated address space.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62VTAM
Procedure Name: VTAMINIT

EZA5933I Link name opened
Explanation: A DLC connection associated with the indicated TCPIP link has been successfully opened. Datagrams to and from destinations associated with the indicated link are passed between the TCPIP address space and the SNALINK LU6.2 address space using the DLC connection.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62IUCV
Procedure Name: IUCVPCON
EZA5934I Establishing connection with name for address

Explanation: An SNA LU type 6.2 connection has been initiated with the indicated remote LU name. This connection is used as the medium through which data to and from the indicated IP address are transferred.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62IUCV
Procedure Name: IUCVPMES

EZA5935I Send conversation allocated for address

Explanation: The SNA LU type 6.2 conversation that is used for sending data to the destination node associated with the indicated IP address has been successfully established. IP datagrams addressed to the indicated address are sent to the destination node using the send conversation.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62VTAM
Procedure Name: VTAMALOC

EZA5936I Receive conversation allocated for address

Explanation: The SNA LU type 6.2 conversation to be used for receiving data from the destination node associated with the indicated IP address has been successfully established. IP datagrams from the indicated IP address are transferred to the local node using the receive conversation.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: LU62VTAM
Procedure Name: VTAMALOC

EZA5937I Link name closed

Explanation: The DLC connection associated with the indicated TCPIP link has been closed. The SNALINK LU6.2 interface attempts to buffer any datagrams received from destination nodes associated with the indicated link. However, if the link is not reestablished before the buffer space is exhausted, incoming datagrams are discarded. The TCPIP address space is responsible for the reconnection of the DLC link.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: If the SNALINK LU6.2 address space is not shut down, check the reason for the severing of the DLC connection. The TCPIP address space might have been shut down or abended.
Module: LU62IUCV
Procedure Name: IUCVSEVR, IUCVCMES
EZA5938I  Received operator shutdown request

Explanation: A console command requesting the orderly shutdown of the SNALINK LU6.2 interface has been received and is processed immediately.

System action: The SNALINK LU6.2 address space shuts down immediately.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: LU62MAIN

Procedure Name: MAINPROC

EZA5939I  TPEND exit called with reason rc

Explanation: A VTAM shutdown notification was received resulting in the invocation of the TPEND exit routine. The indicated reason code was passed to the exit routine.

System action: The SNALINK LU6.2 address space shuts down immediately.

Operator response: No action is needed.

System programmer response: Determine the cause of the VTAM shutdown notification. For more information about VTAM shutdown notifications see z/OS Communications Server: SNA Programmer’s LU 6.2 Reference.

Module: LU62MAIN

Procedure Name: MAINPROC

EZA5940I  TCPIP ADDRESS SPACE NAME SET TO AddressSpaceName

Explanation: The TCPIP address space name to be used by SNALINK LU6.2 has been set to AddressSpaceName. It corresponds to the value of the TCPIPJOBNAME statement found in TCPIP.DATA.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Check that the indicated name is the correct TCPIP address space name to be used by SNALINK LU6.2. If the name is incorrect, specify the correct name as the value of the TCPIP.DATA TCPIPJOBNAME statement and restart the SNALINK LU6.2 application.

Module: LU62INIT

Procedure Name: READTCPD

EZA5950W  LU62CFG: Line number: DEST statement - Blank Connection Start Type, type assumed

Explanation: The indicated line of the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG contains a DEST statement that does not include a specification of when the connection to the destination is to be established. The indicated start type value is assumed. The indicated start type value is used for the destination defined on the indicated line of the configuration data set.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Check that the indicated start type is the required start type value for the destination. If the value is incorrect, correct the SNALINK LU6.2 configuration data set, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2
EZA5951W  LU62CFG: Line number: BUFFERS statement - Blank number of Additional Send Buffers, value assumed

Explanation: The indicated line of the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG contains a BUFFERS statement that does not include a specification of the number of additional send buffers to be allocated for each destination. The indicated default value is assumed. The number of additional send buffers allocated for each destination is the indicated number.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Check that the indicated number is the required number of additional send buffers for each destination. If the number is incorrect, correct the SNALINK LU6.2 configuration data set, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1

EZA5952W  LU62CFG: Line number: BUFFERS statement - Blank Send Queue Limit, value assumed

Explanation: The indicated line of the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG contains a BUFFERS statement that does not include a specification of the send queue limit to be enforced for each destination. The indicated default value is assumed.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Check that the indicated number is the required send queue limit to be enforced for each destination. If the number is incorrect, correct the SNALINK LU6.2 configuration data set, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1

EZA5953W  LU62CFG: Line number: LINK statement - Blank Idle Timeout, seconds assumed

Explanation: The indicated line of the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG contains a LINK statement that does not include a specification of the idle timeout to be used for all connections associated with the link. The indicated default number of seconds is assumed. Inactive connections for the current link are closed after the indicated number of seconds of inactivity.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Check that the indicated number of seconds is the required idle timeout value for each destination associated with the link. If the number of seconds is incorrect, correct the SNALINK LU6.2 configuration data set, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

EZA5954W  NO TCPIP.DATA FILE ACCESSED - ADDRESS SPACE NAME TCPIP ASSUMED

Explanation: The TCPIP address space name to be used by SNALINK LU6.2 has been set to TCPIP. This is the default value. It has been assigned because no TCPIPUSERID or TCPIPJOBNAME TCPIP.DATA statement was found.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: If the name is incorrect, specify the correct name as the value of the TCPIP.DATA TCPIPJOBNAME statement. Also check that the SYSTCPD DD statement for the SNALINK LU6.2 procedure has the correct TCPIP.DATA file specified. After making any changes restart the SNALINK LU6.2 application.
Module: LU62INIT  
Procedure Name: READTCPD

**EZA5959I  CANCEL Command Accepted - Address Space will Abend**

Explanation: A CANCEL subcommand was entered from an operator console (using the MODIFY console command).

System action: The SNALINK LU6.2 address space abends immediately. If the SYSUDUMP ddname is defined, a dump is produced.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: LU62MDFY  
Procedure Name: MODIFY

**EZA5960I  HALT Command Accepted - Address Space will Shutdown**

Explanation: A HALT subcommand was entered from an operator console (using the MODIFY console command).

System action: The SNALINK LU6.2 shuts down immediately.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: LU62MDFY  
Procedure Name: MODIFY

**EZA5961I  Establishment of Connection to IP Address address Initiated**

Explanation: The establishment of a connection to the destination node identified by the indicated IP address has been requested by a RESTART subcommand entered from an operator console (using the MODIFY console command).

System action: A connection to the indicated IP address is initiated.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: LU62MDFY  
Procedure Name: STRTCONN

**EZA5962I  Drop of Connection to IP Address address Initiated**

Explanation: The termination of a connection with the destination node identified by the indicated IP address has been requested by a DROP subcommand entered from an operator console (using the MODIFY console command).

System action: The connection with the indicated IP address is closed.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: LU62MDFY  
Procedure Name: DROPCONN
EZA5963I  TRACE Command Completed

**Explanation:** The trace level specified in a TRACE subcommand entered from an operator console (using the MODIFY console command) has been set for the specified destinations. The new trace levels take effect immediately.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** LU62MDFY

**Procedure Name:** TRACE

---

EZA5964I  address (Disconnected)

**Explanation:** This message is output on the operator console in response to a LIST subcommand (entered using the MODIFY console command). It indicates that no connection with the indicated IP address has been established during the current invocation of the SNALINK LU6.2 address space.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** LU62MDFY

**Procedure Name:** LISTCONN

---

EZA5965I  address (Disconnected on date at time)

**Explanation:** This message is output on the operator console in response to a LIST subcommand (entered using the MODIFY console command). It indicates that no connection with the indicated IP address currently exists, but a connection was disconnected at the indicated time on the indicated date. The date is in Julian date format (yy.ddd), and the time is in standard 24-hour clock format (hh:mm:ss).

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Procedure Name:** LISTCONN

---

EZA5966I  address (Connected on date at time)

**Explanation:** This message is output on the operator console in response to a LIST subcommand (entered using the MODIFY console command). It indicates that a connection with the indicated IP address currently exists; it was established at the indicated time on the indicated date. The date is in Julian date format (yy.ddd), and the time is in standard 24-hour clock format (hh:mm:ss). Further details of the status of this connection are output on the console (using a multiline WTO).

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** LU62MDFY

**Procedure Name:** LISTCONN
EZA5967I • EZA5969I

**EZA5967I**  
**Connected via:** type  **Trace Level:** level

**Explanation:** This message is output on the operator console following message EZA5966I to provide further details of the connection identified in the EZA5966I message.

The indicated type describes why the connection was established:

- Data. Connection established either because a datagram was sent or received to or from the destination node, or an INIT option was processed by the destination node;
- Init. Connection established because of the INIT option in the configuration data set;
- Restart. Connection established because of the RESTART subcommand entered on console (using MODIFY console command).

The indicated trace level indicates the current level of tracing in force for the connection (“On,” “Off,” or “Detail”). Further details of the status of this connection are output on the console (using a multiline WTO).

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** LU62MDFY

**Procedure Name:** LISTCONN

---

**EZA5968I**  
**SEND:- Status:** status  **Packets Out:** value

**Explanation:** This message is output on the operator console following messages EZA5966I and EZA5967I to provide further details of the connection identified in the EZA5966I message.

The indicated status value describes the current status of the send conversation with the conversation node:

- Allocated. Conversation is allocated and ready to send data.
- Not Allocated. Conversation is either yet to be started, or has just been deallocated.
- Pending Alloc. Allocation of conversation has been initiated but not yet completed.
- Pending Dealloc. Deallocation of the conversation has been initiated but not yet completed.

The indicated value describes the number of datagrams sent to the destination node during the period that the current connection has existed. Further details of the status of this connection are output on the console (using a multiline WTO).

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** LU62MDFY

**Procedure Name:** LISTCONN

---

**EZA5969I**  
**RECV:- Status:** status  **Packets In:** value

**Explanation:** This message is output on the operator console following messages EZA5966I, EZA5967I and EZA5968I to provide further details of the connection identified in the EZA5966I message.

The indicated status describes the current status of the receive conversation with the conversation node:

- Allocated. Conversation is allocated and ready to receive data.
- Not Allocated. Conversation is either yet to be started, or has just been deallocated.
- Pending Alloc. Allocation of conversation has been initiated but not yet completed.
- Pending Dealloc. Deallocation of the conversation has been initiated but not yet completed.

The indicated value describes the number of datagrams received from the destination node during the period that the current connection has existed. This is the last line in the multiline message for a connected destination.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.

**Procedure Name:** VTAMRECV

---

**EZA5991I**  IP datagram added to the pending message queue, bytes= length

**Explanation:** This message is written to the SYSPRINT data set when detailed tracing is enabled and an IP datagram, which was extracted from a logical record received from VTAM, was loaded into the VTAM-pending message queue. Datagrams are only loaded into the VTAM-pending message queue if the DLC message buffer is either full or currently being sent to the TCPIP address space. Entries in the queue are placed in the DLC message buffer (and subsequently sent to TCPIP) once the current buffer has been successfully sent to the TCPIP address space. The indicated length is the length of the IP datagram placed on the queue. Message EZA5985I appears following this message.

**System action:** Processing continues.

**Number of IP packets sent on address = value**

**Explanation:** This message is written to the SYSPRINT data set when detailed tracing is enabled and an IP datagram has just been passed to VTAM for transmission to the destination node associated with the indicated IP address. The indicated number is the number of IP datagrams sent to the indicated IP address during the current invocation of the SNALINK LU6.2 address space, including the datagram that triggered this message. One or more lines of message EZA5999I appear following this message to show the contents of the datagram just sent.
System action:  Processing continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  LU62VTAM
Procedure Name:  VTAMSEND

EZA5996I  Number of IP packets received on address = value

Explanation:  This message is written to the SYSPRINT data set when detailed tracing is enabled and an IP
datagram has just been received, using VTAM, from the destination node associated with the indicated IP address.
The indicated number is the number of IP datagrams received from the indicated IP address during the current
invocation of the SNALINK LU6.2 address space, including the datagram that triggered this message.

System action:  Processing continues. One or more lines of message EZA5999I appear following this message to
show the contents of the datagram just received.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  LU62VTAM
Procedure Name:  VTAMRECV

EZA5997I  Connection address will timeout in seconds seconds

Explanation:  This message is written to the SYSPRINT data set when detailed tracing is enabled and the inactivity
timeout value for the connection associated with the indicated IP address has just been recalculated. The indicated
number of seconds is the time until the connection is due to timeout unless the connection is used within that period.
If the connection with the indicated IP address is not used within the indicated number of seconds, the connection is
closed.

System action:  Processing continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  LU62VTAM
Procedure Name:  RESTIMER

EZA5998I  VTAM connection has reached timeout period and expired

Explanation:  This message is written to the SYSPRINT data set when detailed tracing is enabled and the inactivity
timeout period for a connection has expired. Message EZA5985I is written to the SYSPRINT data set following this
message to identify the connection involved. The connection identified in message EZA5985I, which follows this
message, is closed.

System action:  Processing continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  LU62VTAM
Procedure Name:  RESTIMER

EZA5999I  datagram

Explanation:  This message is written to the SYSPRINT data set when detailed tracing is enabled. It contains a
hexadecimal dump of the contents of an IP datagram and is repeated until the entire datagram has been dumped.
Each of these messages shows the hexadecimal representation of 40 bytes of data from the datagram. Trailing nulls
(X'00') are used to fill the last message for a datagram if required. This message is repeated until the contents of the entire datagram have been written to SYSPRINT.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** LU62VTAM

**Procedure Name:** HEXDUMP
Chapter 7. EZA6xxx messages

**EZA6009W Conversations for address terminated**

**Explanation:** The send and receive conversations comprising the connection to the destination node associated with the indicated IP address have been closed. The connection was closed for one of the following reasons:

- An allocation failure occurred.
- One of the conversations was closed because of a VTAM error or command.
- The connection was closed using a DROP subcommand entered from an operator console (using the MODIFY console command).
- The inactivity timeout period for the connection expired.
- The destination node closed one or both conversations.

Internal data structures are reinitialized to allow the connection to be restarted when required.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** If the termination was caused by an error, see the preceding messages in the SYSPRINT data set to determine the exact nature of the problem.

**Module:** LU62VTAM

**Procedure Name:** CLEARCON

---

**EZA6010E Receive error for address, what received= value, length= length**

**Explanation:** An incomplete logical record was received from the destination node associated with the indicated IP address. The indicated value is the what received field returned from VTAM. The indicated length is the number of bytes received. This error can be caused by the SNALINK LU6.2 transaction program on the destination node that does not conform to the protocol defined in the relevant RFC.

**System action:** The connection is closed. Processing continues.

**Operator response:** No action is needed.

**System programmer response:** See the [z/OS Communications Server: SNA Programmer’s LU 6.2 Reference](https://www.ibm.com/services/zos) for an explanation of the received value. If possible, correct the error; otherwise, contact the IBM Software Support Center.

**Module:** LU62VTAM

---

**EZA6011E Unable to allocate send conversation for address**

**Explanation:** The send conversation could not be allocated with the destination node associated with the indicated IP address. Preceding messages in the SYSPRINT data set indicate the exact nature of the problem.

**System action:** Processing continues; the connection is closed.

**Operator response:** No action is needed.

**System programmer response:** See the preceding messages to determine the nature of the problem.

**Module:** LU62VTAM

**Procedure Name:** VTAMALLOC
Explanation: The send conversation could not be allocated with the destination node associated with the indicated IP address. The Function Management Header (FMH5) could not be flushed. Messages EZA6029E to EZA6032E are also written to the SYSPRINT data set to describe the exact nature of the problem.

System action: Processing continues; the connection is closed.

Operator response: No action is needed.

System programmer response: See messages EZA6029E to EZA6032E in the SYSPRINT data set to determine the nature of the problem.

Module: LU62VTAM

Procedure Name: VTAMALOC

Explanation: A send and receive conversation with the destination node associated with the indicated IP address could not be deallocated. Messages EZA6029E to EZA6032E are also written to the SYSPRINT data set to describe the exact nature of the problem.

System action: Processing continues; the connection is closed.

Operator response: No action is needed.

System programmer response: See messages EZA6029E to EZA6032E in the SYSPRINT data set to determine the nature of the problem.

Module: LU62VTAM

Procedure Name: VTAMDALC

Explanation: An attempt to allocate a receive conversation with the destination node associated with the indicated IP address was rejected.

System action: Processing continues; the connection is closed.

Operator response: No action is needed.

System programmer response: See the preceding messages in the SYSPRINT data set to determine the nature of the problem.

Module: LU62VTAM

Procedure Name: VTAMATTN

Explanation: A conversation allocation attempt has been unsuccessful because the Function Management Header (FMH5) was not received correctly. Messages EZA6029E to EZA6032E are also written to the SYSPRINT data set to describe the exact nature of the problem.

System action: Processing continues; the connection is closed.

Operator response: No action is needed.

System programmer response: See messages EZA6029E to EZA6032E in the SYSPRINT data set to determine the nature of the problem.

Module: LU62VTAM

Procedure Name: VTAMATTN
**EZA6016W**  Not authorized to accept conversation allocation attempt from *lu*.

**Explanation:** A conversation allocation attempt was received from the indicated logical unit, but the logical unit is not defined in the SNALINK LU6.2 configuration data set.

**System action:** Processing continues; the conversation allocation attempt is rejected.

**Operator response:** No action is needed.

**System programmer response:** Correct the SNALINK LU6.2 configuration data set and restart the SNALINK LU6.2 address space.

**Module:** LU62VTAM

**Procedure Name:** VTAMATTN

---

**EZA6017W**  VTAM event queue full, event lost

**Explanation:** The VTAM event queue has overflowed, and an event has been lost.

**System action:** The SNALINK LU6.2 address space attempts to continue; however, more problems might occur with VTAM interactions.

**Operator response:** No action is needed.

**System programmer response:** Contact the IBM Software Support Center.

**Module:** LU62VTAM

**Procedure Name:** PUTVTAM

---

**EZA6018W**  Unable to reject conversation for *address*

**Explanation:** An error was encountered while attempting to reject a receive conversation allocation attempt from the destination node associated with the indicated IP address. Messages EZA6029E to EZA6032E are also written to the SYSPRINT data set to describe the exact nature of the problem.

**System action:** Processing continues; the connection is closed.

**Operator response:** No action is needed.

**Module:** LU62VTAM

**Procedure Name:** VTAMATTN

---

**EZA6019W**  Unable to find destination entry for *lu*; partner for lost conversation

**Explanation:** A loss notification was received from VTAM for a conversation with the indicated logical unit; however, the logical unit is not defined in the SNALINK LU6.2 configuration data set. The loss notification is ignored.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Potential problem in either VTAM or SNALINK LU6.2. Contact the IBM Software Support Center.

**Module:** LU62VTAM

**Procedure Name:** VTAMATTN
EZA6020W Lost send conversation for address
Explanation: A loss notification has been received from VTAM for the send conversation for the connection with the destination node associated with the indicated IP address.
System action: Processing continues; the connection is closed.
Operator response: No action is needed.
System programmer response: See the VTAM diagnostic messages to determine the reason for the conversation loss.
Module: LU62VTAM
Procedure Name: VTAMATTN

EZA6021W Lost receive conversation for address
Explanation: A loss notification has been received from VTAM for the receive conversation for the connection with the destination node associated with the indicated IP address.
System action: Processing continues; the connection is closed.
Operator response: No action is needed.
System programmer response: See the diagnostic messages output by the SNALINK LU6.2 transaction program on the destination node to determine the reason for the conversation loss.
Module: LU62VTAM
Procedure Name: VTAMATTN

EZA6022W Closing conversations for address
Explanation: The connection to the destination node associated with the indicated IP address is being closed because of an error condition encountered during processing. Preceding error messages in the SYSPRINT data set describe the exact nature of the problem.
System action: Processing continues; the connection is closed.
Operator response: No action is needed.
System programmer response: See the preceding messages in the SYSPRINT data set to determine the nature of the problem.
Module: LU62VTAM
Procedure Name: VTAMSEND, DOVTSEND, VTAMRECV, DOVTRECV

EZA6023W Unable to complete CNOS on LU lu for address
Explanation: The CNOS macro invocation for the indicated logical unit was unsuccessful. The CNOS macro is the first VTAM macro executed in the conversation allocation process. This error condition occurs when the indicated LU name is either incorrect or unreachable. Messages EZA6029E to EZA6032E are also written to the SYSPRINT data set to describe the exact nature of the problem.
System action: Processing continues; the connection is closed.
Operator response: No action is needed.
System programmer response: See messages EZA6029E to EZA6032E in the SYSPRINT data set to determine the nature of the problem.
Module: LU62VTAM
Procedure Name: DOVTALOC
**EZA6024E**  DLC event queue full, event lost

**Explanation:** The DLC event queue has overflowed, and an event has been lost.

**System action:** The SNALINK LU6.2 address space abends with 3C5 reason 105.

**Operator response:** No action is needed.

**System programmer response:** Contact the IBM Software Support Center.

**Module:** LU62IUCV

**Procedure Name:** PUTIUCV

---

**EZA6025E**  Unable to allocate receive conversation for address

**Explanation:** The allocation of the receive conversation with the destination node associated with the indicated IP address was unsuccessful. Preceding messages in the SYSPRINT data set indicate the exact nature of the problem.

**System action:** Processing continues; the connection is closed.

**Operator response:** No action is needed.

**System programmer response:** See the preceding messages to determine the nature of the problem.

**Module:** LU62VTAM

**Procedure Name:** VTAMALLOC

---

**EZA6026E**  Unable to initiate conversation allocation with lu for address

**Explanation:** A conversation allocation request for the indicated logical unit was rejected by VTAM. This can be because of incorrect LU or mode names, or corrupted request blocks, control blocks, or both. Messages EZA6029E to EZA6032E are also written to the SYSPRINT data set to describe the exact nature of the problem.

**System action:** Processing continues; the connection is closed.

**Operator response:** No action is needed.

**System programmer response:** See messages EZA6029E to EZA6032E in the SYSPRINT data set to determine the nature of the problem.

**Module:** LU62VTAM

**Procedure Name:** DOVTALLOC

---

**EZA6027E**  Error rc in VTAM OPEN

**Explanation:** An error occurred in opening the Access Method Control Block (ACB) defined in the VTAM statement in the SNALINK LU6.2 configuration data set. The indicated return code is the ACB error value returned by VTAM.

**System action:** The SNALINK LU6.2 address space abends down immediately.

**Operator response:** No action is needed.

**System programmer response:** If the return code = 5A, then verify that the VTAM APPL on the VTAM statement in TCPIPL62.TCPIPL62.CONFIG data set is defined in your VTAM list and has been activated. If other return codes are issued with this message, see [z/OS Communications Server: SNA Programmer’s LU 6.2 Reference](https://www.ibm.com) to find the meaning of the indicated ACB error value returned by VTAM.

**Module:** LU62VTAM

**Procedure Name:** VTAMINIT

---

**EZA6028E**  Error flag in VTAM CLOSE

**Explanation:** An error occurred in closing the Access Method Control Block (ACB) defined in the VTAM statement in the SNALINK LU6.2 configuration data set. The indicated flag is the ACB error flag value returned by VTAM.

**System action:** The SNALINK LU6.2 address space abends down immediately.
Operator response: No action is needed.

System programmer response: See the VTAM diagnostic documentation to determine the meaning of the indicated flag.

Module: LU62VTAM

Procedure Name: CLOSEACB

EZA6029E  command err. R15 value R0 value RTNCD rc FDBK2 rc

Explanation: The indicated VTAM APPC command was unsuccessful. The indicated value for R15 is the value returned using general register 15. The indicated value for R0 is the value returned using general register 0. The indicated return code for RTNCD is the return code returned from the APPC command. The indicated return code for FDBK2 is the value of the feedback return code returned using the RPL.

System action: Processing continues; messages EZA6030E to EZA6032E are also written to the SYSPRINT data set following this message to further describe the error condition encountered.

Operator response: No action is needed.

System programmer response: See z/OS Communications Server: SNA Programmer’s LU 6.2 Reference for a description of the meanings of each of the values reported in this message.

Module: LU62VTAM

Procedure Name: PRTRPXER

EZA6030E  command err. RCPRI= rc, RCSEC= rc

Explanation: The indicated VTAM APPC command was unsuccessful. This message follows message EZA6029E to further describe the error encountered. The indicated return code for RCPRI is the value returned from VTAM using the primary return code field of the RPL. The indicated return code for RCSEC is the secondary return code value. Messages EZA6031E and EZA6032E are also written to the SYSPRINT data set following this message to further describe the error condition encountered.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: See z/OS Communications Server: SNA Programmer’s LU 6.2 Reference for a description of the meanings of the primary and secondary return code values reported in this message.

Module: LU62VTAM

Procedure Name: PRTRPXER

EZA6031E  command err. Sense code received: value

Explanation: The indicated VTAM APPC command was unsuccessful. This message follows messages EZA6029E and EZA6030E to further describe the error encountered. The indicated sense code is the sense code value returned from VTAM. Message EZA6032E is also written to the SYSPRINT data set following this message to further describe the error condition encountered.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: See z/OS Communications Server: SNA Programmer’s LU 6.2 Reference for a description of the sense code values.

Module: LU62VTAM

Procedure Name: PRTSENSE
EZA6032E  command err. Sense code specified: value

Explanation: The indicated VTAM APPC command was unsuccessful. This message follows messages EZA6029E to EZA6031E to further describe the error encountered. The indicated sense code is the sense code value specified on the VTAM macro invocation that was unsuccessful.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: See z/OS Communications Server: SNA Programmer’s LU 6.2 Reference for a description of the sense code values.

Module: LU62VTAM

Procedure Name: PRTSENSE

---

EZA6046E Rejecting DLC path for link, not configured

Explanation: A DLC path allocation request has been received from the TCPIP address space for the indicated link, but the link is not defined by a LINK statement in the SNALINK LU6.2 configuration data set. The DLC path allocation request is rejected.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Correct the hlq.PROFILE.TCPIP data set or the SNALINK LU6.2 configuration data set, so that the link names used in each data set correspond exactly.

Module: LU62IUCV

Procedure Name: IUCVPCON

---

EZA6047E Rejecting DLC path for link, bad entry setup

Explanation: A DLC path allocation request has been received from the TCPIP address space for the indicated link, but an error was encountered in creating the corresponding DLC table entry. The DLC path allocation request is rejected. The error detected was either that the SNALINK LU6.2 address space has insufficient free storage to allocate the buffers required for the link to be established, or an active entry already exists in the DLC table data structure. A preceding message in the SYSPRINT data set identifies the exact nature of the error.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: If insufficient storage caused the error, increase the REGION size for the SNALINK LU6.2 address space, and restart the address space.

Module: LU62IUCV

Procedure Name: IUCVPCON

---

EZA6048E Error rc accepting DLC path

Explanation: An error was encountered during the establishment of a DLC path between the TCPIP address space and the SNALINK LU6.2 address space. The DLC path allocation request is rejected. The indicated return code is the code returned using register 15 from the accept attempt.

System action: Processing continues.

Operator response: Check that the TCPIP address space is active.

System programmer response: Check the TCPIP log data set for an indication of the nature of the error. Attempt to try the path establishment again by restarting the SNALINK LU6.2 device from within TCPIP. If the error persists, contact the IBM Software Support Center.

Module: LU62IUCV

Procedure Name: DOIUACCP
EZA6049E  Error rc sending on DLC path

Explanation: An error was encountered while sending data using a DLC path to the TCPIP address space. The DLC path is severed. The indicated return code is the code returned using register 15 from the send attempt.

System action: Processing continues.

Operator response: Check that the TCPIP address space is active.

System programmer response: Check the TCPIP log data set for an indication of the nature of the error. Attempt to reestablish the IUCV path by restarting the SNALINK LU6.2 device from within TCPIP. If the error persists, contact the IBM Software Support Center.

Module: LU62IUCV

Procedure Name: DOIUSEND

EZA6050E  Error rc receiving on DLC path

Explanation: An error was encountered while receiving data using a DLC path from the TCPIP address space. The DLC path is severed. The indicated return code is the code returned using register 15 from the receive attempt.

System action: Processing continues.

Operator response: Check that the TCPIP address space is active.

System programmer response: Check the TCPIP log data set for an indication of the nature of the error. Attempt to reestablish the IUCV path by restarting the SNALINK LU6.2 device from within TCPIP. If the error persists, contact the IBM Software Support Center.

Module: LU62IUCV

Procedure Name: DOIURECV

EZA6051E  Error rc severing DLC path

Explanation: An error was encountered while severing a DLC path between the TCPIP address space and the SNALINK LU6.2 address space. The indicated return code is the code returned using register 15 from the sever attempt.

System action: Processing continues as though the DLC path was successfully severed.

Operator response: Check that the TCPIP address space is active.

System programmer response: Check the TCPIP log data set for an indication of the nature of the error. If problems are encountered in the subsequent reestablishment of the path, shut down, and restart the SNALINK LU6.2 address space. If the error persists, contact the IBM Software Support Center.

Module: LU62IUCV

Procedure Name: DOIUSEVR

EZA6052E  Error rc in DLC initialization

Explanation: An error was encountered during the DLC initialization. The indicated return code is the code returned using register 15 from the initialization routine.

System action: The SNALINK LU6.2 address space shuts down immediately.

Operator response: Check that the TCPIP address space is active.

System programmer response: Check the TCPIP log data set for an indication of the nature of the error. Restart the SNALINK LU6.2 address space. If the error persists, contact the IBM Software Support Center.

Module: LU62IUCV

Procedure Name: IUCVINIT
EZA6059W  Error encountered in processing name - dataset closed

Explanation: An I/O error was detected during the processing of the data set defined by the indicated ddname. This message is accompanied by message EZA6060W, which describes the nature of the error detected.

System action: Message EZA6060W is output to indicate the nature of the error detected, and the data set is closed.

Operator response: No action is needed.

System programmer response: Locate the accompanying message EZA6060W to identify the nature of the error.

Module: LU62IO

Procedure Name: OPENOUT, OPENINP, PUTDS, GETDS, CLOSEDS

---

EZA6060W  I/O_error_message

Explanation: This message accompanies message EZA6059W; the indicated error message describes the nature of the I/O error detected.

System action: See message EZA6059W.

Operator response: No action is needed.

System programmer response: The indicated error message was constructed using the SYNADAF system macro. See the documentation for this macro to determine the exact nature of the I/O error encountered. Correct the error, and restart the SNALINK LU6.2 address space.

Module: LU62IO

Procedure Name: OPENOUT, OPENINP, PUTDS, GETDS, CLOSEDS

---

EZA6061W  Abend code-rc trapped in operation for name - dataset closed

Explanation: An abend condition was encountered during the running of the indicated operation on the data set defined by the indicated ddname. The abend was trapped and the address space allowed to continue.

System action: Processing continues; the data set is closed by the system.

Operator response: No action is needed.

System programmer response: Determine the nature of the abend condition using the indicated Abend code and reason code values, correct the problem, and restart the SNALINK LU6.2 address space.

Module: LU62IO

Procedure Name: OPENOUT, OPENINP, PUTDS, GETDS, CLOSEDS

---

EZA6062W  Error in open of name - output to dataset will be suppressed

Explanation: An error was encountered during the opening of the output data set defined by the indicated ddname. All attempts to write to the data set are suppressed.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: See previous error messages to determine the nature of the problem, correct the problem, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: L62ENTRY

---

EZA6063W  Error in open of name - no data will be read

Explanation: An error was encountered during the opening of the input data set defined by the indicated ddname.

System action: Processing continues as though the input data set was empty.

Operator response: No action is needed.
System programmer response: See previous error messages to determine the nature of the problem, correct the problem, and restart the SNALINK LU6.2 address space.

Module: LU62INIT
Procedure Name: L62ENTRY

EZA6064W Record Format of *name* must be either F or V - dataset closed

Explanation: An unexpected record format was encountered during the open of the input data set defined by the indicated ddname. Only fixed- or variable-length record formats are supported.

System action: Processing continues as though the input data set was empty.

Operator response: No action is needed.

System programmer response: Correct the record format of the data set, and restart the SNALINK LU6.2 address space.

Module: LU62IO
Procedure Name: GETDS

EZA6065W Error in read of *name* - dataset closed

Explanation: An error was encountered during a read operation on the data set defined by the indicated ddname.

System action: Processing continues as though an end-of-file condition was encountered.

Operator response: No action is needed.

System programmer response: See previous error messages to determine the nature of the problem, correct the problem, and restart the SNALINK LU6.2 address space.

Module: LU62INIT
Procedure Name: READTCPD, RLCFG#P1, RLCFG#P2

EZA6074E MODIFY sub-command missing

Explanation: A MODIFY command was entered for the SNALINK LU6.2 address space from an operator console, but no subcommand was specified. The command is ignored.

System action: Processing continues.

Operator response: Enter the MODIFY command in the correct format.

System programmer response: No action is needed.

Module: LU62MDFY
Procedure Name: MODIFY

EZA6075E Invalid MODIFY sub-command

Explanation: A MODIFY command was entered for the SNALINK LU6.2 address space from an operator console, but the subcommand specified was not recognized by the SNALINK LU6.2 address space. The command is ignored.

System action: Processing continues.

Operator response: Enter the MODIFY command in the correct format.

System programmer response: No action is needed.

Module: LU62MDFY
Procedure Name: MODIFY
EZA6076W DROP: No Current Connection to IP Address address

Explanation: A DROP subcommand, which included the indicated IP address in the specified address range, was entered from an operator console (using the MODIFY console command), but there was no current connection to that destination. The rest of the connections in the address range are closed.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: LU62MDFY

Procedure Name: DROPCONN

EZA6077W RESTART: Connection to IP Address address Already Established

Explanation: A RESTART subcommand, which included the indicated IP address in the specified address range, was entered from an operator console (using the MODIFY console command), but there was already a connection established with that destination. Connections are established with the rest of the destinations in the address range.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: LU62MDFY

Procedure Name: STRTCONN

EZA6078E DROP: IP/LU/ALL Expected after DROP

Explanation: The syntax of a DROP subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

System action: Processing continues.

Operator response: Enter the command using the correct syntax.

System programmer response: No action is needed.

Module: LU62MDFY

Procedure Name: DROP

EZA6079E command: ‘=&’ Expected after IP

Explanation: The syntax of the indicated subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

System action: Processing continues.

Operator response: Enter the command using the correct syntax.

System programmer response: No action is needed.

Module: LU62MDFY

Procedure Name: DROP, LIST, RESTART

EZA6080E command: IP Address Expected after ‘IP=’

Explanation: The syntax of the indicated subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

System action: Processing continues.

Operator response: Enter the command using the correct syntax.
EZA6081E  •  EZA6084E

System programmer response:  No action is needed.
Module:  LU62MDFY
Procedure Name:  DROP, LIST, RESTART

---

EZA6081E  command:  Invalid Format for a fully qualified IP Address

Explanation:  The IP address contained in the indicated subcommand entered from an operator console (using the MODIFY console command) was not in the required format. The IP address should be in the correct dotted-decimal format for a network node (for example, 192.9.207.100). The command is ignored.

System action:  Processing continues.
Operator response:  Enter the command using the correct syntax.
System programmer response:  No action is needed.
Module:  LU62MDFY
Procedure Name:  DROP, LIST, RESTART

---

EZA6082E  command:  IP Address Not Defined in Configuration Dataset

Explanation:  The IP address contained in the indicated subcommand entered from an operator console (using the MODIFY console command) is not defined as a destination address in the SNALINK LU6.2 configuration data set. The command is ignored.

System action:  Processing continues.
Operator response:  Enter the command using a valid IP address.
System programmer response:  No action is needed.
Module:  LU62MDFY
Procedure Name:  DROP, LIST, RESTART

---

EZA6083E  command:  '=' Expected after LU

Explanation:  The syntax of the indicated subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

System action:  Processing continues.
Operator response:  Enter the command using the correct syntax.
System programmer response:  No action is needed.
Module:  LU62MDFY
Procedure Name:  DROP, LIST, RESTART

---

EZA6084E  command:  LU Name Expected after ‘LU=’

Explanation:  The syntax of the indicated subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

System action:  Processing continues.
Operator response:  Enter the command using the correct syntax.
System programmer response:  No action is needed.
Module:  LU62MDFY
Procedure Name:  DROP, LIST, RESTART
EZA6085E command: Invalid Format for LU Name

Explanation: The LU name contained in the indicated subcommand entered from an operator console (using the MODIFY console command) was longer than 8 characters. The command is ignored.

System action: Processing continues.

Operator response: Enter the command using the correct syntax.

System programmer response: No action is needed.

Module: LU62MDFY

Procedure Name: DROP, LIST, RESTART

EZA6086E command: LU Name Not Defined in Configuration Dataset

Explanation: The LU name contained in the indicated subcommand entered from an operator console (using the MODIFY console command) is not defined in the SNALINK LU6.2 configuration data set. The command is ignored.

System action: Processing continues.

Operator response: Enter the command using a valid LU name.

System programmer response: No action is needed.

Module: LU62MDFY

Procedure Name: DROP, LIST, RESTART

EZA6087E RESTART: Invalid Range Specified - IP,LU,INIT or ALL expected

Explanation: The syntax of a RESTART subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

System action: Processing continues.

Operator response: Enter the command using the correct syntax.

System programmer response: No action is needed.

Module: LU62MDFY

Procedure Name: RESTART

EZA6088E LIST: Invalid Range Specified - IP,LU,ACTIVE or ALL expected

Explanation: The syntax of a LIST subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

System action: Processing continues.

Operator response: Enter the command using the correct syntax.

System programmer response: No action is needed.

Module: LU62MDFY

Procedure Name: LIST

EZA6089E TRACE: ON/OFF/DETAIL or ALL/IP expected after TRACE

Explanation: The syntax of a TRACE subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.

System action: Processing continues.

Operator response: Enter the command using the correct syntax.

System programmer response: No action is needed.

Module: LU62MDFY
Procedure Name: TRACE

EZA6090E   TRACE: ALL/IP expected after ON/OFF/DETAIL
Explanation: The syntax of a TRACE subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.
System action: Processing continues.
Operator response: Enter the command using the correct syntax.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: TRACE

EZA6091E   TRACE: '=' expected after IP
Explanation: The syntax of a TRACE subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.
System action: Processing continues.
Operator response: Enter the command using the correct syntax.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: TRACE

EZA6092E   TRACE: IP address expected after '='
Explanation: The syntax of a TRACE subcommand entered from an operator console (using the MODIFY console command) was incorrect. The command is ignored.
System action: Processing continues.
Operator response: Enter the command using the correct syntax.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: TRACE

EZA6093E   TRACE: Invalid format for fully qualified IP address
Explanation: The IP address contained in a TRACE subcommand entered from an operator console (using the MODIFY console command) was not in the required format. The IP address should be in the correct dotted-decimal format for a network node (for example, 192.9.207.100). The command is ignored.
System action: Processing continues.
Operator response: Enter the command using the correct syntax.
System programmer response: No action is needed.
Module: LU62MDFY
Procedure Name: TRACE

EZA6094E   TRACE: IP address not defined in Configuration dataset
Explanation: The IP address contained in a TRACE subcommand entered from an operator console (using the MODIFY console command) is not defined as a destination IP address in the SNALINK LU6.2 configuration data set. The command is ignored.
System action: Processing continues.
Operator response: Enter the command using a valid IP address.

