MVS System Messages
Volume 5 (EDG - GFS)
## Contents

### About this document
- Who should use documentation for MVS System Messages
- How to use these documents
- Where to find more information
  - Where to find the most current message information
  - Information updates on the web
  - Using LookAt to look up message explanations
  - The z/OS Basic Skills Information Center

### How to send your comments to IBM
- If you have a technical problem

### Summary of changes
- Changes made in z/OS Version 1 Release 13
- Changes made in z/OS Version 1 Release 12 as updated April 2011
- Changes made in z/OS Version 1 Release 12 as updated April 2010
- Changes made in z/OS Version 1 Release 11

### Chapter 1. Introduction
- Message format
  - Format of the message body
  - Messages sent to MCS/SMCS consoles
  - Messages sent to hardcopy log in JES2 system
  - Messages sent to hardcopy log in JES3 system
  - Messages sent to the job log, to other data sets, and to display terminals
  - Truncated data in multi-line messages
- Message description
  - Description items
  - Routing codes
  - Descriptor codes
- Message directory

### Chapter 2. EDG messages
- Format of System DFSMSrmm Messages
- EDG messages

### Chapter 3. EDGH messages

### Chapter 4. ERB messages

### Chapter 5. LANRES messages (EWX, ACP, ASD)
- EWX Host Messages
- EWX Server Messages

### Chapter 6. FEW messages

### Chapter 7. GDE messages

### Chapter 8. GFSA messages

### Chapter 9. GFSC messages

### Accessibility
- Using assistive technologies
- Keyboard navigation of the user interface
- z/OS information

### Notices
- Policy for unsupported hardware
- Trademarks

© Copyright IBM Corp. 1988, 2011
MVS™ System Messages primarily describe messages that are issued to the system operator at the system console and system messages that are logged. These include the following messages:

- Operator messages issued by the BCP and DFSMS/MVS.
- Log messages issued by the BCP and DFSMS/MVS.
- Some SYSOUT messages issued by the BCP and DFSMS/MVS. SYSOUT messages are issued by utilities that normally run in batch, such as SPZAP.
- Batch job messages issued by the BCP. Messages issued by JES2 or JES3 for batch jobs are in the JES messages documents.

For the most part, messages issued at interactive terminals (like TSO/E and CICS® terminals) are documented by the specific elements and products that support those terminals.

The titles of the MVS System Messages indicate the range of message prefixes in the documents:

- z/OS MVS System Messages, Vol 1 (ABA-AOM), SA22-7631
- z/OS MVS System Messages, Vol 2 (ARC-ASA), SA22-7632
- z/OS MVS System Messages, Vol 3 (ASB-BPX), SA22-7633
- z/OS MVS System Messages, Vol 4 (CBD-DMO), SA22-7634
- z/OS MVS System Messages, Vol 5 (EDG-GFS), SA22-7635
- z/OS MVS System Messages, Vol 6 (GOS-IEA), SA22-7636
- z/OS MVS System Messages, Vol 7 (IEB-IEE), SA22-7637
- z/OS MVS System Messages, Vol 8 (IEF-IGD), SA22-7638
- z/OS MVS System Messages, Vol 9 (IGF-IWM), SA22-7639
- z/OS MVS System Messages, Vol 10 (IXC-IZP), SA22-7640

If you do not know which document describes a particular message, try using LookAt (see "Using LookAt to look up message explanations" on page vii). Here are some of the other types of messages on that bookshelf:

- z/OS MVS Dump Output Messages, SA22-7590
- z/OS MVS System Codes, SA22-7626
- z/OS and z/VM HCD Messages, SC33-7986
- z/OS JES2 Messages, SA22-7537
- z/OS JES3 Messages, SA22-7552
- z/OS TSO/E Messages, SA22-7786
- z/OS UNIX System Services Messages and Codes, SA22-7807

For a list of message documents sorted by message prefix, see "Message directory" on page 17.

This document also contains the routing and descriptor codes that IBM assigns to the messages that z/OS components, subsystems, and products issue. Routing and descriptor codes are specified by the ROUTCDE and DESC keyword parameters on WTO and WTOR macros, which are the primary methods that programs use to...
issue messages. The routing code identifies where a message will be displayed. The descriptor code identifies the significance of the message and the color of the message on operator consoles with color.

### Who should use documentation for MVS System Messages

The system messages documents are for people who receive messages from the system. Usually, these people are system operators, system programmers, and application programmers who do any of the following tasks:
- Initialize the operating system and its subsystems
- Monitor system activity
- Keep the system running correctly
- Diagnose and correct system problems
- Diagnose and correct errors in problem programs

### How to use these documents

The system messages contain descriptions of messages, along with the following topics:
- "Building your own message library" on page 28 tells how to create a customized message library.
- "Message directory" on page 17 lists all message prefixes and the documents containing the message descriptions.
- Chapter 1, "Introduction," on page 1 describes how the system issues messages, where it places them, and their formats.
- "Routing codes" on page 10 and "Descriptor codes" on page 14 contain an introduction to routing and descriptor codes. These sections describe:
  - The meaning of each code
  - How to specify these codes
  - How the system uses these codes

For information on using routing and descriptor codes to route messages, see [z/OS MVS Planning: Operations](http://www.ibm.com/systems/z/OS/v1r13/psa/). 

**Message Explanations**: Message chapters are arranged alphabetically by the message prefixes. In each chapter, the messages are arranged numerically by the numbers following the prefix. For a general description of message explanations, see [Message description](#) on page 9.

### Where to find more information

Where necessary, the message documents reference information in other books, using shortened versions of the book title. For complete titles and order numbers of the books for all products that are part of z/OS, see [z/OS Information Roadmap](http://www.ibm.com/systems/z/OS/v1r13). 

Many message descriptions refer to the following terms. You need to consult the reference listed below for more information:
- **Data areas and control blocks**: See [z/OS MVS Data Areas](http://www.ibm.com/systems/z/OS/zos/bkserv) in [z/OS Internet Library](http://www.ibm.com/systems/z/OS/v1r13). 
- **Dumps**: For examples of ABEND, stand-alone, and SVC dumps and how to read them, see [z/OS MVS Diagnosis: Tools and Service Aids](http://www.ibm.com/systems/z/OS/v1r13). For examples of component output from dumps and how to read and request it, see [z/OS MVS Diagnosis: Reference](http://www.ibm.com/systems/z/OS/v1r13).
Identification of a component, subsystem, or product: See the \textit{z/OS MVS Diagnosis: Reference} to identify the component, subsystem, or product from the name of an IBM\textsuperscript{®} module or for a macro. The module prefix and macro tables give the program identifier to be used in a PIDS symptom in a search argument.

System completion and wait state codes: See \textit{z/OS MVS System Codes}.

Logrec data set error records: For the formatted records, see \textit{z/OS MVS Diagnosis: Reference}.

Trace output: For the formats and the meaning of the information in the generalized trace facility (GTF) trace, instruction address trace, master trace, system trace, and component trace, see \textit{z/OS MVS Diagnosis: Tools and Service Aids}.

Hardware: Use the appropriate \textit{Principles of Operation} document for the hardware you have installed.

Where to find the most current message information

The MVS System Messages documents are cumulative. As messages are added to the system they are added to the documents. Similarly, when messages are changed on the system, they are changed in the documents. However, when a message is deleted from the system (no longer issued), the message is \textit{not} deleted from the document. This means that users can look in the most recent message documents for the most current descriptions of system messages.

To find the most current edition of a document, you can look on the Web. Point your browser to the z/OS home page and click on Library:

\url{http://www.ibm.com/systems/z/os/zos/}

When you are in the z/OS library area, use the messages and codes database to search for the message ID you are interested in.

Information updates on the web

For the latest information updates that have been provided in PTF cover letters and Documentation APARs for z/OS, see the online document at:

\url{http://publibz.boulder.ibm.com/cgi-bin/bookmgr_OS390/Shelves/ZDOCAPAR}

This document is updated weekly and lists documentation changes before they are incorporated into z/OS publications.

Using LookAt to look up message explanations

LookAt is an online facility that lets you look up explanations for most of the IBM messages you encounter, as well as for some system abends and codes. Using LookAt to find information is faster than a conventional search because in most cases LookAt goes directly to the message explanation.

You can use LookAt from these locations to find IBM message explanations for z/OS\textsuperscript{®} elements and features, z/VM\textsuperscript{®}, z/VSE, and Clusters for AIX\textsuperscript{®} and Linux:

- The Internet. You can access IBM message explanations directly from the LookAt Web site at \url{www.ibm.com/servers/eserver/zseries/zos/bkserv/lookat/}.
- Your z/OS TSO/E host system. You can install code on your z/OS systems to access IBM message explanations using LookAt from a TSO/E command line (for example: TSO/E prompt, ISPF, or z/OS UNIX System Services).
- Your Microsoft Windows workstation. You can install LookAt directly from the \textit{z/OS and Software Products DVD Collection} (SK3T-4271) and use it from the
resulting Windows graphical user interface (GUI). The command prompt (also known as the DOS > command line) version can still be used from the directory in which you install the Windows version of LookAt.

- Your wireless handheld device. You can use the LookAt Mobile Edition from [www.ibm.com/servers/eserver/zseries/zos/bkserv/lookat/lookatm.html](http://www.ibm.com/servers/eserver/zseries/zos/bkserv/lookat/lookatm.html) with a handheld device that has wireless access and an Internet browser.

You can obtain code to install LookAt on your host system or Microsoft Windows workstation from:

- The z/OS and Software Products DVD Collection (SK3T-4271).
- The LookAt Web site (click **Download** and then select the platform, release, collection, and location that suit your needs). More information is available in the LOOKAT.ME files available during the download process.

### The z/OS Basic Skills Information Center

The z/OS Basic Skills Information Center is a Web-based information resource intended to help users learn the basic concepts of z/OS, the operating system that runs most of the IBM mainframe computers in use today. The Information Center is designed to introduce a new generation of Information Technology professionals to basic concepts and help them prepare for a career as a z/OS professional, such as a z/OS system programmer.

Specifically, the z/OS Basic Skills Information Center is intended to achieve the following objectives:

- Provide basic education and information about z/OS without charge
- Shorten the time it takes for people to become productive on the mainframe
- Make it easier for new people to learn z/OS.

To access the z/OS Basic Skills Information Center, open your Web browser to the following Web site, which is available to all users (no login required): [http://publib.boulder.ibm.com/infocenter/zos/basics/index.jsp](http://publib.boulder.ibm.com/infocenter/zos/basics/index.jsp)
How to send your comments to IBM

We appreciate your input on this publication. Feel free to comment on the clarity, accuracy, and completeness of the information or give us any other feedback that you might have.

Use one of the following methods to send us your comments:
1. Send an email to mhvrcfs@us.ibm.com
3. Mail the comments to the following address:
   IBM Corporation
   Attention: MHVRCFS Reader Comments
   Department H6MA, Building 707
   2455 South Road
   Poughkeepsie, NY 12601-5400
   U.S.A.
4. Fax the comments to us as follows:
   From the United States and Canada: 1+845+432-9405
   From all other countries: Your international access code +1+845+432-9405

Include the following information:
• Your name and address
• Your email address
• Your telephone or fax number
• The publication title and order number:
  z/OS V1R13.0 MVS System Messages, Vol 5 (EDG-GFS)
  SA22-7635-21
• The topic and page number related to your comment
• The text of your comment.

When you send comments to IBM, you grant IBM a nonexclusive right to use or distribute your comments in any way it believes appropriate without incurring any obligation to you.

IBM or any other organizations will only use the personal information that you supply to contact you about the issues that you submit.

If you have a technical problem

Do not use the feedback methods listed above. Instead, do one of the following:
• Contact your IBM service representative
• Call IBM technical support
• Visit the IBM support portal at [http://www.ibm.com/systems/z/support/](http://www.ibm.com/systems/z/support/)
Summary of changes

This document contains terminology, maintenance, and editorial changes to improve consistency and retrievability. Technical changes or additions to the text and illustrations are indicated by a vertical line to the left of the change.

New, changed, or deleted messages can affect your system's automation routines. To ensure that your installation's automation routines are current, review the new, changed, and deleted messages listed in "z/OS Summary of Message and Interface Changes." "z/OS Summary of Message and Interface Changes" is available on the "z/OS Collection, SK3T-4271" and in the z/OS Internet library at: http://www.ibm.com/servers/eserver/zseries/zos/bkserv/

Changes made in z/OS Version 1 Release 13

The document contains information previously presented in "z/OS MVS System Messages, Vol 5 (EDG-GFS), SA22-7635-20," which supports z/OS Version 1 Release 12. For a comprehensive list of message changes, see "z/OS Summary of Message and Interface Changes."

Changes made in z/OS Version 1 Release 12 as updated April 2011

New information:
• Chapter 6, “FEW messages,” on page 713 contains new and changed messages.

For a comprehensive list of message changes, see "z/OS Summary of Message and Interface Changes."

Changes made in z/OS Version 1 Release 12

For a comprehensive list of message changes, see "z/OS Summary of Message and Interface Changes."

Changes made in z/OS Version 1 Release 11 as updated April 2010

For a comprehensive list of message changes, see "z/OS Summary of Message and Interface Changes."
Changes made in z/OS Version 1 Release 11

For a comprehensive list of message changes, see z/OS Summary of Message and Interface Changes.
Chapter 1. Introduction

The z/OS operating system issues messages from z/OS elements and features, and from program products and application programs running on the system. The system issues messages in different ways and to different locations:

- **WTO and WTOR macros**: Most messages are issued through WTO and WTOR macros to one of the following locations:
  - Console
  - Operations log (OPERLOG)
  - System log (SYSLOG)
  - Job log
  - SYSOUT data set

Routing codes determine where the messages are displayed or printed. The routing codes for messages issued by the operating system are included with each message.

- **WTL macro or the LOG operator command**: Some messages are issued through the WTL macro or the LOG operator command to the system log (SYSLOG).

- **Dumping services routines**: Dump messages are issued through the Dumping services routines and can appear in one of the following locations:
  - SVC dumps, stand-alone dumps, or SYSMDUMP ABEND dumps formatted by the interactive problem control system (IPCS)
  - Trace data sets formatted by the interactive problem control system (IPCS)
  - ABEND dumps or SNAP dumps produced by the dumping services

In dump or trace data sets formatted by IPCS, the messages appear interactively on a terminal or in a printed dump.

- **DFSMS/MVS access methods**: Some messages are issued through DFSMS/MVS access methods directly to one of the following locations:
  - Output data set
  - Display terminal

Messages are sent to different locations to meet some specific needs. For example, messages routed to a console usually shows the result of an operator command and sometimes require an operator reply, while messages recorded in the hardcopy log permanently are often used for auditing. Understanding the locations where you receive messages can help you manage your message flow.

**Console**

Messages sent to a multiple console support (MCS) console, an SNA multiple console support (SMCS) console, or an extended MCS (EMCS) console are intended for the operators. Operations can control which messages are displayed. See [z/OS MVS Planning: Operations](#) for information about controlling message display.

The system writes in the hard-copy log all messages sent to a console, whether the message is displayed or not.

**Operations log**

The operations log (OPERLOG) records all message traffic from each system in a sysplex that activates the OPERLOG. The operations log consists of the following data:

- Messages to and from all consoles
- Commands and replies entered by the operator
System log

The system log (SYSLOG) is a SYSOUT data set that stores the messages and commands from the current system. SYSOUT data sets are output spool data sets on direct access storage devices (DASD) provided by the job entry subsystem (either JES2 or JES3). An installation usually prints the system log periodically. The system log consists of:

- All messages issued through WTL macros
- All messages entered by operator LOG commands
- Usually, the hard-copy log
- Any messages routed to the system log from any system component or program

Job log

Messages sent to the job log are intended for the programmer who submitted a job. The job log is specified in the system output class on the MSGCLASS parameter of the JCL JOB statement.

SYSOUT data set

Messages sent to a SYSOUT data set are intended for a programmer. These messages are issued by an assembler or compiler, the linkage editor and loader, and an application program. If the SYSOUT data set and the MSGCLASS parameter on the JCL JOB statement specify the same class, all messages about a program will appear in the same SYSOUT listing.

Message format

A displayed or printed message can appear by itself or with other information, such as a time stamp. The following topics show the format of the message body and the formats of accompanying information when the message is sent to various locations.

Format of the message body

The message body consists of three parts: the reply identifier (optional), the message identifier, and the message text. The following formats are possible:

<table>
<thead>
<tr>
<th>Format</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id CCCnnn text</td>
<td>Reply identifier: It is optional. It appears if an operator reply is required. The operator specifies it in the reply.</td>
</tr>
<tr>
<td>id CCCnnns text</td>
<td></td>
</tr>
<tr>
<td>id CCCnnnns text</td>
<td></td>
</tr>
<tr>
<td>id CCCnnnnns text</td>
<td></td>
</tr>
<tr>
<td>id CCCSnnns text</td>
<td></td>
</tr>
</tbody>
</table>

id Reply identifier: It is optional. It appears if an operator reply is required. The operator specifies it in the reply.

CCCnnn, CCCnnns, CCCnnnns, CCCnnnnns, CCCSnnns
Message identifier.

CCC
A prefix to identify the component, subsystem, or product that produced the message. The prefix is three characters.

S The subcomponent identifier, which is an optional addition to the prefix to identify the subcomponent that produced the message. The subcomponent identifier is one character.

nnn, nnnns, nnnnnnn A serial number to identify the individual message. The serial number is three, four, or five decimal digits.
s An optional type code, which is one of the following:
A Action: The operator must perform a specific action.
D Decision: The operator must choose an alternative.
E Eventual action: The operator must perform action when time is available.
I Information: No operator action is required.
S Severe error: Severe error messages are for a system programmer.
W Wait: Processing stops until the operator performs a required action.

text
Text: The text provides information, describes an error, or requests an operator action.

Note: The following messages have special format for the message body. Refer to the specific message chapters for details.
- ADR messages
- CNL messages
- EWX messages
- IDA messages
- IEW messages
- IGW01 messages

Messages sent to MCS/SMCS consoles
Messages sent to MCS/SMCS consoles appear in one of the following formats:

<table>
<thead>
<tr>
<th>Format</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>f hh:mm:ss syslogname jobname message</td>
<td>The operator has performed the action required for the message. The message has been deleted.</td>
</tr>
<tr>
<td>f hh:mm:ss syslogname message</td>
<td>The message is for information only; no operator action is required. The message was issued by the system or by a problem program.</td>
</tr>
<tr>
<td>f hh:mm:ss jobname message</td>
<td>The message requires specific operator action and was issued by a WTOR or by an authorized program. The message has a descriptor code of 1, 2, or 11.</td>
</tr>
<tr>
<td>f syslogname message</td>
<td>The message requires specific operator action and was issued by a WTOR or by a problem program. The message has a descriptor code of 1, 2, or 11.</td>
</tr>
<tr>
<td>f jobname message</td>
<td>The message requires no specific operator action and was issued by a problem program using a WTO macro.</td>
</tr>
</tbody>
</table>

f A screen character to indicate the status of certain messages, as follows:
<table>
<thead>
<tr>
<th>Screen Character</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>l</td>
<td>The operator has performed the action required for the message. The message has been deleted.</td>
</tr>
<tr>
<td>-</td>
<td>The message is for information only; no operator action is required. The message was issued by the system or by a problem program.</td>
</tr>
<tr>
<td>*</td>
<td>The message requires specific operator action and was issued by a WTOR or by an authorized program. The message has a descriptor code of 1, 2, or 11.</td>
</tr>
<tr>
<td>@</td>
<td>The message requires specific operator action and was issued by a WTOR or by a problem program. The message has a descriptor code of 1, 2, or 11.</td>
</tr>
<tr>
<td>+</td>
<td>The message requires no specific operator action and was issued by a problem program using a WTO macro.</td>
</tr>
</tbody>
</table>
blank  The message requires no specific operator action.

hh.mm.ss
  Time stamp: the hour (00-23), minute (00-59), and second (00-59).

sysname
  System name for the system that issued the message.

jobname
  Job name for the task that issued the message. This field is blank if a job did not issue the message.

message
  Reply identifier, message identifier, and text.

Messages sent to hardcopy log in JES2 system

Multiple console support (MCS) handles message processing in:
- A JES2 system
- A JES3 system on a local processor
- A JES3 system on a global processor, if JES3 has failed

MCS sends messages with routing codes 1, 2, 3, 4, 7, 8, and 10 to the hardcopy log when display consoles are used or more than one console is active. All other messages can be routed to the hard-copy log by a system option or a VARY HARDCPY operator command.

Messages sent to the hardcopy log appear in the format:

```
tcrrrrrr sysname yyddd hh:mm:ss.th ident msgflags message
  message
  t lid message
```

t  The first character on the line indicates the record type:
  D  Data line of a multiple-line message; this line may be the last line of the message.
  E  End line or data-end line of a multiple-line message.
  L  Label line of a multiple-line message.
  M  First line of a multiple-line message.
  N  Single-line message that does not require a reply.
  O  Operator LOG command.
  S  Continuation of a single-line message or a continuation of the first line of a multi-line message. This continuation may be required because of the record length for the output device.
  W  A message that requires a reply.
  X  A log entry that did not originate with a LOG command or a system message.

c  The second character on the line indicates whether the line was generated because of a command:
  C  Command input.
  R  Command response.
I Command issued internally. The job identifier contains the name of the internal issuer.

blank Neither command input nor command response.

rrrrrr Hexadecimal representation of the routing codes 1 through 28. To understand this hexadecimal number, convert it to binary; each binary 1 represents a routing code. For example, X'420C' represents routing codes 2, 7, 13, and 14 as shown here:

Hexadecimal: 4 2 0 C
Binary: 0 1 0 0 0 0 1 0 0 0 0 1 1 0 0
Routing Codes: 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16

sysname The system name from the SYSNAME parameter in parmlib.

yyddd The Julian date, given as the year (00-99) and the day of the year (000-366).

Note: If HCFORMAT(CENTURY) is specified in the CONSOLxx parmlib member, the Julian date appears as yyyyddd.

hh:mm:ss.th Time stamp, given as the hour (00-23), minute (00-59), second (00-59), and hundredths of a second (00-99).

ident The job identifier for the task that issued the message, if the second character on the line is blank.

If the second character on the line is C or R, this field contains one of the following:

jobid The job identifier of the task that issued the message, if it was issued by a job.

consname Console name of the console which issued the command or received the message.

INTERNAL For a command generated by a problem program or the system.

INSTREAM For a command read from the input stream.

blank If MCS could not determine the source or destination for the message.

lid Multiple-line identifier for the second and succeeding lines of a multiple-line message. This field appears after the message text (1) on the first line or (2) in the message area and is not followed by text on a continuation of the first line. The identifier appears on all lines of the same message.

msgflags Installation exit and message suppression flags. For information about the description of the hardcopy log message flags, see HCL in z/OS MVS Data Areas in z/OS Internet Library at http://www.ibm.com/systems/z/os/zos/bkserv/.

message Reply identifier, message identifier, and text. The reply identifier and message identifier appear only on the first line of a multiple-line message.
Messages sent to hardcopy log in JES3 system

Messages sent to the JESMSG hardcopy log in a JES3 system appear in the format:

```
hh:mm:ss t message
```

Messages sent to the MLOG/DLOG hardcopy log appear in the format:

```
dest console yyddd hhmsst[a][prefix] message
```

**dest**

JES3 destination class, which corresponds to the MVS routing code.

**console**

JES3 or MVS console name, as follows:

- **blank** For a message issued without a console name.
- **nnnnn** The JES3 console name (JNAME) from the JES3 initialization stream. This applies to remote consoles only.
- **cnname** The MCS console name, as specified on the NAME(cnname) parameter under the CONSOLE definition in SYS1.PARMLIB(CONSOLxx).
- **INTERNAL** For a command generated by a problem program or operating system routine.
- **NETWORK** For a message issued to the network job entry (NJE) console.

**yyddd**

The Julian date, given as the year (00-99) and the day of the year (000-366).

**Note:** If HCFORMAT(CENTURY) is specified in the CONSOLxx parmlib member, the Julian date appears as yyyyddd.

**hhmsst**

Time stamp, given as the hour (00-23), minute (00-59), second (00-59), and tenth of a second (0-9).

**i**

Attention indicator for JES3 space constraints, as follows:

- **blank** Normal output or no action required.
- **#** The message is rerouted automatically or by a command from another console.
- **%** Minimum space (track) situation (JSAM).
- **=** Marginal space (track) situation (JSAM).
- **<** Minimum buffer situation (JSAM).

**Note:** The above four symbols can be changed by a CONSTD statement in the JES3 initialization stream.

**a**

Action prefix character, as follows:

- **blank** Normal message.
- **+** JES3 input command, issued on the global processor.
- **-** MVS input command, issued on the global processor.
Operator action required.

**prefix**

```
prefix R=jobname
```

Optional prefix for messages issued outside the JES3 address space or on a local processor, as follows:

```
sysname
```

The name of the system where the issuing program is running. JES3 determines the name from the ID parameter on the MAINPROC statement in the JES3 initialization stream.

```
jobname
```

The job name of the issuing program. It is all blanks for a system routine.

**message**

Reply identifier, message identifier, and text.

**Messages sent to the job log, to other data sets, and to display terminals**

Messages sent to the job log, to other data sets, and to display terminals appear in the format designed by the program that issued them.

**Truncated data in multi-line messages**

Under any one of the following conditions, the system might need to truncate a multi-line message:

- When a message is being transported from one system to another in a sysplex, the sending or receiving system might encounter an error that prevents some or all of the message text from appearing. This can be caused by any of the following:
  - The issuing system is stopped or quiesced.
  - The issuing system fails to end a multi-line message.
  - The issuing system has an XCF buffer shortage.
  - A disruption occurs in sysplex communication.
  - An error occurs on the receiving system.

When one of the above conditions occurs, one of the following messages can appear within the message text, indicating such an error:

- `LOSS OF DATA - MESSAGE COMPLETION FORCED`
- `LOSS OF INTERMEDIATE MESSAGE DATA`

- When no data line or endline has been issued for a multi-line message after an interval of thirty seconds, the system issues the following endline:
  ```
  MESSAGE TIMED OUT - MESSAGE COMPLETION FORCED
  ```

- When a connect request exceeds the limit of 65533 lines, the system truncates the message with the following text:
  ```
  EXCEEDED LINE LIMIT - MESSAGE COMPLETION FORCED
  ```

- When a multi-line message is issued with no end line, and it is not possible for the system to obtain space to temporarily store the message, the system truncates the message with the following text:
  ```
  CONNECT UNAVAILABLE - MESSAGE COMPLETION FORCED
  ```

- When a multi-line connect request is issued, and the system is unable to obtain space to store the connecting lines, the system truncates the message with the following text:
  ```
  CONNECT UNSUCCESSFUL - MESSAGE COMPLETION FORCED
  ```
• When a message is too long to fit into 80% of the Console message cache, the system truncates the message with the following text:
  MESSAGE TRUNCATED FOR CONSOLE MESSAGE CACHE

• When there is a shortage of WTO buffers for display on MCS consoles, the screen display may be truncated with one of the following lines of text:
  NUMBER OF LINES EXCEEDED MLIM - MESSAGE TRUNCATED
  STORAGE CONSTRAINT - MESSAGE TRUNCATED
Message description

The following topics describes the different message description items, and in particular, the routing and descriptor codes.

**Description items**

The message explanation information is presented by the following items:

**Explanation**

The meaning of the message, including why the system issued the message.

**System Action**

- What the system did as a result of the system condition reported by the message. A system condition could include running out of storage, a hardware or software failure, an abend, a wait state.
- What the system did as a result of user input. User input can include a system command, a job running on the system, a transaction, a query, or another user-system interaction.

**Operator Response**

Instructions for the system operator, including, as appropriate, decisions to make and actions to take.

Only provided for messages that could appear at the operator console.

**User Response**

Instructions for the end user.

Only provided for messages that could appear at an interactive interface such as a TSO/E terminal or ISPF application.

*Note: Most user messages are explained in other message books, such as [z/OS TSO/E Messages](https://www.ibm.com/training/library/zos/).*

**Application Programmer Response**

Instructions for an application programmer.

Only provided for messages that could appear in SYSOUT produced by a job, for example SPZAP.

**System Programmer Response**

Instructions for the system programmer.

Only provided for messages that require additional action beyond the operator response, user response, or application programmer response.

**Storage Administrator Response**

Instructions for the DFSMSdfp storage administrator.

**Security Administrator Response**

Instructions for the security administrator.

Only provided for security-related messages.

**Problem Determination**

Additional instructions for determining the cause of the problem, searching problem databases, and, if necessary, reporting the problem to the IBM support center. These instructions are for a customer support person who can troubleshoot problems, such as the system programmer or system administrator, an experienced security administrator, or an experienced storage administrator.
For additional information on performing problem determination procedures, see z/OS Problem Management and the appropriate diagnosis guide for the product or element issuing the message, such as:

- DFSMS/MVS diagnosis guides and references
- z/OS JES2 Diagnosis
- z/OS JES3 Diagnosis

**Source**

Element, product, or component that issued the message.

**Detecting Module**

Name of the module or modules that detected the condition that caused the message to be issued.

**Routing Code**

For WTO or WTOR messages, the routing code of the message. See “Routing codes” for more information about the code meaning.

**Descriptor Code**

For WTO or WTOR messages, the descriptor code of the message. See “Descriptor codes” on page 14 for more information about the code meaning.

### Routing codes

Routing codes send system messages to the consoles where they are to be displayed. More than one routing code can be assigned to a message to send it to more than one console. For more information on message routing, see the following topics:

- z/OS MVS Programming: Authorized Assembler Services Guide
- z/OS MVS Programming: Authorized Assembler Services Reference SET-WTO
- z/OS MVS Installation Exits
- z/OS MVS Initialization and Tuning Reference

**Specification**

The routing codes are specified in the ROUTCDE parameter of the WTO or WTOR macro. If you specify a message which contains no routing codes, MVS may provide one or more default routing codes, based upon the presence or lack of other queuing specifications.

If you specify a message containing descriptor codes but no routing codes and no target console, MVS will not assign any routing codes and will write the message to the hardcopy log.

If you specify a message containing no routing codes, no descriptor codes, and no target console, MVS will assign a default set of routing codes. This set of default routing codes is specified at MVS initialization on the DEFAULT statement in your CONSOLxx parmlib member. If a set of default routing codes was not provided on the DEFAULT statement, MVS will assign routing codes 1 through 16.

**Routing code meaning**

Routing codes appear within the associated message. The routing code field can contain the following numeric values, special characters, or notes:

<table>
<thead>
<tr>
<th>Code</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Operator Action</td>
</tr>
</tbody>
</table>
The message indicates a change in the system status. It demands action by a primary operator.

2 Operator Information
The message indicates a change in system status. It does not demand action; rather, it alerts a primary operator to a condition that might require action.

This routing code is used for any message that indicates job status when the status is not requested specifically by an operator inquiry. It is also used to route processor and problem program messages to the system operator.

3 Tape Pool
The message gives information about tape devices, such as the status of a tape unit or reel, the disposition of a tape reel, or a request to mount a tape.

4 Direct Access Pool
The message gives information about direct access storage devices (DASD), such as the status of a direct access unit or volume, the disposition of a volume, or a request to mount a volume.

5 Tape Library
The message gives tape library information, such as a request by volume serial numbers for tapes for system or problem program use.

6 Disk Library
The message gives disk library information, such as a request by volume serial numbers for volumes for system or problem program use.

7 Unit Record Pool
The message gives information about unit record equipment, such as a request to mount a printer train.

8 Teleprocessing Control
The message gives the status or disposition of teleprocessing equipment, such as a message that describes line errors.

9 System Security
The message gives information about security checking, such as a request for a password.

10 System/Error Maintenance
The message gives problem information for the system programmer, such as a system error, an uncorrectable I/O error, or information about system maintenance.

11 Programmer Information
This is commonly referred to as write to programmer (WTP). The message is intended for the problem programmer. This routing code is used when the program issuing the message cannot route
the message to the programmer through a system output (SYSOUT) data set. The message appears in the JESYSMSG data set.

12 Emulation
The message gives information about emulation. (These message identifiers are not included in this publication.)

13-20 For customer use only.
21-28 For subsystem use only.
29 Disaster recovery.
30-40 For IBM use only.
41 The message gives information about JES3 job status.
42 The message gives general information about JES2 or JES3.
43-64 For JES use only.
65-96 Messages associated with particular processors.
97-128 Messages associated with particular devices.
* The message will be routed back to the consoles that initiated the associated requests.
/ The message will be routed to different locations according to the task issuing it. For example, */2/3 means the message is routed back to the console that initiated the request, to a primary operator, or to the tape pool.
# The message will be routed in one of the following ways:
• According to the routing indicators specified by the operator
• According to the default routing instructions previously specified by the operator
• Back to the console that initiated the associated request
— The message has no routing code.
N/A A routing code is not applicable for the message.

Note 2 The message is issued by a WTO or WTOR macro, but has no routing or descriptor codes (old format WTO or WTOR macro).

Note 3 The message has a routing code of 1, which sends the message to a primary operator, and the message is also routed to the console that it describes.

Note 4 The message is sent to all active consoles; this is a broadcast message.

Note 5 The message has a routing code of 2, which sends the message to a primary operator.

Note 6 The message is routed only to non-printer consoles. This message is not issued by a WTO or WTOR macro.

Note 7 The message is routed to consoles where one or more of the following are active:
• MONITOR JOBNAME
• MONITOR SESSIONS
• MONITOR STATUS
Note 9  The message is issued during the nucleus initialization program (NIP) processing.

Note 10  The message is issued by the WTL macro.

Note 11  The message is routed to a SYSPRINT data set by data management.

Note 12  The message is issued by a WTO or WTOR macro with SYNCH=YES. See z/OS MVS Initialization and Tuning Reference for more information.

Note 13  The message is routed only to receivers of the hardcopy message set.

Note 14  The message is routed back to the console that initiated the request and to all associated consoles.

Note 16  The message is routed to the IPCS print file IPCSPRNT.

Note 17  The message is issued by JES3. A JES3 destination class is specified either by the initialization stream or by operator commands.

Note 18  The message is sent in response to a command to the console where the command was entered.

Note 19  The message is written to a data set. If routing and descriptor codes are also included for the message, the message might also be displayed according to the specified routing and descriptor codes. (The descriptor code does not apply to writing the message to the data set.)

Note 20  JES3 does not issue the message. JES3 sends the message to another subsystem for processing.

Note 21  This message is a trailer attached to multiple messages previously issued. It has the same routing and descriptor codes as the first line of the conglomerate.

Note 22  This message is routed to the transaction program (TP) message log.

Note 23  This message is issued by the device controller. The routing code will vary according to the device controller’s task.

Note 24  This message is routed to the assembly listing.

Note 25  When this message is issued during IPL, the routing codes are 2 and 10 and the descriptor code is 12. When it is issued after IPL, it has no routing code and the descriptor code is 5.

Note 26  When this message is issued during NIP processing, the descriptor code is 12. When it is issued after NIP processing, the descriptor code is 4.

Note 27  The indicated route codes are used only if this message is issued in response to a reply of CKPTDEF during a JES2 checkpoint reconfiguration. This message might be issued to a specific console rather than directed by route code. For further information concerning the routing of JES2 messages issued during a reconfiguration, see z/OS JES2 Initialization and Tuning Guide.

Note 28  These routing and descriptor codes apply only when SMS issues the message. If SMS returns the message to its caller and the caller issues the message, the codes do not apply.
Note 29  This message is written to the JES3OUT data set.

Note 30  This message is issued by JES3. The message is written to the *MODIFY CONFIG (*F MODIFY) log and/or the issuer of the *F CONFIG command.

Note 31  The routing and descriptor codes for this message are dependent on the setting of indicator bits within the S99EOPTS field in the SVC 99 Request Block Extension (S99RBX). See the z/OS MVS Programming: Authorized Assembler Services Guide Processing Messages and Reason Codes from Dynamic Allocation for additional information.

Note 32  Routing code 2 is only applicable if message IYP050D was issued.

Note 33  Routing code 2 is only applicable if message IZP050D was issued.

Note 34  This message is only displayed on the SMCS Console Selection screen, and is not issued via WTO support.

Note 35  By default, IBM Health Checker for z/OS messages does not use routing codes, but the installation can override the default to use routing codes using either the MODIFY hzsproc command or in the HZSPRMxx parmlib member. See IBM Health Checker for z/OS: User’s Guide for more information.

Note 36  This message is written to the JESYSMSG data set.

Descriptor codes
Descriptor codes describe the significance of messages. They indicate whether the system or a task stops processing, waits until some action is completed, or continues. This code also determines how the system will display and delete the message.

Association with message type code
Descriptor codes are associated with message type codes, specified by a letter following the message serial number, as follows:

<table>
<thead>
<tr>
<th>Descriptor Code</th>
<th>Type Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>W (wait)</td>
</tr>
<tr>
<td>2</td>
<td>A (action) or D (decision)</td>
</tr>
<tr>
<td>3</td>
<td>E (eventual action)</td>
</tr>
<tr>
<td>4 through 10</td>
<td>I (information)</td>
</tr>
<tr>
<td>11</td>
<td>E (critical eventual action)</td>
</tr>
<tr>
<td>12 and 13</td>
<td>I (information)</td>
</tr>
</tbody>
</table>

Valid combinations and restrictions for descriptor codes
Descriptor codes are specified in the DESC parameter of the WTO or WTOR macro. The following restrictions apply when specifying descriptor codes:

- Descriptor codes 1 through 6, 11, and 12 are mutually exclusive. Assign only one of these codes to a message. If you assign two mutually exclusive codes to one message, the system uses the most important code and ignores the other.
- Descriptor codes 7 through 10 and 13 can be assigned in combination with any of the mutually exclusive codes.
- Descriptor code 9 can be used only with descriptor code 8.
Under certain conditions, the system uses a descriptor code other than that specified in the macro as follows:

- The system assigns descriptor code 6 if the macro specifies a ROUTCDE parameter, but no DESC parameter.
- The system assigns descriptor code 7 if all of the following are true:
  1. A problem program issued the macro.
  2. The macro omits both DESC and ROUTCDE parameters, or specifies descriptor codes 1 or 2.
  3. The message is not a multiple-line WTO message.
- The system assigns no descriptor code if all of the following are true:
  1. An authorized program issued the macro.
  2. The macro omits both DESC and ROUTCDE parameters.
  3. The message is not a multiple-line WTO message.

**Note:** An authorized program has at least one of these characteristics:
- Authorized by the authorized program facility (APF)
- Runs in supervisor state
- Runs under PSW key 0 through 7

**Message deletion**
With multiple console support (MCS), action messages with descriptor code 1 or 2 issued by problem programs are assigned descriptor code 7; thus, they are automatically deleted from the system at task or address space ending.

The system deletes messages issued by any program when that program issues the DOM macro for a message.

The operator can manually remove all messages from a display console screen or can set the console to roll messages off the screen.

**Message Color**
On operator consoles with color, the descriptor code determines the color of the message. The use of color is explained in [z/OS MVS System Commands](https://www.ibm.com). Also see the descriptions of the CONSOLOxx and MPFLSTx parmlib members in [z/OS MVS Initialization and Tuning Reference](https://www.ibm.com).

**Descriptor code meaning**
Descriptor codes appear within the associated message. The descriptor code field can contain the following numeric values, special characters or note.

<table>
<thead>
<tr>
<th>Code</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>System Failure&lt;br&gt;The message indicates an error that disrupts system operations. To continue, the operator must reIPL the system or restart a major subsystem. This causes the audible alarm to be sounded.</td>
</tr>
<tr>
<td>2</td>
<td>Immediate Action Required&lt;br&gt;The message indicates that the operator must perform an action immediately. The message issuer could be in a wait state until the action is performed or the system needs the action as soon as possible to improve performance. The task waits for the operator to complete the action. This causes the audible alarm to be sounded.</td>
</tr>
</tbody>
</table>
Note: When an authorized program issues a message with descriptor code 2, a DOM macro must be issued to delete the message after the requested action is performed.

3 Eventual Action Required
The message indicates that the operator must perform an action eventually. The task does not wait for the operator to complete the action.

If the task can determine when the operator has performed the action, the task should issue a DOM macro to delete the message when the action is complete.

4 System Status
The message indicates the status of a system task or of a hardware unit.

5 Immediate Command Response
The message is issued as an immediate response to a system command. The response does not depend on another system action or task.

6 Job Status
The message indicates the status of a job or job step.

7 Task-Related
The message is issued by an application or system program.
Messages with this descriptor code are deleted when the job step that issued them ends.

8 Out-of-Line
The message, which is one line of a group of one or more lines, is to be displayed out-of-line. If a message cannot be displayed out-of-line because of the device being used, descriptor code 8 is ignored, and the message is displayed in-line with the other messages.

9 Operator's Request
The message is written in response to an operator's request for information by a DEVSERV, DISPLAY, or MONITOR command.

10 Not defined
Descriptor code 10 is not currently in use.

11 Critical Eventual Action Required
The message indicates that the operator must perform an action eventually, and the action is important enough for the message to remain on the display screen until the action is completed. The task does not wait for the operator to complete the action. This causes the audible alarm to be sounded.

Avoid using this descriptor code for non-critical messages because the display screen could become filled.

If the task can determine when the operator has performed the action, the task should issue a DOM macro to delete the message when the action is complete.
12 Important Information

The message contains important information that must be displayed at a console, but does not require any action in response.

13 Automation Information

Indicates that this message was previously automated.

14-16 Reserved for future use.

/ The message will have different descriptor codes according to the task issuing it. For example, 4/6 means the message can describe system status or job status.

— The message has no descriptor code.

N/A A descriptor code is not applicable for the message.

Note 1 The descriptor code for an IBM Health Checker for z/OS check exception message might vary, because the installation can override the descriptor code either using the MODIFY hzsproc command or in the HZSPRMxx parmlib member. See [IBM Health Checker for z/OS: User’s Guide](#) for more information. In addition to the descriptor code selected by the installation, one of the following descriptor codes is also included based on the severity of the check:

- High severity checks use a descriptor code of 11.
- Medium severity checks use a descriptor code of 3.
- Low severity checks use a descriptor code of 12.

### Message directory

To use a message prefix to locate the document containing a specific message, see the following table.

Building your own message library

If you are operators or programmers in an installation, you can build your own libraries of the message and code information that fits your specific needs. You can place into binders the chapters and documents containing only the messages and codes you receive.

Basic documents

Each installation requires at least one copy of each of the MVS System Messages documents and of z/OS MVS Dump Output Messages. Regardless of the specific options of your system, you will receive at the console or in listings some subset of the messages in these documents.

Each installation also requires at least one copy of z/OS MVS System Codes, which contains the 3-digit hexadecimal system completion codes (abend codes) and the wait state codes produced by all the components of the system.

Note: 4-digit decimal user completion codes appear in documents for the component, subsystem, or product that produces the codes. Codes produced by installation-provided programs do not appear in IBM documents.

All programming and operations personnel need access to the basic documents, although application programmers might not need to have their own copies.

Optional documents

For information about message changes for multiple z/OS elements including JES2, JES3, RACF, TCP/IP, and others, see z/OS Summary of Message and Interface Changes.

Translating messages

Using the MVS message service (MMS), you can translate MVS system messages into other languages. The following messages cannot be translated:

- Initialization messages
- DFSMS/MVS messages
- JES3 messages
- Some complicated multiple-line messages

See z/OS MVS Planning: Operations and z/OS MVS Programming: Assembler Services Guide for information about using the MMS.

Finding changes to system message texts

Automation routines are sensitive to message text changes between releases. So before migrating from your current release to another one, you might need to check out the message changes. The summary of changes of the related messages books can be a helpful reference; an alternative can identify changes to message texts more accurately: comparing the SYS1.MSGENU data set.

IBM supplies a data set containing the text of system messages that are translated. This data set, called SYS1.MSGENU, contains the text of system messages in the form of message skeletons.

Note that this method will not show changes to messages that are not translated:
- MVS system messages that are not translated, such as IPL and NIP messages (which are issued before the MVS message service is available)
- Other product messages that are not translated, such as DFSMS/MVS messages, and JES3 messages.

You can compare the new data set with the data set on the system from which you are migrating. Depending on how you do the comparison, you can get output like the following.

For new messages, the output might show an I (for Insert) on the left:

```
I - IEA403I   VALUE OF RMAX HAS BEEN CHANGED TO 99
```

For messages with changed text, the output might show both an I and a D, indicating that a record in the message file has been replaced:

```
I - IEE162I 46 &NNN. ROLL &A. MESSAGES (DEL=R OR RD)
D - IEE162I 46 &NNN. ROLL &A. MESSAGES (DEL=R, RD)
```

This means that, in message IEE162I, (DEL=R, RD) was replaced by (DEL=R OR RD).

Using this information, you can decide if your automation routines need to be changed.
Chapter 2. EDG messages

Format of System DFSMSrmm Messages

This topic contains the messages issued by DFSMSrmm. The format of DFSMSrmm error messages is:

EDGcnnxx

where:

- EDG is the DFSMSrmm identifier
- c is an alphanumeric identifier assigned to a component of DFSMSrmm. The message component identifiers are assigned as follows:

<table>
<thead>
<tr>
<th>C value</th>
<th>Component</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Subsystem initialization</td>
</tr>
<tr>
<td>1</td>
<td>Subsystem interface</td>
</tr>
<tr>
<td>2</td>
<td>Subsystem main task</td>
</tr>
<tr>
<td>3</td>
<td>TSO commands and API</td>
</tr>
<tr>
<td>4</td>
<td>Open/Close/End-of-Volume exits</td>
</tr>
<tr>
<td>5</td>
<td>Report programs</td>
</tr>
<tr>
<td>6</td>
<td>Batch programs and utilities</td>
</tr>
<tr>
<td>7</td>
<td>Conversion programs</td>
</tr>
<tr>
<td>8</td>
<td>DFSMShsm interface</td>
</tr>
<tr>
<td>9</td>
<td>Common routines, such as PARSE</td>
</tr>
<tr>
<td>C</td>
<td>CIM provider</td>
</tr>
<tr>
<td>H</td>
<td>Health and Migration check messages</td>
</tr>
</tbody>
</table>

- nnn is a 3 or 4 digit message number
- x indicates the severity of the error. The value x can be:

<table>
<thead>
<tr>
<th>Identifier</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>Action: The operator must perform a specific action.</td>
</tr>
<tr>
<td>D</td>
<td>Decision: The operator must choose among alternatives.</td>
</tr>
<tr>
<td>E</td>
<td>Eventual action: For messages displayed at the console, the operator must perform an action when time is available. For messages not displayed at the console, the message provides information about an error. The programmer needs to take action to resolve the problem.</td>
</tr>
<tr>
<td>I</td>
<td>Informational: No operator action required. Information for the system programmer.</td>
</tr>
<tr>
<td>S</td>
<td>Severe error: Information for a system programmer.</td>
</tr>
<tr>
<td>W</td>
<td>Warning: The message provides information for an error that should be corrected by the system programmer. This message suffix is not used on console messages.</td>
</tr>
</tbody>
</table>
EDG messages

EDG0001I DFSMSrmm SUBSYSTEM INTERFACE INITIALIZATION COMPLETE FOR ENTRY ssname

Explanation: The DFSMSrmm subsystem initialization routine has completed successfully and is prepared for the subsystem procedure to be started with the START command.

In the message text:

ssname
Identifies the entry in the IEFSSNxx member in SYS1.PARMLIB that is being used

System action: The system will reject all tape mounts until the DFSMSrmm subsystem is started.

Operator response: Start the DFSMSrmm subsystem to prevent tape mounts from being rejected.

Source: DFSMSrmm

Detecting Module: EDGSSSI
Routing Code: 2
Descriptor Code: 4

EDG0002E DFSMSrmm SUBSYSTEM INTERFACE INITIALIZATION FAILED FOR ENTRY ssname

Explanation: The DFSMSrmm subsystem initialization routine failed to initialize the subsystem interface.

In the message text:

ssname
Identifies an entry in the IEFSSNxx member in SYS1.PARMLIB

System action: Normal use of tape volumes might not be possible unless the subsystem is initialized.

Operator response: Inform the system programmer. The operator can retry the request to initialize the subsystem interface when the DFSMSrmm subsystem is started by replying to Message EDG0103D.

System programmer response: Verify that the DFSMSrmm programs are correctly installed. If there are multiple entries in IEFSSNxx with EDGSSSI specified, then look for other messages denoting success or failure of initialization for the other subsystem names defined. If this is the only entry for DFSMSrmm in IEFSSNxx, then no automatic recording or validation of tape volumes is possible.

Source: DFSMSrmm

Detecting Module: EDGSSSI
Routing Code: 1
Descriptor Code: 11

EDG0003E DFSMSrmm SUBSYSTEM INTERFACE INCOMPLETE - CSECT csect_name MISSING FROM MODULE module_name

Explanation: A required module, csect_name, was not found in the load module module_name.

In the message text:

csect_name
Control section name

module_name
Name of the load module

System action: Initialization continues but will be incomplete.

Operator response: Inform the system programmer.

System programmer response: Reinstall the DFSMSrmm programs.

Source: DFSMSrmm
EDG0004E • EDG0006E

Detecting Module: EDGSSSI
Routing Code: 1
Descriptor Code: 11

EDG0004E DFSMSrmm SUBSYSTEM INTERFACE INCOMPLETE - ID text MISSING FROM CSECT csect_name

Explanation: DFSMSrmm initialization information is incomplete.
In the message text:

- text Descriptive text
- csect_name Control section name

System action: Initialization continues but the DFSMSrmm subsystem interface is set to inactive.
Operator response: Inform the system programmer.
System programmer response: Report this error to the IBM Support Center, along with the complete message text for this error.
Source: DFSMSrmm
Detecting Module: EDGSSSI
Routing Code: 1
Descriptor Code: 11

EDG0005E DFSMSrmm SUBSYSTEM INTERFACE INITIALIZATION FAILED WITH COMPLETION CODE abend_code

Explanation: An abend with completion code abend_code occurred during DFSMSrmm subsystem initialization. Subsystem initialization fails.
In the message text:

- abend_code The abend code associated with the request

System action: No recovery is possible. The system writes an SVC dump to aid problem determination.
Operator response: Inform the system programmer.
System programmer response: Consult z/OS MVS System Codes to see if there is any immediate corrective action possible. If the error cannot be corrected, report the error to the IBM Support Center. Provide the SVC dump.
Source: DFSMSrmm
Detecting Module: EDGSSSI
Routing Code: 1
Descriptor Code: 11

EDG0006E DFSMSrmm SUBSYSTEM INTERFACE INITIALIZATION FAILED WITH RETURN CODE return_code, ADDRESS address

Explanation: A routine required by DFSMSrmm failed with a return code of return_code.
In the message text:

- return_code Value returned indicating the results of processing
- address The address where the subsystem initialization module failed
EDG0007E  DFSMSrmm SUBSYSTEM INTERFACE INITIALIZATION FAILED WITH RETURN CODE

return_code

Explanation: A routine required by DFSMSrmm failed with a return code of return_code.

In the message text:

return_code
- An internal DFSMSrmm value returned indicating the results of processing.

System action: Subsystem initialization did not complete successfully.
Operator response: Inform the system programmer.
System programmer response: Report this error to the IBM Support Center, along with the complete message text.

Source: DFSMSrmm
Detecting Module: EDGSSI
Routing Code: 1
Descriptor Code: 11

EDG0008E  ESTAE CREATE FAILED

Explanation: The initialization routine could not establish a recovery environment during subsystem initialization.

System action: Initialization failed.
Operator response: Inform the system programmer.
System programmer response: Report the error to the IBM Support Center.

Source: DFSMSrmm
Detecting Module: EDGSSI

EDG0009E  DFSMSrmm SUBSYSTEM INTERFACE INITIALIZATION INCOMPLETE - MESSAGE BROADCAST REQUEST FAILED

Explanation: The initialization routine could not establish a recovery environment during subsystem initialization.

System action: Initialization failed.
Operator response: Inform the system programmer.
System programmer response: Report the error to the IBM Support Center.

Source: DFSMSrmm
Detecting Module: EDGSSI
Routing Code: 1
Descriptor Code: 11
EDG0010I DFSMSrmm SUBSYSTEM INTERFACE FOR ENTRY ssname1 CANNOT BE INITIALIZED, ENTRY ssname2 IS ALREADY INITIALIZED

Explanation: The initialization routine could not initialize the subsystem interface because a previous entry, defined in IEFSSNxx in SYS1.PARMLIB, has already been initialized.

In the message text:

ssname1 Is the subsystem name in IEFSSNxx in SYS1.PARMLIB that failed to be initialized

ssname2 Is a previous subsystem name in IEFSSNxx in SYS1.PARMLIB that has already been initialized

System action: Initialization for the specified subsystem ssname1 fails.

Operator response: Inform the system programmer.

System programmer response: Review the subsystems defined in IEFSSNxx in SYS1.PARMLIB, and remove any duplicate entries that specify EDGSSSI. Only one entry in IEFSSNxx specifying EDGSSSI is supported.

Source: DFSMSrmm

Detecting Module: EDGSSSI

Routing Code: 1/p>

Descriptor Code: 11

EDG0011E DFSMSrmm CANNOT RECORD TAPE VOLUME I/O ERRORS - INITIALIZATION CONTINUES.

SVC FLAGS = flags

Explanation: The DFSMSrmm initialization routine detected an unacceptable value in the system SVC table for the tape volume error recording interface.

In the message text:

flags Is the value of the SVC flags field from the SVC table record.

System action: The tape volume error recording interface was not initialized. DFSMSrmm initialization continues.

Operator response: Inform the system programmer.

System programmer response: Check the SVC 83 record in the system SVC table. It should be defined as a type 3 SVC and must be APF authorized (X'C8000000').

Source: DFSMSrmm

Detecting Module: EDGMINT

Routing Code: 2

Descriptor Code: 11

EDG0101I STARTED TASK ENDED BECAUSE THE DFSMSrmm SUBSYSTEM IS ALREADY ACTIVE

Explanation: The DFSMSrmm subsystem is already active, so it is not possible to start another.

System action: The newly started DFSMSrmm task ends.

Operator response: None.

Source: DFSMSrmm

Detecting Module: EDGMAIN

Routing Code: 2,3

Descriptor Code: 3

Chapter 2. EDG messages 35
EDG0102E  STARTED TASK ENDED BECAUSE THE DFSMSrmm SUBSYSTEM IS NOT DEFINED AS A SUBSYSTEM

Explanation:  DFSMSrmm is not defined as a subsystem in an IEFSSNxx member of SYS1.PARMLIB.
System action:  The started task ends.
Operator response:  Inform the system programmer.
System programmer response:  Define DFSMSrmm as a subsystem.
Source:  DFSMSrmm
Detecting Module:  EDGMAIN
Routing Code:  2,3
Descriptor Code:  3

EDG0103D  DFSMSrmm SUBSYSTEM INTERFACE IS INACTIVE - ENTER "IGNORE", "CANCEL" OR "RETRY"

Explanation:  During initialization, the subsystem interface was not activated. The operator can reply to ignore the message and continue, cancel the DFSMSrmm subsystem, or retry subsystem interface initialization.
System action:  If the reply is "IGNORE", DFSMSrmm initialization continues and DFSMSrmm TSO subcommands and other subsystem functions operate. DFSMSrmm might not be able to intercept all WTO messages required for mount message and VTS export or import interception, unless some other subsystem has requested WTO broadcasting.
If the reply is "CANCEL", DFSMSrmm ends and no DFSMSrmm subsystem functions are operable.
If the reply is "RETRY", subsystem interface initialization is retried.
Operator response:  Reply as directed by the installation documentation or the system programmer.
System programmer response:  Determine the cause of the initialization failure. Tape volume security and integrity might be compromised if tape volumes are mounted without DFSMSrmm being active.
Source:  DFSMSrmm
Detecting Module:  EDGMAIN, EDGMAIN, EDGMTAB
Routing Code:  1,3
Descriptor Code:  2

EDG0104E  DFSMSrmm SUBSYSTEM INITIALIZATION FAILED

Explanation:  Errors occurred during initialization of the DFSMSrmm subsystem. A diagnostic message precedes this one.
System action:  The started task ends.
Operator response:  Inform the system programmer.
System programmer response:  Analyze the previously issued messages and retry subsystem initialization.
Source:  DFSMSrmm
Detecting Module:  EDGMAIN
Routing Code:  1,3
Descriptor Code:  3
EDG0105I DFSMSrmm SUBSYSTEM INITIALIZATION COMPLETE

Explanation: The DFSMSrmm subsystem is successfully initialized and active.

System action: The subsystem is ready to process requests.

Operator response: None.

Source: DFSMSrmm

Detecting Module: EDGMAIN

Routing Code: 1,3

Descriptor Code: 7

EDG0106E DFSMSrmm SUBSYSTEM MAIN TASK HAS ABENDED abend_code

Explanation: The DFSMSrmm subsystem main task ended with the specified abend_code.

In the message text:

abend_code
The abend code associated with the request

System action: The system issues an abend code. When any abend code other than X'22' is issued, the system writes an SVC dump to aid problem determination and attempts to recover through re-initialization. When X'22' abend code is issued, no recovery is possible and DFSMSrmm ends. If the abend occurred during DFSMSrmm initialization, DFSMSrmm issues message EDG0107A. The operator can supply different initialization parameters to correct the error.

Operator response: Inform the system programmer.

System programmer response: If the error is not corrected with different parameters, contact the IBM Support Center.

Source: DFSMSrmm

Detecting Module: EDGMAIN

Routing Code: 1,3

Descriptor Code: 3

EDG0107A ENTER SUFFIX OF INITIALIZATION MEMBER OR "CANCEL"

Explanation: An abend occurred during DFSMSrmm initialization. The operator is prompted to enter different initialization parameters or cancel the DFSMSrmm subsystem.

System action: DFSMSrmm attempts to re-initialize with the specified parameters. Otherwise, the task ends.

Operator response: Reply as directed by the installation documentation or system programmer.

System programmer response: If the error is not corrected with different parameters, report it to the IBM Support Center.

Source: DFSMSrmm

Detecting Module: EDGMAIN

Routing Code: 1,3

Descriptor Code: 2

EDG0108E DFSMSrmm SUBSYSTEM STARTED WITH INCORRECT EXECUTION PARAMETER parm_name

Explanation: The DFSMSrmm subsystem started with an incorrect parameter specified.

In the message text:

parm_name
Name of the incorrect parameter
EDG0109E  •  EDG0110D

System action: The subsystem issues a message prompting the operator to enter the correct parameter.

Operator response: Reply with a valid DFSMSrmm startup parmlib member suffix. A maximum of two characters can be specified, and they must identify an existing member in the DFSMSrmm parmlib data set.

System programmer response: Correct the startup procedure by specifying a valid parameter, of one or two characters, to serve as a member name suffix in the DFSMSrmm parmlib member.

Source: DFSMSrmm
Detecting Module: EDGMAIN
Routing Code: 1,3
Descriptor Code: 3

EDG0109E  INCORRECT REPLY - text IT MUST BE A TWO CHARACTER SUFFIX OR "CANCEL"

Explanation: During subsystem startup, a prompt for a valid member name suffix was issued. The reply was incorrect.

In the message text:

   text
   The incorrect reply

System action: DFSMSrmm prompts the operator to enter valid initialization parameters.

Operator response: Reply to the message with the correct startup parameter. Alternatively, reply "CANCEL" to stop the subsystem startup.

System programmer response: Ensure that the DFSMSrmm procedure has a valid parameter specified for the startup member suffix.

Source: DFSMSrmm
Detecting Module: EDGMAIN
Routing Code: 1,3
Descriptor Code: 2

EDG0110D  ENTER TODAY'S DATE WITH FORMAT date_string OR "CANCEL"

Explanation: The DFSMSrmm initialization requests that the operator verify the system date by entering the date and day of the week.

In the message text:

   date_string
   Is the date information entered by the operator and consists of:
      • A three-character abbreviation of the day of the week: MON, TUE, WED, THU, FRI, SAT, or SUN.
      • The date in a date format defined by the installation:
         – European format DD/MM/YYYY
         – American format MM/DD/YYYY
         – ISO or International format YYYY/MM/DD
         – Julian format YYYY/DDD

System action: The system verifies the date in the date_string and compares it with the system date. If the dates are the same, initialization continues. Otherwise, the system waits for the operator to correct the reply or reset the system date and reissue the reply.

Operator response: Reply as requested with the correct date, day and date format. Enter "CANCEL" to stop the DFSMSrmm subsystem.

System programmer response: None.

Source: DFSMSrmm
Detecting Module: EDGMAIN
EDG0111E  DATE ENTERED CONTAINS SYNTAX ERROR - date_string

Explanation: The date_string in the message is the operator response to message EDG0110D. The date_string is not in the correct format.

In the message text:

date_string
   Contains the date information entered by the operator

System action: The system prompts the operator for the correct reply.

Operator response: Supply the date information in the format described in message EDG0110D.

Source: DFSMSrmm

Detecting Module: EDGMAIN

Routing Code: 1,3

Descriptor Code: 2

EDG0112E  REPLIED DATE replied_date is NOT DAY OF WEEK day

Explanation: The replied_date in the message is the operator response to message EDG0110D. The replied_date does not correspond to the day of week day indicated in the reply.

In the message text:

replied_date
   The date entered by the operator
day
   Can be: MON, TUE, WED, THU, FRI, SAT or SUN

System action: The system prompts the operator for the correct reply.

Operator response: Supply the date information in the format described in message EDG0110D.

Source: DFSMSrmm

Detecting Module: EDGMAIN

Routing Code: 1,3

Descriptor Code: 3

EDG0113E  DATE ENTERED, replied_date, DOES NOT MATCH SYSTEM DATE, system_date

Explanation: The replied_date is not the same as the system_date indicated in the reply.

In the message text:

replied_date
   The date entered by the operator
system_date
   The date set for the system when it is started

System action: The system prompts the operator for the correct reply.

Operator response: Supply the correct date as requested. If the replied_date was correct, reset the system_date using the MVS SET DATE operator command.

**Descriptor Code:** 7

---

**EDG0115D**  THE DFSMSrmm SUBSYSTEM IS NOT RUNNING UNDER A JOB ENTRY SYSTEM - SOME DFSMSrmm FUNCTIONS ARE NOT AVAILABLE. REPLY "IGNORE" OR "CANCEL"

**Explanation:** When you do not run the DFSMSrmm subsystem under the JES2 or JES3 subsystem, there are functions in DFSMSrmm that cannot be used because they require job entry subsystem services for successful processing. JES2 or JES3 is required if you want to use the NOTIFY function. The NOTIFY function allows you to use DFSMSrmm to notify volume and product owners when the volumes they own become eligible for release or when product volumes are added. Other functions, like displaying diagnostic messages from SORT during inventory management, also require JES2 or JES3 for successful processing.

**System action:** If you reply "IGNORE", DFSMSrmm initialization continues. The notification of owners during release processing is not performed, but DFSMSrmm TSO subcommands and other subsystem functions can be used. If you reply "CANCEL", DFSMSrmm ends and no DFSMSrmm subsystem functions can be used.

**Operator response:** Reply as directed by the installation documentation or the system programmer.

**System programmer response:** If you want to use the NOTIFY function, specify the SUB=JES2 or SUB=JES3 parameter when starting the DFSMSrmm procedure.

**Source:** DFSMSrmm

**Detecting Module:** EDGMAIN

EDG0123D  function FOUND TO BE ACTIVE ON SYSTEM system_name - REPLY "Y" TO RESET STATUS OR "N"

Explanation: During DFSMSrmm startup, when opening the control data set, DFSMSrmm has determined that inventory management or backup is active on system system_name. Operator intervention is required because DFSMSrmm cannot automatically reset the inventory management indicators.

In the message text:

function
    The function that is active. It can be: INVENTORY MANAGEMENT or BACKUP.

system_name
    The system name. It can be:
    • the DFSMSrmm system name, as defined in the DFSMSrmm startup parameters.
    • "UT.sss" which indicates that a DFSMSrmm utility external to the DFSMSrmm subsystem is running. sss is the SMF ID of the system where the utility was started.
    • N/A which indicates that the DFSMSrmm system name is not available.

System action: The DFSMSrmm subsystem startup waits for a reply to the message. If both inventory management and backup are running, DFSMSrmm issues this message once for each function.

Operator response: Reply "N" if inventory management is in progress on the named system. Reply "Y" if you want
to run inventory management on a system other than the one that failed or if backup was in progress on a system
that failed.

**System programmer response:** Determine if inventory management or backup should be run on another system
and recommend the correct course of action to the operator.

**EDG0124E**  ERROR OPENING FILE *file_name*

**Explanation:** During subsystem initialization, DFSMSrmm was unable to open the file named in the message.

In the message text:

*file_name*

  The name of the file that could not be opened

**System action:** Subsystem initialization stops.

**Operator response:** When the error is corrected, restart the DFSMSrmm procedure.

**System programmer response:** Review the error messages issued and correct the error.

**Source:** DFSMSrmm

**Detecting Module:** EDGAMGR

**Routing Code:** 1,3

**Descriptor Code:** 3

---

**EDG0125E**  INCORRECT VSAM SHAREOPTIONS FOR DFSMSrmm CONTROL DATA SET

**Explanation:** During DFSMSrmm subsystem startup, the DFSMSrmm control data set is opened. The DFSMSrmm
control data set share options are checked to ensure they are valid for the current configuration.

**System action:** The subsystem startup fails.

**Operator response:** Inform the system programmer.

**System programmer response:** See [z/OS DFSMSrmm Implementation and Customization Guide](https://www.ibm.com) for information on
setting the DFSMSrmm control data set share options. Use the AMS ALTER command to change the
SHAREOPTIONS.

**Source:** DFSMSrmm

**Detecting Module:** EDGAMGR

**Routing Code:** 1,3

**Descriptor Code:** 3

---

**EDG0126I**  PARMLIB CDSID *parm_cds_id* DOES NOT MATCH THE CDSID *cds_id* SET IN THE CONTROL
DATA SET

**Explanation:** During DFSMSrmm subsystem startup, the DFSMSrmm control data set is opened and the control
record is validated against the known values for this system. DFSMSrmm has determined that the current
DFSMSrmm control data set does not match the parameter values that were used for this startup.

In the message text:

*parm_cds_id*

  Is the value you have assigned to the CDSID operand in the parmlib member currently in use.
**EDG0127D • EDG0128I**

*cds_id*
Is the value you have assigned to the CDSID in the DFSMSrmm control data set that DFSMSrmm is now opening for use.

**System action:** The subsystem startup fails.

**Operator response:** Once the error is corrected, restart the DFSMSrmm procedure specifying a valid parmlib member suffix. If you do not know of one, contact the system programmer.

**System programmer response:** Correct the CDSID value in the parmlib member or the name of the DFSMSrmm control data set on the DNAME operand. The value of the CDSID in both the DFSMSrmm control data set and the parmlib member must be the same.

**Source:** DFSMSrmm

---

**EDG0127D** RECOVERY OF CONTROL DATA SET ON *date* AT *time* POSSIBLY INCOMPLETE - REPLY "CONTINUE" OR "CANCEL"

**Explanation:** DFSMSrmm found that the recovery of the control data set by EDGBKUP at the time and date specified was not successful. There might be inconsistencies in the DFSMSrmm control data set.

In the message text:

*date*
Is the date set by EDGBKUP in the DFSMSrmm control data set control record, when it last restored the DFSMSrmm control data set.

*time*
Is the time set by EDGBKUP in the DFSMSrmm control data set control record, when it last restored the DFSMSrmm control data set.

**System action:** DFSMSrmm prompts the operator to reply whether initialization of the DFSMSrmm address space should continue or be canceled.

**Operator response:** Reply as directed by the system programmer.

**System programmer response:** Verify the contents of the DFSMSrmm control data set, using the EDGUTIL utility, PARM=VERIFY, to determine if any inconsistencies exist in the control data set. If the records containing the inconsistencies refer to volumes that are not critical to the installation, instruct the operator to reply CONTINUE. Otherwise, instruct the operator to reply CANCEL, and perform the corrective actions recommended by the EDGUTIL messages to correct the DFSMSrmm control data set.

EDG0131E DFSMSrmm DID NOT FREE APPROXIMATELY xxxK OF ECSA BECAUSE OF ERRORS - OBTAINING NEW COMMON STORAGE

Explanation: During a previous DFSMSrmm subsystem startup, DFSMSrmm detected a storage overlay. The current DFSMSrmm subsystem startup allocates new storage areas to circumvent the problem. You might need to IPL the system to recover the lost storage if there is a shortage of common storage on the system.

In the message text:

xxx

This is the amount of ECSA storage that has been lost in kilobytes.

System action: DFSMSrmm subsystem startup continues with initialization. DFSMSrmm did not free the overlaid storage and obtained new areas in common storage.

Operator response: Consult your operational procedures to determine when an IPL of the system is possible. An IPL is not essential but is required to release the unused storage. An IPL might be necessary if there are shortages of common storage. Inform the system programmer.

System programmer response: Determine how much common storage is not allocated on the system and decide if an IPL is required to recover the lost storage. Gather information from the previous subsystem startups such as messages and dumps so that the storage overlay problem can be investigated. Report the error to the IBM Support Center.

EDG0155I  ADDRESS SPACE LIST BY JOBNAME:  jobname jobname jobname jobname jobname NUMBER OF JOBNAMES DELAYING SHUTDOWN = jobname_count

Explanation:  The DFSMSrmm subsystem is attempting to stop, but the shutdown processing is delayed because there are tasks, on the current system, still using DFSMSrmm resources. This message is preceded by EDG0154I.
EDG0156E • EDG0181I

In the message text,

jobname  Is the name of an address space delaying the DFSMSrmm shutdown. Up to 5 job names are listed in each of up to 6 lines of this multiline message. A maximum of 30 job names is listed. If more than 30 address spaces are delaying DFSMSrmm shutdown, the 30th job name is displayed as ‘....’

jobname_count  Is the count of all the address spaces delaying the DFSMSrmm shutdown not just those listed.

System action:  The DFSMSrmm subsystem waits for the subsystem requests to be completed.

Operator response:  If the reason for the delay is an outstanding WTOR, reply to the outstanding WTOR for the address space holding the resource so the DFSMSrmm function in that address space can complete. If you need to view the complete list of address spaces at any time, you can enter the following command to determine which address space is holding the resource SYSZRMM/SHUTDOWN:

GRS,RES=(SYSZRMM,SHUTDOWN),DET,SCOPE=SYSTEM

System programmer response:  None.

Chapter 2. EDG messages  51
EDG0207E  SMF NUMBER FOR SMFAUD CANNOT EQUAL THAT FOR SMFSEC - NO AUDIT RECORDS WILL BE PRODUCED

Explanation:  The SMFAUD and SMFSEC operands provided as startup parameters to DFSMSrmm have the same SMF number. The SMF numbers must be different for DFSMSrmm to write SMF records.

System action:  DFSMSrmm accepts the SMFSEC value and ignores the SMFAUD value. No SMF audit records are produced. DFSMSrmm issues message EDG0215D which prompts the operator to reply Y or N.

Operator response:  Report the error to the system programmer. Reply Y to ignore the error and continue processing without correcting the SMFAUD or SMFSEC value. Reply N to stop DFSMSrmm to correct the parmlib values and then restart DFSMSrmm. When the error is corrected, you can restart the subsystem with the MODIFY command.

System programmer response:  Correct the supplied parameters if SMF records are required. You must restart the DFSMSrmm subsystem by using the MVS operator MODIFY command. See z/OS MVS System Commands for information about the MODIFY command.

EDG0226I  THE STARTED TASK FOR DFSMSrmm IS NOT DEFINED TO RACF - OPTION TPRACF(N) HAS BEEN FORCED

Explanation: While processing the OPTION startup command, a value of "P" or "A" was detected for the TPRACF operand. DFSMSrmm is not defined to RACF.

System action: Processing continues after the TPRACF operand value has been overridden to TPRACF(N).

Operator response: Report the error to the system programmer. DFSMSrmm issues message EDG0215D to prompt you to ignore the error or shutdown DFSMSrmm. Reply Y to ignore the errors and continue processing without correcting the parmlib error. Reply N to stop processing. After the parmlib value has been corrected, restart DFSMSrmm using the MODIFY command.

System programmer response: DFSMSrmm must be defined to RACF if you want to use DFSMSrmm to provide RACF tape security profile management. Refer to the z/OS DFSMSrmm Implementation and Customization Guide for information on installing DFSMSrmm with RACF. If you do not want DFSMSrmm to manage RACF tape security profiles, change the startup parameters to TPRACF(N). Restart DFSMSrmm with the correct startup parameter.

EDG0227E  NO SMFSEC VALUE SPECIFIED FOR SECCLS SMF(Y) VALUE - NO SMF SECURITY RECORDS WILL BE WRITTEN

Explanation: DFSMSrmm detected a conflict in the startup parameters needed to produce SMF records. At least one SECCLS command has an SMF(Y) operand specified in parmlib member EDGRMMxx but the SMFSEC operand of the parmlib member OPTION command was not provided. The SMFSEC operand is needed for DFSMSrmm to write SMF records.

System action: Processing continues. No SMF security records are produced. DFSMSrmm issues message EDG0215D which prompts the operator to reply "Y" or "N".

Source: DFSMSrmm

Detecting Module: EDGPARM

Routing Code: 3

Descriptor Code: 3
**EDG0228D**  •  **EDG0231E**

**Operator response:** Report the error to the system programmer. Reply Y to ignore the errors and continue processing without correcting the parmlib error. Reply N to stop processing. After the parmlib value has been corrected, restart DFSMSrmm using the MODIFY command.

**System programmer response:** Correct the supplied startup parameters. If security records are required, specify SMFSEC(YES), or SMFSEC with a user-assigned record type on the OPTION command in parmlib. Otherwise use the SMF(N) operand for the SECCLS command. See [z/OS MVS System Commands](http://www.ibm.com) for information about the MODIFY command.

Detecting Module: EDGPARM

Routing Code: 3

Descriptor Code: 3

EDG0238E  OVERLAPPING VOLUME SET DEFINED FOR command TYPE(type). value1 OVERLAPS value2

Explanation: A PRTITION or OPENRULE command has specified volume selection operands that conflict with another command.

In the message text:

command  Is one of the following: PRTITION, or OPENRULE.

type  Is one of the following: ALL, RMM or NORMM.

value1  Is one of the following: a volume serial number, a volume prefix specified through the VOLUME operand, or a volume range specified with the VOLUMERANGE operand.
value2

Is one of the following: a volume serial number, a volume prefix specified through the VOLUME operand, or a
volume range specified with the VOLUMERANGE operand.

System action: DFSMSrmm initialization stops. This message is followed by message “EDG0215D” on page 53.
Operator response: Notify the system programmer. Reply to message “EDG0215D” on page 53 as directed. Restart
DFSMSrmm when the system programmer has corrected the error.

System programmer response: Correct the VOLUME and VOLUMERANGE operands so that overlaps do not exist.
Volume sets must be unique within command and type; for example, PRTRITION TYPE(RMM) with VOLUME(A*)
and PRTRITION TYPE(RMM) with VOLUMERANGE(A:B99999) is an overlap because the volume range A:B99999
begins within the A* set but extends beyond it. When the message includes TYPE(ALL) the overlap could be with
another command specifying a type of ALL or it could be with RMM or NORMM. DFSMSrmm ignores the
overlapping values if initialization continues.

EDG0243I operand IGNORED FOR SYNONYM MEDINF COMMAND FOR NAME name MEDIATYPE
type_id,type_name RECORDINGFORMAT format_id,format_name

Explanation: This message is issued during initialization when multiple MEDINF commands have been specified that specify synonym names for MEDIATYPE or RECORDINGFORMAT. You do not need to specify CAPACITY or REPLACE operands for synonym entries and these are ignored.

In the message text:
operand
   Is the command operand name, and is either CAPACITY or REPLACE.
name
   Is the value specified for the MEDINF NAME operand.
type_id
   Is a number in the range 0 to 255; it is the internal value specified for the MEDIATYPE operand.
type_name
   Is the external value specified for the MEDIATYPE operand.
format_id
   Is a number in the range 0 to 255; it is the internal value specified for the RECORDINGFORMAT operand.
format_name
   Is the external value specified for the RECORDINGFORMAT operand.

System action: DFSMSrmm initialization continues. DFSMSrmm uses the CAPACITY and REPLACE values from the non-synonym entry.

Operator response: Notify the system programmer.

System programmer response: Ensure that each MEDINF command specifies a unique combination of NAME, MEDIATYPE, and RECORDINFORMAT values and ensure that CAPACITY and REPLACE are not specified for synonym entries. DFSMSrmm ignores the operands if you do specify them.

Descriptor Code: 3

EDG0302I  INSTALLATION EXIT exit_name IS NOW DISABLED

Explanation: DFSMSrmm disabled an installation exit.

In the message text:

exit_name
This is the name of the installation exit.

System action: DFSMSrmm disables the exit and will no longer call the named installation exit.

Operator response: None.

System programmer response: You should identify the reason for the exit being disabled, from the preceding EDG0300I or EDG0301I message. Follow the response documented for that message.

Source: DFSMSrmm

Detecting Module: EDGCMUX

Routing Code: 2,3

Descriptor Code: 3

EDG0303D  INSTALLATION EXIT exit_name HAS FAILED - REPLY "RETRY", "CANCEL", "DISABLE" OR "CONTINUE", volser, jobname, stepname

Explanation: DFSMSrmm called an installation exit and detected that the exit either abnormally ended or set an unsupported return code.

In the message text:

exit_name
This is the name of the installation exit that failed.

volser
This is the volume serial number that DFSMSrmm is processing.

jobname
This is the name of the job that is running.

stepname
This is the name of the current job step.
**System action:** DFSMSrmm waits for the operator to reply to this message.

