About this document

This document presents the information you need to set up and use the Xvfb program product.

In IBM Ported Tools for z/OS V1.2, the Xvfb code is delivered as a separate FMID, HVFB111 and is available only with the IBM Ported Tools for z/OS 245 FMID HOS1120. The Xvfb for z/OS code in FMID HVFB111 is the same code that was available as PTFs UA21819 and UA32671 with IBM Ported Tools for z/OS V1.1. The Xvfb for z/OS code is delivered as a separate FMID in order to allow IBM to provide more efficient support.

Who should use this document?

This document is for the system programmers who run a z/OS system with z/OS UNIX System Services (z/OS UNIX), and for their users who use the Xvfb portion of IBM Ported Tools for z/OS. On other open systems, some system programmer tasks might be done by an administrator.

This document assumes that the readers are familiar with z/OS systems and with the information for z/OS systems and the accompanying products.

Where to find more information

Where necessary, this document references information in other documents about the elements and features of z/OS®. For complete titles and order numbers for all z/OS documents, see z/OS Information Roadmap.

Softcopy publications

Softcopy z/OS publications are available for web-browsing and PDF versions of the z/OS publications for viewing or printing using Adobe® Acrobat Reader. Visit the z/OS library at http://www.ibm.com/systems/z/os/zos/bkserv/.

IBM Ported Tools for z/OS home page

The IBM Ported Tools for z/OS home page is located at [www.ibm.com/servers/eserver/zseries/zos unix/port tools.html](http://www.ibm.com/servers/eserver/zseries/zos unix/port tools.html) It contains a brief description of the IBM Ported Tools for z/OS products, information on how to order them, and supporting documentation.

How to send your comments to IBM

We appreciate your input on this publication. Feel free to comment on the clarity, accuracy, and completeness of the information or give us any other feedback that you might have.

Use one of the following methods to send us your comments:
1. Send an e-mail to mhvrdfs@us.ibm.com
3. Mail the comments to the following address:
   IBM Corporation
   Attention: MHVRCFS Reader Comments
   Department H6MA, Mail Station P181
   2455 South Road
   Poughkeepsie, NY 12601-5400
   U.S.A.
4. Fax the comments to us as follows:
   From the United States and Canada: 1+845+432-9405
   From all other countries: Your international access code +1+845+432-9405

Include the following information:
• Your name and address
• Your e-mail address
• Your telephone or fax number
• The publication title and order number:
  IBM Ported Tools for z/OS: Xvfb User's Guide
  SA23-2216-00
• The topic and page number related to your comment
• The text of your comment.

When you send comments to IBM, you grant IBM a nonexclusive right to use or distribute your comments in any way it believes appropriate without incurring any obligation to you.

IBM or any other organizations will only use the personal information that you supply to contact you about the issues that you submit.

If you have a technical problem

Do not use the feedback methods listed above. Instead, do one of the following:
• Contact your IBM service representative
• Call IBM technical support
• Visit the IBM zSeries support Web page at http://www.ibm.com/servers/eserver/support/zseries/
Summary of changes

for SA23-2216-00
IBM Ported Tools for z/OS: Xvfb

Chapter 1. Xvfb — Virtual framebuffer X Server for X Version 11

Synopsis

Xvfb [ option ] . . .

Description

Xvfb is an X server that can run on machines with no display hardware and no physical input devices. It emulates a dumb framebuffer using virtual memory.

The primary use of this server was intended to be server testing. The mfb or cfb code for any depth can be exercised with this server without the need for real hardware that supports the desired depths. The X community has found many other novel uses for Xvfb, including testing clients against unusual depths and screen configurations, doing batch processing with Xvfb as a background rendering engine, load testing, as an aid to porting the X server to a new platform, and providing an unobtrusive way to run applications that don't really need an X server but insist on having one anyway.

Options

In addition to the normal server options described in the Xserver Options section, Xvfb accepts the following command line switches:

-screen screennum WxHxD
This option creates screen screennum and sets its width, height, and depth to W, H, and D respectively. By default, only screen 0 exists and has the dimensions 1280x1024x8.

-pixdepths list-of-depths
This option specifies a list of pixmap depths that the server should support in addition to the depths implied by the supported screens. list-of-depths is a space-separated list of integers that can have values from 1 to 32.

-linebias n
This option specifies how to adjust the pixelization of thin lines. The value n is a bitmask of octants in which to prefer an axial step when the Bresenham error term is exactly zero. This option is probably only useful to server developers to experiment with the range of line pixelization possible with the cfb and mfb code.