System programmer response: No action is needed.

Module: LU62MDFY

Procedure Name: TRACE

EZA6095W  

RESTART: No connections to start

Explanation: A RESTART subcommand, with a range specification of INIT, was entered from an operator console (using the MODIFY console command), but there are no destinations defined with the INIT option in the configuration data set. The command is ignored.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: LU62MDFY

Procedure Name: RESTART

EZA6114E  

LU62CFG: Line number Col column: Invalid Statement Type

Explanation: An incorrect statement type was encountered in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Remove or correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1

EZA6115E  

LU62CFG: Line number Col column: VTAM statement - Application Id expected

Explanation: The application ID was omitted from a VTAM statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1

EZA6116E  

LU62CFG: Line number Col column: VTAM statement - Invalid format for Application Id

Explanation: The application ID contained in a VTAM statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is longer than 8 characters. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT
Procedure Name: RLCFG#P1

**EZA6117E**  LU62CFG: Line number Col column: VTAM statement - Invalid format for Password

**Explanation:** The password contained in a VTAM statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is longer than 8 characters. The error was detected at the indicated line in the indicated column.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT

**Procedure Name:** RLCFG#P1

**EZA6118E**  LU62CFG: Line number Col column: LINK statement - TCP/IP Link Name expected

**Explanation:** The TCPIP link name field of a LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is missing. The error was detected at the indicated line in the indicated column.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT

**Procedure Name:** RLCFG#P2

**EZA6119E**  LU62CFG: Line number Col column: LINK statement - Invalid TCP/IP Link Name

**Explanation:** The TCPIP link name contained in a LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is longer than 8 characters. The error was detected at the indicated line in the indicated column.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT

**Procedure Name:** RLCFG#P2

**EZA6120E**  LU62CFG: Line number Col column: LINK statement - Link Name already defined

**Explanation:** The TCPIP link name field in a LINK statement in the SNALINK LU6.2 configuration data set has already been defined in a previous LINK statement. The error was detected at the indicated line in the indicated column.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT

**Procedure Name:** RLCFG#P2
**EZA6121E**  
**LU62CFG: Line number Col column: LINK statement - Log Mode Table Name expected**

**Explanation:** The Log Mode Table field of a LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is missing. The error was detected at the indicated line in the indicated column.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT  
**Procedure Name:** RLCFG#P2

---

**EZA6122E**  
**LU62CFG: Line number Col column: LINK statement - Invalid Log Mode Table Name**

**Explanation:** The Log Mode Table name contained in a LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is longer than 8 characters. The error was detected at the indicated line in the indicated column.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT  
**Procedure Name:** RLCFG#P2

---

**EZA6123E**  
**LU62CFG: Line number Col column: LINK statement - Invalid Idle Timeout value**

**Explanation:** The Idle Timeout value contained in a LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is not a valid integer in the range 0 to $2^{31} - 1$. The error was detected at the indicated line in the indicated column.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT  
**Procedure Name:** RLCFG#P2

---

**EZA6124E**  
**LU62CFG: Line number Col column: DEST statement - Destination IP Address expected**

**Explanation:** The Destination IP address field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is missing. The error was detected at the indicated line in the indicated column.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT  
**Procedure Name:** RLCFG#P2
EZA6125E  LU62CFG: Line number Col column: DEST statement - Invalid format for a fully qualified IP address

Explanation: The Destination IP address field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is not in the required format. The IP address should be in the correct dotted-decimal format for a network node (for example, 192.9.207.100). The error was detected at the indicated line of the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

---

EZA6126E  LU62CFG: Line number Col column: DEST statement - Duplicate IP address detected

Explanation: The Destination IP address field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG has already been defined in a previous DEST statement. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct or remove the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

---

EZA6127E  LU62CFG: Line number Col column: DEST statement - Send LU Name expected

Explanation: The Send LU Name field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is missing. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

---

EZA6128E  LU62CFG: Line number Col column: DEST statement - Invalid Send LU Name

Explanation: The Send LU Name field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is longer than 8 characters. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2
EZA6129E LU62CFG: Line number Col column: DEST statement - Receive LU Name or ‘=’ expected

Explanation: The Receive LU Name field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is missing. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

EZA6130E LU62CFG: Line number Col column: DEST statement - Invalid Receive LU Name

Explanation: The Receive LU Name field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is longer than 8 characters. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

EZA6131E LU62CFG: Line number Col column: DEST statement - Duplicate LU Name Detected

Explanation: The Send or Receive LU Name field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG has already been defined on a previous DEST statement. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

EZA6132E LU62CFG: Line number Col column: DEST statement - LU Name cannot equal the Application Id on the VTAM statement

Explanation: The Send or Receive LU Name field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is the same as that defined on the VTAM statement. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2
Explanation: The Connection Start Type field of a DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG contains an incorrect value. The Connection Start Type value should be either DATA, INIT, or blank. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

Explanation: The Maximum Packet Size field of a BUFFERS statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is missing. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1

Explanation: The Maximum Packet Size value contained in a BUFFERS statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is not a valid integer in the range 20 - 32758. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1

Explanation: The Additional Send Buffers value contained in a BUFFERS statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is not a valid integer in the range 0 to 2³¹-1. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1
BUFFERS statement - Invalid Send Queue Limit value

Explanation: The Send Queue Limit value contained in a BUFFERS statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is not a valid integer in the range 0 to $2^{31}−1$. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1

---

TRACE statement - ON/OFF/DETAIL or ALL/IP expected after TRACE

Explanation: The syntax of a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is incorrect. The error was detected at the indicated line.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

---

TRACE statement - ALL/IP expected after ON/OFF

Explanation: The syntax of a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is incorrect. The error was detected at the indicated line.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2

---

TRACE statement - ‘=’ expected after IP

Explanation: The syntax of a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is incorrect. The error was detected at the indicated line.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P2
EZA6141E LU62CFG: Line number: TRACE statement - IP address expected after ‘=’

**Explanation:** The syntax of a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is incorrect. The error was detected at the indicated line.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT

**Procedure Name:** RLCFG#P2

---

EZA6142E LU62CFG: Line number: TRACE statement - Invalid format for a fully qualified IP address

**Explanation:** The IP address field of a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG is not in the required format. The IP address should be in the correct dotted-decimal format for a network node (for example, 192.9.207.100). The error was detected at the indicated line.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT

**Procedure Name:** RLCFG#P2

---

EZA6143E LU62CFG: Line number: TRACE statement - IP address not defined

**Explanation:** The IP address specified in a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG was not previously defined in a DEST statement. The error was detected at the indicated line.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT

**Procedure Name:** RLCFG#P2

---

EZA6144E LU62CFG: Line number: TRACE statement - Extraneous trailing data on line

**Explanation:** Extra trailing data was found on a line containing a TRACE statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line.

**System action:** The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

**Operator response:** No action is needed.

**System programmer response:** Correct the line in error, and restart the SNALINK LU6.2 address space.

**Module:** LU62INIT

**Procedure Name:** RLCFG#P2
EZA6145E  LU62CFG: Line *number*: Only one VTAM statement may be specified

Explanation: More than one VTAM statement was found in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Remove one of the VTAM statements, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1

EZA6146E  LU62CFG: VTAM statement missing

Explanation: A VTAM statement was not found in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Add a VTAM statement to the configuration data set, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1

EZA6147E  LU62CFG: Line *number*: Only one BUFFERS statement may be specified

Explanation: More than one BUFFERS statement was found in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Remove one of the BUFFERS statements, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1

EZA6148E  LU62CFG: BUFFERS statement missing

Explanation: A BUFFERS statement was not found in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Add a BUFFERS statement to the configuration data set, and restart the SNALINK LU6.2 address space.

Module: LU62INIT

Procedure Name: RLCFG#P1
LU62CFG: No LINK statements defined

Explanation: No LINK statements were found in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Add a LINK statement for each IUCV connection required between the SNALINK LU6.2 address space and the TCPIP address space, and restart the SNALINK LU6.2 address space.

Each of these connections should also be defined in the hlq.PROFILE.TCPIP data set using DEVICE and LINK statements. If DEVICE and LINK statements are added to the hlq.PROFILE.TCPIP data set, restart the TCPIP address space.

Module: LU62INIT
Procedure Name: RLCFG#P1

LU62CFG: No DEST statements defined

Explanation: No DEST statements were found in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Add a DEST statement for each destination IP address in the network directly connected to the SNALINK LU6.2 address space.

Module: LU62INIT
Procedure Name: RLCFG#P1

LU62CFG: Line number: No DEST statements defined for previous LINK statement

Explanation: No DEST statements were found for the previous LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Either add a DEST statement following the previous LINK statement, or delete the previous LINK statement; then restart the SNALINK LU6.2 address space.

Module: LU62INIT
Procedure Name: RLCFG#P1

LU62CFG: Line number: VTAM statement must appear before first LINK statement

Explanation: No VTAM statement was found before the first LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the configuration data set, and restart the SNALINK LU6.2 address space.

Module: LU62INIT
Procedure Name: RLCFG#P1
EZA6153E LU62CFG: Line number: A DEST statement can only appear after a LINK statement

Explanation: No LINK statement was found before the first DEST statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the configuration data set, and restart the SNALINK LU6.2 address space.

Module: LU62INIT
Procedure Name: RLCFG#P1

EZA6154E LU62CFG: No DEST statements defined for last LINK statement

Explanation: No DEST statements were found for the last LINK statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Either add a DEST statement following the last LINK statement or delete the last LINK statement; then restart the SNALINK LU6.2 address space.

Module: LU62INIT
Procedure Name: RLCFG#P1

EZA6155E LU62CFG: Line number Col column: Extraneous trailing data on line

Explanation: Extra trailing data was found on a line following a statement in the SNALINK LU6.2 configuration data set defined by the ddname LU62CFG. The error was detected at the indicated line in the indicated column.

System action: The SNALINK LU6.2 address space shuts down immediately after the current pass of the data set is completed.

Operator response: No action is needed.

System programmer response: Correct the line in error, and restart the SNALINK LU6.2 address space.

Module: LU62INIT
Procedure Name: RLCFG#P1, RLCFG#P2

EZA6170W Unable to setup connection entry.

Explanation: An error occurred during the creation of a Connection Table entry for a new connection. The cause is either insufficient storage available to create the buffers associated with the entry, or a program logic error. Preceding messages in the SYSPRINT data set indicate the exact nature of the error.

System action: Processing continues; the connection attempt is abnormally ended.

Operator response: No action is needed.

System programmer response: If preceding messages indicate insufficient storage, increase the REGION size parameter for the SNALINK LU6.2 address space, and restart the address space.

Module: LU62VTAM
Procedure Name: ALOCCONN
EZA6171W  Unable to start connection for address; connection entry setup failed

Explanation: This message is output on the console when a connection establishment that was initiated using the MODIFY command has been unsuccessful because of an error in creating the corresponding Connection Table entry. This error can occur when either there is insufficient storage available to create the buffers associated with the entry or a program logic error has occurred; preceding messages in the SYSPRINT data set indicate the exact nature of the error.

System action: Processing continues; the connection attempt is abnormally ended.

Operator response: No action is needed.

System programmer response: If preceding messages indicate insufficient storage, increase the REGION size parameter for the SNALINK LU6.2 address space, and restart the address space.

Module: LU62VTAM

Procedure Name: MAKECONN

EZA6172E  Sequential search length too large length

Explanation: The indicated search field length passed to the sequential search routine was longer than 255.

System action: Processing continues as though the required entry was not found. Depending on the type of entry being located, this can lead to subsequent errors.

Operator response: No action is needed.

System programmer response: Probable program logic error. Contact the IBM Software Support Center.

Module: LU62MAIN

Procedure Name: SEQSERCH

EZA6173E  Binary search length too large length

Explanation: The indicated search field length passed to the binary search routine was longer than 255.

System action: Processing continues as though the required entry was not found. Depending on the type of entry being located, this can lead to subsequent errors.

Operator response: No action is needed.

System programmer response: Probable program logic error. Contact the IBM Software Support Center.

Module: LU62MAIN

Procedure Name: BINSERCH

EZA6174W  Unable to setup DLC table entry for link; entry already active for path

Explanation: An attempt to establish a DLC connection for the indicated TCPIP link has been unsuccessful because the corresponding DLC table entry is already marked as active.

System action: Processing continues; the DLC connection attempt is abnormally ended.

Operator response: No action is needed.

System programmer response: Probable program logic error. Contact the IBM Software Support Center. The data structures can be reinitialized by restarting the SNALINK LU6.2 address space.

Module: LU62IUCV

Procedure Name: SETUPIUC
EZA6175E  Unable to setup DLC table entry; free memory exhausted, RC=rc

Explanation:  An attempt to establish a DLC connection has been unsuccessful because of an error in a GETMAIN macro invocation.

System action:  Processing continues; the DLC connection attempt is abnormally ended.

Operator response:  No action is needed.

System programmer response:  Check the indicated GETMAIN return code value to determine the cause of the error. If insufficient storage caused the error, increase the REGION size parameter for the SNALINK LU6.2 address space, and restart the address space.

Module:  LU62IUCV

Procedure Name:  SETUPIUC

EZA6176W  Unable to clear DLC table entry; already inactive for path

Explanation:  An attempt to close a DLC connection for the indicated TCPIP link has been unsuccessful because the corresponding DLC table entry is already marked as inactive.

System action:  Processing continues; the DLC connection is assumed to be correctly closed.

Operator response:  No action is needed.

System programmer response:  Contact the IBM Software Support Center.

Module:  LU62IUCV

Procedure Name:  CLEARIUC

EZA6177E  Unable to clear DLC table entry for path; can't free memory RC=rc

Explanation:  An attempt to close a DLC connection has been unsuccessful because of an error in a FREEMAIN macro invocation. The indicated return code is the return code for the unsuccessful FREEMAIN macro invocation.

System action:  Processing continues; the DLC connection is assumed to be correctly closed.

Operator response:  No action is needed.

System programmer response:  Probable program logic error. Contact the IBM Software Support Center.

Module:  LU62IUCV

Procedure Name:  CLEARIUC

EZA6178W  The connection entry passed to SETUPCON is already in use

Explanation:  An attempt to establish a connection with a destination node has been unsuccessful because of the corresponding Connection Table entry already being marked as active.

System action:  Processing continues; the connection establishment attempt is abnormally ended.

Operator response:  No action is needed.

System programmer response:  Probable program logic error. Contact the IBM Software Support Center.

Module:  LU62VTAM

Procedure Name:  SETUPCON

EZA6179E  Getmain error RC=rc

Explanation:  An attempt to establish a connection with a destination node has been unsuccessful because of an error in a GETMAIN macro invocation. The indicated return code is the return code value from the unsuccessful GETMAIN macro invocation.

System action:  Processing continues; the connection establishment attempt is abnormally ended.

Operator response:  No action is needed.
System programmer response: Check the indicated GETMAIN return code value to determine the cause of the error. If insufficient storage caused the error, increase the REGION size parameter for the SNALINK LU6.2 address space, and restart the address space.

Module: LU62VTAM
Procedure Name: SETUPCON

EZA6180E  GENCB error RC= rc

Explanation: An attempt to establish a connection with a destination node has been unsuccessful because the VTAM RPL could not be generated in the Connection Table entry. The indicated return code is the return code value from the unsuccessful GENCB macro invocation.

System action: Processing continues; the connection establishment attempt is abnormally ended.

Operator response: No action is needed.

System programmer response: Check the indicated GENCB return code value to determine the cause of the error, and correct the problem if possible.

Module: LU62VTAM
Procedure Name: SETUPCON

EZA6181W  The connection entry passed to CLEARCON is already inactive

Explanation: The Connection Table entry address, passed to the routine responsible for clearing the entry and freeing the memory used by associated buffers, is already marked as inactive.

System action: Processing continues; the connection is assumed to be correctly closed.

Operator response: No action is needed.

System programmer response: Probable program logic error. Contact the IBM Software Support Center.

Module: LU62VTAM
Procedure Name: CLEARCON

EZA6182E  Freemain error; RC= rc

Explanation: An attempt to close a connection with a destination node has been unsuccessful because of an error in a FREEMAIN macro invocation. The indicated return code is the return code for the unsuccessful FREEMAIN macro invocation.

System action: Processing continues; the connection is assumed to be correctly closed.

Operator response: No action is needed.

System programmer response: Probable program logic error. Contact the IBM Software Support Center.

Module: LU62VTAM
Procedure Name: CLEARCON

EZA6183E  The IP address address from the connection table is undefined

Explanation: An attempt to close a connection with a destination node has been unsuccessful because of a probable program logic error or internal data structure corruption.

System action: Processing continues; the connection is assumed to be correctly closed.

Operator response: No action is needed.

System programmer response: Probable program logic error. Contact the IBM Software Support Center.

Module: LU62VTAM
Procedure Name: KILLCONN
EZA6184E  Invalid connection entry address passed to ADD INACTIVITY
Explanation: An error occurred while adding a connection to the timeout inactivity list; the connection entry address did not reference a valid Connection Table entry.
System action: The SNALINK LU6.2 address space issues a user abend immediately.
Operator response: No action is needed.
System programmer response: Probable program logic error. Contact the IBM Software Support Center.
Module: LU62MAIN
Procedure Name: ADDINACT

EZA6185E  Invalid connection entry address passed to SUB INACTIVITY
Explanation: An error occurred while removing a connection from the timeout inactivity list; the connection entry address did not reference a valid Connection Table entry.
System action: The SNALINK LU6.2 address space issues a user abend immediately.
Operator response: No action is needed.
System programmer response: Probable program logic error. Contact the IBM Software Support Center.
Module: LU62MAIN
Procedure Name: SUBINACT

EZA6186E  The inactivity queue has lost the address connection
Explanation: The Connection Table entry for the indicated IP address has been lost from the timeout inactivity list.
System action: The SNALINK LU6.2 address space issues a user abend immediately.
Operator response: No action is needed.
System programmer response: Contact the IBM Software Support Center.
Module: LU62MAIN
Procedure Name: SUBINACT

EZA6187E  Unable to match RPL address to send or receive for address
Explanation: The RPL address returned from VTAM for a conversation allocation request did not match either the send or receive RPL address.
System action: The SNALINK LU6.2 address space issues a user abend immediately.
Operator response: No action is needed.
System programmer response: Probable program logic error or data corruption in either VTAM or SNALINK LU6.2. Contact the IBM Software Support Center.
Module: LU62VTAM
Procedure Name: VTAMALOC

EZA6188W  The connection entry passed to KILLCONN is already inactive
Explanation: An attempt to close a connection with a destination node has been unsuccessful because of the corresponding Connection Table entry already being marked as inactive.
System action: Processing continues; the connection is assumed to be correctly closed.
Operator response: No action is needed.
System programmer response: Probable program logic error. Contact the IBM Software Support Center.
Module: LU62VTAM
**EZA6189W • EZA6193W**

**Procedure Name:** KILLCONN

---

**EZA6189W   Unable to honor connection request for address; connection entry setup failed**

**Explanation:** An error was encountered during the creation of a Connection Table entry for a new connection that was initiated from the destination node associated with the indicated IP address. This error can occur when either there is not enough storage to create the buffers associated with the entry or a program logic error has occurred. The preceding messages in the SYSPRINT data set indicate the exact nature of the error.

**System action:** Processing continues; the connection attempt is abnormally ended.

**Operator response:** No action is needed.

**System programmer response:** If preceding messages indicate insufficient storage, increase the REGION size parameter for the SNALINK LU6.2 address space, and restart the address space.

**Module:** LU62VTAM

**Procedure Name:** VTAMATTN

---

**EZA6190W   Program Parameters Ignored**

**Explanation:** Program parameters were passed to the SNALINK LU6.2 address space, but no parameters are processed by the SNALINK LU6.2 address space. The parameters are ignored.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Remove the program parameters from the invocation JCL.

**Module:** LU62INIT

**Procedure Name:** L62ENTRY

---

**EZA6192W   CIB for START Command not freed - MODIFY Commands may not be available**

**Explanation:** An error occurred during the initialization of MODIFY command handling. MODIFY commands might not be available.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Probable program error. Contact the IBM Software Support Center.

**Module:** LU62MAIN

**Procedure Name:** MAINPROC

---

**EZA6193W   Unrecognized Console Command - Command Ignored**

**Explanation:** An unrecognized console command was passed to the SNALINK LU6.2 address space; only START, MODIFY, STOP, and PURGE commands are recognized. The command is ignored.

**System action:** Processing continues.

**Operator response:** Enter the required command using the correct format.

**System programmer response:** No action is needed.

**Module:** LU62MAIN

**Procedure Name:** MAINPROC
EZA6204W  Datagram for address discarded, queue limit exceeded

Explanation: The length of the send queue, which holds IP datagrams waiting to be passed to VTAM, has exceeded the maximum length specified in the BUFFERS statement in the SNALINK LU6.2 configuration data set. The indicated address is the destination IP address of the datagram triggering this message. The datagram is discarded.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Consider increasing the send queue limit or maximum packet size value on the BUFFERS statement. If possible, tune the VTAM connection with the destination node to provide better throughput.

Module: LU62IUCV

Procedure Name: IUCVPMES

EZA6205W  Datagram for address discarded, no free memory for connection entry

Explanation: An IP datagram for the indicated IP address has initiated a connection attempt with the corresponding destination node, but the connection attempt was unsuccessful because of insufficient available storage to allocate the required buffers. The datagram is discarded.

System action: Processing continues; the connection attempt is abnormally ended.

Operator response: No action is needed.

System programmer response: Increase the value of the REGION parameter for the SNALINK LU6.2 address space, and restart the address space.

Module: LU62IUCV

Procedure Name: IUCVPMES

EZA6206W  Datagram for address discarded, VTAM send buffer pool exhausted

Explanation: The buffer pool used to hold IP datagrams waiting to be passed to VTAM has been exhausted. The datagram is discarded.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: Consider increasing the number of additional send buffers and maximum packet size values in the BUFFERS statement. If possible, tune the VTAM connections to provide better throughput.

Module: LU62IUCV

Procedure Name: IUCVPMES

EZA6207W  VTAM send queue limit exceeded for address

Explanation: The length of the send queue, which holds IP datagrams waiting to be passed to VTAM, has exceeded the maximum length specified in the BUFFERS statement in the SNALINK LU6.2 configuration data set. The indicated address is the destination IP address of the datagram triggering this message. Message EZA6204W is also written to the SYSPRINT data set, and the datagram is discarded.

System action: Processing continues.

Operator response: No action is needed.

System programmer response: See message EZA6204W.

Module: LU62VTAM

Procedure Name: ADDVTSND
**EZA6208W**  Datagram for address discarded, link requested, link defined

**Explanation:** An IP datagram for the indicated IP address was received from TCPIP using the indicated link. However, in the SNALINK LU6.2 configuration data set, the first indicated link has been defined to use the second indicated link. The datagram is discarded.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Correct the hlq.PROFILE.TCPIP data set or the SNALINK LU6.2 configuration data set, and restart the address spaces.

**Module:** LU62IUCV

**Procedure Name:** IUCVPMES

---

**EZA6209W**  Datagram for address discarded, link link closed

**Explanation:** An IP datagram has been received from the indicated IP address, but the associated IUCV connection on which the datagram is to be passed to TCPIP is not currently open. TCPIP is responsible for initiating the establishment of IUCV connections and will try to establish the connections again every 30 seconds. The datagram is discarded.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Check that the TCPIP address space is active and that the IUCV connection to the SNALINK LU6.2 address space has been successfully started.

**Module:** LU62VTAM

**Procedure Name:** VTAMRECV

---

**EZA6210W**  Datagram for address discarded, IP address not defined

**Explanation:** An IP datagram with the indicated first-hop address was received from TCPIP (using IUCV), but the address is not defined in the SNALINK LU6.2 configuration data set. The datagram is discarded.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Correct the SNALINK LU6.2 configuration data set, and restart the address space.

**Module:** LU62IUCV

**Procedure Name:** IUCVPMES

---

**EZA6211W**  Message from link discarded, receive buffer too small

**Explanation:** A message sent by the TCPIP address space using IUCV is too large to be received into the IUCV receive buffer. The indicated link name is the TCPIP link name on which the message was sent. The datagrams in the message are discarded.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Probable program error. Contact the IBM Software Support Center.

**Module:** LU62IUCV

**Procedure Name:** DOIURECV
**EZA6212W** Datagram for *address* discarded, Send datagram exceeded the MAX packet size

**Explanation:** An IP datagram received from TCPIP (using IUCV) is larger than the maximum packet size value defined in the BUFFERS statement in the SNALINK LU6.2 configuration data set. This maximum packet size value should be set to the same value as that defined for the corresponding link in the hlq.PROFILE.TCPIP data set. The datagram is discarded.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Correct the hlq.PROFILE.TCPIP data set or the SNALINK LU6.2 configuration data set, and restart the address spaces.

**Module:** LU62IUCV

**Procedure Name:** IUCVMES

---

**EZA6213W** Datagram from *address* discarded, Receive datagram exceeded the MAX packet size

**Explanation:** An IP datagram sent from a destination node (using VTAM) is larger than the maximum packet size value defined in the BUFFERS statement in the SNALINK LU6.2 configuration data set. This maximum packet size value should be set to the same value on all nodes in the network directly connected to the SNALINK LU6.2 address space. The datagram is received in sections and then discarded.

**System action:** Processing continues.

**Operator response:** No action is needed.

**System programmer response:** Check that the maximum packet size value is set to the same value on all nodes in the network directly connected to the SNALINK LU6.2 address space.

**Module:** LU62VTAM

**Procedure Name:** VTAMRECV

---

**EZA6219E** IUCV Initialization Failed, VMCF Subsystem not located

**Explanation:** While trying to determine the Program Call number for use by the IUCV interface, the JES Subsystem Communication Vector Table (SSCT) entry for VMCF could not be located.

**System action:** The SNALINK LU6.2 address space shuts down immediately.

**Operator response:** No action is needed.

**System programmer response:** Verify that the VMCF subsystem is active. See Step 3: Configure VMCF and TNF in z/OS Communications Server: IP Configuration Guide for more information about starting VMCF and TNF. Check for previous operator messages that might indicate why VMCF failed to initialize.

**Module:** LU62INIT

**Procedure Name:** GETIPC

---

**EZA6220S** Unable to start connection for *address*; no free connection entries

**Explanation:** An attempt to establish a connection with the destination node associated with the indicated IP address failed because there were no free Connection Table entries. This indicates a program logic error or internal data corruption has occurred because there should have been sufficient entries allocated during initialization of the address space.

**System action:** The SNALINK LU6.2 address space issues a user abend immediately.

**Operator response:** No action is needed.

**System programmer response:** Contact the IBM Software Support Center.

**Module:** LU62VTAM

**Procedure Name:** ALOCCONN
EZA6221S  Invalid exit type found on VTAM event queue, Type= type

Explanation: The indicated exit type was found on the VTAM event queue. The valid exit types are SEND, RECV, ATTN, ALOC, and DALC.

System action: The SNALINK LU6.2 address space issues a user abend immediately.

Operator response: No action is needed.

System programmer response: Contact the IBM Software Support Center.

Module: LU62VTAM

Procedure Name: PROCVTAM

---

EZA6222S  No connection entry found in RPL record

Explanation: All VTAM requests are made with the address of the relevant Connection Table entry in the word immediately preceding the RPL address defined to VTAM. This address has somehow been corrupted.

System action: The SNALINK LU6.2 address space issues a user abend immediately.

Operator response: No action is needed.

System programmer response: Contact the IBM Software Support Center.

Module: LU62VTAM

Procedure Name: VTAMALOC, VTAMSEND, VTAMRECV, VTAMDALC

---

EZA6223S  Unmatched RPL address for address in DEALOC

Explanation: The RPL address returned from a VTAM deallocate request does not match either the Send or Receive RPL address, which indicates that the RPL has probably been corrupted.

System action: The SNALINK LU6.2 address space issues a user abend immediately.

Operator response: No action is needed.

System programmer response: Contact the IBM Software Support Center.

Module: LU62VTAM

Procedure Name: VTAMDALC

---

EZA6224S  VTAM send completed, but send queue empty for address

Explanation: The VTAM send queue was empty when it was expected to contain an entry, indicating that the queue has probably been corrupted.

System action: The SNALINK LU6.2 address space issues a user abend immediately.

Operator response: No action is needed.

System programmer response: Contact the IBM Software Support Center.

Module: LU62VTAM

Procedure Name: VTAMSEND

---

EZA6225S  ATTN Exit event type invalid. Type= type

Explanation: The indicated ATTN exit type was detected. The valid exit types are FMH5, CNOS, and LOSS.

System action: The SNALINK LU6.2 address space issues a user abend immediately.

Operator response: No action is needed.

System programmer response: Contact the IBM Software Support Center.

Module: LU62VTAM
EZA6226S  Negative send queue count for *address*

Explanation: A counter, which contains the number of entries in the VTAM send, contains a negative number, indicating a probable program logic error.

System action: The SNALINK LU6.2 address space issues a user abend immediately.
Operator response: No action is needed.
System programmer response: Contact the IBM Software Support Center.
Module: LU62VTAM
Procedure Name: SUBVTSND

EZA6227S  Bad RPL specified on *command*

Explanation: The return codes from the indicated VTAM APPC command show that the RPL specified was not valid. Messages EZA6029E to EZA6032E are written to the SYSPRINT data set to provide further details of the error.

System action: The SNALINK LU6.2 address space issues a user abend.
Operator response: No action is needed.
System programmer response: Contact the IBM Software Support Center.
Module: LU62VTAM
Procedure Name: ANALYZE

EZA6228S  Bad RPLX specified on *command*

Explanation: The return codes from the indicated VTAM APPC command show that the extended RPL specified was not valid. Messages EZA6029E to EZA6032E are written to the SYSPRINT data set to provide further details of the error.

System action: The SNALINK LU6.2 address space issues a user abend.
Operator response: No action is needed.
System programmer response: Contact the IBM Software Support Center.
Module: LU62VTAM
Procedure Name: ANALYZE

EZA6229S  *command* received a policing error

Explanation: The return codes from the indicated VTAM APPC command indicate that a non-APPC command was issued on a APPC connection. Messages EZA6029E to EZA6032E are written to the SYSPRINT data set to provide further details of the error.

System action: The SNALINK LU6.2 address space issues a user abend.
Operator response: No action is needed.
System programmer response: Contact the IBM Software Support Center.
Module: LU62VTAM
Procedure Name: ANALYZE

EZA6230S  Pending message buffer pool exhausted

Explanation: The free pool for the pending message queue has been exhausted. This should never happen because sufficient entries are allocated during initialization, and a maximum of one entry can be used by each connection. This is a probable program logic error. A dump is produced if the ddname SYSUDUMP has been defined.
System action: The SNALINK LU6.2 address space abnormally ends.
Operator response: No action is needed.
System programmer response: Contact the IBM Software Support Center.
Module: LU62VTAM
Procedure Name: VTAMRECV

EZA6275I SNMP query engine running and awaiting queries...
Explanation: The SNMP query engine is running and it is available to handle queries.
System action: The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: sqeserv
Procedure Name: MAIN

EZA6276I There are available_FD’s Client connections possible
Explanation: The number of client connections possible is determined by subtracting the number of current connections from the maximum number of connections defined in the management information base (MIB).
System action: The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: sqeserv
Procedure Name: MAIN

EZA6277S more than trans_count transactions in a second
Explanation: The maximum number of transactions per second has been exceeded. This can be a sign that SQESERV is in a loop.
System action: The SNMP query engine exits.
Operator response: Tell the system programmer about the error.
System programmer response: Contact the IBM Software Support Center.
Module: sqeserv
Procedure Name: await_queries

EZA6278I await_queries : select
Explanation: The SQE server has attempted to issue a select function to determine if any queries were outstanding. Message EZA6279E is displayed.
System action: The SQE server ends.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQESERV
Procedure Name: await_queries
**EZA6279E** select failed in await_queries

**Explanation:** The SQE server encountered an error issuing a select function call to determine if any queries were outstanding.

**System action:** The SQESERV module ends.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** See [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com) for information about socket errors.

**Module:** SQESERV

**Procedure Name:** await_queries

---

**EZA6280E** accept_new_client: accept

**Explanation:** The SQE server encountered an error while trying to establish an accept for a TCP listen.

**System action:** SNMP query server continues processing.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** See [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com) for information about socket errors.

**Module:** SQESERV

**Procedure Name:** accept_new_client

---

**EZA6281E** mkNVlisten: socket

**Explanation:** The SQE server encountered an error while trying to establish a socket for a TCP listen.

**System action:** The SQESERV module ends.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** See [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com) for information about socket errors.

**Module:** SQESERV

**Procedure Name:** mkNVlisten

---

**EZA6282E** mkNVlisten: bind

**Explanation:** The SQE server encountered an error while trying to establish a bind for a TCP listen.

**System action:** The SQESERV module ends.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** See [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com) for information about socket errors.

**Module:** SQESERV

**Procedure Name:** mkNVlisten

---

**EZA6283E** mkNVlisten: socket(AF_IUCV)

**Explanation:** The SQE server encountered an error while trying to establish an IUCV socket for a TCP listen.

**System action:** The SQESERV module ends.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** See [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com) for information about socket errors.
Module: SQESERV
Procedure Name: mkNVlisten

EZA6285E  Can’t make UDP port - can’t send SNMP requests
Explanation: The SQE server could not make the SNMP UDP port.
System action: The SQESERV module ends.
Operator response: Tell the system programmer about the error.
System programmer response: This error message is preceded by a message indicating an error with either the socket or bind request.
Module: SQESERV
Procedure Name: create_ports

EZA6286W  Can’t make SNMP trap port - can’t receive traps
Explanation: The SQE server cannot make the SNMP trap port because of an unsuccessful socket call or bind.
System action: The SQESERV module ends.
Operator response: Check that another SQESERV program is not already running. Only one SQESERV program can use the SNMP trap port. If this is the only SQESERV program attempting to run, contact the system programmer.
System programmer response: Check that the user is allowed to use the reserved port by making the appropriate PORT entries in the hlq.PROFILE.TCPIP data set.
Module: SQESERV
Procedure Name: create_ports

EZA6287E  Can’t do TCP listen - can’t accept TCP clients
Explanation: The SQE server encountered an error attempting a TCP listen.
System action: The SQESERV module ends with exit code 1.
Operator response: Tell the system programmer about the error.
Module: SQESERV
Procedure Name: create_ports

EZA6288E  Can’t do IUCV listen - can’t accept IUCV clients
Explanation: The SQE server encountered an error attempting an IUCV listen.
System action: The SQESERV module ends.
Operator response: Tell the system programmer about the error.
Module: SQESERV
Procedure Name: create_ports
EZA6289W  Can’t make raw ICMP socket - can’t do PING

Explanation:  The SQE server encountered an error making the PING port. SNMP Ping requests are unsuccessful.

System action:  Processing continues without the raw socket.

Operator response:  Check that the user is permitted to use RAW sockets.

System programmer response:  If you are running on a system with the RACF program installed, check that the SNMPQE user ID is authorized to the RACF. See the EZARACF sample shipped in SEZAINST for sample RACF definitions.

Restart SNMPQE with debug level 4 to get detailed information about the problem. See the information about specifying SNMPQE parameters in z/OS Communications Server: IP Configuration Reference for more information about starting SNMPQE with debug level 4.

Module:  SQESERV

Procedure Name:  create_ports

EZA6290I  Accepted new client connection

Explanation:  The SQE server was able to establish a new client connection.

System action:  Processing continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  SQESERV

Procedure Name:  accept_new_client

EZA6292I  Received following NVquery packet.

Explanation:  The SQE server was able to receive a packet. Following this message will be a hexadecimal display of the packet.

System action:  Processing continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  SQESERV

Procedure Name:  getNVquery

EZA6293I  Terminated client connection.

Explanation:  The SQE server has ended a client connection.

System action:  The client connection is ended and the SNMP query engine continues.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  SQESERV

Procedure Name:  terminate_connection

EZA6294E  getSNMPresponse: recvfrom

Explanation:  The SQE server was unable to receive a response from an SNMP query.

System action:  Processing continues.

Operator response:  Tell the system programmer about the error.

System programmer response:  Verify that the SNMPD agent is available.
Module: SQESERV
Procedure Name: getSNMPresponse

EZA6295I  Received following SNMP_response packet

Explanation: The SQE server was able to receive a response from an SNMP query. The hexadecimal display of the packet will follow.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQESERV
Procedure Name: getSNMPresponse

EZA6297E  error code err_code : out of memory

Explanation: The SQE server was unable to get enough storage.

System action: Processing continues.
Operator response: Tell the system programmer about the error.
System programmer response: Increase the region size and restart the SNMP query engine.
Module: SQESERV, SQEQUEUE, SQEPNV, SQEMKREQ
Procedure Name: Various

EZA6298E  create_SNMP_TRAP_port : socket

Explanation: The SQE server was unable to establish a socket for an SNMP trap port.

System action: The SQESERV module ended.
Operator response: Tell the system programmer about the error.
System programmer response: Verify that the port for SNMPQE was defined correctly in the hlq.PROFILE.DATA data set. If the port was defined correctly see z/OS Communications Server: IP Programmer's Guide and Reference for information about socket errors.
Module: SQESERV
Procedure Name: create_SNMP_trap_port

EZA6299E  create_SNMP_TRAP_port : bind

Explanation: The SQE server was unable to bind a socket for an SNMP trap port.

System action: The SQESERV module ended.
Operator response: Tell the system programmer about the error.
Module: SQESERV
Procedure Name: create_SNMP_trap_port

EZA6300I  getSNMPtrap : recvform

Explanation: The SQE server was unable to receive an SNMP trap packet.

System action: Processing continues.
Operator response: Tell the system programmer about the error.

Module: SQESERV
Procedure Name: getSNMPtrap

EZA6301I  Received following SNMP_trap packet
Explanation: The SQE server was able to receive a trap packet for the SNMP query server. The hexadecimal display of the packet will follow.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQESERV
Procedure Name: getSNMPtrap

EZA6303E  recvPING: recvfrom
Explanation: The SQE server was unable to receive a SNMP ICMP packet.
System action: Processing continues.
Operator response: Tell the system programmer about the error.
Module: SQESERV
Procedure Name: create_SNMP_trap_port

EZA6304E  Error code err_code : received ICMP packet >= size bytes
Explanation: The SQE server was unable to receive an SNMP ICMP packet because the packet was too large. The largest packet size supported by the SQE server is 4096 bytes.
System action: Processing continues.
Operator response: Reissue the PING request with a smaller packet size.
System programmer response: No action is needed.
Module: SQESERV
Procedure Name: getSNMPresponse

EZA6305I  dumping packet of size bytes
Explanation: The SQE server will print a packet as hexadecimal data.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQESERV
Procedure Name: hex_dump
EZA6306W resolver not yet supported

Explanation: The SQE server found a Q_RESOLVER_RESPONSE request, which is not currently supported. The request is ignored.

System action: Processing continues with the next request.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEQUEUE
Procedure Name: queue_entry

EZA6307E queue_entry

Explanation: Either an SNMP, RESOLVER, PING, or an incorrect query was requested and was unsuccessful.