**Operator response:** Reply as described in the following table.

<table>
<thead>
<tr>
<th>Operator Reply</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>CANCEL</td>
<td>DFSMSrmm fails the current request, but processes all other requests.</td>
</tr>
<tr>
<td>DISABLE</td>
<td>DFSMSrmm continues with the current request. All future requests are processed by DFSMSrmm without use of the installation exit. The installation exit is disabled. Tape processing continues. If you reply DISABLE, refer to message EDG0304I which describes possible consequences.</td>
</tr>
<tr>
<td>CONTINUE</td>
<td>DFSMSrmm processes the current request ignoring the failure of the installation exit. All future requests will be processed using the installation exit. DFSMSrmm issues EDG0304I in response to the reply.</td>
</tr>
</tbody>
</table>
| RETRY          | DFSMSrmm retries the current request. Before replying RETRY, first refresh the DFSMSrmm installation exits. To refresh the exits, enter the following operator command:  

`MODIFY DFRMM,REFRESH EXITS`

DFSMSrmm reissues this message if your reply is not: CANCEL, DISABLE, CONTINUE, or RETRY.

**System programmer response:** After correcting the error that caused your installation exit to fail, refresh LLA if necessary, then issue the following operator command to refresh the DFSMSrmm installation exit:

`MODIFY DFRMM,REFRESH EXITS`

**Source:** DFSMSrmm

**Detecting Module:** EDGCMUX

**Routing Code:** 1,3

**Descriptor Code:** 3

---

**Explanation:** This message is issued in response to the CONTINUE or DISABLE operator reply to message EDG0303D. Since the installation exit either abnormally ended or set an unsupported return code, processing might be incomplete. For example, a vital record specification management value was not set as expected or volume information exists although DFSMSrmm was requested to ignore the volume.

In the message text:

- `volser`  
  This is the volume serial number that DFSMSrmm is processing.

- `jobname`  
  This is the name of the job that is running.

- `stepname`  
  This is the name of the current job step.

**System action:** Processing continues using available information.

**Operator response:** None.

**System programmer response:** If incomplete information is recorded, you might correct information for the volume by ensuring that a vital record specification is defined for the volume. You can use the DFSMSrmm ISPF dialog or DFSMSrmm TSO subcommands to correct information that was incorrectly updated or when a volume record was created in error.

Is the return code in decimal from the exit routine module_name. See [z/OS DFSMSrmm Implementation and Customization Guide](https://www.ibm.com/support/docview.wss?uid=swg27012856) for supported return codes.

reason

Is the reason code in decimal from the exit routine exit_module. See [z/OS DFSMSrmm Implementation and Customization Guide](https://www.ibm.com/support/docview.wss?uid=swg27012856) for supported return codes.

**System action:** DFSMSrmm processing continues. If the exit is EDG_EXIT200, DFSMSrmm writes a PDA trace record and skips return to scratch processing for the current volume. Message EDG2448I is issued at the end of processing. When the problem occurs for multiple volumes in the same inventory management run, only the first occurrence results in a message.

**Operator response:** Notify the system programmer.

**System programmer response:** Review your exit routine, and ensure that only supported return codes are set.

**Source:** DFSMSrmm

Detecting Module: EDGCMIX

Routing Code: 2,3

Descriptor Code: 3,7

---

**EDG0314I**

EXIT MODULE module_name ENDED ABNORMALLY – EXIT exit_name VOLUME volser ABEND CODE abend_code ABEND REASON CODE abend_reason

**Explanation:** DFSMSrmm is using the CSVDYNEX macro to call the exit routines associated with one of the DFSMSrmm installation exits. The request has not completed as expected.

In the message text:

module_name

Is the name of the exit routine. It can be one of EDGUX100, EDGUX200, EDGUX300, and any valid load module name.

exit_name

Is the name of the DFSMSrmm installation exit. It can be one of EDG_EXIT100, EDG_EXIT200, and EDG_EXIT300.

volser

Is the volume serial number being processed.

abend_code

Is the abend code in hexadecimal from the exit routine exit_name. This might be a system or user completion code.

abend_reason

Is the abend reason code in hexadecimal from the exit routine exit_name.

**System action:** DFSMSrmm processing continues. If the exit is EDG_EXIT200, DFSMSrmm disables return to scratch processing for the remainder of the inventory management run.

**Operator response:** Notify the system programmer.

**System programmer response:** Review your exit routine, and ensure that its processing does not result in system or user abends.

**Source:** DFSMSrmm

Detecting Module: EDGCMIX

Routing Code: 2,3
EDG0350E  UNABLE TO OBTAIN IP ADDRESS FOR SERVER server_name

Explanation: The DFSMSrmm subsystem initialization could not successfully look up the host name specified in the DFSMSrmm EDGRMMxx parmlib member to obtain an IP address.

In the message text:

server_name
  Identifies the server host name you specified in the DFSMSrmm EDGRMMxx parmlib member.

System action: DFSMSrmm startup fails.

Operator response: Inform the system programmer. After the error has been corrected, restart the DFSMSrmm subsystem.

System programmer response: Verify that the correct server host name has been specified in the DFSMSrmm EDGRMMxx parmlib member and that a DNS name server is configured correctly to resolve the server host name. If you specify the server name as a host name or a fully qualified domain name, ensure that the TCP/IP domain name service is configured to resolve the correct IP address.

Descriptor Code: 3,5,7

EDG0352E  UNABLE TO CONNECT TO SERVER server_name ON PORT NUMBER port_number

Explanation: The DFSMSrmm subsystem initialization could not connect to the DFSMSrmm server. DFSMSrmm issues message EDG0356E prior to this message to identify the details of the TCP/IP error.

In the message text:

server_name
  Identifies the server host name you specified in the DFSMSrmm EDGRMMxx parmlib member.

port_number
  Identifies the TCP/IP port number you specified in the DFSMSrmm EDGRMMxx parmlib member.

System action: DFSMSrmm startup fails.

Operator response: Inform the system programmer. After the error has been corrected, restart the DFSMSrmm subsystem.
EDG0353I • EDG0354I

System programmer response: Verify that the correct server host name and port number are defined to DFSMSrmm and that you have configured TCP/IP on the client and server systems to enable the connection. Also consider your firewall configuration and how it might impact communications. Refer to EDG0356E for details of the TCP/IP error message.

Routing Code: 1,3

Descriptor Code: 3,7

EDG0353I  SERVER LISTENER TASK HAS ENDED - USE THE MODIFY COMMAND WITH "RESTART LISTENER" TO RESTART

Explanation: The DFSMSrmm server subsystem TCP/IP listener task has ended. The error might have occurred because DFSMSrmm was unable to set up TCP/IP communication, an unrecoverable error has occurred, or you have used the operator command.

F DFRMM,STOP LISTENER

DFSMSrmm issues message EDG0352E or EDG0356E to describe the error before issuing this message.

System action: DFSMSrmm processing continues.

Operator response: If you require the DFSMSrmm subsystem to run as a server, use the operator command after the errors are corrected.

F DFRMM,RESTART LISTENER

System programmer response: DFSMSrmm runs as a standard system with no server task running. To retry communications, you can use the operator command

F DFRMM,RESTART LISTENER

or use a DFSMSrmm EDGRMMxx parmlib member to restart DFSMSrmm.

EDG0356E  system COMMUNICATION ERROR - FUNCTION function RETURN CODE return_code REASON CODE reason_code

Explanation:  The DFSMSrmm subsystem is communicating with another DFSMSrmm system and encountered an error.

In the message text:

system
  Is one of these values: CLIENT or SERVER. When system is CLIENT, it is the server system that encountered the error communicating with the client system. When system is SERVER, it is the client system that encountered the error communicating with the server.

function
  Is one of the TCP/IP communication server functions used by DFSMSrmm.

return_code
  Is the TCP/IP communications error code.

reason_code
  Is the TCP/IP communications reason code.

System action:  DFSMSrmm processing continues.
Operator response:  Inform the system programmer.
System programmer response:  Identify the cause of the error using the codes specified in the message.

Descriptor Code:  3,7

Chapter 2. EDG messages  71
EDG0358D • EDG0359E

EDG0358D  SERVER server_name COMMUNICATION ERROR - REPLY "CANCEL", OR "RETRY"

Explanation: The DFSMSrmm subsystem is communicating between the DFSMSrmm client and the DFSMSrmm server. DFSMSrmm issues message EDG0352E or EDG0356E to describe the error before issuing this message.

In the message text:

server_name
Identifies the server host name you specified in the DFSMSrmm EDGRMMxx parmlib member on the client system. If the server host name is not available, the IP address is used because you specified an IP address in the DFSMSrmm EDGRMMxx parmlib member.

System action: DFSMSrmm processing waits for an operator response. While DFSMSrmm waits for you to respond to the message, it periodically retries the failed request. If the retry is successful, DFSMSrmm cancels the outstanding reply.

Operator response: Reply to message EDG0358D with one of the valid responses.

<table>
<thead>
<tr>
<th>Reply</th>
<th>And the result is</th>
</tr>
</thead>
<tbody>
<tr>
<td>CANCEL</td>
<td>The current request fails. If the current request is to connect to the server at DFSMSrmm subsystem startup, replying CANCEL stops the DFSMSrmm subsystem.</td>
</tr>
<tr>
<td>RETRY</td>
<td>Before you RETRY, correct the error that prevented the client system from connecting to the server. DFSMSrmm retries connecting to the server and attempts to continue processing the current request.</td>
</tr>
</tbody>
</table>

System programmer response: Ensure that the operator knows the correct response to use. When this message is issued at startup time because the server is not available, and you have an alternate parmlib member available containing an alternate server host name to be used when the primary DFSMSrmm server host is unavailable, you can select a new parmlib member in response to EDG0107A. When this message is issued while DFSMSrmm is running, you can switch to an alternate server by using the operator command.

Routing Code: 1,3

Descriptor Code: 2

EDG0359E  UNSUPPORTED REQUEST FROM CLIENT client_name ip_address

Explanation: The DFSMSrmm server subsystem has received TCP/IP socket communication from an unidentifiable source and cannot process the data being sent from the client system.

In the message text:

client_name
Is the host name of the client that initiated the request.

ip_address
Is the IP address of the client that initiated the request.

System action: DFSMSrmm fails the request.

Operator response: Inform the system programmer.

System programmer response: Identify the client that made the request by using the host name or the IP address from the message text. The most likely cause of this error message is that a non-DFSMSrmm client attempted to initiate a request.

Source: DFSMSrmm

Detecting Module: EDGIPSL, EDGIPST

Routing Code: 2,3
EDG0360E • REQUEST FROM CLIENT client_name ip_address IS TOO HIGH A LEVEL TO BE PROCESSED BY THIS SERVER

Explanation: The DFSMSrmm server subsystem has received TCP/IP socket communication from a DFSMSrmm client system but the data sent from the client is known to be a level not yet supported by this server system.

In the message text:
client_name
   Is the host name of the client that initiated the request.
ip_address
   Is the IP address of the client that initiated the request.

System action: DFSMSrmm fails the request.

Operator response: Inform the system programmer.

System programmer response: Identify the client that made the request by using the host name or the IP address from the message text. Ensure that the server has the required toleration maintenance installed to enable it to correctly support the client request.

Source: DFSMSrmm
Detecting Module: EDGIPSL, EDGIPST
Routing Code: 2,3
Descriptor Code: 3,7

EDG0361D • SERVER STARTUP ERROR - REPLY "RETRY" OR "IGNORE"

Explanation: The DFSMSrmm server subsystem is starting up and has been unable to set up TCP/IP communication. DFSMSrmm issues message EDG0352E or message EDG0356E to describe the error before issuing this message.

System action: DFSMSrmm waits for the operator reply. While DFSMSrmm waits for a response to this message, DFSMSrmm periodically retries the failed request. If the retry is successful, DFSMSrmm cancels the outstanding reply.

Operator response: Reply to message EDG0361D with one of the valid responses.

<table>
<thead>
<tr>
<th>Reply</th>
<th>When</th>
</tr>
</thead>
<tbody>
<tr>
<td>RETRY</td>
<td>You want DFSMSrmm to try starting up the server system again by retrying TCP/IP communications.</td>
</tr>
<tr>
<td>IGNORE</td>
<td>It is acceptable for DFSMSrmm subsystem to run as a standard system and not as a server system.</td>
</tr>
</tbody>
</table>

System programmer response: Ensure that the operator knows the correct response to use. When the operator replies with IGNORE, DFSMSrmm runs as a standard system; there is no server task running. To retry communications, use the operator command
F DFRMM,RESTART LISTENER

or restart DFSMSrmm with an available parmlib member.

EDG1105I  STOP COMMAND ENTERED WHILE DFSMSrmm IS QUIESCED AND REQUESTS ARE WAITING TO BE PROCESSED

Explanation: The STOP DFSMSrmm command has been entered, but DFSMSrmm is already quiesced. Either DFSMSrmm manual recovery is in progress, or the QUIESCE DFSMSrmm command was entered previously.

System action: The system issues message EDG1107D and the STOP command processing depends on the reply to EDG1107D.

Operator response: Notify the system programmer.

Source: DFSMSrmm

Detecting Module: EDGMCMD

Routing Code: 1,3

Descriptor Code: 3

EDG1106I  STOP COMMAND ENTERED WHILE DFSMSrmm IS QUIESCED AND REQUESTS ARE WAITING TO BE PROCESSED - INCLUDING CATALOG STATUS TRACKING

Explanation: The STOP DFSMSrmm command has been entered, but DFSMSrmm is already quiesced. Either DFSMSrmm manual recovery is in progress, or the QUIESCE DFSMSrmm command was entered previously. The requests waiting to be processed include one or more requests to update the DFSMSrmm control data set with data set catalog status.

System action: The system issues message EDG1107D and the STOP command processing depends on the reply to EDG1107D.

Operator response: Notify the system programmer.

System programmer response: Determines whether or not to stop DFSMSrmm. If you choose to stop DFSMSrmm and not process the requests, you must re-synchronize the DFSMSrmm control data set with the system catalogs before running inventory management.

Source: DFSMSrmm

Detecting Module: EDGMCMD

Routing Code: 1,3

Descriptor Code: 2

EDG1107D  REQUESTS WAIT TO BE PROCESSED - REPLY "STOP", "QUIESCE", "RESTART", OR "M=xx"

Explanation: The STOP DFSMSrmm command has been entered, but DFSMSrmm is already quiesced. Either DFSMSrmm manual recovery is in progress, or the QUIESCE DFSMSrmm command was entered previously. Message EDG1105I or EDG1106I precede this message. If the preceding message is EDG1106I, the requests that wait to be processed include one or more requests to update the DFSMSrmm control data set with data set catalog status.

System action: STOP command processing depends on the reply to this message.

Reply | To
---|---
STOP | Stop DFSMSrmm and fail the waiting requests.
QUIESCE | Return to the quiesce state.
RESTART | Restart DFSMSrmm using the current parmlib member.
M=xx | Restart DFSMSrmm using a specified parmlib member, where xx is the parmlib member suffix. When you reply with either “RESTART” or “M=xx”, DFSMSrmm restarts and attempts to process the waiting requests.

Operator response: Reply to message EDG1107D.

System programmer response: Determines how to reply to this message. If you choose to stop DFSMSrmm and not process the requests, you must re-synchronize the DFSMSrmm control data set with the system catalogs before running inventory management.

</table>
EDG1113I

Function | Explanation
---|---
API | API subcommand parsing
DFHSM | EDGFHSM/EDGTVEXT processing to support releasing of tapes
INERS | EDGINERS processing
VRS | ADD, DELETE, UPDATE VRS subcommand processing
LS | LISTVRS subcommand processing
HSKP | Inventory management processing
BKUP | CDS Backup
C/S | Client/Server processing on a server system

Any other values are internal to DFSMSrmm.

**system**
Identifies the DFSMSrmm SYSID value defined in the EDGRMMxx parmlib member of the originating system. A SYSID is only shown when the request originates on a client system. Local system tasks are listed without a system ID. You can use the HOLD, RELEASE, and CANCEL operator commands only for local system tasks.

**requestor_type**
Identifies the requestor. The values can be one of:
- JOB - the requestor is a batch job.
- STC - the requestor is a started task.
- TSU - the requestor is a time sharing user.

**requestor_name**
Identifies the requestor by name.

**time**
Lists the time that the request was started in hh:mm:ss. For client requests, this is the request start time from the client.

**token_value**
Uniquely identifies the request. The token is 8 alphanumeric characters.

**s**
The s column indicates special processing information for the DFSMSrmm task. It can be one of the following values:
- blank: No special information is available
- H: The task is subject to HOLD processing
- C: The task is subject to CANCEL processing
- +: This task holds the RESERVE on the DFSMSrmm CDS

**ip_status**
Identifies the status of IP processing. The value consists of three parts:
- The status code, which can be Co (Connect), Wr (Write), Re (Read), or Cl (Close).
- A < or > symbol, where < indicates that the request has started, and > indicates that the request has been completed.
- The time that indicates when the ip_status last changed.

**System action:** Command processing continues.

EDG1200D  I/O ERROR ON CONTROL DATA SET WHEN PROCESSING MESSAGE msg_number, REPLY EITHER "RETRY" OR "CANCEL"

Explanation: DFSMSrmm intercepted a message and has experienced an I/O error on the DFSMSrmm control data set while processing the message in the subsystem.

In the message text:

msg_number

Is the message identifier and number of the intercepted message DFSMSrmm is currently processing. Possible values include:

- CBR3660A - Short-on-scratch 3495 Tape Library Dataserver condition

System action: The DFSMSrmm subsystem waits for the operator's response: RETRY or CANCEL. Enter RETRY to make another attempt to access the DFSMSrmm control data set information. Enter CANCEL if no further action should be taken.

Operator response: Check your installation's procedures for handling the identified message and I/O errors on the DFSMSrmm control data set. If the error can be corrected, follow the steps outlined for the correction, and enter RETRY. If the error cannot be corrected, enter CANCEL.

System programmer response: If the operator entered CANCEL, advise your tape librarian or storage administrator that a condition that DFSMSrmm tried to intercept might need to be dealt with manually.

Source: DFSMSrmm

Detecting Module: EDGWTO

Routing Code: 1,3

Descriptor Code: 2

EDG1202I  SCRATCH PROCEDURE name NOT STARTED

Explanation: The DFSMSrmm subsystem attempted to process one of the messages CBR3660A, CBR3792E, and CBR3794A and start the procedure used to recover from the low-on-scratch, and low-on-cache space conditions. The low-on-scratch procedure has already been run and did not correct the low-on-scratch or low-on-cache situation. Intervention is required by the tape librarian or system programmer to ensure that there are enough scratch volumes or enough cache space in the library.

In the message text:
EDG1203D • EDG1204I

name
This is the name of the scratch procedure specified with the SCRATCHPROC parameter in PARMLIB. If you
have not specified this in PARMLIB, it will default to EDGXPROC.

System action: Processing continues.

Operator response: Inform the system programmer.

System programmer response: The scratch procedure has been run since the last running of inventory management,
and scratch volumes or cache space are still low. Consider releasing some volumes back to scratch, or adding some
new scratch volumes to resolve the low-on-scratch condition, or see messages CBR3792E and CBR3794A for the
resolution of the low-on-cache condition.

EDG1203D INVENTORY MANAGEMENT PREVENTED PROCESSING OF MESSAGE msg_number, REPLY
EITHER "RETRY" OR "CANCEL"

Explanation: DFSMSrmm intercepted a message. If inventory management is in progress, messages cannot be
processed.

In the message text:

msg_number
Is the message identifier and number of the intercepted message DFSMSrmm is currently processing. Possible
values include:
CBR3660A - Short on scratch 3495 Tape Library Dataserver condition

System action: The DFSMSrmm subsystem waits for the operator's response: RETRY or CANCEL. Enter RETRY to
make another attempt to process the message in the subsystem. Enter CANCEL if no further action should be taken.

Operator response: Check your installation's procedures for handling the identified message and inventory
management in-progress condition. If you can wait for inventory management to complete, wait until the batch job
requesting inventory management completes, and enter RETRY. If you cannot wait, enter CANCEL.

System programmer response: If the operator entered CANCEL, advise your tape librarian or storage administrator
that a condition that DFSMSrmm tried to intercept might need manual intervention.

Detecting Module: EDGWTO
Routing Code: 1,3
Descriptor Code: 2

EDG1204I BACKUP PROCEDURE name NOT STARTED

Explanation: The DFSMSrmm subsystem attempted to process the message EDG2107E and start the procedure used
to backup the control data set and journal and reset the journal. A control data set backup is already running at the
time the message is processed.

In the message text:

name
This is the name of the backup procedure specified with the BACKUPPROC operand in PARMLIB.

System action: Processing continues.

Operator response: Inform the system programmer.

System programmer response: A control data set backup was already running, so the backup procedure was not
started.

Source: DFSMSrmm
EDG1300I  UNABLE TO CREATE ACEE. RETURN CODE racf_return_code REASON CODE racf_reason_code. SAF RETURN CODE saf_return_code

Explanation: DFSMSrmm is processing a request and must check that the user is authorized to make the request. Because the requestor has the OPERATIONS attribute or is PRIVILEGED, DFSMSrmm attempts to create an ACEE for use in the authorization check. The RACROUTE REQUEST=VERIFY,ENVIRON=CREATE request to create the ACEE failed.

In the message text:

racf_return_code
The return code from RACF or your security product describing the failure to create an ACEE.

racf_reason_code
The reason code from RACF or your security product describing the failure to create an ACEE.

saf_return_code
The contents of register 15 after the RACROUTE request.

System action: The current request fails as if it failed the authorization check.

Operator response: Inform the system programmer.

System programmer response: Ensure that the requestor is authorized to create an ACEE. See z/OS DFSMSrmm Implementation and Customization Guide for information about SAF calls for authorization checking.

EDG2002I  SUBSYSTEM REQUEST FAILED - DFSMSrmm SUBSYSTEM CANCELLED BY OPERATOR

Explanation: DFSMSrmm issues this message when the operator has used the CANCEL command for the DFSMSrmm subsystem address space. The message is issued by the issuer of the subsystem request and does not appear on the console or SYSLOG.
EDG2003E • EDG2011I

**System action:** DFSMSrmm fails your request.

**Operator response:** Inform the system programmer.

**Application Programmer Response:** Reissue your request when the DFSMSrmm subsystem is restarted.

**Source:** DFSMSrmm

**Detecting Module:** EDGQMGR

**Routing Code:** 3

**Descriptor Code:** 3

---

EDG2003E ABEND Ssss Uuuuu RSN reason_code DURING DFSMSrmm SUBSYSTEM PROCESSING AT offset IN MODULE module_name

**Explanation:** DFSMSrmm issues this message when a subsystem request abends.

In the message text:

- **Ssss**
  - The system completion code.

- **Uuuuu**
  - The user completion code. For DFSMSrmm user completion codes, refer to the [z/OS DFSMSrmm Diagnosis Guide](https://www.ibm.com).  

- **RSN reason_code**
  - The reason code for the completions code Ssss and Uuuuu.

- **offset**
  - The hexadecimal offset in module module_name.

- **MODULE module_name**
  - The name of the failing load module.

**System action:** DFSMSrmm ends the failing subsystem request.

**Operator response:** Inform the system programmer.

**System programmer response:** Reissue your request when the DFSMSrmm subsystem is restarted.

**Source:** DFSMSrmm

**Detecting Module:** EDGQMGR

EDG2011I VOLUME volser HAS A SECURITY CLASS NUMBER security_number WHICH IS NO LONGER DEFINED TO DFSMSrmm

**Explanation:** During report extract processing, the security level assigned to the volume does not match any existing value.

In the message text:

- **volser**
  - Volume serial number

- **security_number**
  - A number defining a security classification

**System action:** Report extract processing continues. DFSMSrmm uses the lowest security level for the specified volume.

**Operator response:** Report the message to the system programmer.

**System programmer response:** Check the security class numbers defined for your installation. Enter a valid security class for the volume to correct the error. Use the DFSMSrmm parmlib member SECCLS command to add the security class that matches the security class number in the message. Or issue RMM CHANGEVOLUME subcommand to
change the security level of the volume to one that is currently defined.

EDG2050I  DFSMSrmm RECEIVED AN UNEXPECTED RETURN CODE return_code AND REASON CODE reason_code WHEN REQUESTING function INFORMATION

Explanation: The DFSMSrmm subsystem issued a request for information from another DFSMS facility and received an unexpected return code.

In the message text:

return_code
   Value returned indicating the results of processing.

reason_code
   Value returned indicating the results of processing.

function
   Can be: ACS, LIBCNTL, LIBRARY, VOLUME, SMSLEV, STORGRP, or TCDB.

System action: The request fails.

Operator response: Inform the system programmer.

System programmer response: Report the problem to the IBM Support Center.

Source: DFSMSrmm
Detecting Module: EDGLOCV
Routing Code: 1
Descriptor Code: 3

EDG2051I  date_type DATE IN VOLUME CATALOG ENTRY FOR VOLUME volser IS INVALID

Explanation: The DFSMSrmm subsystem was converting a date from the tape configuration database entry into internal format. Conversion was not possible because the date was not in the correct format.

In the message text:

date_type
   Can be: LAST-WRITE or EXPIRATION.

volser
   Volume serial number

System action: DFSMSrmm writes the date as all zeros.

Operator response: Inform the system programmer.

System programmer response: Correct the date in the tape configuration database entry for the volume identified.

Source: DFSMSrmm
Detecting Module: EDGLOCV
Routing Code: 1,3
Descriptor Code: 3

EDG2100I  file_name FILE ERROR IN FUNCTION function - RC=return_code, REAS=reason_code, KEY=osam_key

Explanation: The DFSMSrmm subsystem encountered an error performing an I/O operation on the DFSMSrmm control data set or journal.

In the message text:
file_name
Can be MASTER or JOURNAL.

function
An internal representation of the requested function

return_code
The code returned by VSAM in register 15 or an DFSMSrmm internal return code. Possible values for DFSMSrmm internal return codes are:

- F0  Error in SHOWCAT
- F1  Error in BLDVRP
- F2  Error in DLVRP
- F3  Error in DYNALLOC
- FC  DFSMSrmm does not support the record read from the control data set
- FF  DFSMSrmm does not support the I/O request made

reason_code
The RPL reason code returned by VSAM, or zero for DFSMSrmm internal return codes.

vsam_key
The key of the requested VSAM record

System action: The current I/O request fails.

Operator response: Report the error to the system programmer.

System programmer response: The error occurred during VSAM processing. If the DFSMSrmm control data set is damaged, DFSMSrmm issues message EDG2101I to describe physical errors. For logical errors, you might have to recreate the DFSMSrmm control data set using the latest backup copy, along with the journal. For DFSMSrmm internal return codes, the action depends on the return code. For F1, there was insufficient storage to satisfy the request. Increase the region size to correct the problem. For FC, your control data set contains records that are not supported by DFSMSrmm. You should ensure that the VSAM data set being used contains only valid records. Ensure you use the DFSMSrmm-supplied utilities to perform functions against the DFSMSrmm control data set. For FF, report the error to the IBM Support Center.

For interpretation of Record Management Return Codes and Reason Codes for OPEN and CLOSE, refer to the z/OS DFSMS Macro Instructions for Data Sets.

EDG2103D PERMANENT JOURNAL ERROR - REPLY "R" TO RETRY, "I" TO IGNORE, "D" TO DISABLE OR "L" TO LOCK

Explanation: The DFSMSrmm subsystem encountered an error performing I/O to the journal. If the journal is full, DFSMSrmm issues message EDG2104E.

System action: The current task waits for a reply.

Operator response:

<table>
<thead>
<tr>
<th>The operator replies</th>
<th>For the action</th>
<th>And the result is</th>
</tr>
</thead>
<tbody>
<tr>
<td>D</td>
<td>Disable</td>
<td>DFSMSrmm completes the DFSMSrmm control data set update and disables the journal. Updates can be made to the DFSMSrmm control data set, but DFSMSrmm does not allow further updates to the journal until BACKUP is run to back up the DFSMSrmm control data set and to clear the journal. Forward recovery might not be possible because some journal records are missing as a result of the journal being disabled. If there are inconsistencies in the DFSMSrmm control data set after the restore is performed, run the DFSMSrmm utility EDGUTIL VERIFY(ALL) to validate the control data set.</td>
</tr>
<tr>
<td>I</td>
<td>Ignore</td>
<td>DFSMSrmm completes the DFSMSrmm control data set update. DFSMSrmm does not update the journal and issues this message for subsequent updates. Forward recovery might not be possible because some journal records are missing as a result of the journal being disabled.</td>
</tr>
</tbody>
</table>
### EDG2104E • EDG2105E

<table>
<thead>
<tr>
<th>The operator replies</th>
<th>For the action</th>
<th>And the result is</th>
</tr>
</thead>
<tbody>
<tr>
<td>L</td>
<td>Lock</td>
<td>DFSMSrmm does not allow updates to the DFSMSrmm control data set until BACKUP is run to back up the DFSMSrmm control data set and to clear the journal. DFSMSrmm fails any requests that result in an update to the DFSMSrmm control data set. For tape open and close requests, DFSMSrmm issues WTO R EDG4000D which prompts the operator for a RETRY or CANCEL reply. DFSMSrmm issues EDG3205E in response to a DFSMSrmm TSO subcommand request. If the error occurred during inventory management, the utility issues a message and processing stops.</td>
</tr>
<tr>
<td>R</td>
<td>Retry</td>
<td>DFSMSrmm retries the same DFSMSrmm control data set update and the journal update. This reply might correct an update failure resulting from an I/O error caused by some temporary hardware fault that has now been cleared. If the retry fails, or if the original update failed because the journal was full, then select one of the other replies to this message.</td>
</tr>
</tbody>
</table>

**System programmer response:** Use the DFSMSrmm EDGHSKP utility with the BACKUP parameter to back up the DFSMSrmm control data set and clear the journal. You must reply to this message before the DFSMSrmm control data set can be backed up. The control data set remains reserved until you reply to this message. The recommended reply is L. If the journal is deleted and reallocated to recover from the error, you must stop and start DFSMSrmm before journaling can resume.

**Routing Code:** 1

**Descriptor Code:** 2

---

### EDG2104E  JOURNAL FILE IS FULL - SCHEDULE CONTROL DATA SET BACKUP TO CLEAR IT

**Explanation:** The DFSMSrmm subsystem detected that the journal is full.

**System action:** When backup is already in progress, DFSMSrmm locks the journal until the backup is completed. If backup is not in progress, DFSMSrmm issues message EDG2103D which prompts the operator for a reply.

**Operator response:** Report the message to the system programmer. If DFSMSrmm issues message EDG2103D, reply as directed. If you have procedures set up for backing up the control data set and clearing the journal, perform the procedures in response to the message.

**System programmer response:** Ensure that a procedure is in place to back up the control data set and clear the journal. The procedure can be started automatically through message automation or manually by the operator. Use the DFSMSrmm EDGHSKP utility with the BACKUP parameter to back up the control data set and clear the journal. Provide the operator with guidance for responding to message EDG2103D.

**Source:** DFSMSrmm

**Detecting Module:** EDGMFIO

**Routing Code:** 1

**Descriptor Code:** 3

---

### EDG2105E  JOURNAL FILE IS status - SCHEDULE CONTROL DATA SET BACKUP TO CLEAR IT

**Explanation:** During initialization, the DFSMSrmm subsystem found that the journal was not available as a result of the response to either message EDG2103D or EDG2106D.

In the message text:
**EDG2106D**

*status*
Can be:
- DISABLED
- LOCKED

**System action:** The control data set status remains unchanged. DFSMSrmm cannot perform requested functions or recovery processing if the journal is locked or disabled.

**Operator response:** Inform the system programmer.

**System programmer response:** Schedule control data set backup processing using the DFSMSrmm EDGHSKP utility. Use EDGHSKP to back up the control data set and clear the journal.

**Source:** DFSMSrmm

**Detecting Module:** EDGMFIO

**Routing Code:** 1

**Descriptor Code:** 3

---

**EDG2106D** JOURNAL AND CONTROL DATASET DO NOT MATCH - REPLY "C" TO CANCEL, "D" TO DISABLE OR "L" TO LOCK

**Explanation:** During initialization, the DFSMSrmm subsystem found that the journal does not match the current control data set because
- The control data set was restored without using the journal

or
- The journal selected by the DFSMSrmm parameters has changed and is not empty

**System action:** The current task waits for a reply.

**Operator response:** Reply as described in the following table.

<table>
<thead>
<tr>
<th>When the operator replies</th>
<th>For the action</th>
<th>The result is</th>
</tr>
</thead>
<tbody>
<tr>
<td>C</td>
<td>Cancel</td>
<td>DFSMSrmm stops.</td>
</tr>
<tr>
<td>D</td>
<td>Disable</td>
<td>DFSMSrmm disables the journal and completes initialization. Updates can be made to the DFSMSrmm control data set, but no further updates to the journal take place until the BACKUP function of inventory management is run to back up the control data set and to clear the journal.</td>
</tr>
<tr>
<td>L</td>
<td>Lock</td>
<td>DFSMSrmm completes its initialization but no updates to the DFSMSrmm control data set are allowed until the DFSMSrmm EDGHSKP utility with the BACKUP parameter is run to back up the control data set and to clear the journal.</td>
</tr>
</tbody>
</table>

Any reply other than C, L, or D.

Other than CANCEL, LOCK, or DISABLE.

DFSMSrmm reissues this message to prompt the operator for the correct response: C, L, or D.

**System programmer response:** Instruct the operator to respond as follows:

<table>
<thead>
<tr>
<th>If the mismatch</th>
<th>The operator reply is</th>
</tr>
</thead>
<tbody>
<tr>
<td>is caused by an incomplete restore</td>
<td>C. Then repeat the restore using both the control data set backup and the correct journal, then restart DFSMSrmm.</td>
</tr>
<tr>
<td>is caused by an incorrect journal</td>
<td>C. Then restart DFSMSrmm with the correct journal.</td>
</tr>
<tr>
<td>cannot be resolved immediately</td>
<td>L or D. Then request an inventory management - BACKUP of the DFSMSrmm control data set. Clear the journal to avoid possible data integrity problems that might occur when DFSMSrmm control data set updates are not journaled.</td>
</tr>
</tbody>
</table>
You must reply to this message before the DFSMSrmm control data set can be backed up. The control data set remains reserved until you reply to this message.

Source: DFSMSrmm
Detecting Module: EDGMFIO
Routing Code: 1,3
Descriptor Code: 2

EDG2107E  JOURNAL THRESHOLD REACHED - JOURNAL IS \textit{percentage_value}\% FULL, \textit{tracks} TRACKS (\textit{kilobytes}K) AVAILABLE

Explanation: During journal write activity, the journal data set reached the percentage full threshold defined on the JOURNALFULL operand in the EDGRMMxx parmlib member. DFSMSrmm also issues this message during startup if the journal is already at or past the threshold specified.

In the message text:

- \textit{percentage_value}\% is how full the journal data set is, in percentage terms.
- \textit{tracks} is the amount of space remaining in the journal data set, expressed in tracks.
- \textit{kilobytes}K is the amount of space remaining in the journal data set, expressed in kilobytes.

System action: Processing continues. If a backup procedure name is defined in BACKUPPROC operand in parmlib, DFSMSrmm issues the START command to start the backup procedure defined in BACKUPPROC operand in parmlib.

Operator response: If the backup procedure is not started by DFSMSrmm, follow your installation-defined procedure or inform the system programmer.

System programmer response: If a backup procedure has not been defined using BACKUPPROC operand in parmlib and started automatically, use the DFSMSrmm EDGHSKP utility with the BACKUP parameter to backup the control data set and clear the journal.

Source: DFSMSrmm
Detecting Module: EDGMVSM
Routing Code: 3
Descriptor Code: 2

EDG2108E  JOURNAL IS \textit{percentage_value}\% FULL, \textit{tracks} TRACKS (\textit{kilobytes}K) AVAILABLE

Explanation: DFSMSrmm previously issued message EDG2107E to indicate that the journal data set has reached the percentage full threshold defined on the JOURNALFULL operand in the EDGRMMxx parmlib member. DFSMSrmm issues this message again each time the journal fills up an additional 5% or each time the journal is 1% over 90% full. When the journal is 100% full, DFSMSrmm issues message EDG2104E.

In the message text:

- \textit{percentage_value}\% is how full the journal data set is, in percentage terms.
- \textit{tracks} is the amount of space remaining in the journal data set, expressed in number of tracks.
- \textit{kilobytes}K is the amount of space remaining in the journal data set, expressed in kilobytes.

System action: Processing continues.

Operator response: Follow your installation-defined procedure or inform the system programmer.
EDG2109I

System programmer response: Make sure the journal is backed up and cleared. If the journal is not already backed up in response to message EDG2107E or if you do not have BACKUPPROC defined in the parmlib, schedule the DFSMSrmm EDGHSKP utility with the BACKUP parameter to back up the control data set and clear the journal. DFSMSrmm stops issuing this message when the journal is backed up and cleared.

Source: DFSMSrmm

Detecting Module: EDGMVSM

Routing Code: 3

Descriptor Code: 2

EDG2109I MASTER FILE IS FULL FOR FUNCTION function - RC=return_code, REAS=reason_code, KEY=vsam_key

Explanation: The DFSMSrmm subsystem discovered that the DFSMSrmm control data set is full when attempting to add or update a record. If the control data set is allocated with no secondary extents, or there is no free space left on the current volume, VSAM is unable to extend the size of the control data set to accommodate additional records. The DFSMSrmm subsystem starts control data set recovery processing.

In the message text:

function
  An internal representation of the requested function

return_code
  The code returned by VSAM in register 15

reason_code
  The RPL reason code returned by VSAM

vsam_key
  The key of the requested VSAM record

System action: The current I/O request to the DFSMSrmm control data set fails.

Operator response: Follow the actions required for message EDG2116A which is also issued.

System programmer response: Manual recovery of the DFSMSrmm control data set is necessary. If the control data set is full because the records are badly organized and there are many CI and CA splits, reorganize the control data set using the EDGBKUP utility with the BACKUP(REORG) parameter. If the control data set needs to be larger, either allocate a new larger CDS and use IDCAMS REPRO to copy the contents, or take a backup copy of the contents with IDCAMS REPRO, delete the current DFSMSrmm control data set, and reallocate it with more space and REPRO the copy of the CDS back in. See the z/OS DFSMSrmm Implementation and Customization Guide for information on calculating the size of the control data set.

An alternative method is to use the EDGBKUP utility to restore the DFSMSrmm control data set from the most recent backup copy to a new, larger control data set. Specify the JOURNAL DD statement naming the most recent journal backup and the active DFSMSrmm journal so that forward recovery includes the updates for the DFSMSrmm request that was in progress at the time the control data set became full. Refresh the DFSMSrmm subsystem by issuing the MODIFY DFRMM,M=xx command.

Recommendation: Use BACKUP(REORG) with the existing CDS and refresh the DFSMSrmm subsystem using the MODIFY operator command.

Descriptor Code: 4
EDG2110I  DFSMSrmm DETECTED A FAILED CONTROL DATA SET UPDATE

**Explanation:** DFSMSrmm detected that a previous update to the DFSMSrmm control data set did not complete successfully. At this point, the contents of the DFSMSrmm control data set are unpredictable.

**System action:** DFSMSrmm determines if there is sufficient information to attempt automatic recovery of the failed update. DFSMSrmm issues messages to the operator, either EDG2111I or EDG2115I, to describe the action to be taken. See the explanation for message EDG2115I for reasons why automatic recovery might not be attempted.

**Operator response:** Determine, from the subsequent message, the action to be taken.

**Source:** DFSMSrmm

**Detecting Module:** EDGMFIO

**Routing Code:** 2

**Descriptor Code:** 4

EDG2111I  DFSMSrmm STARTING AUTOMATIC RECOVERY OF THE CONTROL DATA SET

**Explanation:** DFSMSrmm has determined that the journal is active, and provides enough information to recover.

**System action:** DFSMSrmm attempts to recover the DFSMSrmm control data set updates, using the changed records stored in the journal.

**Operator response:** Determine, from the subsequent message, either EDG2112I or EDG2115I, whether the attempt is successful.

**Source:** DFSMSrmm

**Detecting Module:** EDGMFIO

**Routing Code:** 2

**Descriptor Code:** 4

EDG2112I  AUTOMATIC RECOVERY OF CONTROL DATA SET SUCCESSFUL

**Explanation:** DFSMSrmm has succeeded in making updates to the DFSMSrmm control data set that were previously interrupted.

**System action:** The DFSMSrmm address space continues with normal processing.

**Operator response:** If you have only a single system using the DFSMSrmm control data set, recovery is now complete. If multiple systems are sharing the DFSMSrmm control data set and recovery has already failed on one of the other systems, DFSMSrmm issues message EDG2116A. Reactivate DFSMSrmm by issuing the MODIFY DFRMM,M=xx command with the correct parmlib member suffix. See z/OS DFSMSrmm Implementation and Customization Guide for information about using the MODIFY operator command to reactivate DFSMSrmm.

**Descriptor Code:** 4

EDG2113I  AUTOMATIC RECOVERY OF CONTROL DATA SET COMPLETED BY ANOTHER SYSTEM

**Explanation:** Another system completed the recovery of the detected failed DFSMSrmm control data set update.

**System action:** The DFSMSrmm address space continues with normal processing.

**Operator response:** None.

**Source:** DFSMSrmm

**Detecting Module:** EDGMFIO

**Routing Code:** 2
EDG2114I  AUTOMATIC RECOVERY OF CONTROL DATA SET HAS FAILED

Explanation: An I/O error on the journal or the DFSMSrmm control data set prevented recovery from the failed update to the DFSMSrmm control data set. This message is immediately preceded by message EDG2110I or EDG2111I.

System action: The DFSMSrmm address space quiesces before issuing message EDG2116A.

Operator response: DFSMSrmm issues message EDG2116A, which notifies you when to start manual recovery processing. If the DFSMSrmm control data set is shared with multiple systems, the DFSMSrmm address space on each system must issue message EDG2116A before you can start recovery processing. If the EDG2116A message has not yet been issued on a system, and the EDG2110I message has not been issued on that system, restart the DFSMSrmm address space to cause it to prepare for recovery.

System programmer response: None.

Source: DFSMSrmm

Detecting Module: EDGMFIO

Routing Code: 2

Descriptor Code: 4

EDG2115I  RECOVERY OF CONTROL DATA SET IS REQUIRED

Explanation: Recovery from the failed update to the DFSMSrmm control data set is not possible, for one of the following reasons:

• The journal was not defined in the initialization parameters.
• The journal was disabled in response to message EDG2103D.
• The journal update was ignored in response to message EDG2103D.
• The journal and DFSMSrmm control data set do not match.

System action: The DFSMSrmm address space quiesces before issuing message EDG2116A.

Operator response: DFSMSrmm issues message EDG2116A, which notifies you when to start manual recovery processing. If the DFSMSrmm control data set is shared with multiple systems, the DFSMSrmm address space on each system must issue message EDG2116A before you can start recovery processing. If the EDG2116A message has not yet been issued on a system, and the EDG2110I message has not been issued on that system, restart the DFSMSrmm address space to cause it to prepare for recovery.

Detecting Module: EDGMFIO

Routing Code: 2

Descriptor Code: 4

EDG2116A  DFSMSrmm QUIESCED - START CONTROL DATA SET RECOVERY PROCEDURE

Explanation: DFSMSrmm has freed resources and recovery processing is ready to begin.

System action: The DFSMSrmm address space waits to be reactivated. DFSMSrmm can be reactivated by issuing the MODIFY DFRMM,M=xx command or the START DFRMM,M=xx

Operator response: Verify that all DFSMSrmm systems sharing the DFSMSrmm control data set are ready for manual recovery. DFSMSrmm must issue this message on all sharing systems before you can start manual recovery. Start the recovery procedure documented in your installation’s recovery procedures. See the [z/OS DFSMSrmm Managing and Using Removable Media](https://www.ibm.com) for information about using the MODIFY or START command.

System programmer response: Once recovery is successful, ensure that any DFSMSrmm requests that failed are resubmitted. You might need to restart inventory management processing or rerun any utility active at the time of the failure. Users can reissue any failed requests.

Source: DFSMSrmm
EDG2117I • EDG2119E

EDG2117I  JOURNAL AND CONTROL DATA SETS DO NOT MATCH

Explanation: During automatic recovery of the DFSMSrmm control data set, DFSMSrmm found that the journal did not contain the expected record. This error is the result of using the wrong DFSMSrmm control data set or the wrong journal. The error probably occurred during the startup of the DFSMSrmm address space after manual recovery of the DFSMSrmm control data set, where an incorrect recovery procedure was used.

System action: The DFSMSrmm address space issues message EDG2115I and then prepares for manual recovery.

Operator response: Inform the system programmer.

System programmer response: Check that the correct DFSMSrmm control data set and journal have been used for this startup of DFSMSrmm. Only use EDGBKUP to restore the DFSMSrmm control data set, as this utility validates the control data set during the restore.

Source: DFSMSrmm

Detecting Module: EDGMFIO

Descriptor Code: 3
EDG2158I  function FAILED FOR DATA SET data-set-name ON VOLUME volser CATALOG RETURN CODE return_code REASON CODE reason_code

Explanation: During an update to information for a volume, DFSMSrmmm failed to locate or uncatalog a data set. The failure occurred when DFSMSrmmm was in the process of deleting information about the data set from the control data set, or when DFSMSrmmm was changing the volume status to SCRATCH.

In the message text:

function
The possible values for this string are LOCATE or UNCATALOG
data-set-name
The name of the data set being located or uncataloged
volser
The volume serial number containing the data set
return_code
The return code, in decimal, returned from catalog processing is documented is under message IDC3009I
reason-code
The reason code, in decimal, returned from catalog processing is documented is under message IDC3009I

System action: Processing continues.
Operator response: Inform the system programmer.
System programmer response: Determine the cause of the problem from the return and reason codes given. One reason for the failure might be that locating the dataset required access to a volume and catalog which is unavailable. After the problem has been fixed, arrange with the tape librarian to uncatalog the dataset if it is catalogued on the specified volume.

Descriptor Code: 3

EDG2159I  INCOMPLETE DATA RETURNED FROM RACROUTE AUTH REQUEST

Explanation: The RACROUTE facility did not return the Resource Profile Area (RPF) requested because RACF, or an equivalent, does not support the ENTITY=(...,PRIVATE) option of the RACROUTE TYPE=AUTH call. The information in the RPF is required to distinguish resources protected by discrete profiles from those protected by generic, as well as to identify DSTYPE=T data set profiles and TAPEVOL profiles containing TVTOC data. RACF level 1.8.1, or higher, or a functionally equivalent security product, is required for DFSMSrmmm to manage security profiles.

System action: The routine abnormally ends. The system writes a dump and RACF processing for the volume ends. The system continues as if no RACF processing were appropriate for the volume.
Operator response: Inform the system programmer.
System programmer response: Ensure RACF 1.8.1 or higher, or an equivalent security product, is installed and supports all the options of the RACROUTE TYPE=AUTH parameters. Alternatively, system support can specify that DFSMSrmmm should not maintain the RACF profiles, by specifying the initialization parameter TPRACF(N), at least until the security system can be enhanced to the required level.

EDG2202E  NO VITAL RECORDS SPECIFICATIONS FOUND

Explanation: During vital record processing, DFSMSrmm found no vital record specifications defined in the DFSMSrmm control data set. To run vital record processing, at least one vital record specification must be defined.

System action: DFSMSrmm inventory management vital record processing ends. The current inventory management request, which includes other functions, stops.

Operator response: Report the problem to the system programmer.

System programmer response: Define at least one vital record specification. Then reissue the request. If this error occurs even when there are vital record specifications in the DFSMSrmm control data set, report the problem to the IBM Support Center.

102  z/OS V1R13.0 MVS System Messages, Vol 5 (EDG-GFS)
EDG2217I • EDG2219I

EDG2217I  LOCATE FOR DATA SET dsname FAILED RETURN CODE code

Explanation: During inventory management, DFSMSrmm tried to determine if a data set is cataloged. The locate request failed.
In the message text:

  dsname  
  Is the name of the data set.

  code  
  The return code returned by the catalog locate request.

System action: DFSMSrmm assumes that the data set is cataloged and continues processing.
Operator response: None.
System programmer response: Determine from the catalog return code what corrective action is required. The next run of inventory management uses the correct catalog status when the error is corrected.

EDG2218I  RETAIN WHILE CATALOGED OPTION IGNORED - NOT SUPPORTED IF SATUPD(Y) OPTION IN USE

Explanation: During inventory management, DFSMSrmm found a data set that matches vital records specification that has the WHILECATALOG option. WHILECATALOG is only supported on a DFSMSrmm master system that has no satellite systems.
System action: DFSMSrmm continues processing, but does not do any catalog checking. Data sets are retained using the count values only.
Operator response: None.
System programmer response: If you want to use the retain-while-cataloged option, you must change the DFSMSrmm option SATUPD to SATUPD(N).

EDG2219I  FILTER PROCESSING FAILED RETURN CODE code - SKIPPING DATA SET VRS dsname

Explanation: During EDGHSKP vital records processing, DFSMSrmm checks the data set name mask and job name mask specified in a data set vital record specification. If the data set name or job name mask is not specified correctly, DFSMSrmm issues this message and sets a return code informing you that policies defined by the vital record specification were not processed.
In the message text:

  dsname  
  The vital record specification data set name mask.
EDG2220E • EDG2222E

code
The return code from DFSMSrmm filter processing support.

System action: DFSMSrmm ignores the data set vital record specification and continues processing. DFSMSrmm sets the inventory management return code to 4. If other errors are encountered during inventory management processing, DFSMSrmm might set the return code to 8 or 12.

Operator response: None.

System programmer response: Check the return code displayed in the message. DFSMSrmm sets the return code to 8 when the data set name mask or job name mask is not a valid fully qualified or generic data set name or job name. For all return codes other than 4 or 8, contact the IBM Support Center.

When DFSMSrmm sets return code 4 or 8, redefine the vital record specification using a valid fully qualified or generic data set name mask or job name mask that is acceptable to DFSMSrmm. Then rerun inventory management to use the corrected vital record specification policies. See z/OS DFSMSrmm Managing and Using Removable Media for information about defining vital record specifications.

Descriptor Code: 7

EDG2220E SORT PROCESSING FAILED RETURN CODE return_code
Explanation: During EDGHSKP vital records processing, the external sort failed.

In the message text:

return_code
The return code set by SORT.

System action: Vital records processing ends. The current inventory management request, which might include other functions, stops. DFSMSrmm issues ABEND U2201.

Operator response: Report this error to the system programmer.

System programmer response: Determine the cause of the sort error and resubmit the job. Refer to the documentation for your SORT product for details on how to obtain diagnostic messages and information. See z/OS DFSMSrmm Diagnosis Guide for information on code U2201. If you cannot correct the error, report the problem to the IBM Support Center.

Source: DFSMSrmm
Detecting Module: EDGVREC
Routing Code: 11
Descriptor Code: 7

EDG2222E LOCATION value DETERMINATION FOR LOCATION location FAILED WITH RETURN CODE return_code REASON CODE reason_code additional_information

Explanation: The DFSMSrmm subsystem issued a request to determine the location priority or location type for the specified location from another DFSMS facility and received an unexpected return code and reason code.

In the message text:

value
This is either TYPE or PRIORITY.

location
This is the location name.

return_code
This is the value returned from an internal request.
**EDG2223E**

**reason_code**
This is the value returned from an internal request.

**additional_information**
Values that you should provide to the IBM Support Center.

**System action:** Processing continues. When the problem is with PRIORITY, DFSMSrmm uses the lowest priority value. When the problem is with TYPE, DFSMSrmm uses LOCATION(CURRENT). DFSMSrmm sets a minimum inventory management return code of 4.

**Operator response:** Report the problem to the system programmer.

**System programmer response:** If the location displayed in the message text is a system-managed library, ensure that the library is attached to the system when DFSMSrmm is started. If the library is attached and the problem is still not resolved, report the problem to the IBM Support Center.

---

**EDG2223E** DYNAMIC ALLOCATION OF VITAL RECORDS SELECTION SORT FILE dd_name FAILED ERROR CODE return_code function_code error_code info_code sms_code

**Explanation:** During vital record processing, DFSMSrmm attempted to allocate or deallocate its sort input/output work files. These files are used during sorts to contain records selected from the DFSMSrmm control data set.

The size of the sort files is determined at execution time as follows:

**SRTINOUT**
Is determined by estimating the maximum number of possible data set records in the used space of the CDS.

**DATUPD**
Is determined by counting the number of data set records to be processed. Normally, non-scratch data sets are processed. For CATSYNCH processing all data set records are processed.

**VOLCON**
Is determined by estimating the maximum number of possible data set records in the used space of the CDS.

**VOLSET**
Is determined by estimating the maximum number of possible data set records in the used space of the CDS.

**CONSET**
Is determined by counting the number of volume records to be processed. Only non-scratch, non-pending release volumes are processed.

Some file sizes are estimated because they must be allocated and opened before the record numbers can be counted.

The allocation uses AVGREC=U and the size of the DFSMSrmm sort record. The primary space is set to half the determined value, and the secondary space is set equal to the primary space to enable flexible file size, and the allocation is rounded to the nearest cylinder.

In the message text:

**dd_name**
The name of the file to be allocated. It can be one of the following:
- SRTINOUT
- DATUPD
- VOLCON
- VOLSET
- CONSET

**return_code**
The DYNALLOC return code expressed in hexadecimal.
**EDG2224I**

**function_code**
One of the following codes:
- 01 - dynamic allocation failed
- 02 - dynamic de-allocation failed

**error_code**
The error code expressed in hexadecimal.

**info_code**
The information code expressed in hexadecimal.

**sms_code**
The SMS reason code in hexadecimal. It appears in the message only when the error_code is 97xx.

**System action:** DFSMSrmm inventory management vital record processing ends with ABEND code U2220 and DFSMSrmm writes a system dump.

**Operator response:** Inform the system programmer.

**System programmer response:** Use the dynamic allocation error and information codes to determine the reason for the failure and correct the problem if possible. You can check the LOGREC for additional SMS messages that describe the error. Use the AMS LISTC command to check used space in the CDS (High Used RBA - Available Space) and the number of free rack numbers available. DFSMSrmm dynamically allocates the sort files if one is not pre-allocated. If you add a sort file to the DFSMSrmm started procedure, DFSMSrmm uses it and dynamic allocation and de-allocation are skipped. If the problem cannot be identified, report the error to the IBM Support Center.

**EDG2224I** **REPEATED NAME VRS name_vrs STARTS A LOOP IN type VRS CHAIN vrs_entry**

**Explanation:** During inventory management vital record processing, DFSMSrmm has detected that a NAME vital record specification specifies the same name as used previously in the chain. DFSMSrmm cannot process the loop in the chain because it includes a retention NAME vital record specification. You can only have a loop in a vital record specification chain when the NAME vital record specifications contain no retention information.

In the message text:

**type**
This is the type of vital record specification and can be one of the following:

- **DSN**
  - DSN is a data set name in vrs_entry

- **VOL**
  - VOL is a specific or generic volume serial number in vrs_entry

**vrs_entry**

**name_vrs**

**System action:** Processing continues as if the NEXTVRS field in the NAME VRS was not specified. DFSMSrmm sets a minimum return code of 4.

**Operator response:** None.

**System programmer response:** Correct the vital record specification chain so that NAME vital record specifications are used only once in a chain that includes retention type NAME vital record specifications.

Descriptor Code: 7

EDG2225I   UNSUPPORTED VRS RECORD  vrs_type VRS IS  vrs_mask

Explanation: During inventory management vital record processing, DFSMSrmm verifies that all VRS records read from the CDS can be used successfully by the current VRSEL setting. This VRS uses options which are not supported by VRSEL(OLD).

Reasons why a VRS is unsupported are:
• Use of COUNT(0)
• Use of JOBNAME(OPEN) or JOBNAME(ABEND)

In the message text:

vrs_type
  Is the type of vital record specification. It can be one of:
  
  DSN
    DSNAME vital record specification
  
  VOL
    VOLUME vital record specification
  
  NAME
    NAME vital record specification

vrs_mask
  Is the mask that uniquely identifies the vital record specification that is not supported. For DSNAME vital record specifications the mask includes the data set name and optionally job name.

System action: Processing continues and DFSMSrmm sets a minimum return code of 4. DFSMSrmm ignores the VRS; no data sets can match to or use the VRS.

Operator response: None.

System programmer response: Switch to using VRSEL(NEW).

Source: DFSMSrmm
Detecting Module: EDGVREC0
Routing Code: N/A
Descriptor Code: N/A

EDG2226I   RETENTION INFORMATION FOUND IN NAME VRS — NAME name COUNT count RETENTION TYPE types

Explanation: DFSMSrmm lists unsupported or incorrect records. Incorrect records are those with retention type or count specified.

In the message text:

name
  The vital record specification name.

count
  The vital record specification COUNT value.

types
  The retention types specified in the NAME vital record specification and can be:
  • UNKNOWN
And optionally one or both of:
  - UNTILEXPIRED
  - WHILECATALOG

System action: Processing continues. DFSMSrmm sets a minimum return code of 4.

Operator response: None.

System programmer response: Check that the NAME vital record specifications are all correctly defined. If the
NAME vital record specifications are not correctly defined, you can use the REXX procedure EDGRVCLN to ensure
that the NAME vital record specifications are valid.

Source: DFSMSrmm
Detecting Module: EDGVREC0
Routing Code: 11
Descriptor Code: 7

EDG2227I RETENTION INFORMATION FOUND FOR NAME VRS name IN CHAIN FOR VOLUME VRS volser

Explanation: An unsupported vital record specification chain has been detected. A volume vital record specification
chain cannot include a retention NAME vital record specification.

In the message text:

name
  The vital record specification name.
volser
  The volume vital record specification.

System action: Processing continues but ignores the retention type and count from the NAME VRS. A minimum
return code of 4 is set.

Operator response: None.

System programmer response: Check that the vital record specifications are all correctly defined. Remove the
retention NAME vital record specification from the vital record specifications chained from the named volume vital
record specification.

Source: DFSMSrmm
Detecting Module: EDGVREC0
Routing Code: 11
Descriptor Code: 7

EDG2228I UNSUPPORTED CHAIN FOR NAME VRS name_vrs IN type VRS CHAIN vrs_entry

Explanation: An unsupported vital record specification chain has been detected. The following chains are not
supported but cannot be detected at the time a VRS is created:
  • A volume VRS chain cannot use ANDVRS.
  • A vital record specification with EXTRADAYS cannot be chained to using the ANDVRS operand.
  • A vital record specification with the EXTRADAYS retention type cannot chain to a non-retention NAME vital
    record specification.
  • ANDVRS cannot chain to a NAME VRS which has no retention information.
  • A NAME VRS without retention information cannot specify ANDVRS.
  • An EXTRADAYS NAME VRS cannot specify ANDVRS.

In the message text:

name_vrs
  The name of the vital record specification that identifies the point in the chain where the error occurs.
type
This is the type of vital record specification.
One of the following:
- DSN — It is a data set name in vrs_entry
- VOL — It is a specific or generic volume serial number in vrs_entry

vrs_entry
This is either the data set name and jobname, or generic volume serial number of the vital record specification at the start of the chain.

System action: Processing continues. A minimum return code of 4 is set. If ANDVRS was used in error, DFSMSrmm processes as if NEXTVRS was specified. If a non-retention vital record specification is chained from an EXTRADAYS vital record specification, the non-retention NAME vital record specification is ignored.

Operator response: None.

System programmer response: Check that the vital record specifications are all correctly defined. If ANDVRS is used to chain to an EXTRADAYS vital record specification, re-define the vital record specification specifying NEXTVRS rather than ANDVRS. If the EXTRADAYS vital record specification chains to a vital record specification that does not include retention information you must remove the non-retention NAME vital record specification from the vital record specification chain. If ANDVRS is used in a volume vital record specification chain, correct the chain to use NEXTVRS.

---

EDG2229I NUMBER OF VRS RECORDS READ IS number

Explanation: During inventory management vital record processing, DFSMSrmm counts the number of vital record specifications in the control data set, and issues this message. DFSMSrmm then checks the count against the limit specified by the VRSMIN parmlib option before performing any further processing. DFSMSrmm uses the action value specified for the VRSMIN parmlib option to determine whether to continue processing or to fail processing, if the minimum number of vital record specifications is not available for processing.

In the message text:

number
Is the number of vital record specifications read from the control data set.

System action: Processing continues based on the action value specified for the VRSMIN parmlib option.

The EDGHSKRP return code is set based on the VRSMIN option:
- For FAIL, the return code is 12.
- For WARN, the return code is 4.
- For INFO, there is no effect on the return code.

Operator response: None.

System programmer response: If the number of vital record specifications is less than the minimum number specified in the VRSMIN parmlib option, determine why the number of vital record specifications is too low. Add the vital record specifications required to satisfy the minimum number of vital record specifications or correct the parmlib option to specify a lower number.

Source: DFSMSrmm

Detecting Module: EDGVREC0
Routing Code: 11
Descriptor Code: 7
EDG2230I  NEXTVRS name_vrs DOES NOT EXIST. CHAINING vrs_type VRS IS vrs_mask.

Explanation: During inventory management vital record processing, DFSMSrmm checks all vital record specification chains by following the chain using the NEXTVRS and ANDVRS values. The vital record specification displayed in the message does not exist in the DFSMSrmm control data set.

In the message text:

name_vrs
Is the NAME vital record specification defined by NEXTVRS or ANDVRS.

vrs_type
Is the type of vital record specification that specifies the NEXTVRS or ANDVRS value. It can be one of:
- DSN - DSNNAME vital record specification
- VOL - VOLUME vital record specification
- NAME - NAME vital record specification

vrs_mask
Is the mask that uniquely identifies the vital record specification with the chaining error. For DSNNAME vital record specifications the mask includes the data set name and optionally job name.

System action: Processing continues and DFSMSrmm sets a minimum return code of 4. DFSMSrmm retains additional data sets in the current location, permanently.

Operator response: None.

System programmer response: Add the missing vital record specification or correct the NEXTVRS or ANDVRS value specified on the vital record specification displayed in the message.

EDG2235E  CATALOG SEARCH INTERFACE REQUEST FAILED RETURN CODE return_code REASON CODE reason_code MODULE ID module FOR CATALOG catalog_name

Explanation: During DFSMSrmm synchronization processing, DFSMSrmm encountered an error in the catalog search interface. The catalog search interface was not able to access the user catalog named in the message text.

In the message text:
EDG2236I • EDG2237E

`return_code`
The catalog processing return code.

`reason_code`
The catalog processing reason code.

`module`
The catalog module information.

`catalog_name`
The name of the inaccessible catalog.

**System action:** Catalog search continues to allow more catalog errors to be detected. At the end of catalog search processing, DFSMSrmm inventory management processing stops. DFSMSrmm abnormally ends and issues a code of U2201. DFSMSrmm utility EDGHSKP ends with return code of 12.

**Operator response:** None.

**System programmer response:** See [z/OS DFSMS Managing Catalogs](https://www.ibm.com) for information on possible return codes from the catalog search interface IGGCSI00. If the named user catalog is no longer needed on this system, disconnect it from the master catalog. Otherwise, make sure the catalog is available and accessible. If the problem cannot be resolved, report the problem to the IBM Support Center.

Descriptor Code: 7

EDG2241E  UNSUPPORTED LOCATION TYPE DETECTED FOR type VRS vrs_identifier

**Explanation:** During inventory management VRSEL processing, DFSMSrmm found a vital record specification in the control data set with an unsupported location type.

In the message text:

*type*
  The type of vital record specification. It can be VOLUME, DSNAME, or NAME.

*vrs_identifier*
  The vital record specification identifier:
  * For volume vital record specifications, a generic or specific volume serial number.
  * For dsname vital record specifications, a data set name mask and optionally job name
  * For name vital record specifications, a VRS name

**System action:** DFSMSrmm inventory management vital record processing continues. It processes the vital record specification as if the location is CURRENT but it does not change the vital record specification. DFSMSrmm sets a minimum return code of 4.

**Operator response:** None.

**Application Programmer Response:** Inform the system programmer. After the error has been corrected, rerun the inventory management job.

**System programmer response:** Correct the error by deleting the vital record specification using the RMM DELETVRS subcommand. Then add the correct vital record specification by using the RMM ADDVRS subcommand. You could also use the DFSMSrmm ISPF CHANGE VRS dialog to cause the vital record specification to be deleted and redefined using the correct location information. For example, add or alter the description field and the dialog takes care of adding and deleting the vital record specification.

You can also run the DFSMSrmm EDGUTIL utility with the VERIFY(VRS) parameter to check that the information recorded in the DFSMSrmm control data set is correct. Then run EDGUTIL with the MEND parameter to update the vital record specification information if needed. If you have just converted to DFSMSrmm, rerun the conversion after correcting the SYSIN statements for EDGCNVT, or report the problem to IBM Support Center so that the conversion tools can be corrected.

Detecting Module: EDGVRECC0
Routing Code: 11
Descriptor Code: 7
EDG2242I  INITIAL NUMBER OF VRS RETAINED VOLUMES = number percent%

Explanation: DFSMSrmm issues this message to the MESSAGE file during VRSEL inventory management. This message is issued for information only.

In the message text:

number
Is the number of physical and logical volumes retained by VRS control when EDGHSKP VRSEL starts. This number includes volumes that are retained by VRS (or-VRS retained) because RETAINBY(SET) and another volume was retained by VRS. This number also includes volumes that contain data sets that have been retained by VRS.

percent
Is the percentage of the total number of physical and logical volumes read from the CDS.

System action: DFSMSrmm inventory management processing continues.

Operator response: None.

System programmer response: You can use this information to determine a good setting for the VRSDROP parmlib option.

Source: DFSMSrmm

Detecting Module: EDGVRECM

EDG2243I  INITIAL NUMBER OF NEWLY ASSIGNED VOLUMES = number percent%

Explanation: DFSMSrmm issues this message to the MESSAGE file during VRSEL inventory management. This message is issued for information only.

In the message text:

number
Is the number of physical and logical volumes that are newly assigned when EDGHSKP VRSEL starts. A newly assigned volume is one that has a volume assignment date and time that is higher than the run date and time of the previous VRSEL processing and is not VRS retained.

percent
Is the percentage of the total number of physical and logical volumes read from the CDS.

System action: DFSMSrmm inventory management processing continues.

Operator response: None.

System programmer response: You can use this information to help determine a good setting for the VRSRETAIN parmlib option.

Source: DFSMSrmm

Detecting Module: EDGVRECM

Routing Code: -

Descriptor Code: -
**EDG2245I • EDG2246I**

*percent*

Is the percentage of the total number of physical and logical volumes removed from VRS control expressed as a percentage of the physical and logical volumes VRS retained at the start of VRSEL processing. See message EDG2242I for the initial count of VRS retained volumes.

**System action:** DFSMSrmm inventory management processing continues based on the action value specified for the VRSDROP parmlib option. If the VRSDROP limit is reached, the EDGHSKP return code is set based on the VRSDROP action:

- For FAIL, the return code is 12 and no volumes are dropped from VRS retention.
- For WARN, the return code is 4.
- For INFO, there is no effect on the return code.

**Operator response:** None.

**System programmer response:** You can use this information to determine a good setting for the VRSDROP parmlib option. If the limit is reached, review the inventory management processing to determine if an error occurred and why the limit is triggered. If the limit is triggered incorrectly, you might have to adjust your limit.

**Source:** DFSMSrmm

**Detecting Module:** EDGVRECM

---

**EDG2245I NUMBER OF NEWLY ASSIGNED VOLUMES TO BE RETAINED = number percent%**

**Explanation:** DFSMSrmm issues this message to the MESSAGE file during VRSEL inventory management. This message is issued for information only.

In the message text:

*number*

Is the number of physical and logical volumes to be retained by VRS control. This number includes all newly assigned volumes that are now VRS retained. This might be because RETAINBY(SET) and another volume was VRS retained, and includes all volumes that contain VRS retained data sets or are now VRS retained.

*percent*

Is the number of physical and logical volumes retained by VRS control expressed as a percentage of the newly assigned physical and logical volumes VRS at the start of VRSEL processing. See message EDG2243I for the initial count of newly assigned volumes.

**System action:** DFSMSrmm inventory management processing continues based on the action value specified for the VRSRETAIN parmlib option. If the VRSRETAIN limit is reached, the EDGHSKP return code is set based on the VRSRETAIN action:

- For FAIL, the return code is 12 and DFSMSrmm makes no updates to the CDS as a result of VRSEL processing.
- For WARN, the return code is 4.
- For INFO, there is no effect on the return code.

**Operator response:** None.

**System programmer response:** You can use this information to determine a good setting for the VRSRETAIN parmlib option. If the limit is reached, review the inventory management processing to determine if an error occurred and why the limit is triggered. If the limit is triggered incorrectly, you might have to adjust your limit.

deename FILE DYNAMIC ALLOCATION ERROR return_code error_code info_code sms_code, dsname

Explanation: An error occurred during dynamic allocation or deallocation for data set dsname. The files or data set names which appear in this message are all related to those which are required to be pre-allocated, cataloged data sets.

In the message text:

dename

Can be:

**ACTIVITY**
The activity file.

**EDGSPLCS**
The EDGSPLCS file.

**MESSAGE**
The message file.

**REPORT**
The report file.

**REPTEXT**
The report extract file.

**XREPTEXT**
The extended report extract file.

**BLANK**
The ddname was not generated by the system. Refer to the dsname that is provided in the message.

**SYSnmmm**
A system-generated ddname for the report extract file, where nnnnn is a number that is unique within the system.

**return_code**
The return code from DYNALLOC (in hexadecimal).

**error_code**
The error code (in hexadecimal).

**info_code**
The information code (in hexadecimal).

**sms_code**
The SMS reason code (in hexadecimal). It appears in the message only when the error_code is 97xx.

**dsname**
The name of the data set.

For information about these DD names and their specific requirements, see the topic of Allocating Data Sets for Inventory Management in [z/OS DFSMSrmm Implementation and Customization Guide, SC26-7405](#).

For an explanation of these codes, see [z/OS MVS Programming: Authorized Assembler Services Reference ALE-DYN](#).

System action: The DFSMSrmm inventory management job stops.
EDG2302E • EDG2303E

Operator response: Inform the system programmer. After the error has been corrected, rerun the inventory management job.

System programmer response: Correct the allocation error and resubmit the inventory management job.

EDG2306I  ONLY SATELLITE AND BACKUP PROCESSING ALLOWED ON A SATELLITE FILE - OTHER REQUESTS IGNORED

Explanation: The DFSMSrmm utility EDGHSKP requested processing other than satellite update or backup on a satellite file. Only satellite update and backup are allowed on a satellite file.

System action: Requests for supported requests will be attempted.
EDI2307I  INVENTORY MANAGEMENT TASK task_name HAS COMPLETED SUCCESSFULLY

Explanation: A DFSMSrmm inventory management task completed with a zero return code.

In the message text:

`task_name`

Can be one of:
- EXPROC - Expiration processing
- DSTORE - Storage location processing
- VRSEL - Vital records selection
- RPTEXT - Report extract processing
- CATSYNCH - Catalog synchronization

System action: The DFSMSrmm inventory management task completes successfully and processing continues.

Operator response: None.

EDI2308I  CHANGES HAVE BEEN MADE TO VRS POLICIES SINCE THE PREVIOUS INVENTORY MANAGEMENT RUN

Explanation: During inventory management processing, DFSMSrmm checks to see if any vital record specifications have been added or deleted by DFSMSrmm commands since the previous successful run of inventory management vital record processing, storage location management, or expiration processing. DFSMSrmm processing depends on the VRSCHANGE parmlib option.

System action: Processing continues based on the value of the VRSCHANGE parmlib option.

Operator response: None.

System programmer response: If the VRSCHANGE(INFO) parmlib option is in use, DFSMSrmm continues processing and no special action is required. If the VRSCHANGE(VERIFY) parmlib option is in use, DFSMSrmm stops processing and prevents this run of inventory management from continuing.

You can list the parmlib options currently in use by using the RMM LISTCONTROL OPTION subcommand, or using the CONTROL ISPF dialog.

You can run inventory management BACKUP or RPTEXT functions as long as you do not run any other inventory management functions. To run VRSEL, DSTORE, or EXPROC, you must first successfully run EDGHSKP vital record processing using the VERIFY parameter. DFSMSrmm issues return code zero for a successful run. Check the REPORT and ACTIVITY files from the VERIFY run and ensure that DFSMSrmm is performing the required retention and movement actions.

**EDG2311I** INVENTORY MANAGEMENT STOPPING BECAUSE OF VRSCHANGE(*change_option*) OPTION

**Explanation:** During inventory management processing, DFSMSrmm checks to see if any changes have been made to vital record specifications. DFSMSrmm issues this message if changes have been made and you specified an option for the VRSCHANGE parmlib option to prevent further processing.

In the message text:

*change_option*

One of the following:

- VERIFY
EDG2312I  CHANGES HAVE BEEN MADE TO VRS POLICIES SINCE THE START OF THE VERIFY RUN - A FURTHER VERIFY RUN IS REQUIRED

Explanation: During inventory management processing, DFSMSrmm checks to see if any vital record specifications have been added or deleted by DFSMSrmm commands. DFSMSrmm has detected that vital record specifications have been added or deleted since this VERIFY run was started.

System action: Processing continues based on the value of the VRSCHANGE parmlib option.

Operator response: None.

System programmer response: If the VRSCHANGE(INFO) parmlib option is in use, DFSMSrmm continues processing and no special action is required. If the VRSCHANGE(VERIFY) parmlib option is in use, DFSMSrmm fails this run of inventory management. Another VERIFY inventory management run is required to verify the changes made to vital record specifications.

You can list the parmlib options currently in use by using the RMM LISTCONTROL OPTION subcommand, or using the DFSMSrmm ISPF System Options Display panel.

You can run inventory management BACKUP or RPTEXT functions as long as they are not run with any other inventory management functions. To run VRSEL, DSTORE, or EXPROC, you must first successfully run EDGHSKP vital record processing using the VERIFY parameter.

Source: DFSMSrmm

EDG2313I VITAL RECORD SELECTION CANNOT RUN UNTIL THE CATALOGS ARE SYNCHRONIZED.

Explanation: You have attempted to run EDGHSKP with the VRSEL parameter. VRSEL relies on correct catalog status. Because the parmlib member specified the CATSYSID with specific system IDs, DFSMSrmm knows that catalogs are not shared. Thus, DFSMSrmm cannot determine the correct catalog status because the control data set and user catalogs are not currently synchronized.

System action: Processing of EDGHSKP ends with return code 12.

Operator response: Notify the system programmer.

System programmer response: To run DFSMSrmm with unshared user catalogs, you must maintain the synchronization of the control data set with the user catalogs. Run EDGHSKP CATSYNCH on each DFSMSrmm system and then rerun inventory management.

Source: DFSMSrmm

EDG2312I  EDG2313I
Routing Code: 11
Descriptor Code: 7

EDG2314I INVENTORY MANAGEMENT CANNOT RUN BECAUSE THE CATALOGS ARE SYNCHRONIZED AND CATSYSID IS NOT SPECIFIED IN PARMLIB.

Explanation: Without specifying CATSYSID, you have attempted to run EDGHSKP while the control data set and user catalogs are synchronized. Without the CATSYSID operand to specify how catalogs are shared, DFSMSrmm cannot determine exactly what sort of processing you want to run.

System action: Processing ends with return code 12.

Operator response: Notify the system programmer.

System programmer response: To correct this problem, you can take one of these actions.

• Add the CATSYSID operand to the DFSMSrmm EDGRMMxx parmlib member and refresh DFSMSrmm.
• Run EDGUTIL with PARM=UPDATE to mark the control data set as not synchronized using the CATSYNC(NO) SYSIN option.

Source: DFSMSrmm
Detecting Module: EDGMHKP
Routing Code: 11
Descriptor Code: 7

EDG2315E INVENTORY MANAGEMENT CANNOT RUN BECAUSE CONTAINER INFORMATION IS NOT CONSISTENT

Explanation: You have enabled the DFSMSrmm stacked volume support using EDGUTIL. DFSMSrmm issues this message when container information is not consistent. You might have used a lower level system to add container information for a volume since stacked volume support was enabled. You can run EDGUTIL with the MEND parameter to make the existing container information consistent.

System action: Inventory management ends.

Operator response: None.

System programmer response: Run the DFSMSrmm EDGUTIL utility with the MEND parameter to make the information consistent.

Source: DFSMSrmm
Detecting Module: EDGMHKP
Routing Code: 11
Descriptor Code: 7

EDG2316E INVENTORY MANAGEMENT CANNOT RUN BECAUSE EXTENDED BIN SUPPORT IS ENABLED

Explanation: You have enabled extended bin support using the EDGUTIL utility on a higher-level system. You are trying to run inventory management on this down level system that does not support extended bin.

System action: Inventory management ends.

Operator response: None.

System programmer response: Run inventory management on a system where extended bin support is enabled.

Detecting Module: EDGMHKP
Routing Code: 11
Descriptor Code: 7
EDG2317E MIGRATION FROM VRSEL(OLD) TO VRSEL(NEW) IS RECOMMENDED

Explanation: During inventory management vital record processing, DFSMSrmm checks the VRSEL option that you have defined in the EDGRMMxx parmlib. The VRSEL(OLD) option will be removed in a future release of z/OS. It is recommended to migrate to using VRSEL(NEW).

System action: Processing continues. A minimum return code of 4 is set.

Operator response: None.

System programmer response: Plan a migration to VRSEL(NEW). Refer to the migration planning steps documented in the z/OS DFSMSrmm Implementation and Customization Guide.

EDG2319I PROCESSING CANCELLED BY OPERATOR COMMAND AT hh:mm:ss

Explanation: DFSMSrmm issues this message to the MESSAGE file when the subsystem request for inventory management is subject to operator CANCEL command processing.

In the message text:

hh:mm:ss
This is the time that processing was ended.

System action: DFSMSrmm inventory management processing ends.

Operator response: None.

System programmer response: None.