-blackpixel pixel-value, -whitepixel pixel-value
These options specify the black and white pixel values the server should use.

Xserver options

-displaynumber
The X server runs as the given displaynumber, which by default is 0. If multiple X servers are to run simultaneously on a host, each must have a unique display number.
-a number
Sets pointer acceleration (that is, the ratio of how much is reported to how much the user actually moved the pointer).

-ac
Disables host-based access control mechanisms. Enables access by any host, and permits any host to modify the access control list. Use with extreme caution. This option exists primarily for running test suites remotely.

-audit level
Sets the audit trail level. The default level is 1, meaning only connection rejections are reported. Level 2 additionally reports all successful connections and disconnects. Level 0 turns off the audit trail. Audit lines are sent as standard error output.

-auth authorization-file
Specifies a file which contains a collection of authorization records used to authenticate access. See also the xdm and Xsecurity manual pages.

-bc
Disables certain kinds of error checking, for bug compatibility with previous releases (such as working work around bugs in R2 and R3 xterms and toolkits). Deprecated.

-bs
Disables backing store support on all screens.

-br
Sets the default root window to solid black instead of the standard root weave pattern.

-c
Turns off key-click.

c volume
Sets key-click volume (allowable range: 0-100).

-cc class
Sets the visual class for the root window of color screens. The class numbers are as specified in the X protocol.

-co filename
Sets name of RGB color database.

-core
Causes the server to generate a core dump on fatal errors.

-dpi resolution
Sets the resolution of the screen, in dots per inch. To be used when the server cannot determine the screen size from the hardware.

-deferglyphs whichfonts
Specifies the types of fonts for which the server should attempt to use deferred glyph loading. whichfonts can be one of the following:

- All (all fonts)
- None (no fonts)
- 16 (16 bit fonts only)

-f volume
Sets beep (bell) volume (allowable range: 0-100).

-fc cursorFont
Sets the default cursor font.

-fn font
Sets the default font.

-fp fontPath
Sets the search path for fonts. This path is a comma separated list of directories which the X server searches for font databases.
-help     Prints a usage message.
-1        Causes all remaining command line arguments to be ignored.

-nolisten trans-type
          Disables a transport type. For example, TCP/IP connections can be
          disabled with -nolisten tcp.

-noreset
          Prevents a server reset when the last client connection is closed. This
          overrides a previous -terminate command line option.

-p minutes
          Sets screen-saver pattern cycle time in minutes.

-pn
          Permits the server to continue running if it fails to establish all of its
          well-known sockets (connection points for clients), but establishes at least
          one.

-r Turn off auto-repeat.

r Turn on auto-repeat.

-s minutes
          Sets screen-saver timeout time in minutes.

-su Disables save under support on all screens.

-t number
          Sets pointer acceleration threshold in pixels (that is, after how many pixels
          pointer acceleration should take effect).

-terminate
          Causes the server to terminate at server reset, instead of continuing to run.
          This overrides a previous -noreset command line option.

-to seconds
          Sets default connection timeout in seconds.

-tst
          Disables all testing extensions (for example, XTEST, XTrap, XTestExtension1, RECORD).

ttyxx Ignored, for servers started the ancient way (from init).

v Sets video-off screen-saver preference.

-v Sets video-on screen-saver preference.

-wm Forces the default backing-store of all windows to be WhenMapped. This
          is a backdoor way of getting backing-store to apply to all windows.
          Although all mapped windows will have backing store, the backing store
          attribute value reported by the server for a window will be the last value
          established by a client. If it has never been set by a client, the server will
          report the default value, NotUseful. This behavior is required by the X
          protocol, which allows the server to exceed the client's backing store
          expectations but does not provide a way to tell the client that it is doing
          so.

-x extension
          Loads the specified extension at init. This is a no-op for most
          implementations.

[+-]xinerama
          Enables(+) or disables(--) the XINERAMA extension. The default state is
          disabled.
Signals

The X server attaches special meaning to the following signals:

**SIGHUP**

This signal causes the server to close all existing connections, free all resources, and restore all defaults. It is sent by the display manager whenever the main user’s main application (usually an xterm or window manager) exits to force the server to clean up and prepare for the next user.

**SIGTERM**

This signal causes the server to exit cleanly.

**SIGUSR1**

This signal is used quite differently from either of the above. When the server starts, it checks to see if it has inherited SIGUSR1 as SIG_IGN instead of the usual SIG_DFL. In this case, the server sends a SIGUSR1 to its parent process after it has set up the various connection schemes. Xdm uses this feature to recognize when connecting to the server is possible.