System action: Processing continues.
Operator response: Tell the system programmer about the error.
System programmer response: Determine the cause of the error by referring to the messages that follow.
Module: SQEQUEUE
Procedure Name: queue_entry

EZA6308I sending SNMP request to host

Explanation: The SQE query engine is sending a request to the host specified.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEQUEUE
Procedure Name: send_SNMP_request

EZA6309W ret_response: cant find q_ptr

Explanation: The SQE query engine has no more outstanding responses in the queue.

System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEQUEUE
Procedure Name: ret_response

EZA6310W fd fd not ready for writing for timeout seconds

Explanation: The SQE query engine timed out while trying to write a response to the connection.

System action: The connection is closed.
Operator response: Reestablish the connection.
System programmer response: Verify that the SNMPD client is available.
Module: SQEQUEUE
Procedure Name: write_reply
EZA6312W  Dropping packet for client on fd=fd
Explanation: The SQE query engine could not write a response to the connection.
System action: Connection is closed.
Operator response: Contact the system programmer.
System programmer response: Determine if the agent is available, then reestablish the connection.
Module: SQEQUEUE
Procedure Name: ret_response

EZA6313W  Ignored write_reply for unexpected fd fd
Explanation: The SQE query engine could not write a response to the connection.
System action: Connection is closed.
Operator response: Contact system programmer.
System programmer response: Determine if the agent is available, reestablish the connection.
Module: SQEQUEUE
Procedure Name: ret_response

EZA6314E error code err_code: unknown request type
Explanation: The SQE query engine received an unknown request type and could not respond.
System action: Processing continues.
Operator response: Tell the system programmer about the error.
System programmer response: Check the sending device and determine why it is sending incorrect request types.
Module: SQEMKREQ
Procedure Name: SQEMKREQ

EZA6316E mkPINGport: socket
Explanation: The SQE Query engine PING routine could not establish a socket connection for a PING request.
System action: SQEPING exits.
Operator response: Tell the system programmer about the error.

Usually this problem is caused by an authorization failure. See the information about the configure the SNMP query engine in z/OS Communications Server: IP Configuration Guide for more information about the required authorization.
Module: SQEPING
Procedure Name: mkPINGport

EZA6317E send_ping_packet: sendto
Explanation: The SQE Query engine PING routine was unable to send a PING packet.
System action: SQEPING exits.
Operator response: Tell the system programmer about the error.
System programmer response: Verify that the specified host is connected. Verify the that the PING was requested correctly.
Module: SQEPING
Procedure Name: send_PING_packet

EZA6319W  ObjectId to long: obj_id
Explanation: The object identifier was too long.
System action: MIB@DESC exits.
Operator response: Tell the system programmer about the error.
System programmer response: Correct the object identifier and resubmit. See z/OS Communications Server: IP Programmer’s Guide and Reference for more information about the correct format of the object identifier in Management Information Base (MIB) Objects.
Module: MIB@DESC
Procedure Name: MIB@DESC

EZA6320W  Cannot open MIB description file: data_set
Explanation: SNMP was unable to open the indicated MIB description data set.
System action: MIB@DESC returns control to the calling application.
Operator response: Make sure that the indicated MIB description data set is loaded and in storage accessible to the host.
System programmer response: No action is needed.
Module: MIB@DESC
Procedure Name: MIB@DESC

EZA6321E  MIB_descript_file
Explanation: This message is displayed with message EZA6320W to indicate the current MIB file.
System action: MIB@DESC returns control to the calling application.
Operator response: Respond as indicated by message EZA6320W.
System programmer response: Respond as indicated by message EZA6320W.
Module: MIB@DESC
Procedure Name: MIB@DESC

EZA6322I  Using MIB_descript_file as MIB description file
Explanation: The MIB description file was opened successfully.
System action: Processing continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MIB@DESC
Procedure Name: MIB@DESC

EZA6324E  unknown MIB type: type
Explanation: The SQE server found an unknown type field in the MIB description file.
System action: Processing continues.
Operator response: Tell the system programmer about the error.
System programmer response: Correct the MIB description file, the hlq.MIB@DESC.DATA data set, and restart SQESERV.
Module: SNMPSEND
Procedure Name: read_mib_desc_tbl

EZA6325W out of memory in read_mibdesc_tbl
Explanation: MIB@DESC was unable to get enough storage to process the MIB description file.
System action: Processing continues.
Operator response: Tell system programmer about the error.
System programmer response: Increase the region size for the SNMPD program.
Module: MIB@DESC
Procedure Name: MIB@DESC

EZA6326E create_SNMP_port : socket error
Explanation: A socket() call was unsuccessful in attempting to create an SNMP port. The port could not be created.
System action: The SQESERV module ends.
Operator response: Tell the system programmer about the error.
System programmer response: See Appendix A, “Additional information about remote procedure call (RPC) messages,” on page 653 for more information about tcperror return codes.
Module: SNMPSEND
Procedure Name: create_SNMP_port

EZA6327E create_SNMP_port: bind error
Explanation: A bind() call was unsuccessful in attempting to create an SNMP port. The port could not be created.
System action: The SQESERV module ends.
Operator response: Tell the system programmer about the error.
System programmer response: See Appendix A, “Additional information about remote procedure call (RPC) messages,” on page 653 for more information about tcperror return codes.
Module: SNMPSEND
Procedure Name: create_SNMP_port

EZA6328W parse_SNMP_packet: cannot parse packet (ps_alloc)
Explanation: The SQE server could not parse an SNMP request because sufficient storage could not be allocated. The request is ignored.
System action: Processing continues with the next request.
Operator response: If the error persists, tell the system programmer about the error.
System programmer response: Start the SNMPQE procedure with a larger region size.
Module: SNMPPARS
Procedure Name: parse_SNMP_packet

EZA6329W parse_SNMP_packet: cannot parse packet (str_setup)
Explanation: The SQE server could not parse an SNMP request because sufficient storage could not be allocated. The request is ignored.
System action: Processing continues with the next request.
Operator response: If the error persists, tell the system programmer about the error.
System programmer response: Start the SNMPQE procedure with a larger region size.

Module: SNMPPARS

Procedure Name: parse_SNMP_packet

EZA6330W  parse_SNMP_packet: cannot parse packet (ps2pe)

EZA6331W  ps_error

Explanation: The SQE server could not parse an SNMP request because of an error converting a presentation stream to a presentation element. The request is ignored.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: Contact the IBM Software Support Center.

Module: SNMPPARS

Procedure Name: parse_SNMP_packet

EZA6332W  parse_SNMP_packet: cannot parse packet (decode)

Explanation: The SQE server encountered an error decoding an SNMP request. The request is ignored.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: Identify the agent that sent the incorrect request and correct any problems at that agent.

Module: SNMPPARS

Procedure Name: parse_SNMP_packet

EZA6333W  parse_SNMP_packet: corrupted packet

Explanation: The SNMP server found a corrupted packet. There is a problem with the agent that sent the request. The request is ignored.

System action: Processing continues with the next request.

Operator response: Identify the SNMP agent that sent the incorrect packet, and correct any errors.

System programmer response: No action is needed.

Module: SNMPPARS

Procedure Name: parse_SNMP_packet

EZA6334W  snmp_parse: store_SNMP_var cannot parse packet (length1)

Explanation: SNMPPARS could not parse a packet because the packet was longer than expected.

System action: Processing continues.

Operator response: Tell the system programmer about the error.

System programmer response: Determine the device sending packets with incorrect lengths. If it is SNMPD agent, verify that the packet size was specified correctly at startup.

Module: SNMPPARS

Procedure Name: store_SNMP_var
EZA6335W  snmp_parse: store_SNMP_var cannot parse packet (length2)

Explanation:  SNMPPARS could not parse a packet because the packet was longer than expected.

System action:  Processing continues.

Operator response:  Tell the system programmer about the error.

System programmer response:  Determine the device sending packets with incorrect lengths. If it is SNMPD agent, verify that the packet size was specified correctly at startup.

Module:  SNMPPARS

Procedure Name:  store_SNMP_var

---

EZA6336W  store_SNMP_var: unknown MIB type: type

Explanation:  The SQE server received a response containing an object with an unknown MIB type. The request is ignored. The object is not processed.

System action:  Processing continues with the next request.

Operator response:  Tell the system programmer about the error.

System programmer response:  Identify the agent sending the incorrect response, and correct any problems with the agent.

Module:  SNMPPARS

Procedure Name:  store_SNMP_var

---

EZA6337W  make_SNMP_packet: illegal SNMP request: request

Explanation:  The SQE server found an incorrect SNMP request. The request is ignored.

System action:  Processing continues with the next request.

Operator response:  Tell the system programmer about the error.

System programmer response:  Contact the IBM Software Support Center.

Module:  SNMPPARS

Procedure Name:  make_SNMP_request

---

EZA6338W  make_SNMP_request: illegal object identifier: id

Explanation:  The SQE server found an incorrect object identifier, which was ignored. The request is ignored.

System action:  Processing continues with the next request.

Operator response:  Tell the system programmer about the error.

System programmer response:  An application has provided an incorrect object identifier. Identify the application and correct the error. If you are using an IBM application program (for example, the NetView® program), contact the IBM Software Support Center.

Module:  SNMPPARS

Procedure Name:  make_SNMP_request

---

EZA6339W  make_SNMP_request: out of memory (oid_cpy)

Explanation:  A call to oid_cpy was unsuccessful because it could not allocate the storage needed.

System action:  Processing continues.

Operator response:  Tell the system programmer about the error.

System programmer response:  Increase the region size.

Module:  SNMPPARS
Procedure Name: make_SNMP_request

EZA6340W  make_SNMP_packet: no MIB type defined: name

Explanation: An application has tried to issue an SNMP Set request for an object for which no MIB description data is known. The request is ignored.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: Add the relevant data to the MIB description file and restart SQESERV. This is the hlq.MIB@DESC.DATA data set.

Module: SNMPPARS

Procedure Name: make_SNMP_request

EZA6341W  make_SNMP_request: cannot parse packet (encode)

Explanation: A call to make_SNMP_request was unsuccessful. Preceding messages further define the nature of the problem.

System action: Processing continues.

Operator response: Tell system programmer about the problem.

System programmer response: If the problem is due to incorrect packet information or an incorrect packet format, contact the IBM Software Support Center.

Module: SNMPPARS

Procedure Name: make_SNMP_request

EZA6342W  make_SNMP_packet: cannot parse packet (ps_alloc)

Explanation: The SQE server could not allocate sufficient storage to parse a packet. The request is ignored.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Start the SNMPQE procedure with a larger region size.

Module: SNMPPARS

Procedure Name: make_SNMP_request

EZA6343W  make_SNMP_packet: cannot parse packet (str_setup)

Explanation: The SQE server could not parse an SNMP request because sufficient storage could not be allocated. The request is ignored.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Start the SNMPQE procedure with a larger region size.

Module: SNMPPARS

Procedure Name: make_SNMP_request

EZA6344W  make_SNMP_packet: cannot parse packet (pe2ps)

Explanation: The SQE server could not parse an SNMP request because of an error converting a presentation element to a presentation stream. The request is ignored.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.
**System programmer response:** Invalid data was passed in the SNMP request. Check the application program that initiated the request. If you are using an IBM application program (for example, the NetView program), contact the IBM Software Support Center.

**Module:** SNMPPARS

**Procedure Name:** make_SNMP_request

---

**EZA6345W snmp_parse: do_qb2str: out of memory**

**Explanation:** The SQE server could not parse an SNMP request because sufficient storage could not be allocated. The request is ignored.

**System action:** Processing continues.

**Operator response:** Tell the system programmer about the problem if it persists.

**System programmer response:** Start the SNMPQE procedure with a larger region size.

**Module:** SNMPPARS

**Procedure Name:** do_qb2str

---

**EZA6346W snmp_parse: is_invalid_ObjectID: illegal object identifier obj_id**

**Explanation:** The SQE server encountered an incorrect object identifier. The request is ignored.

**System action:** Processing continues.

**Operator response:** Tell the system programmer about the problem.

**System programmer response:** Check the sending device to determine why it is sending an object identifier that is not allowed. Correct the object identifier and resubmit. See [z/OS Communications Server: IP Programmer’s Guide and Reference](https://pubs.opengroup.org/onlinepubs/9699919999/a02z01/messages/) for more information about the correct format of the object identifier in “Management Information Base (MIB) Objects.”

**Module:** SNMPPARS

**Procedure Name:** do_qb2str

---

**EZA6347W out of memory in cache_object (new)**

**Explanation:** The SQE server could not allocate storage to add a new object to a list. No caching is done.

**System action:** Processing continues.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Start the SNMPQE procedure with a larger region size.

**Module:** SQECACHE

**Procedure Name:** cache_object

---

**EZA6348W out of memory in cache_object name**

**Explanation:** The SQE server could not allocate enough storage to add an object to a list. No caching is done.

**System action:** Processing continues.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Start the SNMPQE procedure with a larger region size.

**Module:** SQECACHE

**Procedure Name:** cache_object
EZA6351E  error code err_code: illegal protocol.
Explanation: The SNMP query engine received a packet with an unknown protocol. The packet is discarded.
System action: The SNMP query engine continues.
Operator response: Contact the system programmer.
System programmer response: Determine the device that is sending incorrect packets to the SNMP query engine and why it is sending them.
Module: SQEPNV
Procedure Name: sqepnv

EZA6352E  error code err_code: illegal character set
Explanation: The SNMP query engine received a packet with a character other than ASCII or EBCDIC. The packet is discarded.
System action: The SNMP query engine continues.
Operator response: Contact the system programmer.
System programmer response: Determine the device that is sending incorrect packets to the SNMP query engine and why it is sending them.
Module: SQEPNV
Procedure Name: sqepnv

EZA6353E  error code err_code: illegal packet type
Explanation: The SNMP query engine received a packet that it did not recognize. The packet is discarded.
System action: The SNMP query engine continues.
Operator response: Contact the system programmer.
System programmer response: Determine the device that is sending incorrect requests to the SNMP query engine and why it is sending them. See z/OS Communications Server: IP User’s Guide and Commands for more information.
Module: SQEPNV
Procedure Name: sqepnv

EZA6354E  error code err_code: illegal request packet type
Explanation: The SNMP query engine received a request packet that it did not recognize. The packet is discarded.
System action: The SNMP query engine continues.
Operator response: Contact the system programmer.
System programmer response: Determine the device that is sending incorrect requests to the SNMP query engine and why it is sending them. See z/OS Communications Server: IP User’s Guide and Commands for more information.
Module: SQEPNV
Procedure Name: sqepnv

EZA6355E  error code err_code: null get variable list
Explanation: The SNMP query engine received a GET request that did not have any variables passed with it. The packet is discarded.
System action: The SNMP query engine continues.
Operator response: See z/OS Communications Server: IP User’s Guide and Commands for more information about the
valid format for SNMP GET commands. The variables expected by the SNMP query engine are the host name, community name, and the variable name(s).

**System programmer response**: No action is needed.

**Module**: SQEPNV

**Procedure Name**: nv_get_variable

---

**EZA6356E**  
**error code err_code: unknown MIB variable**

**Explanation**: The SNMP query engine tried to locate the Management Information Base (MIB) variable. Either the MIB variable was unable to be located, the ANSI name is longer than 200 characters, the end of string character was not located at the end of the MIB variable, or the MIB variable type could not be located.

**System action**: The SNMP query engine continues.

**Operator response**: Verify that the hlq.MIBDESC.DATA is correct. See **z/OS Communications Server: IP User’s Guide and Commands**. Verify that the request to the SNMP query engine was done correctly. Check the SNMP agent job output for messages that indicate a problem. See **z/OS Communications Server: IP User’s Guide and Commands** for more information about the valid format for SNMP query commands and MIB variable names.

**System programmer response**: No action is needed.

**Module**: SQEPNV

**Procedure Name**: sqepnv

---

**EZA6357E**  
**unrecognized type: type**

**Explanation**: The SNMP query engine was unable to determine the data type within a MIB variable.

**System action**: The SNMP query engine stops processing the mib variable. The SNMP query engine continues.

**Operator response**: Verify that the hlq.MIBDESC.DATA is correct. See **z/OS Communications Server: IP User’s Guide and Commands** chapter on “Managing TCP/IP Network Resources Using SNMP.” Verify that the request to the SNMP query engine was done correctly. See **z/OS Communications Server: IP User’s Guide and Commands** for more information about the valid format for SNMP query commands.

**System programmer response**: No action is needed.

**Module**: SQEPNV

**Procedure Name**: sqepnv

---

**EZA6358W**  
**null hdr pointer**

**Explanation**: The pointer to the packet header is equal to 0.

**System action**: The SNMP query engine stops processing the packet and continues.

**Operator response**: Tell the system programmer about the error.

**System programmer response**: View job output for the SNMP query engine and look for any other messages that may show more information about the problem. If the problem persists contact the IBM Software Support Center.

**Module**: SQEPRNV

**Procedure Name**: prNVparse

---

**EZA6359I**  
**major version major version**

**EZA6360I**  
**minor version minor version**
EZA6361I  release release
Explanation: These messages echo the major and minor version numbers and the release levels of the received packet.
System action: The SNMP query engine processes the packet and continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVparse

EZA6362W illegal protocol specification
Explanation: The SNMP query engine has received a packet with an incorrect protocol specifications. The SNMP query engine stops processing the packet.
System action: The SNMP query engine continues.
Operator response: Contact the system programmer.
System programmer response: View the previous messages EZA6359 - EZA6361 for the packets major and minor versions and the release. Determine the device that is sending packets with incorrect protocol specifications and investigate.
Module: SQEPRNV
Procedure Name: prNVparse

EZA6363I native set: character set
Explanation: The SNMP query engine is displaying the native character set for the packet.
System action: The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVparse

EZA6364I packet type: packet type
Explanation: The SNMP query engine is displaying the type of packet received.
System action: The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVparse

EZA6365W packet type&colan illegal packet type ( packet type )
Explanation: The SNMP query engine has received an incorrect type of packet.
System action: The SNMP query engine stops processing the packet. The SNMP query engine continues.
Operator response: If the packet was sent as a request, verify that the request was sent correctly. See z/OS Communications Server: IP User’s Guide and Commands for valid SNMP commands. If the error was the result of a response for an SNMP agent, notify the system programmer.
System programmer response: Determine the SNMP agent sending incorrect responses and investigate the reason it is sending incorrect responses.

Module: SQEPRNV
Procedure Name: prNVparse

EZA6366I null request body
Explanation: The SNMP query engine has received a request packet, but the body of the request was empty.
System action: The SNMP query engine stops processing the packet. The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVrequest

EZA6367I sequence ID: sequence_ID
Explanation: The SNMP query engine has received a packet that has the stated sequence_ID. The SNMP query engine will use the sequence_ID to associate requests with responses.
System action: The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVrequest

EZA6368I hostname len: name length
Explanation: The SNMP query engine is displaying the length of the name of the host the request will be sent to.
System action: The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVrequest

EZA6369W no hostname:
Explanation: The SNMP query engine could not find a host name for the request packet.
System action: The SNMP query engine continues.
Operator response: Verify that the request was entered correctly.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVrequest

EZA6370I hostname: hostname
Explanation: The SNMP query engine is displaying the host name that the request will be sent to.
System action: The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVrequest

EZA6371I community len: community len
Explanation: The SNMP query engine is displaying the length of the community name.
System action: The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVrequest

EZA6372W no community name!
Explanation: The SNMP query engine could not find a community name for the request packet.
System action: The SNMP query engine continues.
Operator response: Verify that the request was entered correctly.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVrequest

EZA6373I community name: community name
Explanation: The SNMP query engine is displaying the community name that the request was made for.
System action: The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVrequest

EZA6374I optional length optional length
Explanation: The SNMP query engine is displaying the number of retry parameters that SNMPIUCV has received from the SNMPIUCV member of the DSIPARMS data set.
System action: The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVrequest

EZA6375I max. retries: snmprcnt
Explanation: The SNMP query engine is displaying the number of times that the SNMP query engine will resend an SNMP PDU when no response was received.
System action: The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVrequest

---

**Explanation:**
The SNMP query engine is displaying the timeout value for a request (in tenths of a second). After sending an SNMP request to an agent, the SNMP query engine waits $n$ tenths of a second for a response.

**System action:** The SNMP query engine continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.
Module: SQEPRNV
Procedure Name: prNVrequest

---

**Explanation:**
The SNMP query engine is displaying the retry back-off exponent. The retry back-off exponent specifies whether the timeout value between retries of an SNMP request is calculated linearly or exponentially. The valid values are 1 (linear) or 2 (exponential). The default is 2.

**System action:** The SNMP query engine continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.
Module: SQEPRNV
Procedure Name: prNVrequest

---

**Explanation:**
The SNMP query engine has received an incorrect type of packet.

**System action:** The SNMP query engine stops processing the packet. The SNMP query engine continues.

**Operator response:** If the packet was sent as a request, verify that the request was sent correctly. See [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com/support/knowledgecenter/SSLTBW_2.2.0/com.ibm.zos.v2r2.biphy.doc) for valid SNMP commands. If the error was the result of a response for an SNMP agent, notify the system programmer.

**System programmer response:** Determine the SNMP agent sending incorrect responses and investigate the reason it is sending incorrect responses.
Module: SQEPRNV
Procedure Name: prNVparse

---

**Explanation:**
The SNMP query engine has receive a request packet from SNMPIUCV that has an empty list header.

**System action:** The SNMP query engine stops processing the packet. The SNMP query engine continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.
Module: SQEPRNV
Procedure Name: prNVgetreq, prNVsetreq
EZA6380I  name length length

EZA6381I  name name

Explanation: The SNMP query engine has received a request or is sending a response to a SNMPIUCV packet. Displayed is the length and the name of the variable being sent or requested.

System action: The SNMP query continues to process the packet.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SQEPRNV

Procedure Name: prNVgetreq, prNVsetreq

EZA6382I  value type type

Explanation: The SNMP query engine has received a request or is sending a response to a SNMPIUCV packet. Displayed is the value type of the data being processed. The valid value types are:

- text
- number
- internet address
- empty
- counter
- gauge
- time ticks
- display string
- string
- object ID

System action: The SNMP query continues to process the packet.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SQEPRNV

Procedure Name: prNVgetreq, prNVsetreq

EZA6383W  value type: unknown type!

Explanation: The SNMP query engine has received a request or is sending a response to a SNMPIUCV packet. The value type received is not a known value type. The valid value types are:

- text
- number
- internet address
- empty
- counter
- gauge
- time ticks
- display string
- string
- object ID

System action: The SNMP query engine tries to process the packet. The SNMP query engine continues.

Operator response: Verify that the hlq.MIBDESC.DATA correct. Verify that the request to the SNMP query engine was done correctly. See z/OS Communications Server: IP User’s Guide and Commands for more information about the valid format for SNMP query commands.

System programmer response: No action is needed.

Module: SQEPRNV
Procedure Name: prNVgetreq, prNVsetreq

EZA6384I  value length :length
Explanation: The SNMP query engine has received a request or is sending a response to a SNMPIUCV packet. The value length is being displayed.
System action: The SNMP query engine continues to process the packet. The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVgetreq, prNVsetreq

EZA6385I  value :string value
Explanation: The SNMP query engine has received a request or is sending a response to a SNMPIUCV packet. The Management Information Base (MIB) variable is being displayed.
System action: The SNMP query engine continues to process the packet. The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVgetreq, prNVsetreq

EZA6386I  value :decimal value
Explanation: The SNMP query engine has received a request or is sending a response to a SNMPIUCV packet. The Management Information Base (MIB) variable is being displayed.
System action: The SNMP query engine continues to process the packet. The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVgetreq, prNVsetreq

EZA6387I  value :unsigned value
Explanation: The SNMP query engine has received a request or is sending a response to a SNMPIUCV packet. The Management Information Base (MIB) variable is being displayed.
System action: The SNMP query engine continues to process the packet. The SNMP query engine continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: SQEPRNV
Procedure Name: prNVgetreq, prNVsetreq

EZA6388I  major error: major error number
Explanation: The SNMP query engine has received a response to a SNMP PIUCV packet. The major and minor error codes are being displayed along with any error text. For more information about SNMP error codes see Communications Server: IP User's Guide and Commands.

System action: The SNMP query engine continues to process the packet. The SNMP query engine continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SQEPRNV

Procedure Name: prNVgetreq, prNVsetreq

Explanation: The SNMP query engine has received a trap response or trap request packet. Displayed is filter ID used to filter the trap responses.

System action: The SNMP query engine continues processing the packet.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SQEPRNV

Procedure Name: prNVresp_copy, prNVtrap, prNVtrap_req

Explanation: The SNMP query engine has received a trap response or trap request packet. Displayed is the IP address of the agent sending the trap response.

System action: The SNMP query engine continues processing the packet.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SQEPRNV

Procedure Name: prNVresp_copy, prNVtrap
Explanation: The SNMP query engine has received a trap response packet. Displayed is the network mask that is ANDed with the dotted decimal IP address. The result will be compared with the desired network.

System action: The SNMP query engine continues processing the packet.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SQEPRNV

Procedure Name: prNVresp_copy

Explanation: The SNMP query engine has received a trap response packet. Displayed is the desired network. The desired network will be compared to the results from ANDing the agent address with the network mask.

System action: The SNMP query engine continues processing the packet.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SQEPRNV

Procedure Name: prNVresp_copy

Explanation: The SNMP query engine has received a trap packet that has no data associated with it.

System action: The SNMP query engine stops processing the packet. The SNMP query engine continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SQEPRNV

Procedure Name: prNVtrap

Explanation: The SNMP query engine has received a trap packet. The generic trap type value is displayed. See z/OS Communications Server: IP User’s Guide and Commands for more information about SNMP generic trap types.

System action: The SNMP query engine continues processing the packet.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SQEPRNV

Procedure Name: prNVtrap

Explanation: The SNMP query engine has received a trap packet. The specific trap type value is displayed. The specific trap value will be 0 unless the generic trap type is 6. For more information about generic and specific traps see z/OS Communications Server: IP User’s Guide and Commands.

System action: The SNMP query engine continues processing the packet.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SQEPRNV

Procedure Name: prNVtrap
Procedure Name: prNVtrap

**Explanation:** The SNMP query engine has received a trap packet. The time stamp that was present within the trap packet is displayed.

**System action:** The SNMP query engine continues processing the packet.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SQEPRNV

**Procedure Name:** prNVtrap

**Explanation:** The SNMP query engine has received a trap packet. The length of the enterprise object ID and the enterprise object ID are displayed. See [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com) for more information about enterprise object IDs.

**System action:** The SNMP query engine continues processing the packet.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SQEPRNV

**Procedure Name:** prNVtrap

**Explanation:** The SNMP query engine tried to parse the variable name out of the packet. The body of the packet that should contain the name was empty.

**System action:** The SNMP query engine stops processing the packet. The SNMP query engine continues.

**Operator response:** Verify that the request was done properly and resubmit.

**System programmer response:** No action is needed.

**Module:** SQEPRNV

**Procedure Name:** prNVvar_name

**Explanation:** The SNMP query engine has received a var_name packet. Displayed is the object ID and its length. See [z/OS Communications Server: IP User’s Guide and Commands](https://www.ibm.com) for more information about enterprise object IDs.

**System action:** The SNMP query engine continues processing the packet.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** SQEPRNV

**Procedure Name:** prNvar_name
EZA6407W null ping_req body

Explanation: The SNMP query engine received a ping request packet. The body of the packet was empty.

System action: The SNMP query engine stops processing the packet. The SNMP query engine continues.

Operator response: Verify that the ping request was done correctly and resubmit.

System programmer response: No action is needed.

Module: SQEPRNV

Procedure Name: prNVping_req

EZA6408I STOP command received - SNMP Query Engine stops

Explanation: The SNMP query engine received the MVS STOP command and ended.

Examples: Not applicable.

System action: SNMP query engine ends.

Operator response: None.

User response: Not applicable.

System programmer response: None.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: SNMP Query Engine

Module: SQESERV

Routing code: 10

Descriptor code: 12

EZA6409I socket_type listening socket socket_value removed from select mask

Explanation: The indicated listening socket has been removed from the selection mask because the maximum number of sockets are in use. While the listening socket is not included in the selection mask, new connections are not accepted.

socket_type indicates whether the listening socket type is TCP or IUCV.

socket_value indicates the listening socket value.

When an existing connection closes, message EZA6410I is generated in the output file and new connections can be accepted again.

Examples:

- EZA62901 Accepted new client connection
- EZA6409I TCP listening socket 5 removed from select mask
- EZA62931 Terminated client connection
- EZA6410I TCP listening socket 5 added back to select mask
- EZA62901 Accepted new client connection

System action: The SNMP query engine continues processing existing connections, but no new connections are accepted for this listening socket.

Operator response: None.

User response: Not applicable.

System programmer response: None.

Problem determination: Not applicable.

Source: z/OS Communications Server TCP/IP: SQESERVE

Module: SQESERV
Routing code: Not applicable.
Descriptor code: Not applicable.
Automation: Not applicable.

**EZA6410I**  
*socket_type* *listening socket* *socket_value* added back to select mask

Explanation: This message is generated when the listening socket is added to the selection mask. Adding the socket to the selection mask allows new connections to be accepted for the socket.

*socket_type* indicates whether the listening socket type is TCP or IUCV.

*socket_value* indicates the listening socket value.

See related message EZA6409I.

Examples:
- EZA6290I Accepted new client connection
- EZA6409I TCP listening socket 5 removed from select mask
- EZA6293I Terminated client connection
- EZA6410I TCP listening socket 5 added back to select mask
- EZA6290I Accepted new client connection

System action: The SNMP query engine continues.

Operator response: None.

User response: Not applicable.

System programmer response: None.

Source: z/OS Communications Server TCP/IP: SQESERVE

Module: SQESERV

Routing code: Not applicable.

Descriptor code: Not applicable.

Automation: Not applicable.

**EZA6423I**  
mibdesc_file_name(line_num), illegal object identifier object_id

Explanation: The SNMP agent is checking the MIBDESC.DATA data set. Displayed is the MIBDESC datset name, line number, and the object ID that was not correct.

System action: The SNMP agent continues processing the MIBDESC file.

Operator response: Contact system programmer.

System programmer response: Correct the MIBDESC.DATA data set.

Module: MIB@DESC

Procedure Name: print_SNMP_Message

**EZA6424I**  
Decoded SNMP PDU:

Explanation: SNMP has received an SNMP message.

System action: The SNMP continues processing the SNMP message.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: SNMPPRNT

Procedure Name: print_SNMP_Message
EZA6425W  Message: out of memory

Explanation: The SNMP Query Engine was decoding an SNMP message, but the SNMP Query Engine could not allocate enough storage to build the decoded SNMP message. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response: No action is needed.

Module: SNMPTYPE

Procedure Name: decode_SNMP_Message, encode_SNMP_Message

EZA6426W  version: out of memory

Explanation: The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the SNMP version number. The SNMP message is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response: No action is needed.

Module: SNMPTYPE

Procedure Name: encode_SNMP_Message

EZA6427E  version has unknown component: component

Explanation: While encoding or decoding the presentation element for the SNMP version number in an SNMP request, the SNMP Query Engine was expecting the presentation element to have a version number of 0 (SNMP version-1). The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: For errors in decoding incoming SNMP requests, run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center. For errors encoding an SNMP response or trap PDU to be sent out, contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_Message, encode_SNMP_Message

EZA6428E  Message bad sequence: pe_error

Explanation: If decoding the presentation element for an SNMP request, the SNMP Query Engine was expecting a presentation element with a class of Sequence to have a form of Constructed. If encoding an SNMP response or trap PDU, the SNMP Query Engine received the indicated pe_error while adding a presentation element to a sequence. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: For errors occurring on incoming SNMP messages, run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center. For errors occurring on outgoing SNMP PDUs (other than out of storage errors), contact the IBM Software Support Center.
Module: SNMPTYPE
Procedure Name: decode_SNMP_Message, encode_SNMP_Message

EZA6429W community initialization fails
Explanation: The SNMP Query Engine was encoding an SNMP PDU, but the message being encoded does not have a valid community name. The SNMP PDU is discarded.
System action: Processing continues with the next request.
Operator response: Tell the system programmer about the error.
System programmer response: Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: encode_SNMP_Message

EZA6430W community: out of memory
Explanation: The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the community name. The SNMP PDU is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.

Module: SNMPTYPE
Procedure Name: encode_SNMP_Message

EZA6431E PDUs invalid choice selected: choice
Explanation: While encoding an SNMP PDU, the SNMP Query Engine was expecting the type to be 1 (get request), 2 (getNext request), 3 (get response), 4 (set request), or 5 (trap). Instead, the PDU had the indicated type. The SNMP PDU is discarded.
System action: Processing continues with the next request.
Operator response: Tell the system programmer about the error.
System programmer response: Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: encode_SNMP_PDU

EZA6432W PDU: out of memory
Explanation: The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation elements for the PDU. The SNMP PDU is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.

Module: SNMPTYPE
Procedure Name: encode_SNMP_PDU
EZA6433W  request-id: out of memory

Explanation: The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the request-ID. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response: No action is needed.

Module: SNMPTYPE
Procedure Name: encode_SNMP_PDU

EZA6434E  PDU bad sequence: pe_error

Explanation: The SNMP Query Engine received the indicated pe_error while encoding or decoding the data portion of an SNMP request. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: For errors encountered while decoding an incoming PDU, run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center. For errors encountered while encoding an SNMP PDU, contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_PDU, encode_SNMP_PDU

EZA6435W  error-status: out of memory

Explanation: The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the error-status. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response: No action is needed.

Module: SNMPTYPE
Procedure Name: encode_SNMP_PDU

EZA6436E  error-status has unknown component: component

Explanation: While encoding or decoding the error-status presentation element of an SNMP PDU, the SNMP Query Engine was expecting the error-status to be 0 (no error), 1 (too big), 2 (no such name), 3 (bad value), 4 (read only), or 5 (general error). Instead, the error-status had the indicated value. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: For errors encountered while decoding an incoming PDU, run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center. For errors encountered while encoding an outgoing PDU, contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_PDU, encode_SNMP_PDU
EZA6437W  error-index: out of memory
Explanation: The SNMP Query Engine was encoding an SNMP PDU to be sent out, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the error-index. The SNMP PDU is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.
Module: SNMPTYPE
Procedure Name: encode_SNMP_PDU

EZA6438W  Trap-PDU: out of memory
Explanation: The SNMP Query Engine was encoding an SNMP TRAP PDU, but the SNMP Query Engine could not allocate enough memory to build the presentation element for the PDU. The TRAP PDU is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.
Module: SNMPTYPE
Procedure Name: encode_SNMP_trap_PDU

EZA6439W  enterprise initialization fails
Explanation: The SNMP Query Engine was encoding an SNMP TRAP PDU, but the trap being encoded does not contain a valid enterprise object ID. The TRAP PDU is discarded.
System action: Processing continues with the next request.
Operator response: Tell the system programmer about the error.
System programmer response: Contact the IBM Software Support Center.
Module: SNMPTYPE
Procedure Name: encode_SNMP_trap_PDU

EZA6440W  enterprise: out of memory
Explanation: The SNMP Query Engine was encoding an SNMP TRAP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the enterprise object ID. The SNMP TRAP PDU is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.
Module: SNMPTYPE
Procedure Name: encode_SNMP_trap_PDU

EZA6441E  Trap-PDU bad sequence: pe_error
Explanation: The SNMP Query Engine received the indicated pe_error while encoding or decoding an SNMP TRAP PDU. The SNMP request is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, tell the system programmer about the error.
System programmer response: For errors encountered while decoding an incoming TRAP, run traces (either the
SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center. For errors encountered while encoding an SNMP TRAP PDU, contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_trap_PDU, encode_SNMP_trap_PDU

---

**EZA6442W** generic-trap: out of memory

**Explanation:** The SNMP Query Engine was encoding an SNMP TRAP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the generic-trap type. The SNMP TRAP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, restart the SNMP Query Engine with a larger region size.

**System programmer response:** No action is needed.

---

**EZA6443E** generic-trap has unknown component: component

**Explanation:** While encoding or decoding the presentation element for the generic-trap type in an SNMP TRAP PDU, the SNMP Query Engine was expecting the generic-trap to be 0 (coldStart), 1 (warmStart), 2 (linkDown), 3 (linkUp), 4 (authenticationFailure), 5 (egpNeighborLoss), or 6 (enterpriseSpecific). Instead, the generic-trap type had the indicated value. The SNMP trap is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.

**System programmer response:** For errors encountered while decoding an incoming SNMP TRAP PDU, run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that originated the trap. If the received encode trap is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center. For errors encountered while encoding an outgoing SNMP TRAP PDU, contact the IBM Software Support Center.

---

**Module:** SNMPTYPE

**Procedure Name:** decode_SNMP_trap_PDU, encode_SNMP_trap_PDU

---

**EZA6444W** specific-trap: out of memory

**Explanation:** The SNMP Query Engine was encoding an SNMP TRAP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the specific trap type. The SNMP TRAP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, restart the SNMP Query Engine with a larger region size.

**System programmer response:** No action is needed.
EZA6445W  VarBind: out of memory
Explanation: The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough memory to build the presentation element for the variable bindings pair. The SNMP PDU is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.
Module: SNMPTYPE
Procedure Name: encode_SNMP_VarBind

EZA6446E  VarBind bad sequence: pe_error
Explanation: The SNMP Query Engine received the indicated pe_error while encoding or decoding the variable bindings in an SNMP PDU. The SNMP request is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, tell the system programmer about the error.
System programmer response: For errors encountered while decoding an incoming PDU, run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center. For errors encountered encoding the PDU, contact the IBM Software Support Center.
Module: SNMPTYPE
Procedure Name: decode_SNMP_VarBind, encode_SNMP_VarBind

EZA6447W  VarBindList: out of memory
Explanation: The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the variable bindings list. The SNMP PDU is discarded.
System action: Processing continues with the next request.
Operator response: If the error persists, start the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.
Module: SNMPTYPE
Procedure Name: encode_SNMP_VarBindList

EZA6448E  Message bad class/form/id: class/form/oid
Explanation: While decoding the presentation element for the SNMP request, the SNMP Query Engine was expecting the presentation element to have a class of 0 (universal), a form of 1 (constructed), and an ID of X'10'x (sequence). Instead, the encoded request had the indicated class, form, and ID. The SNMP request is discarded.
System action: Processing continues with the next request.
Operator response: Tell the system programmer about the error.
System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.
Module: SNMPTYPE
Procedure Name: decode_SNMP_Message
EZA6449E  Message bad form: form

Explanation: While decoding the presentation element for an encoded SNMP message, the SNMP Query Engine was expecting the presentation element to have a form of 1 (constructed). Instead, the SNMP Query Engine request had the indicated form. The SNMP request is discarded.

This message might also appear if VTAM is closed before the SNMP Query Engine (SNMPQE) task is closed.

System action: Processing continues with the next request.

Operator response: Ensure that the SNMPQE task is closed before VTAM. If the error persists, contact the system programmer.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMP_TYPE

Procedure Name: decode_SNMP_Message

---

EZA6450W  out of memory

Explanation: SNMP could not allocate enough storage to decode an incoming SNMP request. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response: No action is needed.