Source: DFSMSrmm
Detecting Module: EDGHSKP, EDGVREC, EDGMUPD, EDGRPTX, EDGXRPTX

EDG2320I PROCESSING HELD BY OPERATOR COMMAND AT hh:mm:ss

Explanation: DFSMSrmm issues this message to the MESSAGE file when the subsystem request for inventory management is subject to operator HOLD command processing.

In the message text:

hh:mm:ss
This is the time that processing detected it should be held.

System action: DFSMSrmm processing waits.
EDG2403E  MOVE OF VOLUME volser DEFERRED - NO AVAILABLE EMPTY BIN NUMBERS FOR MEDIANAME medianame IN LOCATION location

Explanation:  The named volume is required to be moved to the named storage location, but there are no empty bin numbers available.

In the message text:

medianame
This is the media name, determined from the volume media name and the LOCDEF definition, for which there are no empty bin numbers. If the move is to a DFSMSrmm built-in storage location, the media name is not considered and is listed as N/A.

location
This is the name of the location to which the volume must move.

volser
This is the volume serial number of the volume to be moved.

System action:  Processing continues. A minimum return code of 4 is set. The named volume is not moved, but the required move is left pending.

Operator response:  None.

System programmer response:  Use the RMM SEARCHBIN subcommand to see if there are any empty bin numbers for the named location. Some bin numbers might have been freed by later inventory management storage location management processing. If there are too few empty bin numbers, use the RMM ADDBIN subcommand to define more bin numbers. When adding bin numbers for storage locations defined using LOCDEF, remember to specify the correct media name on the ADDBIN subcommand.

Source:  DFSMSrmm

Detecting Module:  EDGMFIO, EDGMFIC

EDG2404W  VOLUME volser FOR JOB job_name IS OPEN - VOLUME HAS EXPIRATION DATE expiration_date ASSIGNED DATE assigned_date

Explanation:  DFSMSrmm issues this message when it is possible that a job failed to close a data set as a result of a system error. The message includes the expiration date of the volume and the assigned date of the volume so that you can determine if any action is required to recover the volume. Only volumes assigned before the previous day are listed in this message. If the job writing to the named volume is still running from the previous day, no action is required.

In the message text:

volser
Volume serial number

job_name
Name of a job identified to a system

expiration_date
Volume expiration date

assigned_date
For a master or user volume, the assigned_date is the date when the volume was assigned to a user. For a scratch volume, assigned_date is the date when the volume was returned to scratch status.

**EDG2405I • EDG2410I**

**System action:** Inventory management continues and the volume status is not changed.

**Operator response:** Inform the system programmer.

**System programmer response:** If you do not want the OPEN volume to be retained, use the RMM CHANGEVOLUME subcommand with the RETPD or EXPDT operands, or the RMM DELETENVOLUME subcommand with the RELEASE option, to release the volume if it is no longer required.

**Source:** DFSMSrmm

**Detecting Module:** EDGMUPD

**Routing Code:** 11

**Descriptor Code:** 7

---

**EDG2405I**  VOLUME *volser* REJECTED. INSTALLATION OPTION PREVENTS OVERWRITE OF FILES ON MASTER VOLUMES

**Explanation:** The current request is to open an existing tape data set for output. Although you have specified the correct data set name, the installation option MASTEROVERWRITE(ADD) prevents existing data sets being overwritten. The installation option allows you to either extend the current last file on a volume or to add a new file to the volume.

In the message text:

*volser*

Volume serial number

**System action:** If DFSMSrmm is running in warning mode, the volser is used and EDG4004I is issued. Otherwise, the volser is rejected and EDG4005E or EDG4006E is issued.

**Operator response:** See the operator response for message EDG4004I or EDG4005E.

**System programmer response:** Ensure that the tape request specifies either a data set sequence number in the JCL higher that or equal to the last recorded file on the volume. If the volume was rejected because of incorrect DFSMSrmm control data set information, update the DFSMSrmm control data set.

**Source:** DFSMSrmm

**Descriptor Code:** 7
EDG2411I  VOLUME volser HAS A SECURITY CLASS NUMBER security_number WHICH IS NO LONGER DEFINED TO DFSMSrmm

Explanation: During expiration processing, the security number assigned to the volume does not match any existing value.

In the message text:

volser
Volume serial number

security_number
A number defining a security classification

System action: Expiration processing continues. DFSMSrmm uses the lowest security level for the specified volume.

Operator response: Report the message to the system programmer.

System programmer response: Correct the error by entering a security level that has been defined for your installation. Use the DFSMSrmm parmlib member SECCLS command to add the security class that matches the security class number in the message. Or issue RMM CHANGEVOLUME subcommand to change the security level of the volume to one that is currently defined.

Descriptor Code: 3

EDG2412E  MOVE OF VOLUME volser DEFERRED - VOLUME MEDIANAME medianame IS NOT ELIGIBLE FOR LOCATION location

Explanation: A volume is identified to be moved to a storage location. That storage location is not defined to accommodate a volume with the listed mediumame. The LOCDEF parameters must include either the volume's media name or * coded in the MEDIANAME operand.

In the message text:

volser
The volume serial number that could not be moved.

medianame
The media name of the volume.

location
The location to which the volume should be moved.

System action: Processing continues. A minimum return code of 4 is set.

Operator response: None.

System programmer response: Use the RMM LISTCONTROL LOCDEF subcommand to view the currently defined locations. If the volume should move to the named location, you must add its media name or * to the MEDIANAME operand on the LOCDEF parameters in parmlib for location. If the volume should not move to location, update the vital record specification which caused the move, create a new vital record specification to move the volume elsewhere, or issue the RMM CHANGEVOLUME volser LOCATION to cancel the current move and optionally specify a new destination location.

If you update the LOCDEF parameters you can use the MODIFY operator command to refresh the parameters that DFSMSrmm is using.

Source: DFSMSrmm

Detecting Module: EDGMUPD

Routing Code: 11

Descriptor Code: 7
EDG2413E  MOVE OF VOLUME volser DEFERRED - STORAGE LOCATION location IS NOT DEFINED TO DFSMSrmm

Explanation: A volume has been marked to be moved to a storage location which is not defined to DFSMSrmm. Storage locations are defined using the LOCDEF parameters in the DFSMSrmm parmlib.

In the message text:

volser
The volume serial number that could not be moved.

location
The location to which the volume should be moved.

System action: Processing continues. A minimum return code of 4 is set.

Operator response: None.

System programmer response: Use the RMM LISTCONTROL LOCDEF subcommand to view the currently defined locations. Ensure that the location named in the EDG2413E message text is defined as a storage location. If the volume should move to the named location, you must add a LOCDEF command using TYPE(STORAGE) to the DFSMSrmm parmlib defining the location. If the volume should not move to location, update the vital record specification which names the invalid location, or cancel the move using the RMM CHANGEVOLUME subcommand with the LOCATION operand.

Routing Code: 11
Descriptor Code: 7

EDG2414E  MOVE OF VOLUME volser_1 DEFERRED - VOLUME volser_2 IS STILL MOVING OUT OF LOCATION location, MEDIANAME media_name, BIN bin_number

Explanation: Inventory management DSTORE processing cannot start the move of a volume from a bin-managed storage location. Another volume is still moving out of the same bin.

In the message text:

volser_1 The volume serial number of the volume which cannot yet be moved.

volser_2 The volume serial number of the volume that is currently moving out of the bin.

location The name of a bin-managed storage location.

media_name
The media name of the bin.

bin_number
The bin number.

System action: Processing continues. A minimum return code of 4 is set. The named volume (volser_1) has not been moved and the required move is left pending.

Operator response: None.

System programmer response: Complete the move of the volume (volser_2). If the destination is a system-managed library, enter the volume into the library. Otherwise, use the RMM CHANGEVOLUME subcommand to confirm the completion of the move.

EDG2426I volume_type TOTAL NUMBER OF SCRATCH RECORDS WRITTEN = number percent%

Explanation: DFSMSrmm issues this message to the MESSAGE file when EXPROC processing for system managed volumes requests deferred processing of volumes to scratch.

In the message text:

volume_type

volume_type is one of the following:
**EDG2427I • EDG2428I**

- PHYSICAL
- LOGICAL
- RM_VRSEL
- RM_EXPDT
- TOTAL

**number**
The number of system managed volume_type volumes that are ready for returning to scratch on this system, for which a record has been written to the EDGSPLC output file.

**percent**
The percentage of volume_type volumes selected for EXPROC processing (see message EDG2435I).

**System action:** DFSMSrmm inventory management processing continues.

**Operator response:** None.

**System programmer response:** Run the EDGSPLC utility to process the scratch statements produced by EDGHSKP EXPROC processing for system managed volumes.

**Source:** DFSMSrmm

**Detecting Module:** EDGMUPD

---

**EDG2427I INITIAL NUMBER OF EXPDT RETAINED VOLUMES = number percent%**

**Explanation:** DFSMSrmm issues this message to the MESSAGE file during inventory management expiration processing. EXPDT retained volumes can be managed by either the EXPDT or the VRSEL retention method. This message is issued for information only.

In the message text:

**number**
This is the number of processed physical and logical volumes that are retained by EXPDT retention. This number includes volumes that are expiration retained because RETAINBY(SET) and another volume was EXPDT retained. VRS retained and newly assigned volumes are excluded.

**percent**
This is the number of the total number of processed physical and logical volumes read from the CDS by EXPROC processing and as restricted by the EXPROC SYSIN command.

**System action:** DFSMSrmm inventory management processing continues.

**Operator response:** None.

**System programmer response:** You can use this information to help determine a good setting for the EXPDTDROP parmlib option.

**Source:** DFSMSrmm

**Detecting Module:** EDGMUPD

---

**EDG2428I NUMBER OF EXPDT RETAINED VOLUMES TO BE DROPPED = number percent%**

**Explanation:** DFSMSrmm issues this message to the MESSAGE file during inventory management expiration processing. EXPDT retained volumes can be managed by either the EXPDT or the VRSEL retention method. This message is issued for information only.

In the message text:

**number**
This is the number of physical and logical volumes to be removed from EXPDT retention. This number includes volumes that were expiration retained because RETAINBY(SET) and another volume was EXPDT retained. Volumes removed from VRS retention during this process and those newly assigned are excluded.

**percent**
This is the number of physical and logical volumes removed from EXPDT retention expressed as a percentage of the physical and logical volumes retained by expiration date at the start of EXPROC processing.
**System action:** DFSMSrmm EXPROC inventory management processing continues based on the action value specified for the EXPDTDROP parmlib option. If the EXPDTDROP limit is reached, the EDGHSKP return code is set based on the EXPDTDROP action:

- For FAIL, the return code is 12 and no volumes are dropped from EXPDT retention and no volume updates occur as a result of VRSEL or any other inventory management processing. VRSEL data set updates have been completed.
- For WARN, the return code is 4.
- For INFO, there is no effect on the return code.

**Operator response:** None.

**System programmer response:** You can use this information to help determine a good setting for the EXPDTDROP parmlib option. If the limit is reach, review the inventory management processing to determine if an error occurred and why the limit is reached. If the limit is triggered incorrectly, you might have to adjust your limit.

    CHNG Update a record in the control data set
    GETD Read a record by key from the control data set
    GETS Read the next record from the control data set
    GTKG Read a record with the named or next higher key from the control data set
    LDEL Delete a record from the control data set
    LOCK Obtain exclusive use of the control data set
    SETP Position within the control data set
    UNLK Release exclusive use of the control data set

record_type The type of record for read, delete, and update requests. It is not provided for other function types.

    record_type can be: VOLUME, BIN, or OWNER.

identifier The record for read, delete, and update requests. It is not provided for other function types.

return_code The return code set by EDGMFIO.

reason_code The reason code set by EDGMFIO.

System action: DFSMSrmm abnormally ends with abend code U2410, and the system writes an SVC dump.

Operator response: Inform the system programmer.

System programmer response: Run the EDGUTIL VERIFY function to ensure the consistency of the DFSMSrmm control data set. If the error cannot be identified and corrected, report the problem to the IBM Support Center.

Descriptor Code: 7
**EDG2441I** ERROR CHECKING SMS ENVIRONMENT. FUNCTION function identifier - RETURN CODE return_code REASON CODE reason_code

**Explanation:** During inventory management, DFSMSrmm validates the execution environment prior to using OAM services. DFSMSrmm detected an error during validation.

In the message text:

`function`

This is the DFSMSrmm control data set function requested and can be:

- **LOCATION**
  Checks that a volume destination is valid and that the volume is defined in the volume catalog.

- **MEDIACNV**
  Checks that the required location of the volume is a known store location which supports the volume's media name.

- **SMSLEVEL**
  Checks that DFSMS/MVS is installed and that the SMS subsystem is active.

- **TCDBVOL**
  Checks that a TCDB exists and contains at least one volume.

- **VOLUME**
  Checks that a volume is defined in the volume catalog.

`identifier`

`identifier` is provided only for the `LOCATION` function, the `MEDIACNV` function, the `VOLUME` function and identifies the volume being processed. DFSMSrmm does not provide the identifier for the `SMSLEVEL` and `TCDBVOL` functions.

`return_code`

This is the return code set by either the CBRXLCS macro or SMS or DFSMSrmm.

`reason_code`

This is the reason code set by either the CBRXLCS macro or SMS or DFSMSrmm.

**System action:** Inventory management abnormally ends with abend code U2450 and DFSMSrmm writes an SVC dump in the following cases:

- For the `LOCATION` function if the return code is greater than 8.
- For the `MEDIACNV` function if the return code is greater than 8.
- For the `SMSLEVEL` function if the return code is greater than 4.
- For the `VOLUME` function if the return code is not equal to zero.

If DFSMSrmm does not issue an abend, the current volume is skipped and inventory management processing continues with the next volume.

**Operator response:** Inform the system programmer.

**System programmer response:** If the return code is 8, report the problem to the IBM Support Center. Otherwise, refer to [z/OS DFSMS OAM Planning, Installation, and Storage Administration Guide for Tape Libraries](https://www.ibm.com/support/docview.wss?uid=swg27038537) for OAM return code and reason code explanations.

EDG2448I  •  EDG2502E

Descriptor Code:  –

EDG2448I  UNEXPECTED RESULTS FOR THIS EXPROC RUN FROM EXIT exit_name - ONE OR MORE VOLUMES NOT RETURNED TO SCRATCH

Explanation:  DFSMSrmm inventory management EXPROC processing attempted to call the EDG_EXIT200 installation exit, but an error has occurred during processing.

System action:  DFSMSrmm EXPROC processing has completed, but one or more volumes that were eligible for return to scratch remain in pending release status.

Operator response:  N/A

System programmer response:  An exit module for the EDG_EXIT200 installation exit has returned an unsupported return or reason code. DFSMSrmm issues the relevant EDG0313I message for the first occurrence and writes a PDA trace entry for each occurrence. See message EDG0313I that is written to the MESSAGE file and to the system log. If you need to refer to all the errors, use ARCPRPDO to format the PDA trace entries created by module EDGCMIX during EXPROC processing. The PDA trace entry gives details of the exit name, exit module name and the values returned. Ensure that the exit module returns only supported return codes as defined in the z/OS DFSMSrmm Implementation and Customization Guide.

Routing Code: 11
Descriptor Code: 7

EDG2503E PROCESSING OF VOLUME volser1 FAILED. RACK rack_number ALREADY IN USE FOR VOLUME volser2

Explanation: During satellite update processing, the rack rack_number assigned to the volume is already occupied by another volume volser2.

In the message text:

volser1
The volume serial number from the satellite file

rack_number
The shelf location, which should be empty but has been assigned to another volume

volser2
The volume serial number already assigned to rack_number in the current DFSMSrmm control data set.

status
The status of volser2 defined in the current DFSMSrmm control data set

System action: Satellite processing abnormally ends with abend code U2500. The current inventory management activities end.

Operator response: None.

System programmer response: This message is issued because the same rack number was assigned to two different volumes from two different systems.

To correct this error, decide which volume you want assigned to the rack number provided in the message text. Move the other volume to a different rack using the RMM CHANGENVOLUME subcommand with the RACK operand. Use the RMM ADDVOLUME subcommand to assign the new rack number.

Because satellite update processing uses the volume information with the most recent date, change the volume date and time information on the system where you issued the move request. Use a date and time higher than the other systems where the volume has been added, to ensure the volume information is updated correctly. We suggest changing the description information as well, to avoid changing any significant data. Also check for any other volume that might have been added on this system.

Rerun the current satellite update processing with the same input data.

Source: DFSMSrmm
Detecting Module: EDGSUPD
Routing Code: 11
Descriptor Code: 7
EDG2504E  PROCESSING OF VOLUME volser1 FAILED. BIN bin_number ALREADY IN USE FOR VOLUME volser2

Explanation: During satellite update processing, a volume record found in the satellite changes input file was either being added to the DFSMSrmm control data set, or changed in the DFSMSrmm control data set. The bin number assigned to the incoming volume was found in the DFSMSrmm control data set referencing another volume.

In the message text:

volser1
The volume serial number being processed from the satellite changes file

bin_number
The bin number assigned to volser1 should be undefined or defined as empty on this system

volser2
The volume serial number already assigned to bin_number in the current DFSMSrmm control data set

System action: Satellite processing abnormally ends with abend code U2500. The current inventory management activities stop.

Operator response: None.

System programmer response: This error occurs because satellite update information is being exchanged between two master systems. The OPTION MASTER(Y/N) parameter should be checked and corrected as necessary. You can use DFSMSrmm TSO subcommands to correct the problem by deleting volumes from one system and adding volumes to another system.

Source: DFSMSrmm

**EDG2604E** DYNAMIC ALLOCATION OF EDGXRPTX SORT FILE FAILED. ERROR CODE return_code

*function_code* error_code *info_code*

**Explanation:** During the extended extract record processing, DFSMSrmm attempted to allocate or deallocate the report extract file.

In the message text:

*return_code*

The return code from DYNALLOC expressed in hexadecimal.

*function_code*

This is one of:

- 01 - dynamic allocation failed
- 02 - dynamic deallocation failed

*error_code*

The error code expressed in hexadecimal.

*info_code*

The information code expressed in hexadecimal.

For an explanation of these codes, see [z/OS MVS Programming: Authorized Assembler Services Reference ALE-DYN](#).

**Source:** DFSMSrmm

**Detecting Module:** EDGXRPTX

**System action:** DFSMSrmm inventory management report extract processing ends with ABEND code U2604 and DFSMSrmm writes a system dump.

**Operator response:** Inform the system programmer.

**System programmer response:** Use the dynamic allocation error and information codes to determine the reason for the failure and correct the problem if possible. If the problem cannot be identified, report the error to the IBM Support Center.

**EDG3001E** DFSMSrmm SUBSYSTEM IS NOT ACTIVE

**Explanation:** The DFSMSrmm subsystem is not active. DFSMSrmm TSO subcommands cannot be used to display or alter information contained within the DFSMSrmm control data set.

**System action:** The request fails.

**Operator response:** Start the DFSMSrmm subsystem, using your installation's procedures.

**EDG3000E** RMM COMMAND IS NOT APF AUTHORIZED

**Explanation:** The DFSMSrmm command processor is in a library that is not APF authorized, does not appear in the AUTHCMD list in the IKJTSOxx member of SYS1.PARMLIB, or does not have the AC(1) link-edit option.

**System action:** The request fails.

**Operator response:** None.

**System programmer response:** Add the command name to the AUTHCMD list in the IKJTSOxx member of SYS1.PARMLIB. If the library containing the command is not in the APF list (IEAAPFx member of SYS1.PARMLIB), either move the command to an authorized library, or update the APF list to add the new library. If the link-edit information is incorrect, correct it, link-edit the module again, and do an LLA refresh. If DFSMSrmm is not installed correctly or LPA code is changed, you might need to re-IPL the system with the CLPA option.

EDG3025I  continue_information

Explanation: An RMM TSO SEARCH subcommand specified the CONTINUE operand and more records may exist.
In the message text:

continue_information

This is the exact value to be used for the CONTINUE operand of the search command that continues the search.

System action: The command completes.

Operator response: None.

Application Programmer Response: To get the next set of records, input the text of the message as the continuation
information in the CONTINUE operand of the repeated search subcommand.

Source: DFSMSrmm
Detecting Module: EDGMTSO

EDG3026E  SEARCH SUBCOMMAND INTERRUPTED BY OPERATOR COMMAND

Explanation: The SEARCH subcommand you issued was interrupted by a CANCEL command.

System action: The subcommand fails.

Operator response: None.

Application Programmer Response: If you need more data than that returned by SEARCH, reissue the
subcommand.

EDG3027E  SUBCOMMAND INTERRUPTED BY OPERATOR COMMAND

Explanation: The ADD or DELETE subcommand you issued with COUNT greater than 1 is interrupted by a CANCEL command.

System action: The subcommand fails.

Operator response: None.

Application Programmer Response: Use the information returned by the command to determine how many resources were added or deleted. Adjust the subcommand for reissuing if you want to finish adding or deleting the resources.

Source: DFSMSrmm

Detecting Module: EDGTSO

EDG3028I  PROCESSING INTERRUPTED BY ATTN

Explanation: You used the attention key (ATTN) to interrupt DFSMSrmm subsystem request processing. The RMM TSO command processor cannot determine whether your command is completed or not. If you issued an ADD or DELETE subcommand with the subsystem, the request may not be completed. When you specify COUNT, the request may only be partially completed.

System action: The subcommand is interrupted.

Operator response: None.

Application Programmer Response:
- If you used an ADD or DELETE subcommand, use the SEARCH command to determine whether your request was processed.
- If you specified a COUNT number greater than 1, determine how many resources were added or deleted.
- If you issue the subcommand again, adjust the values to account for the completed processing before the attention is interrupted.

Descriptor Code: 7
EDG3203I • EDG3205E

EDG3203I   SEARCH COMPLETE - MORE ENTRIES MAY EXIST

Explanation: This message is issued for information only. The RMM SEARCH subcommand was specified with the LIMIT operand. DFSMSrmm returned the number of entries specified by the LIMIT operand. There might be more entries that match the search criteria.

If you issued a SEARCHVRS request with the CHAIN operand, the amount of information DFSMSrmm returns exceeds the DFSMSrmm buffer size.

System action: Processing continues.

Operator response: None.

Application Programmer Response: You can reissue the subcommand specifying a higher limit value or LIMIT(*)

To get more vital record specifications returned, reissue the SEARCHVRS request with the CHAIN operand and use the last entry shown as the starting point for the search.

Note: Specifying LIMIT(*) can return an extremely large number of entries.

Descriptor Code:  7

---

EDG3213D  ANOTHER GETVOLUME CURRENTLY IN PROGRESS - ENTER "RETRY", "CANCEL", OR "IGNORE"

Explanation:  DFSMSrmm issues this message when a user invokes TSO RMM GETVOLUME subcommand, while another previously invoked GETVOLUME subcommand is being processed for a system managed volume and has not yet completed. Subcommand processing has already waited for the previous request to complete. Either there is a problem or the previous GETVOLUME has been running at a time of system problems.

System action:  The command processor prompts the operator to reply RETRY, CANCEL or IGNORE. When the reply is RETRY, the command processor continues to wait for the other GETVOLUME request to complete.
When the reply is CANCEL, DFSMSrmm fails the new request without waiting for the other request to complete.
When the reply is IGNORE, the GETVOLUME processing continues regardless that another GETVOLUME request is in progress.

**Operator response:** Reply as described in the following table:

<table>
<thead>
<tr>
<th>Operator Reply</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>RETRY</td>
<td>The subcommand continues to wait for the other GETVOLUME request to complete.</td>
</tr>
<tr>
<td>CANCEL</td>
<td>DFSMSrmm fails the new request. The system issues corresponding return and reason codes and message EDG3215I.</td>
</tr>
<tr>
<td>IGNORE</td>
<td>the GETVOLUME processing continues regardless that the previous GETVOLUME request may not yet have completed.</td>
</tr>
</tbody>
</table>

Decide which is the best reply based on your knowledge of your systems. You can use the IGNORE reply to clean up from possible error situations when a previous GETVOLUME request started and has not completed correctly. For example, the system failed in the middle of the request. Use the F DFRMM,QUERY ACTIVE operator command to see if any other subsystem requests are active on any of the systems sharing the DFSMSrmm CDS.

**System programmer response:** Advise the operator on the best response for your installation.

EDG3254E  CHANGE REJECTED BECAUSE THE VOLUME IS ALREADY PART OF AN EXISTING MULTIVOLUME SEQUENCE

Explanation:  An RMM CHANGEVOLUME subcommand was issued with the PREVVOL operand. The volume specified in the request has a next volume defined. The PREVVOL operand can only be used with a volume that is not part of a multiple volume sequence, or that is at the end of a multiple volume sequence.

System action:  The request fails.

Operator response:  None.

Application Programmer Response:  Reissue the RMM CHANGEVOLUME subcommand without the PREVVOL operand, or after removing the subsequent volumes in the multiple volume sequence. To remove the subsequent volumes in the sequence, issue the RMM CHANGEVOLUME subcommand for each volume in the sequence, starting with the last volume in the sequence.

**EDG3268I**  "UNABLE TO OPEN CLIST DATA SET dname"

**Explanation:** The RMM SEARCH subcommand specified the CLIST operand to create a data set of entries that meet the search criteria. The CLIST data set has been allocated, but can not be opened.

In the message text:
EDG3269I  CLIST DATA SET ORGANIZATION IS NOT SEQUENTIAL OR PARTITIONED DSN=dsname

Explanation:  The RMM SEARCH subcommand specified the CLIST operand to create a data set of entries that meet the search criteria. The CLIST data set was pre-allocated but it has an unsupported data set organization. The data set must be either a physical sequential data set or a partitioned data set.

In the message text:

*dsname*  
The name of the allocated CLIST data set.

System action:  The subcommand fails.

Operator response:  None.

Application Programmer Response:  Determine the cause from the additional error messages issued by the system. Correct the error and rerun the subcommand.

Source:  DFSMSrmm

Detecting Module:  EDGTSO

Routing Code:  11

Descriptor Code:  7

EDG3270I  CLIST DATA SET IS TOO SMALL

Explanation:  The RMM SEARCH subcommand specified the CLIST operand to create a data set of entries that meet the search criteria. The CLIST data set was not large enough to contain all the entries that met the search criteria.

System action:  The subcommand fails.

Operator response:  None.

Application Programmer Response:  If you created the data set, delete it, and reallocate it as either sequential or partitioned. If the data set was created using a data class defined by your storage administrator, the data class data set organization is incorrect. Correct the error and rerun the subcommand.

EDG3272I  LOCATION NAME locname IS NOT DEFINED

Explanation:  DFSMSrmm validates the location and library names that you use in the DFSMSrmm TSO subcommands to make sure that they have been defined to DFSMSrmm or to SMS. The location specified is not defined to either DFSMSrmm or SMS or the SMS library type is not known. You cannot use a distributed VTS library name in the DFSMSrmm subcommands.

In the message text:
locname
   The name of a location that should be defined in the SMS configuration or defined as a storage location.

System action: The subcommand fails.

Operator response: If the library is defined, but is currently offline, vary the library online.

Application Programmer Response: Use the names of libraries that are defined in the active SMS configuration or locations that are defined to DFSMSrmm. ISMF can be used to list libraries that are defined. If ISMF does not list the library type, the library must be varied online before DFSMSrmm allows the library name to be used. If you have more than one system, ensure that you have issued the request on the correct system, as DFSMSrmm can only process the command on the system where the library is defined.

If the location is the name of a storage location, ensure that the location is defined as a storage location using LOCDEF in the DFSMSrmm parmlib.

Detecting Module:  EDGMTSO
Routing Code:  11
Descriptor Code:  7

EDG3290I  CONFIRM OF VOLUME "MOVE" OR "RETURN" OR "REPLACE" RELEASE ACTIONS IS NOT SUPPORTED WHILE THE VOLUME IS LIBRARY RESIDENT

Explanation:  You attempted either to confirm a volume move out of an automated or manual tape library or a return to owner release action. The volume has not been ejected from the library. You must first eject the volume before DFSMSrmm can accept confirmation of these actions.

System action:  The subcommand fails.

Operator response:  None.

Application Programmer Response:  For confirmation of release actions, use the RMM CHANGEVOLUME subcommand with the EJECT operand to cause the volume to be ejected. For confirmation of volume movement, if DFSMSrmm already shows the volume to be in transit, use the ISMF EJECT or operator EJECT command to cause the volume to be ejected. For confirm return to owner, collect the volume from the library, return the volume to its owner, and then retry the command. For confirm replace, collect the volume from the library, substitute a new volume with the same volume serial number, and then re-enter the volume. For confirm move, collect the volume from the library, complete the required move and then retry the command.

Source:  DFSMSrmm
Detecting Module:  EDGMTSO
Routing Code:  11
Descriptor Code:  7

EDG3291I  ENTRY OF VOLUME TO SYSTEM MANAGED LIBRARY REJECTED - RACK NUMBER MUST EQUAL VOLUME SERIAL NUMBER

Explanation:  You attempted to enter a volume in a system-managed tape library. DFSMSrmm checks that the volume has a standard label and has the same internal and external volume serial numbers. The external volume serial number and the rack number must be the same.

System action:  The subcommand fails.

Operator response:  None.

Application Programmer Response:  If you are adding a new volume ensure that a rack number already exists with the same number as the volume serial number. If you are changing an existing volume, move the volume to a different rack number and change the external label so the volume can be added to a system-managed tape library.
EDG3292I LIBRARY NAME REJECTED - VOLUME IS ALREADY IN LIBRARY library_name

Explanation: You attempted to set the name of a library for a volume. DFSMSrmm attempts to get that volume defined in the volume catalog, but first checks to see if the volume is already defined in the volume catalog. This volume is defined already, and is defined as being in a different library than the one named in your command.

In the message text:

library_name
   The name of the 3495 Tape Library Dataserver the volume is current in.

System action: The subcommand fails.

Operator response: None.

Application Programmer Response: Correct the command to use the correct library name.

Source: DFSMSrmm
Detecting Module: EDGLOCV
Routing Code: 11
Descriptor Code: 7

EDG3293I CANNOT SPECIFY STORENUMBER(99999) WITH NEXTVRS OPERAND

Explanation: You have asked DFSMSrmm to retain all copies of a data set or volume in a location and, at the same time, tried to name a subsequent vital record specification. If all copies are to be retained in the current location, there is no need for any subsequent vital record specifications.

System action: The subcommand fails.

Operator response: None.

Application Programmer Response: Correct the command by either removing the NEXTVRS operand or reducing the STORENUMBER value.

Source: DFSMSrmm
Detecting Module: EDGTSO
Routing Code: 11
Descriptor Code: 7

EDG3295I LOCATION CHANGE REJECTED AS THE VOLUME IS ALREADY MOVING

Explanation: You were trying to change the location where a volume resides. The volume is already marked as moving from one location to another. You can only request this move manually for volumes that are not already moving between locations.

System action: The subcommand fails.

Operator response: None.

Application Programmer Response: When you have confirmed that the move is completed, retry the request to move the volume to a new location using the LOCATION operand.

Source: DFSMSrmm
Detecting Module: EDGMTSO
Routing Code: 11
EDG3296I  NO VITAL RECORD SPECIFICATION EXACTLY MATCHES THE ONE YOU SUPPLIED

Explanation: You have used the RMM SEARCHVRS subcommand with the CHAIN operand to request a list of chained vital records specifications from the DFSMSrmm control data set. When the CHAIN operand is used, DFSMSrmm only looks for a specification that exactly matches the criteria you specify.

System action: The subcommand fails.

Operator response: None.

Application Programmer Response: Correct the DSNAME, VOLUME, or NAME operand value so that you specify an existing specification. If you do not know the exact name to use, reissue the RMM SEARCHVRS subcommand, without the CHAIN operand, to first determine which vital record specifications exist.

Source: DFSMSrmm
Detecting Module: EDGMTSO
Routing Code: 11
Descriptor Code: 7

EDG3297I  COUNT MUST BE GREATER THAN THE SUM OF DELAY AND STORENUMBER WHEN NEXTVRS IS SPECIFIED

Explanation: The combination of COUNT, DELAY and STORENUMBER values is not correct for the RMM ADDVRS subcommand issued. The value of COUNT must be greater than the sum of the DELAY and STORENUMBER values when a subsequent vital record specification is to be used.

System action: The subcommand fails.

Operator response: None.

Application Programmer Response: Correct either the COUNT, DELAY, or STORENUMBER values, or do not use the NEXTVRS operand.

Source: DFSMSrmm
Detecting Module: EDGTSO
Routing Code: 11
Descriptor Code: 7

EDG3298I  A DELAY VALUE CANNOT BE SPECIFIED FOR THE HOME LOCATION

Explanation: You have tried to specify a number of days to delay a vital record before it is sent to its home location. The volume should already be in its home location.

System action: The subcommand fails.

Operator response: None.

Application Programmer Response: Correct either the DELAY or LOCATION values.

EDG3308I  CHAIN OPERAND SPECIFIED WITHOUT ONE OF DSNAME, NAME OR VOLUME OPERANDS

Explanation: You have used the SEARCHVRS subcommand with the CHAIN operand to request a list of chained vital records specifications from the DFSMSrmm control data set. When the CHAIN operand is used, you must specify which vital record specification to start the chain with.

System action: The subcommand fails.

Operator response: None.

Application Programmer Response: Add the DSNAME, VOLUME or NAME operands so that you specify an existing specification. If you do not know the exact name to use, reissue the RMM SEARCHVRS subcommand without the CHAIN operand to first determine which vital record specifications exist.

Source: DFSMSrmm

Detecting Module: EDGTSO

Routing Code: 11

Descriptor Code: 7

EDG3309I  CONFIRM MOVE FAILED - THE VOLUME HAS NOT BEEN EJECTED

Explanation: You attempted to confirm the completion of the move for a single volume that is being moved from a system-managed library. DFSMSrmm checks to see if the volume is in the library before allowing the move to be confirmed.

System action: The subcommand fails.

Operator response: None.

Application Programmer Response: Eject or export the volume from the library. You can use the RMM CHANGEOJECT subcommand with the EJECT operand to get a physical volume ejected from a library. Use export processing to remove logical volumes from a library.

Source: DFSMSrmm

Detecting Module: EDGMTSO

Routing Code: 11

Descriptor Code: 7

EDG3310I  REQUEST NOT SUPPORTED ON THIS SYSTEM - VOLUME LOCATION location IS NOT DEFINED TO DFSMS

Explanation: You attempted to change information about a volume that is resident in a system-managed tape library. The library name is not defined in the current SMS configuration on this system or the library type is not known.

In the message text:

location

The location that DFSMSrmm knows the volume to be in.

System action: The subcommand fails.

Operator response: If the library is defined, but is currently offline, vary the library online.

Application Programmer Response: If the library is defined, but the library type is not known, the library must be varied online before DFSMSrmm allows the library name to be used. If you have more than one system, ensure that you have issued the request on the correct system, as DFSMSrmm can only process the command on the system where the library is defined.

EDG3311I UPDATE OF VOLUME CATALOG FAILED RETURN CODE code REASON CODE reason_code

Explanation: You attempted to eject a volume, or delete information or change information for a volume or a data set on a volume that is currently defined in a volume catalog. The DFSMSrmm request to delete or update volume information in the volume catalog failed.

In the message text:

code    The return code that is set by the CBRXVOL macro.

reason_code
    The reason code that is set by the CBRXVOL macro.

System action: The subcommand fails.

Operator response: None.

System programmer response: Refer to the CBRXVOL return codes or catalog service reason codes in z/OS DFSMSdfp Diagnosis for a description of the possible codes. If you are trying to update recording format, media type, compaction, or special attributes, you might have specified a combination of options that is not supported. If so, select a valid combination and try again.

EDG3314I MOVE OF VOLUME REJECTED - VOLUME MEDIANAME medianame IS NOT ELIGIBLE FOR LOCATION location

Explanation: You issued an RMM CHANGEVOLUME subcommand to move a volume to a storage location. That storage location is not defined to accommodate a volume with the listed media name. The installation’s LOCDEF parameters must include either the volume’s media name or * coded in the MEDIANAME operand.

In the message text:

medianame
The medianame of the volume.

location
The location to which you requested the volume be moved.

System action: The command fails.
Operator response: None.

System programmer response: Use the RMM LISTCONTROL LOCDEF command to view the currently defined locations. If the volume should be moved to the named location, you must add its media name or * to the MEDIANAME operand on the LOCDEF parameters in parmlib for location.

If you update the LOCDEF parameters you can use the MODIFY operator command to refresh the parameters that DFSMSrmm is using.

Descriptor Code: 7

EDG3325I CHAIN OPERAND SPECIFIED WITHOUT A SPECIFIC DATA SET OR VOLUME

Explanation: You have used the RMM SEARCHDATASET or RMM SEARCHVOLUME subcommands with the CHAIN operand to request a list of chained resources from the DFSMSrmm control data set. When the CHAIN operand is used, you must specifically identify a resource in the chain. For data set, you must specify a non-generic data set name, a volume serial number, and optionally a file sequence number. For volumes, you must specify a non-generic volume serial number.

System action: The command fails.

Operator response: None.

Application Programmer Response: Add the DSNAME, VOLUME, and optionally FILESEQ operands so that you specify an existing resource in the chain. The data set name and volume serial number must be non-generic. If you do not know the exact name to use, reissue the RMM SEARCHDATASET or RMM SEARCHVOLUME subcommand without the CHAIN operand to first determine which resources might exist.
EDG3326I  A CURRENT LABEL VERSION HAS BEEN SPECIFIED FOR A VOLUME THAT HAS A LABEL TYPE OTHER THAN AL

Explanation: The RMM ADDVOLUME or RMM CHANGEVOLUME subcommand has been entered. You can specify a current label version value for a tape volume which does not have AL type labels.

System action: The subcommand fails.

Application Programmer Response: Reissue your request ensuring that a valid combination of label type and label version is specified. Current label version can only be specified for tape volumes recorded, or being added or changed, which have a AL label type.

EDG3327I  DATA SET NAME MASK TOO LONG FOR A GDG VRS

Explanation: The data set name mask specified for a GDG type of vital record specification is too long to allow the GDG data set name suffix to be added by DFSMSrmm during vital record processing.

System action: The subcommand fails.

Operator response: None.

Application Programmer Response: Correct the ADDVRS subcommand to specify a shorter data set name mask or do not specify the GDG operand. Refer to z/OS DFSMSrmm Managing and Using Removable Media for information on the RMM TSO ADDVRS subcommand.

EDG3328I  type RECORD key CHAINED FROM typef RECORD keyf WAS NOT FOUND

Explanation: You have used the RMM SEARCHDATASET or RMM SEARCHVOLUME subcommands with the CHAIN operand to request a list of chained resources from the DFSMSrmm control data set. Information obtained from an existing record in the DFSMSrmm control data set identified a resource in the chain, but that resource could not be found in the control data set.

In the message text:

- type: Identifies the resource type that could not be found which can be: VOLUME or DATASET.
- key: Unique information to identify the resource not found.
  - The volume serial number for volumes.
  - Data set name, volume serial number, and file sequence number for data sets.
- typef: Identifies type of the resource that points to the missing resource that could not be found. typef can be: VOLUME or DATASET.
- keyf: Unique information to identify the resource chained to the resource not found.
  - The volume serial number for volumes.
EDG3329I  EJECT IS NOT SUPPORTED FOR A PRIVATE LOGICAL VOLUME

Explanation: You specified the EJECT operand on the RMM CHANGEVOLUME subcommand for a virtual tape server resident logical volume. DFSMSrmm only allows you to eject a scratch logical volume. Ejecting a scratch logical volume results in the volume being purged from the Library Manager database.

System action: The command fails.

Application Programmer Response: You cannot eject a private logical volume using the RMM CHANGEVOLUME subcommand with the EJECT operand. To move a volume from the VTS, you must use export processing. To use DFSMSrmm support for export processing, you can use the RMM CHANGEVOLUME subcommand with the LOCATION operand. Using the LOCATION operand, you are requesting that DFSMSrmm change the location of the volume. Then run DFSMSrmm inventory management later to move the volume to the location. You can then use library export processing to remove the logical volume from the virtual tape server on a stacked volume.

Source: DFSMSrmm

EDG3330I  VOLUME TYPE AND LOCATION ARE INCONSISTENT

Explanation: You specified an incorrect volume TYPE for a system managed volume. You cannot specify TYPE(LOGICAL) when the location is a non-VTS system managed library. You cannot specify TYPE(PHYSICAL) when the location is a VTS system managed library.

System action: The command fails.

Application Programmer Response: Specify the correct value for the TYPE operand, or use the DFSMSrmm default value. If the TYPE is correct, ensure that the correct location name is specified.

Source: DFSMSrmm

EDG3331I  RACK OR POOL OPERANDS ARE NOT SUPPORTED FOR A LOGICAL VOLUME

Explanation: You have specified the RACK or POOL operand on the RMM ADDVOLUME or RMM CHANGEVOLUME subcommands. For RMM ADDVOLUME, you also specified the TYPE(LOGICAL) operand. For CHANGEVOLUME, you specified the TYPE(LOGICAL) operand or the volume is already defined as a logical volume.

System action: The command fails.

Application Programmer Response: Do not specify the RACK or POOL operands because a logical volume cannot
have a rack number and can only be pooled based on the volume serial number prefix.

Source: DFSMSrmm
Detecting Module: EDGMTSO
Routing Code: 11
Descriptor Code: 7

EDG3332I A RACK NUMBER IS NOT SUPPORTED FOR A LOGICAL VOLUME

Explanation: You have specified the TYPE(LOGICAL) operand on the RMM CHANGEVOLUME subcommand for a volume. The volume defined to DFSMSrmm has an existing rack number which is different than the volume serial number. Rack numbers are not supported for logical volumes.

System action: The command fails.

Application Programmer Response: If the volume is a logical volume, use the RMM CHANGEVOLUME subcommand with the NORACK operand to remove the rack number from the volume. The volume is pooled by DFSMSrmm using its volume serial number rather than its rack number. This might move the volume to a different volume pool defined using the DFSMSrmm EDGRMMxx VLPOOL command if the rack number and the volume are not the same.

Source: DFSMSrmm
Detecting Module: EDGMTSO
Routing Code: 11
Descriptor Code: 7

EDG3333I UNSUPPORTED HOME LOCATION FOR A LOGICAL VOLUME

Explanation: You have issued the RMM CHANGEVOLUME subcommand with a home location name other than SHELF or the name of a virtual tape server library.

System action: The command fails.

Application Programmer Response: If the logical volume is already in the virtual tape server, specify the library name. Otherwise, you can specify SHELF or any virtual tape server library name.

Source: DFSMSrmm
Detecting Module: EDGMTSO
Routing Code: 11
Descriptor Code: 7

EDG3334I LIBRARY TYPE CANNOT BE DETERMINED

Explanation: You issued an RMM TSO subcommand against a system-managed volume and DFSMSrmm needs to know if the library is a VTS. DFSMSrmm attempts to process the subcommand without the need to know if a volume is a logical volume or physical volume or in a virtual tape server library. Some requests require this information. Therefore the library must be correctly configured. The system obtains the required information at IPL time and at ACTIVATE IODF, and requires at least one tape drive operational.

System action: The command fails.

Application Programmer Response: Correct any configuration problems so that DFSMSrmm can determine if the library is a virtual tape server.

Source: DFSMSrmm
Detecting Module: EDGMTSO
Routing Code: 11
Descriptor Code: 7
EDG3335I  NEWVOLUME IS NOT SUPPORTED FOR VOLUME TYPE

Explanation:  You have issued a DFSMSrmm TSO subcommand with the NEWVOLUME operand for a volume that does not allow you to change the volume serial number. You cannot change the serial number for a logical volume or a stacked volume.

System action:  DFSMSrmm fails the command request.

Operator response:  None.

Application Programmer Response:  Ensure that the volume is defined as the correct type.

Source:  DFSMSrmm

Detecting Module:  EDGMTSO

Routing Code:  11

Descriptor Code:  7

EDG3336I  STACKED VOLUME IS NOT EMPTY

Explanation:  You attempted to delete a stacked volume from the DFSMSrmm control data set but the stacked volume is still identified as the container for one or more volumes.

System action:  DFSMSrmm fails the command.

Operator response:  None.

Application Programmer Response:  To delete a stacked volume:
1. Use RMM SEARCHVOLUME CONTAINER( stacking_volume) to identify all contained volumes.
2. Remove the contained volumes.
3. Delete the stacked volume.

Source:  DFSMSrmm

Detecting Module:  EDGMTSO

Routing Code:  11

Descriptor Code:  7

EDG3337I  STACKED VOLUME CONTAINER DOES NOT EXIST

Explanation:  You have attempted to associate a volume with a stacked volume container. The stacked volume is not defined to DFSMSrmm.

System action:  DFSMSrmm fails the command.

Application Programmer Response:  To associate a volume with a stacked volume:
1. Define the stacked volume container to DFSMSrmm.
2. Specify the CONTAINER operand on the RMM ADDVOLUME or RMM CHANGEVOLUME subcommand for the volume you are adding to the container.

Source:  DFSMSrmm

Detecting Module:  EDGMTSO

Routing Code:  11

Descriptor Code:  7

EDG3338I  INITIALIZE ACTION NOT SUPPORTED FOR A STACKED VOLUME

Explanation:  You requested the relabeling of a stacked volume. This is not supported because the stacked volume cannot be processed on a host system.

System action:  DFSMSrmm fails the command.
EDG3339I  •  EDG3341I

Operator response:  None.

Application Programmer Response:  If you issued the RMM CHANGEVOLUME subcommand, you can specify INITIALIZE(Y) only if you also specify CONFIRMRELEASE(INIT) in the same request.

EDG3339I  RELEASE IS NOT SUPPORTED FOR A STACKED VOLUME

Explanation:  You have used the RMM DELETEVOLUME subcommand to release a volume. Stacked volumes are restricted to MASTER status and cannot be released.

System action:  DFSMSrmm fails the command.

Operator response:  None.

Application Programmer Response:  Do not release stacked volumes.

Source:  DFSMSrmm

Detecting Module:  EDGMTSO

Routing Code:  11

Descriptor Code:  7

EDG3340I  STORAGE GROUP AND LIBRARY COMBINATION IS NOT VALID

Explanation:  You have specified a storage group name for a system-managed volume. The storage group name must be a valid storage group in the active SMS configuration and must be valid for the library associated with the volume. DFSMSrmm checks the volume's new location, current location, and then home location to determine if a volume is system-managed. DFSMSrmm validates the storage group name with the identified location.

System action:  DFSMSrmm fails the command.

Operator response:  None.

Application Programmer Response:  Specify a valid storage group name, optionally with a location name, using a value from the active SMS configuration.

Source:  DFSMSrmm

Detecting Module:  EDGMTSO

Routing Code:  11

Descriptor Code:  7

EDG3341I  VOLUME TYPE INCONSISTENT WITH SYSTEM-MANAGED INFORMATION

Explanation:  You have specified an incorrect volume type for a system-managed volume. DFSMSrmm issues this message for a stacked volume when you have specified TYPE(STACKED) and the TCDB contains details of the volume or when the Library Manager identifies the volume as a stacked volume and the type is not defined to DFSMSrmm as STACKED.

System action:  DFSMSrmm fails the command.

Operator response:  None.

Application Programmer Response:  Specify the correct volume type or use the RMM ADDVOLUME subcommand processing default volume type value.

Source:  DFSMSrmm

Detecting Module:  EDGMTSO
EDG3342I  CONTAINER VALIDITY CHECKING FAILED

**Explanation:** You have specified a stacked volume name using the CONTAINER operand of RMM CHANGEVOLUME subcommand. DFSMSrmm validity checking ensures that the volume has previously been exported to the specified stacked volume and that the copy on the stacked volume is still valid. DFSMSrmm validity checking uses values internal to DFSMSrmm in the form of an export token that is created when the original export was performed. DFSMSrmm also checks the name of the volume’s previous stacked volume container and if the stacked volume is export recorded. If the stacked volume or exporting volume has been written to since the original export, DFSMSrmm resets the validation values to prevent virtual export.

**System action:** DFSMSrmm fails the command.

**Operator response:** None.

**Application Programmer Response:** Specify the correct stacked volume container name or accept that the exported copy on the stacked volume is no longer valid. You can use the RMM CHANGEVOLUME FORCE operand to override the DFSMSrmm action.

**Source:** DFSMSrmm

**Detecting Module:** EDGMTSO

**Routing Code:** 11

**Descriptor Code:** 7

EDG3343I  SCRATCH STATUS IS NOT SUPPORTED FOR A STACKED VOLUME

**Explanation:** You have used the RMM ADDVOLUME subcommand to define a stacked volume to DFSMSrmm. Stacked volumes are restricted to MASTER status.

**System action:** DFSMSrmm fails the command.

**Operator response:** None.

**Application Programmer Response:** Add stacked volumes to DFSMSrmm specifying MASTER status and an owner ID.

**Source:** DFSMSrmm

**Detecting Module:** EDGMTSO

**Routing Code:** 11

**Descriptor Code:** 7

EDG3344I  VOLUME CATALOG INFORMATION CONFLICTS WITH LIBRARY MANAGER INFORMATION

**Explanation:** You issued the RMM ADDVOLUME subcommand to add a logical or physical volume. The volume is defined in the Library Manager database, but the volume is not defined in the volume catalog (TCDB). The logical or physical volume must be defined in both the Library Manager database and the volume catalog.

**System action:** The command fails.

**Operator response:** None.

**System programmer response:** Update the TCDB or Library Manager database so that they contain the same information about the volume. For example, you can use the IDCAMS CREATE VOLUMEENTRY subcommand to add the volume to the volume catalog (TCDB).

**Source:** DFSMSrmm

**Detecting Module:** EDGMTSO

**Routing Code:** 11

**Descriptor Code:** 7
EDG3345I • EDG3347I

EDG3345I  MANUAL CARTRIDGE ENTRY FAILED - NO MEDIA TYPE SPECIFIED

Explanation: You are moving a volume to a manual tape library using the RMM CHANGECARTRIDGE subcommand with the CONFIRMMOVE operand. You specified a volume that does not have valid MEDITYPE information defined to DFSMSrmm.

A media type is required when adding a volume to a system-managed library.

System action: The command fails.

Operator response: None.

System programmer response: Use the MEDIATYPE operand to specify a valid type of media. Also specify a valid recording format if the volume is not a scratch volume. Use the RECORDINGFORMAT operand to specify the recording format.

EDG3347I  CANCEL MOVE FAILED, BIN IS ALREADY IN USE

Explanation: You were trying to cancel the move of a volume from a bin-managed storage location, but the bin is already being used by another volume.

System action: DFSMSrmm fails the command.

Operator response: None.

System programmer response: Reissue the RMM CHANGEVOLUME LOCATION command, but add the BIN operand with an empty bin number.

Source: DFSMSrmm
Detecting Module: EDGMTSO
Routing Code: 11
EDG3348I  LOCATION NAME locname IS NOT DEFINED AS A HOME LOCATION

Explanation: A volume’s home location can be any library location, SHELF or a storage location defined as a home storage location using the DFSMSrmm parmlib LOCDEF command. The location you have specified on the subcommand is not defined to DFSMSrmm as a home storage location.

In the message text:

locname                The name of a location defined as a storage location.

System action: The subcommand fails.

Operator response: None

Application Programmer Response: If you are using storage location names as home locations for volumes, you must define the location using the DFSMSrmm EDGRMMxx parmlib LOCDEF command and specify the HOME operand.

Source: DFSMSrmm
Detecting Module: EDGTSO
Routing Code: 11
Descriptor Code: 7

EDG3349I  STORAGE LOCATION NAMES CANNOT BE SPECIFIED

Explanation: The location name you specified is defined to DFSMSrmm as a storage location. This subcommand does not support the use of storage location names. You can only specify a library name or SHELF.

System action: The subcommand fails.

Operator response: None

Application Programmer Response: Specify the name of a library location or SHELF.

Source: DFSMSrmm
Detecting Module: EDGTSO
Routing Code: 11
Descriptor Code: 7

EDG3350I  THE NAME OF A SHELF-MANAGED STORAGE LOCATION MUST BE SPECIFIED

Explanation: The location you specified is not defined to DFSMSrmm as a storage location that is shelf-managed. This subcommand only supports the use of shelf-managed storage locations.

System action: The subcommand fails.

Operator response: None

Application Programmer Response: Specify the name of a shelf-managed storage location.

Source: DFSMSrmm
Detecting Module: EDGTSO
Routing Code: 11
Descriptor Code: 7
EDG3351I  START MOVE REJECTED, ANOTHER VOLUME IS STILL MOVING OUT OF BIN `bin_number` AT LOCATION `location`  

Explanation: You were trying to move a volume from a bin-managed storage location, but another volume is still moving out of the same bin.

In the message text:

`bin_number`  
  The bin number.

`location`  
The name of a bin managed storage location.

System action: DFSMSrmm fails the command.

Operator response: None.

System programmer response: Complete the move of the volume that is still moving out of the bin. If the destination is a system-managed library, enter the volume into the library. Otherwise, use the RMM CHANGEVOLUME subcommand to confirm the completion of the move. Then, retry the failed subcommand.

Source: DFSMSrmm
Detecting Module: EDGMTSO
Routing Code: 11
Descriptor Code: 7

EDG3352I  BIN NUMBER IS NOT SUPPORTED FOR A LOGICAL VOLUME OR A VOLUME IN A CONTAINER  

Explanation: You were trying to move a logical volume or a volume in a container (stacked volume) into a bin while stacked volume support is enabled.

System action: DFSMSrmm fails the command.

Operator response: None.

System programmer response: To move the stacked volume, use the RMM CHANGEVOLUME subcommand for the stacked volume. To move a logical volume, first export the logical volume onto a stacked volume.

Source: DFSMSrmm
Detecting Module: EDGMTSO
Routing Code: 11
Descriptor Code: 7

EDG3353I  UNEXPECTED RETURN CODE `return_code` AND REASON CODE `reason_code` FROM SUBSYSTEM REQUEST  

Explanation: RMM subcommand processing received an unexpected return code and reason code from a request to process a DFSMSrmm control data set record.

In the message text:

`return_code`  
  This is the return code set by EDGMFIO.

`reason_code`  
  This is the reason code set by EDGMFIO.

System action: DFSMSrmm fails the command.

Operator response: Inform the system programmer.

System programmer response: Run EDGUTIL with the VERIFY parameter to ensure the consistency of the DFSMSrmm control data set. If the error cannot be identified and corrected, report the problem to the IBM Support Center. Provide the return code and reason code that is displayed in this message to the IBM Support Center.
EDG3354I CONTAINER CHANGE REJECTED AS THE VOLUME IS MOVING

Explanation: You were trying to place a moving volume into a container (stacked volume) while stacked volume support is enabled. You can only use the container operand if the volume is not moving.

System action: DFSMSrmm fails the command.

Operator response: None.

System programmer response: When you have confirmed that the move has completed, or when you have canceled the move, retry the request to place the volume into a container.

Source: DFSMSrmm
Detecting Module: EDGMTSO
Routing Code: 11
Descriptor Code: 7

EDG3355I VOL1 IS NOT SUPPORTED FOR NL, LOGICAL, OR STACKED VOLUMES

Explanation: You have provided a VOL1 value or changed another volume attribute that cannot be combined with the VOL1 attribute. When you specify a VOL1 value, DFSMSrmm treats the volume as a duplicate volume. DFSMSrmm does not support duplicate volume processing for NL volumes, logical volumes, or stacked volumes.

System action: The subcommand fails.

Operator response: None.

Application Programmer Response: If you are adding a volume, do not specify the VOL1 operand. Change the volume serial number using the VOL1 operand and specify the volume serial number to ensure the volume is no longer a duplicate volume, or do not specify the TYPE(LOGICAL), TYPE(STACKED) or LABEL(NL) values.

Descriptor Code: 7

EDG3356I DELETE VOLUME REJECTED, TCDB STATUS DOES NOT MATCH THE DFSMSrmm VOLUME STATUS

Explanation: You issued the RMM DELETEVOLUME REMOVE EJECT subcommand to delete a volume from DFSMSrmm and from the TCDB. The request failed because the TCDB status does not match the RMM volume status. The TCDB status is PRIVATE and the DFSMSrmm volume status is not MASTER or USER, or the TCDB status is SCRATCH and the RMM volume status is MASTER or USER.

System action: The command fails.

Operator response: None.

System programmer response: Update the TCDB so that it matches the DFSMSrmm volume status.

Source: DFSMSrmm
Detecting Module: EDGMTSO
Routing Code: 11
Descriptor Code: 7
EDG3357I  •  EDG3359E

EDG3357I  CHANGEVOLUME REJECTED — WWID CANNOT BE CHANGED ONCE A VALUE IS SET

Explanation: You attempted to set the worldwide unique cartridge ID for a volume. DFSMSrmm found the the volume already has a worldwide unique cartridge ID.

System action: The subcommand fails.

System programmer response: You cannot change the worldwide unique cartridge ID value once a value is defined to DFSMSrmm. If the value is incorrect in DFSMSrmm you can use DELETEVOLUME followed by ADDVOLUME, or use REPLACE processing to clear the worldwide unique cartridge ID so it can be recorded by DFSMSrmm correctly the next time the volume is used.

Source: DFSMSrmm
Detecting Module: EDGMTSO
Routing Code: 11
Descriptor Code: 7

EDG3358E  SPECIFIED VOLUME IS NOT PENDING REPLACE

Explanation: You have issued the RMM DELETEVOLUME subcommand with the REPLACE operand against a volume that is not pending replacement, or REPLACE was not the only release action.

System action: The command fails.

Operator response: None.

Application Programmer Response: Ensure that all outstanding actions for the volume are completed before reissuing the command. To delete the volume in any case, use the FORCE operand to remove the volume information.

Source: DFSMSrmm
Routing Code: –
Descriptor Code: –

EDG3359E  SPECIFIED MEDIA INFORMATION IS INCONSISTENT

Explanation: Either of the following situations occur:
• You have issued either the RMM TSO subcommand ADDVOLUME or CHANGEVOLUME with the operand MEDINF assigning non-IBM installation defined media information to the volume.
• You have issued the RMM TSO subcommand CHANGEVOLUME. The volume has already had non-IBM media information assigned, and the values you specified for media type and recording format are not defined in your installation.

System action: The command fails.

Operator response: None.

Application Programmer Response: Ensure that you specify a media type and recording format combination that is allowed in your installation for the associated media information name. You can use the RMM TSO subcommand LISTCONTROL MEDINF to display the installation defined media information.

Descriptor Code: –
EDG3360E  CLIST DATA SET LRECL lrecl IS TOO SHORT - MINIMUM LRECL min_lrecl

Explanation: You have issued a SEARCH subcommand with the CLIST operand and the ADD or DISP=MOD operand. However, the LRECL for an existing data set with fixed record length is shorter than the minimum LRECL required for new records.

In the message text:

lrecl
This is the existing logical record length of the CLIST data set.

min_lrecl
This is the minimum record length required to create the CLIST output for a fixed length record data set.

System action: The subcommand fails.

Operator response: None.

Application Programmer Response: Either recreate the CLIST data set with a larger fixed LRECL or use variable length records.

Source: DFSMSrmm
Detecting Module: EDGTSOCL

EDG3361I  HOLD ATTRIBUTE IS SET

Explanation: If you issued the CHANGEVOLUME subcommand, you are attempting to set the hold attribute but the attribute is already set. If you issued the DELETEVOLUME subcommand, you are attempting to release a volume when the HOLD attribute is set.

System action: The subcommand ends with return code 12 reason code 258.

Application Programmer Response: Determine the correct setting and reissue the correct subcommand.

Source: DFSMSrmm
Detecting Module: EDGTSO

EDG3362I  HOLD ATTRIBUTE IS NOT SET

Explanation: You are attempting to reset the hold attribute but the attribute is not set.

System action: The subcommand ends with return code 12 reason code 260.

Application Programmer Response: Determine the correct setting and reissue the correct subcommand.

Source: DFSMSrmm
Detecting Module: EDGTSO

EDG3363I  RETENTION METHOD CAN ONLY BE CHANGED FOR THE FIRST VOLUME IN A SET

Explanation: You issued the CHANGEVOLUME subcommand to change the retention method for a volume. This is supported only for the first volume in a volume set. DFSMSrmm will propagate the value to all volumes in the set.

System action: The subcommand ends with return code 12 reason code 266.

Application Programmer Response: Determine the correct first volume in the set and re-issue the subcommand.

Source: DFSMSrmm
Detecting Module: EDGTSO

EDG3364I  VRSELEXCLUDE(NO) CAN ONLY BE SPECIFIED FOR DATA SETS ON A RETENTION METHOD(VRSEL) VOLUME

Explanation: You issued the CHANGEDATASET subcommand to reset the VRSEL exclude attribute. This is supported only when the volume is managed by retention method VRSEL. Data sets on volumes managed by the EXPDT retention method are always excluded from VRSEL processing.
EDG3365I • EDG3900I

System action: The subcommand ends with return code 12 reason code 268.

Application Programmer Response: If the volume is already managed by the EXPDT retention method you cannot force the data sets to be processed by VRSEL. If you want all the data sets in the volume set to be managed by VRSEL change the volume retention method to VRSEL. When a volume set is managed by VRSEL you can exclude specific data sets by setting VRSELEXCLUDE(YES) for those specific data sets.

Source: DFSMSrmm

Detecting Module: EDGTSO

EDG3365I COPYFROM DATA SET RECORD DOES NOT EXIST

Explanation: You issued the CHANGEDATASET subcommand with the COPYFROM operand to copy the data set attributes, but the source data set is not known to DFSMSrmm.

System action: The subcommand ends with return code 12 reason code 270.

Application Programmer Response: Re-issue the subcommand with the correct key values for the source data set and ensure the source data set is defined to DFSMSrmm. Use the COPYFROM operand DSN, VOLUME and SEQ operands to identify the source data set record.

Source: DFSMSrmm

Detecting Module: EDGTSO

EDG3366I COPYFROM VALIDATION FAILED - RECFM OR LRECL DO NOT MATCH FOR SOURCE AND TARGET DATA SET

Explanation: You issued the CHANGEDATASET subcommand with the COPYFROM operand to copy the data set attributes. This is supported only when the source and target data set have the same record format and logical record length.

System action: The subcommand ends with return code 12 reason code 272.

Application Programmer Response: Re-issue the CHANGEDATASET subcommand specifying a valid source and target data set, ensuring that the record format and logical record length match. Ensure that the data_set_name parameter, VOLUME and SEQ operands correctly identify the data set record for the target data set, and that the COPYFROM operand DSN, VOLUME and SEQ sub-operands identify the source data set record.

EDG4000D JOURNAL FILE IS LOCKED DURING action FOR volser BY jobname, stepname, ddbname; ENTER "RETRY" OR "CANCEL"

Explanation: An attempt to update the DFSMSrmm control data set has been made. The ddbname for jobname stepname was being opened or closed while the journal is locked. DFSMSrmm locked the journal data set when the operator replied 'L' to message EDG2103D.

In the message text:
**EDG4000D**

**action**
The possible values for **action** are OPEN, CLOSE, EOV, and LABEL. The value indicates the operation that the application or system is performing.

**volser**
This is the volume serial number.

**job_name**
This is the name of a job identified to a system.

**stepname**
This is the name of a step within a job.

**ddname**
This is the data definition name.

**System action:** The system waits for the operator to reply either RETRY or CANCEL.

**Operator response:** Check your installation's procedures for backing up the DFSMSrmm control data set and clearing the journal. If your installation procedures instruct you to do backing up, follow the steps for it. Make sure that EDGHSKP is only used with the BACKUP parameter specified and afterwards enter RETRY to retry the update of the DFSMSrmm control data set information.

If you are not instructed to perform back up processing and RETRY, enter CANCEL. When you enter CANCEL, the following table describes possible outcomes.

<table>
<thead>
<tr>
<th>If the action is</th>
<th>DFSMSrmm</th>
</tr>
</thead>
<tbody>
<tr>
<td>CLOSE</td>
<td>Does not complete updates to the control data set made at CLOSE time. This results in missing information in the control data set.</td>
</tr>
<tr>
<td>OPEN or LABEL and DFSMSrmm is running in WARNING or RECORD-ONLY mode</td>
<td>Continues processing.</td>
</tr>
<tr>
<td>OPEN or LABEL and DFSMSrmm is running in PROTECT mode</td>
<td>Rejects the current volume and the system issues another mount request if the request is for a scratch volume. If the journal locked condition continues, the operator must use the MVS CANCEL command to fail the job. When the function is OPEN or LABEL, DFSMSrmm requests the failure of the OPEN request. See <a href="https://www.ibm.com/support/knowledgecenter/SSLTBW_2.2.1/com.ibm.zos.v2r13.fsms.doc/DFSMSrmm_Installation_Exits.html">z/OS DFSMS Installation Exits</a> for information about how the request is failed.</td>
</tr>
<tr>
<td>EOV and DFSMSrmm is running in WARNING or RECORD-ONLY mode</td>
<td>Continues processing.</td>
</tr>
<tr>
<td>EOV for the current volume and DFSMSrmm is running in PROTECT mode</td>
<td>Continues processing. The job continues. Updates to the control data set made at EOV time are not completed. This results in missing information in the control data set.</td>
</tr>
<tr>
<td>EOV for the next volume and DFSMSrmm is running in PROTECT mode</td>
<td>Rejects the volume. If the request is non-specific (a scratch volume), DFSMSrmm rejects the volume and the system issues another mount request. The operator must use the MVS CANCEL command to fail the job. When the function is OPEN or LABEL, DFSMSrmm requests the failure of the OPEN request. See <a href="https://www.ibm.com/support/knowledgecenter/SSLTBW_2.2.1/com.ibm.zos.v2r13.fsms.doc/DFSMSrmm_Installation_Exits.html">z/OS DFSMS Installation Exits</a> for information about how the request is failed.</td>
</tr>
</tbody>
</table>

**Application Programmer Response:** If the operator entered CANCEL, advise your tape librarian or storage administrator that DFSMSrmm control data set entries might be incomplete. Advise your System Programmer to schedule the control data set back up processing to clear the journal. Use EDGHSKP,PARM=BACKUP to back up the control data set and to clear the journal. Do not specify any other EDGHSKP parameters. Then resubmit the job.

**DFSMSrmm I/O ERROR IN action FOR volser BY jobname, stepname, ddname; ENTER "RETRY" OR "CANCEL"**

**Explanation:** DFSMSrmm issues this message when the DFSMSrmm subsystem is quiesced and DFSMSrmm has issued message EDG2116A. DFSMSrmm also issues this message when an I/O error occurred on the DFSMSrmm control data set while the ddname for jobname stepname was being opened or closed.

In the message text:

- **action**
  - action can be: OPEN, CLOSE, EOV, or LABEL. The value indicates the operation that the application or system is performing.

- **volser**
  - Volume serial number

- **jobname**
  - Name of a job identified to a system

- **stepname**
  - Name of a step within a job

- **ddname**
  - The data definition name

**System action:** The system waits for the operator to reply either RETRY or CANCEL.

**Operator response:** Check whether the subsystem is quiesced (the EDG2116A message has been issued). If the subsystem is quiesced, see message EDG2116A for information about reactivating the subsystem. After the subsystem has been reactivated, reply RETRY to continue. Reply CANCEL if no further action should be taken. If the subsystem is not quiesced, check your installation’s procedures for handling I/O errors on the DFSMSrmm control data set. Correct the error if possible, and enter RETRY to retry the update of the DFSMSrmm control data set information.

If the error cannot be corrected, enter CANCEL if no further action should be taken.

**If the action is** | **Then**
--- | ---
CLOSE | When you reply CANCEL, updates to the control data set made at CLOSE time are not completed. This results in missing information in the control data set.
OPEN or LABEL and DFSMSrmm is running in WARNING or RECORD-ONLY mode | Replying CANCEL allows processing to continue. If DFSMSrmm is running in PROTECT mode, replying CANCEL causes DFSMSrmm to reject the current tape volume.
EOV and DFSMSrmm is running in WARNING or RECORD-ONLY mode | Replying CANCEL allows processing to continue. If the message text says EOV for the current volume and DFSMSrmm is running in PROTECT mode, replying CANCEL allows processing to continue. The job continues. Updates to the control data set made at EOV time are not completed. This results in missing information in the control data set. If the message text says EOV for the next volume and DFSMSrmm is running in PROTECT mode, replying CANCEL causes DFSMSrmm to reject this volume. If the request is non-specific (for a scratch volume), DFSMSrmm rejects the current volume and the system issues another mount request. If the I/O errors on the control data set continue, the operator must use the MVS CANCEL command to fail the job.
OPEN or LABEL | DFSMSrmm requests the failure of the OPEN request. See z/OS DFSMS Installation Exits for information about how the request is failed.

**Application Programmer Response:** If the operator entered CANCEL, advise your tape librarian or storage administrator that DFSMSrmm control data set entries might be incomplete.

**Source:** DFSMSrmm

**Detecting Module:** EDGOECM

**Routing Code:** 1,3,11
EDG4002E

Descriptor Code: 2

EDG4002E  DFSMSrmm DETECTED SUBSYSTEM ERROR return_code, reason_code DURING action FOR dsname
BY jobname, stepname, ddname

Explanation: While opening or closing a data set, the DFSMSrmm subsystem was found inactive.

In the message text:

return_code
Describes the error which can be:
- 4 Logic error in DFSMSrmm.
- 8 The subsystem is not active.
- 12 The subsystem is not defined.
- 16 Logic error in DFSMSrmm.
- 20 Logic error in DFSMSrmm.

reason_code
The values are internal to DFSMSrmm. Provide these values to the IBM Support Center.

action
action can be: OPEN, CLOSE, EOV, and LABEL. The value indicates the operation that the application or system is performing.

dname
The data set that is being opened or closed.

jobname
The name of the job identified to a system.

stepname
The name of the step within a job.

ddname
The data definition name.

System action: The system writes a dump to SYS1.DUMPnn data set. O/C/EOV processing abnormally ends.

Operator response: Respond as described in the following table.

<table>
<thead>
<tr>
<th>Return_code</th>
<th>Operator Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>4,16,20</td>
<td>Report the error to the IBM Support Center.</td>
</tr>
<tr>
<td>8</td>
<td>Restart the DFSMSrmm subsystem.</td>
</tr>
<tr>
<td>12</td>
<td>Make sure that DFSMSrmm has been correctly installed.</td>
</tr>
</tbody>
</table>

Report the problem to the system programmer. The DFSMSrmm control data set can be corrected if only partial information has been recorded.

System programmer response: Inform the tape librarian or storage administrator that the error occurred and that DFSMSrmm control data set records might be incomplete. Refer to [z/OS MVS Using the Subsystem Interface](z/OS MVS Using the Subsystem Interface) for the error code explanations provided for the IEFSSREQ macro, and take the appropriate action.

Descriptor Code: 3
EDG4003E  DFSMSrmm DETECTED CONTROL BLOCK ERROR return_code reason_code DURING action FOR volser BY jobname, stepname ddname

Explanation: An error was detected in the data area passed to DFSMSrmm during processing of a volume.
In the message text:

return_code
Describes the error which can be:
8    The volume is rejected.
12   The volume is rejected and no other volume can be mounted to satisfy the request.
16   An I/O error occurred in DFSMSrmm.
20   DFSMSrmm could not recognize the request.
24   Intrusive backup is in progress.

reason_code
The values are internal to DFSMSrmm. Provide these values to the IBM Support Center.

action
action can be OPEN, CLOSE, EOV, or LABEL. The value indicates the operation that the application or system is performing.

volser
The volume serial number.

job_name
The name of a job identified to a system.

stepname
The name of a step within a job.

ddname
The data definition name.

Operator response: Report the problem to the system programmer.

System programmer response: A logic error has occurred in DFSMSrmm. Report the error along with the reason_code to the IBM Support Center. Inform your tape librarian or storage administrator that the DFSMSrmm control data set records might be incomplete.

Source: DFSMSrmm

Detecting Module: EDGSOCE

Routing Code: 2,3,11

Descriptor Code: 3

EDG4004I  stepname, ddname ONLY PERMITTED BECAUSE DFSMSrmm RUNNING IN WARNING MODE

Explanation: DFSMSrmm determined that the specified volume should not be used, but allows the volume to be used because DFSMSrmm is running in warning mode only.
In the message text:

volser
Volume serial number

job_name
Name of a job identified to a system

stepname
Name of a step within a job
The data definition name

**System action:** Because no action is taken by DFSMSrmm, standard MVS criteria are used to determine if the volume is rejected.

**Operator response:** Report the warning to your system programmer or the individual responsible for supervising DFSMSrmm in warning mode.

**System programmer response:** Ask the tape administrator if changes to the job’s JCL or the current DFSMSrmm parmlib options are needed.

**Source:** DFSMSrmm

**Detecting Module:** EDGSOCE

**Routing Code:** 2,3,11

**Descriptor Code:** 3

---

**EDG4005E**

**VOLUME volser ON unit_address REJECTED FOR USE BY jobname, stepname, dname**

**Explanation:** The specified volume cannot be used to satisfy this mount request.

In the message text:

- **volser**
  This is the volume serial number.

- **unit_address**
  This is the device address.

- **job_name**
  This is the name of a job identified to a system.

- **stepname**
  This is the name of a step within a job.

- **dname**
  The data definition name

**System action:** The tape is rejected. The operator is asked to mount another tape. The tape drive autoloader is not indexed if a re-mount is requested for a non-specific volume. This prevents the loader from being emptied when it might be pre-loaded with tapes from a different scratch pool.

**Operator response:** If a scratch tape is requested, mount another scratch tape. Otherwise, cancel the job. If the autoloader has not been indexed to mount the next pre-loaded scratch volume, verify that an acceptable scratch volume is available and mount the volume on the drive. Return the loader status to the correct setting after an acceptable tape is mounted.

**System programmer response:** Once a usable tape has been mounted, ignore this message. If the job is canceled before a usable tape can be mounted, check the specified DD statement for any incorrect volume, density, or label parameters. If the DD statement appears correct, check the DFSMSrmm EDGRMMxx parmlib options to determine if the volume was rejected based on the option values.

Descriptor Code: 2

EDG4010D  BACKUP IN PROGRESS DURING action FOR volser BY jobname, stepname, ddname; ENTER "RETRY" OR "CANCEL"

Explanation: DFSMSrmm could not record an open or close of a volume because the DFSMSrmm control data set backup was in progress.

In the message text:

action
action can be: OPEN, CLOSE, EOV, and LABEL. The value indicates the operation that the application or system is performing.
System action: The system waits for the operator to reply either RETRY or CANCEL.

Operator response: No opens or closes can be processed while backup is in progress. Wait for backup processing to complete, then enter RETRY to continue or CANCEL to cancel the action. If the operator enters RETRY, recording is retried. If the backup process has not completed, DFSMSrmm retries the request five more times at one minute intervals before again issuing a write-to-operator message.

If the action is | Then
--- | ---
CLOSE or EOV | When you reply CANCEL, updates to the control data set made at CLOSE or EOV time are not completed. This results in missing information in the control data set.
OPEN or LABEL | When you reply CANCEL, DFSMSrmm fails the job when DFSMSrmm is running in PROTECT mode. In WARNING or RECORD-ONLY mode, processing continues.

System programmer response: If the operator entered CANCEL, advise your tape librarian or storage administrator that DFSMSrmm control data set entries might be incomplete.

Source: DFSMSrmm
Detecting Module: EDGSOCE
Routing Code: 1,3
Descriptor Code: 3
**EDG4012D**

**EDG4012D** DFSMSrmm INACTIVE FOR action volser BY jobname, procname, stepname, ddname; ENTER "RETRY", "CANCEL" OR "CONTINUE"

**Explanation:** DFSMSrmm issues this message when the DFSMSrmm subsystem is not started. When the DFSMSrmm subsystem is started, DFSMSrmm automatically replies to the message so there is no need for an operator reply. DFSMSrmm issues this message once for each system. The subsystem interface is initialized but the DFSMSrmm subsystem is not active. Before DFSMSrmm can validate a mounted volume, or record an open or close of a volume, the DFSMSrmm subsystem must be started and remain active.

In the message text:

**action**
- Indicates the function being attempted on the tape volume which can be: OPEN or CLOSE.

**volser**
- The volume serial number requested in the user's JCL.

**jobname**
- The job name of the job requesting the tape.

**procname**
- A procedure name is provided if it is available.

**stepname**
- The name of the current job step being processed by the system.

**ddname**
- The name of the data set allocated for the current tape volume.

**System action:** The system prompts the operator to reply RETRY, CANCEL, or CONTINUE. If the operator enters RETRY, validation and recording is retried. If the operator enters CANCEL, DFSMSrmm requests that open processing or close processing fails the request. If the request cannot be failed, DFSMSrmm abnormally ends the request. The ABEND code is F13 for an OPEN request and F14 if the request is for CLOSE.

If the operator enters CONTINUE during OPEN processing, DFSMSrmm issues EDG4007I and the volume is rejected. DFSMSrmm rejects the volume even after DFSMSrmm is active when you reply CONTINUE during OPEN processing. The MVS mount message is then reissued. For OPEN processing the difference between replying RETRY and CONTINUE is that the volume is rejected if the reply is CONTINUE. Unless DFSMSrmm is started, OPEN processing is never permitted to complete.

If the operator enters CONTINUE during CLOSE processing, DFSMSrmm allows the CLOSE to complete. The information in the control data set might not be correct if the CLOSE completes.

If you want to run tape processing without DFSMSrmm being active, use the DFSMSrmm EDGRESET utility to remove DFSMSrmm from the system and then reply RETRY. To use the EDGRESET utility enter the `S DFRRMM,OPT=RESET` operator command. You need special authorization to request the reset. See [z/OS DFSMSrmm Implementation and Customization Guide](https://www.ibm.com/support/knowledgecenter/SSEPGG_13.1.0/com.ibm.zos.v1r13.bm.edgs.html) for authorization details.