Examples

1. `Xvfb :1 -screen 0 1600x1200x32`
   
   The server will listen for connections as server number 1, and screen 0 will be depth 32 1600x1200.

2. `Xvfb :1 -screen 1 1600x1200x16`
   
   The server will listen for connections as server number 1, will have the default screen configuration (one screen, 1280x1024x8), and screen 1 will be depth 16 1600x1200.

3. `Xvfb -pixdepths 3 27 -fbdir /usr/tmp`
   
   The server will listen for connections as server number 0, will have the default screen configuration (one screen, 1280x1024x8), will also support pixmap depths of 3 and 27, and will use memory mapped files in /usr/tmp for the framebuffer.

4. `xwud -in /usr/tmp/Xvfb_screen0`

   Displays screen 0 of the server started by the preceding example.

Authors

David P. Wiggins, The Open Group, Inc.
Chapter 2. Xvfb messages

XVFB0001 number spans
Explanation: Informational printing of the number spanned.
User response: None.

XVFB0004 allocation failed
Explanation: While parsing the xkb configuration file, the program failed to allocate memory.
User response: Verify that the system has enough resources available for use.

XVFB0005 unterminated string on line number
Explanation: While parsing the xkb configuration file, the program encountered a non-terminated string at the specified line.
User response: Verify that the line in question has a correct termination character.

XVFB0006 expected identifier on line number
Explanation: While parsing the xkb configuration file, the program failed to find an expected identifier on the specified line.
User response: Verify that the line in question contains the correct identifier.

XVFB0007 expected '=' on line number
Explanation: While parsing the xkb configuration file, the program failed to find an expected '=' character on the specified line.
User response: Verify that the line in question contains a '='.

XVFB0008 expected ';' or newline on line number
Explanation: While parsing the xkb configuration file, the program failed to find an expected ';' or newline on the specified line.
User response: Verify that the line in question contains a ';' or newline.

XVFB0009 expected a boolean value on line number
Explanation: While parsing the xkb configuration file, the program failed to find a boolean value at the specified line.
User response: Verify that the line in question contains an appropriate boolean value.

XVFB0010 expected a numeric value on line number
Explanation: While parsing the xkb configuration file, the program failed to find an expected numeric value at the specified line.
User response: Verify that the line in question contains an appropriate numeric value.

XVFB0011 expected a string on line number
Explanation: While parsing the xkb configuration file, the program failed to find a string at the specified line.
User response: Verify that an appropriate string exists at the line in question.

XVFB0012 expected a modifier name on line number
Explanation: While parsing the xkb configuration file, the program failed to find a modifier name at the specified line.
User response: Verify that an appropriate modifier name exists at the line in question.

XVFB0013 expected a control name on line number
Explanation: While parsing the xkb configuration file, the program failed to find an expected control name on the specified line.
User response: Verify that an appropriate control name exists at the line in question.

XVFB0014 expected an AccessX option on line number
Explanation: While parsing the xkb configuration file, the program failed to find an expected AccessX option on the specified line.
User response: Verify that an AccessX option exists at the line in question.

XVFB0015 expected '+' or '-' on line number
Explanation: While parsing the xkb configuration file, the program failed to find an expected '+' or '-' at the specified line.
User response: Verify that the line in question contains either a '+' or '-'.

XVFB0032 ProgramName: not compiled for TCP/IP
Explanation: The given program has not been compiled with TCP/IP support.
User response: You must recompile the binaries, adding in support for TCP/IP.

XVFB0033 ProgramName: not compiled for DECnet
Explanation: The given program has not been compiled with DECnet support.
User response: You must recompile the binaries, adding in support for DECnet.

XVFB0034 ProgramName: not compiled for Secure RPC
Explanation: The given program has not been compiled with Secure RPC support.
User response: You must recompile the binaries, adding in support for Secure RPC.

XVFB0035 ProgramName: not compiled for Kerberos 5
Explanation: The given program has not been compiled with Kerberos 5 support.
User response: You must recompile the binaries, adding in support for Kerberos 5.

XVFB0036 ProgramName: unknown address family
Explanation: The given program encountered an unknown address family.
User response: This error occurs when trying to edit the list of hosts that may connect to the server. Verify that the information you are trying to add or edit is in the correct format.

XVFB0037 ProgramName: unable to get node name
for name:
Explanation: The given program is unable to retrieve the node name.
User response: When compiled with DNETCONN, if the change_host function cannot parse the given host name to find the correct node, this error will occur. Verify that the host name is correct and in the correct format.