Module: SMITYPES, SNMP_TYPE

Procedure Name: decode_SNMP_Message, decode_SNMP_PDUs, decode_SNMP_PDU decode_SNMP_VarBindList decode_SNMP_VarBind decode_SNMP_trap_PDU decode_SMI_ObjectSyntax decode_SMI_Counter decode_SMI_Gauge decode_SMI_TimeTicks

---

EZA6451E  version bad class/form/id: class/form/id

Explanation: While decoding an incoming SNMP request, the SNMP Query Engine was expecting the presentation element for the version number to have a class of 0 (universal), a form of 0 (primitive), and an ID of 2 (integer). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMP_TYPE

Procedure Name: decode_SNMP_Message

---

EZA6452E  version bad integer: pe_error

Explanation: The SNMP Query Engine received the indicated pe_error while decoding the SNMP version number in an SNMP request. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.
System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_Message

EZA6453E  Message missing version element

Explanation: While decoding an incoming SNMP request, the SNMP Query Engine could not find a presentation element for the SNMP version. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_Message

EZA6454E  community bad class/form/id: class/form/id

Explanation: While decoding an incoming SNMP request, the SNMP Query Engine was expecting a presentation element for the community name to have class of 0 (universal) and an ID of 4 (octet string). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_Message

EZA6455E  community bad octetstring: pe_error

Explanation: The SNMP Query Engine received the indicated pe_error while decoding the presentation element for the community name in an incoming SNMP PDU. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the pe_error indicates a storage problem, restart the SNMP Query Engine with a larger region size. Otherwise, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_Message
EZA6456E  Message missing community element

**Explanation:** While decoding an SNMP request, the SNMP Query Engine could not find a presentation element for the community name. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SNMPTYPE

**Procedure Name:** decode_SNMP_Message

---

EZA6457E  Message missing data element

**Explanation:** While decoding an incoming SNMP request, the SNMP Query Engine could not find any presentation elements for the data. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SNMPTYPE

**Procedure Name:** decode_SNMP_Message

---

EZA6458E  Message has too many elements(3): number

**Explanation:** While decoding an SNMP request, the SNMP Query Engine was expecting the SNMP request to have 3 presentation elements (version, community name, and data). Instead, the request had the indicated number of elements. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SNMPTYPE

**Procedure Name:** decode_SNMP_Message

---

EZA6459E  PDUs has unknown choice: classformid

**Explanation:** While decoding the presentation element of an SNMP message, the SNMP Query Engine was expecting the data portion to have a class of CONT (context-specific) and an ID of 0 (Get Request), 1 (GetNext Request), 2 (Get Response), 3 (Set Request), or 4 (trap). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.
System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_PDUs

EZA6460E  GetRequest-PDU  bad class/id: class/id

Explanation: While decoding the presentation element for the data portion of the SNMP Get PDU, the SNMP Query Engine was expecting the presentation element to have a class of CONT (context-specific) and an ID of 0 (Get). Instead, the request had the indicated class and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_GetRequest_PDU

EZA6461E  GetNextRequest-PDU  bad class/id: class/id

Explanation: While decoding the presentation element for the data portion of the SNMP GetNext Request PDU, the SNMP Query Engine was expecting the presentation element to have a class of CONT (context-specific) and an ID of 1 (GetNext). Instead, the presentation element had the indicated class and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_GetNextRequest_PDU

EZA6462E  GetResponse-PDU  bad class/id: class/id

Explanation: While decoding the presentation element for the data portion of the SNMP GetResponse PDU, the SNMP Query Engine was expecting a class of CONT (context-specific) and an ID of 2 (Get Response). Instead, the presentation element had the indicated class and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_GetResponse_PDU
EZA6463E  SetRequest-PDU bad class/id: class/id

Explanation: While decoding an SNMP SetRequest, the SNMP Query Engine expected the presentation element of the data portion of the request to contain a class of CONT (context-specific) and an ID of 3 (Set Request). Instead, the presentation element had the indicated class and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_SetRequest_PDU

EZA6464E  PDU bad class/form/id: class/form/id

Explanation: While decoding the data portion of an SNMP PDU, the SNMP Query Engine was expecting the presentation element to have a class of UNIV (universal), a form of 1 (constructed), and an ID of X'10'x (sequence). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_PDU

EZA6465E  PDU bad form: form

Explanation: While decoding the data portion of an SNMP PDU, SNMP was expecting the presentation element to have a form of 1 (constructed). Instead, the presentation element had the indicated form. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_PDU

EZA6466E  request-id bad class/form/id: class/form/id

Explanation: While decoding the presentation element containing the request-ID for the SNMP PDU, the SNMP Query Engine was expecting the presentation element to have a class of UNIV (universal), a form of 0 (primitive), and an ID of 2 (integer). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.

System action: Processing continues with the next request.
Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_PDU

EZA6467E request-id bad integer: pe_error

Explanation: The SNMP Query Engine received the indicated pe_error while decoding the presentation element for the request-ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_PDU

EZA6468E PDU missing request-id element

Explanation: While decoding an incoming SNMP PDU, SNMP could not find the presentation element for the request-id. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_PDU

EZA6469E error-status bad class/form/id: class/form/id

Explanation: While decoding the presentation element for the error-status of an incoming SNMP PDU, the SNMP Query Engine was expecting the presentation element to have a class of UNIV (universal), a form of 0 (primitive), and an ID of 2 (integer). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_PDU

EZA6470E  error-status bad integer: pe_error

Explanation: The SNMP Query Engine received the indicated pe_error while decoding the presentation element for the error-status value in an incoming SNMP PDU. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_PDU

EZA6471E  PDU missing error-status element

Explanation: While decoding an incoming SNMP PDU, the SNMP Query Engine could not find the presentation element for the error-status. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_PDU

EZA6472E  error-index bad class/form/id: class/form/id

Explanation: While decoding the presentation element for the error-index in a received SNMP PDU, the SNMP Query Engine was expecting the presentation element to have a class of UNIV (universal), a form of 0 (primitive), and an ID of 2 (integer). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_PDU

EZA6473E  error-index bad integer: pe_error

Explanation: The SNMP Query Engine received the indicated pe_error while decoding the error-index value in a received SNMP PDU. The SNMP request is discarded.

System action: Processing continues with the next request.
EZA6474E  •  EZA6476E

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_PDU

EZA6474E  PDU missing error-index element

Explanation: While decoding an incoming SNMP PDU, the SNMP Query Engine could not find a presentation element for the error-index. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_PDU

EZA6475E  PDU missing variable-bindings element

Explanation: While decoding an incoming SNMP PDU, the SNMP Query Engine could not find the presentation element for the variable bindings. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_PDU

EZA6476E  PDU has too many elements(4): number

Explanation: While decoding the data portion of an SNMP request, the SNMP Query Engine was expecting the request to have 4 presentation elements (request-id, error-status, error-index, and variable bindings). Instead, the PDU had the indicated number of elements. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_PDU

496  z/OS V1R13.0 Comm Svr: IP Messages Volume 1 (EZA)
EZA6477E  Trap-PDU bad class/id: class/id

Explanation: While decoding the presentation element of an SNMP TRAP PDU, the SNMP Query Engine was expecting the presentation element to have a class of CONT (context-specific) and an ID of 4 (trap). Instead, the presentation element had the indicated class and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_trap_PDU

EZA6478E  enterprise bad class/form/id: class/form/id

Explanation: While decoding the presentation element for the enterprise object identifier in a received TRAP PDU, the SNMP Query Engine was expecting the presentation element to have a class of UNIV (universal), a form of 0 (primitive), and an ID of 6 (objectID). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_trap_PDU

EZA6479E  enterprise bad object identifier: pe_error

Explanation: The SNMP Query Engine received the indicated pe_error while decoding the presentation element for the enterprise object identifier for a TRAP PDU. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_trap_PDU

EZA6480E  Trap-PDU missing enterprise element

Explanation: While decoding an SNMP TRAP PDU, the SNMP Query Engine could not find a presentation element for the enterprise object ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.
System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_trap_PDU

EZA6481E  Trap-PDU missing agent-addr element

Explanation: While decoding an SNMP TRAP PDU, the SNMP Query Engine could not find a presentation element for the agent address. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_trap_PDU

EZA6482E  generic-trap bad class/form/id: class/form/id

Explanation: While decoding the presentation element for the generic-trap type in an SNMP TRAP PDU, the SNMP Query Engine was expecting the presentation element to have a class of UNIV (universal), a form of 0 (primitive), and an ID of 2 (integer). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_trap_PDU

EZA6483E  generic-trap bad integer: pe_error

Explanation: The SNMP Query Engine received the indicated pe_error while decoding the value of the generic-trap type in an SNMP TRAP PDU. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_trap_PDU
EZA6484E Trap-PDU missing generic-trap element

Explanation: While decoding an SNMP TRAP PDU, the SNMP Query Engine could not find a presentation element for the generic trap type. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_trap_PDU

EZA6485E specific-trap bad class/form/id: classformid

Explanation: While decoding the presentation element for the specific trap type for an SNMP TRAP PDU, the SNMP Query Engine was expecting the presentation element to have a class of UNIV (universal), a form of 0 (primitive), and an ID of 2 (integer). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_trap_PDU

EZA6486E specific-trap bad integer: pe_error

Explanation: The SNMP Query Engine received the indicated pe_error while decoding the presentation element for the value of the specific-trap type. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_trap_PDU

EZA6487E Trap-PDU missing specific-trap element

Explanation: While decoding an SNMP TRAP PDU, the SNMP Query Engine could not find a presentation element for the specific trap type. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.
Module: SNMPTYPE
Procedure Name: decode_SNMP_trap_PDU

---

**EZA6488E**  Trap-PDU missing time-stamp element

**Explanation:** While decoding an SNMP TRAP PDU, the SNMP Query Engine could not find the presentation element for the time stamp. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_trap_PDU

---

**EZA6489E**  Trap-PDU missing variable-bindings element

**Explanation:** While decoding an SNMP TRAP PDU, the SNMP Query Engine could not find the presentation element for the variable bindings. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_trap_PDU

---

**EZA6490E**  Trap-PDU has too many elements(6): number

**Explanation:** While decoding an SNMP TRAP PDU, the SNMP Query Engine was expecting the data portion of the message to have 6 presentation elements (enterprise object ID, agent address, generic trap type, specific trap type, time stamp, and variable bindings). Instead, the PDU had the indicated number of elements. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SNMPTYPE
Procedure Name: decode_SNMP_trap_PDU
EZA6491E  VarBind bad class/form/id: class/form/id

Explanation: While decoding the variable bindings in an SNMP PDU, the SNMP Query Engine was expecting
the presentation element to have a class of UNIV (universal), a form of 1 (constructed), and an ID of X'10'x (sequence).
Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer
traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the
encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the
request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly.
Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_VarBind

EZA6492E  VarBind bad form: form

Explanation: While decoding the variable bindings in an SNMP PDU, the SNMP Query Engine was expecting
the presentation element to have a form of 1 (constructed). Instead, the presentation element had the indicated form. The
SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer
traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the
encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the
request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly.
Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_VarBind

EZA6493E  VarBind missing name element

Explanation: While decoding the variable bindings in an SNMP PDU, the SNMP Query Engine could not find the
presentation element for the variable name. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer
traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the
encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the
request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly.
Contact the IBM Software Support Center.

Module: SNMPTYPE

Procedure Name: decode_SNMP_VarBind

EZA6494E  VarBind missing value element

Explanation: While decoding the variable bindings in an SNMP PDU, the SNMP Query Engine could not find the
presentation element for the variable value. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer
traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SNMPTYPE  
**Procedure Name:** decode_SNMP_VarBind

---

**EZA6495E** VarBind has too many elements(2): number

**Explanation:** While decoding the variable bindings in an SNMP PDU, the SNMP Query Engine was expecting the variable bindings pair to have 2 presentation elements (variable name and variable value). Instead, the variable bindings had the indicated number of elements. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SNMPTYPE  
**Procedure Name:** decode_SNMP_VarBind

---

**EZA6496E** VarBindList bad class/form/id: class/form/id

**Explanation:** While decoding the variable bindings list in an SNMP PDU, the SNMP Query Engine was expecting the presentation element to have a class of UNIV (universal), a form of 1 (constructed), and an ID of X'10'x (sequence). Instead, the presentation element had the indicated class, form, and ID. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SNMPTYPE  
**Procedure Name:** decode_SNMP_VarBindList

---

**EZA6497E** VarBindList bad form: form

**Explanation:** While decoding the variable bindings list in an SNMP PDU, the SNMP Query Engine was expecting the presentation element to have a form of 1 (constructed). Instead, the presentation element had the indicated form. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SNMPTYPE  
**Procedure Name:** decode_SNMP_VarBindList
**EZA6498E** VarBindList bad sequence: *pe_error*

**Explanation:** The SNMP Query Engine received the indicated *pe_error* while decoding the variable bindings list in an SNMP PDU. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES

**Procedure Name:** decode_SNMP_VarBindList

---

**EZA6499E** ObjectName initialization fails

**Explanation:** The SNMP Query Engine was encoding an SNMP PDU, but the PDU being encoded does not have a valid object name. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Contact the IBM Software Support Center.

**Module:** SMITYPES

**Procedure Name:** encode_SMI_ObjectName

---

**EZA6500W** ObjectName: out of memory

**Explanation:** The SNMP Query Engine was encoding an SNMP PDU, but the SNMP Query Engine could not allocate enough storage to build the presentation element for the object name. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, restart the SNMP Query Engine with a larger region size.

**System programmer response:** No action is needed.

**Module:** SMITYPES

**Procedure Name:** encode_SMI_ObjectName

---

**EZA6501W** number: out of memory

**Explanation:** The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the variable is *number*. The SNMP Query Engine could not allocate enough storage to build the presentation element for the variable value. The PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, restart the SNMP Query Engine with a larger region size.

**System programmer response:** No action is needed.

**Module:** SMITYPES

**Procedure Name:** encode_SMI_ObjectSyntax
EZA6502E string initialization fails

Explanation: The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the variable is string. The PDU did not have a valid string to be encoded. The PDU is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: Contact the IBM Software Support Center.

Module: SMITYPES

Procedure Name: encode_SMI_ObjectSyntax

EZA6503W string: out of memory

Explanation: The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the variable is string. The SNMP Query Engine could not allocate enough storage to build the presentation element for the variable value. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response: No action is needed.

Module: SMITYPES

Procedure Name: encode_SMI_ObjectSyntax

EZA6504E object initialization fails

Explanation: The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the variable is object id. The PDU being encoded did not have the object ID value. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: Contact the IBM Software Support Center.

Module: SMITYPES

Procedure Name: encode_SMI_ObjectSyntax

EZA6505W object: out of memory

Explanation: The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the variable is object id. The SNMP Query Engine could not allocate enough storage to build the presentation element for the variable value. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response: No action is needed.

Module: SMITYPES

Procedure Name: encode_SMI_ObjectSyntax

EZA6506W empty: out of memory

Explanation: The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the variable is empty. The SNMP Query Engine could not allocate enough storage to build the presentation element for the variable value. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.
System programmer response: No action is needed.

Module: SMITYPES

Procedure Name: encode_SMI_ObjectSyntax

EZA6507E  ObjectSyntax invalid choice selected: choice

Explanation: While encoding the variable bindings of an SNMP PDU, the SNMP Query Engine expected the syntax of the variable to be 1 (number), 2 (string), 3 (object ID), 4 (empty), 5 (internet address), 6 (counter), 7 (gauge), 8 (time-ticks), or 9 (opaque). Instead, the variable had the indicated syntax. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: Contact the IBM Software Support Center.

Module: SMITYPES

Procedure Name: encode_SMI_ObjectSyntax

EZA6510E  NetworkAddress invalid choice selected: type

Explanation: While encoding the agent address of a TRAP PDU, the SNMP Query Engine was expecting the network address type to be 1 (internet address). Instead, the network address had the indicated type. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: Contact the IBM Software Support Center.

Module: SMITYPES

Procedure Name: encode_SMI_NetworkAddress

EZA6511E  IpAddress initialization fails

Explanation: The SNMP Query Engine was encoding the agent address of an SNMP TRAP PDU or the variable bindings of an SNMP PDU. The syntax of the variable is internet address. The PDU being encoded did not have a valid internet address to be encoded. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: Contact the IBM Software Support Center.

Module: SMITYPES

Procedure Name: encode_SMI_IpAddress

EZA6512W  IpAddress: out of memory

Explanation: The SNMP Query Engine was encoding the agent address of an SNMP TRAP PDU or the variable bindings of an SNMP PDU. The syntax of the variable is internet address. The SNMP Query Engine could not allocate enough storage to build the presentation element for the internet address. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response: No action is needed.

Module: SMITYPES

Procedure Name: encode_SMI_IpAddress
**EZA6513W**  Counter: out of memory

**Explanation:** The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the variable is `counter`. The SNMP Query Engine could not allocate enough storage to build the presentation element for the variable value. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, restart the SNMP Query Engine with a larger region size.

**System programmer response:** No action is needed.

**Module:** SMITYPES

**Procedure Name:** encode_SMI_Counter

---

**EZA6514W**  Gauge: out of memory

**Explanation:** The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the variable is `gauge`. The SNMP Query Engine could not allocate enough storage to build the presentation element for the variable value. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, restart the SNMP Query Engine with a larger region size.

**System programmer response:** No action is needed.

**Module:** SMITYPES

**Procedure Name:** encode_SMI_Gauge

---

**EZA6515W**  TimeTicks: out of memory

**Explanation:** The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the variable is `time ticks`. The SNMP Query Engine could not allocate enough storage to build the presentation element for the variable value. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, restart the SNMP Query Engine with a larger region size.

**System programmer response:** No action is needed.

**Module:** SMITYPES

**Procedure Name:** encode_SMI_TimeTicks

---

**EZA6516E**  Opaque initialization fails

**Explanation:** The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the variable is `opaque`. The SNMP PDU being encoded did not have a valid value for the variable. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Contact the IBM Software Support Center.

**Module:** SMITYPES

**Procedure Name:** encode_SMI_Opaque

---

**EZA6517W**  Opaque: out of memory

**Explanation:** The SNMP Query Engine was encoding the variable bindings of an SNMP PDU. The syntax of the variable is `opaque`. The SNMP Query Engine could not allocate enough storage to build the presentation element for the variable value. The SNMP PDU is discarded.
System action: Processing continues with the next request.

Operator response: If the error persists, restart the SNMP Query Engine with a larger region size.

System programmer response: No action is needed.

Module: SMITYPES

Procedure Name: encode_SMI_Opaque

---

EZA6518E ObjectName bad class/form/id: class/form/id

Explanation: While decoding the presentation element of the variable bindings of an SNMP PDU, the SNMP Query Engine was expecting the presentation element to have a class of UNIV (universal), a form of 0 (primitive), and an ID of 6 (object ID). Instead, the presentation element had the indicated class, form, and ID. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SMITYPES

Procedure Name: decode_SMI_ObjectName

---

EZA6519E ObjectName bad form: form

Explanation: While decoding the presentation element of the variable bindings of an SNMP PDU, the SNMP Query Engine was expecting the presentation element to have a form of 0 (primitive). Instead, the presentation element had the indicated form. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SMITYPES

Procedure Name: decode_SMI_ObjectName

---

EZA6520E ObjectName bad object identifier: pe_error

Explanation: The SNMP Query Engine received the indicated pe_error while decoding the variable name of an SNMP PDU. The SNMP request is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: See z/OS Communications Server: IP and SNA Codes for information about pe_errors. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SMITYPES

Procedure Name: decode_SMI_ObjectName
EZA6521E  number bad integer: pe_error

Explanation: The SNMP Query Engine received the indicated pe_error while decoding the presentation element for the variable value of an SNMP PDU. The syntax of the variable is number. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: See z/OS Communications Server: IP and SNA Codes for information about pe_errors. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SMITYPES
Procedure Name: decode_SMI_ObjectSyntax

EZA6522E  string bad octetstring: pe_error

Explanation: The SNMP Query Engine was decoding the variable bindings of an SNMP PDU. The syntax of the variable is string. The SNMP Query Engine received the indicated pe_error while decoding the variable value. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: See z/OS Communications Server: IP and SNA Codes for information about pe_errors. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SMITYPES
Procedure Name: decode_SMI_ObjectSyntax

EZA6523E  object bad object identifier: pe_error

Explanation: The SNMP Query Engine received the indicated pe_error while decoding the presentation element for the variable value of an SNMP PDU. The syntax of the variable is object id. The SNMP PDU is discarded.

System action: Processing continues with the next request.

Operator response: Tell the system programmer about the error.

System programmer response: See z/OS Communications Server: IP and SNA Codes for information about pe_errors. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

Module: SMITYPES
Procedure Name: decode_SMI_ObjectSyntax

EZA6524E  ObjectSyntax has unknown choice: classformid

Explanation: While decoding the presentation element of the variable value of an SNMP PDU, the SNMP Query Engine was expecting the presentation element to have one of the following class and ID combinations:

<table>
<thead>
<tr>
<th>Class</th>
<th>ID</th>
</tr>
</thead>
<tbody>
<tr>
<td>APPL (application-specific)</td>
<td>0 (internet address)</td>
</tr>
<tr>
<td>APPL (application-specific)</td>
<td>1 (counter)</td>
</tr>
</tbody>
</table>

508  z/OS V1R13.0 Comm Svr: IP Messages Volume 1 (EZA)
Instead, the presentation element had the indicated class, form, and ID. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES

**Procedure Name:** decode_SMI_ObjectSyntax

---

**EZA6528E** NetworkAddress has unknown choice: class/form/id

**Explanation:** While decoding the presentation element for the agent address of the SNMP TRAP PDU, the SNMP Query Engine was expecting the presentation element to have a class of APPL (application-specific) and an ID of 0 (internet address). Instead, the presentation element had the indicated class and ID. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES, SMIPRINT

**Procedure Name:** decode_SMI_NetworkAddress

---

**EZA6528E** IpAddress bad class/id: class/id

**Explanation:** The SNMP Query Engine was decoding the agent address of an SNMP TRAP PDU or the variable bindings of an SNMP PDU. The syntax of the variable is internet address. The SNMP Query Engine was expecting the presentation element for the variable value or agent address to have a class of APPL (application-specific) and an ID of 0 (internet address). Instead, the presentation element had the indicated class and ID. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the
request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES  
**Procedure Name:** decode_SMI_IpAddress

---

**EZA6529E**  
**IpAddress bad octetstring:** pe_error  
**Explanation:** The SNMP Query Engine received the indicated pe_error while decoding the agent address of an SNMP TRAP PDU or the variable bindings of an SNMP PDU. The syntax of the variable is internet address. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** See [z/OS Communications Server: IP and SNA Codes](https://www.ibm.com) for information about pe_errors. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES  
**Procedure Name:** decode_SMI_IpAddress

---

**EZA6530E**  
**Counter bad class/id:** class/id  
**Explanation:** The SNMP Query Engine was decoding the variable bindings of an SNMP PDU. The syntax of the variable is counter. The SNMP Query Engine was expecting the presentation element for the variable value to have a class of APPL (application-specific) and a value of 1 (counter). Instead, the presentation element had the indicated class and ID. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** If the error persists, tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES  
**Procedure Name:** decode_SMI_Counter

---

**EZA6531E**  
**Counter bad integer:** pe_error  
**Explanation:** The SNMP Query Engine was decoding the variable bindings of an SNMP PDU. The syntax of the variable is counter. The SNMP Query Engine received the indicated pe_error while decoding the variable value. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** See [z/OS Communications Server: IP and SNA Codes](https://www.ibm.com) for information about pe_errors. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES  
**Procedure Name:** decode_SMI_Counter
**Explanation:** The SNMP Query Engine was decoding the variable bindings of an SNMP PDU. The syntax of the variable is `gauge`. The SNMP Query Engine was expecting the presentation element for the variable value to have a class of APPL (application-specific) and an ID of 2 (gauge). Instead, the presentation element had the indicated class and ID. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES

**Procedure Name:** decode_SMI_Gauge

---

**Explanation:** The SNMP Query Engine received the indicated `pe_error` while decoding the presentation element for the variable value of an SNMP PDU. The syntax of the variable is `gauge`. The SNMP request is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** See [z/OS Communications Server: IP and SNA Codes](https://www.ibm.com/support/docview.ws/docuid/ibm108586) for information about `pe_errors`. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES

**Procedure Name:** decode_SMI_Gauge

---

**Explanation:** The SNMP Query Engine was decoding the variable bindings of an SNMP PDU. The syntax of the variable is `time ticks`. The SNMP Query Engine was expecting the presentation element for the variable value to have a class of APPL (application-specific) and an ID of 3 (time ticks). Instead, the presentation element had the indicated class and ID. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES

**Procedure Name:** decode_SMI_TimeTicks

---

**Explanation:** The SNMP Query Engine received the indicated `pe_error` while decoding the presentation element for the variable value of an SNMP PDU. The syntax of the variable is `time ticks`. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.
System programmer response: See [z/OS Communications Server: IP and SNA Codes](http://www.ibm.com) for information about pe_errors. Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES

**Procedure Name:** decode_SMI_TimeTicks

---

**EZA6536E** Opaque bad class/id: `class/id`

**Explanation:** The SNMP Query Engine was decoding the variable bindings of an SNMP PDU. The syntax of the variable is `opaque`. The SNMP Query Engine was expecting the presentation element for the variable value to have a class of APPL (application-specific) and an ID of 4 (opaque). Instead, the presentation element had the indicated class and ID. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES

**Procedure Name:** decode_SMI_Opaque

---

**EZA6537E** Opaque bad octetstring: `pe_error`

**Explanation:** The SNMP Query Engine received the indicated `pe_error` while decoding the variable bindings of an SNMP PDU. The syntax of the variable is `opaque`. The SNMP PDU is discarded.

**System action:** Processing continues with the next request.

**Operator response:** Tell the system programmer about the error.

**System programmer response:** Run traces (either the SNMP Query Engine traces or some form of LAN analyzer traces) to determine whether the encoded stream was in error or if the SNMP Query Engine was in error. If the encoded stream was in error, contact the appropriate support center for the SNMP client or agent that sent the request. If the received encoded request is correct, then the SNMP Query Engine is parsing the request incorrectly. Contact the IBM Software Support Center.

**Module:** SMITYPES

**Procedure Name:** decode_SMI_Opaque

---

**EZA6617I** pDPIpacket: `Major=`, `Minor=`, `Release=`, `Type=`

**Explanation:** The SNMP agent has received a pDPIpacket request. Displayed are the values in the `snmp_dpi_hdr`. See [z/OS Communications Server: IP Programmer’s Guide and Reference](http://www.ibm.com) for more information about the pDPIpacket command.

**System action:** The SNMP agent continues processing the pDPIpacket.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** MKDPI

**Procedure Name:** mkdpi
EZA6618W  pDPIpacket: No support for this level of DPI

Explanation: The SNMP agent has received a pDPIpacket request with Major release not equal to 2 or a minor release not equal to 1 or a release version not equal to 0 or 1. See z/OS Communications Server: IP Programmer’s Guide and Reference for more information about the pDPIpacket command.

System action: The SNMP agent stops processing the pDPIpacket. The SNMP agent continues.

Operator response: Contact the system programmer.

System programmer response: Review the minor and major version levels and the release level displayed in preceding messages. Determine the agent making the request. Determine why it is making the request with an unsupported level of DPI.

Module: MKDPI
Procedure Name: mkdpi

EZA6619I  pDPIget: oid=object id

Explanation: The SNMP agent has received a pDPIpacket request. Displayed is the object identifier being requested. See z/OS Communications Server: IP Programmer’s Guide and Reference for more information about the pDPIpacket command.

System action: The SNMP agent continues processing the pDPIpacket.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MKDPI
Procedure Name: mkdpi

EZA6620I  pDPInext: group_id=group id, oid=object id

Explanation: The SNMP agent has received a pDPIpacket request. Displayed is the group identifier and object identifier being requested. See z/OS Communications Server: IP Programmer’s Guide and Reference for more information about the pDPIpacket command.

System action: The SNMP agent continues processing the pDPIpacket.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: MKDPI
Procedure Name: mkdpi

EZA6621E  pDPIset: Invalid packet, integer length =length

Explanation: The SNMP agent has received a pDPIpacket request. Displayed is the length of integer to be set. The length is not equal to 4. See z/OS Communications Server: IP Programmer’s Guide and Reference for more information about the pDPIpacket command.

System action: The SNMP agent stops processing the pDPIpacket. The SNMP agent continues.

Operator response: Contact the system programmer.

System programmer response: Determine the agent that is sending the incorrect packet. Analyze the output to determine why it is sending incorrect packets.

Module: MKDPI
Procedure Name: dpi_set_packet
EZA6622I  pDPIset: oid=object id, type='type'H, value_len= length

Explanation:  The SNMP agent has received a pDPIpacket request. Displayed is the object identifier, the
SNMP_TYPE and the length of the value. See z/OS Communications Server: IP Programmer’s Guide and Reference
for more information about the pDPIpacket command.

System action:  The SNMP agent continues processing the pDPIpacket.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  MKDPI

Procedure Name:  dpi_set_packet

EZA6623I  value=decimal_value hex_value

Explanation:  The SNMP agent has received a pDPIpacket request. Displayed is the value of the object identifier in
long decimal and hexadecimal formats. See z/OS Communications Server: IP Programmer’s Guide and Reference
for more information about the pDPIpacket command.

System action:  The SNMP agent continues processing the pDPIpacket.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  MKDPI

Procedure Name:  dpi_set_packet

EZA6624I  value=decimal_value hex_value

Explanation:  The SNMP agent has received a pDPIpacket request. Displayed is the value of the object identifier in
unsigned long decimal and hexadecimal formats. See z/OS Communications Server: IP Programmer’s Guide and Reference
for more information about the pDPIpacket command.

System action:  The SNMP agent continues processing the pDPIpacket.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  MKDPI

Procedure Name:  dpi_set_packet

EZA6625I  value='hex_value'H

Explanation:  The SNMP agent has received a pDPIpacket request. Displayed is the value of the object identifier as
an octet string format. See z/OS Communications Server: IP Programmer’s Guide and Reference for more information
about the pDPIpacket command.

System action:  The SNMP agent continues processing the pDPIpacket.

Operator response:  No action is needed.

System programmer response:  No action is needed.

Module:  MKDPI

Procedure Name:  dpi_set_packet

EZA6626I  pDPItrap: generic=decimal_value hex_value, specific=decimal_value hex_value

Explanation:  The SNMP agent has received a pDPItrap request. Displayed is the value of the traps generic and
specific fields. Each field is displayed in decimal and hexadecimal formats. See z/OS Communications Server: IP
Programmer’s Guide and Reference for more information about the pDPItrap command.
System action: The SNMP agent continues processing the pDPIpacket.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MKDPI
Procedure Name: dpi_trap_packet

EZA6627I pDPItrap: generic=decimal_value hex_value, specific=decimal_value hex_value enterprise=enterprise value

Explanation: The SNMP agent has received a pDPItrap request. Displayed is the value of the traps generic and specific fields along the enterprise value. The generic and specific fields are displayed in both decimal and hexadecimal formats. See z/OS Communications Server: IP Programmer’s Guide and Reference for more information about the pDPItrap command.

System action: The SNMP agent continues processing the pDPIpacket.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MKDPI
Procedure Name: dpi_trap_packet

EZA6628I pDPItrap: generic=decimal_value hex_value, specific=decimal_value hex_value no enterprise specified.

Explanation: The SNMP agent has received a pDPItrap request using version 1.1 or higher. Displayed are the values of the trap’s generic and specific fields. The generic and specific fields are displayed in both decimal and hexadecimal formats. No enterprise value was specified. See z/OS Communications Server: IP Programmer’s Guide and Reference for more information about the pDPItrap command.

System action: The SNMP agent continues processing the pDPIpacket.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: MKDPI
Procedure Name: dpi_trap_packet

EZA6630E fDPIparse: Unknown packet_type: type

Explanation: While parsing a packet from an SNMP subagent over the DPI interface, SNMPD was expecting the packet type to be 1 (get), 2 (getNext), 3 (set), 4 (trap), 5 (response), or 6 (register). Instead, the packet had the indicated type. The DPI request is discarded.

System action: Processing continues with the next request.
Operator response: Tell the system programmer about the error.
System programmer response: Check the DPI subagent program for errors. If there are no apparent errors in the subagent program, contact the IBM Software Support Center. If the subagent is the SNMP subagent existing in the TCPIP module, contact the IBM Software Support Center.
Module: MKDPI
Procedure Name: fDPIparse

EZA6631E cDPIpacket: Unknown packet_type

Explanation: The SNMP agent has received a packet that is unknown.

System action: The SNMP agent stops processing the pDPIpacket. The SNMP agent continues.
Operator response: Contact the system programmer.
System programmer response: Determine the device that is sending the incorrect packets. View the device output to
determine why it is sending incorrect packets. See \textit{z/OS Communications Server: IP Programmer's Guide and Reference} for more information about the \textit{pDPIpacket} command.

\textbf{Module: MKDPI}

\textbf{Procedure Name: cDPIpacket}

\textbf{EZA6632E cDPIset: Invalid packet, integer length} \textit{length}

\textbf{Explanation:} The SNMP agent has received a set packet. The variable to be set is an integer type. Integer types must have a length of 4.

\textbf{System action:} The SNMP agent stops processing the \textit{pDPIpacket}. The SNMP agent continues.

\textbf{Operator response:} Contact the system programmer.

\textbf{System programmer response:} Determine the device that is sending the incorrect packets. View the device output to determine why it is sending incorrect packets. See \textit{z/OS Communications Server: IP Programmer's Guide and Reference} for more information about the \textit{pDPIpacket} command.

\textbf{Module: MKDPI}

\textbf{Procedure Name: cDPIset}

\textbf{EZA6633E mkMIBquery: Unknown packet type} \textit{packet type}

\textbf{Explanation:} The SNMP agent has received a \textit{mkDPIregister} packet. While trying to query the Management Information Base (MIB) it determined that the packet type was unknown.

\textbf{System action:} The SNMP agent stops processing the \textit{pDPIpacket}. The SNMP agent continues.

\textbf{Operator response:} Contact the system programmer.

\textbf{System programmer response:} Determine the device that is sending the incorrect packets. View the device output to determine why it is sending incorrect packets. See \textit{z/OS Communications Server: IP Programmer's Guide and Reference} for more information about the \textit{mkDPIregister} command.

\textbf{Module: MKDPI}

\textbf{Procedure Name: mkMIBquery}

\textbf{EZA6634E mkDPIset: Unknown SNMP_TYPE} \textit{type}

\textbf{Explanation:} The SNMP agent has received an \textit{mkDPIset} packet. The SNMP\_TYPE is not supported.

\textbf{System action:} The SNMP agent stops processing the \textit{pDPIpacket}. The SNMP agent continues.

\textbf{Operator response:} Contact the system programmer.

\textbf{System programmer response:} Determine the device that is sending the incorrect packets. View the device output to determine why it is sending packets with incorrect SNMP\_TYPEs. See \textit{z/OS Communications Server: IP Programmer's Guide and Reference} for more information about the \textit{mkDPIset} command.

\textbf{Module: MKDPI}

\textbf{Procedure Name: dpi_set_packet}

\textbf{EZA6635E mkDPIlist: Unknown SNMP_TYPE} \textit{type}

\textbf{Explanation:} The SNMP agent has received an \textit{mkDPIlist} packet. The SNMP\_TYPE is not supported.

\textbf{System action:} The SNMP agent stops processing the \textit{pDPIpacket}. The SNMP agent continues.

\textbf{Operator response:} Contact the system programmer.

\textbf{System programmer response:} Determine the device that is sending the incorrect packets. View the device output to determine why it is sending packets with incorrect SNMP\_TYPEs. See \textit{z/OS Communications Server: IP Programmer's Guide and Reference} for more information about the \textit{mkDPIlist} command.

\textbf{Module: MKDPI}

\textbf{Procedure Name: dpi_set_packet}
Procedure Name: dpi_set_packet
Chapter 8. EZA8xxxx messages

EZA8200I  MVS TCP/IP Telnet version level

Explanation: You are running the indicated version of TCP/IP Telnet for MVS.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNTELPG

Procedure Name: ClearScreen

EZA8201I  Telnet will allow you to log in to a remote host

EZA8202I  machine. Note that the “remote” host may be the

EZA8203I  same as your local host.

EZA8205I  You may specify a remote host when invoking TELNET.

EZA8206I  Otherwise, you will be prompted to enter one of the

EZA8207I  following:

EZA8208I  a remote host, “quit”, or “?” for assistance.

EZA8210I  Specify the remote host either via an internet

EZA8211I  host name, or via an internet address of the form

EZA8212I  “nn.nn.nn.nn.”.

EZA8214I  Once connected, follow the log in and usage procedures

EZA8215I  of the remote host.

EZA8217I  To invoke one of several TELNET commands, hit an

EZA8218I  appropriate attention key:

EZA8219I  In Transparent Mode -- PA1

EZA8220I  In Line Mode -- any PFkey but PF 1,2,3, or 13,14,15
Then, enter any of the following commands:

- **Help or ?** -- Receive (this) assistance
- **AYT** -- Are You There?
- **AO** -- Abort Output
- **BRK** -- Break
- **IP** -- Interrupt Process
- **PA1** -- Send PA1 key; ONLY if NOT in Line Mode
- **SYNCH** -- Clear data path, except for TELNET commands
- **Quit** -- Quit the TELNET session

If in Line Mode, the following PF settings are in force:

- **PF1 or 13** -- Retrieve previous input line
- **PF2 or 14** -- Scroll halfway up
- **PF3 or 15** -- Turn off display of user-line; designed to be used before entering password

Explanation: These messages are displayed when Help is invoked. This is displayed by typing a question mark (?) or `help` at the command line.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: HelpMe

Telnet terminated -- Connection closed

Explanation: The Telnet session has ended because of a connection state type of CONNECTIONclosing, SENDINGonly, or NONEXISTENT notification has been received.

System action: The Telnet connection ends. TCPIP continues.

Operator response: Reinitiate the Telnet connection if desired.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: UtEndTelnet
EZA8247E  Telnet terminated
Explanation: The Telnet connection has been ended.
System action: The Telnet connection ends. TCPIP continues.
Operator response: Reinitiate the Telnet connection if desired.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: UtEndTelnet

EZA8248E  Port ‘port number’ invalid (out-of-range or not numeric.)
Explanation: The port number specified in the port_number parameter of the TELNET command is incorrect. The port parameter indicates the port number to which you want to connect on the remote host. When connecting to a non-TELNET port, the data exchange must follow the protocol recognized by the other port. The default is well-known port 23.
System action: TCPIP continues.
Operator response: Check for the correct command syntax and port number and reissue the command. See the z/OS Communications Server: IP User’s Guide and Commands for more information.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: GetParameters

EZA8249I  Ignoring extraneous parameters after port
Explanation: Additional parameters have been entered after the port number parameter of the TELNET command. These parameters are unnecessary and are being ignored.
System action: TCPIP continues.
Operator response: Check for correct command syntax and try command again.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: GetParameters

EZA8250I  Missing parm after TRANSLATE
Explanation: The data set name of the translation table for the TRANSLATE parameter is missing. This parameter specifies a nonstandard translation table file and can be declared as an option of the TELNET command.
System action: TCPIP continues.
Operator response: Enter the correct data set name and resubmit the command. See the z/OS Communications Server: IP User’s Guide and Commands for more information.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: GetParameters

EZA8251I  Invalid option “value” ignored
Explanation: An incorrect option in the TELNET command has been declared. This option is being ignored.
System action: TCPIP continues.
Operator response: Check for the correct command syntax and try the command again. See the z/OS Communications Server: IP User’s Guide and Commands for more information.
EZA8252E • EZA8255E

System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: GetParameters

EZA8252E  errmsg (msgnum)

Explanation: This message indicates the return code received after the BeginTcpIp or Handle procedure was unsuccessful. The BeginTcpIp procedure is used to inform the TCPIP address space that you want to start using its services. The Handle procedure is used to specify that you want to receive notifications in the given set. This procedure is called after BeginTcpIp and before accessing the TCPIP services.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action: TCPIP continues.
Operator response: Consult the system programmer.
System programmer response: Respond as indicated by the message EZAmsgnum.
Module: TNUTMAS
Procedure Name: GetParameters

EZA8253I  Host "host ID" Unknown.