**Operator response:** No tape activity is allowed when DFSMSrmm is inactive. To allow tape activity, perform one of the following actions:
- Start the DFSMSrmm subsystem. DFSMSrmm automatically replies to the WTOR and validates the volume and records volume information.
- Reply CONTINUE to continue.
- Reply CANCEL to cancel the action.

**System programmer response:** If the operator replies CONTINUE, advise the tape librarian or storage administrator that the activity might not have been recorded in the DFSMSrmm control data set. See [z/OS DFSMSrmm Implementation and Customization Guide](https://www.ibm.com/support/knowledgecenter/SSEPGG_13.1.0/com.ibm.zos.v1r13.bm.edgs.html) for authorization details.

218 z/OS V1R13.0 MVS System Messages, Vol 5 (EDG-GFS)
**Explanation:**
DFSMSrmm intercepted a mount request for a specific volume. The volume is probably not currently in the library. DFSMSrmm issues this message to provide DFSMSrmm location information to help the operator locate the volume.

Any null field in the message indicates that DFSMSrmm has no information for that value.

In the message text:

- **dev**
  - The tape device number on which the volume is to be mounted.

- **volser**
  - The volume serial number.

- **jobname**
  - The name of a job identified to a system.

- **procname**
  - The name of the procedure.

- **stepname**
  - The name of the step within a job.

- **rack**
  - The external identifier or rack number for the volume.

- **location**
  - The current location for the volume.

- **loc_bin**
  - The shelf location for the volume in the current location.

- **destination**
  - The location to which the volume is moving.

- **dest_bin**
  - The shelf location for the volume in the named destination.

- **loan_location**
  - The location where the volume is on loan.

**System action:**
Processing continues.

**Operator response:**
Use the information in the message to determine where the volume is located and retrieve it. If you cannot retrieve the volume for mounting, you might need to cancel the job.

**System programmer response:**
None.

**Source:**
DFSMSrmm

**Detecting Module:**

2,7

---

**Explanation:**
During disposition processing, DFSMSrmm attempted either to change a volume location or to confirm movement to a location. The DFSMSrmm TSO subcommand displayed in the message cannot be executed.

In the message text:

- **volser**
  - The volume serial number.

- **operands**
  - Can be one of the following:
EDG4020I • EDG4021I

LOANLOC(loc_name)
LOCATION(loc_name)
CMOVE

Where the loc_name is a name of a storage, library, or loan location to which the volume was requested to be moved.

return_code
An internal DFSMSrmm value returned indicating the results of processing.

reason_code
An internal DFSMSrmm value returned indicating the results of processing.

System action: Disposition control processing fails.

Operator response: Contact your system programmer.

System programmer response: Note the subcommand identified by the message text and reissue it in a TSO or batch environment using the same or another user ID. If the command fails again, use the message issued by command processing to determine the cause of the error and correct it. If you are unable to determine the reason for the EDG4014E message, report the error to the IBM Support Center with the full text of the error message.

EDG4020I  VOLUME volser REJECTED BY INSTALLATION REJECT DEFINITIONS

Explanation: The specified volume cannot be used on this system because the volume prefix matches one or more REJECT prefixes defined for the installation.

In the message text:

volser
Volume serial number

System action: If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message EDG4005E or EDG4006E.

Operator response: None.

System programmer response: Check that the volser and the REJECT prefixes are correct.

Source: DFSMSrmm
Detecting Module: EDGSOCE
Routing Code: 2,3,11
Descriptor Code: 3

EDG4021I  VOLUME volser REJECTED. IT IS NOT IN AN ACCEPTABLE Scratch pool, rtype=rvalue REQUESTED mtype=mvalue MOUNTED

Explanation: DFSMSrmm found that the specified volume serial number is not assigned to an acceptable scratch pool. Only scratch tapes from acceptable pools can be used for scratch tape mounts, so this volume is rejected. DFSMSrmm indicates in the mount message what caused the volume to be rejected.

In the message text:

volser
Volume serial number.
**rtype**
Indicates how a scratch pool is selected. One of the following:

<table>
<thead>
<tr>
<th>When rtype is</th>
<th>Then</th>
</tr>
</thead>
<tbody>
<tr>
<td>PREFIX</td>
<td>A specific scratch pool is selected by the DFSMSrmm EDGUX100 installation exit.</td>
</tr>
<tr>
<td>POOL</td>
<td>A system specific pool is selected based on VLPOOL definitions.</td>
</tr>
<tr>
<td>SGNAME</td>
<td>A scratch pool is selected using a storage group name as part of SMS ACS processing.</td>
</tr>
</tbody>
</table>

**rvalue**
Indicates the value associated with the requested rtype. One of the following:

<table>
<thead>
<tr>
<th>When rtype is</th>
<th>Then</th>
</tr>
</thead>
<tbody>
<tr>
<td>PREFIX</td>
<td>rvalue is the VLPOOL prefix selected by the DFSMSrmm EDGUX100 installation exit.</td>
</tr>
<tr>
<td>POOL</td>
<td>rvalue is the VLPOOL prefix selected by DFSMSrmm system-based pooling. If there is no system-specific pool, the value is NONE.</td>
</tr>
<tr>
<td>SGNAME</td>
<td>rvalue is the storage group name selected by SMS ACS processing.</td>
</tr>
</tbody>
</table>

**mtype**
Indicates the scratch pool for the mounted volume. One of the following:

<table>
<thead>
<tr>
<th>When mtype is</th>
<th>Then</th>
</tr>
</thead>
<tbody>
<tr>
<td>PREFIX</td>
<td>The volume is pooled based on pool prefix.</td>
</tr>
<tr>
<td>RACK</td>
<td>The volume is in a non-scratch VLPOOL.</td>
</tr>
<tr>
<td>SGNAME</td>
<td>The volume is in a pool based on storage group. The volume has a storage group name or the volume has no storage group name but is in a VLPOOL assigned to a storage group by name.</td>
</tr>
</tbody>
</table>

**mvalue**
Indicates the scratch pool associated with the mounted volume. One of the following:

<table>
<thead>
<tr>
<th>When mtype is</th>
<th>Then</th>
</tr>
</thead>
<tbody>
<tr>
<td>PREFIX</td>
<td>mvalue is the VLPOOL prefix which matches the mounted volume serial number.</td>
</tr>
<tr>
<td>RACK</td>
<td>mvalue is the VLPOOL prefix.</td>
</tr>
<tr>
<td>SGNAME</td>
<td>mvalue is the storage group name for the mounted volume.</td>
</tr>
</tbody>
</table>

**System action:** If you are running DFSMSrmm in warning mode, the volume specified in this message can be used and DFSMSrmm issues message EDG4004I. If you are running DFSMSrmm in protect mode, DFSMSrmm issues message EDG4005E or message EDG4006E.

**Operator response:** None

**System programmer response:** If you are using the DFSMSrmm EDGUX100 installation exit to implement exit-based scratch pools, check that the implementation steps have been correctly followed. Otherwise use the information in the message to determine why the volume is rejected. You need to consider how a scratch pool is selected; by SMS ACS processing, EDGUX100 installation exit, or by DFSMSrmm system-based pooling. You can use the RMM LISTCONTROL VLPOOLS subcommand to list the pool definitions. If the volume was incorrectly rejected because of incorrect installation options, update the DFSMSrmm start up options and restart DFSMSrmm.
**EDG4022I • EDG4023I**

Source: DFSMSrmm
Detecting Module: EDGSOCE
Routing Code: 2, 3, 11
Descriptor Code: 3

---

**EDG4022I**  
**VOLUME volser REJECTED. IT IS NOT IN THE SCRATCH POOL FOR THIS SYSTEM.**

Explanation: A scratch mount has been issued on a system for which there is one or more specific scratch pools defined to DFSMSrmm. The named volume is not in the system's scratch tape pool. Only a volume from the system's scratch tape pool can be accepted.

In the message text:

- `volser`
  - Volume serial number

System action: If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message EDG4005E or EDG4006E.

Operator response: None.

System programmer response: If the volume has been correctly rejected, no action is necessary. If the volume was incorrectly rejected because of incorrect or incomplete installation options, update the DFSMSrmm start up options and restart DFSMSrmm.

---

**EDG4023I**  
**VOLUME volser REJECTED. IT MAY NOT BE USED ON MVS SYSTEMS**

Explanation: The specified volume cannot be used on an MVS system. The use value for the volume was set to use the volume on a VM system only.

In the message text:

- `volser`
  - Volume serial number

System action: If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message EDG4005E or EDG4006E.

Operator response: None.

System programmer response: If the volume was correctly rejected, no action is necessary. If the volume was rejected in error because of incorrect information in the DFSMSrmm control data set, use the RMM CHANGEVOLUME subcommand with the USE operand to change the volume use value.

---
EDG4024I  VOLUME volser REJECTED. BLP OUTPUT IS NOT PERMITTED TO SCRATCH OR MASTER VOLUMES

Explanation:  Bypass label processing (BLP) is being used to write data to a master or scratch tape volume. This is only allowed on volumes that are in USER status when the DFSMSrmm EDGRMMxx OPTION command BLP(RMM) operand is specified.

In the message text:

volser  
Volume serial number

System action:  If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message EDG4005E or EDG4006E.

Operator response:  None.

System programmer response:  If the volume has been correctly rejected, no action is necessary. If the volume was rejected in error because the DFSMSrmm control data set information was incorrect, update the DFSMSrmm control data set with correct STATUS information. If bypass label processing is required, either change the volume status to USER, or consider using the installation option BLP(NORMM).

Source:  DFSMSrmm

Detecting Module:  EDGSOCE

Routing Code:  2,3,11

EDG4025I  VOLUME volser REJECTED. READING OF SCRATCH VOLUMES OR VOLUMES OBTAINED WITH GETVOLUME IS NOT PERMITTED

Explanation:  The specified volume serial number is either a scratch volume or a scratch volume obtained using the RMM GETVOLUME subcommand. The volume cannot be used for input processing unless you write the first file.

In the message text:

volser  
Volume serial number

System action:  If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and DFSMSrmm issues message EDG4004I.

If DFSMSrmm is operating in protect mode, DFSMSrmm issues message EDG4005E or EDG4006E.

Operator response:  None.

System programmer response:  If the volume has been correctly rejected, no action is necessary. If the volume was rejected because of incorrect information in the DFSMSrmm control data set, update the DFSMSrmm control data set.

Source:  DFSMSrmm

Detecting Module:  EDGSOCE

Routing Code:  2,3,11

Descriptor Code:  3

EDG4026I  VOLUME volser REJECTED. FIRST FILE HDR1 NAME hdr1_info DOES NOT MATCH RECORDED NAME first_dsname

Explanation:  The DFSMSrmm control data set has a different data set name for the first file on the volume. If DFSMSrmm is operating in warning mode, the volser in this message can be used and DFSMSrmm issues message EDG4004I. If DFSMSrmm is not operating in warning mode, DFSMSrmm issues message EDG4005E or EDG4006E.

In the message text:
EDG4027I

volser
The volume serial number.

first_dsname
The data set name recorded by DFSMSrmm for the volume first file.

hdr1_info
The information from the volume HDR1. It can be one of the following values:
- "***NOHDR1***" when there is no HDR1 information.
- The last 17 characters of the data set name from the volume HDR1 label, if IBM standard labels (SL) are being used or if ISO/ANSI labels (AL) are being used and the volume first file is a non-GDG.
- The last 17 characters of the data set name from the volume HDR1 label and a GDG suffix, if ISO/ANSI labels (AL) are being used and the volume first file is a GDG.

System action: If DFSMSrmm is operating in warning mode, the volser in this message can be used and DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message EDG4005E or EDG4006E.

Operator response: Use the LABEL procedure to verify the volume label and the header labels for the first file. Use the SCAN VOLUME(volser) response to see the label information on the console.

System programmer response: If the volume has been correctly rejected, no action is necessary. If the volume was rejected because of incorrect information in the DFSMSrmm control data set, update the DFSMSrmm control data set.

If the data on the volume was written while DFSMSrmm was not active, or created on another system where DFSMSrmm did not have knowledge of the volume, the volume data might be valid. If the data on the tape is valid, update the volume status to MASTER. Use the EDGINERS utility with the SCAN VOLUME(volser) SYSIN command to display the volume label and file one header labels. Use the information displayed to determine what data is on the tape.

If a tape was not initialized with the DFSMSrmm EDGINERS utility, inform DFSMSrmm that the tape has been initialized, by using the following command:
```
RMM CHANGEVOLUME volser -
   INIT(Y) CONFIRMRELEASE(INIT)
```

EDG4027I VOLUME volser REJECTED. IT IS NOT A SCRATCH VOLUME AND MOUNT REQUEST WAS NON-SPECIFIC

Explanation: A non-specific tape mount, either SCRTCH or PRIVAT, was issued.
- SCRTCH is used if the data set being created on the non-specific volume is temporary. That is, when DISP=(NEW,DELETE) or when DSN=&&tempname.
- PRIVAT is used for all other cases of non-specific volumes.

The operator mounted a non-scratch volume. A non-scratch volume is one that is not defined to DFSMSrmm or that is defined to DFSMSrmm in either MASTER or USER status. Only a scratch volume that is defined to DFSMSrmm is acceptable.

In the message text:

volser
Volume serial number

System action: If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message EDG4005E or EDG4006E.

Operator response: None.

System programmer response: If the volume has been correctly rejected, no action is necessary. If the volume was
rejected because of incorrect information in the DFSMSrmm control data set, update the DFSMSrmm control data set.

Detecting Module: EDGSOCE
Routing Code: 2,3,11
Descriptor Code: 3

EDG4028I VOLUME volser REJECTED. VOLUMES WITH NON STANDARD LABELS ARE NOT SUPPORTED

Explanation: While processing an open request for a tape volume, DFSMSrmm detected a volume with a nonstandard label.

In the message text:

volser

Volume serial number

System action: If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message EDG4005E or EDG4006E.

Operator response: None.

System programmer response: If a nonstandard label volume must be used, bypass label processing could be used to read the volume. Otherwise, do not define the volume to DFSMSrmm.

Source: DFSMSrmm
Detecting Module: EDGSOCE
Routing Code: 2,3,11
Descriptor Code: 3

EDG4029I VOLUME volser REJECTED. DATA SET NAME DOES NOT MATCH FOR A RECORDED VOLUME

Explanation: The data set name does not match information recorded in the DFSMSrmm control data set during previous I/O operations. The data set names must match for input from a recorded volume. Because they do not match, the data set cannot be read and the specified volume is rejected.

In the message text:

volser

Volume serial number

System action: If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message EDG4005E or EDG4006E.

Operator response: None.

System programmer response: Recheck the data set names. If the volume has been correctly rejected, no action is necessary. If the volume was rejected because of incorrect or incomplete DFSMSrmm control data set information, update the DFSMSrmm control data set.

Descriptor Code: 3
**EDG4030I • EDG4031I**

**EDG4030I** VOLUME volser REJECTED. THE DESTRUCTION OF STANDARD LABELS IS NOT PERMITTED

**Explanation:** There is a label conflict with the volume because the volume contains only standard labels, and the current request is for an unlabeled volume. DFSMSrmm only supports the destruction of standard labels, either while a volume is in USER status, or when you have the correct access to the STGADMIN.EDG.NOLABEL.volser security profile in FACILITY class. If your installation controls this function using RACF security profiles, an ICH408I message is issued prior to this message and displays the resource name involved, the required access, and your permitted access.

In the message text:

*volser*  
Volume serial number

**System action:** If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, the volume is demounted. Message EDG4005E or EDG4006E is issued after this message to describe the system action taken.

**Operator response:** See the operator response for the message EDG4004I, EDG4005E, or EDG4006E issued after this message.

**System programmer response:** If the volume has been correctly rejected, no action is necessary. If the volume was rejected because of incorrect information in the DFSMSrmm control data set, update the DFSMSrmm control data set with the correct status for the volume. If the volume was rejected because the user does not have the correct level of access to the STGADMIN.EDG.NOLABEL.volser resource in FACILITY class, and the user should be authorized, permit the user to access the resource. ALTER access is required for non-specific requests and UPDATE access for specific volume requests.

**Source:** DFSMSrmm

**Detecting Module:** EDGSOCE

**Routing Code:** 2,3,11

**Descriptor Code:** 3

**EDG4031I** VOLUME volser REJECTED. THE CREATION OF STANDARD LABELS IS NOT PERMITTED

**Explanation:** There is a label conflict with the specified volume. The current request is for standard labels and this volume contains none. DFSMSrmm only supports the creation of standard labels, either while a system-managed volume is in USER status, or when you have the correct access to the STGADMIN.EDG.LABEL.volser security profile in FACILITY class. If your installation controls this function using RACF security profiles, an ICH408I message is issued prior to this message and provides the resource name involved, the required access, and your permitted access. For non-system-managed volumes, when the mounted volume contains no labels, the creation of standard labels is never permitted regardless of the volume status USER or the correct access to the STGADMIN.EDG.LABEL.volser security profile.

In the message text:

*volser*  
Volume serial number

**System action:** If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, the volume is demounted. Message EDG4005E or EDG4006E is issued after this message to describe the system action taken.

**Operator response:** See the operator response for the message EDG4004I, EDG4005E, or EDG4006E issued after this message.

**System programmer response:** If the volume has been correctly rejected, no action is necessary. If the volume was rejected because of incorrect or incomplete DFSMSrmm control data set information, update the DFSMSrmm control data set with the correct volume status. If the volume was rejected because the user does not have the correct level of access to the STGADMIN.EDG.LABEL.volser resource in FACILITY class, and the user should be authorized, permit the user to access the resource. ALTER access is required for non-specific requests and UPDATE access for specific volume requests.

EDG4037I  VOLUME volser REJECTED. FILE BEING CREATED DOES NOT FOLLOW LAST FILE RECORDED

Explanation: The data set created on the specified output volume does not follow the last data set recorded in the DFSMSrmm control data set. The data sets must be recorded in sequence. The information recorded by DFSMSrmm might be incorrect, or the request might not be valid because intervening data sets have not yet been written.

In the message text:

volser
Volume serial number

System action: If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message EDG4005E or EDG4006E.

Operator response: None.

System programmer response: If the volume has been correctly rejected, no action is necessary. If the volume was rejected because of incorrect DFSMSrmm control data set information, update the DFSMSrmm control data set using known information for the data sets that have not yet been recorded by DFSMSrmm. If this message is accompanied by system completion code F13, see z/OS DFSMSrmm Implementation and Customization Guide for more information.

Source: DFSMSrmm
Detecting Module: EDGSOCE
Routing Code: 2,3,11
Descriptor Code: 3

EDG4038I  VOLUME volser REJECTED. ATTEMPT TO READ FILE THAT HAS NOT YET BEEN RECORDED

Explanation: While opening the specified volume, DFSMSrmm found that information for the data set being read is not available. The reason DFSMSrmm might not have found the information is:

• The information recorded by DFSMSrmm could be incorrect because the tape was created on another system.
• The request might not be valid because the data set was never created.
• The data set might be on a subsequent volume in a multivolume set.

DFSMSrmm issues EDG4038I when a request is made to read a data set on a multivolume set and the volume that is mounted does not contain the data set. The volume is correctly rejected as not having the data set recorded on it. When the correct volume is mounted, RMM does not reject the volume.

In the message text:

volser
Volume serial number

System action: If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message EDG4005E or EDG4006E.

If a subsequent volume in the multivolume set can be used to satisfy the request, DFSMSrmm does not fail the request and allows the next volume in sequence to be requested. DFSMSrmm continues to process volumes until the correct volume is found or until all specified volumes have been processed.

Operator response: None.

System programmer response: If the volume has been correctly rejected, no action is necessary. If the volume was rejected because of incorrect or incomplete DFSMSrmm control data set information, update the DFSMSrmm control data set with known information for data sets that exist on the volume.

Source: DFSMSrmm
Detecting Module: EDGSOCE
Routing Code: 2,3,11
Descriptor Code: 3
EDG4040I  VOLUME  volser, PREVIOUS IN SEQUENCE TO  prev_volser, NOT MANAGED BY DFSMSrmm, 
jobname, stepname, ddname;

Explanation: While recording information about the volume being processed, DFSMSrmm found that the volume 
was part of a multiple volume sequence, and that the previous volume in the sequence was not managed by 
DFSMSrmm.

In the message text:
volser
  Volume serial number
prev_volser
  The previous volume in a multiple volume sequence
job_name
  Name of a job identified to a system
stepname
  The name of a job step
ddname
  The data definition name

System action: Processing continues

Operator response: The message is for information only, but it can indicate that a volume that should be managed 
by DFSMSrmm is not yet defined to DFSMSrmm.

System programmer response: If the volume should be managed by DFSMSrmm, define it to DFSMSrmm.

Source: DFSMSrmm
Detecting Module: EDGSOCE
Routing Code: 2,3,11
Descriptor Code: 3

EDG4041I  VOLUME  volser  REJECTED, DATA SET NAME DOES NOT MATCH FOR A MASTER VOLUME

Explanation: The data set name specified does not match information recorded in the control data set. For output to 
a master volume, the data set names must match. Because they do not match, the data set is not overwritten and the 
specified volser is rejected.

In the message text:
volser
  Volume serial number

System action: If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and 
DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message 
EDG4005E or EDG4006E.

Operator response: None.

System programmer response: Recheck the data set names. If the volume has been correctly rejected, no action is 
necessary. If the volume was rejected because of incorrect DFSMSrmm control data set information, update the 
DFSMSrmm control data set.

Descriptor Code: 3

EDG4047I  VOLUME volser IGNORED. IGNORE REQUESTED BY INSTALLATION EXIT

Explanation: The DFSMSrmm EDGUX100 installation exit has requested that this volume be ignored, by
DFSMSrmm. DFSMSrmm does not record any information about the specified volume and permits the volume’s use.
This is because the user is authorized to request that the volume be ignored or DFSMSrmm is running in record or
warning mode.

In the message text:
volser

This is the volume serial number of the volume the user is attempting to use.

System action: DFSMSrmm ignores this volume while it remains mounted. DFSMSrmm does not validate the
mounted volume and does not record any information about the current tape usage in the DFSMSrmm control data
set.

Operator response: None.

Source: DFSMSrmm

Detecting Module: EDGOECM
Routing Code: 2,3
Descriptor Code: 3

EDG4048I  VOLUME volser REJECTED. MOUNTED VOLUME DOES NOT EQUAL REQUESTED VOLUME

Explanation: A request for bypass label processing was made for a specific volume serial number. The volume
mounted for use has a different volume serial number, and at least one of the volumes is managed by DFSMSrmm.
DFSMSrmm only allows the mounted and requested volumes to be different if neither volume serial number is
defined to DFSMSrmm.

In the message text:
volser

This is the volume serial number of the volume that was mounted for use.

System action: If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and
DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message
EDG4005E or EDG4006E.

EDG4053I  VOLUME volser REJECTED. DATA SET NAME COULD NOT BE READ DUE TO AN I/O ERROR

Explanation: The data set name recorded on the volume for the first file must match the information recorded by DFSMSrmm in the control data set for the specified volume. The first file information on the volume could not be read due to an I/O error.

In the message text:

volser  Volume serial number

System action: If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message EDG4005E or EDG4006E.

Operator response: None.

System programmer response: Re-run the job using another tape drive.

Source: DFSMSrmm
Detecting Module: EDGSOCE
Routing Code: 2,3,11
EDG4054I  EDG4055I

Descriptor Code:  3

EDG4054I  drive_number.volser.volseq (location).message_text

Explanation: DFSMSrmm issues this message during CLOSE or EOV disposition processing. The parmlib option DISPDDNAME initiates this processing when a matching DD name is found at CLOSE or EOV time.

In the message text:

  drive_number  The 4-digit device number of the tape drive on which the volume was written.
  volser      The 6-character volume serial number.
  volseq      The 4-digit volume sequence number.
  (location)  The location to which the volume is to be moved, enclosed in parentheses. This value, which can include up to 8 characters, is only included if a location is assigned.
  message_text  The message text, as provided in the disposition control file.

System action: Processing continues

Operator response: Use your local operational procedures to decide what to do for this message.

System programmer response: Ensure you have local procedures that address how your operators should respond to this message.

Source: DFSMSrmm

Routing Code: 13

Descriptor Code:  3

EDG4055I  VOLUME volser REJECTED. WWID WWID_read FOR VOLUME DOES NOT MATCH RECORDED VALUE WWID_rec

Explanation: The information previously recorded by DFSMSrmm for the specified volume does not match the current information recorded on the volume.

In the message text:

  • WWID_read is the worldwide unique cartridge ID for the WORM volume being processed. The value is provided to the system from the mounted volume.
  • WWID_rec is the worldwide unique cartridge ID for the WORM volume as previously recorded by DFSMSrmm.

The value is recorded by DFSMSrmm on the first use of the volume and must match all subsequent uses of the volume.

System action: If DFSMSrmm is operating in warning mode, the volume specified in this message can be used, the worldwide unique cartridge ID is corrected, and DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message EDG4005E or EDG4006E.

System programmer response: If the volume has been correctly rejected no action is necessary. If the volume has been rejected because of incorrect information in the DFSMSrmm control data set then update the DFSMSrmm control data set. Once DFSMSrmm has recorded, or you have defined, a worldwide unique cartridge ID for a volume it cannot be changed by command. If the value is incorrect in DFSMSrmm you can correct the information.

To correct the information, first display data set information for the volume and save that information. Next issue the RMM DELETEVOLUME subcommand to remove the volume information followed by the RMM ADDVOLUME subcommand to add volume information. Finally add back the saved data set information. Alternatively, you can use the REPLACE release action and DFSMSrmm will clear the volume information when you confirm the replace action during release processing. The next time the volume is used DFSMSrmm will record the correct write mount count and worldwide unique cartridge ID values.

Source: DFSMSrmm

Detecting Module: EDGSOCE

Routing Code: 2,3,11
EDG4056I  VOLUME volser REJECTED. WRITE MOUNT COUNT count_value_read FOR VOLUME DOES NOT MATCH RECORDED VALUE count_value_rec

Explanation: The information previously recorded by DFSMSrmm for the specified volume does not match the current information recorded on the volume.

In the message text:
- `count_value_read` is the Write Mount Count for the WORM volume being processed. The value is provided to the system from the mounted volume.
- `count_value_rec` is the Write Mount Count for the WORM volume as previously recorded by DFSMSrmm. The value is recorded by DFSMSrmm on the first use of the volume, incremented for each mount for output, and must match all subsequent uses of the volume.

System action: If DFSMSrmm is operating in warning mode, the volume specified in this message can be used, the write mount count is corrected, and DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message EDG4005E or EDG4006E.

System programmer response: If the volume has been correctly rejected no action is necessary.

To correct the information issue the RMM CHANGEMOUNT subcommand with WMC(0) and the correct value will be recorded the next time the volume is used. Alternatively, you can use the REPLACE release action and DFSMSrmm will clear the volume information when you confirm the replace action during release processing. The next time the volume is used DFSMSrmm will record the correct write mount count and worldwide unique cartridge ID values.

Source: DFSMSrmm

EDG4057I  EDG_EXIT300 SUPPLIED MEDIA INFORMATION FOR VOLUME VOLSER volser INCONSISTENT. MEDINFO medinf MEDIATYPE media_type RECORDINGFORMAT recording_format

Explanation: The EDGUX300 installation exit was called for a non IBM media provided values for media type and recording format, that are not defined for your installation for the media information name assigned to the volume.

In the message text:
- `volser` The volume serial number.
- `medinf` Media information name recorded for the volume.
- `media_type` EDGUX300 supplied media type.
- `recording_format` EDGUX300 supplied recording format.

System action: Processing continues.

Operator response: None.

System programmer response: Ensure that the specified media type and recording format combination is defined in your installation for the associated media information name. You can use the RMM TSO subcommand LISTCONTROL MEDINFO to display the installation defined media information.

EDG4058I • EDG4060I

**EDG4058I**  VOLUME volser REJECTED BY INSTALLATION OPENRULE COMMAND REJECT ACTION

Explanation: The specified volume cannot be used on this system because the volume matches an OPENRULE entry defined for an installation that specifies an action of REJECT.

In the message text:

`volser`

The volume serial number.

**System action:** If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message EDG4005E or EDG4006E.

**Operator response:** None.

**System programmer response:** Check that the volser and the OPENRULE with the action of REJECT are correct.

**Source:** DFSMSrmm

**Detecting Module:** EDGSOCE

**Routing Code:** 2,3,11

**Descriptor Code:** 3

**EDG4059I**  VOLUME volser REJECTED - VOLUMES TO BE REPLACED ARE "READ ONLY"

Explanation: This message is issued when a volume, which has the REPLACE release action set, is used for output processing. DFSMSrmm does not allow volumes to be written to if they are to be replaced.

In the message text:

`volser`

The volume serial number of the volume that the user is attempting to use.

**System action:** If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message EDG4005E or EDG4006E.

**Operator response:** None.

**System programmer response:** Ensure that volumes that have the REPLACE release action set are correctly identified. Review the REPLACE policies in use as defined by the MEDINF commands in parmlib.

**Source:** DFSMSrmm

**Detecting Module:** EDGOECM

**Routing Code:** 2,3

**Descriptor Code:** 3

**EDG4060I**  VOLUME volser REJECTED. OPENRULE ACTION IGNORE BUT USE OUTSIDE OF DFSMSrmm CONTROL NOT AUTHORIZED

Explanation: The volume matched to an OPENRULE entry that specified an action of IGNORE. The IGNORE action requests that DFSMSrmm ignore this volume. The user must be authorized to request that the specified volume be ignored. The user was not authorized and the request failed.

Message EDG4060I can be accompanied by an ICH408I message that explains the reason for the authorization failure. If the ICH408I message is not issued, the most likely cause for the error is that there is no security profile defined for ignore processing. When there is no profile, DFSMSrmm does not allow a volume to be ignored. You must add one or more security profiles to ensure the correct authorization.

In the message text:

`volser`

The volume serial number of the volume that the user is attempting to use.

**System action:** If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and
DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message EDG4005E or EDG4006E.

**Operator response:** None.

**System programmer response:** If the volume is ignored, define the RACF resource STGADMIN.EDG.IGNORE.TAPE.volser, STGADMIN.EDG.IGNORE.TAPE.NORMM.volser, or STGADMIN.EDG.IGNORE.TAPE.RMM.volser and authorize the user. Refer to [z/OS DFSMSrmm Implementation and Customization Guide](http://www.ibm.com/support/docview.wss?uid=swg21236839) for information about authorizing users.

**Source:** DFSMSrmm

**Detecting Module:** EDGOECM

**Routing Code:** 2,3

**Descriptor Code:** 3

---

**EDG4061I VOLUME volser IGNORED. IGNORE REQUESTED BY OPENRULE ACTION IGNORE**

**Explanation:** The DFSMSrmm parmlib options for OPENRULE with an action of IGNORE has requested that this volume be ignored by DFSMSrmm. DFSMSrmm does not record any information about the specified volume and permits the volume’s use. This is because the user is authorized to use a volume that is ignored or DFSMSrmm is running in record mode.

In the message text:

volser

The volume serial number of the volume that the user is attempting to use.

**System action:** DFSMSrmm ignores this volume while it remains mounted. DFSMSrmm does not validate the mounted volume and does not record any information about the current tape usage in the DFSMSrmm control data set.

**Operator response:** None.

**Source:** DFSMSrmm

**Detecting Module:** EDGOECM

**Routing Code:** 2,3

**Descriptor Code:** 3

---

**EDG4062I VOLUME volser REJECTED. UNDEFINED VOLUME CANNOT BE ADDED - EXTERNAL VOLUME SERIAL NUMBER ALREADY IN USE**

**Explanation:** A volume selected for use is not defined in the DFSMSrmm control data set. DFSMSrmm attempted to define the volume but detected that the external volume serial number was already in use for a volume with a different magnetic volume serial number. Note that the external volume serial number in a system managed tape library is synonymous with rack number for shelf-resident volumes.

In the message text:

volser

The volume serial number of the volume that is not defined and could not be added to the control data set.

**System action:** If DFSMSrmm is operating in warning mode, the volume specified in this message can be used and DFSMSrmm issues message EDG4004I. If DFSMSrmm is operating in protect mode, DFSMSrmm issues message EDG4005E or EDG4006E.

**Operator response:** None.

**System programmer response:** You must resolve the duplication between the volume serial number of the current volume and the rack number that is in use for another volume. You can take the following choices:

- Move the volume from the existing rack number to another rack number, and free the rack number to be used for the current volume.
- For a non-system managed current volume you can pre-add the volume to DFSMSrmm using an empty rack number that does not match the volser.
EDG4063I

- For a non-system managed volume or a system-managed volume remove the volume from the tape library and pre-define the volume to DFSMSrmm as a duplicate volume; use the current volser as the VOL1 label.
- Delete information about the volume whose rack number matches the current volume.

EDG4063I  COPYFROM FAILED FOR target_dsn  VOLUME tvolser  FILE tseq - SOURCE DATA SET RECORD
          source_dsn  VOLUME svolser  FILE ssq  DOES NOT EXIST; jobname, stepname, ddname

Explanation: DFSMSrmm issues this message during tape data set OPEN processing. An EDG_EXIT100 installation exit module has requested to copy data set attributes from a source data set record to the copy as part of tape copy application processing. The installation exit module has provided details in the EDGPL100 parameter list for a source data set record that is not defined to DFSMSrmm. The message indicates that the copy of the data set attributes from the source data set cannot be completed.

In the message text:

- target_dsn  Data set name of the target data set record.
- VOLUME tvolser  Volume serial number of the target data set.
- FILE tseq  Target data set file sequence number.
- source_dsn  Data set name of the source data set record.
- VOLUME svolser  Volume serial number of the source data set.
- FILE ssq  Source data set file sequence number.
- jobname  Name of a job identified to a system
- stepname  Name of a step within a job. The procedure name is also provided when available.
- ddname  The data definition name

System action: Tape open processing continues without copying the data set attributes.

Operator response: None.

Application Programmer Response: The source data set details provided by the EDG_EXIT100 installation exit module are most likely incorrect. When the correct source data set record has been identified use the RMM CHANGEDATASET subcommand with the COPYFROM operand to copy the data set attributes manually. Refer to z/OS DFSMSrmm Managing and Using Removable Media for the syntax of the subcommand. Use the target data set name record details from the message text and the correct source data set record details to ensure that the correct attributes are applied to the target data set record.

Name of the current utility, EDGAUD.

**return_code**  
Value returned indicates the results of processing

**System action:** The program ends.
EDG6001I  INVENTORY MANAGEMENT STARTING ON date AT time - PARAMETERS IN USE ARE parameters

Explanation: DFSMSrmm issues this message for information only. The DFSMSrmm EDGHSKP utility is processing and is ready to request the DFSMSrmm subsystem to start inventory management. DFSMSrmm uses the date and time displayed in this message for all DFSMSrmm processing for this run of inventory management.

In the message text:

date
   The current date in the format specified by the DATEFORM parameter.

time
   The current time.

parameters
   The inventory management EXEC parameters can be:
      - The inventory management EXEC parameters you specified. Any valid combination from the following parameters: VRSEL, DSTORE, EXPROC, RPTEXT, BACKUP, BACKUP(DSS), DATEFORM, VERIFY, and DATE.
      - The default parameters if none were specified: VRSEL, DSTORE, EXPROC, RPTEXT, BACKUP, DATEFORM(D).

System action: The EDGHSKP utility continues processing.

Operator response: None.

Application Programmer Response: None.

EDG6104E ERROR READING THE CONTROL DATA SET. RC = return_code, REAS = reason_code, KEY = vsam_key

Explanation: Either the DFSMSrmm backup and recovery utility, or the control data set utility, has encountered an error performing I/O to the DFSMSrmm control data set. The message text provides information about the attempted I/O.

In the message text:
return_code
The return code that is returned by VSAM in register 15, or it is a DFSMSrmm internal return code. Possible values for the DFSMSrmm internal return code are:
   252 - The record read from the control data set is not a DFSMSrmm supported record.
   255 - The I/O request made is not supported by DFSMSrmm.

reason_code
The RPL reason code returned by VSAM or zero for DFSMSrmm internal return codes

vsam_key
The key of the VSAM record that was the subject of the request

System action: The program fails.
Operator response: None.

Application Programmer Response: Review the message text and refer to z/OS DFSMS Macro Instructions for Data Sets. This error is the result of a VSAM processing error. The DFSMSrmm control data set might be damaged. For DFSMSrmm internal return codes, the action depends on the return code.

For return code 252, your control data set contains records that are not supported by DFSMSrmm. You should ensure that the VSAM data set being used contains only valid records. You should only use the DFSMSrmm supplied and supported utilities against the DFSMSrmm control data set.

For return code 255, report the error to the IBM Support Center. If other VSAM messages have been issued, refer to these messages for action to be taken.

Source: DFSMSrmm
Detecting Module: EDGBKUP
Routing Code: 11
Descriptor Code: 7

EDG6105E ERROR UPDATING THE CONTROL DATA SET. RC = return_code, REAS = reason_code, KEY = vsam_key

Explanation: The DFSMSrmm backup and recovery utility EDGBKUP has encountered an error while performing I/O to the DFSMSrmm control data set. The message text provides information about the attempted action.

Chapter 2. EDG messages 255
EDG6106E • EDG6107E

In the message text:

return_code
  The return code returned by VSAM in register 15

reason_code
  The RPL reason code returned by VSAM

vsam_key
  The key of the VSAM record that was the subject of the request

System action:  The current request for I/O to the DFSMSrmm control data set fails, and the recovery request also fails.

Operator response:  None.

Application Programmer Response:  Review the message text and refer to z/OS DFSMS Macro Instructions for Data Sets.

This error is the result of a VSAM processing error.

If any additional VSAM messages have been issued, refer to these for a description of the action necessary.

EDG6106E  ddname DDNAME NOT ALLOWED FOR BACKUP DURING INVENTORY MANAGEMENT

Explanation:  When the subsystem is active, the DFSMSrmm control data set and journal are dynamically allocated, using the data set names obtained from the DFSMSrmm subsystem. DFSMSrmm received an inventory management request that includes backing up the DFSMSrmm control data set or journal. The request supplied the DFSMSrmm control data set using the MASTER DD statement, or the journal using the JOURNAL DD statement. This is only allowed when the DFSMSrmm subsystem is inactive.

In the message text:

ddname
  The name of the DD statement that is not allowed. One of the values:
    MASTER
    JOURNAL

System action:  The backup request fails and no further processing is performed. Backup is the last inventory management function performed, so all other requests should have completed successfully.

Operator response:  None.

Application Programmer Response:  Remove the MASTER and JOURNAL DD statements from the inventory management JCL, and re-run the backup request.

---

**EDG6111W  RECORD TO BE UPDATED DURING JOURNAL UPDATE PROCESSING DOES NOT EXIST**

**Explanation:** A record to be updated during the journal update phase of RESTORE does not exist in the DFSMSrmm control data set.

During SMFIN forward recovery, journal records are created from SMF records. This might have caused the JOURNAL DD entry specified in the message to have been created.

**System action:** The record is not added. Processing continues with the next record in the journal.

**Operator response:** None.

**Application Programmer Response:** Make sure the correct journal and BACKUP data sets are being used. If not, correct the data set names and resubmit the job.

**Source:** DFSMSrmm

**Detecting Module:** EDGBKUP

**Routing Code:** 11

**Descriptor Code:** 7
EDG6112W - RECORD TO BE DELETED DURING JOURNAL UPDATE PROCESSING DOES NOT EXIST

Explanation: The journal update procedure for RESTORE has attempted to delete a record that does not exist in the DFSMSrmm control data set.

During SMFIN forward recovery, journal records are created from SMF records. This might have caused the JOURNAL DD entry specified in the message to have been created.

System action: Processing continues with the next record in the journal.

Operator response: None.

Application Programmer Response: Make sure the correct journal and BACKUP data sets are being used. If not, correct the data set names and resubmit the job.

Source: DFSMSrmm

Detecting Module: EDGBKUP

Routing Code: 11

Descriptor Code: 7

EDG6113E - INCORRECTLY FORMATTED JOURNAL FILE RECORD READ

Explanation: The journal update procedure for RESTORE has failed to recognize a journal record.

System action: The program fails.

Operator response: None.

Application Programmer Response: Make sure the correct journal is being used. Correct the JCL and resubmit the job.

Source: DFSMSrmm

Detecting Module: EDGBKUP

Routing Code: 11

Descriptor Code: 7

EDG6114E - ERROR POSITIONING TO CONTROL DATA SET RECORD KEY 'record_type', RPL REASON CODE reason_code

Explanation: An error occurred during a VSAM POINT operation on the DFSMSrmm control data set.

In the message text:

record_type
  Is the record type being searched for in the DFSMSrmm control data set

reason_code
  Is the RPL ERROR CODE

System action: If reason_code is 16, the program continues. Otherwise, the program fails with the return code set by the VSAM POINT operation.

Operator response: None.

Application Programmer Response: If the reason_code is 16, verify that there should be no records of type type in the control data set. If no other errors are reported, then this is probably normal. For any other return code, refer to z/OS DFSMS Macro Instructions for Data Sets to interpret the return and reason code.

Source: DFSMSrmm

Descriptor Code: 7

EDG6117E  CONTROL DATA SET DDNAME NOT SPECIFIED

Explanation: The DFSMSrmm utility EDGUTIL did not find a MASTER DD file allocated for its use.
System action: The program fails.
Operator response: None.
Application Programmer Response: Supply a MASTER DD statement when running this utility.
Source: DFSMSrmm
Detecting Module: EDGBKUP
Routing Code: 11
Descriptor Code: 7

EDG6118W  NO SYSIN FILE SUPPLIED - A CONTROL DATA SET HAS BEEN CREATED

Explanation: You invoked the EDGUTIL utility without specifying parameters.
System action: The EDGUTIL utility created a control data set. EDGUTIL was run using the default value of MASTER(Y).
Operator response: None.
Application Programmer Response: If you do not wish the default values, resubmit the EDGUTIL job and supply appropriate values.
EDG6119E  DFSMSrmm CONTROL DATA SET MUST NOT BE IN USE BY DFSMSrmm SUBSYSTEM DURING RESTORE OR REORGANIZE

Explanation:  The target control data set specified to EDGBKUP on the MASTER DD statement must not be in use by the DFSMSrmm subsystem during a restore or reorganize.

System action:  The program fails.

Operator response:  None.

System programmer response:  Quiesce or shutdown the DFSMSrmm subsystem and resubmit the EDGBKUP utility job.

Source:  DFSMSrmm
Detecting Module:  EDGBKUP
Routing Code:  11
Descriptor Code:  7

EDG6120E  MULTIPLE SYSIN STATEMENTS ARE NOT SUPPORTED

Explanation:  There are multiple logical statements in the SYSIN file. Only one command in SYSIN is supported.

System action:  The utility ends.

Operator response:  None.

Application Programmer Response:  Change the input, so that there is only one command in the SYSIN statement. If you are using continuations, ensure that all required continuation characters are present.

Source:  DFSMSrmm
Detecting Module:  EDGUTIL, EDGBKUP
Routing Code:  11
Descriptor Code:  7

EDG6121E  JOURNAL DATA SET IS EMPTY

Explanation:  The journal specified during a RESTORE operation is empty.

System action:  The DFSMSrmm control data set has been restored but no journal updates were made because the journal supplied was empty. The program ends with return code 4.

Operator response:  None.

Application Programmer Response:  Make sure that the JOURNAL DD statement in the job specifies the correct data set. If journal updates are not required during this restore, then remove the DD statement.

Source:  DFSMSrmm
Detecting Module:  EDGBKUP

EDG6122E  JOURNAL DATA SET NOT USED, DATA SET ATTRIBUTES ARE INCORRECT

Explanation:  The journal DCB attributes are checked before using the data set to update the DFSMSrmm control data set during a RESTORE operation. If the attributes do not match those set by the DFSMSrmm subsystem, then the data set will not be used during the RESTORE operation.

During SMFIN forward recovery, journal records are created from SMF records. This might have caused the
EDG6123E  JOURNALDD entry specified in the message to have been created.

System action: The program ends with return code 12.

Operator response: None.

Application Programmer Response: Ensure that the data set supplied as a journal to the restore job is a valid journal. Resubmit the job using the correct data set.

Source: DFSMSrmm

Detecting Module: EDGBKUP

---

EDG6123E  JOURNAL DATA SET CANNOT BE PROCESSED, IT DOES NOT CONTAIN VALID JOURNAL DATA

Explanation: The journal supplied to the RESTORE job does not contain a valid journal header record, and will not be processed.

System action: The program ends with return code 12.

Operator response: None.

Application Programmer Response: Check the data set supplied as the journal to the restore operation. Resubmit the job with the correct data set.

Source: DFSMSrmm

Detecting Module: EDGBKUP

---

EDG6124E  JOURNAL DDNAME NOT ALLOWED FOR BACKUP DURING INVENTORY MANAGEMENT

Explanation: The user made an inventory management request that includes backing up the DFSMSrmm control data set. The user supplied the JOURNAL DD statement. This is only allowed when the DFSMSrmm subsystem is inactive.

System action: The backup request fails and no further processing is performed. Because backup is the final inventory management function performed, all other requests should have completed successfully.

Operator response: None.

Application Programmer Response: Remove the JOURNAL DD statement from the inventory management JCL and resubmit the backup request.

Source: DFSMSrmm

Detecting Module: EDGBKUP

---

EDG6125E  USE OF BATCH LSR IS NOT SUPPORTED WHEN THE MEND PARAMETER IS SPECIFIED

Explanation: DFSMSrm issues this message when:
- The Batch local shared resource (BLSR) subsystem is used with the DFSMSrmm utility EDGUTIL when you specify the MEND parameter.
- The data set specified on the MASTER DD statement is not a VSAM data set.

System action: Processing ends. DFSMSrmm returns return code 16.

Operator response: None.

Application Programmer Response: Resubmit the job without using BLSR.

Source: DFSMSrmm

Detecting Module: EDGUTIL
EDG6126E  CONTROL DATA SET BACKUP FAILED - JOURNAL IS LOCKED

Explanation: A DFSMSdss backup of the DFSMSrmm control data set failed because the journal data set is locked. The journal might have filled up or there might have been an I/O error. If a journal is in use, there must be an active journal data set available in order for tape to be used for the backup copies.

System action: Backup processing fails and DFSMSrmm sets return code 12.

Operator response: None.

System programmer response: Allocate a new journal data set if the journal is locked because of an I/O error, or enlarge the journal to avoid it filling up during backup of the control data set. You can request a backup using AMS REPRO instead of DFSMSdss by not specifying the BACKUP(DSS) parameter in the EXEC statement parameters. If DFSMSdss backup is required, resubmit the job after making sure an active journal is available.

Source: DFSMSrmm

Detecting Module: EDGBKUP

EDG6127E  BACKUP CANNOT PROCEED - TAPE OUTPUT IS SUPPORTED FOR THE BACKUP(DSS) PARAMETER ONLY

Explanation: A backup has been requested with the BACKUP parameter. BACKUP(DSS) must be requested when the output for the journal or control data set backup is directed to a tape data set. The backup output for the journal or the control data set has been directed to a tape data set, but tape output is not supported when the BACKUP parameter is used.

System action: Backup processing fails and DFSMSrmm sets return code 12.

Operator response: None.

System programmer response: The backup job must be changed to write the backup data to a DASD data set. If output to tape is required, request backup by specifying the BACKUP(DSS) parameter instead of BACKUP.

Source: DFSMSrmm

Detecting Module: EDGBKUP

EDG6128I  CONCURRENT COPY NOT AVAILABLE REASON CODE reason_code - PROCESSING CONTINUES WITHOUT CONCURRENT COPY

Explanation: A concurrent backup has been requested of the DFSMSrmm control data set, but DFSMSdss could not establish a concurrent copy session.

reason_code

Is the ADRDSSU UIM reason code as described in the z/OS DFSMSdss Storage Administration for UIM function Eioption 24.

System action: Backup processing continues. DFSMSrmm sets return code 4.

Operator response: None.

System programmer response: Use the reason code to determine why the concurrent copy session was not initialized. If you want to use concurrent copy, you must resolve the problem described by the reason code and resubmit the job.

Source: DFSMSrmm

Detecting Module: EDGBKDSS

EDG6129E  CONTROL DATA SET BACKUP HAS FAILED - ADRDSSU RETURN CODE return_code MESSAGE

ADRnnnn

Explanation: A DFSMSdss backup has been requested of the DFSMSrmm control data set. The DFSMSdss backup of the control data set failed.

return_code

Is the ADRDSSU task return code.
EDG6130E • EDG6132E

nnnt

Is the ADRDSSU message number suffix. nnn is the message number and t is the type. Refer to z/OS MVS System Messages, Vol 1 (ABA-AOM) for the message. Refer to the SYSPRINT file to see all the messages issued by ADRDSSU during processing.

System action: Backup processing stops. DFSMSrmm sets return code 12.

Operator response: None.

System programmer response: Request a backup using AMS REPRO instead of DFSMSdss by not specifying the BACKUP(DSS) parameter in the EXEC statement parameters. If DFSMSdss backup is required, resubmit the job after correcting the ADRDSSU processing problems.

Source: DFSMSrmm

Detecting Module: EDGBKUP

EDG6130E CONTROL DATA SET BACKUP HAS FAILED - ADDITIONAL TAPE VOLUME REQUIRED

Explanation: The end of volume has been reached during backup to tape. Either, an additional tape volume is required while the control data set backup is directed to tape without using concurrent copy, or an additional tape volume is required while the journal backup is directed to tape and control data set updates are being made.

In both cases, DFSMSrmm supports only one tape volume. This is a documented restriction of DFSMSrmm.

System action: Backup processing stops. DFSMSrmm sets return code 12.

Operator response: None.

System programmer response: To correct the problem you have the following options:

• Use BACKUP(DSS) with concurrent copy.
• Direct the backup output to DASD.
• Use a tape volume with higher capacity

Source: DFSMSrmm

Detecting Module: EDGBKUP

EDG6131E CONTROL DATA SET RECOVERY FAILED - NAME OF RESTORED DATA SET DOES NOT MATCH MASTER DATA SET NAME

Explanation: You have restored the DFSMSrmm control data set from a DFSMSdss backup. The name of the restored data set does not match the master data set name. The data set might have been renamed incorrectly during restore or the incorrect data set name was specified on the MASTER DD statement.

For forward recovery to be successful, the MASTER DD statement must specify the new name of the restored data set or must not be specified.

System action: Restore processing stops. DFSMSrmm sets return code 12.

Operator response: None.

System programmer response: To correct the problem you have the following options:

• Do not rename the control data set during restore processing.
• Do not specify a MASTER DD statement for restore from a backup taken with DFSMSdss.
• Ensure that the data set name specified on the MASTER DD statement matches the name of the restored data set.

Source: DFSMSrmm

Detecting Module: EDGBKUP

EDG6132E BACKUP CANNOT PROCEED - TAPE OUTPUT IS NOT SUPPORTED FOR BACKUP(DSS) PARAMETER WHILE DFSMSrmm IS IN QUIESCE MODE

Explanation: A backup has been requested with the BACKUP(DSS) parameter and the output for the journal or control data set backup has been specified directly to a tape data set while DFSMSrmm is quiesced.

System action: Backup processing ends and DFSMSrmm sets return code 16.
EDG6133E  MASTER FILE IS NOT A VSAM DATA SET

**Explanation:** DFSMSrmm issues this message when you have specified a non-vsam data set for the MASTER DD file. You cannot use Batch LSR or any other subsystem data sets to process the DFSMSrmm control data set. The MASTER DD must name the DFSMSrmm control data set.

**System action:** EDGUTIL processing ends with return code 16.

**Operator response:** Report the error to the application programmer.

**Application Programmer Response:** Update the JCL for EDGUTIL to specify the VSAM DFSMSrmm control data set on the DSN keyword of the MASTER DD statement.

**Source:** DFSMSrmm

**Detecting Module:** EDGUTIL

EDG6134E  BACKUP CANNOT START BECAUSE NEITHER BACKUP NOR JRNLBKUP ARE SPECIFIED

**Explanation:** You have requested that DFSMSrmm perform a backup but you did not specify the BACKUP DD statement or the JRNLBKUP DD statement. You must specify at least one of the DD statements.

**System action:** The backup request fails.

**Operator response:** None.

**Application Programmer Response:** Add one or both of the missing DD statements and resubmit the backup request. Specify a BACKUP DD statement to request backup of the DFSMSrmm control data set. Specify a JRNLBKUP DD statement to request backup of the journal.

**Source:** DFSMSrmm

**Detecting Module:** EDGBKUP EDGHSKP

EDG6135E  BACKUP CANNOT START BECAUSE BACKUP IS ALREADY IN PROGRESS

**Explanation:** You have requested DFSMSrmm backup processing but the request fails because there is already a backup running. Only one backup at a time is allowed.

**System action:** The backup request fails.

**Operator response:** None.

**Application Programmer Response:** If you need to start backup, wait until the current backup processing completes and then resubmit the job.

**Source:** DFSMSrmm

**Detecting Module:** EDGBKUP

EDG6136E  JOURNAL BACKUP FAILED - JOURNAL IS LOCKED

**Explanation:** A DFSMSdss backup of the DFSMSrmm journal failed because the journal data set is locked. The journal might have filled up or there might have been an I/O error. If a journal is in use, there must be an active journal data set available in order for tape to be used for the backup copies.

**System action:** Backup processing fails and DFSMSrmm sets return code 12.

**Operator response:** None.
EDG6137I • EDG6139E

System programmer response: Allocate a new journal data set if the journal is locked because of an I/O error, or enlarge the journal to avoid it filling up during backup.

EDG6137I THE REQUESTED FUNCTION function IS NOT SUPPORTED ON A CLIENT SYSTEM

Explanation: You are running a DFSMSrmm utility described by function in the message text on a DFSMSrmm client system. The function is not supported.

In the message text:
function
   BACKUP

System action: The utility processing ends.
Operator response: None.
System programmer response: Run the function on a system with direct access to the DFSMSrmm control data set.
Source: DFSMSrmm
Detecting Module: EDGHSKP

EDG6138E JOURNAL AND SMFIN DD STATEMENTS ARE MUTUALLY EXCLUSIVE - SPECIFY ONLY ONE INPUT DD NAME

Explanation: An error occurred during an attempt to forward recover the control data set. JOURNAL and SMFIN DD statements are mutually exclusive.

System action: The program ends with return code 12.
Operator response: None.
Application Programmer Response: Correct the DD statements to either specify the JOURNAL DD statement to request forward recovery from journal input records, or to specify the SMFIN DD statement to use unloaded SMF records as input, and resubmit the job. If both JOURNAL and SMFIN are available, IBM suggests to use JOURNAL.

EDG6202E  FAILURE DURING DFSMSrmm SUBSYSTEM PROCESSING

Explanation:  A subsystem request from either EDGHSKP or EDGBKUP failed. When you request inventory management functions other than BACKUP, EDGHSKP uses a subsystem request to initiate the functions you request. During backup processing, the DFSMSrmm subsystem must be notified that backup is in progress and is completed. An error in the subsystem prevented notification from occurring.

System action:  The program fails.

Operator response:  None.

Application Programmer Response:  Use the messages that have been issued to identify the cause of the error, correct the error and resubmit the job. You should refer to the message files MESSAGE and SYSPRINT to identify the error.

Source:  DFSMSrmm

Detecting Module:  EDGBKUP

EDG6203E  FAILURE DURING DFSMSrmm SUBSYSTEM PROCESSING RETURN CODE return_code

Explanation:  A subsystem request from either EDGHSKP or EDGBKUP has ended with an unexpected return code. When you request inventory management functions other than BACKUP, EDGHSKP uses a subsystem request to initiate the functions you request. During backup processing, the DFSMSrmm subsystem must be notified that backup is in progress and is completed. The DFSMSrmm subsystem has responded with a return code indicating the error is not known.

In the message text:

return_code
  Value returned indicating the results of processing

System action:  The program fails.

Operator response:  None.

System programmer response:  Contact the IBM Support Center and have available the complete text of the message and any related messages. You should refer to the message files MESSAGE and SYSPRINT to obtain any related messages.

Source:  DFSMSrmm

Detecting Module:  EDGBKUP

EDG6204E  USER NOT AUTHORIZED TO REQUEST SELECTED FUNCTION

Explanation:  The user is not authorized to request inventory management or backup processing.

System action:  The program fails.

Operator response:  None.

Application Programmer Response:  Resubmit the job using the correct userid, or give the user RACF authorization to STGADMIN.EDG.HOUSEKEEP to request backup functions. Refer to z/OS DFSMSrmm Implementation and Customization Guide for information on security profiles and authorizing users.

EDG6205E DFSMSrmm INVENTORY MANAGEMENT FUNCTIONS ARE ACTIVE, REQUEST REJECTED

Explanation: The requested function cannot be run at this time because there are already inventory management functions in progress.
System action: The program fails.
Operator response: None.
Application Programmer Response: Resubmit the job when inventory management is completed. If inventory management processing was canceled, stop and start DFSMSrmm to clear the problem.
System programmer response: If inventory management was stopped because of failure in DFSMSrmm processing, you can correct the error situation by stopping and restarting DFSMSrmm. If DFSMSrmm issued message EDG0123D during start up, ensure that inventory management is not in progress on another system before replying to the message.
Source: DFSMSrmm
Detecting Module: EDGBKUP, EDGHSKP, EDGUPDT

EDG6206W DFSMSrmm SUBSYSTEM INVENTORY MANAGEMENT REQUEST ON A SATELLITE FILE INCLUDED UNSUPPORTED FUNCTIONS

Explanation: The user has requested processing other than satellite, and backup for a DFSMSrmm satellite file.
System action: EDGHSKP performs the supported functions and ignores the other requests.
Operator response: None.
Application Programmer Response: Correct the parameters so that only satellite file processing and backup are provided on future requests.
Source: DFSMSrmm
Detecting Module: EDGHSKP

EDG6207E DFSMSrmm SUBSYSTEM UNABLE TO ALLOCATE AND OPEN THE INPUT AND OUTPUT DATA SETS SPECIFIED

Explanation: The DFSMSrmm subsystem received incorrect data set names for the input and output file.
System action: The job fails.
Operator response: None.
Application Programmer Response: Identify the error from the system messages issued. Correct the error and resubmit the job. All data sets must be permanent, cataloged, predefined data sets allocated with DISP=SHR.
Source: DFSMSrmm
Detecting Module: EDGHSKP

EDG6208E INVENTORY MANAGEMENT CANNOT COMPLETE BECAUSE THE JOURNAL IS LOCKED - BACKUP CONTROL DATA SET AND RERUN IT

Explanation: Inventory management cannot update information in the DFSMSrmm control data set because the journal data set is locked. This was caused by an operator replying 'L' to message EDG2104E.
System action: Inventory management is interrupted. Some volume information in the DFSMSrmm control data set might have been updated already.
Operator response: None.
Application Programmer Response: Backup the DFSMSrmm control data set using the EDGHSKP utility so that the
EDG6209I CATSYNCH INVENTORY MANAGEMENT OPTION CANNOT RUN UNLESS CATSYSID OPERAND IS SPECIFIED IN PARMLIB

Explanation: You have attempted to run EDGHSKP with the CATSYNCH EXEC parameter. You cannot synchronize the DFSMSrmm control data set with the user catalogs unless you specify the CATSYSID operand in the EDGRMMxx parmlib member.

System action: Processing ends with return code 12.

Operator response: Notify the system programmer.

Application Programmer Response: Consider use of CATSYSID in DFSMSrmm parmlib, and if it can be specified, you can rerun CATSYNCH.

Source: DFSMSrmm
Detecting Module: EDGHSKP

EDG6301E DFSMSrmm SUBSYSTEM IS NOT ACTIVE

Explanation: The requested functions cannot be completed because the DFSMSrmm subsystem is not active. The subsystem interface is initialized but the DFSMSrmm subsystem is not active. Before the functions can be processed, the DFSMSrmm subsystem must be started and remain active.

System action: The job fails.

Operator response: Start the DFSMSrmm subsystem.

Application Programmer Response: Contact the operator and request that the subsystem be restarted.

Source: DFSMSrmm
Detecting Module: EDGHSKP, EDGUPDT

EDG6302E DFSMSrmm SUBSYSTEM IS NOT DEFINED TO MVS

Explanation: The DFSMSrmm subsystem has not been defined to MVS.

System action: The job fails.

Operator response: Start the DFSMSrmm subsystem after installation has completed.
EDG6303E • EDG6306E

Application Programmer Response: Refer to z/OS DFSMSrmm Implementation and Customization Guide for installation instructions.

EDG6316I  function FAILED WITH I/O ERROR - JOURNAL RECORD NUMBER number RECORD TYPE type key

Explanation: You are running the EDGUPDT utility to apply JRNLTRAN records to the original CDS. An I/O error has occurred during DFSMSrmm subsystem processing.

In the message text:

function
  Is the original record update recorded in the journal. It can be one of ADD, CHANGE, and DELETE.

number
  The number (4 bytes in hexadecimal) of the journal record processed.

type
  The type of the journal record processed. It can be one of: V for volume, or D for data set.

key
  The partial key of the journal record processed.
  • For a record type V, the volser is given.
  • For a record type D, the data set name, file sequence number, and volser are listed.

System action: EDGUPDT processing ends with the return code of 12.

Operator response: N/A

Storage Administrator Response: Notify the system programmer.

System programmer response: Identify the cause of the error using the SYSLOG and take the appropriate recovery action for the DFSMSrmm error messages found.

Source: DFSMSrmm
Detecting Module: EDGUPDT

EDG6317I  UPDATE PROCESSING ENDED - NO JRNLTRAN CREATED JOURNAL RECORDS FOUND

Explanation: You are running the EDGUPDT utility to apply JRNLTRAN records to the original CDS. No journal records created by JRNLTRAN processing were found. If you specified a TARGETDATE, no records were found before that target date and time.

System action: The utility ends with return code 4.

Operator response: N/A

Storage Administrator Response: Verify that you have been using the correct journal or journal backups. Ensure that DFSMSrmm was running with OPTION JRNLTRAN(YES).

Source: DFSMSrmm
Detecting Module: EDGUPDT

EDG6318I  function CANNOT COMPLETE BECAUSE THE JOURNAL IS LOCKED - JOURNAL RECORD NUMBER number RECORD TYPE type key

Explanation: You are running the EDGUPDT utility to apply JRNLTRAN records to the original CDS. No further updates can be processed because the active DFSMSrmm journal is now locked. This was caused by an operator replying 'L' to message EDG2104E.

In the message text:

function
  Is the original record update recorded in the journal. It can be one of ADD, CHANGE, and DELETE.

number
  The number (4 bytes in hexadecimal) of the journal record processed.
The type of the journal record processed. It can be one of: V for volume, or D for data set.

key

The partial key of the journal record processed.

- For a record type V, the volser is given.
- For a record type D, the data set name, file sequence number, and volser are listed.

System action: EDGUPDT processing ends with the return code of 12.

Operator response: N/A

Storage Administrator Response: Notify the system programmer. When the backup is completed successfully, rerun EDGUPDT by resubmitting the job.

System programmer response: Identify the cause of the error using the SYSLOG and take the appropriate recovery action for the DFSMSrmm error messages found. You can run the EDGHSKP utility with one of the BACKUP parameter options to backup and clear the journal.

EDG6415I  CONTROL DATA SET CONTROL RECORD UPDATED SUCCESSFULLY
Explanation:  This message is issued for information only. The DFSMSrmm control data set control record has been successfully updated by the DFSMSrmm utility.
System action:  Processing continues.
Operator response:  None.
Source:  DFSMSrmm
Detecting Module:  EDGUTIL

EDG6416E  CONTROL DATA SET CONTROL RECORD UPDATE FAILED
Explanation:  An error occurred during the update of the DFSMSrmm control data set control record.
System action:  The request fails.
Operator response:  None.
Application Programmer Response:  Correct the error and resubmit the job.
Source:  DFSMSrmm
Detecting Module:  EDGUTIL

EDG6417I  CONTROL DATA SET VERIFY SUCCESSFUL
Explanation:  This message is issued for information only. The DFSMSrmm control data set has been verified.
System action:  Processing continues
Operator response:  None.
Source:  DFSMSrmm
Detecting Module:  EDGUTIL
EDG6418W  CONTROL DATA SET VERIFY COMPLETED WITH ERRORS
Explanation: The DFSMSrmm control data set verification completed with errors.
System action: The DFSMSrmm utility stops.
Operator response: None.
Application Programmer Response: Refer to the warning messages issued during the execution of the utility, EDGUTIL.
Source: DFSMSrmm
Detecting Module: EDGUTIL

EDG6419E  CONTROL DATA SET VERIFY FAILED
Explanation: DFSMSrmm control data set verification failed.
System action: The utility stops.
Operator response: None.
Application Programmer Response: Refer to the error messages issued to determine the cause of the error and retry the utility.
Source: DFSMSrmm
Detecting Module: EDGUTIL

EDG6420I  PROCESSING ENDED - INVENTORY MANAGEMENT CURRENTLY IN PROGRESS
Explanation: The requested function cannot be completed because some inventory management function is currently in progress.
System action: The utility stops.
Operator response: None.
Application Programmer Response: Resubmit the job when the existing inventory management functions have completed.
Source: DFSMSrmm
Detecting Module: EDGUTIL

EDG6421I  INCOMPLETE SET OF JOURNAL RECORDS IGNORED FOR RECOVERY
Explanation: During forward recovery of the DFSMSrmm control data set from a backup with use of the journal data set, DFSMSrmm found that the latest journal entry was incomplete. This could indicate that either:
• The system failed during journal processing
• The journal was full
• There was an I/O error updating the journal.

In any case, the DFSMSrmm control data set would not have been updated with the intended change, and a recovery would have been attempted.

During recovery from a failed update to the control data set, this situation is normal and recovery processing has been successful.

During SMFIN forward recovery, journal records are created from SMF records. This might have caused the JOURNAL DD entry specified in the message to have been created.

System action: The DFSMSrmm control data set has been forward-recovered to just before the time of the error encountered while updating the control data set. DFSMSrmm sets a minimum return code of 4. DFSMSrmm can now be restarted.
Operator response: None.
**System programmer response:** Ensure that the update that failed is identified and is rerun, along with any other requests that were rejected by DFSMSrmm.

**Source:** DFSMSrmm
**Detecting Module:** EDGBKUP

---

**EDG6422I • BACKUP OF CONTROL DATA SET REJECTED - RECOVERY OF CONTROL DATA SET REQUIRED FIRST**

**Explanation:** DFSMSrmm checks that any previous update of the DFSMSrmm control data set has completed successfully before it backs up the DFSMSrmm control data set. In this case, DFSMSrmm found that a previous update of the control data set had failed. DFSMSrmm was probably stopped during recovery and the recovery actions were not performed.

**System action:** The EDGBKUP utility stops and the requested DFSMSrmm control data set backup is not performed.

**Operator response:** None.

**System programmer response:** Before backup can be performed, you must correct this error. See messages EDG2110I through EDG2116A, which are already issued by DFSMSrmm. If you need to backup and restore the current control data set to perform manual recovery for EDG2116A, you can use EDGBKUP with the BACKUP(REORG) parameter or use IDCAMS REPRO to reorganize the control data set. To recover the control data set:

- Restart the DFSMSrmm address space to allow automatic recovery to be attempted.
- Perform manual recovery of the DFSMSrmm control data set using the journal, if it is available.

Once recovery is successful, you can retry the backup request.

**Source:** DFSMSrmm
**Detecting Module:** EDGBKUP

---

**EDG6423I • CONTROL DATA SET INDICATES A PREVIOUS FAILED CONTROL DATA SET UPDATE**

**Explanation:** DFSMSrmm checks that previous updates of the DFSMSrmm control data set were successful before forward recovering the control data set. In this case, DFSMSrmm found that a previous update of the DFSMSrmm control data set had failed and could not be corrected by this forward recovery. Either the previous update occurred some time before and was present at the time of the backup, or you are using the current control data set. If you were using a restored backup, the backup was probably taken with a utility other than EDGBKUP. DFSMSrmm was probably stopped during recovery and the recovery actions not performed.

**System action:** The EDGBKUP utility completes the forward recovery of the DFSMSrmm control data set. The utility sets return code 8 and updates the control records of the recovered control data set to indicate recovery is in error.

**Operator response:** None.

**System programmer response:** You can correct the original error, rather than use the current attempt at recovery, by finding the correct copy of the journal that was in use at the time of the original back up. See messages EDG2110I through EDG2116A for guidance. To recover:

- Restart the DFSMSrmm address space, using the correct journal, to enable automatic recovery to be attempted.
- Perform manual recovery of the DFSMSrmm control data set using the journal, if it is available.

Otherwise, check that the correct DFSMSrmm control data set has been used for this recovery request. Ignore this error if you are aware, for example, that you have lost a particular backup of the DFSMSrmm control data set. If you are not expecting the error, you should select the correct backups and retry recovery. Run the EDGUTIL utility with VERIFY(ALL). When this completes with return code zero, the DFSMSrmm control data set error indicators are reset.

**Source:** DFSMSrmm
**Detecting Module:** EDGBKUP
EDG6424E  FORWARD RECOVERY START POINT NOT FOUND IN JOURNAL

**Explanation:** During EDGBKUP forward recovery of the DFSMSrmm control data set, DFSMSrmm found that the journal did not contain the records that match to the control data set that is being recovered.

This is the result of using the wrong DFSMSrmm control data set, the wrong journal, or running EDGUTIL on the control data set before forward recovery. If concatenated journal backups have been input to EDGBKUP, this message applies to all the data sets in the concatenation. DFSMSrmm was unable to find the journal records to match the control data set. There might be no journal records that are more recent than the restored control data set backup, or the journal records created since the start of the control data set backup are not present in the journal concatenation.

During SMFIN forward recovery, journal records are created from SMF records. This might have caused the JOURNAL DD entry specified in the message to have been created.

**System action:** The EDGBKUP utility continues with the forward recovery request and sets return code 4. If any journal records have a more recent time stamp than the control data set, they are used for forward recovery.

**Operator response:** None.

**System programmer response:** Ensure that the correct DFSMSrmm control data set and journal have been used for this recovery request. To see if any journal records have been processed, look for the EDG6410I, EDG6411I, and EDG6412I messages in the SYSPRINT file. Use the information in message EDG6431I to check the control data set and journal time stamps. If the control data set time stamp is between the start and end times from the journal, all possible records have been recovered from the journal.

You can ignore this error if you understand why the situation occurred. For example, if you know that you might have lost a particular backup of the DFSMSrmm control data set or journal, you can ignore this error. To respond to the error, you should select the correct backups and retry recovery. Run the EDGUTIL utility with VERIFY(ALL). When this completes with return code zero, the DFSMSrmm control data set error indicators are reset.

If the control data set backup was created using the BACKUP(DSS) option, any restore of the control data set must use the journal backup taken at the same time as the control data set backup. If you do not use the journal backup taken at the same time, you will have missing journal records. To correct the error, add the name of the journal backup that should be used. For recovery from the latest control data set backup, use the latest journal backup and the active journal.

**Source:** DFSMSrmm

**Detecting Module:** EDGBKUP

---

EDG6425E  JOURNAL INPUT CONTAINS DATA SETS OUT OF SEQUENCE - CONCATENATION NUMBER number

**Explanation:** During EDGBKUP recovery of the DFSMSrmm control data set, DFSMSrmm found that the journal consisted of concatenated, multiple data sets, and that the correct concatenation sequence has not been used.

This is the result of either using the wrong journal backups or the wrong data set sequence.

In the message text:

- **number**
  - The number of the data set in the list of concatenated data sets. The first data set in the list is concatenation number 0.

During SMFIN forward recovery, journal records are created from SMF records. This might have caused the JOURNAL DD entry specified in the message to have been created.

**System action:** The EDGBKUP utility continues with the forward recovery request, sets return code 8, and updates the control records of the recovered DFSMSrmm control data set to indicate recovery is in error.

**Operator response:** None.

**System programmer response:** Check that the correct journal backup copies have been used for this recovery request. Ignore this error if you understand exactly why the situation has happened. For example, you might have lost a particular backup of the journal. If you are not expecting the error, you should select the correct backups and retry recovery. Run the EDGUTIL utility with VERIFY(ALL). When this completes with return code zero, the DFSMSrmm control data set error indicators are reset.
EDG6426I  CONTROL DATA SET AND JOURNAL BACKUP SUCCESSFUL

Explanation: This message is issued for information only. The DFSMSrmm control data set and the journal were backed up successfully.

System action: Processing continues.

Operator response: None.

Source: DFSMSrmm
Detecting Module: EDGBKUP

EDG6427I  FORWARD RECOVERY ONLY WILL BE PERFORMED

Explanation: This message is issued for information only. DFSMSrmm performs forward recovery of the DFSMSrmm control data set from the journal without a restore, because a backup copy of the DFSMSrmm control data set was not provided.

System action: Processing continues.

Operator response: None.

Source: DFSMSrmm
Detecting Module: EDGBKUP

EDG6428E  JOURNAL RECORD record_number IN CONCATENATION NUMBER number IS OUT OF SEQUENCE

Explanation: A record in the journal was out of sequence for one of the following reasons:

- The record was time-stamped lower than the previous record from the same system.
- The record sequence number was not correctly incremented from the previous record.

In the message text:

record_number
   The record number within a journal.

number
   The number of the data set in the list of concatenated data sets. The first data set in the list is concatenation number 0.

During SMFIN forward recovery, journal records are created from SMF records. This might have caused the JOURNAL DD entry specified in the message to have been created.

System action: The EDGBKUP utility continues with forward recovery, sets return code 8, and marks the DFSMSrmm control data set in error. This message might be accompanied by message EDG6430E. The EDGUPDT utility continues update processing and sets return code 8.

Operator response: None.

Application Programmer Response: For EDGBKUP, run the EDGUTIL utility with VERIFY(ALL). When EDGUTIL is successfully completed, the error indicators in the DFSMSrmm control data set are reset. For EDGUPDT, review the results of processing to ensure that all expected updates have been made successfully.

Detecting Module: EDGBKUP, EDGUPDT
EDG6429W  TOD CLOCKS BETWEEN SHARING SYSTEMS MAY NOT BE CORRECTLY SYNCHRONIZED -
RECORD record_number IN CONCATENATION NUMBER number

Explanation: A record had a lower date/time than the previous record and originated from a different system to the
previous record, indicating the TOD clocks might not be synchronized.

In the message text:

record_number
   The record number within a journal.

number
   The number of the data set in the list of concatenated data sets. The first data set in the list is concatenation
   number 0.

System action: Return code 4 is set and processing continues.

Operator response: None.

System programmer response: Ensure that TOD clocks for all sharing systems are synchronized.

Source: DFSMSrmm
Detecting Module: EDGBKUP

EDG6430E  AN INCOMPLETE SET OF JOURNAL RECORDS READ AND IGNORED - PRIOR TO RECORD
record_number IN CONCATENATION NUMBER number

Explanation: During forward recovery of a multiple-record update set, DFSMSrmm found a record that was not
part of the set.

In the message text:

record_number
   The record number within a journal.

number
   The number of the data set in the list of concatenated data sets. The first data set in the list is concatenation
   number 0.

During SMFIN forward recovery, journal records are created from SMF records. This might have caused the
JOURNAL DD entry specified in the message to have been created.

System action: The multiple-record set is ignored and processing continues. Return code 8 is set, and the control
record of the recovered DFSMSrmm control data set is updated to show that recovery is in error.

Operator response: None.

System programmer response: Run the EDGUTIL utility with VERIFY(ALL). When this completes with return code
zero, the DFSMSrmm control data set error indicators are reset.

Detecting Module: EDGBKUP

EDG6431I  THE CONTROL DATA SET TIMESTAMPED cds_date WAS function FROM JOURNAL RECORDS
BETWEEN low_date AND high_date

Explanation: DFSMSrmm issues this message for information only. This is a summary record from forward recovery
or update processing.

In the message text:

cds_date
   The time stamp of the restored or recovered control data set.

function
   This is either UPDATED or FORWARD RECOVERED.
**low_date**
The lowest journal record time stamp read for forward recovery.

**high_date**
The highest journal record time stamp read for forward recovery.

During SMFIN forward recovery, journal records are created from SMF records. This might have caused the JOURNAL DD entry specified in the message to have been created.

**System action:** Processing continues.

**Operator response:** None.

**System programmer response:** DFSMSrmm issues this message whether processing is successful. If the utility return code is nonzero, use the timestamps in the message text to validate that the correct time range of journal records has been used. If the message EDG6424E accompanies forward recovery processing, it might be that none of the journal records has been used for forward recovery. This can happen when all the journal records are older than the control data set backup. If the message EDG6317I accompanies update processing, it might be that none of the journal records has been used for update processing. This can happen when none of the JRNLTRAN created journal records are within the target date.

**Source:** DFSMSrmm

**Detecting Module:** EDGBKUP, EDGUPDT

**EDG6432E** A FORMAT 0 JOURNAL RECORD WAS ENCOUNTERED - RECORD record_number IN
CONCATENATION NUMBER number

**Explanation:** A down-level journal record was found in the journal input.

In the message text:

- **record_number**
  The record number within a journal.

- **number**
  The number of the data set in the list of concatenated data sets. The first data set in the list is concatenation number 0.

**System action:** Return code 8 is set and processing continues. The control record of the recovered DFSMSrmm control data set is updated to show that recovery is in error.

**Operator response:** None.

**System programmer response:** Ensure that all sharing systems are at the required level of DFSMSrmm, and that the correct journals have been supplied. Run the EDGUTIL utility with VERIFY(ALL). When this completes with return code zero, the DFSMSrmm control data set error indicators are reset.

**EDG6433I** STARTING VERIFICATION OF record_type RECORDS

**Explanation:** DFSMSrmm utility, EDGUTIL, is checking the validity of record_type records in the control data set.

In the message text:

- **record_type**
  The possible values for this string are:

  **DATA SET**
  Data set records

  **OWNER**
  Owner records

  **PRODUCT**
  Product records
EDG6434I

RACK
All types of rack number records

STORE
Bin numbers in all storage locations

VOLUME
Volume records

VRS
Vital records specification records

System action: Processing continues.