XVFB0038 ProgramName: cannot parse Kerberos name: error_message(retval))
Explanation: The given program is unable to parse the shown Kerberos name.
User response: When compiled with K5AUTH, if the change_host function cannot parse the supplied Kerberos name, this error will occur. Verify that the data passed into the program is correct and formatted properly.

XVFB0039 non-network local connections
add_msg/remove_msg
Explanation: You are adding or removing a non-network local connection.
User response: None.

XVFB0040 no such user name
Explanation: No such user name exists.
User response: If SECURE_RPC is defined and the given user name cannot be found, this error will occur. Verify that the given user name is valid and exists.

XVFB0041 failed to get netname for name
Explanation: Failed to get netname for the given name.
User response: If SECURE_RPC is defined and the netname for the given name cannot be found, this error will occur. Verify that the given user name is valid and the netname exists.

XVFB0042 ProgramName: must be on local machine to add or remove hosts.
Explanation: The given program must be on the local machine to add or remove hosts.
User response: You are trying to add or remove hosts from a remote machine. For security reasons, you must be on the local machine to perform such an action. Ensure you are on the local machine and try again.

XVFB0043 ProgramName: must be on local machine to enable or disable access control.
Explanation: The given program must be on the local machine to enable or disable access control.
User response: You are trying to enable or disable access control from a remote machine. For security reasons, you must be on the local machine to perform such an action. Ensure that you are on the local machine and try again.

XVFB0044 bad display name dpy in cmd command
Explanation: A bad display name was entered in the given command.
User response: Verify that the given display name is valid and properly formatted.
XVFB0045  bad cmd command line
Explanation: You have entered a bad command from the command line.
User response: The most probable cause of this error is an incorrect argument list being input from the command line. Verify that the syntax for the command in question.

XVFB0046  cmd: stdin already in use
Explanation: When trying to open a file, standard in was found to be in use.
User response: Another process has set the okay_to_use_stdin flag to false. Wait for this process to finish or manually kill the process.

XVFB0047  cmd: unable to open file filename
Explanation: While attempting to open the file name in question, fopen failed.
User response: Verify that the file exists with the correct permissions. If attempting to create the file, ensure that you have permission to do so. Furthermore, verify that no other processes have the file in question open or locked.

XVFB0048  ProgramName: unable to alloc entry reading auth file
Explanation: The call to malloc failed when trying to read the authorization file.
User response: Ensure that there are sufficient system resources available to read the contents of the authorization file into a linked list.

XVFB0049  0: unable to parse displayname
Explanation: The program was unable to parse the given display name.
User response: Verify that the display name in question is correct and in the proper format.

XVFB0050  0: unable to get protocol address for displayname
Explanation: The program was unable to parse out the protocol address for the given display name
User response: Verify that the display name in question is correct and in the proper format.

XVFB0051  ProgramName: unable to allocate len bytes for hexkey
Explanation: When attempting to malloc a space the size of len, an error was encountered.

User response: Verify that there is sufficient system resources available for use.

XVFB0052  Attempting to break locks on authority file authfilename
Explanation: The program is trying to break the locks on the authority file.
User response: None.

XVFB0053  ProgramName: errmsg in locking authority file authority filename
Explanation: An error occurred when trying to lock the given file name.
User response: There are 3 possible error: unknown, timeout, and error. For timeout errors, the problem is typically related to network latency issues or a lack of available resources on the machine. Verify that the environment is in working order. An “error” error is indicative of permission or file locked issues. Verify that authority file has the correct permission settings. Unknown errors encompass all other problems.

XVFB0054  ProgramName: authority filename not writable, changes will be ignored"
Explanation: After establishing a lock on the authority file, the program could not write to the file.
User response: After the program has successfully established a lock on the authority file, it failed to write the new changes. Verify that the file is in working order and not corrupt.

XVFB0055  ProgramName: creating new authority file authority filename
Explanation: The program is starting to create the new authority file.
User response: None.

XVFB0056  ProgramName: unable to read auth entries from file authority filename
Explanation: The program could not open the authority file for reading.
User response: When executing fopen against the authority file, the program failed to establish a file pointer. Verify that the file in question is not corrupt and has the correct permission settings.

XVFB0057  ProgramName: unable to open tmp file filename
Explanation: The program failed to open a new temporary file.
User response: When executing fopen, the program
was unable to establish a file pointer to a new temporary file. Verify the permission settings on the folder in which the file would live as well as verifying there is sufficient disk space.