Explanation: The foreign host name specified in the foreign_host parameter of the TELNET command is incorrect or Telnet was not able to reach the destination. This parameter specifies the name or internet address of the local or remote host.

System action: TCPIP continues.
Operator response: Check the correct command syntax and host name and try the command again. See the z/OS Communications Server: IP User’s Guide and Commands for more information.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: GetParameters

EZA8254I  Enter foreign host (and optional port), “quit”, or “?” for help:

Explanation: The host parameter was not specified with the TELNET command. If you do not specify the name or internet address of the local or remote host, you are prompted for the remote host.

System action: TCPIP continues.
Operator response: Enter the local or remote host name and optional port number. See the z/OS Communications Server: IP User’s Guide and Commands for more information.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: UtStartTelnetInit

EZA8255E  Cannot load translate table data set name; errmsg (msgnum)

Explanation: The data set name specified in the data set name option of the TRANSLATE parameter of the TELNET command is incorrect. This data set name specifies the name of a nonstandard translation table.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.
System action: The Telnet connection ends. TCPIP continues.

Operator response: Check for the correct translation data set name, initiate the Telnet connection and resubmit the command. See the z/OS Communications Server: IP User’s Guide and Commands for more information.

System programmer response: Respond as indicated by the message EZAnsgnum.

Module: TNUTMAS

Procedure Name: UtStartTelnetInit

---

EZA8256I Connecting to remote host, port port number

Explanation: A connection has been initiated between the server and the indicated remote host. This message also indicates the port number for which the connection has been opened on the remote host.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: UtStartTelnetInit

---

EZA8259E Waiting for TCP connection resources. Use ATTN to quit.

Explanation: The procedure TcpWaitOpen, which initiates a TCP connection, returned a ZEROresources return code. ZEROresources means that TCP cannot handle any more connections at this time. Since the current application does not handle RESOURCESavailable notifications and the TcpWaitOpen procedure returned a ZEROresources return code, the connection is ended. The RESOURCESavailable notifications can be declared in the Notifications record. This notification is sent only if a previous TcpOpen or TcpWaitOpen returned ZEROresources. This message is displayed with EZA8260E.

System action: The Telnet connection ends. TCPIP continues.

Operator response: Reinitiate the Telnet connection.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: UtStartTelnetInit

---

EZA8260E errmsg (msgnum)

Explanation: This message displays the return code received after a connection has ended. This message is displayed with EZA8259E.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAnsgnum.

System action: The Telnet connection ends.

Operator response: No action is needed.

System programmer response: Respond as indicated by the message EZAnsgnum.

Module: TNUTMAS

Procedure Name: UtStartTelnetInit

---
EZA8261I Quitting...bye

Explanation: An external interrupt notification has been received by the server to stop the Telnet connection. An EXTERNAL interrupt notification is given when a simulated external interrupt occurs in your address space.

System action: The Telnet connection ends.

Operator response: Reinitiate the Telnet connection.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: UtStartTelnetInit

EZA8262I errmsg (msgnum)

Explanation: This message indicates the return code received after the Telnet connection has ended.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmsgnum.

System action: The Telnet connection ends.

Operator response: Notify the system programmer of the message.

System programmer response: Respond as indicated by the message EZAmsgnum.

Module: TNUTMAS

Procedure Name: UtStartTelnetInit

EZA8263E TELNET requires a 327x-type terminal

Explanation: The terminal type currently being used is not one supported by the Telnet protocol. The TELNET command supports IBM 3270-type display stations. Examples of supported display stations are:

- IBM 3178 Display Station
- IBM 3179 Display Station
- IBM 3180 Display Station
- IBM 3191 Display Station
- IBM 3192 Display Station
- IBM 3193 Display Station
- IBM 3194 Display Station
- IBM 3275 Display Station Model 2
- IBM 3276 Control Unit Display Station Models 2, 3, and 4
- IBM 3277 Display Station Model 2
- IBM 3278 Display Station Models 2, 3, 4, and 5
- IBM 3279 Color Display Station Models 2 and 3.

System action: The Telnet connection ends.

Operator response: Run a 3270 type terminal emulator or use a 3270 type display station.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: UtStartTelnetInit

EZA8265I Using Line Mode...

Explanation: The line mode parameter has been specified for the TELNET command. The LINEMODE parameter indicates the logon operation. In line mode, the remote host's output is displayed on the screen one line at a time, without full-screen capabilities.

System action: TCPIP continues.
Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: UtFinishTelnetInit

---

EZA8267I  Notes on using Telnet when in Line Mode;

EZA8268I  - To hide Password, Hit PF3 or PF15

EZA8269I  - To enter Telnet Command, Hit PF14-12, or PF16-24

Explanation: These messages provide information about Telnet when the LINEMODE parameter for the TELNET command has been specified.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: UtFinishTelnetInit

---

EZA8270I  Using Transparent Mode...

Explanation: The transparent mode of operation is the default for the TELNET command. When in transparent mode, the remote host's full-screen capabilities are functional on the local terminal.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: UtFinishTelnetInit

---

EZA8272I  Notes on using Telnet when in Transparent Mode;

EZA8273I  - To enter Telnet Command, Hit PA1

Explanation: These messages provide information about using Telnet when the transparent mode has been specified in the TELNET command.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: UtFinishTelnetInit

---

EZA8275I  **** Telnet: Internal consistency failure;

EZA8276I  message

Explanation: The procedure UtMustHave, which checks that a given internal consistency condition exists, was unsuccessful. This message displays the condition associated with this procedure.

Although these messages will be displayed on the console without the message number, the following table lists the
message numbers. See those messages for more information.

**Description**

- bad case in UtToServ.
- BuffEmpty: bad return code: errmsg (msgnum)
- BuffEmpty: errmsg (msgnum)
- CallToServer: Bad user command.
- CallTcpSend: errmsg (msgnum)
- CallToServer: Bad Tag.
- CallToUser: bad return code.
- GetNote finds user attention flag wrong.
- GobbleChar: urgent bytes went below 0 before DM
- GobbleChar: urgent bytes went below 0 before DM
- GobbleChar: urgent bytes went below 0 before DM
- GobbleChar: urgent bytes went below 0 before DM
- GobbleChar: urgent bytes went below 0 before DM
- GobbleChar: urgent bytes went below 0 before DM
- GobbleChar: urgent bytes went below 0 before DM
- GobbleChar: urgent bytes went below 0 before DM
- GobbleChar: urgent bytes went below 0 before DM
- GobbleChar: urgent bytes went below 0 before DM
- GobbleChar: urgent bytes went below 0 before DM
- IacNoteArrives: server sent DM after Urgentspan
- IssueRead: Bad Return code.
- MainLoop: Bad notification: notification
- NegotiateOptions: bad subnegotiation sent
- NewLineRead: bad line feed state.
- NewLineRead: bad line feed state.
- Pop (in UtToUser) : bad stack pointer.
- Received Subnegotiation on Echo option
- Received Subnegotiation on Transmit-binary option
- Received Subnegotiation on Use-Eor option
- Received Subnegotiation on unsupported option
- TelnetRead: Length of subnegotiation too long
- TelnetRead: Expecting IACnvt.
- TelnetRead: Length of subnegotiation too long
- TelnetRead: bad subnegotiation sent
- TelnetRead: Bad UnderstandingState.
- TelnetRead: urgent bytes went below 0 before DM
- TryToSendData: errmsg (msgnum)
- UserCommand: Bad Telnet command.
- UtEndTelnet: Bad Turncode from GetNextNote.
- UtGetBuffSpace: Bad ReturnCode.
- UtGetBuffSpace: UrgentSpan is negative.
- UtToUser: Bad CurrentChar.
- UtTsInit: Bad return code from the receive.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  See the message number for information on the system programmer response.
Module:  TNUTMAS
Procedure Name:  UtMustHave

**EZA8277I**  CallTcpSend:  `errmsg (msgnum)`

Explanation:  This message is displayed after an unsuccessful attempt to start a Telnet session. This message is displayed with EZA8246E.

`errmsg` is the text of the message that describes the error.

`msgnum` is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in `errmsg`. For more information about this message, see message EZA`msgnum`.

System action:  TCPIP continues.
Operator response:  Inform the system programmer of this message.
System programmer response:  Respond as indicated by the message EZA`msgnum`.
Module:  TNUTMAS
Procedure Name:  CallTcpSend

**EZA8278I**  UtGetBuffSpace:  Bad ReturnCode.

Explanation:  The procedure UtGetBuffSpace, which is called when a TcpSend is unsuccessful due to insufficient buffer space, has been initialized. This procedure also receives notes from the notification list until it finds a BUFFERspaceAVAILABLE note. A BUFFERspaceAVAILABLE notification is given when space becomes available on a connection. This message is displayed with EZA8246E.

System action:  The Telnet connection ends.
Operator response:  Reinitiate the Telnet connection.
System programmer response:  No action is needed.
Module:  TNUTMAS
Procedure Name:  UtGetBuffSpace

**EZA8279I**  Connection closed

Explanation:  The Telnet connection has ended.

System action:  The Telnet connection ends.
Operator response:  Reinitiate the Telnet connection if required.
System programmer response:  No action is needed.
Module:  TNUTMAS
Procedure Name:  UtGetBuffSpace

**EZA8280I**  GetNote finds user attention flag wrong.

Explanation:  The procedure GetNote, which checks and processes the notification queue, found that there were no user attention notifications pending or that the queue was empty. This message is displayed with EZA8246E.

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module: TNUTMAS
Procedure Name: GetNote

EZA8281I CallToServer: Bad user command.
Explanation: An incorrect command has been received by the server. This message is displayed with EZA8246E.
System action: TCPIP continues.
Operator response: Check for the correct function keys and commands available when using transparent mode. See the z/OS Communications Server: IP User’s Guide and Commands for more information.
System programmer response: No action is needed.

Module: TNUTMAS
Procedure Name: CallToServer

EZA8282I CallToServer: Bad Tag.
Explanation: An incorrect command or attention key has been received by the server. This message is displayed with EZA8246E.
System action: TCPIP continues.
Operator response: Check for the correct function keys and commands available when using transparent mode. See the z/OS Communications Server: IP User’s Guide and Commands for more information.
System programmer response: No action is needed.

Module: TNUTMAS
Procedure Name: CallToServer

EZA8283I in SendNegotiation

EZA8284I Claim is (ord) claim: Option is (ord) option
Explanation: The procedure SendNegotiation processes option negotiations. This message indicates the command code received for the option negotiation.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: TNUTMAS
Procedure Name: SendNegotiation

EZA8285I in FindTermName
Explanation: The procedure FindTermName, which processes the terminal name and sends the TERMINAL-type option subnegotiation to the client, has been initialized.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: TNUTMAS
Procedure Name: FindTermName
The SendIS procedure has been initiated. This procedure processes “terminal type is” statements from the user. The command code for IS is 0.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: SendIS

Indicates the terminal name as it was declared in the terminal-type option negotiation.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: SendIS

The procedure DONTnack, which sends a DONT negotiation acknowledgment, has been initiated. A DONT command is a denial of request to perform a specified option.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: DONTnack

The procedure WONTnack, which sends a WONT negotiation acknowledgment, has been initiated. A WONT command is a refusal to perform a specified option.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: WONTnack

The procedure BackOutOptions, which ends any transparent mode option negotiation and resets the option negotiation status, has been initiated.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: BackOutOptions

**EZA8291I** in Negotiate Options; option is (ordinal value): option

**EZA8292I** tag is (ordinal value): tag

Explanation: The procedure NegotiateOptions, which handles the negotiation of Telnet options, has been initiated. This message also indicates the option negotiation command.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: NegotiateOptions

**EZA8293I** DONT or WONT received for unknown option

Explanation: A DONT or WONT command has been received for an option that was not specified or is not known.

System action: TCPIP continues.

Operator response: Check for the correct Telnet option command syntax and resubmit the command. See RFC 854 for more information about option negotiations. See Appendix B, “Related protocol specifications,” on page 655 for information about accessing RFCs.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: NegotiateOptions

**EZA8294I** Received Subnegotiation on Echo option

Explanation: A subnegotiation command has been received after an Echo option. When the Echo option is in effect, the party at the end performing the echoing is expected to transmit (echo) data characters it receives back to the sender of the data character. This message is displayed with EZA8246E.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: NegotiateOptions

**EZA8295I** NegotiateOptions: bad subnegotiation sent

Explanation: The procedure NegotiateOptions, which handles the negotiation of Telnet options, received an incorrect subnegotiation command. This message is displayed with EZA8246E.

System action: TCPIP continues.

Operator response: Check for the correct Telnet option command syntax and resubmit the command. See RFC 854 for more information about option negotiations. See Appendix B, “Related protocol specifications,” on page 655 for information about accessing RFCs.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: NegotiateOptions
EZA8296I  Received Subnegotiation on Use-Eor option

Explanation: A subnegotiation option command has been received on a Use-Eor option. End of record (EOR) is used to frame the end of a write command when in transparent mode. This message is displayed with EZA8246E.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: NegotiateOptions

EZA8297I  Received Subnegotiation on Transmit-binary option

Explanation: A subnegotiation option has been received on a transmit binary option. The transmit binary option allows for a transmission change to 8-bit binary. This message is displayed with EZA8246E.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: NegotiateOptions

EZA8298I  Received Subnegotiation on unsupported option

Explanation: The option for which a subnegotiation has been received is not implemented on this Telnet connection. This message is displayed with EZA8246E.

System action: TCPIP continues.

Operator response: Check for the correct Telnet option command syntax and resubmit the command. See RFC 854 for more information about option negotiations. See Appendix B, "Related protocol specifications," on page 655 for information about accessing RFCs.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: NegotiateOptions

EZA8305I  in IacNoteArrives

Explanation: The procedure IacNoteArrives, which handles Interpret As Command (IAC) commands received from the Telnet server, has been initiated.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: IacNoteArrives

EZA8306I  Option neg. stuff arrives

Explanation: The procedure IacNoteArrives, which handles Interpret As Command (IAC) commands received from the Telnet server, has received a Telnet option negotiation command.

System action: TCPIP continues.

Operator response: No action is needed.
**EZA8307I**  •  **EZA8310I**

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: IacNoteArrives

---

**EZA8307I**  IacNoteArrives: server sent DM after Urgentspan

Explanation: A data mark (DM) has been received. A data mark is a reserved octet that is appended to a control function. While in Urgent mode, this option will end a program running on the remote host. This message is displayed with EZA8246E.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: IacNoteArrives

---

**EZA8308I**  Other Telnet char arrives

Explanation: Additional Telnet characters are being received by the server.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: IacNoteArrives

---

**EZA8309I**  CallToUser: bad return code.

Explanation: The procedure CallToUser, which processes return codes received from UtToUser, was unsuccessful because of an incorrect return code received. The procedure UtToUser contains the routines for correspondence from server Telnet to the user. This message is displayed with EZA8246E.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: This message should be preceded by more specific error messages. Correct the errors indicated by the preceding messages.

Module: TNUTMAS

Procedure Name: CallToUser

---

**EZA8310I**  DataDelivered; # bytes: bytes

Explanation: Indicates the number of bytes delivered from the user to the Telnet server.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNUTMAS

Procedure Name: MainLoop
**EZA8311I**  UrgentMode;LastUrgByte *byte*

**Explanation:** The server has received an attention signal to begin data transmission in urgent mode. When in urgent mode, the data stream is immediately scanned for attention signals. These signals are used to invoke special handling of the data stream by the process that receives it. This message also indicates the last urgent byte being delivered.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNUTMAS

**Procedure Name:** MainLoop

**EZA8312I**  got USERwantsATTENTION

**Explanation:** The user has entered an attention key. An attention key is a function key on terminals that, when pressed, causes an I/O interruption in the processing unit.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNUTMAS

**Procedure Name:** MainLoop

**EZA8313I**  got USERdeliveresLINE

**Explanation:** The user has entered a line of data at the terminal.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNUTMAS

**Procedure Name:** MainLoop

**EZA8314I**  got CONNECTIONstate

**Explanation:** The client has received a connection state change notification. This notification is given when a TCP connection receives information from the network that causes the state of the connection to change. Such changes might arise when the remote client opens, closes, or abends the connection.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNUTMAS

**Procedure Name:** MainLoop

**EZA8315I**  Connection closed

**Explanation:** The Telnet connection has ended.

**System action:** The Telnet connection ends.

**Operator response:** Reinitiate the Telnet connection if required.

**System programmer response:** No action is needed.

**Module:** TNUTMAS
 Procedure Name: MainLoop

EZA8316I  in URGENTpending
Explanation: An URGENTpending notification has been received. This notification is given when the TCPIP service is informed by the remote site that there is urgent data not yet delivered to the client.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: MainLoop

EZA8317I  UtGetBuffSpace: UrgentSpan is negative.
Explanation: No more urgent data is found in the data stream before a data mark (DM) is received. This message is displayed with EZA8246E.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: MainLoop

EZA8318I  UrgentMode
Explanation: Urgent mode has been initiated. When in urgent mode, the data stream is immediately scanned for attention signals. These signals are used to invoke special handling of the data stream by the process that receives it.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: MainLoop

EZA8319I  got EXTERNALinterrupt: code
Explanation: An EXTERNAL interrupt notification has been received. This notification is given when a simulated external interrupt occurs in your address space.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: MainLoop

EZA8320I  MainLoop: Bad notification: notification
Explanation: The procedure MainLoop, which processes data from the user to the Telnet server, was unsuccessful because of an incorrect notification received. This message displays the notification name. This message is displayed with EZA8246E.
System action: TCPIP continues.
Operator response: This message should be preceded by more specific error messages.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: MainLoop

EZA8321I in UtEndTelnet
Explanation: The procedure UtEndTelnet, which ends the user’s Telnet connection, turns off the full-screen services, and shuts down the TCP connection, has been initiated.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: UtEndTelnet

EZA8322I Session ended. <ENTER> to return to TSO
Explanation: The Telnet connection has ended. To return to the time sharing option (TSO) environment, press the ENTER key.
System action: The Telnet connection ends. TCPIP continues.
Operator response: Press the ENTER key.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: UtEndTelnet

EZA8323I UtEndTelnet: Bad TurnCode from GetNextNote.
Explanation: The UtEndTelnet procedure, which stops a Telnet connection, received an incorrect return code from GetNextNote. The GetNextNote procedure gets the next notification off the notification queue. This message is displayed with EZA8246E.
System action: The Telnet connection is ended. TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: UtEndTelnet

EZA8324I Using TCPIPTES...
Explanation: The test option has been specified for the NETSTAT command. This command provides information about the status of the local host. The TEST option displays detailed information about the TCPIPTES address space. You can use the TEST parameter in conjunction with any other NETSTAT parameter to display information about the specified TCPIPTES address space.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNUTMAS
Procedure Name: GetParameters
EZA8325I Option (ord of enum):

EZA8326I WILL.

EZA8327I WILL consummated.

EZA8328I DO.

EZA8329I DO consummated.

**Explanation:** Indicates the options that are currently in effect. A WILL option indicates the desire to begin performing, or confirmation that you are now performing, the indicated option. A DO option indicates the request that the other party perform, or confirmation that you are expecting the other party to perform, the indicated option. Depending on the options specified only some of these options will be displayed.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNUTMAS

**Procedure Name:** UtFinishTelnetInit

---

EZA8331I Telnet

**Explanation:** The Telnet services have been invoked.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNUTMAS

**Procedure Name:** UtFinishTelnetInit

---

EZA8335I Pop (in UtToUser): bad stack pointer.

**Explanation:** Telnet issues this message while attempting to process data received by the server. The submitted data has been processed and no more procedure calls are required. This message is displayed with EZA8246E.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNTOUSE

**Procedure Name:** Push

---

EZA8337I BuffEmpty : bad return code : errmsg (msgnum)

**Explanation:** Telnet issues this message when an unsuccessful return code is given while attempting to retrieve data from the buffer for processing. This message is displayed with EZA8246E.

`errmsg` is the text of the message that describes the error.

`msgnum` is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in `errmsg`. For more information about this message, see message EZAmsgnum.

**System action:** TCPIP continues.

**Operator response:** No action is needed.
System programmer response: Respond as indicated by the message EZAmsgnum.

Module: TNTOUSE

Procedure Name: GetMoreData

Explanation: This message occurs as a result of the most recent character to be processed being retrieved from the buffer, processed, and printed to the user screen.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNTOUSE

Procedure Name: IacScan

EZA8339I ord: Transparent mode, found IAC at IacOffset number is character

Explanation: Telnet issues this message as a result of an Interpret As Command (IAC) character being detected while tracing is on in transparent mode. The IAC is displayed with a command code. If this command deals with option negotiation, the command will have a number to show the code for the referenced option.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNTOUSE

Procedure Name: IacScan

EZA8340I GobbleChar: urgent bytes went below 0 before DM

Explanation: Telnet issues this message while in transparent mode. The data submitted containing urgent data bytes has been exhausted before the data mark. This message is displayed with EZA8246E.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNTOUSE

Procedure Name: IacScan

EZA8341I GobbleChar: urgent bytes went below 0 before DM

Explanation: Telnet issues this message while in Line (non-transparent) mode. The data submitted containing urgent data bytes have been exhausted before detecting a data mark. This message is displayed with EZA8246E.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNTOUSE

Procedure Name: IacScan
EZA8342I  GobbleChar: urgent bytes went below before DM

Explanation: Telnet issues this message while in line (non-transparent) mode. The data submitted containing urgent data bytes have been exhausted before detecting a data mark. This message is displayed with EZA8246E.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNTOUSE
Procedure Name: IacScan

EZA8343I  NewLineRead: bad line feed state.

Explanation: Telnet issues this message while in line (non-transparent) mode. An incorrect line feed state was recognized while attempting to read the line feed set sequence. This message is displayed with EZA8246E.

System action: TCPIP continues.
Operator response: Submit a valid LfSet sequence in the data set to declare a new line.
System programmer response: No action is needed.
Module: TNTOUSE
Procedure Name: CheckForNeedToSuspend

EZA8344I  NewLineRead: bad line feed state.

Explanation: Telnet issues this message while in line (non-transparent) mode. An incorrect line feed state was recognized while attempting to read the carriage return set sequence. This message is displayed with EZA8246E.

System action: TCPIP continues.
Operator response: Submit a valid CrSet sequence in the data set to declare a new line.
System programmer response: No action is needed.
Module: TNTOUSE
Procedure Name: CheckForNeedToSuspend

EZA8345I  in TelnetRead

Explanation: Telnet issues this message while tracing is on. The Telnet command, which was indicated by the presence of an Interpret As Command (IAC) character, is now being read.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNTOUSE
Procedure Name: TelnetRead

EZA8346I  TelnetRead: Excepting IACnvrt.

Explanation: Telnet issues this message while tracing is on. The client is now scanning for an Interpret As Command (IAC) character. This message is displayed with EZA8246E.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNTOUSE
Procedure Name: TelnetRead

EZA8347I TelnetRead: urgent bytes went below 0 before DM
Explanation: Telnet issues this message while tracing is on. The data submitted containing urgent bytes have been exhausted before the data mark. This message is displayed with EZA8246E.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNTOUSE
Procedure Name: TelnetRead

EZA8348I TelnetRead: urgent bytes went below 0 before DM
Explanation: Telnet issues this message while in urgent mode. While looking for a command following the IAC (Interpret As Command) character, the data containing urgent bytes has been exhausted before the data mark. This message is displayed with EZA8246E.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNTOUSE
Procedure Name: TelnetRead

EZA8349I TelnetRead: urgent bytes went below 0 before DM
Explanation: Telnet issues this message while in urgent mode. While scanning for the negotiation option following the Interpret As Command (IAC) character, the data containing urgent bytes was exhausted before detecting a data mark. This message is displayed with EZA8246E.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNTOUSE
Procedure Name: TelnetRead

EZA8350I TelnetRead: urgent bytes went below 0 before DM
Explanation: Telnet issues this message while in urgent mode. The data containing urgent bytes was exhausted before detecting a data mark while negotiating options. This message is displayed with EZA8246E.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TNTOUSE
Procedure Name: TelnetRead

EZA8351I TelnetRead: urgent bytes went below 0 before DM
Explanation: Telnet issues this message while in urgent mode. While scanning for a negotiation option following the Interpret As Command (IAC) character, the data containing urgent bytes was exhausted before detecting a data mark. This message is displayed with EZA8246E.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: Tntonuse
Procedure Name: TelnetRead

EZA8352I  TelnetRead: Length of subnegotiation too long
Explanation: Telnet issues this message to indicate that too many negotiation commands were submitted during the negotiation process. This message is displayed with EZA8246E.
System action: TCPIP continues.
Operator response: Resubmit the negotiation process.
System programmer response: No action is needed.
Module: Tntonuse
Procedure Name: TelnetRead

EZA8353I  TelnetRead: urgent bytes went below 0 before DM
Explanation: Telnet issues this message while in urgent mode. While scanning for the end of the subnegotiations, the data containing urgent bytes was exhausted before detecting a data mark. This message is displayed with EZA8246E.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: Tntonuse
Procedure Name: TelnetRead

EZA8354I  TelnetRead: urgent bytes went below 0 before DM
Explanation: Telnet issues this message while in urgent mode. While scanning for the end of the Telnet command, the data containing urgent bytes was exhausted before detecting a data mark. This message is displayed with EZA8246E.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: Tntonuse
Procedure Name: TelnetRead

EZA8355I  TelnetRead: Length of subnegotiation too long
Explanation: Telnet issues this message while scanning for the end of the Telnet subnegotiations. Instead of a subnegotiation end command, an Interpret As Command (IAC) character was detected. This message is displayed with EZA8246E.
System action: TCPIP continues.
Operator response: Resubmit the Telnet command subnegotiations.
System programmer response: No action is needed.
Module: Tntonuse
Procedure Name: TelnetRead
EZA8356I TelnetRead: Bad subnegotiation sent.

Explanation: Telnet issues this message to indicate that it has received an incorrect subnegotiation packet from the other side of the connection. This message is displayed with EZA8246E.

System action: TCPIP continues.

Operator response: Resubmit the Telnet command.

System programmer response: No action is needed.

Module: TNTOUSE

Procedure Name: TelnetRead

EZA8357I TelnetRead: Bad UnderstandingState.

Explanation: The Telnet server has received an incorrect message while expecting either subnegotiation commands or Interpret As Command (IAC) character. This message is displayed with EZA8246E.

System action: TCPIP continues.

Operator response: Check client machine for the syntax of the command being submitted.

System programmer response: No action is needed.

Module: TNTOUSE

Procedure Name: TelnetRead

EZA8358I UtToUser: Bad CurrentChar.

Explanation: This message indicates an internal consistency error. For more information, see message EZA8275I.

System action: TCPIP continues.

Operator response: 

System programmer response: No action is needed.

Module: TNTOUSE

Procedure Name: TelnetRead

EZA8359I Data received from TCP:

Explanation: Telnet issues this message when more data is sent to the client machine due to data exhaustion of the buffer.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNTOUSE

Procedure Name: UtToUser

EZA8361I address

Explanation: Telnet issues this message while tracing is on and in transparent mode. The address of the current character is displayed.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNTOUSE
**EZA8364I**  

Procedure Name: UtToUser

**EZA8364I** address

Explanation: Telnet issues this message while tracing is on and in transparent mode. The address of the current character is displayed.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNTOUSE

Procedure Name: UtToUser

**EZA8366I** bad case in UtToUser

Explanation: The command called to be processed by the Utouser procedure was not recognized.

System action: TCPIP continues.

Operator response: Check the Telnet client machine for the syntax of the command being submitted.

System programmer response: No action is needed.

Module: TNTOUSE

Procedure Name: UtToUser

**EZA8367I** BuffEmpty: errmsg (msgnum)

Explanation: Telnet issues this message while attempting to receive more data from the server. The buffer that contained the data was empty. This message is displayed with EZA8246E.

errmsg is the text of the message that describes the error.

msgnum is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in errmsg. For more information about this message, see message EZAmgnum.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: Respond as indicated by the message EZAmgnum.

Module: TNTOUSE

Procedure Name: UtUsuInit

**EZA8368I** Valid telnet cmds: AO,AYT,BRK,IP,PA1,QUIT,SYNCH.

Explanation: Telnet issues this message when an incorrect Telnet subcommand is submitted. A list of valid Telnet command is displayed.

System action: TCPIP continues.

Operator response: Resubmit the Telnet command.

System programmer response: No action is needed.

Module: TNTOSRV

Procedure Name: FsHelpMe
**EZA8369I** IssueRead: Bad Return Code.

**Explanation:** Telnet attempted to create a new buffer for user input, but one already exists. This message is displayed with EZA8246E.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNTOSRV

**Procedure Name:** IssueRead

---

**EZA8370I** TryToSendData: \( \text{errmsg (msgnum)} \)

**Explanation:** An attempt to send data was unsuccessful. The reason for the unsuccessful attempt is indicated by the SayCalRe portion of this message. This message is displayed with EZA8246E.

\( \text{errmsg} \) is the text of the message that describes the error.

\( \text{msgnum} \) is the 4-digit numeric portion of the message identifier of the EZA message whose text is displayed in \( \text{errmsg} \). For more information about this message, see message EZA\text{msgnum}.

**System action:** TCPIP continues

**Operator response:** No action is needed.

**System programmer response:** Respond as indicated by the message EZA\text{msgnum}.

**Module:** TNTOSRV

**Procedure Name:** TryToSend

---

**EZA8371I** in Senddata

**Explanation:** Telnet issues this message while in debug mode to indicate that it is using the procedure Senddata, which sends data to Server Telnet.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNTOSRV

**Procedure Name:** SendData

---

**EZA8372I** Telnet command is \( \text{command} \)

**Explanation:** Telnet issues these message while tracing is on. The current Telnet command is displayed.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** TNTOSRV

**Procedure Name:** Fs2ndFieldAddr

---

Chapter 8. EZA8xxx messages  543
EZA8375I  ‘?’ for help: Hit Enter to continue..

Explanation: Telnet issues this message in line (non-transparent) mode to indicate that the previous command submitted was incorrect.

System action: TCPIP continues.

Operator response: Submit a correct command or type ? for help.

System programmer response: No action is needed.

Module: TNTOSRV

Procedure Name: UserCommand

EZA8376W  AMBIGUOUS command: Hit Enter to continue..

Explanation: Telnet was unable to determine which command was indicated by a user response due to truncation or incorrect syntax.

System action: TCPIP continues.

Operator response: Check the syntax and resubmit the Telnet command.

System programmer response: No action is needed.

Module: TNTOSRV

Procedure Name: UserCommand

EZA8377W  Command illegal in Line-Mode: Hit Enter to continue..

Explanation: Telnet issues this message when the PA1 key is pressed while in line mode. This key is incorrect in line (non-transparent) mode.

System action: TCPIP continues.

Operator response: Press Enter to continue.

System programmer response: No action is needed.

Module: TNTOSRV

Procedure Name: UserCommand

EZA8378I  UserCommand: Bad Telnet Command.

Explanation: You submitted an incorrect Telnet command. This message is displayed with EZA8246E.

System action: TCPIP continues.

Operator response: Check the syntax and resubmit the command.

System programmer response: No action is needed.

Module: TNTOSRV

Procedure Name: UserCommand

EZA8379I  Telnet command:

Explanation: This message prompts the user for a Telnet command. A valid Telnet command is expected.

System action: TCPIP continues.

Operator response: Enter the appropriate Telnet command.

System programmer response: No action is needed.

Module: TNTOSRV

Procedure Name: UserDemandsAttention
User data is... data set data set

; Len is data set length

Explanation: Telnet issues these messages while tracing is on. When the user data is received by the server, the address and length of the data buffer containing that information is recorded.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: TNTOSRV

Procedure Name: UserDataArrives

bad case in UtToServ.

Explanation: The command to be processed by the UtToServ procedure was not recognized. This message is displayed with EZA8246E.

System action: TCPIP continues.

Operator response: Check the Telnet server machine for the syntax of the command being submitted.

System programmer response: No action is needed.

Module: TNTOSRV

Procedure Name: UtToServ

UtTsInit: Bad return code from the receive.

Explanation: Telnet issues this message as a result of a return code error while attempting to ready a buffer for user input.

System action: TCPIP continues.

Operator response: Increase the buffer size by using the DATABUFFERPOOLSIZE statement described in the Communications Server: IP Configuration Reference.

System programmer response: No action is needed.

Module: TNTOSRV

Procedure Name: UtTsInit

Once connected, follow the log in and usage procedures of the remote host.

To invoke one of several TELNET commands, hit a PF key (PF4-12), PF(16-24), and then enter the following commands:
Help or ? -- Receive (this) assistance
AYT -- Are You There?
AO -- Abort Output
BRK -- Break
IP -- Interrupt Process
SYNCH -- Clear data path, except for TELNET commands
Quit -- Quit the TELNET session
The following PF settings are in force:
% PF1 or 13 -- Retrieve previous input line
% PF2 or 14 -- Scroll halfway up
% PF3 or 15 -- turn off display of user-line; designed.
to be used before entering password
For control characters, enter cc or `c where c is:
“0”: 00, “a” - “z” or “A” - “Z”; 0x01-0x1A
“2” - “6”: 0x1B-0x1F
“{”: 0x5B, ”}”: 0x5D, “#”: 0x7
Explanation:  Telnet issues these messages when the help (?) option is selected in line (non-transparent) mode.
System action:  TCPIP continues.
Operator response:  Proceed as instructed.
System programmer response:  No action needed.
Module:  TNSRV
Procedure Name:  FsHelpMe
GetVirtualAddress call should not occur.
Explanation:  TCPIP has called the procedure GetVirtualAddress, which should not be called for MVS. This indicates a software error.
System action:  TCPIP continues.
Operator response:  Notify the system programmer of the error.
System programmer response:  Contact the IBM Software Support Center.
Module:  CMMVSUB
Procedure Name: GetVirtualAddress

EZA8501I  Dataset: data_set_name
Explanation: This message displays the name of a partitioned data set.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMMVSUB
Procedure Name: PrintSpecOfFile

EZA8502I  Dataset: partitioned_data_set(member_name)
Explanation: This message displays the name of a partitioned data set and one of its members.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMMVSUB
Procedure Name: PrintSpecOfFile

EZA8503E  error_message
Explanation: This diagnostic message is preceded by an SMTP error message. This message displays the text of the Dynamic Allocation (SVC 99 - DYNALLOC) message. This message provides additional information about why the Dynamic Allocation failed. The message might be issued multiple times to include the completer text from Dynamic Allocation.
error_message is text of the message produced by DYNALLOC.
System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: See the z/OS MVS Programming: Authorized Assembler Services Guide for information about the IEFDB476 service routine message displayed in this message and respond as indicated.
Module: CMMVSUB
Procedure Name: S99Error

EZA8520I  OK
Explanation: The specified application or function is OK in TCPIP. Another message should prefix this message specifying the application or function.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: various
Procedure Name: various
EZA8521I Abnormal condition due to CSA storage shortage

Explanation: There is no CSA storage available.

System action: TCPIP continues.

Operator response: Wait a few minutes and try again. If the problem persists, contact the System Programmer.

System programmer response: Verify the configuration and storage definitions.

Module: various.

Procedure Name: various.

EZA8522I Connection already closing

Explanation: The connection that you are attempting to disconnect is already in the process of closing.

System action: TCPIP continues.

Operator response: If you do not want the connection to close, reestablish your connection.

System programmer response: No action is needed.

Module: various.

Procedure Name: various.

EZA8523I Invalid length specified

Explanation: A parameter was of an incorrect length for the remote site.

System action: TCPIP continues.

Operator response: Reissue your command with a valid parameter length specified. This error should never occur for SMTP or the FTP Server. If it does occur, this indicates that there might be an error with SMTP or the FTP Server code. If this is the case, refer the error to the system programmer or the IBM Software Support Center.

System programmer response: Parse the SMTP or the FTP Server code with trace on for the specific application where the error occurred. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application through TCPIP.

Module: various.

Procedure Name: various.

EZA8524I Cannot send data

Explanation: The FTP Server did not acknowledge receipt of the data sent. In the case of Telnet, this message indicates that the Telnet server could not send the function StKillConn, which closes connections, to the connection indicated in a previous message. A message following this one indicates that there is no such connection and shutdown continues.

System action: TCPIP continues. The calling program continues.

Operator response: This error should never occur in the case of FTP. If it does, this indicates that there might be an error with the FTP Server FTP code. If this is the case, refer the error to the system programmer or the IBM Software Support Center. In the case of the Telnet server, check the connection number indicated in the previous message to determine the problem. If the connection indicated is OK then the problem could be with the server code. If so, refer this problem to the IBM Software Support Center.

System programmer response: Assist the operator as required.

Module: various.

Procedure Name: various.
EZA8525I  Client reinitialized TCP/IP service

Explanation:  A client has reinitialized TCPIP.
System action:  TCPIP restarts.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  various.
Procedure Name:  various.

EZA8526I  Connection already exists

Explanation:  A connection to the server already exists. The request is ignored by the server.
System action:  TCPIP continues. The calling program continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  various.
Procedure Name:  various.

EZA8527I  Destination address is unreachable

Explanation:  The address that you specified is unreachable. This occurs as a result of errors from the remote site. Connection to the remote site is not established.
System action:  TCPIP continues.
Operator response:  Contact the remote site administrator for assistance.
System programmer response:  No action is needed.
Module:  various.
Procedure Name:  various.

EZA8528I  Error in profile data set. Details are in PROFILE.TCPIPERROR or the //SYSERROR DD file. Expansion may be necessary.

Explanation:  There is an error in the hlq..PROFILE.TCPIP data set.
System action:  TCPIP continues.
Operator response:  Open the hlq..PROFILE.TCPIPERROR data set, or the data set pointed to by the //SYSERROR DD statement in the TCPIP JCL procedure. Respond to the details provided in the data set.
System programmer response:  Assist the operator as required.
Module:  various
Procedure Name:  various

EZA8529I  Fatal inter-address communications error VMCF RC=number User=lastuser

Explanation:  The Virtual Machine Communication Facility “VMCF” encountered a network pacing response code. The VMCF return codes below describe the different types of error conditions that may cause the fatal inter-address communication error.