Operator response: None.

System programmer response: None.

Source: DFSMSrmm

Detecting Module: EDGUTIL

EDG6434I  NO record_type RECORDS IN CONTROL DATA SET

Explanation: DFSMSrmm utility, EDGUTIL, found no records of type record_type in the control data set to verify.

In the message text:

record_type
The possible values for this string are:

DATA SET
Indicating that the control data set contains no data set information

EMPTY BIN
Indicating that the control data set contains no bin number records which are currently empty

EMPTY RACK
Indicating that the control data set contains no rack records which are currently empty

INUSE BIN
Indicating that the control data set contains no bin number records containing volumes

INUSE RACK
Indicating that the control data set contains no rack number records containing private volumes

OWNER
Indicating that the control data set contains no owner records

PRODUCT
Indicating that the control data set contains no product records

SCRATCH RACK
Indicating that the control data set contains no rack records containing scratch volumes

VOLUME
Indicating that the control data set contains no volume records

VRS
Indicating that the control data set contains no vital records specifications

System action: Processing continues. This message does not usually indicate an error unless you expect the control data set to contain records of the type record_type.

Operator response: None.

Application Programmer Response: Consider whether it is reasonable that records of the type record_type should not be in the control data set. If you expect records of the type record_type in the control data set, inform the system programmer.

System programmer response: If you expect records of the type record_type in the control data set, inform the IBM Support Center.
EDG6435I  JOURNAL BACKUP SUCCESSFUL

<tr>
<td>R</td>
<td>EMPTY BIN</td>
</tr>
<tr>
<td>S</td>
<td>IN-USE BIN</td>
</tr>
<tr>
<td>V</td>
<td>VOLUME</td>
</tr>
</tbody>
</table>

- **entry_value1**
  The value defined in the DFSMSrmm control data set for entry_type1

  If the entry type is a BIN, the entry value will be one of the following values:

  - **bin_number(location)**
    Providing the bin number and location name for a shelf location in one of the built-in storage locations.

  - **bin_number(location) MEDIANAME(media_name)**
    Providing the bin number, location name, and media name values for a shelf location in one of your installation defined storage locations.

  If the entry type is a RACK, the entry value will be the following:

  - **rack_number(media_name)**
    Providing the rack number and media name for a shelf location in the installation media library.

- **entry_type2**
  Type of DFSMSrmm control data set entry, which can be:

<table>
<thead>
<tr>
<th>Record Key</th>
<th>Message Insert</th>
</tr>
</thead>
<tbody>
<tr>
<td>D</td>
<td>DATASET</td>

</tr>
<tr>
<td>S</td>
<td>IN-USE BIN</td>
</tr>
<tr>
<td>V</td>
<td>VOLUME</td>
</tr>
</tbody>
</table>
The value defined in the DFSMSrmm control data set for entry_type2

If the entry type is a BIN, the entry value will be one of the following:

*bin_number(location)*

Providing the bin number and location name for a shelf location in one of the built-in storage locations.

*bin_number(location) MEDIANAME(media_name)*

Providing the bin number, location name, and media name values for a shelf location in one of your installation defined storage locations.

If the entry type is a RACK, the entry value will be the following:

*rack_number(media_name)*

Providing the rack number and media name for a shelf location in the installation media library.

text

Type of inconsistency, which can be:

- VOLUME
- BIN NUMBER
- MEDIANAME
- RACK TYPE
- RACK NUMBER
- OWNER
- LOCATION
- LOCATION TYPE
- PRODUCT

System action: Processing continues. A minimum return code of 4 is set.

Operator response: None.

System programmer response: Use the DFSMSrmm TSO subcommands or DFSMSrmm ISPF dialog to correct the error, if possible. For example, to return the volume to scratch status, issue RMM CHANGEVOLUME volser STATUS(USER). Then issue RMM DELETEVOLUME volser to delete the volume. Run DFSMSrmm inventory management to update the control data set to reflect these changes. If the error cannot be corrected, restore the DFSMSrmm control data set using the latest backup copy.

EDG6502W entry_type1 ENTRY entry_value1 POINTED TO BY entry_type2 ENTRY entry_value2 DOES NOT EXIST

Explanation: The utility, EDGUTIL, is verifying the consistency of information in the DFSMSrmm control data set. The entry specified as entry_name1 refers to a non-existent entry, specified as entry_name2.

In the message text:

*entry_type1*

Type of DFSMSrmm control data set entry, which can be:

- ASSIGNED BIN
- DATASET
- EMPTY BIN
- EMPTY RACK
- IN-USE RACK
- OWNER
- PRODUCT
- SCRATCH RACK
- UNKNOWN TYPE
- VOLUME
- VRS
EDG6503W

The value defined in the DFSMSrmm control data set for entry_type1

Type of DFSMSrmm control data set entry, which can be:
- ASSIGNED BIN
- DATASET
- EMPTY BIN
- EMPTY RACK
- IN-USE RACK
- OWNER
- PRODUCT
- SCRATCH RACK
- UNKNOWN TYPE
- VOLUME
- VRS

The value defined in the DFSMSrmm control data set for entry_type2

System action: Processing continues.

Operator response: None.

System programmer response: Identify the cause of the error using the DFSMSrmm TSO subcommands or DFSMSrmm ISPF dialog and correct the error. If VTS support is installed, you must run EDGUTIL on the system where VTS is installed. Re-run EDGUTIL on the correct system. If the error cannot be corrected, restore the DFSMSrmm control data set using the latest backup copy.

Source: DFSMSrmm

EDG6503W  VOLUME volser NOT FOUND IN owner_name OWNER ENTRY

Explanation: The utility, EDGUTIL, is verifying the consistency of information in the DFSMSrmm control data set. The volume entry contains an owner name, but the owner information does not contain information about the volume.

In the message text:

volser  Volume serial number

owner_name  The name of an owner defined to DFSMSrmm

System action: Processing continues.

Operator response: None.

System programmer response: You might be able to correct this error as follows:
1. Use the RMM CHANGEVOLUME subcommand to change the owner of the volume to any other owner. For example, issue RMM CHANGEVOLUME volser OWNER(DUMMY).
2. Issue the CHANGEVOLUME request again to change the volume back to its original owner: the owner_name contained in this message, RMM CHANGEVOLUME volser OWNER(owner_name).
3. Rerun EDGUTIL to verify you have corrected the error.

If the error cannot be corrected, restore the DFSMSrmm control data set using the latest backup copy.

\textit{dsname2}  
Data set name

\textit{reason_code}  
Can be:

1. Data set entry \textit{dsname2} and \textit{dsname1} are part of a multiple data set sequence. \textit{dsname1} is the next data set name on the volume but does not exist.

2. Data set entry \textit{dsname2} and \textit{dsname1} are part of a multiple data set sequence. \textit{dsname1} is the previous data set name on the volume but does not exist.

System action: Processing continues.

Operator response: None.

System programmer response: Add the missing data set entry or remove the data set sequence information using the RMM ADDDATASET or DELETEDATASET subcommands or DFSMSrmm ISPF dialog. Then reissue the request. If the error cannot be corrected, restore the DFSMSrmm control data set using the latest backup copy.

Source: DFSMSrmm

Detecting Module: EDGUTIL
EDG6508W OWNER owner_name VOLUME INFORMATION IS INCOMPLETE

Explanation: The utility, EDGUTIL, is verifying the consistency of information in the DFSMSrmm control data set. The list of volumes for the named owner is incomplete. The end of the list indicator is missing.

In the message text:

owner_name
The name of the owner

System action: Processing continues.

Operator response: None.

System programmer response: You might be able to correct this error as follows:
1. Use the RMM SEARCHVOLUME subcommand to find all the volumes owned by the owner in the message text. Note the last volume in the list.
2. Use the RMM ADDVOLUME subcommand to add a free volume for the owner. Specify next free volume after the last one in the list. For example, if XX0087 is the last volume in the list, add XX0088, if it is free.
3. Rerun EDGUTIL to verify that you have corrected the error.
4. Use RMM DELETEVOLUME to remove the volume you added to fix the error.

If the error cannot be corrected, restore the DFSMSrmm control data set using the latest backup copy.

Source: DFSMSrmm

Detecting Module: EDGUTIL

EDG6509W owner_name OWNER DETAILS ENTRY MISSING

Explanation: The utility, EDGUTIL, is verifying the consistency of information in the DFSMSrmm control data set. DFSMSrmm has found that volumes are owned by the specified owner_name, but that the owner is not defined to DFSMSrmm.

owner_name
The name of the owner not defined to DFSMSrmm

System action: Processing continues.

Operator response: None.

System programmer response: Add the missing owner information, using the RMM ADDOWNER subcommand, or DFSMSrmm ISPF OWNER dialog, and correct the error, if possible. If the error cannot be corrected, restore the DFSMSrmm control data set using the latest backup copy.

Source: DFSMSrmm

Detecting Module: EDGUTIL

EDG6510I DFSMSrmm VOLUME STATUS status1 AND VOLUME CATALOG STATUS status2 ARE INCONSISTENT FOR VOLUME volser

Explanation: The utility, EDGUTIL, is verifying the consistency of volume information in the DFSMSrmm control data set with the volume catalog. At some time, the volume catalog might have been updated without the knowledge of DFSMSrmm.

In the message text:

status1
This is the volume status from the DFSMSrmm control data set. It can be one of the following values:
MASTER
USER
SCRATCH

The DFSMSrmm status values MASTER and USER are equivalent to the volume catalog status PRIVATE.

status2
This is the volume status from the volume catalog. It can be one of the following values:
PRIVATE
The DFSMSrmm status values MASTER and USER are equivalent to the volume catalog status PRIVATE.

**volser**
This is the volume serial number of the volume with the inconsistent status.

**System action:** Processing continues. A minimum return code of 0 is set.

**Operator response:** None.

**System programmer response:** You can use the DFSMSrmm TSO subcommands or DFSMSrmm ISPF dialog, and either ISMF or IDCAMS, to list detailed information for the volume. Use the information to determine the status of the volume and take corrective action. If the volume catalog information is wrong, you can use either ISMF or IDCAMS to correct the status. If the DFSMSrmm control data set is wrong, you can use DFSMSrmm TSO subcommands to correct the status.

**Source:** DFSMSrmm

**Detecting Module:** EDGUTIL

---

**EDG6511I**  DFSMSrmm VOLUME LIBRARY NAME *library1* AND VOLUME CATALOG LIBRARY NAME *library2* ARE INCONSISTENT FOR VOLUME *volser*

**Explanation:** The DFSMSrmm EDGUTIL utility is verifying the consistency of volume information in the DFSMSrmm control data set with the volume catalog information. DFSMSrmm found multiple library names for the volume.

In the message text:

*library1*
This is the library name from the DFSMSrmm control data set.

*library2*
This is the library name from the volume catalog.

*volser*
This is the volume serial number of the volume with the inconsistent library names.

**System action:** Processing continues. DFSMSrmm sets a minimum return code of 4.

**Operator response:** None.

**System programmer response:** You can use the DFSMSrmm TSO subcommands or DFSMSrmm ISPF dialog, and either ISMF or IDCAMS, to obtain information about the volume. Use the information to correct the library name. If the volume catalog information is wrong, you can use ISMF or IDCAMS to correct the status. If the DFSMSrmm control data set is wrong, you can use RMM CHANGECLOSEVOLUME subcommand with *volser LIBRARY(library2)* to correct the library name.

You can optionally use the EDGUTIL utility with the MEND parameter to update the DFSMSrmm control data set from the volume catalog information.

**EDG6512I**  NAME VRS DEFINITION *vrs_name1* DOES NOT EXIST. IT IS A NEXTVRS FROM *vrs_type* VRS *vrs_name2*

**Explanation:** The utility, EDGUTIL, is verifying the consistency of vital record specification information in the DFSMSrmm control data set. At some time you might have deleted a *name* type vital record specification, without ensuring that there are no vital record specifications that point to it.

In the message text:

*vrs_name1*
This is the name of the *name* type vital record specification pointed to by *vrs_name2*.

*vrs_type*
This is the type of the current vital record specification being processed by EDGUTIL. It can be one of:
This is the name of the current vital record specification being processed.

**System action:** Processing continues. A minimum return code of 0 is set.

**Operator response:** None.

**System programmer response:** You can use the DFSMSrmm TSO subcommands or DFSMSrmm ISPF dialog to list detailed information for your vital record specification. Use the detailed information to determine the correct set and sequence of vital record specifications that meets your retention and movement requirements. If the vital record specification `vrs_name1` should be defined in the DFSMSrmm control data set, define it now. If the vital record specification is no longer required, you can correct the current vital record specification, `vrs_name2`, by using DFSMSrmm ISPF dialog or the RMM DELETEVRS and ADDVRS subcommands.

EDG6513I  LOCATION NAME *newloc* IS NOT CONSISTENT WITH OLD LOCATION FIELD VALUE *oldloc* IN THE VRS *vrs_type* TYPE RECORD FOR *vrs_name*

**Explanation:** The DFSMSrmm utility, EDGUTIL, is verifying the contents of the vital record specification records in the DFSMSrmm control data set. It has found that the LOCATION name is not consistent with the value in the old LOCATION field in the vital record specification record. This might have happened as a result of sharing the DFSMSrmm control data set with a lower level system and not following the guidance provided for sharing the control data set.

In the message text:

*newloc*

This is the name of the location where resources matching the named vital record specification are to be retained. It can be: HOME, LOCAL, DISTANT, REMOTE, or a system-managed library name.

*oldloc*

This is the value of the old LOCATION field. It can be: LIBRARY, LOCAL, DISTANT, or REMOTE.

*vrs_type*

This is the vital record specification type from the DFSMSrmm control data set. It can be:

- DATASET
- VOLUME
- NAME

*vrs_name*

This is the name of the vital record specification in the DFSMSrmm control data set.

**System action:** Processing continues. A minimum return code of 0 is set.

**Operator response:** None.

**System programmer response:** You can use the DFSMSrmm TSO subcommands or the DFSMSrmm ISPF dialog to list detailed information for your vital record specification. Use the information to determine the correct LOCATION for the vital record specification. Change the vital record specification to correct the discrepancy. Use DFSMSrmm ISPF dialog function or the RMM DELETEVRS and ADDVRS subcommands to change the vital record specification.

EDG6514I  LOCATION NAME *newloc* IS NOT CONSISTENT WITH OLD LOCATION FIELD VALUE *oldloc* IN THE volser VOLUME RECORD

**Explanation:** The DFSMSrmm utility, EDGUTIL, is verifying the contents of the volume records in the DFSMSrmm control data set. It has found that the LOCATION name is not consistent with the value in the old LOCATION field in the volume record. This could have happened as a result of sharing the DFSMSrmm control data set with a lower
EDG6515I  •  EDG6516I

level system, and not following the guidance provided for sharing the control data set.

In the message text:

newloc
This is the name of the location where the volume is currently. It can be: HOME, LOCAL, DISTANT, REMOTE, or a system-managed library name.

oldloc
This is the value of the old LOCATION field. It can be: LIBRARY, LOCAL, DISTANT, or REMOTE.

volser
This is the volume serial number of the volume with the inconsistent fields.

System action:  Processing continues. A minimum return code of 0 is set.

Operator response:  None.

System programmer response:  You can use the DFSMSrmm TSO subcommands or the DFSMSrmm ISPF dialog to list detailed information for the volume record. Use the detailed information to determine the correct LOCATION for the volume. The inconsistency can be corrected by changing the volume information. Use DFSMSrmm ISPF dialog or the RMM CHANGEVOLUME subcommand to do this.

Source:  DFSMSrmm

Detecting Module:  EDGUTIL

EDG6515I    DESTINATION NAME newdest IS NOT CONSISTENT WITH OLD DESTINATION FIELD VALUE olddest IN THE volser VOLUME RECORD

Explanation:  The utility, EDGUTIL, is verifying the contents of the volume records in the DFSMSrmm control data set. The new destination name is not consistent with the value in the old destination field in the DFSMSrmm control data set record. This might have happened as a result of sharing the DFSMSrmm control data set with a lower level system, and not following the guidance provided for sharing the control data set.

In the message text:

newdest
This is the value in the destination name field. It can be: HOME, LOCAL, DISTANT, REMOTE, or a system-managed library name.

olddest
This is the value derived from the old destination field. It can be: LIBRARY, LOCAL, DISTANT, or REMOTE.

volser
This is the volume serial number of the volume with the inconsistent fields.

System action:  Processing continues. A minimum return code of 0 is set.

Operator response:  None.

System programmer response:  You can use the DFSMSrmm TSO subcommands or DFSMSrmm ISPF dialog to list detailed information for the volume record. Use the detailed information to determine the correct destination for the volume. Use the DFSMSrmm ISPF dialog or the RMM CHANGEVOLUME subcommand to confirm the erroneous move, then move the volume back to its previous location. Stop vital records processing to correctly set the destination field based on the vital record specification.

Source:  DFSMSrmm

Detecting Module:  EDGUTIL

EDG6516I    VOLUME volser NOT FOUND IN VOLUME CATALOG

Explanation:  The utility, EDGUTIL, is verifying the consistency of volume information in the DFSMSrmm control data set with the volume catalog. The volume is defined in the control data set, but not in the volume catalog.

In the message text:

volser
This is the volume serial number of the volume that does not have an entry in the volume catalog.
System action:  Processing continues. A minimum return code of 0 is set.
Operator response:  None.
System programmer response:  You can use the DFSMSrmm TSO subcommands or DFSMSrmm ISPF dialog, and either ISMF or IDCAMS, to list detailed information for the volume. Use this information to determine the correct status of the volume and take corrective action. If the volume catalog information is wrong, you can use either ISMF or IDCAMS to add the volume to the volume catalog. If the DFSMSrmm control data set is wrong, you can use RMM DELETEVOLUME subcommand volser to remove the volume from the control data set.

EDG6517I  ERROR READING THE VOLUME CATALOG, RETURN CODE code REASON CODE reason_code

Explanation:  The utility, EDGUTIL, is verifying the consistency of volume information in the DFSMSrmm control data set with the volume catalog. The utility has failed to read the volume catalog.

In the message text:

code
This is the return code that is set by the CBRXVOL macro.

reason_code
This is the reason code that is set by the CBRXVOL macro.

System action:  Processing ends. A return code of 12 is set.
Operator response:  None.
System programmer response:  Refer to z/OS DFSMS OAM Planning, Installation, and Storage Administration Guide for Tape Libraries for a description of the codes. If you can identify the cause of the error from the return and reason codes explanation, correct the error and retry the VERIFY(VOLCAT) process. Otherwise, report this error to the IBM Support Center.
Source:  DFSMSrmm
Detecting Module:  EDGUTIL

EDG6518I  VOLUME CATALOG PROCESSING IS NOT SUPPORTED

Explanation:  The DFSMSrmm EDGUTIL utility parameter operands VOLCAT and SMSTAPE are not supported at the current software level.

System action:  Processing ends. DFSMSrmm sets a return code of 12.
Operator response:  None.
System programmer response:  You can only use the SMSTAPE operand or the VOLCAT operand on a system with the SMS subsystem active that supports the defining of system-managed tape libraries.
Source:  DFSMSrmm
Detecting Module:  EDGUTIL

EDG6519I  COUNT OF type RACK NUMBERS IS NOT EQUAL TO THE NUMBER IN THE CONTROL DATA SET CONTROL RECORD - COUNT IS count

Explanation:  The DFSMSrmm utility, EDGUTIL, is verifying the number of rack numbers in the DFSMSrmm control data set. It has found that the count of rack numbers in the control data set is not the same as the value held in the control data set control record.

In the message text:

Type
Is the type of rack numbers that are being counted. It can be one of the following values:
- ALL
- EMPTY
EDG6520I • EDG6521W

**count**
- Is the number of rack numbers that EDGUTIL has found in the DFSMSrmm control data set.

**System action:** Processing continues. A minimum return code of 4 is set.

**Operator response:** None.

**System programmer response:** Use the UPDATE parameter of the EDGUTIL utility to correctly set the count of rack numbers and free rack numbers in the control data set. The count value is the one you should use on the SYSIN CONTROL command to set the correct number of rack numbers in the control record.

**Source:** DFSMSrmm

**Detecting Module:** EDGUTIL

---

EDG6520I COUNT OF type BIN NUMBERS IN THE location STORAGE LOCATION IS NOT EQUAL TO THE NUMBER IN THE CONTROL DATA SET CONTROL RECORD - COUNT IS count

**Explanation:** The DFSMSrmm utility, EDGUTIL, is verifying the number of bin numbers in the DFSMSrmm control data set. It has found that the count of bin numbers in the control data set is not the same as the value held in the control data set control record.

In the message text:

**type**
- Is the type of bin numbers that are being counted. It can be one of the following values:
  - ALL
  - EMPTY

**location**
- Is the name of the storage location for which the count of bin numbers is incorrect. It can be the following values:
  - DISTANT
  - LOCAL
  - REMOTE

**count**
- Is the number of bin numbers that EDGUTIL has found in the DFSMSrmm control data set.

**System action:** Processing continues. A minimum return code of 4 is set.

**Operator response:** None.

**System programmer response:** Use the UPDATE parameter of the EDGUTIL utility to correctly set the count of bins and free bins for the storage location. The count value is the one you should use on the SYSIN CONTROL command to set the correct number of bin numbers in the control record.

**Source:** DFSMSrmm

**Detecting Module:** EDGUTIL

EDG6521W OWNER owner_name VOLUME COUNT INCONSISTENT

**Explanation:** The utility, EDGUTIL, is verifying the consistency of information in the control data set. It discovered that the number of volumes owned by owner_name is different from that listed by the LISTOWNER subcommand. An error during a DFSMSrmm control data set update might have caused the error.

In the message text:

**owner_name**
- The name of the owner of the volumes for which the number of volumes is inconsistent

**System action:** Processing continues

**Operator response:** None.

**Application Programmer Response:** Report the error to the system programmer.

**System programmer response:** Identify the cause of the error using the DFSMSrmm TSO subcommands or
DFSMSrmm ISPF dialog and correct the error if possible. If the error cannot be corrected, restore the control data set using the latest backup copy.

Detecting Module: EDGUTIL

EDG6523E  BOTH IN-USE AND EMPTY BIN ENTRIES DETECTED FOR BIN NUMBER bin_number

Explanation: The utility, EDGUTIL, is verifying the consistency of information in the DFSMSrmm control data set. It discovered that a bin number in the same storage location has been defined as both EMPTY and IN-USE.

In the message text:

bin_number

The number of the bin that is defined as both EMPTY and IN-USE.

The bin number value is one of the following:

• bin_number(location)
• bin_number(location) MEDIANAME(media_name)

The MEDIANAME is only provided for bin numbers in installation defined storage locations.

System action: Processing continues. A minimum return code of 4 is set.

Operator response: None.

System programmer response: If you are familiar with the contents of the DFSMSrmm control data set records, correct the error:

1. Stop DFSMSrmm and run utility, EDGBKUP, to save the current version of the DFSMSrmm control data set.
2. If the bin number is in an installation defined storage location use the RMM DELETEBIN subcommand to delete the empty bin. If the bin number is in a built-in storage location contact the IBM Support Center to determine how to proceed.
3. Rerun EDGUTIL to verify your changes.

In any case, report this error to the IBM Support Center.

EDG6532E  VOLUME volser HAS AN INCORRECT PREVIOUS VOLUME POINTER previous_volser

Explanation: The EDGUTIL VERIFY function detected an incorrect previous volume pointer for the specified volume. The volume serial number and the previous volume serial number are the same.

In the message text:

volser
The volume serial number of the volume where the error was found.

previous_volser
The previous volume pointer of the volume where the error was found.

System action: Processing continues. DFSMSrmm sets a minimum return code of 4.
Operator response: None.
Application Programmer Response: None.
System programmer response: Use the EDGUTIL MEND function, DFSMSrmm subcommands or DFSMSrmm ISPF dialog to correct the error. To remove a single volume from the end of a multivolume chain, issue RMM CHANGEVOLUME volser PREV Vol without any values. If the error is not at the end of the chain, run EDGUTIL MEND processing to clear the previous volume pointer. Then issue RMM CHANGEVOLUME volser PREV Vol(previous_volser) to fix the chain.

Source: DFSMSrmm
Detecting Module: EDGUTIL

---

EDG6533E  VOLUME volser HAS AN INCORRECT NEXT VOLUME POINTER next_volser

Explanation: The EDGUTIL VERIFY function detected an incorrect next volume pointer for the specified volume. The volume points to itself or next volume serial number is the same as the previous volume serial number.

In the message text:

volser
The volume serial number of the volume where the error was found.

next_volser
The next volume pointer of the volume where the error was found.

System action: Processing continues. DFSMSrmm sets a minimum return code of 4.
Operator response: None.
Application Programmer Response: None.
System programmer response: Use the EDGUTIL MEND function, DFSMSrmm subcommands or DFSMSrmm ISPF dialog to correct the error. Run EDGUTIL MEND processing to clear the next volume pointer. Then issue RMM
CHANGEVOLUME volser PREVVOL(previous_volser) for the volume which should be pointed to by this volume to fix the chain.

Detecting Module: EDGINERS
EDG6601E • EDG6602E

EDG6601E  I/O ERROR processing VOLUME volser, jobname, stepname, unit_address, type, ddname, function, error_message

Explanation: The DFSMSrmm EDGINERS tape volume initialize and erase utility experienced an I/O error while initializing, erasing, or verifying the current tape volume. DFSMSrmm provides the SYNADAF macro output in the message text: jobname, stepname, unit_address, type, ddname, function, and error_message. For more information about the SYNADAF macro, see z/OS DFSMS Macro Instructions for Data Sets.

In the message text:

- **processing**
  The DFSMSrmm operation. It is one of INITIALIZING, ERASING, VERIFYING, and SCANNING.

- **volser**
  The external volume serial number. If you are renaming the volume, DFSMSrmm includes both the current volume serial number and the new volume serial number in the message 'volser,newvolser'.

- **job_name**
  The name of a job identified to a system.

- **stepname**
  The name of a step within a job.

- **unit_address**
  The unit address.

- **type**
  The device type which can be up to four characters.

- **ddname**
  The data definition name.

- **function**
  A SYNADAF function.

- **error_message**
  The message issued by SYNADAF macro.

System action: The EDGINERS utility stops.

Operator response: Either correct the error or report it to the system programmer.

Storage Administrator Response: Correct the error and then resubmit the job. For a description of the SYNADAF macro, refer to z/OS DFSMS Macro Instructions for Data Sets. For further error information, refer to the specific device-type manual.

EDG6602E  ERROR PARSING utility_name EXECUTION PARAMETERS

Explanation: DFSMSrmm encountered an unsupported parameter while parsing the PARM field on the EXEC statement for the utility.

In the message text:

- **utility_name**
  The name of the utility.

System action: The utility fails with return code 12.

Operator response: None.

Storage Administrator Response: Correct the PARM field and resubmit the job.

Source: DFSMSrmm

Detecting Module: EDGINERS
EDG6603E  NO VALID "ERASE" "SCAN" OR "INIT" REQUESTS ENTERED

**Explanation:** The SYSIN file provided to program EDGINERS was either empty or contained no valid initialize or erase requests.

**System action:** The job ends with return code 12.

**Operator response:** None.

**Storage Administrator Response:** Enter or correct the requests in the SYSIN file, or remove the SYSIN DD statement from the JCL to allow WTOR processing.

**Source:** DFSMSrmm

**Detecting Module:** EDGINERS

EDG6604E  UNRECOGNIZED REQUEST

**Explanation:** INIT, SCAN, and ERASE are the only requests that you can specify in the SYSIN file or enter as a response to message EDG6626A.

**System action:** The incorrect command is listed and processing continues with the next request in the SYSIN file or message EDG6626A is reissued.

**Operator response:** Respond to WTOR EDG6626A.

**Storage Administrator Response:** If a request is provided in a SYSIN file, correct the error and resubmit the job. If necessary, respond to EDG6626A with a valid command.

**Source:** DFSMSrmm

**Detecting Module:** EDGINERS

EDG6605D  JOURNAL FILE IS LOCKED DURING DFSMSrmm SUBSYSTEM PROCESSING - ENTER "RETRY" OR "CANCEL"

**Explanation:** The DFSMSrmm control data set cannot be updated when the journal data set is locked. The journal data set was locked when an operator replied L to message EDG2103D. DFSMSrmm cannot complete the requested processing.

**System action:** The utility waits for a reply.

**Operator response:** Check your installation procedures for backing up the control data set and clearing the journal. To back up the control data set, run EDGHSKP with the BACKUP parameter specified. Then enter RETRY to retry the update of the DFSMSrmm control data set information. If you are not instructed to request back up, enter CANCEL.

**System programmer response:** If the operator replies with CANCEL, advise your tape librarian or storage administrator that DFSMSrmm initialize or erase actions might be incomplete. Schedule the control data set back up processing to clear the journal. Use EDGHSKP with a BACKUP parameter to back up the control data set and to clear the journal. Do not specify any other EDGHSKP parameters. Then resubmit the job.

**Detecting Module:** EDGINERS

EDG6606E  SPECIFIED MEDIANAME type DOES NOT MATCH EXISTING MEDIANAME FOR VOLUME cds_volser

**Explanation:** The operator made a request to initialize the volume cds_volser, but the media name is different from the medianame attribute of the volume defined to DFSMSrmm.

In the message text:

- **type**
  The value that you specified for the MEDIANAME operand of your INIT or ERASE request.

- **cds_volser**
  The volume serial number of the volume defined to DFSMSrmm that you are trying to initialize or to erase.
EDG6607D • EDG6609D

System action: The request fails, though processing continues with the next request.
Operator response: When a volume record already exists, you do not need to specify the MEDIANAME operand.
Storage Administrator Response: Correct the information in the DFSMSrmm control data set.
Source: DFSMSrmm
Detecting Module: EDGINERS

EDG6607D INVENTORY MANAGEMENT FUNCTIONS ARE ACTIVE - ENTER "RETRY" OR "CANCEL"

Explanation: The requested functions cannot be completed until inventory management completes.
System action: The utility waits for a reply.
Operator response: When the inventory management functions are completed reply, RETRY. If necessary, reply CANCEL.

<table>
<thead>
<tr>
<th>The operator replies</th>
<th>And the result is</th>
</tr>
</thead>
<tbody>
<tr>
<td>CANCEL</td>
<td>processing stops and DFSMSrmm sets a return code of 16.</td>
</tr>
<tr>
<td>RETRY</td>
<td>tape initialization or erasure continues.</td>
</tr>
</tbody>
</table>

System programmer response: If the operator replies CANCEL, resubmit the job when inventory management ends.

EDG6608E USER NOT AUTHORIZED TO REQUEST INITIALIZE AND ERASE FUNCTIONS

Explanation: The user is not authorized to perform the requested function.
System action: The utility fails.
Operator response: None.
Storage Administrator Response: Resubmit the job under an authorized user ID. Refer to z/OS DFSMSrmm Implementation and Customization Guide for information for authorizing users.
Source: DFSMSrmm
Detecting Module: EDGINERS

EDG6609D FAILURE DURING DFSMSrmm SUBSYSTEM PROCESSING - ENTER "RETRY" OR "CANCEL"

Explanation: The DFSMSrmm subsystem could not complete processing.
System action: The utility waits for a reply.
Operator response: Start the DFSMSrmm subsystem and reply CANCEL or RETRY.

<table>
<thead>
<tr>
<th>The operator replies</th>
<th>And the result is</th>
</tr>
</thead>
<tbody>
<tr>
<td>CANCEL</td>
<td>processing stops and DFSMSrmm sets a return code of 16.</td>
</tr>
<tr>
<td>RETRY</td>
<td>tape initialization or erasure continues.</td>
</tr>
</tbody>
</table>

System programmer response: If the operator replies CANCEL, notify the operator to restart the DFSMSrmm subsystem. Resubmit the job when the subsystem has been restarted.
Source: DFSMSrmm
Detecting Module: EDGINERS
EDG6610E  INCORRECT DATA PASSED TO DFSMSrmm SUBSYSTEM - REASON CODE reason_code

Explanation:  The EDGINERS utility built a data area to communicate with the DFSMSrmm subsystem. The data area contained incorrect data so the request could not be processed.

In the message text:

reason_code

The reason code that identifies the error detected by the DFSMSrmm subsystem.

DFSMSrmm issues reason code 0043 after two attempts are made to initialize a volume using manual processing.

System action:  Processing continues. DFSMSrmm sets a minimum return code of 4.

Operator response:  None.

System programmer response:  If the reason code is 0043, no action is necessary unless a VOL1 was being set to create a duplicate volume. In the case of a duplicate volume, issue the subcommand RMM CHANGEVOLUME volser VOL1(vol1_label). Report any other reason code to the IBM Support Center. Provide the return and reason codes and details of the request. If DFSMSrmm does not issue any other messages, all volumes have been successfully initialized.

Source:  DFSMSrmm

Detecting Module:  EDGINERS

EDG6611E  MEDIANAME AND RACK OR POOL INFORMATION ARE INCONSISTENT FOR VOLUME cds_volser

Explanation:  The programmer made a request to initialize the volume cds_volser, but supplied a pool name or rack number that is incompatible with the media name already assigned to this volume.

In the message text:

cds_volser

The volume serial number of the volume that is already defined to DFSMSrmm, or that you are trying to initialize.

System action:  The request for the specified volume fails, but processing continues with the next requested volume.

Operator response:  None.

Storage Administrator Response:  Correct the request and resubmit it.

Source:  DFSMSrmm

Detecting Module:  EDGINERS

EDG6612E  RACK NUMBER rack_number DOES NOT EXIST OR IS NOT EMPTY

Explanation:  The volume could not be initialized because the request specified a rack_number that is not defined to DFSMSrmm, or is assigned to another volume.

In the message text:

rack_number

The volume shelf location identifier.

System action:  The request to add this volume fails, but processing continues with the next requested volume.

Operator response:  None.

Storage Administrator Response:  If the rack number does not exist, use the RMM ADDRACK subcommand to define the rack. If the rack number exists and contains another volume, select another empty rack. In either case, you can manually define the volume to DFSMSrmm because you do not need to initialize the volume again.

Source:  DFSMSrmm

Detecting Module:  EDGINERS
EDG6613E • EDG6616E

EDG6613E  initialize_or_erase IS NOT PENDING FOR VOLUME cds_volser

Explanation: DFSMSrmm was requested to initialize or erase a volume. Neither initialize nor erase is required for this volume.

In the message text:
initialize_or_erase
   The possible actions for this message.

cds_volser
   Volume serial number defined to DFSMSrmm.

System action: The initialize or erase request fails. Processing continues with the next request.

Operator response: None.

Source: DFSMSrmm

Detecting Module: EDGINERS

EDG6614E  NEW VOLUME cds_volser IS ALREADY DEFINED TO DFSMSrmm

Explanation: DFSMSrmm cannot create a new volume from an existing volume as requested, because the specified volser is already in use by another volume.

In the message text:

cds_volser
   the volume serial number defined to DFSMSrmm.

System action: The initialize request fails. Processing continues with the next request.

Operator response: None.

Storage Administrator Response: Correct the request or the DFSMSrmm control data set and retry the request.

Source: DFSMSrmm

Detecting Module: EDGINERS

EDG6615E  DFSMSrmm SUBSYSTEM IS NOT ACTIVE

Explanation: The requested functions cannot be completed, because the DFSMSrmm subsystem is not active.

System action: The utility fails.

Operator response: Start the DFSMSrmm subsystem.

Storage Administrator Response: Contact the operator and request that the subsystem be started.

Source: DFSMSrmm

Detecting Module: EDGINERS

EDG6616E  DFSMSrmm SUBSYSTEM IS NOT DEFINED TO MVS

Explanation: The DFSMSrmm subsystem has not been correctly defined to the MVS system.

System action: The utility fails.

Operator response: Contact the system programmer to check whether the DFSMSrmm subsystem is correctly installed. Then start DFSMSrmm.

Storage Administrator Response: Define DFSMSrmm as a subsystem as described in z/OS DFSMSrmm Implementation and Customization Guide.

Source: DFSMSrmm

EDG6619I NO selection_type VOLUMES WITH STATUS(status) HAVE THE initialize_or_erase ACTION PENDING

**Explanation:** DFSMSrmm issues this message for information only. DFSMSrmm was requested to initialize or erase volumes that match the selection_type and status and issued this message when:

- There are no volumes requiring the specified action.
- All the volumes requiring the specified action have been processed. DFSMSrmm issues this message when all volumes have been processed and the EDGINERS EXEC statement PARM parameter BATCH(n) is specified and n is not 1.

In the message text:

**selection_type**

- Can be:
  - A location name
  - A pool identifier
  - A media name
  - 3480 as specified in the EDGINERS EXEC statement PARM information
  - A media type
  - A recording format

**status**

- Can be:
  - ALL
  - NOTMASTER
  - SCRATCH

**initialize_or_erase**

- Can be:
  - INITIALIZE
  - ERASE

**System action:** Processing ends.

**Operator response:** None.

**Storage Administrator Response:** None.

**EDG6626A**  
**SPECIFY VOLUME "INIT" "SCAN" OR "ERASE" COMMAND OR "END"

**Explanation:** The DFSMSrmm EDGINERS utility has been started with a request to obtain its information from the console.

**System action:** The DFSMSrmm EDGINERS utility waits for the operator to reply to the WTOR.

**Operator response:** Reply to the WTOR with the information obtained from the programmer.

**Storage Administrator Response:** Inform the operator of the correct reply to the WTOR. See [z/OS DFSMSrmm](http://www.ibm.com) Managing and Using Removable Media for details of the commands that DFSMSrmm accepts for initializing and erasing volumes. Enter "END" to stop the DFSMSrmm EDGINERS utility.

**Source:** DFSMSrmm

**Detecting Module:** EDGINERS

---

**EDG6627A**  
**M drive_number V(volser) R(rack_number) TO BE action vol1_volser, label_type

**Explanation:** DFSMSrmm was requested to initialize or erase a volume. If the indicated action is ERASED, LABELLED, or VERIFIED, the message contains the vol1_volser that is written in the volume label.

In the message text:

*drive_number*
- The tape drive number.

*volser*
- The external volume serial number. If you are renaming the volume, DFSMSrmm includes both the current volume serial number and the new volume serial number in the message 'volser,newvolser'.

*rack_number*
- The volume shelf location identifier that is used to define the volume to DFSMSrmm. rack_number is null when the volume is not defined to DFSMSrmm.

*action*
- Can be one of the following: ERASED, LABELLED, VERIFIED or SCANNED.

*vol1_volser*
- The volume serial number that is written into the VOL1 label.

*label_type*
- Can be: AL, NL, SL

**System action:** DFSMSrmm waits for the operator to reply to the message or for the operator to mount the volume.

**Operator response:** Do one of the following:
- Mount the volume write-enabled. The WTOR is deleted and processing continues as if you had replied M.
- Reply M to the WTOR and then mount the volume write enabled.
- If the volume cannot be mounted, reply S so processing of the volume is skipped.

**Source:** DFSMSrmm

**Detecting Module:** EDGINERS
EDG6628A  drive_number, REPLY WITH RACK NUMBER OR VOLUME SERIAL NUMBER FOR NL VOLUME

**Explanation:**  EDGINERS found a volume on device *drive_number* that contains data, but does not have a valid volume label. EDGINERS cannot verify that the correct volume is mounted. The operator must confirm that the correct volume has been mounted.

In the message text:

*drive_number*

The tape drive number.

**System action:**  EDGINERS waits for an operator response.

**Operator response:**  Reply with the volume serial number or rack number for the volume mounted on the specified tape drive. Reply R *nn*, volume_serial_number or R *nn*, rack_number

**Detecting Module:**  EDGINERS
EDG6631I • EDG6634E

EDG6631I  UTILITY utility_name COMPLETED WITH RETURN CODE return_code

Explanation: DFSMSrmm issues this message for information only. The requested utility completed with return_code, which is the highest one that occurred during processing.

In the message text:

utility_name
  The DFSMSrmm utility.

return_code
  The value returned indicating the results of processing.

System action: The utility ends.

Operator response: None.

Storage Administrator Response: If the utility did not run successfully, refer to the error messages issued in the SYSPRINT file to determine the cause of the error.

Source: DFSMSrmm

Detecting Module: EDGINERS

EDG6632I  POOL pool_name IS NOT DEFINED TO THE DFSMSrmm SUBSYSTEM

Explanation: A request to initialize or erase a volume was made and the POOL operand specified a value that is not defined to your installation.

In the message text:

pool_name
  The identifier for a pool of volumes.

System action: The initialize or erase request fails and processing continues with the next request.

Operator response: If the request was made from the console, reenter the request with a valid pool identifier.

Storage Administrator Response: Reenter the request and specify a valid pool.

Source: DFSMSrmm

Detecting Module: EDGINERS

EDG6633I  NO EMPTY RACKS IN POOL pool_name

Explanation: A request to initialize or erase a volume was made and the POOL operand specified a pool containing no empty racks.

In the message text:

pool_name
  The identifier for a pool of volumes.

System action: The initialize or erase request fails and processing continues with the next request.

Operator response: If the request was made from the console, reissue the request with a valid pool name.

Storage Administrator Response: Reenter the request and specify a valid pool.

Source: DFSMSrmm

Detecting Module: EDGINERS

EDG6634E  TAPE DDNAME DOES NOT ALLOCATE A SUITABLE DRIVE

Explanation: The device allocated to this job step for the TAPE DD statement is not a tape device.

System action: The utility fails.

Operator response: If the utility was started at the console, specify a correct unit name on the start command.
System programmer response: Ensure that the keyword values on the TAPE DD statement identify a tape drive, or an esoteric or generic unit name of a tape device. No DSN keyword should be coded in your JCL, so the system uses a temporary data set name. Ensure that your ACS routines do not direct the allocation of temporary data sets away from tape devices.

Source: DFSMSrmm

EDG6643I  VOLUME volser ERASED AND LABELLED SUCCESSFULLY WITH VOL1 vol1_volser

Explanation:  DFSMSrmm issues this message for information only. The volume has been successfully erased and relabeled, but the DFSMSrmm control data set has not yet been updated to confirm the action.

In the message text:

volser
   The external volume serial number. If you are renaming the volume, DFSMSrmm includes both the current volume serial number and the new volume serial number in the message 'volser,newvolser'.

vol1_volser
   The volume serial number written in the VOL1 label.

System action:  Processing continues, and an attempt to update the DFSMSrmm control data set is made.

Operator response:  If the update to the DFSMSrmm control data set for this volume fails, the control data set should be manually updated. Inform the tape librarian or storage administrator that the DFSMSrmm control data set must be updated to confirm that erase and initialization was successful.

Storage Administrator Response:  None.

EDG6644E • EDG6646I

**Detecting Module:** EDGINERS

**EDG6644E**  
*drive_number*, **INCORRECT VOLUME WAS MOUNTED. VOLUME CONTAINS NO DATA**

**Explanation:** The system attempted to read a label, during verify processing, for a volume that has been successfully labeled with the volume serial contained in message EDG6627A. The volume mounted contains no data.

In the message text:

*drive_number*  
The tape drive number.

**System action:** The system rewinds and unloads the volume, and issues a request to remount the volume.

**Operator response:** Remount the requested volume.

**Source:** DFSMSrmm

**Detecting Module:** EDGINERS

**EDG6645I**  
**DYNAMIC ALLOCATION OF DRIVE FAILED FOR VOLUME** *cds_volser*

**Explanation:** DFSMSrmm was unable to allocate a drive for this volume. The volume is resident in a 3495 Tape Library Dataserver; a drive in the library must be available for the request to complete successfully.

In the message text:

*cds_volser*  
The volume serial number that is defined to DFSMSrmm.

**System action:** The initialize or erase request fails. Processing continues with the next request, if one exists.

**Operator response:** Inform the system programmer.

**System programmer response:** Validate the information that DFSMSrmm has for the volume and that is available in the volume catalog. Any conflicts should be corrected before the request is retried. You should refer to the allocation error messages produced by the dynamic allocation request. These should be available in the JES job log messages.

**Source:** DFSMSrmm

**Detecting Module:** EDGINERS

**EDG6646I**  
*drive_number*, **MOUNT REQUEST FOR VOLUME** *volser* **FAILED RETURN CODE X'code' REASON CODE X'reason_code'**

**Explanation:** DFSMSrmm was unable to get the volume mounted on a drive for processing. The reason for the failure is described by the explanation for the return code set by the CBRXLACS macro.

In the message text:

*drive_number*  
The tape drive number.

*volser*  
The external volume serial number. If you are renaming the volume, DFSMSrmm includes both the current volume serial number and the new volume serial number in the message 'volser,newvolser'.

*code*  
The return code that is set by the CBRXLACS macro.

*reason_code*  
The reason code that is set by the CBRXLACS macro.

**System action:** The initialize or erase request fails. Processing continues with the next request, if one exists.

**Operator response:** Inform the system programmer.

**Storage Administrator Response:** Refer to [z/OS DFSMSdfp Diagnosis] for a description of the possible CBRXLACS codes. Use the code explanation to identify the error. Correct the error, and retry the action that was in progress at the time of the error. If necessary, report this error to the IBM Support Center.
EDG6647I  drive_number, DEMOUNT REQUEST FOR VOLUME volser FAILED RETURN CODE X'code'
       REASON CODE X'reason_code'

Explanation:  DFSMSrmm was unable to get a volume in an automated tape library, demounted after processing. The reason for the failure is described by the explanation for the return code set by CBRXLACS macro.

In the message text:

- **drive_number**: The tape drive number.
- **volser**: The external volume serial number. If you are renaming the volume, DFSMSrmm includes both the current volume serial number and the new volume serial number in the message 'volser,newvolser'.
- **code**: The return code that is set by the CBRXLACS macro.
- **reason_code**: The reason code that is set by the CBRXLACS macro.

**System action:**  DFSMSrmm successfully completed the initialize or erase request. Processing continues with the next request, if one exists.

**Operator response:**  Inform the system programmer.

**Storage Administrator Response:**  Refer to [z/OS DFSMSdfp Diagnosis](https://www.ibm.com/support/knowledgecenter/SSSHTQ_2.2.0/edg220/toc.htm) for a description of the possible CBRXLACS codes. Use the code explanation to identify the error. Correct the error, and retry the action that was in progress at the time of the error. If necessary, report this error to the IBM Support Center.

EDG6649I  POOL pool_name IS NOT DEFINED TO THE DFSMSrmm SUBSYSTEM

Explanation:  A request for automatic volume initialization or erase processing was requested for a specific pool of volumes. The POOL operand specified a pool that is not defined on your system.

In the message text:

- **pool_name**: This is the name of the pool that was requested to be processed.

**System action:**  The utility EDGINERS ends.

**Operator response:**  None.

**Storage Administrator Response:**  You should correct the POOL value to one that is defined on your system. Use the RMM LISTCONTROL subcommand with the VLPOOL operand to list the valid pools on this system.

Source:  DFSMSrmm

Detecting Module:  EDGINERS

---

EDG6649I  LIBRARY NAME library IS NOT DEFINED TO DFSMS

Explanation:  A request for automatic volume initialization or erase processing was requested for a specific system-managed library. The LIBRARY operand specifies a library that is not defined on your system or the library type is not known.

In the message text:

- **library**: The name of the library that was requested to be processed.
EDG6650I  •  EDG6652I

System action: The utility EDGINERS ends.
Operator response: If the library is defined, but is currently offline, vary the library online.

Storage Administrator Response: Change the LIBRARY value to one that is defined on your system. You can use either ISMF or AMS to determine the valid libraries on this system. If the library is defined but the library type is not listed, the library must be varied online before DFSMSrmm allows the library name to be used. You can also use the RMM SEARCHVOLUME subcommand with ACTION(INITIALIZE,ERASE) to determine which libraries have volumes waiting for EDGINERS actions.

Detecting Module: EDGLOCV

EDG6650I  drive_number, CANCEL REQUEST FOR MOUNT OF VOLUME volser FAILED RETURN CODE X'code' REASON CODE X'reason_code'

Explanation: DFSMSrmm was unable to get the volume mount canceled. The reason for the failure is described by the explanation for the return code set by the CBRXLACS macro.

In the message text:

drive_number
- The tape drive number.
volser
- The external volume serial number. If you are renaming the volume, DFSMSrmm includes both the current volume serial number and the new volume serial number in the message 'volser,newvolser'.

code
- The return code that is set by the CBRXLACS macro.
reason_code
- The reason code that is set by the CBRXLACS macro.

System action: The initialize or erase request fails. Processing continues with the next request, if one exists.
Operator response: Inform the system programmer.

Storage Administrator Response: Refer to the z/OS DFSMSdfp Diagnosis for a description of the possible codes. Use the code to identify the cause of the error. Correct the error and retry the action that was in progress at the time of the error. If necessary, report this error to the IBM Support Center.

**EDG6655E** drive_number, FORMAT OF VOLUME volser IS NOT COMPATIBLE WITH CURRENT DEVICE AND SENSE VOLID sense_volser NOT ACCEPTED BY INSTALLATION OPTION

Explanation: The DFSMSrmm EDGINERS utility was not able to read a tape label volser because the format of the label is not supported on this device. Because the DEVSUPxx parmlib option is specified as VOLNSNS=NO, DFSMSrmm cannot use the sensed volume serial (sense_volser).

In the message text:

*drive_number*  
The tape drive number.

*volser*  
The external volume serial number. If you are renaming the volume, DFSMSrmm includes both the current volume serial number and the new volume serial number in the message 'volser,newvolser'.

*sense_volser*  
The sensed volume serial number of the volume obtained from the tape drive.

System action: The initialize or erase request fails.

Operator response: None.

System programmer response: Either use this tape on the correct device or specify VOLNSNS=YES in the DEVSUPxx parmlib member to accept the volume returned from the device sense information.

Source: DFSMSrmm
Detecting Module: EDGINERS
EDG6656E  drive_number, FORMAT OF VOLUME volser IS NOT COMPATIBLE WITH CURRENT DEVICE

Explanation: The DFSMSrmm EDGINERS utility was not able to read a tape label volser because the format of the label is not supported on this device. No volume serial number was returned from the device sense information.

In the message text:

drive_number
  The tape drive number.

volser
  The external volume serial number. If you are renaming the volume, DFSMSrmm includes both the current volume serial number and the new volume serial number in the message 'volser,newvolser'.

System action: The initialize or erase request fails.

Operator response: None.

System programmer response: Use this tape on the correct device.

Source: DFSMSrmm

Detecting Module: EDGINERS

EDG6658I  drive_number, VOLUME volser IS MISSING SERVO TRACKS. PLEASE RETURN CARTRIDGE TO YOUR SUPPLIER TO BE REFORMATTED

Explanation: DFSMSrmm was unable to read the existing volume label from the volume because the volume servo information is not formatted.

In the message text:

drive_number
  The tape drive number.

volser
  The external volume serial number. If you are renaming the volume, DFSMSrmm includes both the current volume serial number and the new volume serial number in the message 'volser,newvolser'.

System action: The initialize or erase request fails and processing continues with the next request.

Operator response: None required.

Storage Administrator Response: Return the volume to the supplier to have the servo tracks reformatted. You can replace the volume with a new volume and rerun the EDGINERS processing to label the replacement volume.

Source: DFSMSrmm

Detecting Module: EDGINERS

EDG6661E  INCORRECT VOLUME MOUNTED ON DEVICE drive_number - REQUESTED VOLUME volser EXPECTED VOL1 expected_vol1 MOUNTED VOL1 mounted_vol1

Explanation: The user tried to relabel a volume oldvolser to volser but the wrong volume mounted_volume was mounted instead. oldvolser is not known to DFSMSrmm.

In the message text:

drive_number
  The address of the tape unit.

volser
  The external volume serial number. If you are renaming the volume, DFSMSrmm includes both the current volume serial number and the new volume serial number in the message 'volser,newvolser'.

expected_vol1
  The volume serial number to be read from the existing VOL1 label.

mounted_vol1
  The volume serial number that was read from the existing VOL1 label.
**System action:** DFSMShsm detected that an incorrect volume was mounted. EDGINERS continues processing as required by the EXEC statement PARM WRONGLABEL specification.

<table>
<thead>
<tr>
<th>When WRONGLABEL is</th>
<th>DFSMShsm</th>
</tr>
</thead>
<tbody>
<tr>
<td>FAIL</td>
<td>Does not prompt the operator for a reply and rejects the volume mount request.</td>
</tr>
<tr>
<td>IGNORE</td>
<td>Does not prompt the operator for a reply and relabels the volume if DFSMShsm is requested to initialize the volume or if the volume is not managed by DFSMShsm. Using IGNORE requires CONTROL access to the RACF FACILITY class resource: STGADMIN.EDG.INERS.WRONGLABEL</td>
</tr>
<tr>
<td>PROMPT</td>
<td>Issues message EDG6663D to prompt the operator to identify the processing that should be performed. No additional authorization is needed to use PROMPT.</td>

</tr>
</tbody>
</table>

Storage Administrator Response: The EDGINERS utility does not search the entire DFSMSrmm control data set to identify the volume. EDGINERS attempts to read the volume record of the volume matching the volser read in the VOL1 label. You can use the RMM SEARCHVOLUME subcommand with the VOL1(mounted_vol1) operand to identify the volume that might have been mounted.

Source: DFSMSrmm
Detecting Module: EDGINERS

EDG6663D drive_number, REPLY "R" TO RETRY OR "F" TO FAIL THE REQUEST, OR "A" TO ACCEPT THE MOUNTED VOLUME

Explanation: During EDGINERS processing, DFSMSrmm detected an incorrect volume serial number in the VOL1 label of a mounted volume. The EXEC parameter WRONGLABEL has been specified and DFSMSrmm prompts the operator to reply. DFSMSrmm issues this message after issuing either message EDG6661E or EDG6662E.

In the message text:

drive_number
The tape drive number.

System action: EDGINERS waits for a reply from the operator.

Operator response: Reply as described in the following table.

<table>
<thead>
<tr>
<th>To Accept the mounted volume</th>
<th>The operator replies</th>
<th>And the result is</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fail the request</td>
<td>F</td>
<td>DFSMSrmm unloads the mounted volume and the request fails.</td>

VALIDITY CHECK FAILED FOR field VALUE SPECIFIED WITH LABEL label_type AND VERSION version_number FOR VOLUME volser

**Explanation:** An unacceptable value has been entered in the ACCESS or OWNERTEXT field for the label type and version being requested.

In the message text:

`field`  
The field in the INIT or ERASE command that you entered via SYSIN or operator reply which contains an invalid value. Possible values are ACCESS, VOLSER, or OWNERTEXT.

`label_type`  
The type of labels being written on the tape volume. Currently only applicable to ISO/ANSI type labels.

`version_number`  
The version number of the label type being used which can be either 3 or 4.

`volser`  
The external volume serial number. If you are renaming the volume, DFSMSrmm includes both the current volume serial number and the new volume serial number in the message 'volser,newvolser'.
EDG6674I  EDG6675E

**System action:** If you provided volume information in a SYSIN file, DFSMSrmm continues with the next request. If the data is being entered using the operator console, DFSMSrmm issues message EDG6626A.

**Operator response:** If manual processing via the operator console is being used, reply to the WTOR with valid values, or END to terminate the EDGINERS program.

**System programmer response:** Inform the operator of the correct reply to the WTOR. The syntax for the reply is described in [z/OS DFSMSrmm Managing and Using Removable Media](https://www.ibm.com). See [z/OS MVS JCL Reference](https://www.ibm.com) for the valid ACCESS codes that can be used on ISO/ANSI version 4 labels.

**EDG6674I**  
_init_or_erase_ **OF VOLUME** _volser_ **WITH A DIFFERENT VOL1** _vol1_volser_ **IS NOT SUPPORTED FOR** _voltype_ **VOLUMES**

**Explanation:** You are running EDGINERS manual processing and you have specified a VOL1 value for an NL volume, scratch volume, logical volume, or stacked volume. In the message text:

- _init_or_erase_  
  One of the possible actions for this message

- _volser_  
  The external volume serial number. If you are renaming the volume, DFSMSrmm includes both the current volume serial number and the new volume serial number in the message 'volser, newvolser'.

- _vol1_volser_  
  VOL1 label volser

- _voltype_  
  One of the following:
  - NL - The volume does not have a label.
  - STACKED - The volume is a stacked cartridge.
  - LOGICAL - The volume is a logical volume.
  - SCRATCH - The volume is a scratch status.

**System action:** The _init_or_erase_ action for the volume fails.

**Operator response:** None.

**Storage Administrator Response:** Do not specify a VOL1 value for an existing NL, scratch, logical, or stacked volume. Do not specify LABEL(NL) when labelling an existing duplicate volume. Duplicate volumes must be physical, non-scratch volumes with standard labels.

**Source:** DFSMSrmm

**Detecting Module:** EDGINERS

---

**EDG6675E**  
_K_ _drive_number_ V(_volser_) R(_rack_number_)

**Explanation:** EDGINERS has finished with the volume and the volume is to be dismounted from the drive.

In the message text:

- _drive_number_  
  _drive_number_ is the tape drive number.

- _volser_  
  The external volume serial number. If you are renaming the volume both the current and new volume serial numbers are included in the message 'volser, newvolser'.

- _rack_number_  
  _rack_number_ is the volume shelf location identifier that is used to define the volume to DFSMSrmm. _rack_number_ is null when the volume is not defined to DFSMSrmm.

**System action:** If the drive is in an automated system managed library EDGINERS dismounts the volume. In all other cases you must dismount the volume.

EDG6679I SCAN RESULTS:
Explanation: DFSMSrmm issues this message containing the results of the scan request.
System action: Processing continues.
Storage Administrator Response: Review the SYSPRINT message file contents for mismatches between the volume and DFSMSrmm information.
System programmer response: None.
Source: DFSMSrmm
Detecting Module: EDGINERS
Routing Code: 3,5,11

EDG6680E MISMATCH OF VOLUME STATUS - VOLUME volser IS ALREADY PRIVATE IN THE TCDB
Explanation: You are scanning the labels of volume that is either scratch status in DFSMSrmm or is not defined to DFSMSrmm but is SCRATCH status in the TCDB. EDGINERS attempts to change the volume status in the TCDB to PRIVATE so that it can be mounted for processing. The change use attribute request failed because the volume is already PRIVATE in the TCDB.
In the message text:
volser
The external volume serial number.
System action: The utility fails the scan request and processing continues with the next request.
Operator response: None.
System programmer response: If the scan request fails because the status of the TCDB volume and DFSMSrmm are not in synchronization, you must synchronize the status according to the correct status. If the status of the DFSMSrmm volume is correct, run the DFSMSrmm EDGUTIL utility with the MEND(SMSTAPE) parameter to update the status. You can use the SYSIN file to specify INCLUDE VOLUME(volser) so that only one volume is synchronized. If the status of the TCDB volume is correct, you can use the DFSMSrmm CHANGEVOLUME subcommand with the STATUS operand to update the status.
If the scan request fails because the status of the TCDB volume has changed from SCRATCH to PRIVATE since the time the EDGINERS utility checked the volume status, you do not have to scan the volume. The status might have changed if the volume was mounted by the library for a nonspecific request and has since been used successfully for output. The status and the label information of a volume that is used for output becomes synchronized with the status of DFSMSrmm.

Detecting Module: EDGINERS
Routing Code: 3,5,11

EDG6681I SCAN FOR VOLUME volser CONTINUES – VOLUME NOT DEFINED TO DFSMSrmm
Explanation: You are scanning the labels of volume that is not defined to DFSMSrmm.
In the message text:
volser
The external volume serial number.
System action: The utility continues but the scan request does not compare the volume label information with DFSMSrmm recorded information.
Operator response: None.
System programmer response: None.
Source: DFSMSrmm
Detecting Module: EDGINERS
Routing Code: 3,5,11

EDG6682I  SCAN RESULTS (TRUNCATED): FOR FULL DETAILS – REFER TO SYSPRINT FILE

Explanation: DFSMSrmm issues this multiline message to the operator console containing the results of the scan request.

System action: Processing continues.

Operator response: Review the message contents for mismatches between the volume and DFSMSrmm information.
To see the complete output, review the contents of the SYSPRINT file. See z/OS DFSMSrmm Managing and Using Removable Media for details of using the LABEL procedure and how to obtain the SYSPRINT file. When SYSPRINT is not a DUMMY file and has been specified as a SYSOUT file, use a tool such as SDSF to view the output directly on the JES spool.

System programmer response: None.

Routing Code: 3,5,11

EDG6683I  MISMATCH ON values

Explanation: DFSMSrmm issues this message to the operator console and SYSPRINT file containing the results of the comparison between tape label contents and the information defined to DFSMSrmm during a scan request.
In the message text:

values
Is a list of the values that are different between the tape labels and the information defined to DFSMSrmm. The values listed are the column headings in the EDG6679I SCAN RESULTS message: LBL, volser, Dsname, Vseq, Dseq, Crdate, Jobname, Step, RECFM, LRECL, BLKSZ, and Dev. See the table Label Data Comparison With DFSMSrmm Data in z/OS DFSMSrmm Implementation and Customization Guide for details of the fields compared.

System action: Processing continues.

Operator response: Review the message contents for mismatches between the volume and DFSMSrmm information.
To see the complete output, review the contents of the SYSPRINT file. Use a tool such as SDSF to view the output directly on the JES spool.

Storage Administrator Response: Review the message contents for mismatches between the volume and DFSMSrmm information.

System programmer response: None.

EDG6706E STORE_STATUS OF X'hex_value1' AND STORE_ID OF X'hex_value2' INCONSISTENT FOR VOLUME volser

Explanation: The EDGUTIL MEND or VERIFY functions detected an incorrect combination of store status and store id for the volume.

In the message text:

hex_value1
The value, in hexadecimal, of the volume's store status. One of the following values:

X'01' Tape library to REMOTE storage location
X'02' REMOTE storage location to tape library
X'03' Tape library to LOCAL storage location
X'04' LOCAL storage location to tape library
X'05' LOCAL storage location to DISTANT
X'06' Tape library to DISTANT storage location
X'07' DISTANT storage location to tape library
X'09' Storage location valid

hex_value2
The value, in hexadecimal, of the volume's store id.

X'C4' DISTANT storage location
X'D3' LOCAL storage location
X'D9' REMOTE storage location
X'E3' Tape library

volser
The volume serial number of the volume in error.

System action: Processing continues. For VERIFY, a minimum return code of 4 is set.

Operator response: None.

System programmer response: If the request was MEND, no action is needed, otherwise run EDGUTIL requesting MEND to correct this.

EDG6750E  NO DATA SET ON VOLUME volser, BUT LAST DATA SET POINTER NOT NULL

Explanation: The EDGUTIL VERIFY(VOLUME) function has detected that the volume has a last data set pointer but the volume contains no data sets.

In the message text:

- **volser**: The volume serial number of the volume.

System action: Processing continues. A minimum return code of 4 is set.
EDG6752E • EDG6754E

Operator response: None.
System programmer response: Run the EDGUTIL MEND function to correct the error.
Source: DFSMSrmm
Detecting Module: EDGUTIL

EDG6752E  DATA SET COUNT FOR VOLUME volser INCORRECT, SHOULD BE count
Explanation: The EDGUTIL VERIFY function has determined that the count of data sets on the volume is incorrect and should be changed to the calculated value.
In the message text:

volser
  The volume serial number of the volume.

count
  The correct data set count for the volume.
System action: Processing continues. A minimum return code of 4 is set.
Operator response: None.
System programmer response: Run EDGUTIL requesting MEND to correct this.
Source: DFSMSrmm
Detecting Module: EDGUTIL

EDG6753I  DATA SET COUNT FOR VOLUME volser INCORRECT, COUNT SET TO count
Explanation: The EDGUTIL MEND function has determined that the count of data sets on the volume is incorrect and has updated it with the correct count.
In the message text:

volser
  The volume serial number of the volume.

count
  The correct data set count for the volume.
System action: Processing continues.
Operator response: None.
System programmer response: None.
Source: DFSMSrmm
Detecting Module: EDGUTIL

EDG6754E  LAST DATA SET POINTER FOR VOLUME volser NULL AND SHOULD BE data_set_name
Explanation: The EDGUTIL VERIFY or MEND functions have detected a data set record has been disassociated from its volume.
In the message text:

volser
  The volume serial number of the volume.

data_set_name
  The correct data set name.
System action: Processing continues. For VERIFY, a minimum return code of 4 is set.
Operator response: None.
System programmer response: If the request was MEND, no action is needed, otherwise run EDGUTIL requesting MEND to correct this.

Source: DFSMSrmm
Detecting Module: EDGUTIL

**EDG6755I**

```plaintext
data_set POINTER FOR VOLUME volser CHANGED TO data_set_name
```

Explanation: The EDGUTIL MEND function has associated an orphaned data set record with the volume.

In the message text:

- **data_set**
  One of the following:
  - **1ST DATA SET**
    First data set on the volume
  - **LAST DATASET**
    Last data set on the volume
  - **NEXT DATASET**
    Next data set on the volume
  - **PREV DATASET**
    Previous data set on the volume

- **volser**
  The volume serial number of the volume.

- **data_set_name**
  The correct data set name.

System action: Processing continues.
Operator response: None.
System programmer response: None.
Source: DFSMSrmm
Detecting Module: EDGUTIL

**EDG6756I**

```plaintext
DATA SET RECORD data_set_name SEQUENCE sequence ON VOLUME volser DELETED
```

Explanation: The EDGUTIL MEND function has determined that the data set record specified is incorrectly associated with the volume. The data set record has been deleted.

In the message text:

- **volser**
  The volume serial number of the volume.

- **sequence**
  The next data set sequence number.

- **data_set_name**
  The correct data set name.

System action: Processing continues.
Operator response: None.
System programmer response: None.
Source: DFSMSrmm
Detecting Module: EDGUTIL
EDG6757W • EDG6759W

EDG6757W  DATA SET RECORD data_set_name SEQUENCE sequence1 ON VOLUME volser OUT OF SEQUENCE, SEQUENCE sequence2 EXPECTED.

Explanation: The EDGUTIL VERIFY or MEND functions have examined the sequence of data sets on the volume and determined that there is a sequencing error.

In the message text:

data_set_name
  The data set name.

sequence1
  The data set's sequence number.

volser
  The volume serial number of the volume.

sequence2
  The correct sequence number.

System action: Processing continues. For VERIFY, a minimum return code of 4 is set.

Operator response: None.

System programmer response: If the request was MEND, no action is needed, otherwise run EDGUTIL requesting MEND to correct this.

Source: DFSMSrmm

Detecting Module: EDGUTIL

EDG6758I  data_set POINTER FOR DATA SET data_set_name1 ON VOLUME volser CHANGED TO data_set_name2

Explanation: The EDGUTIL MEND function has corrected the association between the data set and volume records specified.

In the message text:

data_set
  One of the following values:
  NEXT DATASET - Next data set on the volume
  PREV DATASET - Previous data set on the volume

data_set_name1
  The data set name.

volser
  The volume serial number of the volume.

data_set_name2
  The correct data set name.

System action: Processing continues.

Operator response: None.

System programmer response: None.

Source: DFSMSrmm

Detecting Module: EDGUTIL

EDG6759W  DATA SET RECORD data_set_name1 SEQUENCE sequence ON VOLUME volser OUT OF SEQUENCE, DATA SET data_set_name2 EXPECTED

Explanation: The EDGUTIL VERIFY or MEND functions have examined the sequence of data set records associated with the volume and determined that a sequencing error exists.

In the message text:
**EDG6760E**

**data_set_name1**

The recorded data set name.

**sequence**

The file sequence number of the data set.

**volser**

The volume serial number of the volume.

**data_set_name2**

The correct data set name.

**System action:** Processing continues. For VERIFY, a minimum return code of 4 is set.

**Operator response:** None.

**System programmer response:** If the request was MEND, no action is needed, otherwise run EDGUTIL requesting MEND to correct this.

**EDG6760E**

VOLUME volser HAS INCONSISTENT STATUS FLAGS FLGA = *'hexadecimal_value1', FLGAX = *'hexadecimal_value2'*

**Explanation:** The EDGUTIL VERIFY or MEND functions have determined that the specified fields in the volume record hold contradictory or erroneous information.

In the message text:

**volser**

The volume serial number of the volume.

**hexadecimal_value1**

The contents of field FLGA, in hexadecimal. One of the following values:

- X'80' Volume is a master volume.
- X'40' Volume pending release.
- X'20' Vital record - do not release.
- X'10' User tape.
- X'08' Tape is on loan.
- X'04' Tape opened and not yet closed.
- X'02' Volume is scratch.
- X'01' Volume recorded by OPEN/CLOSE/EOV.

**hexadecimal_value2**

The contents of field FLGAX, in hexadecimal. One of the following values:

- X'80' Scratch volume claimed via RMM GETVOLUME subcommand.
- X'40' Scratch volume has never been initialized.
- X'20' Scratch volume with initialize action pending.
- X'10' Scratch volume waiting to enter a Tape Library Dataserver
- X'08' Abend in process when a data set closed.
- X'04' Abend in OPEN/CLOSE/EOV.
- X'02' Initialization requested for a Tape Library Dataserver volume.

**System action:** Processing continues. For VERIFY, a minimum return code of 4 is set.

**Operator response:** None.
EDG6761I  •  EDG6762E

EDG6761I  VOLUME volser FLGA SET TO X'hexadecimal_value1', AND FLGAX SET TO X'hexadecimal_value2'

Explanation: The EDGUTIL MEND function has determined the proper values of the volume record’s status flags and has updated them.

In the message text:

- **volser**: The volume serial number of the volume.
- **hexadecimal_value1**: The contents of field FLGA, in hexadecimal. One of the following values:
  - X'80': Volume is a master volume.
  - X'40': Volume pending release.
  - X'20': Vital record - do not release.
  - X'10': User tape assigned by the librarian.
  - X'08': Tape is on loan.
  - X'04': Tape opened and not yet closed.
  - X'02': Volume is scratch.
  - X'01': Volume recorded by OPEN/CLOSE/EOV.

- **hexadecimal_value2**: The contents of field FLGAX, in hexadecimal. One of the following values:
  - X'80': Scratch volume claimed via RMM GETVOLUME subcommand.
  - X'40': Scratch volume has never been initialized.
  - X'20': Scratch volume with initialize action pending.
  - X'10': Scratch volume waiting to enter a Tape Library Dataserver.
  - X'08': Abend in process when a data set closed.
  - X'04': Abend probably in OPEN/CLOSE/EOV.
  - X'02': Initialization requested for a Tape Library Dataserver volume.

System action: Processing continues.

Operator response: None.

System programmer response: None.

EDG6762E  VOLUME volser HAS INCONSISTENT TDSI INFORMATION X'hexadecimal_value'

Explanation: The EDGUTIL VERIFY function has determined that the Tape Data Set Information settings in the volume record are incorrect.

In the message text:

- **volser**: The volume serial number of the volume.
**hexadecimal_value**
The contents of the TDSI, in hexadecimal.
Tape recording format and can be:
- X'00'  Not 3480
- X'01'  18 track
- X'02'  36 track
- X'03'  128 track
Tape media type and can be:
- X'00'  Not 3480
- X'01'  Cartridge system tape
- X'02'  Enhanced capacity cartridge
- X'03'  High performance cartridge tape
- X'04'  Extended high performance cartridge tape
Tape compaction technique and can be:
- X'00'  Not known
- X'01'  Not compacted
- X'02'  compacted
Tape special attributes and can be:
- X'00'  None.
- X'01'  read compatible

**System action:** Processing continues. A minimum return code of 4 is set.

**Operator response:** None.

**System programmer response:** Run the EDGUTIL MEND function to correct the error.

EDG6783I  GENERIC KEY VALUE mkgenkey_value IS NOT CONSISTENT WITH vrs_type VRS FOR vrs_name

Explanation: The DFSMSrmm utility, EDGUTIL, is verifying the contents of the vital record specification information in the DFSMSrmm control data set. The utility found that the MKGENKEY value is not consistent with either the data set name or the job name specified in the vital record specification.

In the message text:

mkgenkey_value
   This is the key of the vital record specification.

vrs_type
   This is the vital record specification type in the DFSMSrmm control data set. It can be:
   - DATASET
   - VOLUME
   - NAME
This is the name of the vital record specification in the DFSMSrmm control data set.

**System action:** Processing continues. DFSMSrmm sets a minimum return code of 4.

**Operator response:** None.

**System programmer response:** Run the EDGUTIL MEND function to correct the problem.

**Source:** DFSMSrmm

**Detecting Module:** EDGBKUP

---

**EDG6784I** GENERIC KEY VALUE `mkgenkey_value` SET IN `vrs_type` VRS FOR `vrs_name`

**Explanation:** The DFSMSrmm utility, EDGUTIL, is mending the contents of the vital record specification information in the DFSMSrmm control data set. The utility found that the MKGENKEY value is not consistent with either the data set name or the job name specified in the vital record specification and corrected it.

In the message text:

`mkgenkey_value`

This is the key of the vital record specification.

`vrs_type`

This is the vital record specification type in the DFSMSrmm control data set. It can be:

- DATASET
- VOLUME
- NAME

`vrs_name`

This is the name of the vital record specification in the DFSMSrmm control data set.

**System action:** Processing continues.

**Operator response:** None.

**System programmer response:** None.

**Source:** DFSMSrmm

---

**EDG6785I** VRS RECORD CONTAINS UNSUPPORTED DATA SET NAME MASK `data_set_name` `jobname`

**Explanation:** The EDGUTIL VERIFY or EDGUTIL MEND function has detected a vital record specification with a data set name mask which does not meet the restrictions for specifying data set names.

In the message text:

`data_set_name`

The data set name or generic data set name mask.

`jobname`

The job name or generic job name mask.

**System action:** Processing continues. DFSMSrmm sets a minimum return code of 4.

**Operator response:** None.

**Application Programmer Response:** If DFSMSrmm issued this message after loading the control data set that was created during conversion from another tape management product, correct the 'K' records in the EDGCNVT input file and run the job again. Otherwise, report this error to the system programmer. See z/OS DFSMSrmm Managing and Using Removable Media for information on how to specify generic data set and job name masks.

**System programmer response:** Determine the cause of the error and correct it, if possible. For instance, delete the incorrect vital record specification from the control data set and rerun EDGUTIL to verify the control data set integrity. If the error cannot be corrected, report the problem to the IBM Support Center.

**Source:** DFSMSrmm
**EDG6799E • EDG6806I**

**Detecting Module:** EDGUTIL

**EDG6799E**  ERROR OPENING MASTER FILE, RC = return_code, REASON = reason_code

**Explanation:** The EDGUTIL utility was unable to open the DFSMSrmm control data set. The return_code is a VSAM OPEN error return code. DFSMSrmm issues the return_code 16 when incorrect share options are set because DISP=OLD is specified. EDGUTIL MEND and EDGUTIL VERIFY require DISP=SHR for the control data set.

In the message text:

*return_code*

The VSAM OPEN error return code in decimal.

*reason_code*

The VSAM reason code in decimal.

**System action:** The utility ends. DFSMSrmm sets return code 12.

**Operator response:** None.

**Application Programmer Response:** If the return code is 12, correct the job control language (JCL) used to submit the job and re-submit the job.

**System programmer response:** If the return code is 16, check that DISP=SHR is specified for the MASTER DD statement or for the MASTERB DD statement when BLSR is used. Return and reason codes are documented in [z/OS DFSMS Macro Instructions for Data Sets](https://www.ibm.com/support/docview/docuid/ITG-47c9f6c).

EDG6810E STACKED VOLUME volser COUNT wrong_count OF VOLUMES SHOULD BE correct_count

Explanation: You are running the DFSMSrmm EDGUTIL utility with the VERIFY parameter to verify volume information. DFSMSrmm found an existing stacked volume with an incorrect count of the volumes contained on the stacked volume.

In the message text:

volser
   This is the volume serial number of the stacked volume.

wrong_count
   This is the count from the stacked volume record.

correct_count
   The count of the volumes with this stacked volume named as their container.

System action: EDGUTIL processing continues. For EDGUTIL VERIFY processing, DFSMSrmm sets a minimum return code of 4.

Operator response: None.

System programmer response: Run the DFSMSrmm EDGUTIL utility with the MEND parameter.

Source: DFSMSrmm

Detecting Module: EDGUTIL

EDG6811I STACKED VOLUME volser COUNT wrong_count OF VOLUMES CORRECTED TO correct_count

Explanation: You are running the DFSMSrmm EDGUTIL utility with the MEND parameter for volume information. DFSMSrmm found an existing stacked volume with an incorrect count of the volumes contained on the stacked volume. DFSMSrmm corrects the count of contained volumes.

In the message text:

volser
   This is the volume serial number of the stacked volume.

wrong_count
   This is the count from the stacked volume record.

correct_count
   The count of the volumes with this stacked volume named as their container.

System action: EDGUTIL processing continues.

Operator response: None.

System programmer response: None.

Source: DFSMSrmm

Detecting Module: EDGUTIL
EDG6812E  CONTAINER VOLUME volser IS NOT A STACKED VOLUME

Explanation: You are running the DFSMSrmm EDGUTIL utility with the VERIFY parameter for volume information. DFSMSrmm found volumes with a container name that matches the volser in the message. DFSMSrmm expects all containers to be defined to DFSMSrmm as TYPE(STACKED).

In the message text:

volser

This is the volume serial number of the stacked volume.

System action: EDGUTIL processing continues. For EDGUTIL VERIFY processing, DFSMSrmm sets a minimum return code of 4. For EDGUTIL MEND processing, DFSMSrmm changes the volume type to STACKED and corrects the count of volumes.

Operator response: None.

System programmer response: To correct the volume type, you can use the RMM CHANGEVOLUME volser TYPE(STACKED) subcommand to correct the volume TYPE or run the EDGUTIL utility with the MEND parameter.