**XVFB0058**  
*ProgramName* filename not writable, changes ignored

**Explanation:** The program was unable to write to the file in question.

**User response:** Verify that the file in question has the correct permission settings.

**XVFB0059**  
*ProgramName* unable to write authority file filename

**Explanation:** The program was unable to write the authority file.

**User response:** Verify that the file in question has the correct permission settings and there is sufficient disk space available.

**XVFB0060**  
*ProgramName* unable to link authority file xauth_filename, use temp_name

**Explanation:** When trying to establish links between the temporary file and the new authority file, the program encountered an error.

**User response:** None.

**XVFB0061**  
unknown command user entered command

**Explanation:** The user has tried to enter an unknown command from the command line.

**User response:** Verify that the command given was typed correctly as well as a valid command.

**XVFB0062**  
unable to open extraction file filename

**Explanation:** Xauth was unable to open the file for reading.

**User response:** The user has requested an extract option from Xauth. While attempting to open the given filename for reading, the program encountered an error. Verify that the file in question has the correct permissions.

**XVFB0063**  
internal error with help

**Explanation:** Xauth encountered an error while trying to process a help command.

**User response:** The user has requested help for a given command. If a command was given at the command line, the entered command will be displayed after this message. If no command was given, this message will be the only indication of the error. Verify that files containing Xauth help messages are available and not corrupt.

**XVFB0064**  
on command user entered command

**Explanation:** A possible extension to an internal help error message.

**User response:** If the user entered a command with the request for help, this message will be printed out. Verify that the command in question is a valid command and the Xauth help file containing this command exists and has the correct permissions.

**XVFB0065**  
no help for nonexistent command user entered command

**Explanation:** The user has requested help on a nonexistent Xauth command.

**User response:** Verify that the desired command was typed correctly and is a valid Xauth command.

**XVFB0066**  
Commands:

**Explanation:** Header message for the help ? command.

**User response:** None.

**XVFB0067**  
unable to read any entries from file filename

**Explanation:** No lines were read while trying to read from the authorization file.

**User response:** The xauthorization file appears to have no data in it. Verify that there is in fact information within the file. If there is indeed data within, verify permissions on the file are correct.

**XVFB0068**  
digit entries read in: digit new, digit replacement(s)

**Explanation:** If merging entries with the verbose option turned on, this message will print.

**User response:** None.

**XVFB0069**  
No matches found, authority file filename not written

**Explanation:** When executing the xauth option 'extract', no matches for the given display could be found.

**User response:** Verify that the display argument given to the xauth 'extract' command is a valid display.
XVFB0070  \textit{number entries written to filename}

\textbf{Explanation:} If the verbose option is turned on, this message will show after a successful xauth extract command.

\textbf{User response:} Information message only. Nothing to be done.

XVFB0071  key contains odd number of or non-hex characters

\textbf{Explanation:} The key entered from the command line is not in the correct format.

\textbf{User response:} Verify that the key was typed correctly and is of the proper format.

XVFB0072  unable to allocate \textit{number} bytes for Xauth structure

\textbf{Explanation:} The program was unable to malloc enough space for the Xauth structure.

\textbf{User response:} Verify that there are sufficient system resources available.

XVFB0073  unable to allocate \textit{number} character protocol name

\textbf{Explanation:} The program was unable to malloc enough space for the character protocol name.

\textbf{User response:} Verify that there are sufficient system resources available.

XVFB0074  unable to allocate \textit{number} bytes for auth list

\textbf{Explanation:} The program was unable to malloc enough space for the authorization list.

\textbf{User response:} Verify that there are sufficient system resources available.

XVFB0075  unable to merge in added record

\textbf{Explanation:} When attempting to merge a new record into the existing records, an error occurred.

\textbf{User response:} None.

XVFB0076  \textit{number} entries removed

\textbf{Explanation:} If the verbose option is enabled, this message will show how many entries were removed

\textbf{User response:} None.

XVFB0077  Authority file: \textit{authfilename} OR none

\textbf{Explanation:} Will print the xauthorization file name if it exists. Will print none if not.

\textbf{User response:} None.

XVFB0078  File new: \textit{Yes} OR \textit{No}

\textbf{Explanation:} If an xauthorization file existed, the message will show No. If the xauthorization file has just been created, the message will show Yes.

\textbf{User response:} None.

XVFB0079  File locked: \textit{Yes} OR \textit{No}

\textbf{Explanation:} Displays the lock status of the xauthorization file. If the ignore_locks flag is set, the message will print No, otherwise, Yes.

\textbf{User response:} None.