Return Code

<table>
<thead>
<tr>
<th></th>
<th>Cause</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Invalid virtual buffer address</td>
</tr>
<tr>
<td>2</td>
<td>Invalid subfunction code</td>
</tr>
<tr>
<td>3</td>
<td>Protocol violation</td>
</tr>
</tbody>
</table>
4 Source machine not authorized
5 TCPIPJOBNAME user not available
6 Protection violation
7 Sendx data too large
8 Target machine in quiesce state
9 Message limit exceeded
10 REPLY canceled
11 Message not found
12 Synchronization error
13 Incorrect length
14 Destructive overlap
15 User not authorized for PRIORITY message.
16 Data transfer error
17 CANCEL - busy

System action: TCPIP halts.

Operator response: Tell the system programmer the VMCF communication error encountered.

System programmer response: Use the return code displayed in the list of error responses to determine the cause of the error.

If the return code=5, verify that the TCPIPJOBNAME is correctly specified in the TCPIPDATA data set. Ensure that you are using the correct TCPIPDATA data set.

For other return codes, correct the error using the different resources stated below that may apply to the error condition specified. Once the error is corrected restart TCP/IP. For more information on the VMCF facility and return codes see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference. For information on configuring the TCPIPDATA for the VMCF, see the z/OS Communications Server: IP Configuration Reference. If the error is beyond the scope of these resources, contact the IBM Software Support Center.

Module: various
Procedure Name: various

---

EZA8530I No password in RACF directory

Explanation: The password entered does not exist in the RACF directory.

System action: TCPIP continues. Connection to the remote host ends.

Operator response: Check the password and syntax and make sure that it is a valid password and try your request again.

System programmer response: Help the user update their password in the RACF directory if required.

Module: various
Procedure Name: various.

---

EZA8531I TCPIP not authorized to access dataset

Explanation: The specific data set requested through TCPIP is not accessible; the user is not authorized.

System action: TCPIP continues. The application continues.

Operator response: To access the data set you must be authorized by the remote site. Check with your system administrator to authorize your user ID to have access to the data set on the FTP server.

System programmer response: Assist the operator as required.

Module: various.
Procedure Name: various.
EZA8532I  Invalid request

Explanation: The FTP server has received an incorrect request from TCPIP.
System action: TCPIP halts. The calling program halts.
Operator response: This error should never occur. If it occurs it indicates an error with the server FTP code itself. Refer this error to the system programmer or the IBM Software Support Center.
System programmer response: Parse the code with trace on for the specific application where the error occurred. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application through TCPIP.
Module: various.
Procedure Name: various.

EZA8534I  Invalid virtual address

Explanation: The virtual address specified to TCPIP is not valid. No connection is made to the remote host.
System action: TCPIP continues.
Operator response: Check to make sure that you entered a valid virtual address defined in the remote system. Call the remote system administrator for assistance.
System programmer response: Assist the operator as required.
Module: various.
Procedure Name: various.

EZA8535I  You aborted the connection

Explanation: You either intentionally or unintentionally abended the connection to the remote host.
System action: TCPIP continues. The remote host connection is abended.
Operator response: Reinitialize the connection to the remote host.
System programmer response: Assist the operator as required.
Module: various.
Procedure Name: various.

EZA8536I  The requested local port is not available

Explanation: The local port on which TCPIP has been accessed is not available.
System action: TCPIP halts.
Operator response: Wait several minutes or until TCPIP has been restarted. You should receive a second message after attempting to use TCPIP that reads, TCPIP has been restarted...for some reason or other, when TCPIP becomes available.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8537I  Data set is in use by someone else and cannot be accessed

Explanation: The data set requested through TCPIP is in use by someone else and is not accessible at this time.
System action: TCPIP continues. The calling program continues.
Operator response: Wait a few minutes until the data set becomes available and reissue your request.
System programmer response: No action is needed.
EZA8538I  Data set not available

Explanation: The data set requested is not available. It is either in use or inaccessible.

System action: TCPIP continues. The calling program continues.

Operator response: Wait a reasonable amount of time and try accessing the data set again. If you are not successful after several tries, contact the system programmer or the IBM Software Support Center.

System programmer response: Assist the operator as required.

Module: various.

Procedure Name: various.

EZA8540I  The foreign host has closed this connection

Explanation: The remote host has closed this connection.

System action: TCPIP continues. The host is unsuccessful.

Operator response: Wait until the remote host is ready and reissue the connection to the remote host.

System programmer response: No action is needed.

Module: various.

Procedure Name: various.

EZA8541I  The internet address is not local to this host

Explanation: The host address entered through TCPIP is not local to this host. This host address verification is part of the virtual machine communication facility (VMCF) used within the MVS system. Connection to the remote host is unsuccessful.

System action: TCPIP continues.

Operator response: Check the host address entered and verify that it is correct. If it is, then it has to be updated in your VMCF data set.

System programmer response: No action is needed.

Module: various.

 Procedure Name: various.

EZA8542I  No outstanding notifications

Explanation: There is an error in the application program code itself. The application will halt. The application could include, but is not limited to; SMTP, FTP server, LPD.

System action: TCPIP continues. The calling program halts.

Operator response: Reinitialize your connection and the application program. If the problem persists, contact the system programmer or the IBM Software Support Center.

System programmer response: Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

Module: various.

Procedure Name: various.
EZA8543I No such connection

Explanation: The connection you attempted to query or use does not exist. For the Telnet server, this indicates that the function StKillConn which was called to close a connection was unsuccessful because the connection could not be found.

System action: TCPIP continues. In the case of the Telnet server, this message is ignored and shutdown procedures continue.

Operator response: In most cases you can try your request again using the correct spelling and syntax for the remote address to correct the error. For the Telnet server see other messages that appear with this one for more information. If the error persists, contact the IBM Software Support Center.

System programmer response: Assist the operator as required.

Module: various.

Procedure Name: various.

EZA8544I No TCP/IP service available

Explanation: TCPIP is not available.

Operator response: Wait until TCPIP becomes available and try your request again.

System programmer response: No action is needed.

System action: TCPIP halts.

Module: various.

Procedure Name: various.

EZA8545I Not yet begun TCP/IP service

Explanation: TCPIP is not available.

System action: TCPIP halts.

Operator response: Wait until TCPIP resumes service or reinitialize TCPIP.

System programmer response: No action is needed.

Module: various.

Procedure Name: various.

EZA8546I The connection is not yet open

Explanation: This error should never occur. If it does it means that there is an error with the specific application code itself. Affected applications include, but are not limited to, SMTP and FTP server.

System action: TCPIP continues. The calling program continues.

Operator response: Report this error to the system programmer or the IBM Software Support Center.

System programmer response: Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

Module: various.

Procedure Name: various.

EZA8547I Foreign host rejected the open attempt

Explanation: The remote host that you attempted to connect to has rejected the open attempt.

System action: TCPIP continues. The connection to the remote host is abended.

Operator response: This error occurs on the remote site. Contact the site and reissue your open attempt when their system clears up.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8548I  TcpOpen error: invalid local address
Explanation: The local address that you attempted to use for a communication channel is not valid. The attempted connection is not established.
System action: TCPIP continues.
Operator response: This error should not occur. If the error does occur, it implies an error with the application code itself. Refer the error to the system programmer or the IBM Software Support Center.
System programmer response: Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program. Check the address and syntax and reissue your connection attempt. If the problem persists, contact your system administrator to verify the local address or the IBM Software Support Center for help in debugging the code.
Module: various.
Procedure Name: various.

EZA8549I  TcpOpen error: invalid initial state
Explanation: You need to specify whether you are initiating a TCPIP connection in a passive or active state. It could also indicate that there is an error with the application (FTP server, SMTP) code itself.
System action: The connection is not established.
Operator response: Reissue the connection indicating whether it will be a passive or active connection. If the problem exists in the application code itself, refer this error to the system programmer or the IBM Software Support Center.
System programmer response: Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.
Module: various.
Procedure Name: various.

EZA8550I  Invalid timeout parameter
Explanation: The timeout parameter is used for the PING function when accessing a remote host. PING will return with a message that states that the remote host is not responding if after a few moments it receives no responses from the remote host. In the case of FTP server and SMTP, this could indicate an error with the application code itself.
System action: TCPIP continues. The connection is not established.
Operator response: If the error occurred as result of the PING function, then wait until the host responds or call the remote host’s system administrator to find out the status of the host. In the case of FTP server and SMTP, refer the error to the system programmer or the IBM Software Support Center.
System programmer response: Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.
Module: various.
Procedure Name: various.

EZA8551I  TcpOpen error: unspecified foreign address in active open
Explanation: Indicates, in the case of the TCP engine, that the host address has not been specified in your open attempt. In the case of FTP and SMTP, this error indicates that there might be a problem with the application code itself. The connection is not established.
System action: TCPIP continues.

Operator response: Specify a valid host address when issuing a socket request. If the error persists, verify the address with the other host’s administrator. If the error occurred within the FTP or SMTP function, refer this error to the system programmer or the IBM Software Support Center.

System programmer response: Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

Module: *various.*

Procedure Name: *various.*

**EZA8552I**  TcpOpen error: unspecified foreign port in active open

Explanation: The host port has not been specified in your open attempt. In the case of FTP and SMTP, this error indicates that there might be a problem with the application code itself.

System action: TCPIP continues. The program halts.

Operator response: Specify a valid host port when issuing a socket request. If the error persists, verify the address with the other host’s administrator. If the error occurred within the FTP or SMTP function, refer this error to the system programmer or the IBM Software Support Center.

System programmer response: Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

Module: *various.*

Procedure Name: *various.*

**EZA8553I**  TCPIP cannot read profile data set

Explanation: TCPIP cannot access or read your *hlq*.PROFILE.TCPIP data set.

System action: TCPIP continues.

Operator response: Make sure that your *hlq*.PROFILE.TCPIP data set is accessible by TCPIP. If it is and you are still experiencing this error, open the data set and check the contents to make sure that the information is correct and complete and that the information in the data set is not damaged. For more information about the *hlq*.PROFILE.TCPIP data set, see *[z/OS Communications Server: IP Configuration Reference]*.

System programmer response: No action is needed.

Module: *various.*

Procedure Name: *various.*

**EZA8554I**  Receive still pending on this connection

Explanation: No data has been received on the specified connection. In the case of the FTP server and SMTP, this message could indicate a problem with the code itself.

System action: TCPIP continues.

Operator response: If the error specified is from any application other than the FTP server or SMTP, wait for data or ask the remote site to send you an acknowledgment packet to test your connection. If the error is the SMTP or the FTP server code, refer this error to the system programmer or the IBM Software Support Center.

System programmer response: Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.

Module: *various.*

Procedure Name: *various.*
EZA8555I  Foreign host unexpectedly closed the connection
Explanation:  The remote host has closed the connection, for the specified application, without notice or acknowledgment.
System action:  TCPIP continues. The program halts.
Operator response:  This message occurs as a result of a problem with the remote host. Reinitialize your connection or call the system administrator for the remote host for assistance.
System programmer response:  No action is needed.
Module:  various.
Procedure Name:  various.

EZA8556I  Foreign host aborted the connection
Explanation:  The other host has abended the connection. This could indicate a connection reset at the other host. This could also apply to your Offload device.
System action:  TCPIP continues. The program halts or is disconnected.
Operator response:  In the case of the Offload device, reinitialize the connection from the Offload device. In any other application, contact the other host's administrator to reset their host or determine if there are other problems on their end causing this error.
System programmer response:  No action is needed.
Module:  various.
Procedure Name:  various.

EZA8557I  Software error in TCP/IP!
Explanation:  TCPIP cannot continue because of an error in TCPIP itself.
System action:  TCPIP halts.
Operator response:  Wait a few moments until TCPIP restarts. If after a reasonable amount of time TCPIP does not restart, contact your system administrator.
System programmer response:  No action is needed.
Module:  various.
Procedure Name:  various.

EZA8558I  TCP/IP service is being shut down
Explanation:  TCPIP is being shut down either manually or due to a problem with the application connection.
System action:  TCPIP halts.
Operator response:  Wait a few moments until TCPIP restarts. If after a reasonable amount of time TCPIP does not restart, contact your system administrator.
System programmer response:  No action is needed.
Module:  various.
Procedure Name:  various.

EZA8559I  Foreign host is no longer responding
Explanation:  The connection to the other host has not responded within a certain time threshold.
System action:  TCPIP continues. The connection to the remote host abends.
Operator response:  Wait a few moments until TCPIP restarts. If after a reasonable amount of time TCPIP does not restart, contact the other host's system administrator.
EZA8560I  Foreign host did not respond within OPEN timeout

Explanation: The open attempt to the other host has not responded within a certain time threshold. The connection to the remote host is not established.

System action: TCPIP continues.

Operator response: Wait a few moments until TCPIP restarts. If after a reasonable amount of time TCPIP does not restart, contact the other host's system administrator.

System programmer response: No action is needed.

Module: various.
Procedure Name: various.

EZA8561I  Too many open connections already exist

Explanation: The host connection that you are attempting to establish a connection with already has too many open connections. The connection is not established.

System action: TCPIP continues.

Operator response: Contact the other host's administrator to determine the availability of their system.

System programmer response: No action is needed.

Module: various.
Procedure Name: various.

EZA8563I  Permission is denied

Explanation: The error might be caused by one of the following reasons:
- Not being APF-authorized to use the RAW IP interface
- A Firewall access failure
- A network access failure

System action: The command is not performed and TCPIP continues.

Operator response: Contact your system administrator to gain access to the specific application that you are attempting use.

System programmer response: No action is needed.

Module: various.
Procedure Name: various.

EZA8564I  Foreign host violated the connection protocol

Explanation: The other host has sent data that does not conform to the connection protocol.

System action: TCPIP continues. The program halts or the connection is abended.

Operator response: This error arises as a problem at the remote site. Wait until the problem clears or contact the remote site system administrator.

System programmer response: No action is needed.

Module: various.
Procedure Name: various.
EZA8565I Unimplemented TCP/IP request
Explanation: TCPIP has received a request for a function that has not been implemented.
System action: TCPIP continues.
Operator response: If the specified request should be implemented in TCPIP, contact the system programmer or administrator.
System programmer response: If the request should be updated in your hlq.PROFILE.TCPIP data set, open the data set, set up the specified request in the proper area of the data set and reinitialize TCPIP. For more information about the hlq.PROFILE.TCPIP data set see z/OS Communications Server: IP Configuration Reference.
Module: various.
Procedure Name: various.

EZA8566I Destination host is not known
Explanation: The host address that you are attempting to reach is not known.
System action: TCPIP continues. The program halts or the connection is not established.
Operator response: Check the address and make sure you used the proper syntax and that the address exists for the remote host that you are attempting to reach. If the problem persists, contact the remote host administrator.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8567I Destination network is unreachable
Explanation: The network address that you entered is an unreachable network address.
System action: TCPIP continues. The program or the connection abends.
Operator response: Check that the IP addresses are correct in the hlq.PROFILE.TCPIP data set. Use the GATEWAY statement to add the destination to the configuration data set if necessary. See the z/OS Communications Server: IP Configuration Reference for more information about the GATEWAY statement.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8568I Unspecified connection
Explanation: In the case of SMTP and FTS server, this could indicate an error with the code itself. The connection is not established.
System action: TCPIP continues.
Operator response: If the error specified is from any application other than the FTP server or SMTP, wait for data or ask the remote site to send you an acknowledgment packet to test your connection. If the error is with the SMTP or the FTP server code, refer this error to the system programmer or the IBM Software Support Center.
System programmer response: Parse the code with trace on for the application code. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application program.
Module: various.
Procedure Name: various.
EZA8569I  Client address space has too little storage

Explanation:  The virtual storage of a client address is too small for TCPIP to continue processing.

System action:  TCPIP halts.

Operator response:  Wait until TCPIP resumes. If TCPIP does not resume, contact the system programmer or the IBM Software Support Center.

System programmer response:  Increase the virtual storage for client.

Module:  various.

Procedure Name:  various.

EZA8570I  Foreign host disagreed on security or precedence

Explanation:  The other host has rejected the connection because of discrepancies in either the security or precedence of the open attempt.

System action:  TCPIP halts. The calling program halts.

Operator response:  This error should never occur. If it does it indicates an error with the server FTP code itself. Refer this error to the system programmer or the IBM Software Support Center.

System programmer response:  Parse the code with trace on for the specific application where the error occurred. Look for any indications of possible errors and correct them. Recompile after any corrections are made and test the application through TCPIP.

Module:  various.

Procedure Name:  various.

EZA8571I  No local X.25 virtual circuits available

Explanation:  There are no available X.25 virtual circuits for access. This error results from problems at the remote site.

System action:  TCPIP continues. The program halts or the connection is not established.

Operator response:  Wait until the problem clears, or call the remote site administrator for assistance.

System programmer response:  No action is needed.

Module:  various.

Procedure Name:  various.

EZA8575I  Client has ended TCP/IP service

Explanation:  The client has ended TCPIP either intentionally or unintentionally.

System action:  TCPIP continues. The connection abended.

Operator response:  This error occurs from the client site. Wait until they restart TCPIP or call the site administrator for assistance.

System programmer response:  No action is needed.

Module:  various.

Procedure Name:  various.

EZA8576I  TCP cannot handle any more connections now

Explanation:  TCPIP has no more resources available to handle new connections. This is usually a problem with the remote site not having enough resources available to handle your connection request. In the case of the TCPIP engine, this could indicate the address was not specified or there is not enough room in the TRANSLATE table in your hlq.PROFILE.TCPIP data set. A connection is not established.
System action: TCPIP continues.

Operator response: If the problem is with the remote site, wait until a connection becomes available. If the problem is with the engine, either add the address to your TRANSLATE table or make room for the address in your hlq.PROFILE.TCPIP data set. For more information about the TRANSLATE table and the hlq.PROFILE.TCPIP data set, see z/OS Communications Server: IP Configuration Reference.

System programmer response: No action is needed.

Module: various.
Procedure Name: various.

---

EZA8577I Invalid local address for UDP

Explanation: The local address specified through UDP is not valid. A connection is not established.

System action: TCPIP continues.

Operator response: Verify that the address exists for UDP. Check your address for any syntax errors and try your address again. If you continue to experience problems, contact the IBM Software Support Center.

System programmer response: No action is needed.

Module: various.
Procedure Name: various.

---

EZA8579I Address unspecified when specification necessary

Explanation: The connection you attempted to access through UDP requires that you specify a valid address. A connection is not established.

System action: TCPIP continues.

Operator response: Check the syntax and the address. Make sure you specify an address as required by UDP connections and reissue your connection request.

System programmer response: No action is needed.

Module: various.
Procedure Name: various.

---

EZA8580I Port unspecified when specification necessary

Explanation: The connection you attempted to access through UDP required that you specify a valid port. A connection is not established.

System action: TCPIP continues.

Operator response: Check the syntax of your connection request. Make sure that you specify a port as required for UDP connections and reissue your connection.

System programmer response: No action is needed.

Module: various.
Procedure Name: various.

---

EZA8582I FSend still pending on this connection

Explanation: There is already an FSEND (file in send status) function pending on the connection you are attempting to use.

System action: TCPIP continues.

Operator response: The problem might be with the remote host. Call the system administrator at the remote host for assistance or wait until the current FSEND clears and reissue your request.

System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8583I  Message from MVS host to S/1 is too large
Explanation: The Series/1 processor received a message from the MVS host system that is too large to process. The message is dropped.
System action: TCPIP continues.
Operator response: Resend the message using smaller packets of data or decrease the size of the message.
System programmer response: No action is needed.
Module: TO18S1P
Procedure Name: To1822SIruptHandler

EZA8584I  IO write error on the 370 Channel
Explanation: TCPIP has encountered an I/O error on a System/370 channel.
System action: TCPIP continues.
Operator response: Check the channel adapter for the 1822 interface and make sure that all connections are attached correctly. Also make sure that the hardware is switched on and is online. If you continue to receive this error, check your hardware maintenance guide for more troubleshooting information.
System programmer response: No action is needed.
Module: various.
Procedure Name: various.

EZA8585I  Obtained unknown sense data
Explanation: TCPIP does not recognize the data sent to or from the 1822 Series/1 device.
System action: TCPIP continues.
Operator response: If this error persists, check your connections and make sure that they are properly attached. It might be necessary to shut down the device and restart the device to synchronize the connection. Check your hardware maintenance manual for more assistance.
System programmer response: Assist the operator as required.
Module: various.
Procedure Name: various.

EZA8591I  Series/1 processor is unavailable
Explanation: TCPIP is getting device errors from the Series/1 channel because the Series/1 processor is either shut down or offline. The connection to the Series/1 is abended.
System action: TCPIP continues.
Operator response: Make sure all the connections to the Series/1 are properly attached. Shut down and restart the device if necessary.
System programmer response: Assist the operator as required.
Module: various.
Procedure Name: various.
EZA8592I Interface Message Processor is unavailable

Explanation: The 1822 Interface Message Processor (IMP) is not ready or offline. The IMP is down.

System action: TCPIP continues.

Operator response: Check your hardware connections and make sure that they are properly attached. Also make sure that the device is online. Restart the device if necessary. If the problem persists, consult your hardware manual for more troubleshooting information.

System programmer response: Assist the operator as required.

Module: various.

Procedure Name: various.

EZA8593I Foreign host is dead or unreachable

Explanation: The other host cannot be reached by TCPIP either because the other host is shut down or the first hop address or network address is not valid.

System action: TCPIP continues.

Operator response: Check the GATEWAY statement in your hlq.PROFILE.TCPIP data set and make sure that the first hop and network addresses for the other host are defined correctly. For more information about the GATEWAY statement see z/OS Communications Server: IP Configuration Reference.

System programmer response: Assist the operator as required.

Module: various.

Procedure Name: various.

EZA8594I More than 8 outstanding messages to that host

Explanation: The Information Message Processor (IMP) has detected more than 8 messages for that host. This could indicate that the host is not receiving because it is shut down or experiencing problems.

System action: TCPIP continues.

Operator response: Try pinging the host to see if it is online. If it is, then it might be that it is slow in receiving its envelopes. Call the host's system administrator for help if necessary.

System programmer response: Assist the operator as required.

Module: various.

Procedure Name: various.

EZA8595I Initiating restart, Series/1 thinks host is down

Explanation: The Sseries/1 processor is restarting the host because it has not received acknowledgments from the host.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: various.

Procedure Name: various.

EZA8596I Series/1 application program is not available

Explanation: The 1822 Series/1 application is not ready or available. A connection is not established.

System action: TCPIP continues.

Operator response: Check the connections to the Series/1 channel and make sure that they are properly attached.
Shut down the driver and start it again. If the system does not respond, contact the IBM Software Support Center.

**System programmer response:** Assist the operator as required.

**Module:** various.

**Procedure Name:** various.

---

**EZA8597I** Series/1 ready to receive datagram

**Explanation:** The 1822 Series/1 processor is now up and ready to receive data. The connection is established.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** various.

**Procedure Name:** various.

---

**EZA8598I** X.25 Driver in loopback mode

**Explanation:** The X.25 interface driver is in a loopback mode. The X.25 interface cannot transmit or receive data.

**System action:** TCPIP continues.

**Operator response:** Check the X.25 driver modem hardware and reset it to DATA if it is LOOPBACK. If the hardware is OK, stop and restart the driver through TCPIP. If the problem persists, contact the IBM Software Support Center.

**System programmer response:** Assist the user as required.

**Module:** various.

**Procedure Name:** various.

---

**EZA8599I** Connection dropped by operator

**Explanation:** The operator intentionally dropped the connection to TCPIP.

**System action:** TCPIP halts.

**Operator response:** Reinitiate TCPIP if necessary.

**System programmer response:** No action is needed.

**Module:** various.

**Procedure Name:** various.

---

**EZA8600I** Error opening or reading data set

**Explanation:** TCPIP cannot open or read a Translate table data set. Translate tables are used to convert transmitted data from EBCDIC to ASCII or ASCII to EBCDIC.

**System action:** TCPIP continues. The calling program continues.

**Operator response:** Make sure that the translate table data set is available to TCPIP. If available, make sure that the data set does not contain corrupted information. For more information about translate tables see z/OS Communications Server: IP Configuration Reference.

**System programmer response:** Assist the operator as required.

**Module:** various.

**Procedure Name:** various.
EZA8601I  Data set format invalid

Explanation: The translate table data set has been recognized by TCPIP as having a premature end of file (EOF). This indicates that the data set is a null file or that the data set has corrupted data. The translate table data set is not read.

System action: TCPIP continues.

Operator response: Check the translate table data set and make sure that the data is in the correct format and that the data set is not blank. For more information about translate tables see z/OS Communications Server: IP Configuration Reference.

System programmer response: Assist the operator as required.

Module: various.

Procedure Name: various.

EZA8602I  Offload box error

Explanation: TCPIP has received an error from the Offload device that TCPIP does not recognize.

System action: TCPIP halts.

Operator response: Restart the Offload device and TCPIP. If the problem persists, contact the IBM Software Support Center.

System programmer response: Assist the operator as required.

Module: various.

Procedure Name: various.

EZA8603I  Offload box restart

Explanation: The Offload device has been restarted.

System action: TCPIP halts.

Operator response: Wait until the Offload device has been completely initiated before using TCPIP.

System programmer response: No action is needed.

Module: various.

Procedure Name: various.

EZA8604I  Offload box down

Explanation: The Offload device is not responding to TCPIP.

System action: TCPIP halts.

Operator response: Restart the Offload device and wait until it initiates TCPIP before attempting to use it. If this problem persists contact the IBM Software Support Center.

System programmer response: Assist the operator as required.

Module: various.

Procedure Name: various.

EZA8624E  *** Unknown TCP return code = CallReturn ***

Explanation: TCPIP has encountered a return code that it does not recognize.

System action: TCPIP continues.

Operator response: Call the IBM software Support Center for assistance.

System programmer response: Assist the operator as required.
Module: various.
Procedure Name: various.

Note: The following messages display the call type returned from the procedure SayCliCa, which is called to determine the type of call issued by a client.

---

**EZA8625I**  Abort TCP

**Explanation:** A client is using the procedure TcpAbort to close TCP service.

**System action:** TCP service to the client ends. TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** TcpAbort

---

**EZA8626I**  Begin TCP/IP service

**Explanation:** A client is using the procedure StartTcpIpService to initiate TCP/IP service.

**System action:** TCP/IP service is initiated for the client.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** StartTcpIpService

---

**EZA8627I**  Close TCP

**Explanation:** A client has issued a request to close TCP service.

**System action:** TCP service to the client ends. TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** varies

**Procedure Name:** varies

---

**EZA8628I**  Close UDP

**Explanation:** A client has issued a request to close UDP service.

**System action:** UDP service to the client ends. TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** varies

**Procedure Name:** varies

---

**EZA8629I**  End TCP/IP service

**Explanation:** A client has issued a request to end TCP/IP service.

**System action:** TCP/IP service to the client ends. TCPIP continues.

**Operator response:** No action is needed.
EZA8630I • EZA8633I

System programmer response: No action is needed.
Module: varies
Procedure Name: varies

---

EZA8630I Handle notice

Explanation: The procedure ClientHandle has been called to handle an event notification. ClientHandle checks a client activity and initiates the proper procedure to handle the notification.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TCPREQU
Procedure Name: TcpRequest

---

EZA8631I Is host local?

Explanation: A client has requested verification of a local address by the procedure ClientIsHostLocal to determine whether a host address is local. Address verification is performed by the procedure ClientIsHostLocal.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TCPREQU
Procedure Name: TcpRequest

---

EZA8632I Monitor command

Explanation: A client has called the procedure MonCommand, which instructs the TCPIP address space's monitor process to open a data set and execute the commands found there. This is the principal means of updating network and address tables while the TCPIP address space is in use. MonCommand opens the data set and executes the commands found there.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMERUPT
Procedure Name: MonCommand

---

EZA8633I Monitor query

Explanation: A client has called the procedure MonQuery, which is used to check the status of the TCPIP address space's monitor process.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMERUPT
Procedure Name: MonQuery
EZA8634I  No client call
Explanation: A virtual machine communication facility (VMCF) packet header did not contain a client call.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMVERT
Procedure Name: CallToRequest

EZA8635I  Open TCP
Explanation: A client has issued a call to the procedure ClientOpen, which establishes connections to TCP for clients, to establish TCP service. TCP service is established for the client.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TCPRQU
Procedure Name: TcpRequest

EZA8636I  Open UDP
Explanation: A client has issued a call to the procedure UdpOpen, which establishes UDP connections, to open UDP service. UDP service to the client is opened.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMERUPT
Procedure Name: UdpOpen

EZA8637I  Option TCP
Explanation: A client has issued a call to the procedure ClientOption, which sets client TCP options, to specify options for a TCP connection. ClientOption completes execution and returns.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: TCPRQU
Procedure Name: TcpRequest

EZA8638I  Receive TCP
Explanation: A client is using the procedure TcpReceive to notify the host that it is ready to receive TCP data.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMERUPT
Procedure Name: TcpReceive
EZA8639I  Receive UDP

Explanation: A client is using the procedure UdpReceive to notify the host that it is ready to receive UDP datagrams.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMERUPT

Procedure Name: UdpReceive

EZA8640I  NReceive UDP

Explanation: A client is using the procedure UdpNReceive to notify the host that it is ready to receive UDP datagrams. UdpNReceive allows the client to specify the maximum size for the datagrams it will receive. This parameter is not supported under UdpReceive.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMERUPT

Procedure Name: UdpNReceive

EZA8641I  Status UDP

Explanation: A client has called the procedure UdpStatus to check the status of a UDP connection.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMERUPT

Procedure Name: UdpStatus

EZA8642I  Option UDP

Explanation: A client has issued a call to the procedure UdpOption, which sets client UDP options, to specify options for a UDP connection.

System action: UdpOption completes execution and returns. TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMERUPT

Procedure Name: UdpOption

EZA8643I  Send TCP

Explanation: A client is using the procedure TcpSend to send data normally over a TCP connection.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMERUPT
Procedure Name: TcpSend

**EZA8644I Send UDP**

**Explanation:** A client is using the procedure UdpSend to send data grams normally over a UDP connection.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** UdpSend

---

Procedure Name: TcpStatus

**EZA8645I Status TCP**

**Explanation:** A client is using the procedure TcpStatus to check the status of a connection to TCP.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** TcpStatus

---

Procedure Name: TcpFReceive

**EZA8646I FReceive TCP**

**Explanation:** A client is using the procedure TcpFReceive to receive data pushed over a TCP connection.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** TcpFReceive

---

Procedure Name: TcpFSend

**EZA8647I FSend TCP**

**Explanation:** A client is using the procedure TcpFSend to send data over a TCP connection before the output buffer is full. This function is not supported under TcpSend, which is used to send data normally over TCP connections.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT

**Procedure Name:** TcpFSend

---

**EZA8648I Close RawIP**

**Explanation:** A client is closing a raw IP connection. All data associated with the connection, including any data queued to that connection will be destroyed.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMERUPT
EZA8649I  Open RawIP
Explanation:     A client is using the procedure RawIpOpen to open a raw IP connection to the host.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  CMERUPT
Procedure Name:  RawIpOpen

EZA8650I  Receive RawIP
Explanation:     A client is using the procedure RawIpReceive to tell the network that it is ready to receive raw IP packets.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  CMERUPT
Procedure Name:  RawIpReceive

EZA8651I  Send RawIP
Explanation:     A client is using the procedure RawIpSend to send raw IP packets over the network normally.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  CMERUPT
Procedure Name:  RawIpSend

EZA8652I  Ping request
Explanation:     A client is using the procedure PingRequest to perform a PING to test continuity across the network. For more information on the PING command, see the z/OS Communications Server: IP User’s Guide and Commands.
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  CMERUPT
Procedure Name:  PingRequest

EZA8669E  *** Invalid call: ord = call_number ***
Explanation:     A client has issued a call that TCPIP does not recognize. This indicates a programming error. The call is refused.
System action:  TCPIP continues.
Operator response:  Notify the system programmer of the error.
System programmer response:  Check the client to determine why it is sending incorrect calls.
Module:  CMPRCOM
Procedure Name: SayCliCa

Note: The following messages display the connection state returned by the function SayConSt, which is called to determine the state of a connection.

EZA8670I  Connection closing
Explanation: The connection for which SayConSt was called is closing.
System action: TCPIP continues.
Operator response: Restart the connection if necessary.
System programmer response: Assist the user as necessary.
Module: varies
Procedure Name: varies

EZA8671I  Listening
Explanation: The connection for which SayConSt was called is currently in a listening state.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8672I  Nonexistent
Explanation: The connection for which SayConSt was called does not exist.
System action: TCPIP continues.
Operator response: Start the connection if necessary.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8673I  Open
Explanation: The connection for which SayConSt was called is in an Open state.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8674I  Receiving only
Explanation: The connection for which SayConSt was called is in a Receiving Only state.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8675I Sending only
Explanation: The connection for which SayConSt was called is in a Sending Only state.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8676I Trying to open
Explanation: TCPIP is attempting to open the connection for which SayConSt was called.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8679E *** Invalid state: ord = state ***
Explanation: SayConSt encountered a state it did not recognize. The state is displayed in the message.
System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Check the devices on each end of the connection to determine why they are sending incorrect state information. For more information about valid connection states for TCPIP, see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference
Module: varies
Procedure Name: varies

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

EZA8680I Buffer space available
Explanation: TCPIP has received notification that buffer space is available to send or receive data.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies
EZA8681I  Connection state changed
Explanation:  TCPIP has received notification that the state of a connection has changed.

Note:  This message displays notifications returned by the function SayNotEn, which is used to display event
notifications sent by the TCPIP address space.

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
Procedure Name:  varies

EZA8682I  Data delivered
Explanation:  TCPIP has received notification that data has been delivered.

Note:  This message displays notifications returned by the function SayNotEn, which is used to display event
notifications sent by the TCPIP address space.

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
Procedure Name:  varies

EZA8683I  User-defined notification
Explanation:  TCPIP has received a user-defined notification.

Note:  This message displays notifications returned by the function SayNotEn, which is used to display event
notifications sent by the TCPIP address space.

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
Procedure Name:  varies

EZA8684I  Datagram space available
Explanation:  TCPIP has received notification that space is available to send or receive data grams.

Note:  This message displays notifications returned by the function SayNotEn, which is used to display event
notifications sent by the TCPIP address space.

System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  varies
Procedure Name:  varies
EZA8685I Urgent pending

Explanation: TCPIP has received notification that an urgent transmission is about to be sent.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8686I UDP data delivered

Explanation: TCPIP has received notification that UDP data has been delivered.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8687I UDP datagram space available

Explanation: TCPIP has received notification that space is available to send or receive UDP datagrams.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8688I Other external interrupt received

Explanation: TCPIP has received an external interrupt from the operating system. The appropriate interrupt handler is called to deal with the external interrupt.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies
EZA8689I  User delivers line
Explanation: A user has sent data to TCPIP. The data is received and processed.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8690I  User wants attention
Explanation: A user has requested service from TCPIP. TCPIP delivers the requested service to the user.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8691I  Timer expired
Explanation: A timer has expired on a process or event.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: Processing resumes. TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8692I  FSend response
Explanation: A client has sent notification that it is using the procedure TcpFSend to push data over a TCP connection. The data is sent.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies
EZA8693I FReceive error

**Explanation:** A client was unable to receive data because the connection to which the data was sent was not in the correct state to receive it. TCPIP will handle the resulting interrupt and retransmit the data.

**Note:** This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

**System action:** TCPIP continues.
**Operator response:** No action is needed.
**System programmer response:** No action is needed.
**Module:** varies
**Procedure Name:** varies

---

EZA8694I RawIP packets delivered

**Explanation:** Raw IP packets have been delivered to a client.

**Note:** This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

**System action:** TCPIP continues.
**Operator response:** No action is needed.
**System programmer response:** No action is needed.
**Module:** varies
**Procedure Name:** varies

---

EZA8695I RawIp packet space available

**Explanation:** TCPIP has received notification that buffer space is available to receive raw IP packets.

**Note:** This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

**System action:** TCPIP continues.
**Operator response:** No action is needed.
**System programmer response:** No action is needed.
**Module:** varies
**Procedure Name:** varies

---

EZA8696I IUCV interrupt

**Explanation:** TCPIP has received an interrupt from the inter&hyphen user communication vehicle (IUCV). The IUCV interrupt handler is called to deal with the interrupt.

**Note:** This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

**System action:** TCPIP continues.
**Operator response:** No action is needed.
**System programmer response:** No action is needed.
**Module:** varies
**Procedure Name:** varies
EZA8697I  I/O interrupt

Explanation: TCPIP has received an input/output (I/O) interrupt. The I/O interrupt handler is called to deal with the interrupt.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

EZA8698I  Resources available for TcpOpen

Explanation: The necessary resources are currently available for the procedure TcpOpen, which opens a connection to TCP.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

EZA8699I  Resources available for UdpOpen

Explanation: The necessary resources are available for the procedure UdpOpen, which opens a connection to UDP.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: A UDP connection is opened. TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

EZA8700I  Ping response or timeout

Explanation: TCPIP has received a response from a PING request, used to check connectivity across the network. If the response was not a timeout, it indicates that the host to which the PING was directed is reachable over the network.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies
Procedure Name: varies

EZA8701I SMASH received

Explanation: A short message has been received and queued to the appropriate connection.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8706E *** Invalid notification: ord = notification ***

Explanation: SayNotEn has received a notification that it does not recognize. The notification is ignored.

Note: This message displays notifications returned by the function SayNotEn, which is used to display event notifications sent by the TCPIP address space.

System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Check the device that sent the notification to determine why it is sending incorrect notifications.
Module: varies
Procedure Name: varies

EZA8707I Routine

Explanation: TCPIP has received a packet with a precedence value of routine.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8708I Priority

Explanation: TCPIP has received a packet with a precedence value of priority.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8709I  Immediate
Explanation: TCPIP has received a packet with a precedence value of immediate.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8710I  Flash
Explanation: TCPIP has received a packet with a precedence value of flash.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8711I  Flash override
Explanation: TCPIP has received a packet with a precedence value of flash override.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8712I  Critic/ECP
Explanation: TCPIP has received a packet with a precedence value of Critic/ECP.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8713I Internetwork control
Explanation: TCPIP has received an internetwork control packet.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8714I Network control
Explanation: TCPIP has received a network control packet.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8717E *** Invalid precedence: ord = precedence ***
Explanation: TCPIP has received a packet with a precedence value that it does not recognize. The packet is discarded.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Check the sending device to determine why it is sending packets with an incorrect precedence value.
Module: varies
Procedure Name: varies

Note: The following messages display the protocol type returned by the function SayProTy, which is called to determine the protocol type of an incoming packet.
EZA8718I  ICMP

Explanation: TCPIP has received a packet with a protocol type of internet control message protocol (ICMP).

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8724I  TCP

Explanation: TCPIP has received a transmission control protocol (TCP) packet.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8734I  UDP

Explanation: TCPIP has received a user datagram protocol (UDP) packet.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8736I  protocol

Explanation: TCPIP has received a message with the indicated protocol.