Source: DFSMSrmm

Detecting Module: EDGUTIL

EDG6813E  STACKED VOLUME volser IS MISSING. THE STACKED VOLUME COUNT IS correct_count

Explanation: You are running the DFSMSrmm EDGUTIL VERIFY function for volume information. DFSMSrmm did not find any stacked volume record for existing volumes defined as contained on the stacked volume.

In the message text:

volser

This is the volume serial number of the stacked volume.

correct_count

The count of the volumes with this stacked volume named as their container.

System action: EDGUTIL processing continues. For EDGUTIL VERIFY processing, DFSMSrmm sets a minimum return code of 4.

Operator response: None.

System programmer response: Add the stacked volume to DFSMSrmm using the RMM ADDVOLUME volser TYPE(STACKED) or run the EDGUTIL utility with the MEND parameter to correct the volume type.

Source: DFSMSrmm

Detecting Module: EDGUTIL

EDG6814I  STACKED VOLUME volser IS ADDED. THE STACKED VOLUME COUNT IS correct_count

Explanation: You are running the DFSMSrmm EDGUTIL MEND function for volume information. DFSMSrmm did not find any stacked volume record for existing volumes defined as contained on the stacked volume. DFSMSrmm adds the stacked volume to the control data set using information from the contained volumes.

In the message text:

volser

Is the volume serial number of the stacked volume.

correct_count

The count of the volumes with this stacked volume named as their container.

System action: EDGUTIL processing continues.

Operator response: None.

System programmer response: None.

Detecting Module: EDGUTIL

EDG6822I VOLUME volser MEDIA TYPE media_type IS INCONSISTENT - VOLUME CATALOG MEDIA TYPE media_type LIBRARY MANAGER MEDIA TYPE media_type

Explanation: You are running the DFSMSrmm EDGUTIL utility for volume information. A system-managed volume has a media type inconsistent with the value in the volume catalog or the Library Manager database.

In the message text:

volser
This is the volume serial number of the updated volume.

media_type
This is the media type of the volume from either the DFSMSrmm control data set, the volume catalog, or the Library Manager database. media_type can be any hex value from x'00' to x'0F'. DFSMSrmm returns a value of N/A to indicate that the volume is not known to the catalog or the Library Manager database.

System action: EDGUTIL processing continues. DFSMSrmm sets a minimum return code of 4.

Operator response: None.

System programmer response: If the volume catalog and Library Manager database values are both known, but are different, you must correct the volume catalog media type using access method services commands. Use DFSMSrmm TSO subcommands or run the DFSMSrmm EDGUTIL utility with MEND to correct the error.

Source: DFSMSrmm

Detecting Module: EDGUTIL

EDG6823I VOLUME volser STATUS volume_status IS INCONSISTENT - VOLUME CATALOG STATUS tcdb_status LIBRARY MANAGER STATUS lm_status

Explanation: You are running the DFSMSrmm EDGUTIL utility to verify volume information. A system-managed volume has a status which is inconsistent with the value in the volume catalog or Library Manager database.

In the message text:

volser
This is the volume serial number of the volume.

volume_status
This is the status of the volume from the DFSMSrmm control data set and can be one of the following values:

  MASTER
  USER
  SCRATCH

tcdb_status
This is the status of the volume from the volume catalog. It can be PRIVATE or SCRATCH. The DFSMSrmm status values MASTER and USER are equivalent to the volume catalog status PRIVATE.

lm_status
This is the status of the volume from the Library Manager database. It can be one of the following values:

  PRIVATE
  SCRATCH
  N/A

  The DFSMSrmm status values MASTER and USER are equivalent to the Library Manager status PRIVATE. N/A indicates that the volume was not known to the Library Manager database.

System action: EDGUTIL processing continues. DFSMSrmm sets a minimum return code of 4.

Operator response: None.

System programmer response: If the DFSMSrmm status is correct, either run the DFSMSrmm EDGUTIL utility with the MEND(SMSTAPE) parameter, or use the EDGSPLCS output file with the EDGSPLCS utility to correct the volume catalog and the Library Manager database.
If the volume status is not correct, use the DFSMSrmm subcommands to correct the DFSMSrmm volume status.

**Detecting Module:** EDGUTIL

---

**EDG6824I**

**VOLUME** *volser* **IS IN VOLUME CATALOG ERROR STATUS** *status_number* *status_text*

**Explanation:** You are running the DFSMSrmm EDGUTIL utility to verify volume information. A system-managed volume has been found to be in error status in the volume catalog.

In the message text:

- **volser**
  - This is the volume serial number of the volume.

- **status_number**
  - This is the status code from the volume catalog. *status_number* is a decimal number obtained from the volume catalog.

- **status_text**
  - This is the explanation text for the error status code from the volume catalog.

**System action:** EDGUTIL processing continues. DFSMSrmm sets a minimum return code of 4 upon completion of EDGUTIL VERIFY or EDGUTIL MEND processing. For EDGUTIL MEND(SMSTAPE) processing, when the catalog status error is one of the following:

1
3-5
101
107-111

DFSMSrmm attempts to remove the volume from the error status and sets a minimum return code of 0.

**Operator response:** None.

**System programmer response:** If the error status is one of those listed, you can take any of the following options to remove the volume from the error status:

- Use ISMF
- Run EDGUTIL with MEND(SMSTAPE) parameter
- Use the EDGSPLCS output file with the EDGSPLCS utility

**Source:** DFSMSrmm

EDG6840E DYNAMIC ALLOCATION OF UTILITY SORT FILE VCINOUT FAILED ERROR CODE return_code function_code error_code info_code sms_code

Explanation: The DFSMSrmm EDGUTIL utility attempted to allocate or deallocate its VCINOUT work file. VCINOUT is used during sort to contain records that are selected from the volume catalog. This VCINOUT file size is determined using the size of the control data set.

In the message text:

return_code
The DYNALLOC error return code in decimal.

function_code
This is one of:
• 01-dynamic allocation failed
• 02-dynamic deallocation failed

error_code
The error code expressed in hexadecimal.

info_code
The information code expressed in hexadecimal.

sms_code
The SMS reason code is optional and expressed in hexadecimal. It appears in the message only when the error code is 97xx.
EDG6841E  •  EDG6843I

For an explanation of these codes, refer to \footnote{z/OS MVS Programming: Authorized Assembler Services Guide}.

**System action:** The utility ends. DFSMSrmm sets return code 12.

**Operator response:** Inform the system programmer.

**System programmer response:** Use the dynamic allocation error and information codes to determine the reason for the failure, and correct the problem, if possible. Use the SMS reason code to identify the additional SMS messages that describe the error. Check the LOGREC for additional SMS messages that describe the error. DFSMSrmm dynamically allocates the VCINOUT file, if one is not already allocated. If you add DDNAME VCINOUT to JCL for EDGUTIL, DFSMSrmm uses it; dynamic allocation and deallocation are skipped. If the problem cannot be identified, report the error to the IBM Support Center.

In the message text:

- **volser**
  The volume defined in the DFSMSrmm control data set.

- **tcdb_library**
  The system-managed library listed in the TCDB where the missing volume was discovered.

**System action:** DFSMSrmm updates the volume catalog information to show that the volume is shelf resident.

**Operator response:** None.

**System programmer response:** None.

**Source:** DFSMSrmm

**Detecting Module:** EDGUTIL

---

**EDG6846I**  
**VOLUME CATALOG UPDATE REQUIRED - STATEMENT WRITTEN TO EDGSPLCS FILE FOR VOLUME volser**

**Explanation:** You are running the DFSMSrmm EDGUTIL utility to VERIFY SMS information for volumes. DFSMSrmm found inconsistencies between the DFSMSrmm information for the volume and the volume catalog and Library Manager database. This message indicates that the error can be corrected. A control statement has been written to the data set represented by the EDGSPLCS DD statement.

In the message text:
**EDG6847E • EDG6848E**

*volser*

This is the volume serial number of the volume to be corrected.

**System action:** DFSMSrmm utility continues. A control statement has been written to the data set specified by the EDGSPLCS DD statement.

**Operator response:** None.

**System programmer response:** Use the EDGSPLCS utility to process the statements produced. You can review the contents of the EDGSPLCS file and if you want to make those corrections, pass the file to the EDGSPLCS INDD file.

**Source:** DFSMSrmm

**Detecting Module:** EDGUTIL

**EDG6847E**

LIBRARY COMMUNICATION FAILED - FUNCTION function TYPE type LIBRARY library VOLUME volser RETURN CODE return_code REASON CODE reason_code - PROCESSING ENDED

**Explanation:** While running the DFSMSrmm EDGUTIL utility to verify SMS volume information, the system attempted to communicate with the library using device services, but encountered an error. The error is unrecoverable.

In the message text:

*function*

This is one of the following values: BUILD, CALL, and DELETE.

*type*

The value is INVENTORY.

*library*

This is the name of the library with which DFSMSrmm attempts to communicate.

*volser*

This is the volume serial number of the volume to be retrieved.

*return_code*

This is the request return code.

*reason_code*

This is the request reason code.

**System action:** DFSMSrmm utility ends.

**Operator response:** None.

**System programmer response:** Search problem reporting databases for a fix for the problem. If no fix exists, contact the IBM Support Center.

**Source:** DFSMSrmm

**Detecting Module:** EDGUTIL

---

**EDG6848E**

FILTER PROCESSING FAILED RETURN CODE return_code - PROCESSING ENDED

**Explanation:** You are running the DFSMSrmm EDGUTIL utility. DFSMSrmm attempted to parse the SYSIN file contents, but encountered an error.

In the message text:

*return_code*

The return code from DFSMSrmm filter processing support.

**System action:** DFSMSrmm utility ends.

**Operator response:** None.

**System programmer response:** Check the return code displayed in the message. If there is an error in the SYSIN file, correct the SYSIN file statements. For all return codes other than 4, search problem reporting databases for a fix for the problem. If no fix exists, contact the IBM Support Center.

EDG6849E  ONLY ONE SYSIN sysin_cmd COMMAND IS SUPPORTED

**Explanation:** You are running the DFSMSrmm EDGUTIL or EDGHSKP utility. DFSMSrmm found multiple commands in SYSIN where only a single command is supported.

In the message text:

```
sysin_cmd
```

This can be one of the following values: EXPROC, INCLUDE, or EXCLUDE.

**System action:** DFSMSrmm utility ends.

**Operator response:** None.

**System programmer response:** Correct the SYSIN file statements so that only the supported commands are specified. For EDGUTIL, specify up to one INCLUDE and one EXCLUDE command.

**Source:** DFSMSrmm

Detecting Module: EDGUTIL, EDGHSKP

---

EDG6850E  AT LEAST ONE OPERAND REQUIRED FOR sysin_cmd COMMAND

**Explanation:** You are running the DFSMSrmm EDGUTIL utility. DFSMSrmm did not find an operand for the command in SYSIN where at least one of the following operands is required: LOCATIONS, VOLUMES, or VOLUMERANGES.

In the message text:

```
sysin_cmd
```

This can be one of the following values: INCLUDE, or EXCLUDE.

**System action:** DFSMSrmm utility ends.

**Operator response:** None.

**System programmer response:** Correct the SYSIN file statements.

**Source:** DFSMSrmm

Source:  DFSMSrmm

Detecting Module:  EDGCVCTL

EDG7028I  INVALID OWNER NAME ownerid1 DETECTED, CHANGED TO ownerid2

Explanation:  During conversion from TLCS to DFSMSrmm, the owner name ownerid1 contained unacceptable characters, and was converted to ownerid2. The only acceptable characters are A-Z, 0-9, and $,#, or @. The unacceptable characters have been changed to @. This message is put in the SYSPRINT file.

In the message text:

ownerid1
   The TLCS owner name

ownerid2
   The converted TLCS owner name

System action:  The ownerid2 owner ID is used by DFSMSrmm.

Operator response:  None.

Application Programmer Response:  You can avoid having DFSMSrmm convert owner id records by:
   • Changing the data in the TLCS database before starting the conversion.
   • Changing the data during conversion by use of the exits EDGUX01 or EDGUX04.

After the new database has been built, use the DFSMSrmm TSO subcommands to change owner ids.

Source:  DFSMSrmm

Detecting Module:  EDGCVOCK

EDG7029I  INVALID VOLUME SEQUENCE NUMBER DETECTED FOR volser, CHANGED FROM 0 TO 1

Explanation:  The DFSMSrmm conversion program is processing the TLCS report file and found a volume record with a volume sequence number of 0. This record has been converted to DFSMSrmm format with a sequence number of 1.

In the message text:

volser
   Volume serial number

System action:  Change the volume sequence number from 0 to 1.

Operator response:  None.

Application Programmer Response:  Check the volser provided in the message text. DFSMSrmm converted the sequence number to 1, which means the volume is eligible for retention under DFSMSrmm. You might not want to retain the volume if the data set was opened for output but never closed.

If a data set is open for output because a job has previously failed, you can release the volume after the conversion is complete, when the DFSMSrmm control data set is loaded, and DFSMSrmm is started in manual or higher mode.

You might also consider using TLCS batch update cards to change the volume status to scratch in the TLCS control file.
EDG7031E  ERROR OPENING OLDVRSF FILE

Explanation:  The OPEN macro for the input file allocated to DDNAME OLDVRSF encountered an error.

EDG8001I  task RELEASE REQUEST FOR VOLUME volser FAILED - EDGDFHSM MUST BE APF AUTHORIZED
Explanation: A program has linked to the DFSMSrmm program EDGDFHSM. The program must execute in an APF authorized environment.
EDG8002I • EDG8003I

In the message text:

**task**

The job or started task.

**volser**

The volume serial number.

**System action:** EDGDFHSM performs no processing.

**Operator response:** Inform the system programmer.

**System programmer response:** To use the program EDGDFHSM, correct the environment to link to EDGDFHSM from within an APF authorized environment. EDGDFHSM is designed to be used from DFSMShsm using EDGTVEXT or from an installation exit such as ARCTVEXT.

**Source:** DFSMSrmm

**Detecting Module:** EDGDFHSM

---

EDG8002I  
**task** RELEASE REQUEST FOR VOLUME **volser** FAILED - DFSMSrmm SUBSYSTEM NOT ACTIVE

**Explanation:** EDGDFHSM was called to process the volume **volser**. The DFSMSrmm subsystem must be active or defined to MVS for this request to be processed.

In the message text:

**task**

The job or started task.

**volser**

The volume serial number.

**System action:** EDGDFHSM performs no processing.

**Operator response:** Start the DFSMSrmm subsystem. If DFSMSrmm does not start, inform systems support personnel.

**System programmer response:** Ensure that DFSMSrmm is correctly defined as a subsystem in the system parmlib, and that the subsystem has been started successfully. The tape volume **volser** has not been processed correctly by the DFSMSrmm subsystem. Manual processing might be necessary to ensure that information has been recorded in the DFSMSrmm control data set.

**Source:** DFSMSrmm

**Detecting Module:** EDGDFHSM

---

EDG8003I  
**task** RELEASE REQUEST - VOLUME **volser** IS NOT DFSMSrmm MANAGED

**Explanation:** You requested that DFSMSrmm release a **task** tape volume **volser** that DFSMSrmm does not manage.

In the message text:

**task**

The job or started task.

**volser**

The volume serial number.

**System action:** The current volume request is not completed. The requesting task, however, will have completed its volume deletion processing.

**Operator response:** Inform the system programmer.

**System programmer response:** If this volume and other tape volumes that are used by the task are not managed by DFSMSrmm, you can avoid the EDG8003I messages by stopping the task from calling the EDGDFHSM or the EDGTVEXT program interface. If this task is the only caller of the EDGDFHSM program interface and the EDGTVEXT program interface, you can disable the DFSMSrmm processing by using the TVEXTPURGE(NONE) parmlib option.

**Source:** DFSMSrmm
EDG8004I • EDG8006E

Detecting Module: EDGDFHSM

EDG8004I  task USER user_name NOT AUTHORIZED TO function VOLUME volser

Explanation: A request to list, release, or change tape volume information has been made on behalf of task. The RACF user ID user_name associated with task is not authorized to access the RACF resources protecting DFSMSrmm facilities.

In the message text:

  task
  The job or started task.

  user_name
  The RACF user ID.

  function
  The function requested of the DFSMSrmm subsystem. Can be: LIST, RELEASE, or CHANGE

  volser
  Volume serial number

System action: The current request is rejected.

Operator response: Inform the system programmer.

System programmer response: Review the RACF resource profiles set up to protect DFSMSrmm. Change the profiles so that the task's RACF user ID user_name has the correct level of authorization. See z/OS DFSMSrmm [Implementation and Customization Guide] for authorization details.

Source: DFSMSrmm

Detecting Module: EDGDFHSM

EDG8006E  DFSMSrmm SUBSYSTEM function REQUEST FOR task VOLUME volser FAILED RETURN CODE = return_code REASON CODE = reason_code

Explanation: A processing request was made to release a tape volume, but incorrect information was supplied to the DFSMSrmm subsystem. DFSMSrmm might have issued the reason_code because the requested tape has already been released or returned to scratch status.

In the message text:

  function
  The function requested of the DFSMSrmm subsystem. Can be: LIST, RELEASE, or CHANGE

  task
  The job or started task.

  volser
  The volume serial number.

  return_code
  The value returned in register 15 on return from the subsystem request.

  reason_code
  The value returned by the subsystem that identifies the specific error.

DFSMSrmm issues reason code 35 when the requestor tried to release a volume, but according to DFSMSrmm, the tape was already in scratch status.

DFSMSrmm issues reason code 49 when the requestor tried to release a volume, but to DFSMSrmm, the tape was already released.

System action: DFSMSrmm does not continue processing of current volume.

Operator response: Inform the system programmer.

System programmer response: A request by the DFSMSrmm installation exits EDGTVEXT or EDGDFHSM resulted in a failed subsystem request. For reason codes 35 and 49, check to see why the requested volume has already been

Chapter 2. EDG messages  387
released or returned to scratch status. Refer to the **z/OS DFSMSrmm Implementation and Customization Guide** for information about running DFSMSHsm and DFSMSrmm together and for information about using the EDGTVEXT and EDGDFHSM programs. For reason codes other than 35 and 49, report the return code and reason code to the IBM Support Center.

**Source:** DFSMSrmm

**Detecting Module:** EDGDFHSM

---

**EDG8007E**  
**DFSMSrmm SUBSYSTEM function REQUEST FOR task VOLUME volser FAILED RETURN CODE = return_code**

**Explanation:** A processing request for a tape volume was initiated but the DFSMSrmm subsystem request failed.

In the message text:

- **function**  
  The function requested of the DFSMSrmm subsystem. Can be: LIST, RELEASE, or CHANGE

- **task**  
  The job or started task.

- **volser**  
  The volume serial number.

- **return_code**  
  The value returned in register 15 on return from the subsystem request.

**System action:** DFSMSrmm does not continue processing of current volume.

**Operator response:** For return code 8, restart the DFSMSrmm subsystem. If necessary, inform the system programmer.

**System programmer response:** For return codes 8 and 12, ensure that the DFSMSrmm subsystem is defined and started successfully. For all other return codes, report the problem to the IBM Support Center.

The DFSMSrmm subsystem did not process the tape volume **volser** correctly. Manual processing might be necessary.

**Explanation:** An I/O error occurred on the DFSMSrmm control data set while the task was calling DFSMSrmm, using program EDGTVEXT or EDGDFHSM to release a volume.

In the message text:

- **task**  
  The job or started task.

- **function**  
  The function requested of the DFSMSrmm subsystem. Can be: LIST, RELEASE, or CHANGE

- **volser**  
  The volume serial number of the tape being released.

**System action:** DFSMSrmm waits for the operator's response: RETRY or CANCEL.

**Operator response:** Check your installation's procedures for handling I/O errors on the DFSMSrmm control data set. If the error can be corrected, enter RETRY to update the DFSMSrmm control data set. Enter CANCEL if no further action should be taken.

**System programmer response:** If the operator entered CANCEL, advise your tape librarian or storage administrator that DFSMSrmm control data set entries might be incomplete. Information might need to be added to the control data set.

**Source:** DFSMSrmm
EDG8009E • EDG8011D

Detecting Module: EDGDFHSM

EDG8009E  REPLY TO EDGidD INVALID, PLEASE REPLY WITH EITHER "RETRY" OR "CANCEL"

Explanation: DFSMSrmm issues this message to prompt the operator. The valid replies to message EDG8008D, EDG8010D, EDG8011D, and EDG8013D are RETRY or CANCEL.

In the message text:

id  The number of the message incorrectly replied to. One of the following values:
     8008
     8010
     8011
     8013

System action: DFSMSrmm issues message EDG8008D, EDG8010D, EDG8011D, or EDG8013D after issuing message EDG8009E.

Operator response: When message EDG8008D, EDG8010D, EDG8011D, or EDG8013D is displayed again, following message EDG8009E, enter either RETRY or CANCEL.

Source: DFSMSrmm
Detecting Module: EDGDFHSM

EDG8010D  BACKUP IN PROGRESS DURING task function REQUEST FOR volser - ENTER "RETRY" OR "CANCEL"

Explanation: DFSMSrmm was unable to record a tape volume release request for volser, because DFSMSrmm control data set backup was in progress.

In the message text:

task  The job or started task.

function  The function requested of the DFSMSrmm subsystem. Can be: LIST, RELEASE, or CHANGE

volser  The volume serial number of the tape being released.

System action: DFSMSrmm prompts the operator to reply either RETRY or CANCEL. If the operator enters RETRY, DFSMSrmm tries to record information about the volume. If the operator enters CANCEL, then DFSMSrmm takes no further action.

Operator response: No DFSMSrmm control data set update requests can be processed while backup is in progress. Wait for backup processing to complete, then enter RETRY to continue, or CANCEL to cancel the action.

System programmer response: If the operator replies CANCEL, advise the tape librarian or storage administrator that action might not have been recorded in the DFSMSrmm control data set.

Source: DFSMSrmm
Detecting Module: EDGDFHSM

EDG8011D  DFSMSrmm SUBSYSTEM IS NOT ACTIVE DURING task function REQUEST FOR volser - ENTER "RETRY" OR "CANCEL"

Explanation: DFSMSrmm was unable to process a request to release the volume volser, because the DFSMSrmm subsystem is not active.

In the message text:

task  The job or started task.

function  The function requested of the DFSMSrmm subsystem. Can be: LIST, RELEASE, or CHANGE
volser
The volume serial number of the tape being released.

System action: The operator is prompted to reply either RETRY or CANCEL. If the operator enters RETRY, DFSMSrmm retries the request. If the operator enters CANCEL, no further action is taken.

Operator response: Start the DFSMSrmm subsystem and reply RETRY. If you are not going to start DFSMSrmm, reply CANCEL.

System programmer response: If the operator replies CANCEL, information about the volume might not be recorded. Advise the tape librarian or storage administrator that information in the DFSMSrmm control data set and the requestor's data base might be inconsistent for this volume.

Source: DFSMSrmm

Detecting Module: EDGDFHSM

EDG8012E  task function REQUEST FOR VOLUME volser - DFSMSrmm SUBSYSTEM IS NOT INITIALIZED

Explanation: The DFSMSrmm program interface, EDGDFHSM or EDGTVEXT, has been called when the DFSMSrmm subsystem is not in use. Either the interface has been reset using the EDGRESET utility, or the interface has never been initialized.

In the message text:

task
The job or started task

function
The function requested of the DFSMSrmm subsystem. Can be: LIST, RELEASE, or CHANGE

volser
The volume serial number being released.

System action: Processing continues. DFSMSrmm ignores the current request.

Operator response: Inform your system programmer.

System programmer response: Determine if DFSMSrmm should be in use on your system. Ensure that the correct ARCTVEXT installation exit is in use on your system. If you use another tape management product, ARCTVEXT should call the other tape management product rather than DFSMSrmm. If DFSMSrmm should be in use on your system, include EDGSSI in the IEFSSNxx subsystem name table entry for DFSMSrmm or start the DFSMSrmm procedure.

Source: DFSMSrmm

Detecting Module: EDGDFHSM

EDG8013D  DFSMSrmm JOURNAL FILE IS LOCKED DURING task function REQUEST FOR volser - ENTER "RETRY" OR "CANCEL"

Explanation: The DFSMSrmm journal file is locked while a task is calling DFSMSrmm to release a volume. DFSMSrmm locked the journal data set when the operator replied 'L' to message EDG2103D.

In the message text:

task
The job or started task.

function
The function requested of the DFSMSrmm subsystem. Can be: LIST, RELEASE, or CHANGE

volser
The volume serial number of the tape being released.

System action: DFSMSrmm waits for the operator's response: RETRY or CANCEL.

Operator response: Check your installation's procedures for backing up the DFSMSrmm control data set and clearing the journal. If you are instructed to back up, use EDGHSKP and specify the BACKUP parameter to perform...
backup and clear the journal. Then enter RETRY to update the DFSMSrmm control data set. If you are not instructed to back up, enter CANCEL.

**System programmer response:** If the operator entered CANCEL, advise your tape librarian or storage administrator that DFSMSrmm control data set entries might be incomplete. Schedule the control data set back up processing to clear the journal. Use EDGHSKP, PARM=BACKUP to perform backup and to clear the journal.

---

**EDG8102D**  DFSMSrmm SUBSYSTEM NOT ACTIVE DURING function PROCESSING FOR volser - ENTER "RETRY", "IGNORE", OR "CANCEL"

**Explanation:** DFSMSrmm issues this message because the DFSMSrmm subsystem is inactive. EDGLCSUX or EDGOCEXT was called to process the volume volser. This processing requires that the DFSMSrmm subsystem is active. The subsystem is inactive.

In the message text:

*function*  Describes the processing that DFSMSrmm was asked to perform. It can be:

- **CHANGE USE**  Volume change use processing
- **EJECT**  Cartridge exit processing
- **ENTRY**  Cartridge entry processing
- **RETRIEVE**  Retrieve processing
- **FILE END**  Close or EOV processing
- **FILE START**  Open or EOV processing
- **LABEL ERR**  Label anomaly processing
- **TAPE MOUNT**  Processing a volume mount
- **VALIDATION**  File validation processing

*volser*  Is the volume serial number that is currently being processed
EDG8105E

**System action:** DFSMSrmm waits for the operator to reply to the message. Before the operator can reply RETRY, the DFSMSrmm subsystem must be reactivated.

**Operator response:** Start or restart the DFSMSrmm subsystem. If DFSMSrmm does not start, inform systems support personnel. If the control data set is being restored from tape, reply IGNORE to allow tape processing to continue with a non-system managed tape drive.

<table>
<thead>
<tr>
<th>Operator Reply</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>CANCEL</td>
<td>DFSMSrmm fails the current request but processes all other requests.</td>
</tr>
<tr>
<td>IGNORE</td>
<td>DFSMSrmm allows the current request to continue as a non-system managed tape request but processes all other requests.</td>
</tr>
</tbody>
</table>
| RETRY          | DFSMSrmm retries the current request. Before replying RETRY, start DFSMSrmm by issuing the operator command: S DFRMM

To restart DFSMSrmm issue:
F DFRMM,M=xx

or reply to an outstanding WTOR prompting you for a parmlib member suffix.

If DFSMSrmm is still not active, DFSMSrmm reissues this message. If DFSMSrmm is active, processing continues.

**System programmer response:** Ensure that DFSMSrmm is correctly defined as a subsystem in the system parmlib, and that the subsystem has been started successfully. The tape volume *volser* has not been processed correctly by the DFSMSrmm sub-system. Manual processing might be necessary.

**EDG8105E** ERROR IN DFSMSrmm SUBSYSTEM DURING *function* PROCESSING FOR VOLUME *volser*

**Explanation:** While processing a request from OAM for tape volume *volser*, an error occurred within the DFSMSrmm subsystem.

In the message text:

*function*

Describes the processing that DFSMSrmm was asked to perform. It can be:

- **CHANGE USE**
  Volume change use processing
- **EJECT**
  Cartridge exit processing
- **ENTRY**
  Cartridge entry processing

*volser*

Is the volume serial number that is currently being processed

**System action:** No further processing of the current volume is performed.

The corresponding OAM installation exit will not be called again:

- **CHANGE USE** - CBRUXCUA
- **EJECT** - CBRUXEJC
- **ENTRY** - CBRUXENT

**Operator response:** Inform the system programmer.
System programmer response: An error in the program EDGLCSUX caused an incorrect subsystem request. Report the problem to the IBM Support Center.

The tape volume volser has not been processed correctly by the DFSMSrmm subsystem. Manual processing might be necessary.

To reactivate the appropriate OAM installation exit, either stop and restart Object Access Method, or enter the following command:
LIBRARY RESET,LCS exit name

Source: DFSMSrmm

Detecting Module: EDGLCSUX

EDG8106E DFSMSrmm SUBSYSTEM ERROR DURING function PROCESSING FOR VOLUME volser - RETURN CODE return_code REASON CODE = reason_code

Explanation: A processing request from OAM for tape volume volser was initiated, but the DFSMSrmm subsystem request failed. The return_code is that passed in register 0 on return from the subsystem request.

In the message text:

function
   Describes the processing that DFSMSrmm was asked to perform. It can be one of:
   ENTRY - cartridge entry processing
   EJECT - cartridge exit processing
   CHANGE USE - volume change use processing

volser
   Is the volume serial number that is currently being processed

return_code
   Is the DFSMSrmm subsystem return code. The contents of register 0 on return from the subsystem.

reason_code
   Value returned by the subsystem that identifies the specific error

System action: No further processing of the current volume is performed.

The corresponding OAM installation exit will not be called again:
   ENTRY - CBRUXENT
   EJECT - CBRUXEJC
   CHANGE USE - CBRUXCUA

Operator response: Inform the system programmer.

System programmer response: An error in the program EDGLCSUX caused an incorrect subsystem request.

The tape volume volser has not been processed correctly by the DFSMSrmm subsystem. Manual processing might be necessary.

To reactivate the appropriate OAM installation exit, either stop and restart Object Access Method, or enter the following command:
LIBRARY RESET,LCS installation_exit_name

If manual processing is not successful, report the return code and reason code to the IBM Support Center.

**EDG8121D**  
ENTER volume *req_volser* INTO LIBRARY *lib_name* AND REPLY "RETRY", OTHERWISE REPLY "CANCEL" OR "CONTINUE"

**Explanation:** DFSMSrmm is processing an OAM installation exit retrieve request for the volume. The CBRUXVNL installation exit has requested that the volume should return to a system-managed tape library for processing. For the information about volume location, refer to the EDG8124I message that DFSMSrmm issues for the volume.

In the message text:

*req_volser*
The volume serial number being processed.
EDG8122D

lib_name

This is the name of the system-managed tape library where the volume should be entered. If a library is named, you must enter the volume into that library. It can be:

- A specific system-managed tape library name.
- *ANY* to indicate that you can enter the volume into any system-managed tape library defined on your system.

System action: DFSMSrmm waits for a reply to the message. If the reply is RETRY, it is assumed that you have entered the volume into either the specific named library or any system-managed tape library. If the reply is CANCEL, the current job step fails. If you cannot enter the volume into a system-managed library and have non-system-managed tape drives on which to mount the volume, reply CONTINUE so that the volume can be used.

Operator response: Find the volume using the rack number or bin number and the location information provided in the message EDG8124I, and enter the volume into the correct library. If any library is acceptable, you can use the home location name to help determine where the volume should reside.

<table>
<thead>
<tr>

<td>CONTINUE</td>
<td>If you cannot enter the volume into a system-managed library and have non-system-managed tape drives on which to mount the volume, the volume can be used.</td>
</tr>
<tr>
<td>RETRY</td>
<td>DFSMSrmm assumes that you have entered the volume into either the specific named library, or any system-managed tape library.</td>
</tr>
</tbody>
</table>

Message CBR3610I is issued to notify you that entry processing is complete. You can then reply RETRY to the message EDG8121D.

DFSMSrmm reissues this message if you do not respond with either RETRY, CANCEL, or CONTINUE.

System programmer response: None.

Source: DFSMSrmm

Detecting Module: EDGLCSUX

EDG8122D ENTER volume req_volser INTO LIBRARY lib_name AND REPLY "RETRY", OTHERWISE REPLY "CANCEL"

Explanation: DFSMSrmm is processing an OAM installation exit retrieve request for the volume. The CBRUXVNL installation exit retrieves requests for the volume. The CBRUXVNL installation exit has requested that the volume should return to a system-managed tape library for processing. DFSMSrmm issues this message when an error occurs during volume mount processing. For the information about volume location, DFSMSrmm issues message EDG8124I.

In the message text:

req_volser

The volume serial number being processed.

lib_name

This is the name of the system-managed tape library where the volume should be entered. If a library is named, you must enter the volume into that library. It can be:

- A specific system-managed tape library name.
- *ANY* to indicate that you can enter the volume into any system-managed tape library defined on your system.

System action: DFSMSrmm waits for a reply to the message. If the reply is RETRY, it is assumed that you have entered the volume into either the specific named library or any system-managed tape library. If the reply is CANCEL, the current job step fails.

Operator response: Find the volume using the rack number or bin number and the location information that is provided in message EDG8124I. Enter the volume into the correct library. If any library is acceptable, you can use the home location name to help determine where the volume should reside.
When you see the message CBR3610I, it notifies you that entry processing is complete. You can then reply RETRY to the message EDG8122D.

DFSMSrmm reissues this message if you do not respond with either RETRY or CANCEL.

**System programmer response:** None.

**EDG8123D**  
**IMPORT VOLUME req_volser TO LIBRARY lib_name AND REPLY "RETRY", OTHERWISE REPLY "CANCEL"**

**Explanation:** DFSMSrmm is processing an OAM installation exit retrieve request for the volume. The CBRUXVNL installation exit has requested that the volume is to be returned to a system-managed virtual tape server library for processing. For the information about volume location, DFSMSrmm issues message EDG8124I.

In the message text:

- `req_volser`  
  The volume serial number being processed.

- `lib_name`  
  The name of the system-managed tape library where the volume should be imported. It can be:
  - A specific system-managed tape library name.
  - "ANY" to indicate that you can import the volume into any system-managed tape library defined on your system.
  
  If a library is named, you must enter the volume into that library.

**System action:** DFSMSrmm waits for a reply to the message. If the reply is RETRY, it is assumed that you have, or soon will have, imported the logical volume into either the specific named library or any system-managed tape library. If the reply is CANCEL, the current job step fails. If you cannot import the volume into a system managed library, reply CANCEL.

**Operator response:** Find the volume using the stacked volume name and the location information that is provided in message EDG8124I and enter the volume into the correct library. If any library is acceptable, you can use the home location name to help determine where the volume should reside.

**Operator Reply**  
**Result**

<table>
<thead>
<tr>
<th>Operator Reply</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>CANCEL</td>
<td>The current job step fails.</td>
</tr>
<tr>
<td>RETRY</td>
<td>DFSMSrmm assumes that you have entered the volume into either the specific named library, or any system-managed tape library.</td>
</tr>
</tbody>
</table>

When you see the message CBR3750I, with the import status message, this is notification that import processing is complete. You can then reply RETRY to the message EDG8123D.

DFSMSrmm reissues this message if you do not respond with either RETRY or CANCEL.

EDG8124I • EDG8125I

EDG8124I  VOLUME req_volser RACK rack_number LOCATION loc_name BIN bin_number HOME LOCATION home - NOT IN LIBRARY lib_name

Explanation: DFSMSrmm issues this message for information only. DFSMSrmm is processing an OAM installation exit retrieve request for the volume. The CBRUXVNL installation exit has requested that the volume should return to a system-managed tape library for processing. DFSMSrmm issues message EDG8121D, or EDG8122D, or EDG8123D after this message when DFSMSrmm is controlling system-managed tape exit processing DFSMSrmm is not controlling system-managed tape exit processing, none of message EDG8121D, EDG8122D, or EDG8123D is issued.

In the message text:

req_volser
The volume serial number being processed.

rack_number
This is the external volume serial number that identifies the physical volume.

loc_name
The name of the location where DFSMSrmm believes the volume is stored. It can be any DFSMSrmm supported location or storage location.

bin_number
This is the shelf location in which the volume is stored if the location name is a DFSMSrmm storage location.

home
This is the name of the volume's home location. It can be any location supported by DFSMSrmm. If it is a system-managed tape library name, you can use it to help you decide into which library you should enter the volume.

lib_name
This is the name of the system-managed tape library where the volume should be imported. If a library is named, you must enter the volume into that library. It can be:

• A specific system-managed tape library name.
• *ANY* to indicate that you can import the volume into any system-managed tape library defined on your system.

System action: DFSMSrmm continues processing.

Operator response: Find the volume using the rack number or the bin number and the location information provided in the message, and enter the volume into the correct library. If you can enter the volume into any library, you can use the home location name to determine where the volume should reside.

Reply to message EDG8121D, or message EDG8122D, or message EDG8123D, if DFSMSrmm issued one of these messages for the volume.

System programmer response: None.

EDG8125I  LOGICAL VOLUME req_volser EXPORTED IN STACKED VOLUME stack_volser LOCATION loc_name SHELF shelf_number HOME LOCATION home - NOT IN LIBRARY lib_name

Explanation: DFSMSrmm issues this message for information only. DFSMSrmm is processing an OAM installation exit retrieve request for the volume. The CBRUXVNL installation exit has requested that the volume should return to a system-managed virtual tape server library for processing. DFSMSrmm issues message EDG8123D after this message.

In the message text:

req_volser
The volume serial number being processed.

stack_volser
The value that identifies the stacked volume.
The name of the location where DFSMSrmm believes the `stack_volser` is stored. It can be any DFSMSrmm supported location or storage location.

The shelf location where the `stack_volser` is stored.

The name of the volume's home location. It can be any virtual tape server name. You can use it to help you decide into which library you should import the volume.

The name of the system-managed tape library where the volume should be imported. It can be:
- A specific system-managed tape library name.
- *ANY* to indicate that you can import the volume into any system-managed tape library that is defined on your system.

If a library is named, you must enter the volume into that library.

**System action:** DFSMSrmm continues processing.

**Operator response:** Find the volume using the stacked volume name and the location information that is provided in the message and import the volume into the correct library. If any library is acceptable, you can use the home location name to help determine where the volume should reside.

Reply to message EDG8123D for the volume.

**System programmer response:** None.

**EDG8180I**  
function OF VOLUME external_volser - ENTRY STATUS AND DFSMSrmm STATUS ARE DIFFERENT

**Explanation:** During cartridge entry processing while DFSMSrmm is not running in protect mode, DFSMSrmm detected a difference between the volume status defined to DFSMSrmm and the status selected during entry processing. In protect mode, DFSMSrmm overrides the entry status with the status from DFSMSrmm. In other running modes, DFSMSrmm updates the status recorded in the control data set using the entry status.

In the message text:
**EDG8181I**

*function*

Describes the function being requested of OAM:

**ENTRY**

Logical volume entry processing

**IMPORT**

Logical volume import processing

*external_volser*

This is the volume serial number being processed.

**System action:** DFSMSrmm processing continues. The cartridge entry status is used to update the DFSMSrmm control data set.

**Operator response:** Inform the system programmer.

**System programmer response:** When you switch DFSMSrmm processing to protect mode, the DFSMSrmm volume status overrides the entry status. If the entry status is correct, you have no action to perform. If the entry status was set incorrectly, you should use DFSMSrmm TSO subcommands to change the volume to the correct status.

**Source:** DFSMSrmm

**Detecting Module:** EDGMLCS

---

**EDG8181I  function OF VOLUME external_volser REFUSED - IT DUPLICATES EXISTING STACKED VOLUME**

**Explanation:** DFSMSrmm did not process an OAM installation exit request for the volume. The volume being processed conflicts with an existing volume which is defined to DFSMSrmm. You cannot process stacked volumes by using the OAM installation exits.

In the message text:

*function*

Describes the OAM function that being requested. It can be:

**ENTRY**

Cartridge entry processing

**IMPORT**

Logical volume import processing

**CHANGE USE**

Volume change use processing

**EJECT**

Cartridge exit processing

*external_volser*

This is the volume serial number that DFSMSrmm is processing.

**System action:** DFSMSrmm fails the request and sets a return code. Processing continues with any other volumes which require processing.

**Operator response:** Inform the system programmer.

**System programmer response:** If the volume is not a stacked volume, you must correct the DFSMSrmm information.

**Type of Processing** | **Response**
--- | ---
Import processing | Delete the volume so that import processing automatically defines the volume or use the RMM CHANGEVOLUME volser subcommand with TYPE(LOGICAL) and CONTAINER(stacked_volume).

Entry processing; | Delete the volume so that entry processing automatically defines the volume or use the RMM subcommands to define the volume as a logical volume in scratch status.

EJECT or CHANGE USE processing | Use the RMM CHANGEVOLUME volser subcommand with TYPE(LOGICAL) or TYPE(PHYSICAL) to correct the volume type.
EDG8182I • EDG8183I

Source: DFSMSrmm
Detecting Module: EDGMLCS

EDG8182I  function OF VOLUME external_volser REFUSED - IT DUPLICATES EXISTING PHYSICAL VOLUME

Explanation: DFSMSrmm was unable to process an OAM installation exit request for a logical volume. The volume being imported or entered conflicts with an existing volume which is defined to DFSMSrmm.

You can only import a logical volume when:
- It is not defined to DFSMSrmm.
- The volume is defined as an exported logical volume.

You can only enter a logical volume when:
- It is not defined to DFSMSrmm.
- The volume is defined as a scratch logical volume.

In the message text:

function  Describes the function being requested of OAM:

ENTRY  Logical volume entry processing
IMPORT  Logical volume import processing

external_volser  This is the volume serial number being processing.

System action: DFSMSrmm fails the request and sets a return code. Processing continues with any other volumes which are being imported or entered.

Operator response: Inform the system programmer.

System programmer response: If the entry defined to DFSMSrmm is for the volume being processed, you must correct the definition.

For import processing; either delete the volume so that import processing automatically defines it, or use the RMM CHANGEVOLUME volser subcommand with the TYPE(LOGICAL) and CONTAINER(psvolsr) operands.

For entry processing; either delete the volume so that entry processing automatically defines it, or use the RMM subcommands to set the volume to be a logical volume in scratch status.

Source: DFSMSrmm
Detecting Module: EDGMLCS

EDG8183I  function OF VOLUME external_volser REFUSED - IT IS NOT CURRENTLY EXPORTED

Explanation: DFSMSrmm was unable to process an OAM installation exit request for the volume. The volume being imported is not recorded in the DFSMSrmm control data set as being currently exported. You can only import a logical volume if it has a value for the ‘In container’ data field. This value is set during export processing or by using the RMM subcommands.

In the message text:

function  Describes the function being requested of OAM:

IMPORT  Logical volume import processing

external_volser  This is the volume serial number being processing.
**EDG8184I • EDG8185I**

**System action:** DFSMSrmm fails the request and sets a return code. Import processing continues to process any other volumes which are being imported from the same stacked volume.

**Operator response:** Inform the system programmer.

**System programmer response:** If the entry defined to DFSMSrmm is for the volume being imported, you must correct the definition. Either delete the volume so that import processing automatically defines it, or use the RMM CHANGEVOLUME volser subcommand with the CONTAINER(PSVOLS) operand.

**Source:** DFSMSrmm

**Detecting Module:** EDGMLCS

**EDG8184I**  
**function**  
of  
**VOLUME**  
**external_volser**  
**REFUSED**  
- **IT DUPLICATES AN EXISTING LOGICAL VOLUME**

**Explanation:** DFSMSrmm was unable to process an OAM installation exit request for the volume. The volume being entered is either a scratch logical volume or a physical volume. DFSMSrmm has a volume definition which does not agree with this information. You can only enter a logical volume if it has been defined as a scratch volume to DFSMSrmm or is not yet defined to DFSMSrmm. You can only enter a physical volume if it is not defined to DFSMSrmm as a logical volume.

In the message text:

- **function**  
  Describes the function being requested of OAM:
  
  **ENTRY**  
  Logical volume entry processing

- **external_volser**  
  This is the volume serial number being processing.

- **System action:** DFSMSrmm fails the request and sets a return code. Entry processing continues to process any other volumes which are being entered.

- **Operator response:** Inform the system programmer.

- **System programmer response:** If the entry defined to DFSMSrmm is for the volume being entered, you must correct the definition. Either delete the volume so that entry processing automatically defines it, or use DFSMSrmm processing to set the volume to the correct status and correct the volume type.

- **Source:** DFSMSrmm

Detecting Module: EDGMLCS

EDG8186I  function OF VOLUME external_volser REFUSED - VOLUME HAS EXPIRED AND IS PENDING RELEASE

Explanation: DFSMSrmm is processing an OAM installation exit retrieve request for the volume. DFSMSrmm does not support this request for a volume that is in the pending release status.

In the message text:

function
Describes the function being requested of OAM.

RETRIEVE
Retrieve processing

external_volser
This is the volume serial number being processing.

System action: The request fails and a return code is set so that the job step using the volume fails.

Operator response: None.

System programmer response: A volume that is pending release cannot be used for input or output processing on the system. If you must use the volume, you can reclaim it from pending release status by using the RMM CHANGEVOLUME subcommand with the RETPD or EXPDT operands.

Source: DFSMSrmm
Detecting Module: EDGMLCS

EDG8187I  function OF VOLUME external_volser REFUSED - VOLUME IS WAITING TO BE REINITIALIZED

Explanation: DFSMSrmm is processing an OAM installation exit retrieve request for the volume. DFSMSrmm does not support this request for a volume that has the initialize action pending.

In the message text:

function
Describes the function being requested of OAM.

RETRIEVE
Retrieve processing

external_volser
This is the volume serial number being processing.

System action: The request fails and a return code is set so that the job step using the volume fails.

Operator response: None.

System programmer response: A volume that has the initialize action pending cannot be used for input or output processing on the system. If you must use the volume, you can either complete the initialize action or cancel the initialize action by issuing the RMM CHANGEVOLUME volser INIT(N) subcommand.

Source: DFSMSrmm
Detecting Module: EDGMLCS

EDG8188I **WARNING** function OF VOLUME volser ONLY PERMITTED BECAUSE DFSMSrmm RUNNING IN WARNING MODE

Explanation: DFSMSrmm detected an error processing an OAM request for the volume. The error is ignored because DFSMSrmm is running in warning mode.

In the message text:
function
Describes the OAM function requested. It can be one of:
ENTRY - cartridge entry processing
EJECT - cartridge exit processing
CHANGE USE - volume change use processing
RETRIEVE - Retrieve processing

volser
This is the volume serial number being processed.

System action: Processing continues.

Operator response: Inform the system programmer.

System programmer response: Ensure that the error is corrected before switching from warning to protect mode.

Source: DFSMSrmm

Detecting Module: EDGMLCS

```
EDG8189I  function OF VOLUME external_volser REFUSED - VOLUME SERIAL AND RACK NUMBER rack DO NOT MATCH
```

Explanation: DFSMSrmm was unable to process an OAM installation exit request for the volume. DFSMS/MVS limits the volumes entering a system-managed tape library to be standard label with internal and external labels the same. The rack number for the volume is different from the volume serial number.

In the message text:

function
Describes the function being requested of OAM. It can be:
ENTRY
Cartridge entry processing

CHANGE USE
Volume change use processing

IMPORT
Logical volume import processing

rack
This is the number of the rack that the volume external_volser is assigned to.

external_volser
This is the volume serial number being processed.

System action: DFSMSrmm fails the request and sets a return code. If the volume is being entered into an automated tape library, the volume is ejected.

Operator response: Inform the system programmer.

System programmer response: The volume internal and external labels must match the DFSMSrmm rack number or no rack number must be assigned before the volume can be entered into the system-managed tape library. Either change the external label on the ejected volume, or use the DFSMSrmm ISPF dialog or DFSMSrmm TSO subcommands to change or clear the rack number.

function
Describes the function being requested of OAM. It can be:
CHANGE USE
- Volume change use processing

EJECT
- Cartridge exit processing

ENTRY
- Cartridge entry processing

RETRIEVE
- Retrieve processing

IMPORT
- Logical volume import processing

volser
- This is the volume serial number being processed.

System action: EDGLCSUX performs no function.
Operator response: Inform the system programmer.
System programmer response: If you have modified the OAM installation exit, check the parameter list it passes to EDGLCSUX. Otherwise, report the problem to the IBM Support Center.

Source: DFSMSrmm
Detecting Module: EDGMLCS

EDG8191I  function OF VOLUME volser REFUSED - VOLUME NOT DEFINED FOR USE ON MVS

Explanation: The volume volser is defined to DFSMSrmm for use on VM systems only.

In the message text:

function
- Describes the function being requested of OAM. It can be:

CHANGE USE
- Volume change use processing

EJECT
- Cartridge exit processing

ENTRY
- Cartridge entry processing

RETRIEVE
- Retrieve processing

volser
- This is the volume serial number being processed.

System action: EDGLCSUX performs no function.
Operator response: If the volume is required for use on MVS, request that use information for the volume is changed.
System programmer response: To allow the volume to be used on MVS, use the DFSMSrmm ISPF dialog or RMM CHANGEVOLUME subcommand with the USE operand value MVS.

Source: DFSMSrmm
Detecting Module: EDGMLCS

EDG8192I  function OF VOLUME volser REFUSED - REQUIRED DESTINATION IS destination

Explanation: DFSMSrmm is in the process of moving the volume volser to destination destination which is different from the library into which it has been entered.

In the message text:
**EDG8193I • EDG8194I**

*function*

Describes the function being requested of OAM:

- **ENTRY**
  - Logical volume entry processing

- **IMPORT**
  - Logical volume import processing

*destination*

This is the location where the volume should be moved.

*volser*

This is the volume serial number being processed when DFSMSrmm issued this message.

**System action:** EDGLCSUX does not allow the volume to be entered in the library. If the library is an automated tape library, the volume is ejected.

**Operator response:** If the volume was correctly entered in the library, change the volume's destination.

**System programmer response:** To change the destination, enter the volume in the correct library and then use the DFSMSrmm ISPF dialog or RMM CHANGEVOLUME subcommand with the LOCATION operand.

**Source:** DFSMSrmm

**Detecting Module:** EDGMLCS

---

**EDG8193I**

*function* OF VOLUME *volser* REFUSED - VOLUME NOT DEFINED TO DFSMSrmm AND REJECT PREFIX DENIES USE

**Explanation:** DFSMSrmm was unable to find an entry in its DFSMSrmm control data set for the volume *volser*, and the reject prefix specification denies all access to undefined volumes. The REJECT ANYUSE operand might have been specified in the DFSMSrmm parmlib member to define this range of volume serial numbers.

In the message text:

*function*

Describes the function being requested of OAM. It can be:

- **CHANGE USE**
  - Volume change use processing

- **EJECT**
  - Cartridge exit processing

- **ENTRY**
  - Cartridge entry processing

*volser*

This is the volume serial number being processed.

**System action:** EDGLCSUX performs no function.

**Operator response:** If the volume was correctly entered in the library, request that it be defined to DFSMSrmm before entering it into the library again.

**System programmer response:** To define the volume to DFSMSrmm, use the DFSMSrmm ISPF dialog or RMM ADDVOLUME subcommand to add the volume to the DFSMSrmm control data set.

**Source:** DFSMSrmm

**Detecting Module:** EDGMLCS

---

**EDG8194I**

*function* OF VOLUME *volser* REFUSED - VOLUME STATUS MAY ONLY BE CHANGED FROM PRIVATE TO SCRATCH BY DFSMSrmm

**Explanation:** DFSMSrmm was unable to process an OAM request for the volume because the OAM status for the volume is being changed to SCRATCH and the DFSMSrmm status for the volume is MASTER or USER. DFSMSrmm does not allow a volume's status to change from MASTER or USER to SCRATCH by OAM, unless the volume is...
already a scratch candidate volume. A scratch candidate is pending release and the only pending action is "return to
crash".

In the message text:

function
  Describes the function being requested of OAM.

CHANGE USE
  Volume change use processing

volser
  This is the volume serial number being processing.

System action:  EDGLCSUX performs no function.

System programmer response:  If you want the volume to become a SCRATCH volume, use the volume application
of the DFSMSrmm ISPF dialog to release the volume. Depending on the release actions for the volume, the volume
will return to be a scratch volume when the DFSMSrmm inventory management next runs. If the volume is manually
released, it is a scratch candidate, and you can try the failed request again.

Source:  DFSMSrmm

Detecting Module:  EDGMLCS

EDG8195I  function OF VOLUME volser REFUSED - LCS OWNER INFORMATION IS NOT VALID FOR USE
           BY DFSMSrmm

Explanation:  DFSMSrmm was unable to process an OAM request for the volume. DFSMSrmm uses the first 8 bytes
of the OAM owner information as the volume owner's ID. The first 8 bytes of the owner information does not
contain a valid DFSMSrmm owner ID.

In the message text:

function
  Describes the function being requested of OAM:

CHANGE USE
  Volume change use processing

EJECT
  Cartridge eject processing

ENTRY
  Cartridge entry processing

IMPORT
  Logical volume import processing

volser
  This is the volume serial number being processed when DFSMSrmm issued this message.

System action:  EDGLCSUX performs no function.

System programmer response:  Correct the first 8 bytes of the owner information to a valid DFSMSrmm owner ID.
A DFSMSrmm owner ID consists of 1-to-8 alphanumeric characters. IBM recommends that the owner ID is a RACF
user ID or groupname.

Source:  DFSMSrmm

Detecting Module:  EDGMLCS

EDG8196I  function OF VOLUME volser REFUSED - EXPIRATION DATE EXCEEDS THE DFSMSrmm
           INSTALLATION DEFINED MAXIMUM days RETENTION PERIOD

Explanation:  EDGLCSUX was called to process the volume volser. DFSMSrmm was unable to process an OAM
installation exit entry request for the volume. DFSMSrmm limits the expiration date to be within days days of the
current date.

In the message text:
**EDG8197I • EDG8198I**

*function*

Describes the function being requested of OAM:

- **CHANGE USE**
  - Volume change use processing

- **EJECT**
  - Cartridge eject processing

- **ENTRY**
  - Cartridge entry processing

- **IMPORT**
  - Logical volume import processing

*volser*

This is the volume serial number being processed when DFSMSrmm issued this message.

*days*

This is the installation maximum retention period on this system.

**System action:** EDGILCSUX performs no function.

**Operator response:** None.

**System programmer response:** Update the expiration date in the tape configuration database (TCDB) using the AMS ALTER VOLUMEENTRY command or ISMF tape library volume application or increase the DFSMSrmm maximum retention period.

**Source:** DFSMSrmm

**Detecting Module:** EDGMLCS

---

**EDG8197I  VOLUME volser IS NOT DFSMSrmm MANAGED**

**Explanation:** In support of volume not in library (VNL) processing, the DFSMSrmm subsystem was requested to process a tape volume *volser* that DFSMSrmm does not manage. The CRBUXVNL exit has requested information for the volume and indicated that EDG8197I must be issued if the volume is not defined to DFSMSrmm. Depending on your customization of the CRBUXVNL exit, DFSMSrmm can issue this message for a DASD volume that is not mounted.

In the message text:

*volser*

This is the volume serial number being processed.

**System action:** DFSMSrmm returns information to CRBUXVNL that the volume is not defined to DFSMSrmm. OAM continues processing the volume.

**Operator response:** None.

**System programmer response:** If you want DFSMSrmm to manage volumes, you must define them to DFSMSrmm or allow them to be added automatically during cartridge entry, cartridge eject, and OPEN processing. If this message is issued because a DASD volume was not mounted or has no unit control block, modify the OAM CRBUXVNL exit so that DFSMSrmm is not called when processing the DASD volumes. For a description of CRBUXVNL and how it can be used to optimize how exit detects and manages tape volumes and tape unit names, see the description for CRBUXVNL in the [*z/OS DFSMSrmm Implementation and Customization Guide*](https://www.ibm.com/support/knowledgecenter/en/SSGUGG_1.13.0/com.ibm.zos.v1r13[dfms/c/dfsmsrmm_implementation_and_customization_guide.html).

**EDG8198I  function OF VOLUME external_volser REFUSED - RACK NUMBER ALREADY IN USE FOR VOLUME volser**

**Explanation:** DFSMSrmm was unable to process an OAM installation exit request for the volume. DFSMS/MVS only allows volumes with standard labels and the same internal and external labels to be entered into a system-managed tape library. DFSMSrmm has found an entry in its DFSMSrmm control data set for a volume that already has a rack number the same as the value of the *external_volser*.
In the message text:

**function**

Describes the function being requested of OAM. It can be:

**CHANGE USE**

Volume change use processing

**ENTRY**

Cartridge entry processing

**IMPORT**

Logical volume import processing

**external_volser**

This is the identifier that has been taken from the label on the outside of the tape cartridge by the library vision system.

**volser**

This is the volume serial number that DFSMSrmm found to be already associated with the rack number of the same identifier as the **external_volser**.

**System action:** DFSMSrmm fails the request and sets a return code. If the volume is being entered into an automated tape library, the volume is ejected.

**Operator response:** Inform the system programmer.

**System programmer response:** The conflict between the volumes, the internal labels, external labels, and the DFSMSrmm control data set must be corrected before the volume can be reentered into the automated tape library. You will either need to change the external label on the ejected volume, or make changes to the DFSMSrmm control data set, so that the volume can be reentered without conflict.

**Source:** DFSMSrmm

**Detecting Module:** EDGMLCS

---

**EDG8199I**

**function OF VOLUME external_volser REFUSED - DOES NOT HAVE STANDARD LABELS**

**Explanation:** DFSMSrmm was unable to process an OAM installation exit entry request for the volume. DFSMS/MVS limits the volumes entering a system-managed tape library to be standard label with internal and external labels the same. The volume does not have a standard label according to information recorded in the DFSMSrmm control data set.

In the message text:

**function**

Describes the function being requested of OAM. It can be:

**CHANGE USE**

Volume change use processing

**ENTRY**

Cartridge entry processing

**external_volser**

This is the identifier read from the label on the outside of the tape cartridge by the library vision system for an automated system-managed tape library, or is the volume serial number provided for insert of a volume in a manual system-managed tape library.

**System action:** The request fails and the return code is set so that the volume is ejected.

**Operator response:** Inform the system programmer.

**System programmer response:** You can make changes to the DFSMSrmm control data set label information for the volume so that the volume can be entered without error. Use the DFSMSrmm ISPF dialog or the RMM CHANGEVOLUME subcommand with the LABEL operand.

EDG8200E  DFSMSrmm INACTIVE DURING CATALOG PROCESSING FOR DATA SET data_set_name CATSYNCH CDS

Explanation: DFSMSrmm is not active and is unable to keep data set catalog information current in the DFSMSrmm control data set.

In the message text:

data_set_name

Is the DFSMSrmm recorded data set name.

System action: Catalog processing continues without notifying the DFSMSrmm subsystem.

Operator response: Notify the system programmer.

System programmer response: If you use retention policies based on catalog status defined by vital record specifications with the WHILECATALOG operand, or you specified OPTION UNCATALOG(Y) or UNCATALOG(S) in the EDGRMMxx parmlib member, ensure that EDGHSKP CATSYNCH is used to synchronize the DFSMSrmm control data set with the user catalogs before vital records selection processing is run.

Source: DFSMSrmm

Detecting Module: EDGCATXT

EDG8201E  DFSMSrmm SUBSYSTEM REQUEST FAILED RETURN CODE return_code RMM_return_code RMM_reason_code DURING CATALOG PROCESSING FOR DATA SET data_set_name CATSYNCH CDS

Explanation: During catalog update processing, DFSMSrmm needs to keep data set catalog information up-to-date in the DFSMSrmm control data set. Because the DFSMSrmm subsystem request failed, it was unable to update the DFSMSrmm control data set.

In the message text:

return_code

The MVS subsystem processing return code (the value in Register 15 after the IEFSSREQ macro completes).

RMM_return_code

The DFSMSrmm subsystem processing return code (the value in Register 0 after the IEFSSREQ macro completes).

RMM_reason_code

The DFSMSrmm subsystem processing reason code (the value in the SSOB extension after the IEFSSREQ macro completes).

data_set_name

Is the DFSMSrmm recorded data set name.

System action: Catalog processing continues without notifying the DFSMSrmm subsystem.

Operator response: Notify the system programmer.

System programmer response: See z/OS MVS Using the Subsystem Interface for the return codes from the IEFSSREQ macro and take the appropriate action. The DFSMSrmm return and reason codes are provided for IBM problem analysis information. If you use VRS WHILECATALOG retention policies, you should ensure that EDGHSKP CATSYNCH is used to synchronize the DFSMSrmm control data set with the user catalogs before vital records selection processing is run. If you use retention policies based on catalog status defined by vital record specifications with the WHILECATALOG operand, or you specified OPTION UNCATALOG(Y) or UNCATALOG(S) in the EDGRMMxx parmlib member, ensure that EDGHSKP CATSYNCH is used to synchronize the DFSMSrmm control data set with the user catalogs before vital records selection processing is run.

EDG9114I  error PROCESSING DFSMSrmm PROBLEM DETERMINATION OUTPUT DATA SET

Explanation: While writing to the output data set, DFSMSrmm encountered an I/O error or an ABEND.
In the message text:
EDG9115I

error
Can be:
I/O ERROR
ABEND abend_code
The abend code DFSMSrmm has detected.

System action: On non-consecutive occurrences, DFSMSrmm swaps the EDGPDOX and EDGPDOY output data sets and makes one attempt to retry the output operation. For consecutive failures, the output data set is considered no longer usable. Internal tracing continues, however, no trace data blocks are written to the output data set.

Operator response: None.

System programmer response: If the ABEND code is X’37’, no action is required.
If the ABEND code is not X’37’, see z/OS MVS System Codes for more information about abend codes.

For an I/O error, you can determine the cause of the I/O error from the related messages.
If you need to recreate the EDGPDOX and EDGPDOY output data sets, you can either stop and restart DFSMSrmm, or you can increase the size of data sets without stopping DFSMSrmm. See Increasing the size of the Problem Determination Aid (PDA) Log Data Sets in z/OS DFSMSrmm Implementation and Customization Guide for more information.

Source: DFSMSrmm

Detecting Module: EDGPD0

EDG9115I  I/O action FOR DFSMSrmm PROBLEM DETERMINATION OUTPUT DATA SET, REASON CODE reason_code

Explanation: DFSMSrmm determines that the output data set is unusable because of an error defined by reason_code.

In the message text:

text

action
Is one of:
DISABLED - The trace records are no longer written to the output data set.
INHIBITED - The trace record being processed is not written to the output data set.

reason_code
Is one of:
1. JFCB read error or DD DUMMY specified for the EDGPDOY data set.
2. JFCB read error or DD DUMMY specified for the EDGPDOX data set.
3. A failure occurred while attempting to open the EDGPDOX data set.
4. A failure occurred while attempting to write to the EDGPDOX data set. Message EDG9114I was issued previously.
5. A failure occurred while attempting to switch the EDGPDOX and EDGPDOY data sets. Message EDG9116I was issued previously.
6. There is a deallocation error on the EDGPDOY data set.
7. There is a deallocation error on the EDGPDOX data set.
8. There is an allocation error on the EDGPDOX data set.
9. The EDGPDOX data set is extended format.
10. The EDGPDOY data set is extended format.
11. There is an OBTAIN error for a PDA data set.

System action: Internal tracing continues; however, no trace data blocks are written to the output data set.

Operator response: None.

System programmer response: For reason codes 1 and 2, make sure a valid DD statement exists in the DFSMSrmm startup procedure for EDGPDOX and EDGPDOY. For the other reason codes, refer to the associated messages to determine the cause of the problem.

When the problem is corrected, you can either stop and restart DFSMSrmm to enable PDA trace output processing, or you can increase the size of the EDGPDOX and EDGPDOY data sets without stopping DFSMSrmm. See
EDG9116I • EDG9118I

Increasing the size of the Problem Determination Aid (PDA) Log Data Sets in z/OS DFSMSrmm Implementation and Customization Guide for more information.

Detecting Module: EDGPDO

EDG9116I  RENAME ERROR SWAPPING DFSMSrmm PDA DATA SETS OLD DATA SET = olddsname, NEW DATA SET = newdsn, RETURN CODE return_code REASON CODE reason_code

Explanation: During an attempt to swap the EDGPDOX/EDGPDOY output data sets, an error was encountered in the rename function.

In the message text:

olddsname
  The original data set name that the RENAME macro is changing.

newdsn
  The new data set name that the RENAME macro is creating.

return_code
  The register 15 return code from the RENAME macro.

reason_code
  The status value from the RENAME CAMLIST request.

System action: Internal tracing continues but no trace data blocks are written to the output data set. DFSMSrmm processing continues.

Operator response: None.

System programmer response: Refer to z/OS DFSMSdfp Advanced Services for the meaning of the status value from the RENAME, to determine the problem. You can also ensure that the EDGPDOX data set and the EDGPDOY data sets are on the same volume.

If your installation procedures require that DFSMSrmm problem determination aid data is to be recorded in the output data sets, stop and restart DFSMSrmm.

You can also see "Increasing the size of the Problem Determination Aid (PDA) Log Data Sets" in z/OS DFSMSrmm Implementation and Customization Guide for more information.

Chapter 2. EDG messages  419
EDGC0005I  The SAX parser encountered an IO error in method - java_exception – orig_msg_text

**Explanation:** The incoming character stream could not be read for parsing.

In the message text:

- `java_exception` Identifies the IOException.
- `orig_msg_text` Identifies the original Java error message text.

**System action:** The CIM provider does not return any instances.

**Operator response:** Inform the system programmer.

**System programmer response:** Call the web service without CIM and verify that the XML response is correct.

**Source:** DFSMSrmm

**Detecting Module:** EDGXHJCP

EDGC0006I  The configuration file file_name could not be found - java_exception – orig_msg_text

**Explanation:** The configuration file that stores basic CIM provider settings could not be found.

In the message text:

- `file_name` Identifies the fully qualified name of the configuration file (normally /var/rmm/rmm.properties).
- `java_exception` Identifies the IOException.
- `orig_msg_text` Identifies the original Java error message text.

**System action:** Because basic settings are incomplete, the CIM provider ignores all client requests and returns no instances.

**Operator response:** Inform the system programmer.

**System programmer response:** Ensure that the configuration file, rmm.properties, is either located in the provider's home directory or, if it is located within /var/rmm, correctly specified by the environmental variable RMMCIM_CONFIG=/var/rmm/rmm.properties.

**Source:** DFSMSrmm

**Detecting Module:** EDGXHJCP

EDGC0007I  The option file file_name could not be found - java_exception – orig_msg_text

**Explanation:** The option file that stores customer related CIM provider settings is not located in the directory, as specified in the configuration file.

In the message text:

- `file_name` The fully qualified name of the option file (normally /etc/rrm/rmmcust.properties).
- `java_exception` IOException.
- `orig_msg_text` The original Java error message text.

**System action:** Because customer settings are incomplete, the CIM-provider ignores all client requests and returns no instances.

**Operator response:** Inform the system programmer.
System programmer response: Ensure that the option file, rmmcust.properties, is located in the path, as specified in the configuration.

Source: DFSMSrmm
Detecting Module: EDGXHJCP
Routing Code: N/A

EDGC0008I The RMM-to-CIM mapping file file_name could not be found - java_exception – orig_msg_text

Explanation: The mapping file that stores the relationships between SFI names and CIM property names is not located in the directory, as specified in the configuration file.

In the message text:

file_name
   The fully qualified name of the mapping file (normally /var/rmm/rmmtocim.map).

java_exception
   The IOException.

orig_msg_text
   The original Java error message text.

System action: Because the mapping information is unavailable, the CIM provider ignores all client requests and returns no instances.

Operator response: Inform the system programmer.

System programmer response: Ensure that the mapping file, rmmtocim.map, is located in the path, as specified in the configuration.

Source: DFSMSrmm
Detecting Module: EDGXHJCP

EDGC0010I The XML schema validation could not be set - java_exception – orig_msg_text

Explanation: The CIM provider failed to set the XML validation mode (true | false) as a feature of the SAX Parser.

In the message text:

java_exception
   Identifies the exception as either SAXNotRecognizedException or SAXNotSupportedException.

orig_msg_text
   Identifies the original Java error message text.

System action: The CIM provider returns no instances.

Operator response: Inform the system programmer.

System programmer response: Ensure that the following features of the XMLHandler are valid (setXmlValidation()-method):
   - http://xml.org/sax/features/validation
   - http://apache.org/xml/features/validation/schema

Source: DFSMSrmm
Detecting Module: EDGXHJCP

EDGC0011I Errors occurred during loading of the XML schema file file_name – java_exception – orig_msg_text

422  z/OS V1R13.0 MVS System Messages, Vol 5 (EDG-GFS)
EDGC0014I  Empty CdsID detected for url

Explanation: The queried DFSMSrmm system provides no CDS identification name, which is not allowed.

In the message text:

url
    The web service destination URL of the DFSMSrmm system that has no CDSID defined.

instance_name
    The name of the CIM-Instance, which has the missing CDSID.

System action: The CIM provider ignores this request and returns no instances.

Operator response: Inform the system programmer.

System programmer response: Ensure that the CDSID is set as PARMLIB option for the given DFSMSrmm system.

Source: DFSMSrmm

Detecting Module: EDGXHJCP

Routing Code: N/A

EDGC0015I  The SAX parser encountered an error in method – method_name – java_exception

Explanation: The XML error handler detected an error event during parsing. This is typically a violation of the validity constraint.

In the message text:

method_name
    Identifies the name of the failing method.

java_exception
    Identifies the SAXParseException.

System action: The CIM provider ignores this request and returns no instances.

Operator response: Inform the system programmer.

System programmer response: Ensure that the XML schema is valid and that the response from DFSMSrmm matches it.

Source: DFSMSrmm

Detecting Module: EDGXHJCP

EDGC0016I  The SAX parser encountered a fatal error in method – method_name – java_exception

Explanation: The XML error handler detected a non-recoverable fatal error event during parsing. This is typically a violation of the well-formedness constraint.

In the message text:

method_name
    Identifies the name of the failing method.

java_exception
    Identifies the SAXParseException.

System action: The CIM provider ignores this request and returns no instances.

Operator response: Inform the system programmer.

System programmer response: Ensure that the XML response from DFSMSrmm is well-formed.

Source: DFSMSrmm

Detecting Module: EDGXHJCP
EDGC0017I  The key key_name could not be found in resource bundle class resource_name – java_exception

Explanation: The specified key name is not a valid key of the actual resource bundle class.

In the message text:

key_name
Identifies the message ID of the error message that was used as an entry into the resource class.

resource_name
Identifies the name of the Java resource class.

java_exception
Identifies the MissingResourceException.

System action: The CIM provider ignores this request and returns no instances.

Operator response: Inform the system programmer.

System programmer response: Ensure that the actual localized resource bundle class contains the key.

Source: DFSMSrmm

Detecting Module: EDGXHJCP

EDGC0018I  The UDDI-inquiry-URL inquiry_url is not valid – java_exception – orig_msg_text

Explanation: The specified UDDI inquiry URL found within the option file is not formed as a valid URL address.

In the message text:

inquiry_url
Identifies the fully-specified URL of the UDDI-registry's inquiry destination.

java_exception
Identifies the MalformedURLException.

orig_msg_text
Identifies the original Java error message text.

System action: Because web services are discovered through UDDI, but this UDDI inquiry URL is malformed, the CIM provider ignores this request and returns no instances.

Operator response: Inform the system programmer.

System programmer response: Ensure that a well-formed UDDI inquiry URL is specified within the option file.

Source: DFSMSrmm

Detecting Module: EDGXHJCP

EDGC0020I  A UDDI communication error occurred – java_exception – orig_msg_text

Explanation: A SOAP transport error occurred while trying to discover a web service from the UDDI registry.

In the message text:

java_exception
Identifies either the UDDIException or TransportException.

orig_msg_text
Identifies the original Java error message text.

System action: Because web services are discovered through UDDI, but the UDDI registry is not accessible, the CIM provider ignores this request and returns no instances.

Operator response: Inform the system programmer.

System programmer response: Ensure that the service is properly published to the UDDI-registry, and the service is up and running.

Source: DFSMSrmm
EDG0021I No value set for key key_name
Explanation: An instance of a DFSMSrmm resource is requested, and a required key has no value.
In the message text:
key_name
  The name of the empty key attribute.
System action: Because the requested object is not specified with all required keys, the CIM provider returns no instances.
Operator response: Inform the system programmer.
System programmer response: Ensure that the required key is not empty or numeric if necessary.

---

EDGC0025I  Class *class_name* not supported

**Explanation:** A provider is called to service a CIM class, which is not supported.

*class_name*

The incoming CIM class name.

**System action:** Because the provider cannot handle that class, it terminates and issues the error message.

**Operator response:** Inform the system programmer.

**System programmer response:** Ensure the providers are registered properly. Offering the provider an unsupported class is usually either a cimom error or a provider registration error.

**Source:** DFSMSrmm

**Detecting Module:** EDGXHJCP

**Routing Code:** N/A

---

EDGC0026I  Namespace *namespace* not supported

**Explanation:** A provider is called to service a CIM class. That namespace is not supported.

*namespace*

The namespace of the incoming CIM class.

**System action:** Because the provider cannot handle that class, it terminates and throws the error message.

**Operator response:** Inform the system programmer.

**System programmer response:** Ensure that the namespace of the incoming CIM objects match the environmental variable RMMCIM_NAMESPACE, if set; otherwise it must be the default root/cimv2.

**Source:** DFSMSrmm

**Detecting Module:** EDGXHJCP

**Routing Code:** N/A

---

EDGC0027I  Instance *path_name* not found

**Explanation:** An instance of an auxiliary class IBMrmm_SearchOperands or IBMrmm_DeleteOperands is requested, but not found.

*path_name*

The full path name of the requested CIM instance.

**System action:** The CIM provider fails.

**Operator response:** Inform the system programmer.

**System programmer response:** Ensure that the MOF file rmmcimp.mof contains the instances for auxiliary classes and is loaded properly. Check the existence of the instances with the DFSMSrmm utility script rmmutil.sh.

**Source:** DFSMSrmm

**Detecting Module:** EDGXHJCP
EDG0028I  Environmental variables could not be read
Explanation:  The invocation of the printenv utility failed to list the environmental variables.
System action:  The CIM provider fails.
Operator response:  Inform the system programmer.
System programmer response:  If the following error message appears on the console:
BPXP015I HFS PROGRAM /bin/printenv IS NOT MARKED PROGRAM CONTROLLED,
mark the printenv utility Program Controlled by using the command extattr +p /bin/printenv from the unix system
services shell.

Routing Code:  N/A
EDGC0031I  Key key_name is not of the required format key_format

Explanation: When invoking a CIM instance or association provider method against a specific instance, the client provided a compound key of incorrect format. Every DFSMSrmm CIM class has its own compound key incorporating the CdsID value and the key must comply with the format specific for every class.

In the message text:

key_name
Identifies the name of the compound key.

key_format
Identifies the format the compound key must comply with.

System action: The request fails because the provider cannot identify which entity to process.

Operator response: Provide the compound key with the value corresponding to the required format and invoke the request again.

System programmer response: None.

Source: DFSMSrmm

Detecting Module: EDGXHJCP

Routing Code: N/A

EDGC0032I  Part part_name of key key_name should be a num-character string

Explanation: When invoking a CIM instance or association provider method against a specific instance, the client provided the part of the compound key of incorrect length. Every DFSMSrmm CIM class has its own compound key incorporating the CdsID value and every part of the key must have specific size.

In the message text:

part_name
Identifies the name of the part of the compound key.

key_name
Identifies the name of the compound key.

num
Identifies the required length of the compound key.

System action: The request fails because the provider cannot identify which entity to process.

Operator response: Provide the compound key with the value corresponding to the required format and invoke the request again.

System programmer response: None.

Routing Code: N/A
Chapter 3. EDGH messages

EDGH1001I  REJECT definitions found on this system - No migration action is required

Explanation: The migration check used the LISTCONTROL REJECT subcommand to verify that you have REJECT commands defined in the DFSMSrmm parmlib member. When you have REJECT commands defined you do not need a migration action when migrating to z/OS V1R10 or a later release.

However, you should consider exploitation of the new PRTITION and OPENRULE commands to replace your existing REJECT commands.

System action: The system continues processing.

Operator response: none

System programmer response: n/a

Problem determination: n/a

Source: DFSMSrmm

Automation: n/a

Detecting Module: EDGRHCHK

Routing Code: n/a

Descriptor Code: n/a

EDGH1002I  DFSMSrmm subsystem is not active

Explanation: Check processing included issuing a DFSMSrmm TSO RMM subcommand which requires that the DFSMSrmm subsystem is active.

System action: The system continues processing.

Operator response: Start the DFSMSrmm subsystem.

System programmer response: n/a

Problem determination: n/a

Source: DFSMSrmm

Reference Documentation: z/OS DFSMSrmm Managing and Using Removable Media

Automation: n/a

Detecting Module: EDGRHCHK

Routing Code: n/a

Descriptor Code: n/a

EDGH1003I  User user_id is not authorized to issue the RMM cmd subcommand

Explanation: Check processing included issuing a DFSMSrmm TSO RMM subcommand which requires that the user issuing the subcommand is authorized to do so.

System action: The system continues processing.

Operator response: n/a

System programmer response: Ensure that the correct authorization is defined for the subcommands used by the check. Most checks use LIST and SEARCH subcommands. The authorization required is listed in the z/OS DFSMSrmm Managing and Using Removable Media for each subcommand and is as follows;
EDGH1004I • EDGH1005I

For LISTCONTROL
  CONTROL access to STGADMIN.EDG.LISTCONTROL in the FACILITY class.
or
  CONTROL access to STGADMIN.EDG.MASTER in the FACILITY class.
For SEARCHVRS
  READ access to STGADMIN.EDG.VRS in the FACILITY class

EDGH1005I  RMM subcommand subcommand failed - Return code rc Reason code rsn

Explanation: The DFSMSrmm check routine EDGRHCHK has attempted to use an DFSMSrmm TSO RMM subcommand as part of check processing and the subcommand has failed with the return code and reason code listed in the message text.