XVFB0080  Number of entries: \textit{number}

\textbf{Explanation:} Will print the number of entries in the xauthorization file.

\textbf{User response:} None.

XVFB0081  Changes honored: \textit{Yes} OR \textit{No}

\textbf{Explanation:} If the changes to the xauthorization file were allowed, the status will show Yes, otherwise, No.

\textbf{User response:} None.

XVFB0082  Changes made: \textit{Yes} OR \textit{No}

\textbf{Explanation:} If changes were made to the xauthorization file, the status will show Yes, otherwise, No.

\textbf{User response:} None.

XVFB0083  Current input: \textit{filename}:\textit{linenumber}

\textbf{Explanation:} Displays the current input filename and the line within the file.

\textbf{User response:} None.

XVFB0084  line too long

\textbf{Explanation:} The xauth command 'source' has found a line within the specified file to be too long.

\textbf{User response:} A command found within the file passed to the source command is too long for the buffer. Either reduce the length of the command within the file (suggested) or increase the size of the buffer.
XVFB0085  unable to break line into words
Explanation:  The xauth command 'source' has found a line within the specified file that it is unable to parse.
User response:  A command found within the file passed to the source command is preventing the program from correctly parsing the command. Verify that there are no stray hidden characters within the file. A common cause of this can be creating the file in a windows environment and later moving this file to a *nix system. Also, verify that the file is in EBCDIC format.

XVFB0086  data contains odd number of or non-hex characters
Explanation:  While attempting to validate the key, an data format issue occurred.
User response:  Verify that the key was entered correctly.

XVFB0087  unable to open display displayname.
Explanation:  While trying to open the specified display, an error occurred.
User response:  Verify that the given display is a valid display and any required connection is available.

XVFB0088  couldn't query Security extension on display displayname
Explanation:  While trying to query the Security extension on the given display, an error occurred.
User response:  Verify that the display in question is fully functioning and any required connection is available.

XVFB0089  couldn't generate authorization
Explanation:  xauth could not generate the required authorization.
User response:  None.

XVFB0090  authorization id is number
Explanation:  If the verbose option is set, this message will show what the authorization ID is.
User response:  None.

XVFB0091  ProgramName: unable to generate an authority file name
Explanation:  While trying to generate an authority file name, an error was encountered.
User response:  Specify the name of an authority file name from the command line with the -f 'filename' argument.

XVFB0092  unlink filename failed, errno number
Explanation:  The program failed to unlink the memory mapped file. An error number is given.
User response:  Use the provided error number to learn more about the specific failure.

XVFB0093  shmdt failed, errno number
Explanation:  The program encountered an error while attempting to access shared memory. An error code is given.
User response:  use the provided error number to learn more about the specific failure.

XVFB0094  Invalid screen number screen number
Explanation:  An invalid screen number has been entered from the command line.
User response:  Verify that the command was entered correctly and the entered screen number is within the acceptable range.

XVFB0095  Invalid screen configuration entered configuration
Explanation:  An invalid screen configuration has been entered from the command line.
User response:  Verify that the command was entered correctly and the entered screen configuration is in the correct format.

XVFB0096  Invalid pixmap depth number
Explanation:  An invalid pixmap depth has been entered from the command line.
User response:  Verify that the command was entered correctly and the entered pixmap depth is valid.

XVFB0097  msync failed, errno number
Explanation:  While trying to flush any changes made to the screens out to the mapped file, an error occurred.
User response:  Use the provided error number to learn more about the specific failure.

XVFB0098  open mapped filename failed, errno number
Explanation:  The program failed to successfully open the mapped file. An error code is given.
User response:  Verify that user permissions on the directory structure are correct. Also use the given error code to learn more about the specific problem.
XVFB0099 write mapped filename failed, errno number

Explanation: The program failed to write to the mapped file. An error code is given.

User response: Verify that the user permissions on the directory structure are correct. Also use the given error code to learn more about the specific problem.

XVFB0100 mmap mapped filename failed, errno number

Explanation: While trying to map pages of memory, an error was encountered. An error code is given.

User response: Verify that the user permissions on the directory structure are correct. Also use the given error code to learn more about the specific problem.

XVFB0101 shmat failed, errno number

Explanation: While trying to attach the allocated shared memory to the process, an error occurred. An error code is given.

User response: None.

XVFB0102 shmat failed, errno number

Explanation: While trying to attach the allocated shared memory to the process, an error occurred. An error code is given.

User response: None.

XVFB0103 screen number shmid number

Explanation: Informational message of screen number and shmid ID.

User response: None.