Note: This message displays the precedence values returned by the function SayPreTy, which is used to display the precedence value of an incoming packet. For more information about precedence values, see the Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
**EZA8737I • EZA8745E**

Procedure Name: \textit{varies}  

\textbf{EZA8737I} Specific authorization

**Explanation:** A packet has been received with a specific authorization.

**Note:** This message displays the authority returned by the function SayVmcAu, which is called to determine the authority level of a packet transmitted by the virtual machine communication facility (VMCF).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** \textit{varies}

**Procedure Name:** \textit{varies}

\textbf{EZA8738I} Priority

**Explanation:** A packet has been received with a priority authorization.

**Note:** This message displays the authority returned by the function SayVmcAu, which is called to determine the authority level of a packet transmitted by the virtual machine communication facility (VMCF).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** \textit{varies}

**Procedure Name:** \textit{varies}

\textbf{EZA8739I} Allow short message facility

**Explanation:** A packet has been received authorizing use of the short message facility of the virtual machine communication facility (VMCF).

**Note:** This message displays the authority returned by the function SayVmcAu, which is called to determine the authority level of a packet transmitted by the virtual machine communication facility (VMCF).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** \textit{varies}

**Procedure Name:** \textit{varies}

\textbf{EZA8745E} *** Invalid authorization: \textit{authority} ***

**Explanation:** The virtual machine communication facility (VMCF) has received a packet with an authority that it does not recognize.

**Note:** This message displays the authority returned by the function SayVmcAu, which is called to determine the authority level of a packet transmitted by the virtual machine communication facility (VMCF).

**System action:** The packet is ignored. TCPIP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Check the device that sent the packet to determine why it is sending packets with incorrect authorities.
Module: varies
Procedure Name: varies

EZA8746I Authorize
Explanation: The virtual machine communication facility has received an authorize call from a client.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8747I Unauthorize
Explanation: The virtual machine communication facility (VMCF) has received an unauthorize function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8748I Send
Explanation: The virtual machine communication facility (VMCF) has received a send function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8749I Send/Receive
Explanation: The virtual machine communication facility (VMCF) has received a send/receive function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.
EZA8750I  SendX

Explanation: The virtual machine communication facility (VMCF) has received a sendx function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8751I  Receive

Explanation: The virtual machine communication facility (VMCF) has received a receive function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8752I  Cancel

Explanation: The virtual machine communication facility (VMCF) has received a cancel function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies
EZA8753I  Reply

Explanation: The virtual machine communication facility (VMCF) has received a reply function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

---

EZA8754I  Quiesce

Explanation: The virtual machine communication facility (VMCF) has received a quiesce function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

---

EZA8755I  Resume

Explanation: The virtual machine communication facility (VMCF) has received a resume function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

---

EZA8756I  Identify

Explanation: The virtual machine communication facility (VMCF) has received an identify function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies
Procedure Name: varies

EZA8757I Reject
Explanation: The virtual machine communication facility (VMCF) has received a reject function call from TCPIP.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8758E *** Invalid VMCF function: function ***
Explanation: The virtual machine communication facility (VMCF) has received a call for a function it does not recognize. The call is ignored.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Check the sending device to determine why it is making incorrect VMCF function calls.
Module: varies
Procedure Name: varies

EZA8915I version: version
Explanation: This message displays the internet addressing protocol being used.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8916I Internet Header Length: length = number bytes
Explanation: This message displays the internet header length being used for IP packets and the equivalent length in bytes.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Explaination: These messages indicate the type of service being delivered by an IP datagram, the precedence value, and the performance emphasis. The performance emphasis can be either low delay, high throughput, or high reliability. The message “garbage in reserved bits” is displayed only if incorrect data is encountered in a reserved field of the IP header. The data will be ignored.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

Explaination: This message displays the total length of the IP datagram.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

Explaination: This message displays the identification of an IP datagram and fragmentation information for that datagram.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies
EZA8933I  Time To Live: time  Protocol: protocol  Header Checksum: checksum  Source Address: address  Destination Address: address

Explanation: This message gives the time to live, protocol type, header checksum, and source and destination addresses for an IP datagram.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8936I  Protocol: protocol

Explanation: This message indicates the protocol being used by TCPIP.

Note: For more information about this message, see the message EZA*nnnn, where nnnn is the 4-digit number in parentheses at the end of this message.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8937I  Header CheckSum: checksum

Explanation: This message displays the header checksum from a packet. The header checksum is used to check packet integrity.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA8938I  Source Address: address

Explanation: This message displays the address from which a packet was sent.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.
**EZA8939I**  Destination Address: *address*

**Explanation:** This message displays the address to which a packet was sent.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com). System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: *varies*
Procedure Name: *varies*

**EZA8961I**  net address = *address*, port = *port_type*

**Explanation:** This message displays the internet address and port type of a port.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com).
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: *varies*
Procedure Name: *varies*

**EZA8966I**  Connection: *connection*

**Explanation:** This message displays the current connection.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com).
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: *varies*
Procedure Name: *varies*
**EZA8967I**  Open Attempt Timeout: *time*

**Explanation:** The current connection will wait for the indicated length of time for the other side of the connection to respond to an open request.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://publib.boulder.ibm.com/infocenter/tivihelp/v16r1/topic/com.ibm.servlets.doc/network/tivncs_zoscomm%20server.htm).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** varies

**Procedure Name:** varies

---

**EZA8968I**  Wait Forever

**Explanation:** The value of the OpenAttemptTimeout is WAITForever, indicating that the host will wait for a connection until the connection is opened.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://publib.boulder.ibm.com/infocenter/tivihelp/v16r1/topic/com.ibm.servlets.doc/network/tivncs_zoscomm%20server.htm).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** varies

**Procedure Name:** varies

---

**EZA8969I**  openattempttimeout

**Explanation:** This message displays the value of the OpenAttemptTimeout, which indicates the length of time, in seconds, that the host will wait for a connection to be opened before cancelling the attempt.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://publib.boulder.ibm.com/infocenter/tivihelp/v16r1/topic/com.ibm.servlets.doc/network/tivncs_zoscomm%20server.htm).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** varies

**Procedure Name:** varies

---

**EZA8970I**  Security: *security*

**Explanation:** This message gives the security status of a connection.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://publib.boulder.ibm.com/infocenter/tivihelp/v16r1/topic/com.ibm.servlets.doc/network/tivncs_zoscomm%20server.htm).

**System action:** TCPIP continues.

**Operator response:** No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

**EZA8971I** 
**Compartment:** compartment
**Explanation:** This message indicates the compartment to which a connection is assigned.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](#).

**System action:** TCPIP continues.
**Operator response:** No action is needed.
**System programmer response:** No action is needed.
Module: varies
Procedure Name: varies

**EZA8972I** 
**Precedence:** precedence
**Explanation:** This message displays the precedence type of an IP datagram.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](#).

**System action:** TCPIP continues.
**Operator response:** No action is needed.
**System programmer response:** No action is needed.
Module: varies
Procedure Name: varies

**EZA8973I** 
**Bytes To Read:** number
**Explanation:** This message displays the number of bytes to be read in an IP datagram.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](#).

**System action:** TCPIP continues.
**Operator response:** No action is needed.
**System programmer response:** No action is needed.
Module: varies
Procedure Name: varies

**EZA8974I** 
**Unacked Bytes:** number
**Explanation:** This message displays the number of unacknowledged bytes in an IP datagram.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](#).

**System action:** TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

EZA8975I  Connection State: connection_state  Local Socket: socket  Foreign Socket: socket

Explanation: This message displays the connection state for the current connection and the local and foreign sockets being used for the connection. For more information about the connection state, see the message EZAnnnn, where nnnn is the 4-digit number in parentheses displayed in this message.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

EZA8980I  V1: vmcf_response_code

Explanation: This message displays the response code taken from the packet header of an external virtual machine communication facility (VMCF) packet. The response code indicates the status of the external end of the VMCF connection. For more information about VMCF response codes, see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

EZA8981I  V1: VCMPFLG1

Explanation: This message displays the VCMPFLG1, which is used to specify options associated with a particular function. The flag byte can be set to the following values:

Flag Value Indicates
VMCPAUTS (X’80’) An AUTHORIZE SPECIFIC request.
VMCPPRTY (X’40’) For SEND, SEND/RECV, SENDX, and IDENTIFY requests, a PRIORITY message request. For an AUTHORIZE request, it indicates an AUTHORIZE PRIORITY request. PRIORITY messages cannot be sent to another machine unless it has been authorized to receive them.
VMCPMSMG (X’20’) The virtual machine accepts messages sent via the SMSG command.
Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

EZA8982I V2: VCMPFLG2

Explanation: This message displays the hexadecimal value indicating the virtual machine communication facility (VMCF) function request taken from the VMCF packet header. The flag is reserved, and therefore should be X’00’ initially.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

EZA8986I  Vaddress A: address

Explanation: This message displays the VMCPVADA register taken from the virtual machine communication facility (VMCF) packet header. This register contains one of four addresses, depending on which VMCF function is requested.

For SEND, SEND/RECV, and SENDX requests, VMCPVADA contains the address of the source address space data. For RECEIVE requests, VMCPVADA contains the address of a sink address space RECEIVE buffer. For REPLY requests, VMCPVADA contains the address in sink address space where REPLY data is located. For an AUTHORIZE request, VMCPVADA contains the address of an external interrupt buffer.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: varies
Procedure Name: varies

EZA8987I  Length A: length

Explanation: This message specifies the length of the type of data specified by Vaddress A.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: varies
Procedure Name: varies
Vaddress B: VMCPVADB

Explanation: This message displays the contents of the VMCPVADB register taken from the virtual machine communication facility (VMCF) packet header. This register contains the address of a source address space's REPLY buffer. The length of the buffer is specified by VMCPLENB.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

Length B: VMCPLENB

Explanation: This message displays the VMCPLENB register taken from the virtual machine communication facility (VMCF) packet header. This register indicates the length of the REPLY buffer specified in VMCPVADB.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

AnInteger: integer_value

Explanation: The meaning of the value displayed in AnInteger depends on the type of virtual machine communication facility (VMCF) function call contained in the packet:

For the function:
- AnInteger represents:
  - PINGreq: The value of the timeout being used for the PING request.
  - PINGresponse: The return code from the PING procedure.
  - UDPdatagramDElivered: The length of the entire datagram excluding the UDP header.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies
EZA8992I  Connection: Unspecified

Explanation: This message indicates that connection by which a virtual machine communication facility (VMCF) packet was sent is unspecified.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the \textit{z/OS Communications Server: IP Programmer’s Guide and Reference}.

System action: TCPIP continues.

Procedure Name: varies

---

EZA9008I  Vaddress B: VMCPVADB

Explanation: This message displays the contents of the VMCPVADB register taken from the virtual machine communication facility (VMCF) packet header. This register contains the address of a source address space’s REPLY buffer. The length of the buffer is specified by VMCPLENB.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies
EZA9009I  Length B: VMCPLENB

Explanation: This message displays the VMCPLENB register taken from the virtual machine communication facility (VMCF) packet header. This register indicates the length of the REPLY buffer specified in VMCPVADB.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

EZA9010I  AnInteger: AnInteger

Explanation: The meaning of the value displayed in AnInteger depends on the type of virtual machine communication facility (VMCF) function call contained in the packet:

PINGreq The value of the timeout being used for the PING request.
PINGresponse The return code from the PING procedure.
UDPdatagramDELIVERED The length of the entire datagram excluding the UDP header.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

EZA9011I  Connection: Unspecified

Explanation: This message indicates that connection by which a virtual machine communication facility (VMCF) packet was sent is unspecified.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

EZA9012I  Connection: connection

Explanation: This message indicates the connection by which a virtual machine communication facility (VMCF) packet was sent.
Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

EZA9013I Call: call_code

Explanation: This message displays the call code from a virtual machine communication facility (VMCF) packet header.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: varies

Procedure Name: varies

---

EZA9014I Return code: SayCalRe(return_code)

Explanation: This message displays the return code from a virtual machine communication facility (VMCF) packet header.

Note: For more information about this message, see the message EZA9nnnn, where nnnn is the 4-digit number in parentheses at the end of this message.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: Respond as indicated by the message EZA9nnnn where nnnn is the 4-digit number in parentheses at the end of this message.

Module: varies

Procedure Name: varies

---

EZA9020I VMCF ret code is return_code. VMCF header follows:

Explanation: This message displays the return code from a virtual machine communication facility (VMCF) packet. It precedes the actual VMCF header.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.
System programmer response: Use the return code displayed in the message and the list of VMCF return codes in the z/OS Communications Server: IP Diagnosis Guide to determine whether an error has occurred and respond as indicated by the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.

Module: varies
Procedure Name: varies

EZA9025I VMCF interrupt header:
Explanation: This message precedes the printing of the virtual machine communication facility (VMCF) interrupt header.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: The VMCF interrupt header is printed. TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: varies
Procedure Name: varies

EZA9030I source_address -> destination_address Vversion IHL=header_length Len=packet_length ID=identification Frag Offset=fragmentation_offset=number bytes (More) Protocol=SayProTy(protocol)
Explanation: This message displays information about an incoming IP datagram. IHL is the internet header length, Len is the total length of the datagram in bytes. Frag Offset is the fragmentation offset, and (More) indicates that there are more fragments of this datagram to come.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: varies
Procedure Name: varies

**EZA9080I**  \texttt{SayVmcFu(function)->directory_name V1=VMCPFLG1 ID=message_id VadA=VMCPVADA LenA=length_of_VMCPVADA VadB=VMCPVADB LenB=length_of_VMCPVADB Conn=connection Call=call_code Return=SayCalRe(return_code)}

**Explanation:** This message displays the contents of a virtual machine communication facility (VMCF) packet. V1 is a flag byte used to specify options associated with a particular function. The flag byte can be set to the following values:

- **VMCPAUTS(X’80’)**: An AUTHORIZE SPECIFIC request.
- **VMCPPRTY(X’40’)**: For SEND, SEND/RECV, SENDX, and IDENTIFY requests, a PRIORITY message request. For an AUTHORIZE request, it indicates an AUTHORIZE PRIORITY request. PRIORITY messages cannot be sent to another address space unless that address space has been authorized for PRIORITY messages. The SEND and RESPONSE external interrupts for a PRIORITY message are queued ahead of pending nonpriority external interrupts.
- **VMCPVMSG(X’20’)**: The virtual machine accepts messages sent via the SMSG command.

The ID value is the message identifier.

VadA contains one of four addresses, depending upon which VMCF function is requested.
For SEND, SEND/RECV, and SENDX requests, VMCPVADA contains the address of the source address space data. For RECEIVE requests, VMCPVADA contains the address of a sink address space RECEIVE buffer. For REPLY requests, VMCPVADA contains the address in sink address space where REPLY data is located. For an AUTHORIZE request, VMCPVADA specifies the address of the interrupt buffer.

LenA contains the length of data sent by a user, the length of a RECEIVE buffer, or the length of an external interrupt buffer, whichever is specified in the field VMCPVADA.

VMCPVADB contains the address of a source address space's REPLY buffer for a SEND/RECV request. When the sink address space issues a REPLY in response to a SEND/RECV from the source address space, the REPLY data is moved in this buffer.

LenB specifies the length of the buffer being used to move the data indicated in the field VMCPVADB.

Conn specifies the connection being used to send and receive VMCF packets.

Call displays the call code associated with the packet.

Return indicates whether the packet was sent and received successfully.

Note: For more information about this message, see the message EZA\nnnn, where nnnn is the 4-digit number in parentheses at the end of this message.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: Respond as indicated by the message EZA\nnnn where nnnn is the 4-digit number in parentheses at the end of this message.

Module: varies

Procedure Name: varies

EZA9200I Implied Argument lengths: lengths

Explanation: These trace messages display the size in characters of the arguments submitted.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: FAL@PRTC

Procedure Name: DISPLAY_ARGUMENT_SIZES

EZA9202I filename data set name

Explanation: This is the data set name of the message file being used by Falprint to hold text for messages that Falprint generates as write to operator (WTO) messages, which are written to the operator's console. This allows messages from TCPIP or MVS be to displayed even if an overlying application is being used. This message is displayed with message EZA9228I.
Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: FAL@PRTC
Procedure Name: prtmsgw

EZA9203E  MSG message number not defined
Explanation: The specified message number is not defined in the message data set.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: Insert the message ID and message text in the message data set.
System programmer response: No action is needed.
Module: FAL@PRTC
Procedure Name: printmsgw

EZA9204I  findmsg:colon try again
Explanation: The message specified was not properly linked to the Falprint message repository. Falprint creates a repository of TCPIP messages that are not displayed while an application is being run on TCPIP and converts them to write to operator (WTO) messages, allowing them to be displayed without interference from an overlying application.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: The program tries again and continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: FAL@PRTC
Procedure Name: findmsg

EZA9205I  searching for weak link: data_set_name msg_file
Explanation: Falprint is searching for a weak link between the data set from which message text is being taken and the message file, which is used by Falprint to generate write to operator (WTO) messages, which are written to the operator’s console if necessary. A weak link indicates that a message needed by Falprint from the current data set is not duplicated in the message file.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: The program continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: FAL@PRTC
Procedure Name: varies

EZA9206I Found weak link for message file name

Explanation: A message in the indicated data set did not correspond to a message in the message file being constructed by Falprint, creating a weak link between the message files. Falprint builds a message file containing message text from TCPIP and MVS messages that will not be displayed if an application is being run over TCPIP and converts them to write to operator (WTO) messages, allowing them to be displayed.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: The program continues.

Operator response: Notify the system programmer of this message.

System programmer response: Check the message file and the source data set to determine where the weak link occurred and add the necessary message to the message file.

Module: FAL@PRTC
Procedure Name: isweakmsg

EZA9207I findmsg: looking for message number message number

Explanation: The findmsg function, which finds a specific message in a message file, is searching the file for the specified message.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: The program continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: FAL@PRTC
Procedure Name: findmsg

EZA9208I Reading message file: message file

Explanation: Falprint is in the process of reading the specified message file. Falprint creates a message file to hold the message identifiers and message text from messages from TCPIP and MVS that will not be displayed due to an application that is being run and converts the messages to write to operator (WTO) messages, which are written to the operator's console, allowing them to be displayed.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: The program continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: FAL@PRTC
Procedure Name: initmsgs
**EZA9209I**  initmsgs read message  message_text  message_delimiter

**Explanation:** The indicated message text did not contain a delimiter indicating the end of the text. Falprint appends the message delimiter “-n’ to the text to indicate the end of the text.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/support/docview.wss?uid=swg27014150).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** FAL@PRTC

**Procedure Name:** initmsgs

---

**EZA9210I**  Opened dataset  data set

**Explanation:** Falprint is using the indicated data set to create a message file containing the message identifiers and message texts for messages from TCPIP and MVS that will not be displayed by normal means due to interference from an application currently running. Falprint converts these messages to write to operator (WTO) messages, allowing them to be displayed while the application is running.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/support/docview.wss?uid=swg27014150).

**System action:** The program continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** RES@MVS

**Procedure Name:** mvsfopen

---

**EZA9213I**  EZACISSP not found

**Explanation:** The program was unable to find the communications interface system (CIS) server.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/support/docview.wss?uid=swg27014150).

**System action:** The program continues.

**Operator response:** Notify the system programmer of this message.

**System programmer response:** Make sure that the CIS server is started and online. Make sure that the CIS server is reachable through the network.

**Module:** FAL@PRTC

**Procedure Name:** initmsgs

---

**EZA9214W**  extra quote

**Explanation:** There is an incorrect number of quotation marks at the end of a line in the message data set.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/support/docview.wss?uid=swg27014150).

**System action:** TCPIP continues.
Operator response: Fix the message data set by removing the excess quotation marks.
System programmer response: No action is needed.
Module: FAL@PRTC
Procedure Name: initmsgs

---

**EZA9215W**  Duplicate message file name name

**Explanation:** This message indicates the name specified has already been used for a message data set name.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](z/OS Communications Server: IP Programmer’s Guide and Reference).

**System action:** TCPIP continues.
**Operator response:** No action is needed.
**System programmer response:** No action is needed.

---

**EZA9218E**  Can't open message file or message text name: data set name

**Explanation:** There was a problem opening the message data set or message text name.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](z/OS Communications Server: IP Programmer’s Guide and Reference).

**System action:** TCPIP continues.
**Operator response:** Verify the name of the message data set and try again.
**System programmer response:** No action is needed.

---

**EZA9219E**  Invalid MARGINS statement in message file.

**Explanation:** In the MARGIN statement of the message file, the second margin was smaller than the first margin, or the first margin was assigned a value smaller than 1. This message is also displayed if the MARGINS statement was not in the following form: MARGINS(first margin second margin)

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](z/OS Communications Server: IP Programmer’s Guide and Reference).

**System action:** The program continues.
**Operator response:** Correct the MARGINS statement in the message file.
**System programmer response:** No action is needed.

---
EZA9220E  Can't allocate storage for messages

Explanation:  There was an error allocating dynamic storage for the messages.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call.  For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference

System action: TCPIP continues.

Operator response:  No action is needed.

System programmer response:  Increase the region size.

Module:  FAL@PRTC

Procedure Name:  initmsgs

---

EZA9221E  Missing product in message file:  data set name

Explanation:  The product field is missing from the message data set.  The product field contains a 3 letter combination.  For example:

PRODUCT EZA
PRODUCT EZB
PRODUCT EZY

For more information on the original message file, ask the system programmer.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call.  For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference

System action: TCPIP continues.

Operator response:  No action is needed.

System programmer response:  See the originally shipped version of the specified data set and verify the name of the product.

Module:  FAL@PRTC

Procedure Name:  initmsgs

---

EZA9222E  Missing component in message file:  data set name

Explanation:  There was a component field missing from the message data set.  The component field is a combination of 3 letters representing individual components.  For example:

COMPONENT DNS

For more information on the message facility, ask the system programmer.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call.  For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference

System action: TCPIP continues.

Operator response:  No action is needed.

System programmer response:  See the originally shipped version of the specified data set and verify the name of the component.

Module:  FAL@PRTC

Procedure Name:  initmsgs
EZA9223E  **** Duplicate Message number ****: message number

Explanation: This message indicates that there are 2 or more messages with the same message number in the message data set.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: Delete 1 of the message's text and its corresponding number so there is 1 version of each.

System programmer response: No action is needed.

Module: FAL@PRTC

Procedure Name: initmsgs

EZA9224I  Original message: message text

Explanation: This message displays the first occurrence of the message with the duplicate message number.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: FAL@PRTC

Procedure Name: initmsgs

EZA9225I  Duplicate message: message text

Explanation: This message displays the second occurrence of the message with the duplicate message number.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: FAL@PRTC

Procedure Name: initmsgs

EZA9226E  Can't allocate storage for message text

Explanation: There was an error allocating dynamic storage for the message text.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: Increase the size of the region.
Module: FAL@PTRC
Procedure Name: initmsgs

EZA9227E  Can't allocate storage for message code
Explanation: There is not enough dynamic storage for the message code.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: Increase the size of the region.
Module: FAL@PRTC
Procedure Name: initmsgs

EZA9228I  message number message number text text
Explanation: This message displays all the messages in the message file and the corresponding message numbers.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: FAL@PRTC
Procedure Name: prtmgs, prtmmsgw

EZA9229I  Message message number not found
Explanation: The message number specified was not in the message list, but was called in the source code.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: Verify the existence of the message ID and text, and try again.
System programmer response: No action is needed.
Module: FAL@PRTC
Procedure Name: fflush

EZA9230E  Processed maximum number of message data sets.
Explanation: The maximum number of message data sets have been processed. The maximum number of message data sets is 256. Processing is no longer an option.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: Do not attempt to process any more message data sets.

System programmer response: No action is needed.

Module: FAL@PRTC

Procedure Name: find_msgtxt, update_msgfn

---

**EZA9231I** fal@prt: isdupfn

Explanation: This message is displayed while debugging is enabled and the isdupfn function is invoked. This function determines if there are duplicate message data sets.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com/support/knowledgecenter/en/SSLVMM_13.1.0/com.ibm.zos.v1r13.ceip.doc/index.html).

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: FAL@PRTC

Procedure Name: isdupfn

---

**EZA9232I** fal@prt: isdupfn file already processed

Explanation: The function that determines if there are duplicate message file names has already been successful.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com/support/knowledgecenter/en/SSLVMM_13.1.0/com.ibm.zos.v1r13.ceip.doc/index.html).

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: FAL@PRTC

Procedure Name: isdupfn

---

**EZA9234I** fal@prt: dotimestamp

Explanation: This message is displayed when debugging is enabled and upon the invocation of the dotimestamp function. This function changes the type of time stamping of all messages.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer's Guide and Reference](https://www.ibm.com/support/knowledgecenter/en/SSLVMM_13.1.0/com.ibm.zos.v1r13.ceip.doc/index.html).

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: FAL@PRTC

Procedure Name: dotimestamp
EZA9235I fal@prt: initprt

Explanation: This message is displayed when debugging is enabled and upon the invocation of the initprt function. This function determines the status of the message data set.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: FAL@PRTC
Procedure Name: initprt

EZA9236I Message file data_set_name rc return_code

Explanation: This message displays the name of the processed message data set and the return code.
return_code is the return code from message initialization. If it is zero, then message initialization was successful. If it is a negative number, then a preceding message should have explained the error.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: FAL@PRTC
Procedure Name: initprt

EZA9237E EZAMSGL command exceeds number-byte buffer: command

Explanation: The EZAMSGL command, which is invoked by a user-specified command, exceeded the size of the allocated buffer.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: The program continues.
Operator response: Correct the size of the command in the user-specification. For more information about the EZAMSGL command, see the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference.
System programmer response: No action is needed.
Module: FAL@PRTC
Procedure Name: EZAMSGL

EZA9241I Using pre-loaded message file message file name accessed via EZAMSGP.

Explanation: Falprint is using the default message library included in the Falprint code FAL@PRTC.C, accessed through the function EZAMSGP, which controls the format of the displayed message. Falprint loads the message file.
EZA9242I • EZA9282I

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: Falprint continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: FAL@PRTC

Procedure Name: initprt

EZA9242I Using pre-loaded message file message file name accessed via EZAMSGW.

Explanation: Falprint is using the default message library included in the Falprint code FAL@PRTC.C, accessed through the function EZAMSGW, which controls the format of the displayed message.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: The program continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: FAL@PRTC

Procedure Name: initprt

EZA9282I TcpWaitOpen got unexpected state change: SayConSt(new_state)

Explanation: The procedure TcpWaitOpen, which opens a TCP connection for a client when one becomes available, received an unexpected state change on a connection being monitored. For more information about the new state, see message EZAnnnn where nnnn is the four-digit number in parenthesis at the end of this message.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: Respond as indicated by the message EZAnnnn where nnnn is the four-digit number in parenthesis at the end of this message.

Module: CMERUPT

EZA9282I StartTcpIpService: JOBNAME name is not the TCPIP address space.

Explanation: The specified NETSTAT TCP JOBNAME does not match the JOBNAME of the TCPIP address space.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: NETSTAT ends with error message EZA0216I. TCPIP continues.

Operator response: Reenter NETSTAT with the correct TCPIPJOBNAME as specified in the TCPIP.DATA data set.

System programmer response: No action is needed.

Module: CMERUPT

Procedure Name: StartTcpIpService

EZA9242I EZA9282I
Procedure Name: TcpWaitOpen

EZA9283I  TcpNameChange called after TcpIp service has begun.

Explanation: The procedure TcpNameChange, which changes the default directory name to be used by TCPIP, was called after TCPIP service had begun. The default directory name cannot be changed after TCPIP service has begun.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMERUPT

Procedure Name: TcpNameChange

EZA9284I  StartTcpipService: Error SayCalRe(result) from GetIdentity

Explanation: The procedure GetIdentity, which was called to determine the ID of the address space calling the procedure StartTcpipService, was unsuccessful. The reason is indicated by the SayCalRe portion of this message.

Note: For more information about this message, see the message EZA\nnnn, where \nnnn is the 4-digit number in parentheses at the end of this message.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: Respond as indicated by the message EZA\nnnn where \nnnn is the 4-digit number in parentheses at the end of this message.

Module: CMERUPT

Procedure Name: StartTcpIpService

EZA9285I  TIMER TRACE:

Explanation: This message precedes the printing of a timer trace.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMERUPT

Procedure Name: PrintTimers
EZA9286I Timer: \( \text{delta} = \text{timer\_change} \) \( \text{Datum} = \text{timer\_associated\_notification} \)

Explanation: This message displays the elapsed time from an internal timer set by TCPIP. The Datum in this message is the notification associated with the timer.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/support/docview/U24984213).

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMERUPT

Procedure Name: PrintTimers

---

EZA9288I RemoveTimer: Elapsed time is \( \text{time} \)

Explanation: The procedure RemoveTimer has been called to remove a timer that has been running for the indicated length of time.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/support/docview/U24984213).

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMERUPT

Procedure Name: RemoveTimer

---

EZA9290I Inserting timer: Time = \( \text{seconds} \) Data = \( \text{timer\_associated\_notification} \)

Explanation: The procedure InsertTimeout is inserting a new timer to replace one that has expired or has been removed. The length of time the timer will run is displayed in the message. The Data displayed in this message is the timer associated notification from the timer that has been removed or has expired.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/support/docview/U24984213).

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: No action is needed.

Module: CMERUPT

Procedure Name: InsertTimeout

---

EZA9292I SetTimer: Elapsed time is \( \text{time} \)

Explanation: This message is sent to the trace file if the TIMERdebug option was specified. The timer queue is periodically adjusted to reflect the time that has elapsed since the clock comparator was last set. The elapsed time displayed in this message is the time since the clock comparator was last set.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/support/docview/U24984213).
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMERUPT
Procedure Name: SetTimer

EZA9293I Setting timeout for number Seconds

Explanation: This message is sent to the trace file if the TIMERdebug option was specified. It indicates that a new timer is being created and set to run for the indicated length of time.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMERUPT
Procedure Name: SetTimer

EZA9294I InHeader.V2 is header

Explanation: This message indicates that the procedure MonQuery, which queries the system monitor, has received an error from the virtual machine communication facility (VMCF) indicating that no buffer space is available to receive the query. The query will be resent when buffer space is available to receive it.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: MonQuery halts. TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMERUPT
Procedure Name: MonQuery

EZA9295I Severe error: Insufficient virtual memory available for TCP-IP client

Explanation: No virtual storage was available to open a connection to a TCP/IP client. The connection is refused and the client will not receive TCP/IP service.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: The TCP/IP address space continues.
Operator response: Notify the system programmer of the error.
System programmer response: Increase the amount of virtual storage available to the host TCP/IP address space and restart the connection.
Module: CMERUPT
Procedure Name: NoRoom
EZA9340I  control key

Explanation: The PA2 or CLEAR key has been pressed. The Full-Screen Package (FSP) returns to CP READ and clears the screen when one of these keys is pressed.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMFSCRN
Procedure Name: ReadEnded

EZA9353I  CLIENTconsistency is set for full screen mode.

Explanation: The CLIENTconsistency has been set for full-screen tracing mode.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMFSCRN
Procedure Name: FsIoBegRupt

EZA9354I  bit number is incorrect in HighTwoBits.

Explanation: Indicates the bit number in HighTwoBits. This number can be a number in the range 0 - 64.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMFSCRN
Procedure Name: FsIoBegRupt

EZA9355I  Terminal Model model number is not supported.

Explanation: The indicated terminal model number is not supported on this system.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP ends.
Operator response: See the z/OS Communications Server: IP Configuration Reference for more information about technical requirements for TCP/IP for MVS and restart TCPIP.
System programmer response: No action is needed.
Module: CMFSCRN
Procedure Name: FsStartUp

EZA9356I About to begin
Explanation: This message displays when the debug option is used. The full screen mode has been requested and is about to begin its display.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: CMFSCRN
Procedure Name: Fsstart

EZA9403I data set name not found.
Explanation: The displayed data set name could not be found. When you make changes to your HOSTS.LOCAL data set, you must generate and install new HOSTS.SITEINFO and HOSTS.ADDRINFO data sets.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: Use the MAKESITE statement as either a TSO command or a batch job to generate the new data sets. See the z/OS Communications Server: IP Configuration Reference for more information.

Module: CMHOSTN
Procedure Name: GetSiteEntry

EZA9404I value.value.value.value.
Explanation: Indicates the host’s IP address as specified in the NSINTERADDR statement of the TCPIP.DATADATA data set. This message is displayed with other messages indicating the port number for this IP address. See the z/OS Communications Server: IP Configuration Reference for more information.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.

Module: CMHOSTN
Procedure Name: PrintHost
EZA9409E Syntax or other errors found in file file, continuing.

Explanation: This message is issued when the parser did not find a valid keyword. Syntax or other specification errors were found in the indicated file. The parser state is set to IgnoreState.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: Processing continues.

Operator response: The operator should check that the TCPIP.DATA configuration data set contains the correct syntax and valid information. Correct the input file for correct program operation. See the z/OS Communications Server: IP Configuration Reference for a complete list of the valid keywords.

System programmer response: Assist the user with problem resolution, as required.

Module: CMHOSTN

Procedure Name: ReadTCPIPdataFILE

EZA9410E See string line line number on or before column column number

Explanation: An error has occurred in the indicated line number of the TCPIP.DATA data set.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: Correct the error in the indicated line number and reinitialize TCPIP. See the z/OS Communications Server: IP Configuration Reference for more information.

System programmer response: No action is needed.

Module: CMHOSTN

Procedure Name: ReadTCPIPdataFILE

EZA9411E Unable to allocate/open dataset file, continuing.

Explanation: The application was unable to allocate or unable to open the indicated data set. The reason is indicated by additional messages.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: Check the indicated data set to make sure that it is properly formatted and in storage accessible to the host.

System programmer response: No action is needed.

Module: FTBMVSUB, CMHOSTN

Procedure Name: varies

EZA9412I Unable to allocate/open data set name file, continuing.

Explanation: The attempt to open the HOSTS.SITEINFO data set was unsuccessful. This data set must be generated and installed when changes are made to the HOSTS.LOCAL data set.
Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: No action is needed.

System programmer response: Use the MAKESITE statement as either a TSO command or a batch job to generate the new data set. See the z/OS Communications Server: IP Configuration Reference for more information.

Module: CMHOSTN

Procedure Name: GetSiteEntry

---

EZA9416E Failure in procedure getstate for data_set

Explanation: The procedure getstate, which is called to determine the status of a connection, was unsuccessful for the indicated data set. This indicates that the data set might not have a connection. The parameter list contained in the indicated data set is not passed to MAKESITE.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Check the indicated data set to make sure that it is in storage accessible to the host.

Module: CMMAKSI

Procedure Name: StartUp

---

EZA9417E System error trying to obtain format 1 DSCB for data_set

Explanation: The host was unable to determine the format for the data set control block (DSCB) for the indicated data set. CMMAKSI received a return code of 8 from the procedure getstate, which is called to determine the status of a connection. The data set is not read.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Make sure the DSCB is correctly formatted and resubmit the command.

Module: CMMAKSI

Procedure Name: StartUp

---

EZA9418E Failure using dataset, data set is migrated.

Explanation: The application was unable to use the indicated data set because the data set has been migrated and is inaccessible to the host.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: The indicated data set is not accessed. TCPIP continues.

Operator response: Recall the indicated data set. Make sure that it is properly formatted and in storage accessible to the host.
System programmer response: No action is needed.
Module: FTSMVSUB, CMMAKSI, CMHOSTN
Procedure Name: varies

EZA9419E  Failure using data_set, volume is not mounted.
Explanation: The MAKESITE command was unable to extract a parameter list from the indicated data set because
the volume containing the data set is not mounted.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the
function SayVmcFu, which is called to determine the type of a VMCF function call. For more information
about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference
System action: TCPIP continues.
Operator response: Mount the correct volume and resubmit the command.
System programmer response: Assist the user as necessary.
Module: CMMAKSI
Procedure Name: StartUp

EZA9420E  Failure using data_set, data set is not direct access.
Explanation: The MAKESITE command was unable to extract a parameter list from the indicated data set because
the data set is not a direct access data set. The parameter list is not transferred.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the
function SayVmcFu, which is called to determine the type of a VMCF function call. For more information
about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference
System action: TCPIP continues.
Operator response: Convert the data set to a direct access data set and resubmit the command.
System programmer response: Assist the user as necessary.
Module: CMMAKSI
Procedure Name: StartUp

EZA9421E  Failure using data_set, data set is VSAM.
Explanation: The MAKESITE command was unable to extract a parameter list from the indicated data set because it
is a Virtual Storage Access Method (VSAM) data set.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the
function SayVmcFu, which is called to determine the type of a VMCF function call. For more information
about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference
System action: The parameter list is not transferred. TCPIP continues.
Operator response: Make sure that the data set was specified correctly and resubmit the command.
System programmer response: Assist the user as necessary.
Module: CMMAKSI
Procedure Name: StartUp
Explanation: The MAKESITE command was unable to extract a parameter list from the indicated data set because the data set was specified incorrectly or had an incorrect data set organization. The parameter list is not transferred.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.

Operator response: Make sure that the data set was specified correctly and that it is a sequential data set.

System programmer response: Assist the user as necessary.

Module: CMMAKSI

Procedure Name: StartUp

Explanation: The MAKESITE command was unable to extract a parameter list from the indicated data set because the data set was specified incorrectly or had the wrong record format. The MAKESITE command requires a fixed record length. The parameter list is not transferred.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer's Guide and Reference.

System action: TCPIP continues.

Operator response: Make sure that the data set was specified correctly and has the proper record format. Correct the record format if necessary.

System programmer response: Assist the user as necessary.

Module: CMMAKSI

Procedure Name: StartUp

Explanation: CMMAKSI encountered an error in opening the indicated data set. The reason for this error is indicated by the sense code displayed in this message. The data set is not opened.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCP/IP continues.

Operator response: Notify the system programmer of the error.

System programmer response: Use the sense code displayed in this message and the z/OS Communications Server: IP Sockets Application Programming Interface Guide and Reference to determine the cause of the error.

Module: CMMAKSI

Procedure Name: StartUp

FTP.DATA file not found. Using hardcoded default values.

Explanation: When the FTP.DATA file is not being used, this message indicates that hardcoded defaults are in effect.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.
System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: FTBMVSUB
Procedure Name: Exist

EZA9475I Detected trouble decoding indireced name:

EZA9477I undecoded_name

Explanation: The client was unable to decode an indireced name returned from the Domain Name Server because it exceeded the maximum allowable length. The name is not decoded.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Check the configuration of the Domain Name Server to determine why it is sending names that are longer than the maximum allowable length.
Module: CMRESOL
Procedure Name: GetName

EZA9476I Detected trouble decoding name:

EZA9477I undecoded_name

Explanation: The client was unable to decode a name returned from the Domain Name Server because it exceeded the maximum allowable length. The name is not decoded.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: Notify the system programmer of the error.
System programmer response: Check the configuration of the Domain Name Server to determine why it is sending names that are longer than the maximum allowable length.
Module: CMRESOL
Procedure Name: GetName

EZA9486I A

Explanation: The resource record for which SayRRType was called is an address record. The address record contains the dotted-decimal notation internet address for the domain name identifying the record.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response:  No action is needed.
Module:  CMRESOL
Procedure Name:  SayRRType

EZA9487I  NS
Explanation:  The resource record for which SayRRType was called is a name server record. The name server record contains the domain name of a name server for the current zone.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  CMRESOL
Procedure Name:  SayRRType

EZA9488I  MD
Explanation:  The resource record for which SayRRType was called was an MD record. For more information about this experimental record type, see RFC 1034. See Appendix B, “Related protocol specifications,” on page 655 for information about accessing RFCs.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  CMRESOL
Procedure Name:  SayRRType

EZA9489I  MF
Explanation:  The resource record for which SayRRType was called is an MF record.