Reason code values of 9999 and 9998 are special values set by the check to indicate that no EDG@RC variable was available for the subcommand.

System action: The system continues processing.

Operator response: n/a

System programmer response: Look up the return code and reason code values in the referenced documentation to determine the cause of the problem. Correct the problem before retrying the check.

Problem determination: n/a
Source: DFSMSrmm

Reference Documentation: [z/OS DFSMSrmm Managing and Using Removable Media](https://www.ibm.com)
EDGH1006I The following report lists VRSes which conflict with the z/OS V1R10 support for DELETED tape data sets

Explanation: The DFSMSrmm check routine has found a possible migration action and lists the VRSes it has found. The report lists the results of the SEARCHVRS subcommands issued by the check so that you can review the list of VRSes which conflict with the new DELETED tape data set support.

The SEARCHVRS commands issued by the check are:

```
RMM SEARCHVRS DSNAME('DELETED') OWNER(*) LIMIT(*)
RMM SEARCHVRS JOBNAME(DELETED) OWNER(*) LIMIT(*)
```

System action: The system continues processing.

Operator response: n/a

System programmer response: Review the report which follows to determine which VRSes should be changed prior to implementation of z/OS V1R10 or later release.

Problem determination: n/a

Source: DFSMSrmm

Reference Documentation: [z/OS DFSMSrmm Managing and Using Removable Media](#)

---

EDGH1007I No VRSes conflict with the DELETED tape data set support - No migration action is required

Explanation: The migration check used SEARCHVRS subcommands to verify that you do not have any VRSes using DELETED as the data set name or job name. When you do not use DELETED you do not need a migration action when migrating to z/OS V1R10 or later release.

However, you should consider exploitation of the new DELETED tape data set support which can be enabled by defining VRSes which use DSNAME(DELETED) or JOBNAME(DELETED).

System action: The system continues processing.

Operator response: none

System programmer response: n/a

Problem determination: n/a

Source: DFSMSrmm

Reference Documentation: [z/OS DFSMSrmm Managing and Using Removable Media](#)
EDGH1008I  Volume replace limit is not customized - No migration action is required

Explanation: The migration check used AMASPZAP to verify whether a usermod has updated the DFSMSrmm EDGMUPD load module to override the volume replace limit of 1 permanent error. When you do not have a user modification you do not require a migration action when migrating to z/OS V1R10 or later release.

However, you should consider exploitation of the new volume REPLACE options available via the MEDINF command in parmlib.

System action: The system continues processing.
Operator response: none

EDGH1009I  Utility load_module ended with Return code rc

Explanation: The DFSMSrmm check routine EDGRHCHK has attempted to use an external utility as part of check processing to verify the contents of a DFSMSrmm load module. The utility has ended with the return code listed in the message text.

System action: The system continues processing.
Operator response: none
System programmer response: Look up the return code in the referenced document to determine the cause of the problem. Correct the problem before retrying the check.
Problem determination: You can run the check with DEBUG=ON so that the SYSPRINT is listed to the REXXOUT data set.
Source: DFSMSrmm
Reference Documentation: z/OS MVS Diagnosis: Tools and Service Aids
Automation: n/a
Detecting Module: EDGRHCHK
Routing Code: n/a
Descriptor Code: n/a

EDGH1010I  Allocation of files failed Return code rc

Explanation: The DFSMSrmm check routine EDGRHCHK has attempted to use the TSO ALLOCATE command as part of check processing to prepare for running the AMASPZAP utility and one of the commands has failed with the return code listed in the message text.

System action: The system continues processing.
Operator response: none
System programmer response: Use the return code to determine the cause of the problem and correct the problem before retrying the check.
Problem determination: You can run the check with DEBUG=ON and VERBOSE=YES so that more diagnosis information is available via the REXXOUT data set.
DEBUG=ON enables Rexx Trace Intermediates, and VERBOSE=YES enables Rexx Trace Results. You must specify DEBUG=ON if you want to see the REXXOUT data set. The REXXOUT data set is named:

IBMRMM.EDGRHCHK.REXXOUT.E2

unless you have overridden the data set high level qualifier.

Source: DFSMSrmm
Reference Documentation: [z/OS MVS Diagnosis: Tools and Service Aids](https://www.ibm.com/support/knowledgecenter/SSECG2_2.4.0/com.ibm.zos.v2r4.mc00001.pdf)
Automation: n/a
Detecting Module: EDGRHCHK
Routing Code: n/a
Descriptor Code: n/a

**EDGH1011I** debug_verbose option is in use - See REXXOUT data set rexout

Explanation: The DFSMSrmm check routine EDGRHCHK has detected that one of:

DEBUG
DEBUG and VERBOSE

are set on requesting additional diagnostic information. Health checker has allocated a REXXOUT data set and the system and the check will write additional messages to the data set.

System action: The system continues processing.
Operator response: n/a

System programmer response: Use the results of the check and the contents of the REXXOUT data set to determine the cause of the problem and correct the problem before retrying the check.

You can use the SDSF CK command to view, manage, and display check information.

**Problem determination:** You can run the check with DEBUG=ON and VERBOSE=YES, so that more diagnosis information is available via the REXXOUT data set.

DEBUG=ON enables Rexx Trace Intermediates, and VERBOSE=YES enables Rexx Trace Results. You must specify DEBUG=ON if you want to see the REXXOUT data set. The REXXOUT data set is named:

IBMRMM.EDGRHCHK.REXXOUT.E2

unless you have overridden the data set high level qualifier.

Source: DFSMSrmm

**EDGH1012I** Wrong level of load_module found in LINKLIB data set linklib_dsname

Explanation: The DFSMSrmm check routine EDGRHCHK has attempted to verify whether the load module has been customized locally.

load_module is one of:
EDGH1013I

EDGMUPD - for health check ZOSMIGV1R10_RMM_VOL_REPLACE_LIMIT
the load module EDGMUPD does not contain the string
'LIMIT=' at the expected offset in the module.
EDGVREC - for health check ZOSMIGV1R11_RMM_DUPLICATE_GDG
the load module EDGVREC does not contain the external
symbol ZPSWITCH.

linklib_dsname is either SYS1.LINKLIB or the library you specified via PARM('LINKLIB(lnklib_dsname')).

System action: The system continues processing.

Operator response: n/a

System programmer response: The check ZOSMIGV1R10_RMM_VOL_REPLACE_LIMIT should only be run on a
release of z/OS lower than z/OS V1.10.
The check ZOSMIGV1R11_RMM_DUPLICATE_GDG should only be run on a release of z/OS lower than z/OS V1.11.

Problem determination: You can run the check with DEBUG=ON and VERBOSE=YES so that more diagnosis
information is available via the REXXOUT data set.
DEBUG=ON enables Rexx Trace Intermediates, and VERBOSE=YES enables Rexx Trace Results. You must specify
DEBUG=ON if you want to see the REXXOUT data set. The REXXOUT data set is named:

IBMRRM.EDGRHCHK.REXXOUT.E2

unless you have overridden the data set high level qualifier.

Descriptor Code: n/a

EDGH1017I  The following report lists the ISRSUPC OUTDD contents

Explanation: The DFSMSrmm check routine has found a possible migration action related to the use of stem special variables in Rexx execs. ISRSUPC is run to check your specified LIBRARY and the report is the contents of the ISRSUPC OUTDD file which lists the library members and the .0 stem variables used which must be updated to use the special key variables.

In the report the following information is displayed:

member name - lists the library member name affected
line number - lists the relative line number of the library member
String(s) found - lists the data contained in the line number

System action: The system continues processing.
Operator response: n/a
System programmer response: Review the OUTDD report and use the report to identify affected Rexx execs and the .0 stem variables which must replaced with the key stem variable.

You can use the SAMPLIB member EDGJSTM0 if you need to rerun ISRSUPC independently of the migration check.

EDGH8001E DFSMSrmm default changes in z/OS V1R10
Explaination: You do not currently have any REJECT commands in the DFSMSrmm parmlib member. When you start DFSMSrmm on z/OS V1R10 or later release and do not define any PRTITION commands in parmlib the new default is that non-system managed volumes which are not yet defined to DFSMSrmm are automatically defined by adding them to the DFSMSrmm Control Data Set.
System action: The system continues processing.
Operator response: Report this exception to the System Programmer.
System programmer response: Review the new PRTITION and OPENRULE commands that can be used in parmlib. Prior to z/OS V1R10 DFSMSrmm automatically defined only system managed volumes, leaving non-system managed volumes to be ignored. On z/OS V1R10 and later releases the DFSMSrmm default is now to automatically define all volumes by adding them to the DFSMSrmm Control Data Set. You can change the default processing by defining your own PRTITION command. The following command in parmlib causes DFSMSrmm processing to stay the same:

PRTITION TYPE(NORMM) NOSMT(IGNORE)

Problem determination: n/a
Source: DFSMSrmm
Reference Documentation: Look at the following manual for an explanation of using PRTITION and OPENRULE commands:

z/OS DFSMSrmm Implementation and Customization Guide

Automation: n/a
Detecting Module: EDGRHCHK
Routing Code: n/a
Descriptor Code: 3

EDGH8002E Migration conflict exists for DELETED tape data set support - number DELETED VRSes found
Explaination: One or more of the VRSes defined to DFSMSrmm use either DSNAME('DELETED') or JOBNAME(DELETED). When you start DFSMSrmm VRSEL processing on z/OS V1R10 or later release the new DELETED tape data set support uses these VRSes to control tape data sets which have been subject to the DELETE normal disposition processing. For example, a data set created by the following JCL:

//OUTPUT DD DISP=(DELETE),DSN=MY.TAPE.DATASET,UNIT=TAPE,
// LABEL=(1,SL)
will be matched by VRSEL processing to a VRS such as;

RMM AS DSNAME('DELETED') COUNT(2) DAYS
rather than;
RMM AS DSNAME('MY.TAPE.**') COUNT(4) CYCLES LOCATION(SAFE)

System action: The system continues processing.

Operator response: Report this exception to the System Programmer.

System programmer response: Review the report produced by this check for the VRSes which have been found. If you use JOBNAME(DELETED) in any data set name VRSes you must change the VRS to use JOBNAME(DELETED*) to avoid a conflict with the new 'DELETED' VRS support. If you use DSNAME(DELETED) in any data set name VRSes you must change the VRS to use DSNAME('DELETED*') to avoid a conflict with the new 'DELETED' VRS support.

Problem determination: n/a

Source: DFSMSrmm

Reference Documentation: Look at the following manual for an explanation of the new DELETED tape data set support:

z/OS DFSMSrmm Managing and Using Removable Media

Automation: n/a

Detecting Module: EDGRHCHK

Routing Code: n/a

Descriptor Code: 3

EDGH8003E Customization of volume replace limit found in EDGMUPD - the custom value is zap_limit - equivalent to MEDINF with REPLACE(PERM( limit))

Explanation: You have customized the tape volume replacement limit used by DFSMSrmm by updating the EDGMUPD load module.

Your modification will not fit on z/OS V1R10 or later releases. If you wish to use the same or similar customization on z/OS V1R10 or later releases you must exploit the MEDINF command in parmlib and use the REPLACE operand to specify your limit. When you start DFSMSrmm EXPROC processing on z/OS V1R10 or a later release the MEDINF REPLACE limits are used for all physical volumes, including those which are in scratch status.

Prior to z/OS V1R10 the DFSMSrmm limit was 1 permanent error. Using MEDINF this can be represented by the following using MEDINF with REPLACE:

MEDINF NAME(IBM) REPLACE(PERM(1))

You can simply substitute your limit value in the above PERM operand to get the same results using MEDINF.

System action: The system continues processing.

Operator response: Report this exception to the System Programmer.

System programmer response: Review your modification to EDGMUPD and the recommendation given above and in the referenced publication. Prepare the MEDINF commands you require for DFSMSrmm parmlib on z/OS V1R10 and later releases, and add them to the EDGRMMxx parmlib.

You will no longer be able to apply modifications to load module EDGMUPD.

Problem determination: n/a

Source: DFSMSrmm

Reference Documentation: Look at the following manual for an explanation of the new MEDINF REPLACE support:
EDGH8004E  EDGH8005E

EDGH8004E  Customization found for Duplicate GDG
- Use OPTION GDG(CYCLCLENY(GEN) DUP(COUNT) from z/OS V1.11

Explanation: The DFSMSrmm check routine EDGRHCHK has detected a usermod has been applied to EDGVREC load module which sets the ZPSWITCH to influence duplicate GDG handling. From z/OS V1.11, you must use the parmlib option OPTION GDG instead.

System action: The system continues processing.

Operator response: Report this exception to the System Programmer.

System programmer response: Review the new GDG operand of the OPTION command in parmlib. Determine the settings you require for z/OS V1.11 and later releases, and add it to the EDGRMMxx parmlib.

If the usermod is refitted and used on z/OS V1.11 or a later release, DFSMSrmm VRSEL processing issues message EDGX004I to the MESSAGE file warning that the usermod is no longer supported.

Problem determination: n/a

Source: DFSMSrmm

Reference Documentation: Look at the following book for an explanation of the new GDG parmlib option:

z/OS DFSMSrmm Implementation and Customization Guide

EDGH8005E  Unsupported customization found for EDGVREC

Explanation: The DFSMSrmm check routine EDGRHCHK has detected a user modification to ZPSWITCH in the EDGVREC load module. Review the report produced by this check to identify switches that have been customized. The description column of the report identifies an action for each unsupported switch.

The usermod should not be used on z/OS V1.11 and later releases.

System action: The system continues processing.

Operator response: Report this exception to the System Programmer.

System programmer response: Review the report produced by this check to identify the switches that have been customized. Each switch listed in the report includes an action you should take. In any case the user modification should not be used on z/OS V1.11 or later releases.

When the description includes 'No longer required' you should consider the suggested DFSMSrmm supported function.

When the description includes 'Unsupported value' there is and never was any function based on the switch.

Problem determination: n/a

Source: DFSMSrmm

System action: The system continues processing.

Operator response: Report this exception to the System Programmer.

System programmer response: Review the report produced by this check. For each case listed in the report you must ensure that the variable reference occurs only after the appropriate RMM TSO subcommand. If you find any incorrect variable references you must change the exec to use the key .0 stem variable for the subcommand results being processed. For example, a reference to edg@vol.0 after a SEARCHDATASET subcommand is no longer supported and must be changed to edg@dsn.0.

Problem determination: n/a

Source: DFSMSrmm

Reference Documentation: For more information about the stem variables used by DFSMSrmm subcommands:
- For releases up to z/OS V1R10, see DFSMSrmm User Guide and Reference.
- For z/OS V1R11 and after releases, see z/OS DFSMSrmm Managing and Using Removable Media.
- To read more about the ISRSUPC module used in the EDGJSTM0 sample JCL, see z/OS ISPF User’s Guide Vol II

Automation: n/a

Routing Code: n/a
Descriptor Code: 3
Chapter 4. ERB messages

ERB100I  

**sid: ACTIVE**

**Explanation:** When *sid* is RMF, RMF has been initialized and is ready to receive session commands. When *sid* is a session identifier, that session has started and data is being collected to form the first entry for the report or the system management facility (SMF) record.

**Source:** Resource Measurement Facility (RMF)

**System action:** Processing continues.

**Routing Code:** 2

**Descriptor Code:** 4,5

---

ERB101I  

**sid: REPORT AVAILABLE FOR PRINTING**

**Explanation:** A reporting interval for Monitor I session *sid* has ended. This message appears only when REPORT (REALTIME) is in effect.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF formats and writes a report to SYSOUT storage. The system prints the reports for this interval according to RMF priority and output class.

**Operator response:** Start a printer to the RMF SYSOUT class, if you want to print the report.

**Routing Code:** 2

**Descriptor Code:** 4

---

ERB102I  

**sid: TERMINATED**

**Explanation:** When *sid* is RMF, all RMF processing has ended. When *sid* is a session identifier, that session has ended.

**Source:** Resource Measurement Facility (RMF)

**System action:** The system continues processing.

**Routing Code:** 2

**Descriptor Code:** 4

---

ERB103I  

**sid: OPTIONS IN EFFECT option (value) source . . . option (value) source**

**Explanation:** This message appears in the message data set for the session and lists the options in effect for the RMF Postprocessor or for session *sid*. The options are listed, one per line, in the form option (value) source.

The source indicates where the option was specified and can be:

**Source**  

**COMMAND** On a START or MODIFY command.

**DEFAULT** In the program defaults.

**EXEC** On the EXEC statement in the RMF cataloged procedure.

**CHANGED** Changed by RMF.

**MEMBER** In a member of the RMF partitioned data set.

**SYSIN** On a control statement for the RMF Postprocessor.
ERB104I • ERB108I

Source: Resource Measurement Facility (RMF)
Routing Code: 2
Descriptor Code: 4,5

ERB104I  sid: MODIFIED
Explanation: In response to a MODIFY command, RMF has successfully modified the options in effect for session sid.
Source: Resource Measurement Facility (RMF)
System action: The session continues.
Routing Code: 2
Descriptor Code: 4,5

ERB105I  III: DATA GATHERER ACTIVE
Explanation: The RMF Monitor III data gatherer session was successfully initialized and is now gathering data.
Source: Resource Measurement Facility (RMF)
Operator response: You can now start Monitor III reporting sessions.
Routing Code: 2
Descriptor Code: 4

ERB106I  PPS: NO RECORDS FOUND FOR THE FOLLOWING OPTION(S) PPS: mainopt(subopt) or OVW, SMF RECORD 74 SUBTYPE subtype
Explanation: You requested a report using either a report main option or an OVW option control statement when the SMF data set did not contain the requested records.
Source: Resource Measurement Facility (RMF)
System action: No report or overview column is written. A message and the listing of options are issued.
Operator response: The SMF record data set must contain the appropriate data.
Routing Code: 2
Descriptor Code: 4,5

ERB107I  sid: RMF CANNOT BE STARTED DUE TO DYNAMIC CONFIGURATION CHANGES. TRY AGAIN LATER.
Explanation: A dynamic I/O configuration update occurred within the system while RMF tried to build its internal configuration tables.
Source: Resource Measurement Facility (RMF)
System action: RMF could not build its tables. RMF ends the session.
Operator response: Restart RMF after the dynamic I/O configuration change has been completed.
Routing Code: 2
Descriptor Code: 4

ERB108I  sid: RMF MONITOR I {DEVICE|I/O QUEUING} OPTION CANNOT BE STARTED.
Explanation: During the RMF session, one of the following events occurred:
• A dynamic I/O configuration update occurred within the system while RMF tried to build either its internal device data block structure or its I/O queuing data block structure.
A critical error occurred during a dynamic I/O configuration update when RMF Monitor I was started with either the device option or the I/O queuing option.

Source: Resource Measurement Facility (RMF)

System action: If RMF tried to build its internal data block structure, RMF couldn’t build the block structure. RMF attempts three retries but still cannot complete its processing. Monitor I starts without either the device option, or the I/O queuing option.

If a critical error occurred, RMF issues message ERB110I. RMF cannot use its internal configuration table and cannot start either the Monitor I device option or the I/O queuing option. Monitor I starts without either the device option or the I/O queuing option.

Operator response: If RMF tried to build its internal data block structure, modify RMF after the dynamic I/O configuration update has been completed to add either the desired Monitor I device option or I/O queuing option.

If a critical error occurred, respond to message ERB110I.

Routing Code: 2
Descriptor Code: 11

ERB109I sid: RMF MONITOR III DATA GATHERER CANNOT BE STARTED.

Explanation: A dynamic I/O configuration update occurred within the system while RMF tried to build its internal UCB address table.

Source: Resource Measurement Facility (RMF)

System action: RMF could not build its UCB address table. RMF attempts three retries but still cannot complete its processing. RMF ends the Monitor III data gatherer session.

Operator response: Start the RMF Monitor III data gatherer after the dynamic I/O configuration change is completed.

Routing Code: 2
Descriptor Code: 5,11

ERB110I CRITICAL ERROR DURING DYNAMIC CONFIGURATION CHANGE.

Explanation: An unresolvable error occurred during a RMF dynamic configuration change.

Source: Resource Measurement Facility (RMF)

System action: RMF is no longer able to use its internal configuration data. RMF continues processing, but Monitor I ends device and I/O queueing, and cannot be restarted without a complete RMF restart.

Operator response: Restart RMF to get full monitor capability back.

Routing Code: 2
Descriptor Code: 11

ERB111I RMF IS NOT ENABLED TO RUN ON THIS SYSTEM.

Explanation: The request to run RMF has been denied by MVS, because the optional element RMF is not licensed or enabled on this system.

Source: Resource Measurement Facility (RMF)

System action: RMF discontinues its processing, and terminates immediately.

User response: Have your system administrator check whether you have a license for RMF, and if so, have him enable the product.

Routing Code: 2
Descriptor Code: 4
ERB112I  SERVICE name FAILED WITH RETURN CODE return-code
Explanation: RMF invoked the IFAEDREG or EFADDRG service for registration or deregistration. The service returned with a code greater than 4.
Source: Resource Measurement Facility (RMF)
System action: RMF discontinues its processing, and terminates immediately.
User response: Refer to z/OS MVS Programming: Product Registration.
Routing Code: 2
Descriptor Code: 4

ERB113I  RMF: CANNOT BE STARTED FROM UNAUTHORIZED LIBRARY.
Explanation: RMF has detected that it has been started from a library that is not APF-authorized.
Source: Resource Measurement Facility (RMF)
System action: The RMF control program terminates immediately.
Operator response: Inform your system programmer.
System programmer response: Make sure that RMF is started from a library that is APF-authorized.
Routing Code: 2
Descriptor Code: 4

ERB114I  RMF: CANNOT LOAD LPA MODULES.
Explanation: RMF has detected that it cannot find required LPA modules. The RMF LPA modules reside in SYS1.SERBLPA. Possible causes for this error are as follows:
- SYS1.SERBLPA is not in the LPALST concatenation.
- LPALIB is defined as STEPLIB.
System action: The RMF control program terminates immediately.
Operator response: Inform the system programmer.
System programmer response: Make sure that library SYS1.SERBLPA is in the LPALST concatenation. This can be achieved by adding the library to the active LPALSTxx PARMLIB member (for details see the z/OS MVS Initialization and Tuning Reference) and RE-IPL.
To add the modules in SYS1.SERBLPA dynamically to the LPA without an IPL you may use the SETPROG or SET PROG=xx operator commands (see z/OS MVS System Commands).
Source: Resource Measurement Facility (RMF)
Routing Code: 2
Descriptor Code: 4

ERB115I  START RMFGAT MONITOR III SESSION III
Explanation: In response to a MODIFY command, RMF control has invoked the cataloged procedure RMFGAT to start the RMF Monitor III data gatherer.
Source: Resource Measurement Facility (RMF)
System action: Started task RMFGAT is being initialized in a separate address space.
ERB120I  CS: RMF Client/Server Activation
Explanation: The RMFCSC task has been started successfully and is prompting for commands:

Enter RMFCSC commands:
- F RMFCSC,LU:lu_name
- F RMFCSC,IP:ip_address
- F RMFCSC,EX:tso_command
- P RMFCSC

Source: Resource Measurement Facility (RMF)
System action: Processing continues.
Operator response: None.

ERB121I  CS: Connecting to destination
Explanation: RMFCSC is trying to connect to the specified destination.
Source: Resource Measurement Facility (RMF)
Operator response: None.

ERB122I  CS: Executing command command
Explanation: RMFCSC is executing the specified command.
Source: Resource Measurement Facility (RMF)
Operator response: None.

ERB123I  CS: Invalid command or parameter
Explanation: RMFCSC has recognized an invalid MODIFY command.
Source: Resource Measurement Facility (RMF)
Operator response: Specify a correct command.

ERB124I  CS: Terminating
Explanation: RMFCSC has been stopped successfully.
Source: Resource Measurement Facility (RMF)
Operator response: None.

ERB125I  CS: Internal error
Explanation: RMFCSC has detected a communication error during command input processing.
Source: Resource Measurement Facility (RMF)
System action: None
Operator response: Reissue the RMFCSC command. If the error persists, inform the system programmer.
System programmer response: Search problem reporting data base for a fix for the problem. If no fix exists, report the problem to the IBM Support Center.

ERB126I  CS: Function Return Code: return-code
Explanation: RMFCSC has scheduled a CLIST, REXX procedure or command-processor routine. The function has finished with the specified return code.
Source: Resource Measurement Facility (RMF)
Operator response: If the CLIST, procedure or command was part of a MODIFY command, reissue a correct
### ERB127I  •  ERB142I

MODIFY command. Otherwise, inform the system programmer.

**System programmer response:** For return code 985, ensure a valid APPC or TCP/IP connection to the workstation, otherwise check whether the RMFCSC procedures have been modified improperly.

</table>
ERB143I  RMF: DISTRIBUTED DATA SERVER START RETRY LIMIT EXCEEDED
Explanation: The START command for the distributed data server (DDS) returned with permanent errors.
System action: RMF deactivates the management of the DDS address space.
Operator response: You can take either of the following actions:
• Continue the session with the current options.
• Re-activate the DDS options with the MODIFY command.
Routing Code: 2
Descriptor Code: 4

ERB144I  RMF: NODDS OPTION ACCEPTED
Explanation: RMF accepted the NODDS option.
System action: The distributed data server is not managed by RMF.
Routing Code: 2
Descriptor Code: 4

ERB145I  RMF: STOPPING DISTRIBUTED DATA SERVER
Explanation: RMF issued the STOP command for the distributed data server.
System action: The distributed data server address space is terminated.
Routing Code: 2
Descriptor Code: 4

ERB146I  RMF: DISTRIBUTED DATA SERVER STOP COMMAND FAILURE
Explanation: The STOP command for the distributed data server returned with one or more errors.
System action: RMF performs up to five retries.
Operator response: Contact your system programmer.
System programmer response: Analyze the return code rc from the MGCRE macro.
Routing Code: 2
Descriptor Code: 4

ERB147I  RMF: DISTRIBUTED DATA SERVER STOP LIMIT EXCEEDED
Explanation: The STOP command for the distributed data server returns with permanent errors.
System action: RMF deactivates the management of the distributed data server address space.
Operator response: You can take either of the following actions:
• Continue the session with the current options.
• Re-activate the DDS options with the MODIFY command.
Routing Code: 2
Descriptor Code: 4

ERB200I  sid: ALREADY ACTIVE
Explanation: If the sid is the RMF, then the RMF is already active.
If sid is a session identifier, the START session command specified session identifier sid, but session sid was already active.
Source: Resource Measurement Facility (RMF)

System action: No action taken.

Operator response: If the \textit{sid} is the RMF, stop the currently active RMF task, and reissue the START command.

When \textit{sid} is a session identifier, do one of the following:

\begin{itemize}
    \item Stop the currently active session, and reissue the START command. Issue a MODIFY session command to modify the options of the currently active session.
    \item Start a new session by issuing a START session command with a unique session identifier.
\end{itemize}

Routing Code: 2

Descriptor Code: 4,5

\textbf{ERB201I} \textit{sid}: TASK REINSTATED \{\textit{Ucde} 1 \textit{Scde} 1 DUE TO DYNAMIC I/O RECONFIGURATION\}.

Explanation: RMF, or a system component providing a service for RMF, detected a disruption in operation. Either there was an error in RMF or in RMF session \textit{sid}, or dynamic I/O reconfiguration occurred. One of the following codes is issued with the message:

\begin{itemize}
    \item \textit{Ucde} - user completion code
    \item \textit{Scde} - system completion code
    \item the text DUE TO DYNAMIC I/O RECONFIGURATION
\end{itemize}

The text DUE TO DYNAMIC I/O RECONFIGURATION is only issued if MVS is running second level under VM.

Source: Resource Measurement Facility (RMF)

System action: If the \textit{Ucde} or \textit{Scde} is issued, RMF recovery routines intercept the resulting abnormal ending and reinstate the task. However, data being collected for the current reporting interval is lost; RMF starts data collection for the new interval. If the text DUE TO DYNAMIC I/O RECONFIGURATION is issued, RMF Monitor I finishes the data collection for the interval, restarts the data collection after the point when the reconfiguration completed, and continues its normal processing.

Operator response: None.

System programmer response: If the \textit{Scde} is X'80A', correct the error by increasing the value of the \texttt{REGION} parameter on the RMF PROC statement.

If dynamic I/O reconfiguration had occurred, Monitor III might lose device (that is, DASD or tape) data. Restart Monitor III to obtain all data.

Routing Code: 2

Descriptor Code: 4

\textbf{ERB202I} \textit{sid}: NO RMF MEASUREMENTS SELECTED

Explanation: The options for session \textit{sid} do not specify any measurements to be made, reported, or recorded by the RMF session.

Source: Resource Measurement Facility (RMF)

System action: RMF ends the session.

Operator response: Restart the session, specifying options for at least one RMF measurement applicable to the type of session.

Routing Code: 2

Descriptor Code: 4

\textbf{ERB203I} \textit{sid}: INVALID MENU, NO USABLE ENTRIES FOUND

Explanation: During Monitor II display session \textit{sid}, RMF could not process the menu in order to initialize any measurements.
For example, RMF could find the menu unusable if an attempt to modify it caused an incorrect field length for one
or more of the entries.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF ends the session.

**Operator response:** Ask the system programmer to correct any errors in the menu control section, ERBFMENU.
Then retry the display session.

**System programmer response:** Correct any errors in the menu control section, ERBFMENU.

**Routing Code:** 2

**Descriptor Code:** 4

---

**ERB204I**  RMF NOT DESIGNED FOR THIS DEVICE - PROCEED AT YOUR OWN RISK

**Explanation:** An RMFMON command was issued from a terminal that is not an RMF-supported display station.
Because RMF output is formatted specifically for these devices, the output will be jumbled and probably not useful
on any other terminal device.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF continues the session.

**Operator response:** End the session. To do this at a display station, use the RMF stop display command (Z) or the
TSO attention function. At a non-display station, enter 'INPUT=Z' or use the TSO attention function. Restart the
session at an RMF-supported display station.

---

**ERB205I**  sid: CANNOT BE MODIFIED, COMMAND REJECTED

**Explanation:** A MODIFY session command was issued for session *sid*, but that session is a Monitor II or Monitor III
local 3270 display session, which cannot be modified by a MODIFY session command.

**Source:** Resource Measurement Facility (RMF)

**System action:** No action taken.

**Operator response:** Reissue the MODIFY session command with the identifier of a session that can be modified.

**Routing Code:** 2

**Descriptor Code:** 4,5

---

**ERB206I**  sid: INVALID SESSION COMMAND, *cm*

**Explanation:** For session *sid*, session command *cm* was issued, but *cm* is not a valid session command.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF rejects the command but continues processing all active sessions.

**Operator response:** Enter one of the following: START or S, DISPLAY or D, MODIFY or F, or STOP or P

**Routing Code:** 2

**Descriptor Code:** 4,5

---

**ERB207I**  COMMAND REJECTED

**Explanation:** A command contained an incorrect session identifier.

**Source:** Resource Measurement Facility (RMF)

**System action:** No action taken.

**Operator response:** Reissue the command with a valid session identifier. You can use the DISPLAY session
command to list the identifiers of all active sessions.

**Routing Code:** 2
ERB208I • ERB216I

Descriptor Code: 4,5

---

**ERB208I**  
*sid*: NO PARMS SPECIFIED, MODIFY COMMAND REJECTED

**Explanation:** A MODIFY session command had no options; therefore, RMF did not modify any options for currently active session *sid*.

**Source:** Resource Measurement Facility (RMF)

**System action:** No action taken.

**Operator response:** Reissue the MODIFY session command, specifying the options that you want to modify.

**Routing Code:** 2

**Descriptor Code:** 4,5

---

**ERB210I**  
*sid*: INVALID COMMAND SYNTAX

**Explanation:** A valid RMF session command for session *sid* contained incorrect syntax.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF does not process the command but continues processing all active sessions.

**Operator response:** Correct the syntax of the command.

**Routing Code:** 2

**Descriptor Code:** 4,5

---

**ERB211I**  
RMF: ACTIVE SESSION - *sid*,*sid*,...

**Explanation:** In response to a DISPLAY ACTIVE command, RMF lists all currently active sessions as *sid* in the message text.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF continues processing.

**Routing Code:** 2

**Descriptor Code:** 4,5

---

**ERB212I**  
*sid*: NO ACTIVE SESSIONS

**Explanation:** In response to a DISPLAY ACTIVE command, RMF issues this message to indicate that there are no currently active sessions.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF continues processing.

**Routing Code:** 2

**Descriptor Code:** 4,5

---

**ERB216I**  
ERROR ON FULL SCREEN TPUT - CHECK OWAITHI VALUE

**Explanation:** The TSO TPUT routine issued a return code of 16; this code indicates that the data could not be accommodated with the current values specified for the BUFFERS, BUFSIZE, and OWAITHI parameters. These values are specified in the SYS1.PARMLIB member, IKJPRMxx, used to initialize TSO under TCAM.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF ends the session. The TSO session continues.

**System programmer response:** Reinitialize TSO under TCAM with a SYS1.PARMLIB member designed to accommodate full-screen TPUTs for the IBM 3270 Display Station or the IBM 3277 Display Station Model 2.

**Routing Code:** 2

452  
z/OS V1R13.0 MVS System Messages, Vol 5 (EDG-GFS)
ERB217I  YOU ARE NOT AUTHORIZED TO USE RMFMON

Explanation: Your installation authorization exit routine, ERBTSOCK for RMF Monitor II, has determined that a user who is trying to start an RMF session entered a userid that is not authorized under TSO. The unauthorized userid appeared in the RMFMON command for Monitor II.

Source:  Resource Measurement Facility (RMF)

System action: RMF ends the session. The TSO session continues.

System programmer response: If you are authorized to use RMF Monitor II, enter your userid correctly. If not, ask your installation for authorization to use RMF Monitor II, then reissue the RMFMON command.

Routing Code:  2
Descriptor Code:  4

ERB218I  SESSION CREATE FAILED

Explanation: In response to an RMFMON or RMFWDM command, RMF attempted to initialize a TSO display session. The RMF Monitor II or Monitor III session create function, ERBSESSC, returned a nonzero return code to the TSO RMF interface module.

Source:  Resource Measurement Facility (RMF)

System action: RMF ends the session under TSO. The TSO session continues.

Operator response: Retry the RMFMON or RMFWDM command. If the problem recurs, notify the system programmer.

Routing Code:  2
Descriptor Code:  4

ERB219I  sid: UNRECOGNIZABLE [OPTION | SUBOPTION] 'keyword' IN 'source' INPUT

Explanation: During input merge for the RMF Postprocessor or during session sid, RMF detected an incorrect option or suboption keyword. The source of the incorrect keyword is:

SourceWhere the keyword was specified
OPERATOR In an operator command.
PARM In the PARM field of an EXEC statement in the RMF cataloged procedure.
LIBRARY nn In library member ERBRMFnn.
REPLY In the operator reply to message ERB306D.
SYSIN In an RMF Postprocessor control statement.

Source:  Resource Measurement Facility (RMF)

System action: When the error occurs during a session, RMF asks for operator intervention: RMF issues message ERB305I, listing the current session options, followed by message ERB306D, to which the operator replies by supplying new options or entering ‘GO’. RMF continues other processing.

When the error occurs during the Postprocessor session, RMF substitutes the incorrect value with the default value, if one exists.

Operator response: Examine the options listed following message ERB305I, and respond to message ERB306D.

System programmer response: If the incorrect option is in the EXEC statement, in the library data source, or in a Postprocessor control statement, correct the statement or library member.

Routing Code:  2
Descriptor Code:  4,5
**ERB220I • ERB222I**

---

**ERB220I**  
*sid: OPTION 'option' NOT VALID ON (START | STOP | MODIFY) COMMAND*

**Explanation:** During session *sid*, the indicated command contained the option named in the message; this option is not valid for that command.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF asks for operator intervention: RMF issues message ERB305I, listing the current session options, followed by message ERB306D, to which the operator replies by supplying new options or entering ‘GO’. RMF continues other processing.

**Operator response:** Examine the options listed following message ERB305I, and respond to message ERB306D.

**Routing Code:** 2

**Descriptor Code:** 4,5

---

**ERB222I**  
*sid: OPTION 'option' FOUND IN 'source' INPUT IS IGNORED*

**Explanation:** During input merge for RMF session *sid*, the option named in the message violated an RMF restriction. For example, the MEMBER option cannot appear in a library member. The source of the option in error was:

**Where the option was specified**
- **OPERATOR** In an operator command.
- **PARM** In the PARM field on the EXEC statement in the RMF cataloged procedure.
- **LIBRARY nn** In library member ERBRMFnn.
- **REPLY** In the operator reply to message ERB306D.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF asks the operator for intervention: RMF issues message ERB305I, listing the current session options, followed by message ERB306D, to which the operator replies by supplying new options or entering ‘GO’. RMF continues other processing.

**Operator response:** Examine the options listed following message ERB305I, and respond to message ERB306D.

**System programmer response:** If the incorrect option was specified in the EXEC statement or in the library data source, correct it.

**Routing Code:** 2

**Descriptor Code:** 4,5

---

**ERB222I**  
*sid: MEMBER ID LIMIT EXCEEDED, MEMBER 'nn' IN (OPERATOR | PARM) INPUT IS IGNORED*

**Explanation:** During input merge for session *sid*, more than five valid members were specified as the library data source. As a result, RMF ignores member ERBRMFnn and merges the session options from the other sources.

The source of the error is indicated in the message as follows:
- **OPERATOR** for an operator command
- **PARM** for the PARM field on the EXEC statement in the RMF cataloged procedure

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF asks the operator for intervention: RMF issues message ERB305I, listing the current session options, followed by message ERB306D. RMF continues other processing.

**Operator response:** Examine the options listed following message ERB305I, and respond to message ERB306D by supplying new options or entering ‘GO’.

**System programmer response:** If the error occurred in the EXEC statement, correct it.

**Routing Code:** 2

**Descriptor Code:** 4,5
ERB223I  

**sid: UNEXPECTED END OF TEXT IN 'source' INPUT**

**Explanation:** During input merge for the RMF Postprocessor or for session sid, RMF encountered the end of text in an input source when it expected to find additional required information. The source of the error was:

**Source** Where the error was encountered
- **OPERATOR** In an operator command.
- **PARM** In the PARM field of an EXEC statement in the RMF cataloged procedure.
- **LIBRARY nn** In library member ERBRMFnn.
- **REPLY** In the operator reply to message ERB306D.
- **SYSIN** In an RMF Postprocessor control statement.

**Source:** Resource Measurement Facility (RMF)

**System action:** When the error occurs during a session, RMF asks the operator for intervention: RMF issues message ERB305I, listing the current session options, followed by message ERB306D. RMF continues other processing.

When the error occurs during the Postprocessor session, RMF substitutes the incorrect option with the default value, if one exists.

**Operator response:** Examine the options listed following message ERB305I, and respond to message ERB306D by supplying new options or entering 'GO'.

**System programmer response:** If the error occurred in the EXEC statement, the library data source, or a Postprocessor control statement, correct it.

**Routing Code:** 2

**Descriptor Code:** 4,5

---

ERB224I  

**sid: 'input' SKIPPED DUE TO PREVIOUS ERROR**

**Explanation:** During input merge for the RMF Postprocessor, for the Monitor III data reporter, or for session sid, RMF detected an error, such as a syntax error. RMF skipped the incorrect input, which is written in the message, then attempted to validate the remaining input.

**Source:** Resource Measurement Facility (RMF)

**System action:** When the error occurs during a session, RMF asks the operator for intervention: RMF issues message ERB305I, listing the current session options, followed by message ERB306D. RMF continues other processing.

When the error occurs during the Postprocessor session or the Monitor III data reporter, RMF substitutes the incorrect option with the default value, if one exists.

**Operator response:** Examine the options listed following message ERB305I and the skipped input to determine which options are missing. Respond to message ERB306D with the missing options or by entering 'GO'.

**System programmer response:** When the error occurred during the Postprocessor or the Monitor III data reporter, correct the control statement that caused the error before using the Postprocessor or data reporter again.

**Routing Code:** 2

**Descriptor Code:** 4,5

---

ERB225I  

**sid: INVALID option VALUE 'yyyy' IN 'source' INPUT**

**Explanation:** During input merge for the RMF Postprocessor or for session sid, RMF detected an incorrect value, yyyy, for the named option. The source of the incorrect value is:

**Source** Where the option was specified
- **OPERATOR** In an operator command.
- **PARM** In the PARM field of an EXEC statement in the RMF cataloged procedure.
**LIBRARY** nn In library member ERBRMFnn.
**REPLY** In the operator reply to message ERB306D.
**SYSIN** In an RMF Postprocessor control statement.

**Source:** Resource Measurement Facility (RMF)

**System action:** When the error occurs during a Monitor I or II background session or a Monitor III data gatherer session, RMF asks the operator for intervention: RMF issues message ERB305I, listing the current session options, followed by message ERB306D. RMF continues other processing.

When the error occurs during the Monitor III data reporter or the Postprocessor, RMF ignores the incorrect option and substitutes the default value, if one exists. Also, for the data reporter, RMF displays the OPTIONs screen on the user's terminal.

**Operator response:** Examine the options listed following message ERB305I, and respond to message ERB306D by supplying new options or entering 'GO'.

**System programmer response:** If the incorrect value occurred in the EXEC statement, the library data source, or a Postprocessor control statement, correct it.

**Routing Code:** 2
**Descriptor Code:** 4,5

---

**ERB226I  sid: OPEN FAILED FOR MESSAGE DATASET**

**Explanation:** For Monitor I session *sid* or Monitor II background session *sid*, RMF failed to open an output message data set.

For the Postprocessor, RMF failed to open the output message data set, MFPMSGDS.

**Source:** Resource Measurement Facility (RMF)

**System action:** If *sid* identifies a session, RMF ends that session but continues processing all other active sessions. If *sid* identifies the Postprocessor, RMF ends the Postprocessor job.

**Operator response:** Try to start the session or the Postprocessor again. If the problem persists, notify the system programmer.

**Routing Code:** 2
**Descriptor Code:** 4,5

---

**ERB227I  sid: REJECTED, MAX SESSIONS ALREADY ACTIVE**

**Explanation:** A START command was issued to start non-TSO Monitor II session *sid* when the maximum number, 32, of Monitor II sessions were already active.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF does not start session *sid*, but continues processing all other active sessions.

**Operator response:** Either stop one of the currently active sessions or wait until an active session stops. Then reissue the START command for session *sid*.

**Routing Code:** 2
**Descriptor Code:** 4,5

---

**ERB228I  MONITOR II LOCAL DISPLAY SESSION NOT SUPPORTED**

**Explanation:** You tried to start a Monitor II local 3270 display session, but support has been dropped with z/OS V1R2 RMF.

**Source:** Resource Measurement Facility (RMF)

**System action:** None.

**Operator response:** You can have access to Monitor II information without an active TSO/TCAS subsystem by
means of the RMF Client/Server Enabling (RMFCS) feature.

**System programmer response:** None.

**Routing Code:** 2

**Descriptor Code:** 4

---

**ERB229I**  
**sid:** INITIALIZATION FAILED

**Explanation:** RMF could not initialize session *sid*.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF ends the session but continues processing all other active sessions.

**Operator response:** If RMF issues another message, such as ERB230I, describing the reason for the failure, respond to that message. If RMF does not issue another message, try to restart the session. If the problem persists, notify the system programmer.

**Routing Code:** 2

**Descriptor Code:** 4, 5

---

**ERB230I**  
**sid:** TERMINATED ABNORMALLY *(Scde | Ucde)*

**Explanation:** RMF detected that the system has abnormally ended session *sid*. *Ucde* is the user completion code, and *Scde* is the system completion code.

**Source:** Resource Measurement Facility (RMF)

**System action:** If the RMF cataloged procedure included a SYSABEND or SYSUDUMP DD statement, the system writes a storage dump for the failing session. RMF continues processing all other active sessions.

**Operator response:** None.

**System programmer response:** Examine the dump and respond to the completion code.

**Routing Code:** 2

**Descriptor Code:** 4, 5

---

**ERB231I**  
**sid:** NOT ACTIVE

**Explanation:** A MODIFY, STOP, or DISPLAY command specified session *sid*, but no currently active session is identified as *sid*.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF does not process the command, but continues processing all active sessions.

**Operator response:** Enter the DISPLAY ACTIVE session command to determine the correct session identifier, and reissue the command. The command is described in the [z/OS RMF User's Guide](https://www.ibm.com/docs/en/z-os-rmf-user-guide).

**Routing Code:** 2

**Descriptor Code:** 4, 5

---

**ERB232I**  
**sid:** UNABLE TO ALLOCATE [HARDCOPY | SYS1.PARMLIB]. RETURN CODE `return-code`, ERROR CODE `cccc`, INFORMATION CODE `iiii`

**Explanation:** During session *sid*, RMF failed to allocate dynamically either:

- An output data set needed for hardcopy, if *sid* is a Monitor II or Monitor III display session, or for a printed report, if *sid* is a background session.
- SYS1.PARMLIB for option processing

**Source:** Resource Measurement Facility (RMF)

**System action:** For a display session, RMF continues the session but produces no hardcopy output.
For a background session, if the RECORD option is in effect, RMF continues measurement but produces no printed reports. If the RECORD option is not in effect for a background session, RMF ends the specific measurement but continues the session.

If SYS1.PARMLIB could not be allocated, RMF continues the session using the default values for the OPTIONs.

**Operator response:** Continue the session, or end it and correct the situation described by the return, error, and information codes. See the [z/OS MVS Programming: Authorized Assembler Services Guide](https://www.ibm.com/docs/en/mvs?topic=assembler) for further information.

**Routing Code:** 2

**Descriptor Code:** 4,5

---

ERB233I • sid: UNABLE TO OPEN HARDCOPY

**Explanation:** During session *sid*, RMF failed to open an output data set. The data set was needed for hardcopy, if *sid* is a Monitor II or Monitor III display session; or for a printed report, if *sid* is a background session.

**Source:** Resource Measurement Facility (RMF)

**System action:** For a display session, RMF continues the session but produces no printable output.

For a background session, if the RECORD option is in effect, RMF continues measurement but produces no printed reports. If the RECORD option is not in effect for a background session, RMF ends the specific measurement but continues the session.

**Routing Code:** 2

**Descriptor Code:** 4

---

ERB234I • sid: module TERMINATED ABNORMALLY Scde

**Explanation:** During the RMF Postprocessor session or during session *sid*, an error caused an abnormal ending; *Scde* is the system completion code. The message names the RMF module most recently in control.

**Source:** Resource Measurement Facility (RMF)

**System action:** If the error occurred after a Monitor II session had been successfully initialized, RMF issues message ERB235A to let the operator decide whether or not to continue the session. When RMF cannot issue ERB235A, RMF ends the session. In either case, RMF continues processing all other active sessions.

If the error occurred during the RMF Postprocessor session, RMF stops generating the Monitor II session interval report that was in process. If other reports were requested, the Postprocessor continues with them.

If the error occurred during a Monitor III display session, RMF either displays a panel allowing the operator to request a dump, or issues one of the following messages:

**ERB565I**

The Monitor III data gatherer was ended. RMF produces no more reports but continues the session.

**ERB567I**

The Monitor III data reporter detected an I/O error while accessing the SYSOUT data set. RMF produces no more printable output but continues the session.

**Operator response:** Respond to the system completion code and to message ERB235A, if issued.

**Routing Code:** 2

**Descriptor Code:** 4

---

ERB235A • sid: TO CONTINUE RMF SESSION, ENTER ANY RMF COMMAND. TO TERMINATE THE SESSION AND OBTAIN A DUMP, ENTER ‘STOP’

**Explanation:** An abnormal ending, described in a previous message, has occurred during session *sid*. The operator can continue the session without obtaining diagnostic information or end the session and obtain diagnostic information.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF waits for the operator's response.
Operator response: To continue the session, enter any explicit RMF display command. However, do not press the ENTER key to repeat the previous command; repetition will probably cause the problem to recur.

To end the session and obtain a dump, enter ‘STOP’.

Routing Code: 2
Descriptor Code: 4

---

**ERB236I**  
*sid:* TERMINATED ABNORMALLY  *Ucde*

Explanation: An abnormal ending occurred during session *sid*. *Ucde* is the user completion code.

Source: Resource Measurement Facility (RMF)

System action: If the error occurred after the session had been successfully initialized, RMF issues message ERB235A to let the operator decide whether or not to continue the session. When RMF cannot issue ERB235A, RMF ends the session. In either case, RMF continues processing all other active sessions. If the error occurred during a Monitor III display session, RMF displays a panel allowing the operator to decide whether or not to obtain a dump.

Operator response: Respond to the user completion code and to message ERB235A, if issued.

Routing Code: 2
Descriptor Code: 4

---

**ERB237I**  
*sid:* ABEND U1403 FROM ERBRMFPL - INPUT ERROR

Explanation: During the RMF Postprocessor session or Monitor II session *sid*, RMF’s putline routine, module ERBRMFPL, was passed an incorrect input parameter. The text length was 0 or greater than 79, or the data type contained a value other than HD or DT. RMF may be running with a back level or incorrectly modified copy of module ERBFMENU or ERBBMENU.

Source: Resource Measurement Facility (RMF)

System action: If the error occurred after the session had been successfully initialized, RMF issues message ERB235A to let the operator decide whether or not to continue the session. When RMF cannot issue ERB235A, RMF ends the session. In either case, RMF continues processing all other active sessions.

If the error occurred during the Postprocessor session, RMF stops printing the Monitor II session report that was in process. If other reports were requested, the Postprocessor continues with them.

The system writes an ABEND dump for the failing job step.

Operator response: If an installation-supplied reporter module caused the error, notify the responsible programmer. If an IBM-supplied module caused the error, respond to user completion code 1403 and to message ERB235A, if issued.

System programmer response: If ERBFMENU or ERBBMENU has been modified, the modification must be done again to either correct the error or to use a version of the module that was compiled with the current level of the SMF record mapping macros.

Search problem reporting data bases for a fix for the problem. If no fix exists, report the problem to the IBM Support Center.

Routing Code: 2
Descriptor Code: 4

ERB245I  •  ERB248I

---

**ERB245I**  *sid: INVALID RETURN CODE FROM USER EXIT - USER EXIT IGNORED*

**Explanation:** During the RMF Postprocessor session with the EXITS option in effect, the Monitor I session user exit, ERBMFPUS, passed a return code other than 0, 4, or 8 to the Postprocessor.

**Source:** Resource Measurement Facility (RMF)

**System action:** The Postprocessor continues running but will no longer invoke the user exit.

**System programmer response:** Retest the user exit routine to make sure that it returns a valid code to the Postprocessor.

**Routing Code:** 2  
**Descriptor Code:** 4

---

**ERB246I**  *Control statements for PLOT reporting are ignored*

**Explanation:** With z/OS V1R11 RMF, Postprocessor PLOT reports are no longer available. The corresponding control statements PLOTS, PTOD, MAXPLEN, and PINTV are ignored.

**Source:** Resource Measurement Facility (RMF)

**System action:** The Postprocessor continues with the next control statement.

**System programmer response:** Examine the dump, and respond to the completion code.

**User response:** None.

**Routing Code:** 2  
**Descriptor Code:** 4

---

**ERB247I**  *sid: INTERVAL REPORT TERMINATED DUE TO UNRECOVERABLE ERROR - ABEND {Scde | Ucde}*

**Explanation:** During the RMF Postprocessor session, one of the following occurred:

- An unrecoverable error occurred during initialization for Monitor I session interval reporting.
- All requested Monitor I session interval reports ended abnormally. Here, RMF issues messages ERB401I and ERB402I before this message.

RMF may issue a user completion code *Ucde*; *Scde* is the system completion code.

**Source:** Resource Measurement Facility (RMF)

**System action:** For either error, the Postprocessor stops generating interval reports. If a summary report or plot report is requested, the Postprocessor continues with them.

**System programmer response:** Examine the dump, and respond to the completion code.

**Routing Code:** 2  
**Descriptor Code:** 4

---

**ERB248I**  *sid: DURATION REPORT TERMINATED TO UNRECOVERABLE ERROR - ABEND {Scde | Ucde}*

**Explanation:** An error occurred while the RMF Postprocessor was formatting and writing a duration report. The error was not associated with a particular report.

RMF may issue a user completion code *Ucde*; *Scde* is the system completion code. RMF may also issue messages ERB401I and ERB402I before this message.

**Source:** Resource Measurement Facility (RMF)

**System action:** Because the error was not associated with a particular report, RMF stops formatting and writing all duration reports for this Postprocessor session. If other reports were requested, the Postprocessor continues with them.

**System programmer response:** Examine the dump, and respond to the completion code.
ERB249I  PLOTS REPORT TERMINATED DUE TO UNRECOVERABLE ERROR - ABEND {Sde \ Ucde}

Explanation: An error occurred while the RMF Postprocessor was generating plot reports. The error was not associated with a particular report.

RMF may issue a user completion code Ucde; Sde is the system completion code.

Source: Resource Measurement Facility (RMF)

System action: Because the error was not associated with a particular report, RMF stops formatting and writing all plot reports for this Postprocessor session. If other reports were requested, the Postprocessor continues with them.

System programmer response: Examine the dump, and respond to the completion code.

Routing Code: 2
Descriptor Code: 4

ERB250I  PPS: SMF RECORD CONVERTER ERBPPCON TERMINATED ABNORMALLY, Sccc

Explanation: The RMF Postprocessor system management facilities (SMF) record converter, ERBPPCON, ended because of an error. ERBPPCON provides compatibility to the report-writing routines for SMF records created prior to RMF version 3.1.

In the message text, Sccc is the system completion code.

Source: Resource Measurement Facility (RMF)

System action: The Postprocessor controller, ERBRMFPP, skips any SMF records created by previous versions of RMF. The RMF Postprocessor continues processing the SMF records created by RMF version 3. The data from the skipped records is not included in the reports produced by the Postprocessor.

System programmer response: Respond according to the action indicated in z/OS MVS System Codes for the given system completion code.

Routing Code: 2
Descriptor Code: 4

ERB251I  SMF RECORD tt, SUBTYPE ss, INCOMPLETE.

Explanation: The Postprocessor could not reassemble an SMF record of type tt and subtype ss because that record is incomplete. Originally, the record was larger than 32K, so it was broken into several smaller records. When attempting to reassemble the record, the Postprocessor could not find one or more of the smaller SMF records in the SMF data set.

Source: Resource Measurement Facility (RMF)

System action: The smaller SMF records that belong to the incomplete SMF record are skipped.

System programmer response: Check the SMF input data set.

Routing Code: 2
Descriptor Code: 4

ERB252I  (CYCLE | CONFIGURATION | PROCESSOR TYPE) CHANGED DURING date1 time1
         DURATION INTERVAL. number type [INTERVALS | RECORDS] SKIPPED STARTING date2 time2

Explanation: While processing a duration report, the RMF Postprocessor found a change in either the cycle length, the configuration, or the processor type for the session that produced the system management facilities (SMF) records.

The meaning of the fields in the message text are:
The date and starting time of the duration interval during which either the cycle, the configuration, or the processor type change occurred.

The number of RMF measurement intervals that were skipped because of either the different cycle length, the configuration change, or the processor type change.

The date and starting time of the first RMF measurement interval that was skipped.

Note: RMF takes date1 and time1 from the first input record for the duration interval during which either the cycle, the configuration, or the processor type changed. Therefore, date1 and time1 may be later than the start date and time specified on the Postprocessor control statements.

Source: Resource Measurement Facility (RMF)

System action: If the cycle length changed, the Postprocessor continues processing the duration reports, but ignores all data in the SMF records with different cycle lengths.

If the configuration changed, RMF skips either all device SMF records, or I/O queuing SMF records, or both, which belong to the same duration interval. If the processor type changed, RMF skips all I/O queuing SMF records which belong to the same duration interval.

Routing Code: 2
Descriptor Code: 4
**ERB255I**  \( \text{sid: SUMMARY REPORT TERMINATED DUE TO UNRECOVERABLE ERROR - ABEND} \) \( \text{Ucde} \) \( \text{Scde} \)

**Explanation:** While generating a summary report, the RMF Postprocessor detected an error that was not associated with a particular column in the report. The Postprocessor may issue a user completion code \( \text{Ucde} \); \( \text{Scde} \) is the system completion code.

**Source:** Resource Measurement Facility (RMF)

**System action:** Because the error was not associated with a particular column in the report, RMF stops formatting and writing the entire summary report for this Postprocessor session. If other reports were requested, the Postprocessor continues with them.

**System programmer response:** Examine the dump, and respond to the completion code.

**Routing Code:** 2

**Descriptor Code:** 4

---

**ERB256I**  \( \text{sid: SUMMARY REPORT ccc COLUMN CONTAINS DATA FROM TRUNCATED RECORDS. DATA MAY BE INCOMPLETE.} \)

**Explanation:** In the input data set, the RMF Postprocessor found spanned records without their spanning indicators. The Postprocessor issues this attention message because such records may be truncated or incomplete. ccc indicates the column in the report affected by the apparently truncated records.

During a session, RMF can generate system management facility (SMF) records that are so long that the records are spanned, that is, occupy more than one physical block. Spanned records are most likely when RMF is measuring I/O activity for direct access devices. The spanning indicators can be lost through improper copying of the SMF records.

**Source:** Resource Measurement Facility (RMF)

**System action:** The Postprocessor continues to generate the summary report using the data available and eliminating no columns.

**System programmer response:** Review your installation’s procedures for copying or processing the SMF records produced by RMF. In particular, make sure that the IFASMFDP program is used to copy records from the SMF data sets. See the [z/OS MVS System Management Facilities (SMF)] for further information.

**Routing Code:** 2

**Descriptor Code:** 4

---

**ERB257I** \( \text{sid: RECORDS WITH VERSION NUMBER \( nn \) WERE FOUND IN THE INPUT DATA SET. THE EXPECTED VERSION NUMBER IS \( mm \).} \)

**Explanation:** The Postprocessor found system management facility (SMF) records with an unexpected version number.

If \( nn \) is a valid version number, the SMF records were written by a gatherer that is at a higher release or service level than the Postprocessor.

If version number \( nn \) is obviously wrong, however, the cause of the problem may be that SMF records have been truncated by being copied to a non-VBS data set.

**Source:** Resource Measurement Facility (RMF)

**System action:** The Postprocessor ignores records with an inappropriate version number and continues reading records. Records with the appropriate version number are processed. If no appropriate records are found, the Postprocessor ends with return code 4.

**System programmer response:** To ensure that the Postprocessor can handle the version of the SMF records to be processed, either run the Postprocessor on the same system as the gatherer, or install the newest level of RMF on the system on which you run the Postprocessor.

To avoid an obviously wrong value in \( nn \), ensure that SMF records are always copied to a data set with record format VBS (variable blocked spanned.)

**Routing Code:** 2
ERB258I • ERB261I

Descriptor Code: 4

ERB258I  sid: MONITOR I INTERVAL COLLECTION SKIPPED

Explanation:  A reporting interval for RMF Monitor I session sid lasted beyond 99 minutes. RMF did not create a system management facility (SMF) record for this interval, because the interval value field in the record cannot hold a value greater than 99. If produced, the SMF record would have been incorrect.

The long interval occurred for one of the following reasons:

• RMF had a dispatching priority so low it was not dispatched before 100 minutes had elapsed.
• The processor was stopped during the interval.
• A SET command changed the system clock during the interval.

Source:  Resource Measurement Facility (RMF)

System action:  For this interval, RMF cancels the output, produces no SMF record, and writes no reports.

System programmer response:  If the dispatching priority of RMF is too low, increase it so that RMF is dispatched more frequently.

Routing Code: 2
Descriptor Code: 4

ERB259I  EXCEPTION REPORTING TERMINATED

Explanation:  An error occurred in RMF module ERBMFXCB or ERBMFPER. The Postprocessor ESTAE routine failed to recover.

Source:  Resource Measurement Facility (RMF)

System action:  RMF continues post processing, but ends exception reporting.

System programmer response:  Examine the dump, and respond to the completion code in it.

Routing Code: 2
Descriptor Code: 4

ERB260I  activity ACTIVITY RMF REPORT TERMINATED

Explanation:  RMF encountered an unrecoverable error while taking measurements for the Monitor I monitoring activity named in the message. This message follows ERB261I, ERB265I, ERB266I, or ERB272I, which give the reason for ending the measurement.

Source:  Resource Measurement Facility (RMF)

System action:  RMF stops the measurements.

System programmer response:  Respond to the messages preceding ERB260I.

Routing Code: 2
Descriptor Code: 4

ERB261I  sid: UNABLE TO ESTABLISH ENF LISTEN EXIT FOR EVENT CODE code. RETURN CODE return-code.

Explanation:  RMF had issued an ENFREQ macro to call the event notification facility (ENF) in order to establish a listen exit. The ENFREQ macro passed return code return-code; see z/OS MVS Programming: Authorized Assembler Services Reference EDT-IXG for further information.

Source:  Resource Measurement Facility (RMF)

System action:  If the error occurred while RMF was trying to establish a listen exit for a specific report, RMF ends the report, stops the corresponding measurement, and issues message ERB260I.

If the error occurred while RMF was trying to establish the listen exit for dynamic I/O reconfiguration (event codes 31 and 32), RMF cannot recognize dynamic I/O environment changes, and issues message ERB294I.
Operator response: Contact your system programmer

System programmer response: Analyze the return code return-code from the ENFREQ macro.

Routing Code: 2
Descriptor Code: 4

---

ERB262I  nnnn DEVICES NOT MONITORED BY RMF. INCREASE CMB SYSTEM PARAMETER VALUE.

Explanation: During device report initialization, while RMF was assigning channel measurement blocks (CMB) to devices in order to collect channel measurements, RMF used all the slots. No more slots are available for nnnn devices.

System action: RMF continues monitoring all requested devices but cannot collect channel measurements for the devices without CMBs.

System programmer response: For a system running in CMB mode, the system resource management (SRM) did not initialize enough slots. At the next IPL, you can take either of the following actions:

- Increase the CMB parameter value, for example, CMB=100.
- Set the CMB parameter value to be the name of the device class to be monitored, for example, CMB=COMM.

For details on the CMB parameter, see the [z/OS MVS Initialization and Tuning Reference](https://www.ibm.com). For a system running in ECMB mode, search problem reporting data bases for a fix. If no fix exists, report the problem to the IBM Support Center.

Source: Resource Measurement Facility (RMF)

Routing Code: 2
Descriptor Code: 4

---

ERB263I  RMF UNABLE TO CLOSE IOCDS. (RETURN|RESPONSE) CODE rc

Explanation: RMF failed to close the I/O configuration data set (IOCDS). The MSSFCALL SVC passed return code or response code rc, which is described in messages ERB265I and ERB266I.

Source: Resource Measurement Facility (RMF)

System action: RMF continues processing.

Operator response: Probable hardware error. An initial microcode load (IML) may be required before the IOCDS can be accessed again.

Routing Code: 2
Descriptor Code: 4

---

ERB264I  NO CHANNEL PATH STATUS DATA AVAILABLE TO RMF

Explanation: Either RMF detected that both the store channel path status (STCPS) facility was not active and the I/O Queuing Activity report was selected at initialization time or the Monitor I session option for channel path activity (CHAN) was specified and both the STCPS facility was not active and the Channel Path Measurement Facility (CPMF) was not available.

Source: Resource Measurement Facility (RMF)

System action: RMF stops channel activity measurement. The field "% ALL CHANNEL PATHS BUSY" in the I/O queuing (IOQ) report will be zero.

Routing Code: 2
Descriptor Code: 4
ERB265I

ERB265I IOCDS INFORMATION UNAVAILABLE TO RMF. [RESPONSE | RETURN] CODE return-code.

Explanation: RMF encountered an error while trying to read the I/O configuration data set (IOCDS). A model-dependent return code is included only if IOCDS data is returned by the service processor.

The possible return codes are:

0001 Data set not found during READ.
0002 Buffer address is not valid.
0003 Permanent I/O error.
0005 Number of records to be read is less than or equal to zero, or greater than 32,768.
0007 Record format is not valid.
0008 Incorrect length.
0009 Data set open for output.
0011 Number of records for a variable length data set is one.
0013 Displacement of a variable length data set in the ACTIVEFILE table is not valid.
0014 Character is not valid in data set name during READ.
0015 Character is not valid in data set type during READ.
0020 Character is not valid in data set ID during OPEN process.
0024 Data set mode is not valid during OPEN process.
0036 Disk not accessed during OPEN process.
0037 Failure in non-READ/WRITE services.
0100 Number of records specified in model-dependent parameter is not valid.
0101 Data set not open.
0102 Data set is not valid in model-dependent parameter.
0104 Function is not valid in model-dependent parameter.
0106 Command not accepted because write sequence is in progress.
0107 Diagnostic IOCDS is active but not valid for reads.
0108 No IOCDS is currently marked active.
0112 End of file, or record number is greater than number of records in data set.
0128 Data set not found during OPEN process.
0130 IOCDS/IOCS file specified may not be accessed from this CEC side.
0132 IOCDS/IOCS is open for a write by another partition. This is returned by the LPAR hypervisor.
0133 IOCDS/IOCS is invalid because a partition was reset during a write operation. The IOCDS/IOCS must be validated by a write sequence. This is returned by the LPAR hypervisor.
0134 The PR/SM* partition is not authorized to read the IOCDS.
01F0 Function not supported by VM.* Option RMCHINFO not specified for the MVS virtual machine on VM. For VM/ESA®, specify the RMCHINFO option to get the configuration data in the IOQ report.
0200 Successful for inactive IOCDS/IOCS.
0201 Successful for active not updated IOCDS/IOCS.
0202 The active IOCDS used for this power on reset has already been updated. Because it may not reflect the current configuration information, RMF ends further attempts to process this information.
0457 IOCDS format error. This occurs when RMF is run under PR/SM™ without the PR/SM support PTF installed.
FFFF  Reserved for service call front-end routing module. Incorrect routing code specified.

Source:  Resource Measurement Facility (RMF)

System action:  RMF cannot obtain information about the present I/O configuration. The action RMF takes for each report is:

CHANNEL PATH ACTIVITY
RMF continues monitoring but cannot obtain the channel type for the system management facility (SMF) record or for the written report.

I/O DEVICE ACTIVITY
RMF continues monitoring devices but cannot obtain the logical control unit (LCU) identifier for the SMF record. The RMF report, if requested, will not contain the LCU device activity summary; instead, the device report lists the device numbers in ascending order, and the LCU field is blank.

I/O QUEUEING ACTIVITY
RMF stops monitoring I/O queuing activity and issues message ERB260I.

System programmer response:  Contact your software support personnel.

Routing Code:  2
Descriptor Code:  4

ERB266I  IOCDS INFORMATION UNAVAILABLE TO RMF RETURN CODE return-code.

Explanation:  RMF encountered an error while trying to read the I/O configuration data set (IOCDS). The service call routine returned return code return-code.

Values of return-code and their meanings are:
0004  The service processor is temporarily busy.
0008  The MVS control block for interfacing with the service processor is in use.
0012  The service processor is not available because of hardware failure.

Source:  Resource Measurement Facility (RMF)

System action:  RMF cannot obtain information about the present I/O configuration. The action RMF takes for each report is:

CHANNEL
RMF continues monitoring but cannot obtain the channel type for the system management facility (SMF) record or for the written report.

I/O DEVICE
RMF continues monitoring devices. In the SMF record, a flag (SMF74LCD) is on and the logical control unit (LCU) is unpredictable. The RMF report, if requested, does not contain the LCU device activity summary. The LCU field is blank.

I/O QUEUEING
RMF ends monitoring I/O queuing activity and issues message ERB260I.

Routing Code:  2
Descriptor Code:  4

ERB267I  SRM I/O LOAD BALANCING INFORMATION UNAVAILABLE TO RMF.

Explanation:  RMF cannot find the logical path block (LPB) table to satisfy an LPB utilization (LPBUTIL) trace option request, nor can it obtain information about load balancing from system resource management (SRM).

Source:  Resource Measurement Facility (RMF)

System action:  RMF ends the LPBUTIL trace request but continues all other trace requests.

System programmer response:  During the next IPL, allow more storage for the LPB table by specifying a larger value for the SQA parameter. See the z/OS MVS Initialization and Tuning Reference.

ERB268I  
**sid:** PRIVATE STORAGE TOO SMALL FOR MONITOR III GATHERER

**Explanation:** The REGION parameter in the cataloged procedure for the RMF Monitor III data gatherer is too small.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF ends the Monitor III data gatherer.

**System programmer response:** Increase the REGION parameter value in the cataloged procedure.

Routing Code: 2
Descriptor Code: 4

---

ERB269I  
**III: ERROR IN MONITOR III GATHERING MODULE module DUMP TAKEN**

**Explanation:** The RMF Monitor III data gatherer module named in the message found a permanent error when trying to collect data. This error could happen if RMF external control blocks were changed since the last Monitor III session.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF ends the named Monitor III data gatherer module but continues other data gathering.

**System programmer response:** Examine the printed dump, and correct any errors.

Routing Code: 2
Descriptor Code: 4

---

ERB270I  
**sid:** THE ADDRESS SPACE OF MONITOR III GATHERER NO LONGER EXISTS

**Explanation:** In response to a MODIFY session command for a Monitor III data gatherer, RMF could not find the address space for session *sid*. This error could happen if you had entered a CANCEL command for any of the address spaces of the started task RMFGAT.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF ends the session *sid*.

**Operator response:** If appropriate, restart the Monitor III data gatherer.

Routing Code: 2
Descriptor Code: 4,5

---

ERB271I  
**MONITOR III CACHE DATA COLLECTION DEACTIVATED.**

**Explanation:** Private storage at Monitor III data collection region RMFGAT is too small.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF deactivates Monitor III CACHE data collection.

**Operator response:** Reduce the number of CACHE subsystems for which CACHE data should be collected, using the gatherer option: CACHE(SSID(xxxx,yyyy,...)). Or you can ask your system programmer to increase the region parameter value in the RMFGAT procedure.

**System programmer response:** Increase the region parameter value in the RMFGAT procedure and restart it.

Routing Code: 2
Descriptor Code: 4
ERB272I  sid: SELECTED DEVICE(S) NOT IN SYSTEM.

Explanation: A device report was requested for devices that do not belong to the system.

Source: Resource Measurement Facility (RMF)

System action: RMF stops monitoring device activity, and issues message ERB260I.

System programmer response: Change the device class or NMBR range of the device options that are used to start the session, and make sure the selected devices belong to the system. Then modify the session using the corrected device options.

Routing Code: 2
Descriptor Code: 4

ERB273I  ZZ: INTERFACE IEAVG708 NOT AVAILABLE. NO TRACING OF OMDxxxxX FIELDS.

Explanation: In the RMF Monitor I trace report, at least one of the following fields was selected: OMDGWTOI, OMDGCMO, OMDGWTLI, OMDGWQEB, OMDGOREB or OMDGAMRE. The module is not available.

Source: Resource Measurement Facility (RMF)

System action: No trace data is produced for the selected fields. The trace activity report contains the following line for each of the selected fields:

NO VALID DATA GATHERED FOR FIELD fieldname.

Operator response: Contact your system programmer.

System programmer response: Report the problem to the IBM Support Center.

Routing Code: 2
Descriptor Code: 4

ERB274I  ZZ: NO FICON DIRECTOR IN SYSTEM.

Explanation: You requested the option FCD, but there is no FICON® director installed in the system.

Source: Resource Measurement Facility (RMF)

System action: Because there is no FICON director installed, no data can be provided. The option FCD is terminated if the system does not allow dynamic I/O updates. Otherwise, the option stays active but no SMF record 74-7 is written until a FICON director is installed and is activated via an HCD ACTIVATE request.

System programmer response: To suppress this message, change the option statement or library member to indicate NOFCD until a FICON director is installed in the system and FICON director measurement data is available.

Routing Code: 2
Descriptor Code: 4

ERB276I  I/O CONFIGURATION DATA IS NOT AVAILABLE.

Explanation: RMF encountered an error while trying to retrieve I/O configuration data.

Source: Resource Measurement Facility (RMF)

System action: RMF cannot obtain information about the present I/O configuration. The action RMF takes for each report is:

CHANNEL
RMF continues monitoring but cannot obtain the channel type for the system management facility (SMF) record or for the written report.

I/O DEVICE
RMF continues monitoring devices. In the SMF record, a flag (SMF74LCD) is on and the logical control unit (LCU) is unpredictable. The RMF report, if requested, does not contain the LCU device activity summary. The LCU field is blank.
I/O QUEUING
RMF ends monitoring I/O queuing activity and issues message ERB260I.

Routing Code: 2
Descriptor Code: 4

ERB277I  sid: OPTION VALUE OUT OF RANGE, CONFLICTING, OR IMPROPERLY SPECIFIED.

Explanation: While processing the options for Monitor III data reporter session sid, RMF detected an incorrect value for one of the following options: MODE, SCREEN, REFRESH, STOP, or SYSOUT.

Source: Resource Measurement Facility (RMF)

System action: If the option error is detected during input/merge processing, when starting a local 3270 reporting session, RMF issues additional messages to the system console.
If the option error is detected during options processing in a foreground session, RMF assumes the default value for the incorrect option and continues the session.

Routing Code: 2
Descriptor Code: 4

ERB278I  sid: INVALID OPTION OR EDIT COMMAND ENCOUNTERED

Explanation: While processing the options for Monitor III data reporter session sid, RMF detected incorrect options and/or edit commands. RMF highlights the errors.

Source: Resource Measurement Facility (RMF)

System action: RMF continues the session.

Operator response: Correct the incorrect options and commands, or press ENTER to make RMF ignore the highlighted options and commands.

Routing Code: 2
Descriptor Code: 4

ERB279I  sid: MONITOR III GATHERER INITIALIZATION FAILED

Explanation: While RMF was initializing Monitor III data gatherer session sid, an error occurred. The error could be either:
• A system overload.
• Procedure RMFGAT missing from SYS1.PROCLIB.

Source: Resource Measurement Facility (RMF)

System action: RMF stops initializing the data gatherer but continues processing all other active sessions.

System programmer response: Try to start session sid again after other address spaces have ended. Check SYS1.PROCLIB for RMFGAT; if missing, install them in the library.

Routing Code: 2
Descriptor Code: 4,5

ERB280I  III: DATA GATHERER ABENDED {Ucde | Scde}

Explanation: During Monitor III data gathering, an unrecoverable error occurred while the data gatherer control modules were running. The data gatherer recovery routines did not attempt a retry.
In the message, Ucde is the user completion code; Scde is the system completion code.

Source: Resource Measurement Facility (RMF)

System action: The system writes an ABEND dump for the failing job step.
The Monitor III data gatherer ends.
**System programmer response:** Examine the dump, and respond to the completion code. If this problem recurs, notify the RMF license holder at your installation.

Search problem reporting data bases for a fix for the problem. If no fix exists, report the problem to the IBM Support Center.

**Routing Code:** 2

**Descriptor Code:** 4

---

**ERB281I**  UNABLE TO ACTIVATE/DEACTIVATE LCU MEASUREMENTS. RESPONSE CODE | RETURN CODE cccc

**Explanation:** RMF could not activate or deactivate the channel hardware generation of model-dependent I/O measurements for logical control units of the I/O configuration. In the message text, ccc is the return code from SVC 122.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF processing continues without the I/O queuing activity report function. If RMF was attempting to activate LCU measurements during initialization, this message is followed by message ERB260I.

**Routing Code:** 2

**Descriptor Code:** 4

---

**ERB282I**  IOCD INFORMATION UNAVAILABLE FOR ddd OF yyyy DEVICES. LAST RETURN | RESPONSE CODE cccc

**Explanation:** RMF attempted to read the I/O configuration data for the device ddd named in the message, but MSSFCALL returned an unexpected error. In the message text, ccc is the response code or the return code from MSSFCALL.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF could not obtain the IOCD information for device ddd. The following action is taken for each I/O report requested:

- Channel -- monitoring will continue, but the channel type information may not be available in the SMF record and/or the written record.
- I/O device -- monitoring will continue, but an indicator in the SMF record will be set and the LCU is not available.

For purposes of formatting the device report output properly, RMF will assign the device to the dummy device group LCU 00.

**Routing Code:** 2

**Descriptor Code:** 4

---

**ERB283I**  PPS: MAXIMUM NUMBER OF 253 OVW CONTROL STATEMENTS EXCEEDED.

**Explanation:** The Postprocessor detected more than 253 OVW control statements in the input stream.

**Source:** Resource Measurement Facility (RMF)

**System action:** In context with the option OVERVIEW(RECORD), only the first 253 OVW statements will be processed, the other OVW statements will be ignored. All statements will be processed for option OVERVIEW(REPORT).

**User response:** If you want to create overview records for more than 253 conditions, you have to run several steps of the Postprocessor.

---

**ERB286I**  III: OPTION option IS IGNORED DUE TO PREVIOUS ERROR.

**Explanation:** The option option has been specified but the associated data gatherer has terminated abnormally before.

**Source:** Resource Measurement Facility (RMF)
ERB287I  •  ERB289I

System action:  Option is ignored.
Operator response:  Notify your system programmer.
System programmer response:  Examine system log for earlier messages and follow the message instructions.