XVFB0104 Internal Error! Attempt to remove a non-existent device

Explanation: The program has attempted to remove a non-existent device.

User response: None.

XVFB0105 FreeFontPath: FPE "length and name" refcount is actual count, should be expected count; fixing.

Explanation: The expected and actual counter values were found to be different. The program will automatically adjust.

User response: None.

XVFB0106 failed to set default font path 'path to default font'

Explanation: The program failed to successfully set the default font path.

User response: Verify that the program is attempting to set the correct path.

XVFB0107 Internal error in ConfigureWindow, smode == number

Explanation: While internally organizing the window stack, an error occurred.

User response: None.

XVFB0108 iop_disable failed (error condition)

Explanation: While trying to disable the IOP Server, an error was encountered. An error code is given.

User response: None.

XVFB0109 iop_getevents failed (error condition)

Explanation: While polling the IOP server for events, an error occurred, preventing the query to happen.

User response: None.

XVFB0110 Couldn't open RGB_DB 'path to RGB_DB'

Explanation: The program could not open the given path to the RGB DB.

User response: Verify that the program is trying to access the correct file.

XVFB0112 Value for "name" out of range: pathline number

Explanation: The given value for a color found in the RGB config file is out of the acceptable range.

User response: Acceptable range is: red >= 0 And red <= 0xff green >= 0 And green <= 0xff blue >= 0 And blue <= 0xff

XVFB0113 Fatal server error:

Explanation: Header that is printed any time a fatal error is encountered.

User response: None.

XVFB0114 XDM: reason code, declaring session dead

Explanation: The session has been declared dead for the given reason code. This event typically happens because of too many timeouts or a failed keepalive attempt.

XVFB0130  BOGUS LENGTH in write names,
expected number, got number
Explanation: The expected and actual values of the
data length in the write names do not match.
User response: None.

XVFB0131  Unknown doodad type number in
          XkbWriteGeomDoodads
Explanation: The given doodad is unknown.
User response: None.

XVFB0132  Ignored
Explanation: The unknown doodad has been ignored.
User response: None.

XVFB0133  BOGUS LENGTH in XkbSendGeometry,
expected number, got number
Explanation: The expected and actual values of the
data length in XkbSendGeometry do not match.
User response: None.

XVFB0134  Internal Error! bad
          RemoveResourceClient in
          XkbClientGone
Explanation: An error occurred while trying to
remove a resource client.
User response: None.

XVFB0135  Attempt to change unknown pointer
default (number) ignored
Explanation: The program has ignored the request to
change the default pointer type to an unknown type.
User response: None.

XVFB0136  Atom error: atom not created
Explanation: The specified atom was not created.
User response: None.

XVFB0137  Allocation error: atom property not
          created
Explanation: When trying to allocate the given atom,
an error occurred.
User response: None.

XVFB0138  Internal Error! bad size (number!=number)
          for _XKB_RULES_NAMES
Explanation: The expected and actual values for the
size of _XKB_RULES_NAMES were different
User response: None.

XVFB0139  Error loading keymap file filename (error
code in location)
Explanation: The program failed to successfully load
the keymap file.
User response: None.

XVFB0140  reverting to defaults
Explanation: After a failed keymap file load, the
program will revert to the default values.
User response: None.

XVFB0141  Error opening keymap file filename,
          reverting to defaults
Explanation: The program failed to successfully load
the keymap file. The default values will be reinstated.
User response: None.

XVFB0142  Internal Error!! XKB and core keymap
          have different range
Explanation: XKB and the core keymap have been
found with different ranges.
User response: None.

XVFB0143  Couldn't load XKB keymap, falling back
to pre-XKB keymap
Explanation: Tried to load an XKB keymap file. This
action failed and the previous settings will be used.
User response: None.

XVFB0144  Internal Error! Illegal radio group number
Explanation: XKB tried to process an illegal radio
group.
User response: None.