Note:  This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference
System action:  TCPIP continues.
Operator response:  No action is needed.
System programmer response:  No action is needed.
Module:  CMRESOL
Procedure Name:  SayRRType
**EZA9490I**  CNAME

**Explanation:** The resource record for which SayRRType was called is a canonical name record. The canonical name record is used to provide alias or alternative name information for a domain name. The domain name specified in the first field of the record is an alternative to the canonical or real name specified in the data field.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://publib.boulder.ibm.com/infocenter/zos/v1r13/topic/com.ibm.zos.r13.ipd/c0005390.html).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMRESOL

**Procedure Name:** SayRRType

---

**EZA9491I**  SOA

**Explanation:** The resource record for which SayRRType was called is a start of authority record. The SOA record is unique to a zone and contains administrative details of the zone, including:
- The domain name of the name server responsible for the zone.
- The mail address of the user responsible for the zone.
- The serial number of the zone database, which identifies the current revision of the data.
- The refresh interval, which indicates the length of time, in seconds, you must allow between the refreshing of a database from a remote name server.
- The retry interval, which indicates the length of time, in seconds, you must allow before trying a failed attempt again.
- The expiration time-to-live (TTL), which indicates the maximum time, in seconds, for records to be valid in the zone database.
- The minimum TTL, which indicates the minimum time, in seconds, for records to be valid in the zone database.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://publib.boulder.ibm.com/infocenter/zos/v1r13/topic/com.ibm.zos.r13.ipd/c0005390.html).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMRESOL

**Procedure Name:** SayRRType

---

**EZA9492I**  MB

**Explanation:** The resource record for which SayRRType was called is a mailbox record. The mailbox record is an experimental record with no RFCs that define specific rules for this data type.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://publib.boulder.ibm.com/infocenter/zos/v1r13/topic/com.ibm.zos.r13.ipd/c0005390.html).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMRESOL

**Procedure Name:** SayRRType
Explanation: The resource record for which SayRRType was called is a mail group member record. The mail group member record specifies the mail address of a person belonging to the mail group specified in the domain name field. Mail group records are experimental and have no RFCs that define specific rules for this data type.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the 

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRType

Explanation: The resource record for which SayRRType was called is a mail rename name record. The mail rename name record specifies a mailbox that is a rename of the mailbox specified in the domain name field. The mail rename name record is an experimental record. There are no RFCs that define specific rules for this data type.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the 

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRType

Explanation: The resource record for which SayRRType was called is a null resource record. The null resource record contains any information, providing it is less than 65 535 octets in length. The null resource record is an experimental record type. There are no RFCs that define specific rules for this data type.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the 

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRType

Explanation: The resource record for which SayRRType was called is a well-known services record. The well-known services record stores the protocol numbers of multiple services in a single record. See RFC 1060 for more detailed information. See Appendix B, “Related protocol specifications,” on page 655 for information about accessing RFCs.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRType
Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRType

EZA9497I PTR
Explanation: The resource record for which SayRRType was called is a domain name pointer record. The domain name pointer record is mainly used to store data for the in-addr.arpa domain, and contains the domain name referenced by an internet address.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRType

EZA9498I HINFO
Explanation: The resource record for which SayRRType was called is a host information record. This record type contains a text string specifying the central processing unit (CPU) type and operating system of a node.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
Operator response: No action is needed.
System programmer response: No action is needed.
Module: CMRESOL
Procedure Name: SayRRType

EZA9499I MINFO
Explanation: The resource record for which SayRRType was called is a mailbox information record. The mailbox information record specifies the mail addresses of the persons responsible for the mail group specified in the domain name field. The mailbox information record is an experimental record type. There are no RFCs that define specific rules for this data type.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.
**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMRESOL

**Procedure Name:** SayRRType

---

**EZA9500I MX**

**Explanation:** The resource record for which SayRRType was called is a mail exchanger record. The mail exchanger record defines a host that can act as a mail exchange for the domain specified in the domain name field. A mail exchange runs a mail agent that delivers or forwards mail for the domain name specified in the first field.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/support/knowledgecenter/SSFKQQ_8.5.0/com.ibm.zos.zos.ts20000.pdf).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMRESOL

**Procedure Name:** SayRRType

---

**EZA9500I TXT**

**Explanation:** The resource record for which SayRRType was called is a text string record. The text string record contains descriptive text.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/support/knowledgecenter/SSFKQQ_8.5.0/com.ibm.zos.zos.ts20000.pdf).

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** CMRESOL

**Procedure Name:** SayRRType

---

**EZA9502I Unknown RR Type**

**Explanation:** SayRRType did not recognize the type of the resource record for which it was called.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/support/knowledgecenter/SSFKQQ_8.5.0/com.ibm.zos.zos.ts20000.pdf).

**System action:** TCPIP continues.

**Operator response:** Notify the system programmer of the error.

**System programmer response:** Check the appropriate name server to determine why it is sending incorrect resource records.

**Module:** CMRESOL

**Procedure Name:** SayRRType
Explanation: This message displays the network class. The IN class represents the internet class (most Domain Name Servers support only this class). You can use the wildcard value ANY to match any class. For more information on the network class, see the z/OS Communications Server: IP Configuration Reference.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Module: varies
Procedure Name: varies

EZA9517I address_class number name

Explanation: This message displays the address class of a query. You will also receive one or more of the following values, depending on the resource record type:

<table>
<thead>
<tr>
<th>Value</th>
<th>Indicates</th>
</tr>
</thead>
<tbody>
<tr>
<td>query_type query_class</td>
<td>No responses have been received for this query.</td>
</tr>
<tr>
<td>time_to_live</td>
<td>Responses have been received for the query; they will be cached by the name server for the indicated length of time.</td>
</tr>
<tr>
<td>host_number</td>
<td>A response has been received for an A type query, the response contains a host address.</td>
</tr>
<tr>
<td>cname</td>
<td>A response has been received for a CNAME query. The response contains the canonical name of a host.</td>
</tr>
<tr>
<td>mailbox</td>
<td>A response has been received for an MX query. The response contains the address of a mailbox.</td>
</tr>
</tbody>
</table>
A response has been received for a name server query. The response contains the address of the local name server.

A response has been received for a start of address query. The response contains the address of the start of the table of authority for this zone, and displays the contents of the SOA record.

For more information about these fields, see the

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the

System action: TCPIP continues.

---

**EZA9656E** Invalid row coordinate: row
Explanation: TCPIP encountered an incorrect screen row coordinate during a full-screen setup.

Note: The NETSTAT INTERVAL option is valid only for 3278-type terminals.
Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: The NETSTAT program continues.

Operator response: Tell the system programmer the type of terminal on which you encountered the error.

System programmer response: Modify the TCPIP LOGMODE tables to correctly specify the full-screen characteristics of the terminal type on which the user encountered the error.

For information about TCPIP LOGMODE tables, see z/OS Communications Server: IP Configuration Reference.

Module: CMSCRNS

Procedure Name: Move

EZA9657E Invalid column coordinate: column

Explanation: TCPIP encountered an incorrect screen column coordinate during a full-screen setup.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: The NETSTAT program halts and exits.

Operator response: Tell the system programmer the type of terminal on which you encountered the error.

Note: The NETSTAT INTERVAL option is valid only for 3278-type terminals.

System programmer response: Modify the TCPIP LOGMODE tables to correctly specify the full-screen characteristics of the terminal type on which the user encountered the error.

For information about TCPIP LOGMODE tables, see z/OS Communications Server: IP Configuration Reference.

Module: CMSCRNS

Procedure Name: Move

EZA9689I DbcEtoA: First Double Byte Character Invalid ord(firstchar)

Explanation: EBCDIC double-byte characters are being converted to ASCII. The first character of a double-byte character, with the specified ordinal value, is not in the valid range for EBCDIC double-byte characters. For translation modes containing both single-byte and double-byte data, the erroneous character will be converted using single-byte EBCDIC to ASCII conversion tables. Data will continue to be converted in this manner until an EBCDIC shift-out character is encountered. If the translation mode uses shift-out and shift-in characters or escape sequences to delimit single-byte and double-byte ASCII data, a shift-in character or escape sequence will be added before the converted erroneous character.

For translation modes that convert pure double-byte data only, the erroneous character will be inserted without conversion and the conversion routine will move to the next character assuming it to be a valid first double-byte character. A shift-in character or escape sequence will not be inserted for these modes.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: Check the contents of the data being transmitted, to see if it contains valid double-byte characters. EBCDIC double-byte characters are enclosed within shift-out ’0E’X and shift-in ’0F’X characters.

System programmer response: Assist the user as necessary.

Module: CMDBCSCV PASCAL

Procedure Name: DbcEtoA
EZA9690I  DbcsEtoA : Second Double Byte Character Invalid  ord(firstchar) ord(secondchar)

**Explanation:** EBCDIC double-byte characters are being converted to ASCII. The second character of a double-byte character, with the specified ordinal value, is not in the valid range for EBCDIC double-byte characters. For translation modes containing both single-byte and double-byte data, the erroneous character and the corresponding first double-byte character will be converted using single byte EBCDIC to ASCII conversion tables. Data will continue to be converted in this manner until an EBCDIC shift-out character is encountered. If the translation mode uses shift-out and shift-in characters or escape sequences to delimit single-byte and double-byte ASCII data, a shift-in character or escape sequence will be added before the converted erroneous characters.

For translation modes that convert pure double-byte data only, the erroneous character and the first double-byte character will be inserted without conversion and the conversion routine will move to the next character assuming it to be a valid first double byte character. A shift-in character or escape sequence will not be inserted for these modes.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](#).

**System action:** TCPIP continues.

**Operator response:** Check the contents of the data being transmitted, to see if it contains valid double-byte characters. EBCDIC double-byte characters are enclosed within shift-out '0E'X and shift-in '0F'X characters.

**System programmer response:** Assist the user as necessary.

**Module:** CMDBCSCV PASCAL

**Procedure Name:** DbcsEtoA

---

EZA9691I  DbcsAtoE : Character after ESCAPE Invalid  ord(ASCIIEscape) ord(nextchar)

**Explanation:** ASCII JIS Kanji double-byte characters are being converted to EBCDIC. ASCII JIS Kanji double-byte characters are enclosed within the shift-out escape sequence ESC $ @ or ESC $ B, and the shift-in escape sequence ESC $ B or ESC $ J. The character after the ESCAPE, with the specified ordinal value, is not valid for a JIS Kanji shift-out or shift-in sequence. For translation modes containing both single-byte and double-byte data, the erroneous character and the escape character will be converted using single-byte ASCII to EBCDIC conversion tables. Data will continue to be converted in this manner until a valid shift-out escape sequence is encountered. An EBCDIC shift-in character will be inserted before the converted erroneous characters if the error is encountered after a valid double-byte character.

For translation modes that convert pure double-byte data only, the erroneous character and the escape character will be inserted without conversion and the conversion routine will move to the next character assuming it to be a valid first double byte character. An EBCDIC shift-in character will not be inserted for these modes.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the [z/OS Communications Server: IP Programmer’s Guide and Reference](#).

**System action:** TCPIP continues.

**Operator response:** Check the contents of the data being transmitted, to see if it contains valid JIS Kanji double-byte characters and escape sequences for the selected conversion type.

**System programmer response:** Assist the user as necessary.

**Module:** CMDBCSCV PASCAL

**Procedure Name:** DbcsAtoE

---

EZA9692I  DbcsAtoE : Character after $ Invalid  ord(ASCIIEscape) ord(ASCIIDollar) ord(nextchar)

**Explanation:** ASCII JIS Kanji double-byte characters are being converted to EBCDIC. ASCII JIS Kanji double-byte characters are enclosed within the shift-out escape sequence ESC $ @ or ESC $ B, and the shift-in escape sequence ESC $ B or ESC $ J. The character after the $, with the specified ordinal value, is not valid for a JIS Kanji shift-out or shift-in sequence. For translation modes containing both single-byte and double-byte data, the erroneous escape sequence will be converted using single byte ASCII to EBCDIC conversion tables. Data will continue to be converted in this
manner until a valid Shift-out escape sequence is encountered. For translation modes that convert pure double-byte data only, the erroneous character and the escape character will be inserted without conversion and the conversion routine will move to the next character assuming it to be a valid first double-byte character.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: Check the contents of the data being transmitted, to see if it contains valid JIS Kanji double-byte characters and escape sequences for the selected conversion type.

System programmer response: Assist the user as necessary.

Module: CMDBCSCV PASCAL

Procedure Name: DbscAtoE

EZA9693I  DbscAtoE : Character after ( Invalid  ord(AsciiEscape) ord(AsciiBraceL) ord(nextchar)

Explanation: ASCII JIS Kanji double-byte characters are being converted to EBCDIC. ASCII JIS Kanji double-byte characters are enclosed within the shift-out escape sequence ESC $ @ or ESC $ B, and the shift-in escape sequence ESC ( B or ESC ( J. The character after the (, with the specified ordinal value, is not valid for a JIS Kanji shift-in sequence. For translation modes containing both single-byte and double-byte data, the erroneous escape sequence will be converted using single-byte ASCII to EBCDIC conversion tables. Data will continue to be converted in this manner until a valid shift-out escape sequence is encountered. An EBCDIC shift-in character will be inserted before the erroneous characters.

For translation modes that convert pure double-byte data only, the erroneous character and the escape character will be inserted without conversion and the conversion routine will move to the next character assuming it to be a valid first double-byte character. An EBCDIC shift-in character will not be inserted for these modes.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

System action: TCPIP continues.

Operator response: Check the contents of the data being transmitted, to see if it contains valid JIS Kanji double-byte characters and escape sequences for the selected conversion type.

System programmer response: Assist the user as necessary.

Module: CMDBCSCV PASCAL

Procedure Name: DbscAtoE

EZA9694I  DbscAtoE : Second Double Byte Character Invalid ord(firstchar) ord(secondchar)

Explanation: ASCII double-byte characters are being converted to EBCDIC. ASCII double-byte characters are indicated when the first character is in the range for ASCII double-byte characters. The second character of a double-byte character, with the specified ordinal value, is not in the valid range for the second byte of double-byte characters. For translation modes containing both single-byte and double-byte data, the erroneous character and the corresponding first double-byte character will be converted using single byte ASCII to EBCDIC conversion tables. Data will continue to be converted in this manner until a valid shift-out character or valid shift-out escape sequence is encountered. An EBCDIC Shift-in character will be inserted before the converted erroneous characters.

For translation modes that convert pure double-byte data only, the erroneous character and the first double-byte character will be inserted without conversion and the conversion routine will move to the next character assuming it to be a valid first double-byte character. An EBCDIC shift-in character will not be inserted for these modes.

Note: This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.
**System action:** TCPIP continues.

**Operator response:** Check the contents of the data being transmitted, to see if it contains valid ASCII double-byte characters for the selected conversion type.

**System programmer response:** Assist the user as necessary.

**Module:** CMDBCSCV PASCAL

**Procedure Name:** DbcsAtoE

---

**EZA9695I**  
DbcsAtoE : First Double Byte Character Invalid ord(firstchar)

**Explanation:** ASCII JIS Kanji double-byte characters are being converted to EBCDIC. ASCII JIS Kanji double-byte characters are enclosed within the shift-out escape sequence ESC $ @ or ESC $ B, and the shift-in escape sequence ESC ( $ B or ESC ( J. The first character of a double-byte character, with the specified ordinal value, is not in the valid range for JIS Kanji double-byte characters. For translation modes containing both single-byte and double-byte data, the erroneous character will be converted using single byte ASCII to EBCDIC conversion tables. Data will continue to be converted in this manner until a shift-out character or escape sequence is encountered. An EBCDIC shift-in character will be added before the converted erroneous character.

For translation modes that convert pure double-byte data only, the erroneous character will be inserted without conversion and the conversion routine will move to the next character assuming it to be a valid first double byte character. An EBCDIC shift-in character will not be inserted for these modes.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

**System action:** TCPIP continues.

**Operator response:** Check the contents of the data being transmitted, to see if it contains valid JIS Kanji double-byte characters and escape sequences for the selected conversion type.

**System programmer response:** Assist the user as necessary.

**Module:** CMDBCSCV PASCAL

**Procedure Name:** DbcsAtoE

---

**EZA9697I**  
Invalid Data in data_set : Loading Stopped.

**Explanation:** Binary DBCS translation tables are being loaded from the indicated data set. The data set does not contain data in the required format for DBCS binary translate tables. Loading of the indicated data set stops.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

**System action:** Processing continues.

**Operator response:** Configure a valid DBCS binary translate table data set in the search order hierarchy for the required DBCS translation table. See z/OS Communications Server: IP Configuration Reference for information about the loading and customizing of DBCS translation tables.

**System programmer response:** Assist the user as necessary.

**Module:** CMDBCSCV PASCAL

**Procedure Name:** ExitError

---

**EZA9698I**  
DbcsAtoE : Double Byte Character outside Shift-Out/Shift-in delimiters ord(char)

**Explanation:** ASCII double-byte characters are being converted to EBCDIC. ASCII double-byte characters should be enclosed within shift-out/shift-in characters. A character with the indicated ordinal value was found outside the shift-out/shift-in delimiters. The ordinal value was in the range for double-byte characters for this data. The erroneous character will be converted using single-byte ASCII to EBCDIC conversion tables. Data will continue to be
converted in this manner until an ASCII shift-out character is encountered.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

**System action:** TCPIP continues.

**Operator response:** Check the contents of the data being transmitted, to see if it contains valid shift-out and shift-in characters for the selected conversion type and DBCS control options.

**System programmer response:** Assist the user as necessary.

**Module:** CMDBCSCV PASCAL

**Procedure Name:** DbcsAtoE

---

**EZA9730I Issue Cp of ‘command’**

**Explanation:** This message is displayed upon invocation of the IssueCP procedure. This function asks CP to invoke the given command and returns the return code and response string that CP provides.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

**Module:** MVPMISS

**Procedure Name:** IssueCp

---

**EZA9731I Write to printer printer address: ‘message’**

**Explanation:** The message specified is written to a virtual printer at the address specified.

**Note:** This message displays the virtual machine communication facility (VMCF) function call returned by the function SayVmcFu, which is called to determine the type of a VMCF function call. For more information about VMCF function calls, see the z/OS Communications Server: IP Programmer’s Guide and Reference.

**System action:** TCPIP continues.

**Operator response:** No action is needed.

**System programmer response:** No action is needed.

Chapter 11. EZAOP\textsuperscript{xx} messages

\textbf{EZAOP41I} 'mvscommand' TCPIP COMMAND COMPLETED SUCCESSFULLY

\textbf{Explanation:} The system successfully processed the DISPLAY or VARY command.

In the message text:

\textit{mvscommand}

The MVS command verb specified for TCPIP.

\textbf{System action:} Processing continues

\textbf{User response:} No action is needed.

\textbf{System programmer response:} No action is needed.

\textbf{Module:} EZAO2CMD

\textbf{EZAOP45I} SPECIFIED TCPIP PROCNAME IS NOT RUNNING: \textit{procname}

\textbf{Explanation:} The TCPIP procedure name in the command was not active.

In the message text:

\textit{procname}

The TCPIP procedure name for the DISPLAY or VARY command.

\textbf{System action:} The command request is not completed.

\textbf{User response:} Use the DISPLAY TCPIP command to determine the active TCPIP procedures. Try the command again.

\textbf{System programmer response:} No action is needed.

\textbf{Module:} EZAO2CMD

\textbf{Procedure Name:} Do_V3R3

\textbf{EZAOP46I} TCPIP PROCNAME MUST BE SPECIFIED.

\textbf{Explanation:} More than one TCPIP is currently active and a TCPIP procedure name must be specified in the DISPLAY or VARY command.

\textbf{Examples:}

d tcpip,,n,dev

\textbf{System action:} The command request is not completed.

\textbf{User response:} Use the DISPLAY TCPIP command to determine the active TCPIP procedures. Try the command again.

\textbf{System programmer response:} No action is needed.

\textbf{Module:} EZAO2CMD

\textbf{Procedure Name:} ParseProcName

\textbf{EZAOP47I} server HAS NEVER BEEN STARTED

\textbf{Explanation:} This message is issued in response to the D TCPIP or D TCPIP,TELNET display command if the server type has never been started.

In the message text:
server

The type of server that has never been started. The value is either TCPIP or TELNET.

Examples:
display tcpip
EZAOP47I TCPIP HAS NEVER BEEN STARTED

System action: The command request cannot be completed.

Operator response: Try this command again after one or more servers of the type indicated in the message have been started.

User response: Not applicable.

System programmer response: No action is needed.

Problem determination: None.

Source: z/OS Communications Server TCP/IP

Module: EZAO2CMD

Routing code: Not applicable.

Descriptor code: 5

Automation: Not applicable.

EZAOP49I THERE ARE NO ACTIVE TCPIPS

Explanation: There are no active TCPIP procedures currently running.

System action: The command request cannot be completed.

User response: Try this command again after one or more TCPIP procedures have been started.

System programmer response: No action is needed.

Module: EZAO2CMD

Procedure Name: ParseProcName

EZAOP50I TCPIP STATUS REPORT

Explanation: This is a heading for the TCPIP status report in response to the DISPLAY TCPIP command.

Examples:
d tcpip
EZAOP50I TCPIP STATUS REPORT
COUNT TCPIP NAME VERSION STATUS
----- ---------- -------- -------------------------
1 TCPIP CS V1R8 ACTIVE
*** END TCPIP STATUS REPORT ***

System action: The command is accepted.

User response: No action is needed.

System programmer response: No action is needed.

Module: EZAO2DSP

Procedure Name: OutputTcpStatus

EZAOP60I TELNET STATUS REPORT

TELNET NAME VERSION STATUS
--------------- ---------- --------
server_name version status

*** END TELNET STATUS REPORT ***

Explanation: This message is displayed in response to the D TCPIP,TELNET command. The message displays the
name, version, and status of each Telnet server that is active now or was previously active.

In the message text:

`server_name`

The name of the Telnet server.

`version`

The version and release of Communications Server that was used when the specified server was started.

`status`

The current state of the Telnet server. Valid states are:

- **STARTING**
  - The Telnet server is initializing.

- **ACTIVE**
  - The Telnet server is initialized and ready to support client connections.

- **TERMINATING**
  - The Telnet server is shutting down and is not supporting connections.

- **INACTIVE**
  - The Telnet server has shut down, and the procedure has ended.

If the Telnet server has been stopped with the STOP console command, (STOP CMD) is appended to the status.

**Examples:**

D TCPIP,TELNET
EZAOP601 TELNET STATUS REPORT
TELNET NAME VERSION STATUS
----------- -------- --------------------------------
TELNET CS V1R13 ACTIVE
TELNET5 CS V1R13 INACTIVE (STOP CMD)
TELNET4 CS V1R13 INACTIVE (STOP CMD)
*** END TELNET STATUS REPORT ***

**System action:** None.

**Operator response:** None.

**User response:** Not applicable.

**Module:** EZAO2DSP

**Routing code:** Not applicable.

**Descriptor code:** 5, 8, 9

**Automation:** Not applicable.
Appendix A. Additional information about remote procedure call (RPC) messages

This appendix contains information about RPCLIB and RPCINFO messages.

**RPCLIB messages**

To solve remote procedure call (RPC) errors, begin by doing the following actions:

- Check the system console to make sure that PORTMAP and TCPIP are running.
- Check that sufficient storage is available for tasks. The required heap size varies, but could also be the cause of the problem.
- Compress data sets periodically.

See the [z/OS Communications Server: IP Programmer’s Guide and Reference](https://www.ibm.com/docs/en/zoscommunicationsserver) for information about basic RPC procedures and the requirements for RPC parameters. From this reference, you can determine the missing or incorrect information that caused the error. This reference also lists the tcperror and perror codes, and many of the procedures described in this chapter. Other procedures are contained in the source code and are made up of the basic procedures.

Some RPC errors are caused by C language coding problems. See the following common C language coding errors:

- Array subscripts out of bounds.
- Bad pointers in the user source code. Pointers to incorrect addresses can cause a number of different errors, such as protection violations and overwritten storage.
- Not freeing storage at the end of the job.
- Overwriting data or program areas, (can be an unterminated string). Strings require a null (X’00’ or \0) in the last position.
- Pointer misspecification, such as *p, p, &p, in the user source code.
- Unending loops that generate storage usage.

**RPCINFO messages**

For RPCINFO errors, PING and NETSTAT are important tools. You can use RPCINFO to check procedures registered on local and remote PORTMAPs. PING verifies that local and remote hosts are running with TCPIP. NETSTAT provides the status of socket connections and many other conditions.
Appendix B. Related protocol specifications

This appendix lists the related protocol specifications (RFCs) for TCP/IP. The Internet Protocol suite is still evolving through requests for comments (RFC). New protocols are being designed and implemented by researchers and are brought to the attention of the Internet community in the form of RFCs. Some of these protocols are so useful that they become recommended protocols. That is, all future implementations for TCP/IP are recommended to implement these particular functions or protocols. These become the de facto standards, on which the TCP/IP protocol suite is built.

You can request RFCs through electronic mail, from the automated Network Information Center (NIC) mail server, by sending a message to service@nic.ddn.mil with a subject line of RFC nnnn for text versions or a subject line of RFC nnnn.PS for PostScript versions. To request a copy of the RFC index, send a message with a subject line of RFC INDEX.

For more information, contact nic@nic.ddn.mil or at:

Government Systems, Inc.
Attn: Network Information Center
14200 Park Meadow Drive
Suite 200
Chantilly, VA 22021

Hard copies of all RFCs are available from the NIC, either individually or by subscription. Online copies are available at the following web address: http://www.rfc-editor.org/rfc.html.

See “Internet drafts” on page 671 for draft RFCs implemented in this and previous Communications Server releases.

Many features of TCP/IP Services are based on the following RFCs:

Internet drafts

Internet drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Other groups may also distribute working documents as Internet drafts. You can see Internet drafts at http://www.ietf.org/ID.html.

Several areas of IPv6 implementation include elements of the following Internet drafts and are subject to change during the RFC review process.

Draft Title and Author

draft-ietf-ipngwg-icmp-v3-07

Internet Control Message Protocol (ICMPv6) for the Internet Protocol Version 6 (IPv6) Specification
A. Conta, S. Deering

Appendix C. Accessibility

Publications for this product are offered in Adobe Portable Document Format (PDF) and should be compliant with accessibility standards. If you experience difficulties when using PDF files, you may view the information through the z/OS Internet Library website or the z/OS Information Center. If you continue to experience problems, send an email to mhvrdfs@us.ibm.com or write to:

IBM Corporation
Attention: MHVRCFS Reader Comments
Department H6MA, Building 707
2455 South Road
Poughkeepsie, NY 12601-5400
USA

Accessibility features help a user who has a physical disability, such as restricted mobility or limited vision, to use software products successfully. The major accessibility features in z/OS enable users to:

- Use assistive technologies such as screen readers and screen magnifier software
- Operate specific or equivalent features using only the keyboard
- Customize display attributes such as color, contrast, and font size

Using assistive technologies

Assistive technology products, such as screen readers, function with the user interfaces found in z/OS. Consult the assistive technology documentation for specific information when using such products to access z/OS interfaces.

Keyboard navigation of the user interface

Users can access z/OS user interfaces using TSO/E or ISPF. Refer to , , and for information about accessing TSO/E and ISPF interfaces. These guides describe how to use TSO/E and ISPF, including the use of keyboard shortcuts or function keys (PF keys). Each guide includes the default settings for the PF keys and explains how to modify their functions.

z/OS information

z/OS information is accessible using screen readers with the BookServer or Library Server versions of z/OS books in the Internet library at www.ibm.com/systems/z/os/zos/bkserv/
Notices

This information was developed for products and services offered in the USA.

IBM may not offer all of the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user's responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to:

IBM Director of Licensing
IBM Corporation
North Castle Drive
Armonk, NY 10504-1785
U.S.A.

For license inquiries regarding double-byte (DBCS) information, contact the IBM Intellectual Property Department in your country or send inquiries, in writing, to:

Intellectual Property Licensing
Legal and Intellectual Property Law
IBM Japan Ltd.
1623-14 Shimotsuruma, Yamato-Shi
Kanagawa 242-8502 Japan

The following paragraph does not apply to the United Kingdom or any other country where such provisions are inconsistent with local law:

INTERNATIONAL BUSINESS MACHINES CORPORATION PROVIDES THIS PUBLICATION "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Some states do not allow disclaimer of express or implied warranties in certain transactions, therefore, this statement may not apply to you.

This information could include technical inaccuracies or typographical errors. Changes are periodically made to the information herein; these changes will be incorporated in new editions of the publication. IBM may make improvements and/or changes in the product(s) and/or the program(s) described in this publication at any time without notice.

Any references in this information to non-IBM websites are provided for convenience only and do not in any manner serve as an endorsement of those websites. The materials at those websites are not part of the materials for this IBM product and use of those websites is at your own risk.
IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any obligation to you.

Licensees of this program who wish to have information about it for the purpose of enabling: (i) the exchange of information between independently created programs and other programs (including this one) and (ii) the mutual use of the information which has been exchanged, should contact:

Site Counsel
IBM Corporation

Such information may be available, subject to appropriate terms and conditions, including in some cases, payment of a fee.

The licensed program described in this information and all licensed material available for it are provided by IBM under terms of the IBM Customer Agreement, IBM International Program License Agreement, or any equivalent agreement between us.

Any performance data contained herein was determined in a controlled environment. Therefore, the results obtained in other operating environments may vary significantly. Some measurements may have been made on development-level systems and there is no guarantee that these measurements will be the same on generally available systems. Furthermore, some measurement may have been estimated through extrapolation. Actual results may vary. Users of this document should verify the applicable data for their specific environment.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

All statements regarding IBM’s future direction or intent are subject to change or withdrawal without notice, and represent goals and objectives only.

This information contains examples of data and reports used in daily business operations. To illustrate them as completely as possible, the examples include the names of individuals, companies, brands, and products. All of these names are fictitious and any similarity to the names and addresses used by an actual business enterprise is entirely coincidental.

COPYRIGHT LICENSE:

This information contains sample application programs in source language, which illustrates programming techniques on various operating platforms. You may copy, modify, and distribute these sample programs in any form without payment to IBM, for the purposes of developing, using, marketing or distributing application programs conforming to the application programming interface for the operating platform for which the sample programs are written. These examples have not been thoroughly tested under all conditions. IBM, therefore, cannot guarantee or
imply reliability, serviceability, or function of these programs. The sample programs are provided "AS IS", without warranty of any kind. IBM shall not be liable for any damages arising out of your use of the sample programs.

Each copy or any portion of these sample programs or any derivative work must include a copyright notice as follows:

Policy for unsupported hardware

Various z/OS elements, such as DFSMS, HCD, JES2, JES3, and MVS, contain code that supports specific hardware servers or devices. In some cases, this device-related element support remains in the product even after the hardware devices pass their announced End of Service date. z/OS may continue to service element code; however, it will not provide service related to unsupported hardware devices. Software problems related to these devices will not be accepted for service, and current service activity will cease if a problem is determined to be associated with out-of-support devices. In such cases, fixes will not be issued.

Bibliography

This bibliography contains descriptions of the documents in the z/OS Communications Server library.

z/OS Communications Server documentation is available in the following forms:

- In softcopy on CD-ROM collections. See “Softcopy information” on page viii.

z/OS Communications Server library updates

z/OS Communications Server information

z/OS Communications Server product information is grouped by task in the following tables.

### Planning

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>GC31-8771</td>
<td></td>
<td>This document is intended to help you plan for new IP for SNA function, whether you are migrating from a previous version or installing z/OS for the first time. It summarizes what is new in the release and identifies the suggested and required modifications needed to use the enhanced functions.</td>
</tr>
<tr>
<td>SC31-8885</td>
<td></td>
<td>This document is a high-level introduction to IPv6. It describes concepts of z/OS Communications Server’s support of IPv6, coexistence with IPv4, and migration issues.</td>
</tr>
</tbody>
</table>

### Resource definition, configuration, and tuning

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SC31-8775</td>
<td></td>
<td>This document describes the major concepts involved in understanding and configuring an IP network. Familiarity with the z/OS operating system, IP protocols, z/OS UNIX System Services, and IBM Time Sharing Option (TSO) is recommended. Use this document in conjunction with the .</td>
</tr>
<tr>
<td>Title</td>
<td>Number</td>
<td>Description</td>
</tr>
<tr>
<td>---------</td>
<td>----------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
</tbody>
</table>
| SC31-8776 | This document presents information for people who want to administer and maintain IP. Use this document in conjunction with the . The information in this document includes:  
• TCP/IP configuration data sets  
• Configuration statements  
• Translation tables  
• Protocol number and port assignments |
| SC31-8777 | This document presents the major concepts involved in implementing an SNA network. Use this document in conjunction with the . |
| SC31-8778 | This document describes each SNA definition statement, start option, and macroinstruction for user tables. It also describes NCP definition statements that affect SNA. Use this document in conjunction with the . |
| SC31-8836 | This document contains sample definitions to help you implement SNA functions in your networks, and includes sample major node definitions. |
| SC31-8833 | This document is for system programmers and network administrators who need to prepare their network to route SNA, JES2, or JES3 printer output to remote printers using TCP/IP Services. |

**Operation**

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SC31-8780</td>
<td>This document describes how to use TCP/IP applications. It contains requests that allow a user to log on to a remote host using Telnet, transfer data sets using FTP, send and receive electronic mail, print on remote printers, and authenticate network users.</td>
<td></td>
</tr>
<tr>
<td>SC31-8781</td>
<td>This document describes the functions and commands helpful in configuring or monitoring your system. It contains system administrator's commands, such as TSO NETSTAT, PING, TRACERTE and their UNIX counterparts. It also includes TSO and MVS commands commonly used during the IP configuration process.</td>
<td></td>
</tr>
<tr>
<td>SC31-8779</td>
<td>This document serves as a reference for programmers and operators requiring detailed information about specific operator commands.</td>
<td></td>
</tr>
<tr>
<td>SX75-0124</td>
<td>This document contains essential information about SNA and IP commands.</td>
<td></td>
</tr>
</tbody>
</table>
## Customization

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
</table>
| SC31-6854 | This document enables you to customize SNA, and includes the following:  
  - Communication network management (CNM) routing table  
  - Logon-interpret routine requirements  
  - Logon manager installation-wide exit routine for the CLU search exit  
  - TSO/SNA installation-wide exit routines  | |

## Writing application programs

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SC31-8788</td>
<td>This document describes the syntax and semantics of program source code necessary to write your own application programming interface (API) into TCP/IP. You can use this interface as the communication base for writing your own client or server application. You can also use this document to adapt your existing applications to communicate with each other using sockets over TCP/IP.</td>
<td></td>
</tr>
<tr>
<td>SC31-8807</td>
<td>This document is for programmers who want to set up, write application programs for, and diagnose problems with the socket interface for CICS® using z/OS TCP/IP.</td>
<td></td>
</tr>
<tr>
<td>SC31-8830</td>
<td>This document is for programmers who want application programs that use the IMS® TCP/IP application development services provided by the TCP/IP Services of IBM.</td>
<td></td>
</tr>
<tr>
<td>SC31-8787</td>
<td>This document describes the syntax and semantics of a set of high-level application functions that you can use to program your own applications in a TCP/IP environment. These functions provide support for application facilities, such as user authentication, distributed databases, distributed processing, network management, and device sharing. Familiarity with the z/OS operating system, TCP/IP protocols, and IBM Time Sharing Option (TSO) is recommended.</td>
<td></td>
</tr>
<tr>
<td>SC31-8829</td>
<td>This document describes how to use SNA macroinstructions to send data to and receive data from (1) a terminal in either the same or a different domain, or (2) another application program in either the same or a different domain.</td>
<td></td>
</tr>
<tr>
<td>SC31-8811</td>
<td>This document describes how to use the SNA LU 6.2 application programming interface for host application programs. This document applies to programs that use only LU 6.2 sessions or that use LU 6.2 sessions along with other session types. (Only LU 6.2 sessions are covered in this document.)</td>
<td></td>
</tr>
<tr>
<td>SC31-8810</td>
<td>This document provides reference material for the SNA LU 6.2 programming interface for host application programs.</td>
<td></td>
</tr>
<tr>
<td>SC31-8808</td>
<td>This document describes how applications use the communications storage manager.</td>
<td></td>
</tr>
<tr>
<td>Title</td>
<td>Number</td>
<td>Description</td>
</tr>
<tr>
<td>---------------</td>
<td>---------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td></td>
<td>SC31-8828</td>
<td>This document describes the Common Management Information Protocol (CMIP) programming interface for application programmers to use in coding CMIP application programs. The document provides guide and reference information about CMIP services and the SNA topology agent.</td>
</tr>
</tbody>
</table>

### Diagnosis

<table>
<thead>
<tr>
<th>Title</th>
<th>Number</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>GC31-8782</td>
<td>This document explains how to diagnose TCP/IP problems and how to determine whether a specific problem is in the TCP/IP product code. It explains how to gather information for and describe problems to the IBM Software Support Center.</td>
</tr>
<tr>
<td></td>
<td>GC23-8588-00</td>
<td>This document explains how to gather the trace data that is collected and stored in the host processor. It also explains how to use the Advanced Communications Function/Trace Analysis Program (ACF/TAP) service aid to produce reports for analyzing the trace data information.</td>
</tr>
<tr>
<td></td>
<td>GC31-6850</td>
<td>These documents help you identify an SNA problem, classify it, and collect information about it before you call the IBM Support Center. The information collected includes traces, dumps, and other problem documentation.</td>
</tr>
<tr>
<td></td>
<td>GC31-6851</td>
<td>These documents describe SNA data areas and can be used to read an SNA dump. They are intended for IBM programming service representatives and customer personnel who are diagnosing problems with SNA.</td>
</tr>
<tr>
<td></td>
<td>GC31-6852</td>
<td>These documents describe codes and other information that appear in z/OS Communications Server messages.</td>
</tr>
</tbody>
</table>

### Messages and codes

Communicating your comments to IBM

If you especially like or dislike anything about this document, please use one of the methods listed below to send your comments to IBM. Whichever method you choose, make sure you send your name, address, and telephone number if you would like a reply.

Feel free to comment on specific errors or omissions, accuracy, organization, subject matter, or completeness of this document. However, the comments you send should pertain to only the information in this manual and the way in which the information is presented. To request additional publications, or to ask questions or make comments about the functions of IBM products or systems, you should talk to your IBM representative or to your IBM authorized remarketer.

When you send comments to IBM, you grant IBM a nonexclusive right to use or distribute your comments in any way it believes appropriate without incurring any obligation to you.

Please send your comments to us in either of the following ways:
- If you prefer to send comments by FAX, use this number: 1+919-254-1258
- If you prefer to send comments electronically, use this address: comsvrcf@us.ibm.com
- If you prefer to send comments by post, use this address:
  International Business Machines Corporation
  Attn: z/OS Communications Server Information Development
  P.O. Box 12195, 3039 Cornwallis Road
  Department AKCA, Building 501
  Research Triangle Park, North Carolina 27709-2195

Make sure to include the following in your note:
- Title and publication number of this document
- Page number or topic to which your comment applies.