XVFB0145  unknown key behavior 0xbehavior type
Explanation: An unknown key behavior type has
occurred. This typically indicates an error with the
keyboard. Typical key behavior includes pressed or not.
User response: Verify that no keys are stuck and the
keyboard is functioning properly.
XVFB0146 Extra data (number bytes) after SelectEvents

**Explanation:** Extra data was found after the SelectEvents action.

**User response:** None.

XVFB0147 Internal Error! Bad XKB info in SetPhysicalLockingKey

**Explanation:** While reading the SetPhysicalLockingKey, bad information was found contained within.

**User response:** None.

XVFB0148 MAXFORMATS is too small for this server

**Explanation:** The current setting of MAXFORMATS is too small.

**User response:** Increase the level of MAXFORMATS

XVFB0149 Couldn't add screen number

**Explanation:** XVFB could not add the given screen.

**User response:** None.

XVFB0150 initializing atoms

**Explanation:** Informational message. The program is initializing atoms.

**User response:** None.

XVFB0151 SetMaskForEvent: bogus event number

**Explanation:** The found event number falls outside the acceptable range.

**User response:** None.

XVFB0152 SetCriticalEvent: bogus event number

**Explanation:** The found event number falls outside the acceptable range.

**User response:** None.

XVFB0153 Impossible keyboard event

**Explanation:** The program encountered an unexpected keyboard event.

**User response:** Restart the server and try again.

XVFB0154 bogus pointer event from ddx

**Explanation:** The pointer received is invalid.

**User response:** None.

XVFB0155 client not on event list

**Explanation:** The program could not find a given client within the previously configured client list.

**User response:** Verify that all clients are listed and you are trying to connect to a client on the list.

XVFB0156 failed to allocate spriteTrace

**Explanation:** While attempting to xalloc space, an error occurred.

**User response:** Verify that there are sufficient system resources available.

XVFB0157 Not implemented

**Explanation:** Informational message which accompanies additional messages when an as yet unimplemented function or feature is called.

**User response:** None.

XVFB0158 server restarted. Jumped through uninitialized pointer?

**Explanation:** The server has been restarted. The most typical cause of this is from jumping through an uninitialized pointer.

**User response:** None.

XVFB0159 couldn't create client array

**Explanation:** While trying to xalloc space for an array, an error occurred.

**User response:** Verify that there are sufficient system resources available.

XVFB0160 couldn't create server client

**Explanation:** While trying to xalloc space for an array, an error occurred.

**User response:** Verify that there are sufficient system resources available.

XVFB0161 couldn't init server resources

**Explanation:** While trying to initialize resources for the root resources, an error occurred.

**User response:** None.

XVFB0194 Could't allocate modifierKeyMap in UpdateCore

Explanation: The program failed to allocate modifierKeyMap in UpdateCore.

User response: Ensure that there are sufficient system resources available.

XVFB0195 Couldn't allocate symbols map in UpdateCore

Explanation: The program failed to allocate symbols map in UpdateCore.

User response: Ensure that there are sufficient system resources available.

XVFB0196 could not add Xie as an extension

Explanation: While attempting to add Xie as an extension, an error occurred.

User response: None.
Notices

This information was developed for products and services offered in the U.S.A.

IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user’s responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to:

Programming Interface Information

This publication documents intended Programming Interfaces that allow the customer to write programs that use Open Source Tools for z/OS.

Trademarks

Adobe, the Adobe logo, PostScript, and the PostScript logo are either registered trademarks or trademarks of Adobe Systems Incorporated in the United States and/or other countries.

Other company, product, and service names may be trademarks or service marks of others.
Accessibility

Publications for this product are offered in Adobe Portable Document Format (PDF) and should be compliant with accessibility standards. If you experience difficulties when using PDF files, you may view the information through the z/OS Internet Library Web site or the z/OS Information Center. If you continue to experience problems, send an e-mail to mhvrcfs@us.ibm.com or write to:

IBM Corporation

Department H6MA, Building 707
2455 South Road
Poughkeepsie, NY 12601-5400
U.S.A.

Accessibility features help a user who has a physical disability, such as restricted mobility or limited vision, to use software products successfully. The major accessibility features in z/OS enable users to:

- Use assistive technologies such as screen readers and screen magnifier software
- Operate specific or equivalent features using only the keyboard
- Customize display attributes such as color, contrast, and font size

Using assistive technologies

Assistive technology products, such as screen readers, function with the user interfaces found in z/OS. Consult the assistive technology documentation for specific information when using such products to access z/OS interfaces.

Keyboard navigation of the user interface

Users can access z/OS user interfaces using TSO/E or ISPF. Refer to z/OS TSO/E Primer, z/OS TSO/E User’s Guide and z/OS ISPF User’s Guide Vol I for information about accessing TSO/E and ISPF interfaces. These guides describe how to use TSO/E and ISPF, including the use of keyboard shortcuts or function keys (PF keys). Each guide includes the default settings for the PF keys and explains how to modify their functions.

z/OS information

z/OS information is accessible using screen readers with the BookServer or Library Server versions of z/OS books in the Internet library at:

http://www.ibm.com/systems/z/os/zos/bkserv/