Descriptor Code:  4

ERB287I  III: MONITOR III DATA GATHERER module TERMINATED.
Explanation:  The Monitor III data gatherer module module received a system abend code it could not handle.
Source:  Resource Measurement Facility (RMF)
System action:  The specific gatherer is terminated, and no further data from the interface is collected.
Operator response:  Notify your system programmer.
System programmer response:  Examine the system code and correct the problem, or contact the IBM Support Center.
Routing Code:  2
Descriptor Code:  4

ERB288I  III: MONITOR III DATA GATHERER module, INTERFACE interface FAILED. RC = return-code
          REASON =reason-code. [ABEND U1607. DUMP TAKEN.]
Explanation:  The RMF Monitor III data gatherer module module received a return code from the interface interface. The return code and reason code are reported. If a user dump is taken, this message is extended by ABEND U1607.
          DUMP TAKEN.
Source:  Resource Measurement Facility (RMF)
System action:  No data from the interface is collected during this RMF cycle, mintime or interval. The RMF data gatherer remains active and at the next cycle, mintime or interval, the RMF data gatherer module is called again.
Operator response:  Contact your system programmer.
System programmer response:  Examine the dump, and respond to the return and reason codes.
Routing Code:  2
Descriptor Code:  4

ERB289I  sid: MORE THAN 100 MONITOR III DATA SET NAMES SPECIFIED, ADDITIONAL DATA SETS
          IGNORED
Explanation:  There are currently 100 data set names, and you cannot specify any additional data set names.
Source:  Resource Measurement Facility (RMF)
System action:  The system does not process your input and needs the intervention of the operator to intervene.
          RMF issues the following messages:
          • ERB305I - This message lists the current sessions options.
          • ERB306D - This message requires that the operator supply new options or enter ‘GO’ to continue RMF processing.
Operator response:  You should take the following actions:
          • Examine the options listed in message ERB305I and respond to message ERB306D.
          • If possible, delete some data set names using the DEL suboption of the DS/DATASET option.
          • You can then begin to add new data set names.
System programmer response:  If the error occurred on an EXEC statement or library data source, correct the statement or library member.
Routing Code:  2
ERB290I • ERB292I

Descriptor Code: 4,5

ERB290I  sid  DATA SET NAME name  {ALREADY KNOWN | NOT KNOWN}  {DELETE | ADD}  IGNORED

Explanation: The system issues this message for one of the following conditions:
• You specified the DEL suboption on the DS/DATASET option to delete a data set that does not exist.
• You specified the ADD suboption on the DS/DATASET option to add a data set that already exists.

Source: Resource Measurement Facility (RMF)

System action: The system ignores the input for the ADD or DEL suboption, and forces the operator to intervene. RMF then issues the following messages:
• ERB305I - This message lists the current session options.
• ERB306D - This message requires that the operator supply new options or enter ‘GO’ to continue RMF processing.

Operator response: Examine the options listed in message ERB305I and respond to message ERB306D.

System programmer response: If the error occurred on an EXEC statement or library data source, correct the statement or library member.

Routing Code: 2
Descriptor Code: 4,5

ERB291I  sid  DATA SET RECORDING OPTION suboption  CANNOT BE MODIFIED. PREVIOUS OPTION OPERATION STILL IN PROCESS

Explanation: DS/DATASET suboption may be any one of the following:
• SWITCH
• DEL
• ADD

Message ERB2901I appears when you specify the DS/DATASET option with a suboption, while a previous operation for a suboption is still in progress.

The system processes each suboption in sequential order.

Source: Resource Measurement Facility (RMF)

System action: The system ignores the suboption input.

Operator response: Wait until the system processes the previous suboption, then take the appropriate action for the suboption you specified.
• SWITCH - The system issues message ERB813I when it completes the switch.
• ADD or DEL - The Monitor III Data Index report contains the actual data set names list; check this list to see if the system issued or deleted the data set names.

Routing Code: 2
Descriptor Code: 4,5

ERB292I  III: MONITOR III DATA GATHERER module name FAILED. [DUMP TAKEN.] [MODULE TERMINATED.]

Explanation: There was an unexpected error in the RMF Monitor III data gatherer module. If a dump is taken, the message text is extended by DUMP TAKEN. If the specified module is terminated, the additional text MODULE TERMINATED is updated.

Source: Resource Measurement Facility (RMF)

System action: The failing RMF data gatherer module either remains active or is terminated. A dump is taken only for the first occurrence.

Operator response: Contact your system programmer.

System programmer response: Analyze the dump.

NO DCB ADDR PASSED TO ERBMFMPR

Explanation: RMF called message processing routine ERBMFMPR to process a message, but did not pass a data control block (DCB) address for the data set for the message.

Source: Resource Measurement Facility (RMF)

System action: RMF continues processing. The message being processed is lost unless it also appears on the operator console.

Operator response: Notify the system programmer, supplying the ERB message number immediately preceding ERB299I to help the system programmer determine which module called ERBMFMPR.

System programmer response: Use the ERB message number immediately preceding ERB299I to determine which module called ERBMFMPR.

Routing Code: 2

Descriptor Code: 4

---

**ERB300I**

sid: SYNTAX ERROR IN OR FOLLOWING TEXT BEGINNING ‘text’ IN source INPUT

Explanation: During the syntax scan of the input options for the Postprocessor or for session sid, RMF found one or more errors in or following the text shown in the message. Usually, the last character shown in text is the error. The source of the error is:

Source Where error found
OPERATOR In an operator command.
PARM In the PARM field of an EXEC statement in the RMF cataloged procedure.
LIBRARY nn In library member ERBRMFnn.
REPLY In the operator reply to message ERB306D.
SYSIN In an RMF Postprocessor control statement.

Source: Resource Measurement Facility (RMF)

System action: RMF parses the rest of the input source, then continues with input from any other sources.

When the error occurs during a session, RMF asks the operator for intervention: RMF issues message ERB305I, listing the current session options, followed by message ERB306D, to which the operator replies by supplying new options or entering ‘GO’. RMF continues other processing.

When the error occurs during the Postprocessor session or the Monitor III data reporter, RMF ignores the incorrect option and substitutes the default value, if one exists.

Operator response: Examine the options following message ERB305I, and respond to message ERB306D.

System programmer response: If the incorrect option is on the EXEC statement, in the library data source, or on a Postprocessor control statement, correct the statement or library member.

Routing Code: 2

Descriptor Code: 4,5
ERB301I • ERB302I

ERB301I  sid: CONFLICTING OPTIONS - n

Explanation:  For session sid, you specified incorrect values or mutually exclusive options. n indicates the type of conflict, as follows:

n  Conflict
1  Both NOREPORT and NORECORD were specified, meaning that RMF could produce no output data.
2  REPORT(DEFER) and NOSTOP were specified, meaning that the SYSOUT spool space could become filled.
3  The STOP value is less than the INTERVAL value, meaning that the session will end before the first measurement interval.
4  Both SYNC(SMF) and INTERVAL were specified, but the two options are mutually exclusive. When the SYNC(SMF) option is specified, the interval length is determined by SMF.

Source:  Resource Measurement Facility (RMF)

System action:  RMF modifies the options and continues with input merge and initialization for the session. n indicates the modification:

n  Modification
1  RMF changes NOREPORT to REPORT(DEFER).
2  RMF changes NOSTOP to STOP(value) and sets the value equal to the length established for the interval.
3  RMF sets the STOP value equal to the length established for the interval.
4  RMF ignores the INTERVAL option and uses SYNC(SMF).

In addition, RMF asks the operator for intervention: RMF issues message ERB305I, listing the current session options, followed by message ERB306D, to which the operator replies by supplying new options or entering 'GO'. RMF continues other processing.

Operator response:  Examine the options following message ERB305I, and respond to message ERB306D.

System programmer response:  Examine the input sources, and correct any errors before the next RMF session.

Routing Code:  2
Descriptor Code:  4,5

ERB302I  sid: MEMBER ERBRMFnn NOT FOUND IN PARM LIBRARY

Explanation:  During input merge for session sid, RMF obtained the library member name ERBRMFnn from MEMBER(nn) in the RMF control input stream or assumed the name as a default. However, RMF could not find ERBRMFnn in any of the parameter libraries. See the [z/OS RMF User's Guide](https://www.ibm.com/support/knowledgecenter/SSEPGG_1.3.0/com.ibm.zos.rmf.doc/rmfs0919.html) for information on how to specify the RMF parameter library.

Source:  Resource Measurement Facility (RMF)

System action:  RMF ignores the library as an input source and continues the input merge and initialization.

At the end of the input merge, RMF asks the operator for intervention: RMF issues message ERB305I, listing the current session options, followed by message ERB306D, to which the operator replies by supplying new options or entering 'GO'. RMF continues other processing.

Operator response:  Examine the options following message ERB305I, and respond to message ERB306D.

System programmer response:  Create a member with the name ERBRMFnn, if desired.

Routing Code:  2
Descriptor Code:  4,5
ERB304I  sid: I/O ERROR WHILE PROCESSING RMF LIBRARY DATA SET.

Explanation: During initialization for session sid, an I/O error that could not be corrected, or OPEN error occurred while RMF was reading or searching for the ERBRMFnn member in the parameter libraries. The z/OS RMF User’s Guide gives guidance on specifying parameter libraries.

The SYNAD text appears in the message only if the error occurred while reading the member.

Source: Resource Measurement Facility (RMF)

System action: RMF ignores the library as an input source and continues input merge and initialization.

At the end of the input merge, RMF asks the operator for intervention: RMF issues message ERB305I, listing the current session options, followed by message ERB306D, to which the operator replies by supplying new options or entering ‘GO’. RMF continues other processing.

The system sends messages about the job to one of the following:
- The primary console
- The remote console, for a system with remote consoles
- The hard-copy log for a system with multiple console support (MCS)

Operator response: Examine the options following message ERB305I, and respond to message ERB306D.

Contact hardware support.

System programmer response: Check the IEFSPARM statement in the RMF procedure, or recreate the library data set before using the library again.

Routing Code: 2
Descriptor Code: 4,5

ERB305I  sid: PARAMETERS option (value) source . . option (value) source

Explanation: RMF issues this message if a list of options is requested upon completion of input merge or if RMF detects an error during input merge. The options are listed, one per line, in the form:

option (value) source

The source indicates where the option was specified or what action was taken:

Source Where the option was specified
COMMAND On a START or MODIFY command.
DEFAULT In the program defaults.
EXEC On the EXEC statement in the RMF cataloged procedure.
MEMBER In a member of the RMF partitioned data set.

Source What action taken
CHANGED Changed by RMF:
- If the preceding message is ERB803I, the data set recording function of the Monitor III data gatherer ended abnormally. RMF changes the DS/DATASET option to STOP.
- If the preceding message is ERB819I, the data set recording function of the Monitor III data gatherer could not start because no data set names were available. RMF changes the DS/DATASET option to STOP.

IGNORED Option is ignored:
- If both SYNC(SMF) and INTERVAL options are specified, RMF ignores the INTERVAL option and uses SYNC(SMF).

Source: Resource Measurement Facility (RMF)

System action: RMF issues message ERB306D.

Operator response: Examine the list of options and verify the values.

Routing Code: 2
**ERB306D • ERB308I**

**Descriptor Code:** 4,5

---

**ERB306D**

**sid: REPLY WITH OPTIONS OR GO**

**Explanation:** RMF issues this message after message ERB305I to let the operator change the options.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF waits for the operator to reply. RMF continues processing all other active sessions.

**Operator response:** To change options, enter

REPLY xx, 'option(value),option(value,...').

Otherwise, enter

REPLY xx, '60'.

If you respond with changes, RMF changes the options. RMF issues this message repeatedly, allowing additional changes, until you respond with ‘GO’.

If you enter a syntax error, mutually exclusive values, or incorrect values in your reply, RMF issues message ERB300I or ERB301I. If you specify MEMBER(nn), RMF ignores it because the input merge is already complete and a particular library member was already used. If you specify OPTIONS, RMF lists the options after a subsequent reply of ‘GO’.

**Note:** A syntax error, mutually exclusive options, or incorrect values in your reply forces RMF to issue messages ERB305I and ERB306D again.

---

**ERB307I**

**III: MONITOR III DATA GATHERER module. INTERFACE interface FAILED. RETURN CODE: return-code REASON CODE: reason-code.**

**Explanation:** The RMF Monitor III data gatherer module received a return code from the interface interface. The return code and reason code are reported. It is possible that the message text is extended by ABEND 1607 DUMP TAKEN.

**System action:** This specific gatherer is terminated, and no further data from the interface is collected.

If issued by module ERB3GINI because the IOSENQ service failed, RMFGAT could not get the IOS enqueue in order to serialize initial processing with IOS configuration activity. RMFGAT continues processing. However, due to the listen exit processing of the IOS configuration change events, RMFGAT might need to be initialized again.

**Operator response:** Contact your system programmer.

**System programmer response:** Respond to the return and reason codes. If a dump has been taken, see the explanation of user completion code 1607 in z/OS RMF Messages and Codes.

**Source:** Resource Measurement Facility (RMF)

---

**ERB308I**

**ZZ: INTERVAL LENGTH MUST BE A TRUE DIVISOR OF 60**

**Explanation:** Only the following values for the interval length are allowed: 1,2,3,4,5,6,10,12,15,20,30,60. This restriction guarantees:

- That the SYNC value is met every hour
- That a Postprocessor report involving several systems (such as a SYSPLEX report) can be built at least on an hourly basis.

**Source:** Resource Measurement Facility (RMF)

**System action:** The interval length is changed to the next valid interval length.
System programmer response: Change the interval length to an allowed value. You might also decide to switch to SYNC(SMF) (see the z/OS RMF User’s Guide) and let the interval length be determined by SMF. This ensures, that SMF records written by RMF and by other components are written simultaneously.

Routing Code: 2
Descriptor Code: 4,5

**ERB309I**

**sid**: ERROR IN WLM INTERFACE. RETURN CODE yy. REASON CODE zz.

**Explanation**: An error occurred in the WLM interface. The return and reason code describe the error in more detail. See WLM return codes and reason codes for more information in z/OS MVS Planning: Workload Management and z/OS MVS Programming: Workload Management Services.

**Source**: Resource Measurement Facility (RMF)

**System action**: As indicated by the return code and reason code WLM data may be not available or only partially available. RMF produces reports based on the data it has. The system writes an SVC dump.

**System programmer response**: Refer to the return and reason codes for more information. You can try to restart RMF.

Routing Code: 2
Descriptor Code: 4,5

---

**ERB310I**

**sid**: ERROR DURING COLLECTION OF WLM DATA. RETURN CODE yy. REASON CODE zz.

**Explanation**: An error occurred in the RMF WLM interface services when trying to obtain WLM data.

**Source**: Resource Measurement Facility (RMF)

**Problem determination**: See the following return and reason codes:

<table>
<thead>
<tr>
<th>RC</th>
<th>Error</th>
</tr>
</thead>
<tbody>
<tr>
<td>RS 8</td>
<td>Error in IWMRCOLL service during RCAA data retrieval</td>
</tr>
<tr>
<td>RS 802</td>
<td>Error in IWMPQRY service during SVPOL data retrieval</td>
</tr>
<tr>
<td>RS 804</td>
<td>Error in IWMPQRY service during RQAA data retrieval</td>
</tr>
<tr>
<td>RS 805</td>
<td>Internal RMF error</td>

<td>Internal RMF error</td>
</tr>
<tr>
<td>RS 809</td>
<td>Internal RMF error</td>
</tr>
</tbody>
</table>

**System action**: WLM data might not be available or might be only partially available.

RMF issues message ERB309I if the reason code is 802, 804, or 805.

**System programmer response**: Refer to the return and reason codes for more information.

Routing Code: 2
Descriptor Code: 4

---

**ERB311I**

RMF: CANNOT REACT ON WLM / SRM CHANGES. INTERVALS MAY HAVE MISSING WORKLOAD DATA.

**Explanation**: One of the following things happened:
1. The Resource Measurement Facility (RMF) listen exit ERBLXWLM or ERBLXSRM failed (abnormally ended). Here the error message is accompanied by a dump caused by module ERBLXWLM.
2. RMF could not establish one of the listen exits 41 or 42 during startup. Here the message is preceded by message ERB261I indicating that the WLM ENF listen exits could not be established.
3. RMF could not obtain storage for the common services control block during startup of RMF.

As a result, RMF cannot initially respond to the following events:
ERB312I • ERB314I

- VARY WLM,POLICY= operator command
- MODIFY WLM,MODE= operator command

System action: If one of the preceding actions occurred, the workload data for those intervals/mintimes is lost.

Operator response: Inform the systems programmer.

System programmer response:
- If the ENF listen exit(s) could not be activated, check the reason. (See z/OS MVS Programming: Authorized Assembler Services Reference EDT-IXG for a description of the return codes from the ENF facility.)
- If there is an abnormal end, check the dump associated with this message.

Source: Resource Measurement Facility (RMF)
Routing Code: 2
Descriptor Code: 4

ERB312I  PPS: DIFFERENT CYCLE VALUES FOR SDEVICE REPORT DURING date1 time1 INTERVAL.

Explanation: The CYCLE value found in an SMF type 74 subtype 1 record which is different from the CYCLE values found in the other SMF type 74 subtype 1 record belonging to this interval.

Source: Resource Measurement Facility (RMF)

Problem determination: The Shared Device Activity reports require that the SMF records of all systems used to create this reports run with at least the same CYCLE and SYNCH option.

User response: Use only those SMF records as input to this postprocessor report which have the same cycle value. Ensure, that the RMF Monitor I runs on all systems with the same SYNCH and CYCLE options.

System action: The report is not created for those time ranges which have different CYCLE values.

Routing Code: 2
Descriptor Code: 4

ERB313I  PPS: SMF RECORDS FROM RMF RELEASES PRIOR TO 5.1 NOT USABLE FOR SDEVICE REPORT

Explanation: The Postprocessor found SMF type 74 subtype 1 records from a release prior to RMF 5.1.

Source: Resource Measurement Facility (RMF)

Problem determination: The Shared Device Activity reports require that the SMF records are created either by the current release RMF or from a later release.

User response: Exclude the SMF records from the input dataset which are not from RMF.

System action: The SMF records having the wrong release level are not used to create the shared device reports. If all records are from a previous release, no shared device reports are created.

ERB314I  sid: WLM DATA PARTIALLY NOT AVAILABLE

Explanation: RMF was not able to collect (all) WLM data. The return code (RC) from WLM data collection service was 8, with reason code 806. Valid data could not be obtained, or the token returned by the RMF WLM interface services did not match for one of the following reasons:
- The POLICY changes were too fast to obtain data.
- The execution velocity goal defined in the WLM service class for monitors (WLM, RMF) might be too low.

System programmer response: When the message occurs in combination with fast changes of the POLICY, this is an expected situation.

System action: No action is taken.

Source: Resource Measurement Facility (RMF)
Routing Code: 2
Descriptor Code: 4

**ERB315I**  
**Message**: sid: ABEND U1611: Consecutive failure count exceeded limit in ERB3GSCM. Service Policy Gatherer terminated.  
**Source**: Resource Measurement Facility (RMF)  
**Explanation**: The RMF Monitor III gatherer tried to obtain the WLM service policy and failed ten times. The service policy gatherer is deactivated. The data gathered in the sets of samples show that WLM data is not available.  
**System action**: A dump is taken. The RMF Monitor III gatherer continues without service policy gathering.  
**System programmer response**: Several ERB309/ERB310 messages preceded this messages. Refer to the return and reason codes for more information about this problem.

Routing Code: 2
Descriptor Code: 4

**ERB316I**  
**Message**: FILE SYSTEM NAME hfsname IS NOT VALID.  
**Explanation**: The file system name which has been specified on the HFSNAME option statement does not adhere to the MVS/TSO rules for data set names.  
**Source**: Resource Measurement Facility (RMF)  
**System action**: The invalid file system name is ignored, and the operator is prompted for intervention. RMF issues the following additional messages:  
- ERB305I - This message lists the current session options.  
- ERB306D - This message requires that the operator supplies new input or enters 'GO' to continue RMF processing.  
**Operator response**: You should take the following actions:  
- Examine the options listed in message ERB305I and respond to message ERB306D.  
- Correct the HFS file system name.  
**System programmer response**: If the error occurred on an EXEC statement or library data source, correct the statement or library member.

Routing Code: 2
Descriptor Code: 4

**ERB317I**  
**Message**: MORE THAN 25 FILE SYSTEM NAMES SPECIFIED, ADDITIONAL FILE SYSTEM NAMES IGNORED.  
**Explanation**: The number of file system names which have been specified on the HFSNAME option statements exceeds the allowed maximum of 25.  
**Source**: Resource Measurement Facility (RMF)  
**System action**: The system does not process the input, and the operator is prompted for intervention. RMF issues the following additional messages:  
- ERB305I - This message lists the current session options.  
- ERB306D - This message requires that the operator supplies new input or enters 'GO' to continue RMF processing.  
**Operator response**: You should take the following actions:  
- Examine the options listed in message ERB305I and respond to message ERB306D.  
- If possible, delete some of the file system names using the DEL suboption of the HFSNAME option.  
- Now, you can begin to add new file system names.  
**System programmer response**: If the error occurred on an EXEC statement or library data source, correct the statement or library member.
ERB318I  •  ERB320I

ERB318I   FILE SYSTEM NAME hfsname {ALREADY IN TABLE | NOT IN TABLE}, {ADD | DELETE} IGNORED.

Explanation: The system issues the message for one of the following conditions:
- You specified the DEL suboption on the HFSNAME option to delete a file system name that does not exist.
- You specified the ADD suboption on the HFSNAME option to add a file system name that already exists.

Source: Resource Measurement Facility (RMF)

System action: The system ignores the input for the ADD or DEL suboption, and the operator is prompted for intervention. RMF issues the following additional messages:
- ERB305I - This message lists the current session options.
- ERB306D - This message requires that the operator supplies new input or enters 'GO' to continue RMF processing.

Operator response: Examine the options listed in message ERB305I and respond to message ERB306D.

System programmer response: If the error occurred on an EXEC statement or library data source, correct the statement or library member.

Routing Code: 2
Descriptor Code: 4

ERB319I   III: MORE THAN 25 DATA SET MASKS SPECIFIED, ADDITIONAL MASKS IGNORED.

Explanation: The number of data set masks which have been specified on VSAMRLS option statements exceeds the allowed maximum of 25.

Source: Resource Measurement Facility (RMF)

System action: RMF will process the first 25 data set masks only. In addition, it issues the messages ERB305I and ERB306D.

Operator response: You should take the following actions:
- Examine the options listed in message ERB305I and respond to message ERB306D.
- If possible, delete some of the file system names using the DEL suboption of the VSAMRLS option.
- Then, you can begin to add new data set masks.

System programmer response: If the error occurred on an EXEC statement or library data source, correct the statement or library member.

Routing Code: 2
Descriptor Code: 4

ERB320I   III: DATA SET MASK mask {ALREADY IN TABLE | NOT IN TABLE}, VSAMRLS {ADD | DELETE} IGNORED.

Explanation: RMF issues the message for one of the following conditions:
- You have specified the suboption DEL on the option VSAMRLS to delete a data set mask that does not exist.
- You have specified the suboption ADD to add a data set mask that already exists.

Source: Resource Measurement Facility (RMF)

System action: The system ignores the input for the suboption. In addition, it issues the messages ERB305I and ERB306D.

Operator response: Examine the options listed in message ERB305I and respond to message ERB306D.

System programmer response: If the error occurred on an EXEC statement or library data source, correct the statement or library member.

Routing Code: 2
Descriptor Code: 4
ERB321I III: BUFFER ALLOCATION FAILED FOR MONITOR III GATHERER, PERFORMANCE OF REPORTER MAY BE IMPACTED.

Explanation: The Monitor III data gatherer could not allocate a sufficient number of buffers to keep the set of samples of the current Mintime in uncompressed format.

Source: Resource Measurement Facility (RMF)

System action: RMF continues and compresses the set of samples on each data request. This may impact later on the performance of the reporter.

Operator response: Notify your system programmer.

System programmer response: Increase the region size of the Monitor III data gatherer.

Routing Code: 2
Descriptor Code: 4

ERB322I III: SMSVSAM SERVER IS NOT CURRENTLY AVAILABLE.

Explanation: The SMSVSAM server is not available because of the following reasons:

- The SMSVSAM server has failed and is restarting.
- The SMSVSAM server has permanently failed and is waiting for operator restart.
- The SMSVSAM server is not initialized on the system (RLSINIT(NO) in SMS Parmlib definition, or system is IPLed in local mode).

Source: Resource Measurement Facility (RMF)

System action: No VSAM RLS activity data is currently gathered. As soon as the SMSVSAM server becomes available, VSAM RLS activity data will be gathered.

Operator response: Start or restart the SMSVSAM server.

Routing Code: 2
Descriptor Code: 4

ERB324I III: VSAMRLS DATA SET MASK mask IS NOT VALID. REASON CODE: rsn

Explanation: The IGWCDATA interface has found that the specified mask is incorrect.

Source: Resource Measurement Facility (RMF)

System action: The mask is ignored. Processing continues.

Operator response: Notify your system programmer.

System programmer response:
- The reason code is given by the IGWCDATA interface, you can find the explanation in z/OS DFSMSdfp Diagnosis.
- Probably, the high-level qualifier is missing.
- If the error occurred on an EXEC statement or library data source, correct the statement or library member.

Routing Code: 2
Descriptor Code: 4

ERB325I OLD WKLD GATHERER SUBOPTIONS (subop) IGNORED IN source INPUT.

Explanation: As of z/OS Release 1 Version 5, the WKLD gatherer option no longer supports the specification of suboptions. If any suboption is found as part of the input, it is ignored.

(subop) Shows the suboptions that have been ignored.

source Indicates in which source input the suboption(s) have been encountered. Source may have one of the following values:
ERB326I • ERB327I

- OPERATOR
- PARM
- LIBRARY nn
- REPLY
- SYSIN

System action: The specified suboptions are ignored.

Operator response: None.

System programmer response: If the error occurred on an EXEC statement or library member source, correct the WKLD option statement to avoid this message in the future.

Source: Resource Measurement Facility (RMF)

Routing Code: 2
Descriptor Code: 4

---

ERB326I STORAGE GROUP NAME sgname IS NOT VALID.

Explanation: The storage group name specified on the SGNAME option statement does not follow the MVS/TSO rules for storage group names.

System action: The invalid storage group name is ignored, and the operator is prompted for actions. RMF issues the following additional messages:
- ERB305I - This message lists the current session options.
- ERB306D - This message requires that the operator supplies new input or enters 'GO' to continue RMF processing.

Operator response: Take the following actions:
- Examine the options listed in message ERB305I and respond to message ERB306D.
- Correct the storage group name sgname.

System programmer response: If the error occurred on an EXEC statement or library data source, correct the statement or library member.

Source: Resource Measurement Facility (RMF)

Routing Code: 2
Descriptor Code: 4

---

ERB327I MORE THAN 25 STORAGE GROUP NAMES SPECIFIED, ADDITIONAL STORAGE GROUP NAMES IGNORED.

Explanation: The number of storage group names specified on SGNAME option statements exceeds the allowed maximum of 25.

System action: The system does not process the input and needs operator intervention. RMF issues the following additional messages:
- ERB305I - This message lists the current session options.
- ERB306D - This message requires that the operator supplies new input or enters 'GO' to continue RMF processing.

Operator response: Take the following actions:
- Examine the options listed in message ERB305I and respond to message ERB306D.
- If possible, delete some of the storage group names using the DEL suboption of the SGNAME option.
- Add new storage group names.

System programmer response: If the error occurred on an EXEC statement or library data source, correct the statement or library member.

Routing Code: 2
Descriptor Code: 4
ERB328I  STORAGE GROUP NAME  sgname  {ALREADY IN TABLE | NOT IN TABLE}, {ADD | DELETE} ignored.

Explanation: The system issues the message for one of the following conditions:
• The DEL suboption was specified on the SGNAME option to delete a storage group name that does not exist.
• The ADD suboption was specified on the SGNAME option to add a storage group name that already exists.

System action: The system ignores the input for the ADD or DEL suboption and asks the operator for intervention. RMF issues the following additional messages:
• ERB305I - This message lists the current session options.
• ERB306D - This message requires that the operator supplies new input or enters 'GO' to continue RMF processing.

Operator response: Examine the options listed in message ERB305I and respond to message ERB306D.

System programmer response: If the error occurred on an EXEC statement or library data source, correct the statement or library member.

Routing Code: 2
Descriptor Code: 4

---

ERB400I  sid: I/O ERROR ON RMF WRITE. THE SYNAD TEXT FOLLOWS.  text

Explanation: During session  sid, an I/O error that could not be corrected occurred while RMF was writing a record to a report SYSOUT data set.

Source:  Resource Measurement Facility (RMF)

System action: RMF stops writing records to the data set, closes that data set, opens a new one, and retries writing the record. If this retry is successful, RMF continues with no data loss. If unsuccessful, RMF continues processing but does not complete the reports for this interval.

Operator response:  Contact hardware support.

Routing Code: 2
Descriptor Code: 4

---

ERB401I  sid: RMF REPORT SUBTASK FOR INTERVAL BEGINNING  hh.mm.ss  REINSTATED {Ucde | Scde}

Explanation: During the RMF Postprocessor session or session  sid, an RMF report subtask abnormally ended with either a user completion code  Ucde  or a system completion code  Scde . The subtask had been formatting data and writing records to a SYSOUT data set.  hh.mm.ss  is the beginning of the report interval.

System action: When the message occurs during a session, RMF assumes the data being processed is intact. RMF reinitializes the report subtask, closes the old data set, opens a new data set, and writes the report to the new SYSOUT data set. If the problem occurs a second time, RMF ends the report subtask.

When the message occurs during the Postprocessor session, RMF ends the report being processed. If other reports were requested, the Postprocessor continues with them.

System programmer response: Examine the dump, and respond to the original completion code.

Routing Code: 2
Descriptor Code: 4

---

ERB402I  sid: RMF REPORT SUBTASK FOR INTERVAL BEGINNING  hh.mm.ss  ABENDED {Ucde | Scde}

Explanation: During the Postprocessor session or session  sid, an RMF report subtask abnormally ended with either a user completion code  Ucde  or a system completion code  Scde . The subtask had been formatting data and writing records to a SYSOUT data set.  hh.mm.ss  is the beginning of the report interval.

Source:  Resource Measurement Facility (RMF)
System action: If the subtask ended during a display session, RMF continues the session but does not complete the hardcopy reports. For a background session, if the RECORD option is in effect, RMF writes the SMF records containing the data collected for this interval.

If the subtask ended during the Postprocessor session, RMF stops generating and writing all requested interval or duration reports. If other summary or plot reports were requested, the Postprocessor continues with them.

System programmer response: Respond to the completion code.
Routing Code: 2
Descriptor Code: 4

ERB403I  sid: I/O ERROR ON HARDCOPY DATASET - SYNAD TEXT FOLLOWS text

Explanation: During a display or background session sid, an uncorrectable I/O error occurred while RMF was writing to the SYSOUT data set. For a display session, the error occurred because of a print (P) command or because the hardcopy mode was set on (H ON).

The SYNAD text appears in the message.

Source: Resource Measurement Facility (RMF)
System action: For a display session, RMF continues the session but produces no hardcopy output. For a background session, if the RECORD option is in effect, RMF continues measurement but produces no printed reports. If the RECORD option is not in effect for a background session, RMF ends the specific measurement but continues the session.

Operator response: For a display session, data continues to be shown on the display screen; do not issue the print command or turn on hard-copy mode.

In order for a background session to continue to measure data, make sure the RECORD option is in effect.
Routing Code: 2
Descriptor Code: 4

ERB404I  sid: HARDCOPY FUNCTION CANNOT BE USED. USE THE RECALL FUNCTION TO VIEW THE DATA GATHERED

Explanation: RMF issues this message after message ERB403I for display session sid. RMF cannot print your data because of the failing hardcopy data set.

Source: Resource Measurement Facility (RMF)
Operator response: Use the recall function, Rmm, where mm is the menu item. Specify the operands originally specified for the report again. RMF will display the data on the screen.
Routing Code: 2
Descriptor Code: 4

ERB405I  sid: NO DATA WAS FOUND TO FIT YOUR SELECTION CRITERIA

Explanation: During Monitor II session sid, the data gatherer or data reporter routine passed return code 16 to RMF to indicate that the routine produced no data. For an IBM-supplied report, this message means that RMF found no address spaces to meet the selection criteria in the request for the report. For example, if you enter ARDJ jobname

and the named job has not yet started or has already ended, RMF issues this message.

Source: Resource Measurement Facility (RMF)
System action: RMF continues the session. For a display session, RMF waits for the next display command. For a background session, RMF continues measurement but produces no printed reports for this interval.

Operator response: Specify the command again, or change the options to select different criteria.
Routing Code: 2
**ERB406I**  
*sid: ESTAE COULD NOT BE ESTABLISHED BY module*

**Explanation:** During the RMF Postprocessor session or Monitor II or Monitor III session *sid*, the data gatherer or data reporter module named in the message passed return code 20 to RMF, indicating that the ESTAE macro failed.

**Source:** Resource Measurement Facility (RMF)

**System action:** For a display session, RMF stops writing the current report but continues the session; RMF waits for the next command.

For a background session, RMF stops the current measurement but continues with other measurements.

If the error occurred during the RMF Postprocessor session, RMF stops printing the Monitor II session report that was in process. If other reports were requested, the Postprocessor continues with them.

If the error occurred during the Monitor III data reporter session, RMF ends session *sid* but continues processing all other active sessions.

**Operator response:** For a display session, enter a request for another report. For a background session or the Postprocessor, notify the system programmer.

**Routing Code:** 2

**Descriptor Code:** 4

---

**ERB407I**  
*sid: INVALID SYNTAX IN MENU DEFAULT OPERANDS - operands - DURING THIS SESSION DO NOT DEFAULT OPERANDS FOR PICTURE mm*

**Explanation:** During the RMF Postprocessor session or Monitor II session *sid*, a data gatherer or data reporter routine tried to use the default operands for the menu or option list but found that the operand(s) named in the message were not valid for report *mm*.

**Source:** Resource Measurement Facility (RMF)

**System action:** For a display session, RMF stops writing report *mm* but continues the session; RMF waits for the next command.

For a background session, if the RECORD option is in effect and the failure occurred in the data reporter, RMF continues measurement but produces no printed reports. If the RECORD option is not in effect or the failure occurred in the data gatherer, RMF ends the specific measurement but continues the session.

If the error occurred during the RMF Postprocessor session, RMF stops printing the Monitor II session report that was in process. If other reports were requested, the Postprocessor continues with them.

**Operator response:** For a display session, reissue the command, explicitly specifying all operands.

For a background session, modify the options to specify explicitly all operands required for the measurement.

**System programmer response:** Correct the menu table entry that contains the incorrect operands.

**Routing Code:** 2

**Descriptor Code:** 4

---

**ERB408I**  
*sid: RETURN CODE return-code FROM module*

**Explanation:** During the RMF Postprocessor session or during Monitor II session *sid*, the data gatherer or data reporter module named in the message passed return code *return-code* to RMF. The return code is greater than expected.

The meanings of the possible return codes are explained in Monitor II messages, as follows:

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Monitor II Message</th>
</tr>
</thead>
<tbody>
<tr>
<td>0196</td>
<td>ERBA078</td>
</tr>
<tr>
<td>0200</td>
<td>ERBA079</td>
</tr>
<tr>
<td>1200</td>
<td>ERBA075</td>
</tr>
</tbody>
</table>

Chapter 4. ERB messages 489
These messages are documented in z/OS RMF Messages and Codes.

Source: Resource Measurement Facility (RMF)

System action: For a display session, RMF stops writing the current report but continues the session; RMF waits for the next display command.

For a background session, if the RECORD option is in effect and the failure occurred in the data reporter, RMF continues measurement but produces no printed reports. If the RECORD option is not in effect or the failure occurred in the data gatherer, RMF ends the specific measurement but continues the session.

If the error occurred during the RMF Postprocessor session, RMF stops printing the Monitor II session report that was in process. If other reports were requested, the Postprocessor continues with them.

Operator response: For a display session, enter a request for another report.

For a background session, continue the session with other measurements.

Contact your system programmer.

System programmer response: Determine if an installation-supplied module caused the error, or if an IBM-supplied module caused the error.

Routing Code: 2
Descriptor Code: 4

ERB409I  sid: INVALID OPERAND SYNTAX operands

Explanation: During the Postprocessor session or Monitor II background session sid, RMF found incorrect syntax in the option operand(s) named in the message. RMF may have detected the error during the data gathering or the data reporting phase of a measurement.

Source: Resource Measurement Facility (RMF)

System action: For a background session, if the RECORD option is in effect and the failure occurred in the data reporter, RMF continues measurement but produces no printed reports. Or, if the RECORD option is not in effect or the failure occurred in the data gatherer, RMF ends the specific measurement but continues the session.

If the error occurred during the Postprocessor session, RMF stops printing the Monitor II session report that was in process. If other reports were requested, the Postprocessor continues with them.

Operator response: Correct the incorrect session options.

System programmer response: If the error occurred during the Postprocessor session, correct the incorrect control statement before using the Postprocessor again.

Routing Code: 2
Descriptor Code: 4

ERB410I  sid: report TERMINATED ABNORMALLY cde -SESSION sid, SYSTEM sss

Explanation: While the RMF Postprocessor was producing the Monitor II report named in the message for session sid on system sss, the system abnormally ended the Postprocessor with system completion code cde.

Source: Resource Measurement Facility (RMF)

System action: The system produces a dump. If other reports were requested, the Postprocessor continues with them.

System programmer response: Examine the dump, and respond to the completion code.

Routing Code: 2
Descriptor Code: 4
ERB411I INCOMPLETE DATA - MAXRBS VALUE IN MENU ENTRY HAS BEEN EXCEEDED

Explanation: The limited region size prevented the allocation of more storage to increase the number of relocate blocks MAXRBS.

Source: Resource Measurement Facility (RMF)

System action: RMF continues the session. For a display session, RMF produces a report then waits for the next display command. For a background session, RMF produces a report for all measurements taken within the interval; RMF continues all measurements.

System programmer response: Increase the region size to provide enough storage.

Routing Code: 2
Descriptor Code: 4

ERB412I DATA UNAVAILABLE - MONITOR I REPORT NOT ACTIVE

Explanation: For a Monitor II report, RMF could not obtain required data because the corresponding Monitor I option is not active.

Source: Resource Measurement Facility (RMF)

System action: RMF continues the session. For a display session, RMF waits for the next display command. For a background session, RMF continues measurement but produces no SMF record.

System programmer response: Request a TRX, DEV, PGSP, or IOQUEUE report only when a Monitor I session is active with the corresponding option: WKLD, DEVICE, PAGESP, or IOQ, respectively.

Routing Code: 2
Descriptor Code: 4

ERB413I DATA REINITIALIZED - MONITOR I INTERVAL ENDED

Explanation: For a Monitor II report, RMF found that any data reported would be misleading because the source data in the Monitor I measurement had been reinitialized since the previous request for the report.

Source: Resource Measurement Facility (RMF)

System action: RMF continues the session. For a display session, RMF waits for the next display command. For a background session, RMF continues measurement but produces no report for the interval.

System programmer response: Request the report again.

Routing Code: 2
Descriptor Code: 4

ERB425I III: UNABLE TO GATHER RESOURCE resource

Explanation: For an RMF Monitor III session, the resource in the message is not active. This resource is HSM, JES2, JES3, or the second parameter in your RESOURCE option.

Source: Resource Measurement Facility (RMF)

System action: RMF continues the session.

Operator response: If the resource is HSM, the HSM subsystem is not active. Data cannot be collected for HSM until it is activated.

If the resource is anything else, compare it to the primary JES and correct your RESOURCE option.

Routing Code: 2
Descriptor Code: 4,5
**ERB426I • ERB428E**

---

**ERB426I**  
**III: TOO MANY PARAMETERS ENTERED IN source INPUT**

**Explanation:** For RMF Monitor III, the RESOURCE option contained too many parameters. The source of the option is:

- **Source**  
  Where the option was found

- **OPERATOR**  
  In an operator command.

- **PARM**  
  In the PARM field of an EXEC statement in the RMF cataloged procedure.

- **LIBRARY nn**  
  In library member ERBRMFnn.

- **REPLY**  
  In the operator reply to message ERB306D.

- **SYSIN**  
  In an RMF Postprocessor control statement.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF uses the first two parameters and ignores the rest. RMF asks the operator for intervention: RMF issues message ERB305I, listing the current session options, followed by message ERB306D, to which the operator replies by supplying new options or entering ‘GO’. RMF continues other processing.

**Operator response:** Examine the options following message ERB305I, and respond to message ERB306D.

**Routing Code:** 2

**Descriptor Code:** 4,5

---

**ERB427I**  
**sid: INVALID {MONITOR|MEMBER} ID nnnn, COMMAND REJECTED**

**Explanation:** For RMF session sid, you issued a command with incorrect monitor or member ID nnnn. Valid monitor IDs are:

- **For Monitor III:**
  - MIII M3

- **For Monitor II:**
  - MII M2

A valid member ID, which applies only for Monitor III, is any two-character alphabetic string.

**Source:** Resource Measurement Facility (RMF)

**System action:** No action taken.

**Operator response:** Issue the command with the correct ID.

**Routing Code:** 2

**Descriptor Code:** 4

---

**ERB428E**  
**ZZ: jobname NOT FOUND BY RMF VIRTUAL STORAGE REPORT.**

**Explanation:** For an RMF Monitor I session, you requested that the Monitor I virtual storage activity report include the job named in the message. This job is not currently active.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF gathers virtual storage data for common storage and for any requested jobs that are active. At the start of each RMF Monitor I interval, RMF searches for the named job and, if found, deletes this message and starts gathering data for it.

**Operator response:** Make sure you entered the job name correctly. If not, issue a MODIFY command and correctly specify the job in the VSTOR option.

If the job was named correctly but has not yet started, ignore the message. RMF will begin monitoring the job automatically when the next interval begins after the job starts; RMF will delete this message at that time.

**Routing Code:** 2

---

*492 z/OS V1R13.0 MVS System Messages, Vol 5 (EDG-GFS)*
**ERB429I ZZ: STORAGE GROUP DATA NOT AVAILABLE.**

**Explanation:** This message appears at RMF initialization time if the subsystem interface (SSI) is not installed or not active. The storage group (SG) names are not reported; neither are the devices selected by the SG option.

**Source:** Resource Measurement Facility (RMF)

**System action:** None.

**System programmer response:** Ask the operator to start the storage management subsystem (SMS), if it has been installed.

**Routing Code:** 2

**Descriptor Code:** 4

---

**ERB430I ZZ: MONITOR I DATA GATHERER module, interface INTERFACE FAILED. RETURN CODE: rc REASON CODE: rsn. explanation.**

**Explanation:** The RMF Monitor I Data Gatherer module received a return code from the interface interface. The return code and reason code are reported. Additional error information is displayed in the explanation.

**System action:** If issued by module ERBMFSMS, the message reports that the SMS interface has failed. RMF continues, but storage group information cannot be updated.

If issued by module ERBCNFSR, the message reports that RMF could not get the IOS enqueue in order to serialize initial processing with IOS configuration activity. RMF continues processing but might need to retry initialization several times.

If issued by module ERBMFICY or ERBMFDCY, the message reports that the CRYPTO interface has failed. RMF continues, but does no longer collect information about crypto devices in SMF 70-2 records.

**System programmer response:** For SMS interface errors, see the z/OS DFSMSdfp Diagnosis for a description of the return and reason codes. SMS subsystem interface reason code 5009 indicates that the interface was not able to allocate storage in the RMF address space. In this case the RMF region size should be increased.

For CRYPTO interface errors, search the problem reporting databases for an RMF fix providing support for additional crypto devices or report the problem to the IBM Support Center.

**Routing Code:** 2

**Descriptor Code:** 4

---

**ERB431I sid: STATIC AREA CHANGED, date1 time1 INTERVAL. n ‘type’. RECORDS SKIPPED STARTING date2 time2**

**Explanation:** While processing a virtual storage duration report during session sid, the RMF Postprocessor found a change in the static area for the session that produced the input records.

The fields in the message text are:

- **date1 time1** The date and starting time of the duration interval during which the static area changed.
- **n** The number of RMF intervals skipped because of the static area change.
- **date2 time2** The date and starting time of the first RMF measurement interval that was skipped.

**Note:** RMF takes date1 and time1 from the first input record for the duration interval during which the static area changed. Therefore, date1 and time1 may be later than the start date and time specified on the Postprocessor control statements.

**Source:** Resource Measurement Facility (RMF)

**System action:** The Postprocessor continues processing duration reports but ignores all data in system management facility (SMF) records with different static area values.

**System programmer response:** None.
ERB432I • ERB437I

Routing Code: 2
Descriptor Code: 4

ERB432I  sid: UNABLE TO UNALLOCATE SYS1.PARMLIB. RETURN CODE return-code, ERROR CODE eeee, INFORMATION CODE iii

Explanation: During session sid, RMF failed to unallocate SYS1.PARMLIB after options processing.

Source: Resource Measurement Facility (RMF)

System action: RMF continues the session, but continues to hold SYS1.PARMLIB as a shared data set.

Operator response: Continue the session, or end it and correct the situation described by the return, error, and information codes. Refer to the z/OS MVS Programming: Authorized Assembler Services Reference EDT-IXG for further information.

Routing Code: 2
Descriptor Code: 4,5

ERB433I  sid: TOO MANY PRIVATE AREAS FOR COMPLETE VSTOR DURATION RECORD PROCESSING. LAST PRIVATE AREA PROCESSED IS: jobname.

Explanation: During session sid, the RMF Postprocessor was processing a virtual storage duration report that requested all or part of the private area jobs within the specified duration interval. During this processing, the maximum duration record size of 64K was exceeded when the Postprocessor attempted to add a new private area and its associated subpools.

In the message text, jobname is the job name for the last private area successfully added to the end of the duration record.

Source: Resource Measurement Facility (RMF)

System action: The Postprocessor continues processing the virtual storage duration report but ignores all new private area jobs and their associated subpools.

System programmer response: Specify a shorter duration interval or request a smaller number of jobs.

Routing Code: 2
Descriptor Code: 4

ERB434I  sid: REPORT OPTION NOT APPLICABLE IN GOAL MODE

Explanation: Either a DDMN, a TRX command, or the suboption DOMAIN in combination with the ARD, ASD, or ASRM command, was issued.

The Domain Activity report, the Transaction Activity report, and the DOMAIN suboptions are not applicable.

System action: No action is taken.

Source: Resource Measurement Facility (RMF)

Routing Code: 2
Descriptor Code: 4

ERB437I  sid: SEVERE ERROR RECOGNIZED BY RECOVERY MODULE module. ENQUEUE CONTENTION DATA COLLECTION (REINSTATED | TERMINATED).

Explanation: The recovery routines of RMF modules ERBMFCLS or ERBMFEAG encountered an abnormal condition because of the following reasons:

• RMF tried to recover and attempted an internal restart of contention data collection.
• RMF terminated contention data collection after the retry limit was reached.

System action: RMF continues the session.
Operator response: If contention data collection terminated, stop and start RMF if you want to have contention data.

System programmer response: Collect the diagnostics data for events preceding this message like dumps, SYS1.LOGREC data and console messages. Errors recognized by the recovery routine of module ERBMFCLS may be accompanied by GRS messages (for example, ISG344I) providing more details on the problem.

Exceptions recognized by module ERBMFEAG are probably caused by a massive amount of GRS event notification facility records exceeding the capability of the RMF listen exit module. In this case a user abend dump would have been produced prior to the first occurrence of this message. A too low dispatching priority defined for the RMF address space may be the reason for the insufficient capability of the RMF listen exit.

Routing Code: 2
Descriptor Code: 4

---

**ERB450I**  RMF: SMF DATA BUFFER INITIALIZED

Explanation: The SMF Data Buffer of the RMF Sysplex Data Server has been initialized. SMF data of the requested record types will be stored in the data buffer.

Source: Resource Measurement Facility (RMF)

System action: Data buffer processing continues.

Routing Code: 2
Descriptor Code: 4,5

---

**ERB451I**  RMF: SMF DATA BUFFER TERMINATED

Explanation: The SMF Data Buffer of the RMF Sysplex Data Server has been terminated. SMF data will no longer be stored in the data buffer. The data stored in the data buffer is no longer available.

Source: Resource Measurement Facility (RMF)

System action: Data buffer processing ends.

Routing Code: 2
Descriptor Code: 4,5

---

**ERB452I**  RMF: SMF DATA BUFFER REINITIALIZED

Explanation: The SMF data buffer of the RMF Sysplex Data Server has been reinitialized after an error condition was detected and resolved. Data stored in the data buffer up to the reinitialization of the data buffer is lost.

Source: Resource Measurement Facility (RMF)

System action: Data buffer processing continues.

Routing Code: 2
Descriptor Code: 11

---

**ERB453I**  RMF: SMF DATA BUFFER TERMINATED AFTER UNRECOVERABLE ERROR(S)

Explanation: The SMF data buffer of the RMF Sysplex Data Server has been ended after an unrecoverable error condition was detected and resolved. Data stored in the data buffer up to this event is lost.

Source: Resource Measurement Facility (RMF)

System action: Data buffer processing ends.

Operator response: Restart the data buffer.

Routing Code: 2
Descriptor Code: 11
ERB454I  RMF: SMF DATA BUFFER SPACE MODIFICATION STARTED

Explanation: You issued a MODIFY RMF command with the data buffer option in order to reduce the size of the data buffer. The modification of the size of the data buffer becomes effective after the next wrap-around of the buffer.

Source: Resource Measurement Facility (RMF)

System action: Data buffer processing continues. The data buffer size reduction is initiated.

Routing Code: 2
Descriptor Code: 4,5

ERB455I  RMF: SMF DATA BUFFER SPACE MODIFICATION COMPLETED or RMF: SMF DATA BUFFER RECTYPE MODIFICATION COMPLETED

Explanation: You issued a MODIFY RMF command with the data buffer option in order to change the size of the data buffer or the set of SMF record types of the data to be stored in the buffer. The modification of the size of the data buffer has been completed.

Source: Resource Measurement Facility (RMF)

System action: Data buffer processing continues.

Routing Code: 2
Descriptor Code: 4,5

ERB456I  RMF: SMF DATA BUFFER SPACE MODIFICATION IN PROGRESS, SPECIFY FORCE

Explanation: You issued a MODIFY RMF command with the data buffer option in order to change the size of the data buffer. However, no MODIFY command can be processed until another modification that is currently in progress has been completed. The user may override this situation by specifying FORCE on the SPACE subparameter of the data buffer option.

Source: Resource Measurement Facility (RMF)

System action: RMF does not process the SPACE subparameter of the MODIFY command. Data buffer processing continues.

Operator response: If you want the MODIFY command parameters to become effective, reissue the command and specify FORCE on the SPACE subparameter. However, be aware that the specification of the 'FORCE' subparameter may cause loss of SMF data stored in the buffer. This has no impact on SMF data stored in SMF data sets.

Routing Code: 2
Descriptor Code: 4,5

ERB457I  RMF: SMF DATA BUFFER OPTIONS

RMF: SPACE(size) [-- TARGET SIZE]
RMF: RECTYPE(rty_sty_list)

Explanation: A MODIFY RMF command was issued with the data buffer option in order to change the size of the data buffer or the set of SMF record types of the data to be stored in the buffer. However, either no subparameters have been provided with the data buffer option or one of the subparameters had to be changed: either the SPACE subparameter had to be changed by RMF in order to ensure that the data buffer size is a multiple of 4096 and between the defined limits. If a data buffer size modification is currently in progress, the target size (the effective buffer size) will be displayed with the indication " -- TARGET SIZE".

Source: Resource Measurement Facility (RMF)

System action: RMF displays the options currently in effect. Data buffer processing continues.

Routing Code: 2
Descriptor Code: 4,5
ERB458I  RMF: SMF DATA BUFFER OPTION ERROR: UNEXPECTED INPUT CHARACTER(S) "]" IN

RMF: "data_buffer_option_as_entered"
RMF: >>>>>>>>>|

Explanation: A START RMF or a MODIFY RMF command was issued with the data buffer option and a syntax
error was recognized in the data buffer option. The second line of the message repeats the incorrect input, and an
arrow in the third line points to the substring that could not be interpreted.

Source: Resource Measurement Facility (RMF)

System action: RMF rejects the data buffer option of the START command or the entire MODIFY command. If the
incorrect data buffer option was issued on the START command together with Monitor I data gatherer options, it is
also passed to Monitor I option processing, which causes this option to be skipped (as an invalid Monitor I data
gatherer option). The data buffer processing continues without any change of its parameters.

Operator response: Reissue the command with the correct syntax. See the z/OS RMF User's Guide for the correct
syntax.

Routing Code: 2
Descriptor Code: 4,5

ERB459I  RMF: SMF DATA BUFFER INACTIVE

Explanation: A MODIFY RMF command was issued with the data buffer option, but without the SPACE suboption,
and the data buffer does not currently exist.

Source: Resource Measurement Facility (RMF)

System action: No action taken

Operator response: Reissue the command with the SPACE subparameter in order to create a new data buffer.

Routing Code: 2
Descriptor Code: 4,5

ERB460I  RMF: SYSPLEX DATA SERVER REINSTATED AFTER SEVERE ERROR

Explanation: A severe error occurred in the RMF Sysplex Data Server. However, RMF tried to resume RMF Sysplex
Data Server processing. A dump was taken.

Source: Resource Measurement Facility (RMF)

System action: RMF Sysplex Data Server processing continues.

Operator response: Notify system programmer in order to examine the dump.

System programmer response: Examine the dump.

Routing Code: 2
Descriptor Code: 11

ERB461I  RMF: SYSPLEX DATA SERVER TERMINATED AFTER UNRECOVERABLE ERROR(S)

Explanation: One or more irrecoverable errors occurred in the RMF Sysplex Data Server that did not allow the data
server processing to continue. A dump was taken.

Source: Resource Measurement Facility (RMF)

System action: RMF Sysplex Data Server processing ended.

Operator response: Restart RMF. Notify system programmer in order to examine the dump.

System programmer response: Examine the dump.

Routing Code: 2
Descriptor Code: 11
**ERB462I • ERB464I**

**ERB462I** RMF: SYSPLEX DATA SERVER INACTIVE

**Explanation:** A MODIFY RMF command was issued with the data buffer option. However, the data server is inactive and the command can not be processed.

**Source:** Resource Measurement Facility (RMF)

**System action:** No action taken.

**Operator response:** Restart RMF.

**Routing Code:** 2

**Descriptor Code:** 4,5

---

**ERB463I** RMF: SYSPLEX DATA SERVER TERMINATED AFTER IXJOIN RETURN CODE return-code, REASON CODE reason-code

**Explanation:** This situation may be the result of an improper definition of the XCF couple data set. For example, IXJOIN return/reason code 12/4 indicates that the maximum number of XCF groups has been reached and RMF is not able to create the SYSRMF XCF group, and IXJOIN return/reason code 12/8 indicates that the maximum number of XCF members in an XCF group has been reached and RMF is not able to join this XCF group.

**System action:** RMF Sysplex Data Server terminates processing. The RMF Data Buffer for SMF data, the RMF Sysplex Data Services for SMF or RMF data, and RMF cross-system and multi-system reporting for the syplex become unavailable.

**Operator response:** Notify system programmer.

**Routing Code:** 2

**Descriptor Code:** 11

---

**ERB463I** RMF: SYSPLEX DATA SERVER MESSAGE(S) LOST: IXCMSGO RETURN CODE return-code, REASON CODE reason-code

**Explanation:** During the processing of a request from an RMF callable service that was invoked by an application program, the postprocessor, the Monitor III, or the RMF sysplex data server was not able to communicate with another system because of the reason identified by the return and reason code from the cross-system coupling facility (XCF) message out service. RMF retried to send the message several times but failed. The following return and reason codes from XCF cause this message to be issued:

<table>
<thead>
<tr>
<th>rc</th>
<th>rs</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>12</td>
<td>4</td>
<td>The signalling facility is busy; message buffers are temporarily unavailable.</td>
</tr>
<tr>
<td>12</td>
<td>8</td>
<td>All signalling paths to the target member's system are temporarily unavailable.</td>
</tr>
</tbody>
</table>

**Attention:** Both situations might be the result of an improper definition of the XCF system parameters in the active parmib member, COUPLExx. To avoid these error messages, ensure that you have defined an XCF transport class with a MAXMSG value of at least 4096.

**System action:** RMF continues processing, application programs might experience significant delays and do not receive all the data requested with the RMF callable services due to timeout situations.

**Operator response:** Notify system programmer.

**Routing Code:** 2

**Descriptor Code:** 11

**Source:** Resource Measurement Facility (RMF)

---

**ERB464I** ZZ: CACHE DATA COLLECTION FOR cu_type FAILED. RC = return-code, FAILING DEVICE = device

**Explanation:** An attempt by RMF to obtain device counters for cu_type failed. The reason for the failure is indicated by the return code as described below.

**System action:** RMF writes an SMF type 74-5 problem record with status code R745CSC=08, and a return code in
R745CRTN. Processing continues for the next control unit type.

**System programmer response:** Action depends on the reason for the failure, which is indicated by the return code as follows:

04 GETMAIN failed for a caching subsystem during an attempt to obtain storage for device counters.
   
   Increase the REGION parameter in the RMF procedure, and restart RMF.

08 An I/O error occurred in a caching subsystem during an attempt to obtain device counters. If the failure is intermittent, it might result from a RESERVE having been issued against a 3390 device.
   
   Use the device number to locate the failing control unit. If the message is issued in consecutive intervals, and no RESERVE is active, search the problem-reporting data bases for a fix. If there is no fix, save the SMF74-5 records and the system log. Report the problem to the IBM Support Center.

20 The request to obtain device counters failed with an AOM return code 4 and reason code 20. AOM could not access the RMF internal output buffer to store the device counters. Search the problem reporting database for a fix. If there is no fix, save the SMF74-5 records and the system log. Report the problem to the IBM Support Center.

36 At least one storage director had no path available when RMF attempted to obtain device counters.
   
   Ensure that there is a path to each storage director or each caching subsystem from the system on which RMF is running.

40 A caching subsystem had no path available to it when RMF attempted to obtain device counters.
   
   Ensure that there is a path to each storage director or each caching subsystem from the system on which RMF is running.

56 RMF received a bad return code from AOM when attempting to obtain device counters and the AOM reason code returned is other than 04, 16, or 20. This error might result from an online device with no operational path that RMF uses to retrieve the device counters. Make sure that there is at least one operational path to the devices of the cache subsystems from the system on which RMF is running.
   
   Search the problem reporting database for a fix. If there is no fix, save the SMF74-5 records and the system log. Report the problem to the IBM Support Center.

60 An I/O error occurred in a caching subsystem during an attempt to obtain device counters. The attempt to obtain the device counters was terminated by a timeout condition.
   
   Use the device number to locate the failing control unit. Search the problem reporting database for a fix. If there is no fix, save the SMF74-5 records and the system log. Report the problem to the IBM Support Center.

**Source:** Resource Measurement Facility (RMF)

**Routing Code:** 2

**Descriptor Code:** 4

---

**ERB465I ZZ: CACHE DATA COLLECTION FAILED.**

**Explanation:** The cache data collection subtask did not finish processing during an RMF measurement interval. When this hung situation was resolved during the next interval, the cache data in the written record represented the data for both RMF intervals.

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF continues processing with the next interval.

**System programmer response:** Response depends on the length of the RMF interval in question:

- If the message is issued for an interval that was cut short by a STOP or MODIFY command, the cache data collector cannot finish processing, and no data is collected for the interval. Ignore the message.

- If the message is issued for an interval that was not cut short by a STOP or MODIFY command, increase the RMF measurement interval to 15 minutes or more.

- If the message is issued for intervals of 15 minutes or longer, the cause may be a hardware condition, such as “Intervention Required”. Resolve the hardware condition.

**Routing Code:** 2
Descriptor Code: 4

**ERB466I**  PPS: FOR DURATION PROCESSING, ENQ AND/OR TRACE OPTIONS ARE IGNORED.

**Explanation:** The ENQ REPORTS suboption, the TRACE REPORTS suboption or both of them have been specified together with the DINTV option. There is no ENQ or TRACE duration support available. The reporting for these options is suppressed.

**System action:** The specified REPORTS suboptions for ENQ or TRACE are ignored.

**System programmer response:** If the specified REPORTS suboptions for ENQ or TRACE are needed, rerun the job without the DINTV option specified.

Routing Code: 2
Descriptor Code: 4

**ERB467I**  ZZ: ESS DATA COLLECTION FAILED. RC = return_code, FAILING DEVICE = device

**Explanation:** An attempt by RMF to obtain ESS counters failed. The reason for the failure is indicated by the return code as described below.

**System action:** RMF writes an SMF type 74-8 problem record with status code R748CSC=08, and a return code in R748CRTN.

**System programmer response:** Action depends on the reason for the failure, which is indicated by the return code as follows:

- **03** ESS statistics have been requested by RMF Monitor I gathering option ESS, but no enterprise disk system was found that supports ESS statistics. To suppress this message, change the Monitor I option statement to NOESS until an enterprise disk system is available that supports the ESS statistics.
- **04** GETMAIN failed for a caching subsystem during an attempt to obtain storage for ESS counters. Increase the REGION parameter in the RMF procedure and restart RMF.
- **08** An I/O error occurred in a caching subsystem during an attempt to obtain ESS counters. If the failure is intermittent, it might result from a RESERVE having been issued against a 3390 device. Use the device number to locate the failing control unit. If the message is issued in consecutive intervals, and no RESERVE is active, search the problem reporting database for a fix. If there is no fix, save the SMF74-8 records and the system log. Report the problem to the IBM Support Center.
- **20** The request to obtain ESS counters failed with an AOM return code 4 and reason code 20. AOM could not access the RMF internal output buffer to store the ESS counters. Search the problem reporting database for a fix. If there is no fix, save the SMF74-8 records and the system log. Report the problem to the IBM Support Center.
- **36** At least one enterprise disk system had no path available when RMF attempted to obtain ESS counters. Ensure that there is a path to each enterprise disk system from the system on which RMF is running.
- **40** An enterprise disk system had no path available when RMF attempted to obtain ESS counters. Ensure that there is a path to each enterprise disk system from the system on which RMF is running.
- **56** RMF received a bad return code from AOM when attempting to obtain ESS counters and the AOM reason code returned is other than 04, 16 or 20. This error may result from an online device with no operational path that RMF uses to retrieve the ESS counters. Make sure that there is at least one operational path from the system on which RMF is running to the devices contained in the enterprise disk system. Search the problem reporting database for a fix. If there is no fix, save the SMF74-8 records and the system log. Report the problem to the IBM Support Center.
- **60** An I/O error occurred in a caching subsystem during an attempt to obtain ESS counters. The attempt to obtain the device counters was terminated by a timeout condition.
Use the device number to locate the failing control unit. Search the problem reporting database for a fix. If there is no fix, save the SMF74-8 records and the system log. Report the problem to the IBM Support Center.

**Routing Code:** 2  
**Descriptor Code:** 4

**ERB468I**  
**Explanation:** The ESS data collection subtask did not finish processing during an RMF measurement interval. When this hung situation was resolved during the next interval, the ESS counters in the written record represented the data for both RMF intervals.

**System action:** RMF continues processing with the next interval.

**System programmer response:** Response depends on the length of the RMF interval in question:
- If the message is issued for an interval that was cut short by a STOP or MODIFY command, the ESS data collector cannot finish processing, and no data is collected for the interval. Ignore the message.
- If the message is issued for an interval that was not cut short by a STOP or MODIFY command, increase the RMF measurement interval to 15 minutes or more.
- If the message is issued for intervals of 15 minutes or longer, the cause might be a hardware condition, such as “Intervention Required”. Resolve the hardware condition.

**Routing Code:** 2  
**Descriptor Code:** 4

**ERB469I**  
**Explanation:** For exception or overview duration processing, the existing duration processing logic is adapted. This requires that the RTOD and ETOD values are identical. The ETOD value is used for processing.

**System action:** The RTOD value is set to the ETOD value.

**System programmer response:** Check the reporting time value RTOD and the exception reporting time ETOD. See if they contain the required values.

**Routing Code:** 2  
**Descriptor Code:** 4

**ERB470I**  
**Explanation:** The Postprocessor detected a SMF record type tt and subtype ss that is not completely reassembled. The SMF record is written on system yyy within system complex xxx.

**Source:** Resource Measurement Facility (RMF)

**System action:** The SMF record was skipped.

**User response:** Check the SMF data set.

**ERB471I**  
**Explanation:** SMF data from system zzz within sysplex xxx for coupling facility yyy and reporting interval start at mm/dd/yyyy hh.mm.ss does not cover the whole sysplex reporting interval. This message is repeated every time incomplete data is detected. In addition the note "DATA FROM SEVERAL SYSTEMS IS MISSING OR INCOMPLETE! REPORTED DATA MAY BE INEXACT!" is written on each of the coupling facility report parts. In the Coupling Facility Subchannel Activity report and the Coupling Facility Structure Activity report every system name for which data is not complete is marked with a "*".

**Source:** Resource Measurement Facility (RMF)

**System action:** The Postprocessor creates the coupling facility reports indicating incomplete data.
ERB472I  •  ERB476I

User response:  Check the SMF dataset.

**Explanation:** SMF data from system zzz within sysplex xxx for coupling facility yyy and reporting interval start at mm/dd/yyyy hh.mm.ss is expected, but cannot be found. This message is repeated every time missing data is detected. In addition the note "DATA FROM SEVERAL SYSTEMS IS MISSING OR INCOMPLETE! REPORTED DATA MAY BE INEXACT!" is written on each of the coupling facility report parts.

**Source:** Resource Measurement Facility (RMF)

**System action:** The Postprocessor creates the coupling facility reports indicating missing data at the end of the respective reports.

**User response:** Check the SMF data set. Merge the type tt subtype ss SMF records from sysplex xxx, system zzz into the Postprocessor input stream and rerun the Postprocessor.

---

ERB473I  PPS: rr REPORT TERMINATED DUE TO UNRECOVERABLE ERROR

**Explanation:** An error occurred while the Postprocessor was generating a report. The report that caused the problem is identified by rr. rr contains the value that was specified on the REPORTS or SYSRPTS control statement for the Postprocessor (see [z/OS RMF User’s Guide](https://www.ibm.com/support/knowledgecenter/POWER7M/zos90/rrm/rrm0000002.html) for a description of the REPORTS and SYSRPTS control statements).

**Source:** Resource Measurement Facility (RMF)

**System action:** RMF stops formatting and writing all rr reports for this Postprocessor session. If other reports were requested, the Postprocessor continues with them.

**System programmer response:** Examine the dump.

---

ERB474I  PPS: DATA EXCEPTION IN CF REPORTER - REPORTING INTERVAL FOR SYSPLEX xxx WILL BE SKIPPED

**Explanation:** The Postprocessor encountered an error during processing SMF records 74, subtype 4 data for the current reporting interval. Data cannot be reported for this period.

**Source:** Resource Measurement Facility (RMF)

**System action:** The complete reporting interval for sysplex xxx will be skipped. The Postprocessor continues processing with the next reporting interval.

**User response:** If this message occurs more often, check SMF data set.

---

ERB475I  PPS: DATA EXCEPTION IN WLM REPORTER - REPORTING INTERVAL FOR SYSPLEX xxxxxxxxx WILL BE SKIPPED

**Explanation:** The Postprocessor encountered an error during processing SMF records 72, subtype 3 data for the current reporting interval. Data cannot be reported for this period.

**Source:** Resource Measurement Facility (RMF)

**System action:** The complete reporting interval for sysplex xxxxxxxxx will be skipped. The Postprocessor continues processing with the next reporting interval.

**User response:** If the message occurs more often, check SMF data set.

---

ERB476I  PPS: OPEN FAILED FOR OUTPUT DATA SET

**Explanation:** The Postprocessor session failed to open the output data set for cross system reports (PPXSRPTS).

**Source:** Resource Measurement Facility (RMF)

**System action:** The Postprocessor is terminated immediately.

**System programmer response:** Check the output data set.
ERB477I  PPS: WRITE TO OUTPUT DATA SET FAILED
Explanation: The Postprocessor session failed to write to the output data set for cross system reports (PPXSRTS).
Source: Resource Measurement Facility (RMF)
System action: RMF stops formatting and writing all reports for this Postprocessor session. The Postprocessor is terminated.
System programmer response: Check the output data set.

ERB478I  PPS: SMF RECORDS NOT SORTED
Explanation: The SMF records to be processed by the Postprocessor are not sorted. The SMF record input dataset(s) (MFPINPUT) for the Postprocessor job must contain the SMF records sorted in ascending order by RMF interval start time and RMF interval start date.
Source: Resource Measurement Facility (RMF)
System action: The Postprocessor session is terminated.
System programmer response: Ensure that the input dataset contains the SMF records sorted by RMF interval start time and date.

ERB480I  PPS: MAXIMUM STORAGE EXCEEDED - MODULE mm, FUNCTION ff, LINE ll
Explanation: A request to allocate virtual storage at run time failed. The problem occurred in module mm, function ff at line ll.
Source: Resource Measurement Facility (RMF)
System action: RMF stops formatting and writing all reports for this Postprocessor session. The Postprocessor is terminated.
System programmer response: Try to restart the Postprocessor with less cross system reports requested.

ERB481I  PPS: PROGRAM TERMINATED DUE TO AN UNRECOVERABLE ERROR - MODULE mm, FUNCTION ff, LINE ll
Explanation: The Postprocessor detected an unrecoverable error. The problem occurred in module mm, function ff at line ll.
Source: Resource Measurement Facility (RMF)
System action: Postprocessor tries to stop the failing component and continues processing if possible, otherwise the Postprocessor is ended.
System programmer response: Examine the dump.

ERB482I  PP: SMF RECORD xx, SUBTYPE yy SYSTEM ssss SKIPPED, REASON = rs.
Explanation: The Postprocessor cannot use the SMF record type xx subtype yy from system ssss. The record is skipped because of reason code rs.
Source: Resource Measurement Facility (RMF)
System action: The Postprocessor continues with next SMF record.
System programmer response: Action depends on the reason for the failure, which is indicated by the reason code, as follows:
1 The SMF record indicates a problem during collecting cache control unit data. No report is generated in this case.
Refer to the LOGREC for more detailed information and also to message ERB464I issued by the data collector.
2 The skipped record contains data obtained from a storage control after an IML. No action required.
The Postprocessor found a mixture of RMF records and converted CRR records and skipped the record. The records should be separated, and the Postprocessor could run against both types of records.

The skipped record contains inconsistent data. The model number of the SSID it represents has been changed during the collection. Split the duration interval into parts that contain consistent data only.

The skipped record has an unsupported record level. For record type 103, HTTP Rel. 5.2 is required, for record type 108, Domino® Server Rel. 5.0.3 is required.

The skipped record contains inconsistent data. This can result in there not being enough records to create a report for a specific server interval.

**ERB483I**  PPS: PROCESSING TERMINATED DUE TO READ ERROR(S)

**Explanation:** The Postprocessor encountered a persisting read error during read operations from the SMF record source.

**Source:** Resource Measurement Facility (RMF)

**System action:** The Postprocessor stops reading SMF records. The Postprocessor continues processing of SMF records that have been read successfully.

**System programmer response:** Check the SMF record source.

**ERB484I**  PPS: SMF RECORD **tt** SUBTYPE **ss** SYSTEM **xx** SYSPLEX **yy** SKIPPED REASON=**rr**

**Explanation:** The Postprocessor encountered an error during processing of a SMF record type **tt**, subtype **ss**. The SMF record was written on system **xx** within system complex **yy**. Reason **rr** may be one of the following:

**Reason Description**

1. The Postprocessor detected SMF records with incorrect sync values. The problem usually occurs if the RMF gatherers on the various systems in a sysplex do not use identical sync values, or if the sync value on the system(s) changed within the reported time range.

2. The Postprocessor detected a SMF record that contains inconsistent data.

3. The Postprocessor detected an internal processing error while processing a SMF record.

4. Reassembly of broken records failed.

**Source:** Resource Measurement Facility (RMF)

**System action:** The SMF record is skipped. Processing continues.

**System programmer response:** Check the SMF input data set.

**ERB485I**  PPS: NO REPORTABLE DATA FOUND FOR SPECIFIED **xx** OR OVW OPTIONS

**Explanation:** The SMF data set does not contain data for the specified **xx** suboptions or for specified OVW option control statements.

**xx** is a suboption of the SYSRPTS option (that is, WLMGL or SDEVICE).

**Source:** Resource Measurement Facility (RMF)

**System action:** The Postprocessor reports will be generated for those options for which data has been found.

**User response:** Check the specified options.

**ERB486I**  PPS: CROSS SYSTEM REPORT OPTIONS IN EFFECT

**Explanation:** This message appears in the message data set and lists the options in effect for cross system reports in the RMF Postprocessor. The options are listed, one per line, in the form:

**option (value) -- source**

The source indicates where the option was specified and can be either ‘SYSIN’ if the option was specified on a control statement for the Postprocessor or ‘DEFAULT’ if the program defaults are used.
ERB487I  PPS: SYNTAX ERROR IN CONTROL STATEMENT, LINE:ll, ttt

Explanation: The Postprocessor detected a syntax error in the control statement on line 'll'. 'ttt' provides additional information about the syntax error. 'ttt' is not always available. The second line of the message shows the line containing the control statement that caused the syntax error. The third message line points to the control statement that caused the syntax error.

Source: Resource Measurement Facility (RMF)

System action: The Postprocessor stops parsing of control statements. The Postprocessor session is terminated.

System programmer response: Correct the Postprocessor control statements.

ERB488I  PPS: SYSPLEX DATA SERVER OPERATION FAILURE (reason)

Explanation: The Postprocessor failed to use a service of the RMF sysplex data server.

Note: Please verify your JCL to ensure that you want to access the data of the sysplex data service. If you want to access SMF data that have been written to a data set, you need to specify this data set by using the DD-statement MFPINPUT.

'reason' gives a short description of the problem and may contain the following:

SERVER NOT ACTIVE
The RMF sysplex data server is not active. Start the local RMF address space.

DATA BUFFERS INACTIVE
All RMF data buffers for SMF data are inactive on the systems the Postprocessor needs data from. Start the RMF data buffers on the systems you need information from.

FETCH ERBDSQRY FAILED
A trial to dynamically load the ERBDSQRY service into memory failed. Ensure that the load module is available when running the Postprocessor. The Postprocessor session is terminated.

FETCH ERBDSREC FAILED
A trial to dynamically load the ERBDSREC service into memory failed. Ensure that the load module is available when running the Postprocessor. The Postprocessor session is terminated.

INSUFFICIENT AUTHORIZATION
The Postprocessor is not authorized to call the RMF sysplex data services. The Postprocessor session is terminated.

ERBDSQRY SERVICE TIMEOUT
A timeout occurred for the ERBDSQRY service. Postprocessor reports may be not available or may be incomplete due to the timeout situation. Processing continues.

ERBDSREC SERVICE TIMEOUT
A timeout occurred for the ERBDSREC service. Postprocessor reports may be not available or may be incomplete due to the timeout situation. Processing continues.

NO SMF DATA
No SMF data is available from the sysplex data server. SMF data required in order to build the reports requested via Postprocessor control statements is not available. Check the values of the Postprocessor control statements.

ERBDSQRY SERVICE FAILED, RC=return-code, RSN=reason-code
The ERBDSQRY service failed. Refer to a description of the RMF sysplex data server services for a detailed description of the return code and the reason code. The Postprocessor session is terminated.

ERBDSREC SERVICE FAILED, RC=return-code, RSN=reason-code
The ERBDSREC service failed. Refer to a description of the RMF sysplex data server services for a detailed description of the return code and the reason code. The Postprocessor session is terminated.

Source: Resource Measurement Facility (RMF)
**ERB489I • ERB803I**

**System action:** The Postprocessor stops using services of the sysplex data server. Processing of SMF records that have been retrieved continues.

**System programmer response:** See description of reason.

---

**ERB489I**  
**PPS: SYSPLEX DATA SERVER, nn RECORDS NOT RETRIEVED DUE TO rsn**

**Explanation:** The RMF failed to retrieve SMF records via the sysplex data server. 'nn' gives the number of SMF records that could not be retrieved. 'rsn' describes the reason and may be one of the following:

<table>
<thead>
<tr>
<th>Reason</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>TIMEOUT</td>
<td>SMF record(s) could not be retrieved due to timeout conditions in the sysplex data server.</td>
</tr>
<tr>
<td>OVERFLOW</td>
<td>The SMF record(s) could not be retrieved due to data buffer overflow. The SMF records being requested have been replaced in a wrap around data buffer by newer one's before they could be retrieved by the Postprocessor.</td>
</tr>
</tbody>
</table>

**Source:** Resource Measurement Facility (RMF)

**System action:** Processing continues.

---

**ERB490I**  
**PPS: CONFLICTING SUBOPTIONS IN CONTROL STATEMENT, LINE ll:**  
**PPS: STATEMENT IGNORED**

**Explanation:** The combination of selected suboptions is not allowed.

**Source:** Resource Measurement Facility (RMF)

**System action:** The control statement is ignored, processing continues.

**User response:** For OVV control statements, verify that the correct scope has been specified for the selected condition and run the Postprocessor job again.

---

**ERB802I**  
**sid: MONITOR III DATA SET SUPPORT INITIALIZATION FAILED**

**Explanation:** The data set support subtask was attached, but an initialization error occurred.

**Source:** Resource Measurement Facility (RMF)

**System action:** The system ends the data set support subtask.

**Operator response:** Follow the actions specified in the message that precedes ERB802I.

**Routing Code:** 2

**Descriptor Code:** 4,5

---

**ERB803I**  
**sid: MONITOR III DATA SET SUPPORT TERMINATED**

**Explanation:** The data set support subtask ends, and RMF issues this message for both normal and abnormal ending. RMF Monitor III might also issue this message during an internal restart, for example, due to a local time change.

**Source:** Resource Measurement Facility (RMF)

**System action:** The system detaches the data set support subtask.

**Operator response:** None, if the message occurs during normal termination or as result of an internal restart.

**Routing Code:** 2

**Descriptor Code:** 4,5
**ERB806I**  
*sid: nnnnnnn SAMPLES NOT RECORDED ON MONITOR III DATA SET(S)*

**Explanation:** The data gatherer reuses the samples buffer faster than the data set support can write samples to the disk. *nnnnnnn* contains the number of samples that have not been recorded during the data set support session.

**Source:** Resource Measurement Facility (RMF)

**System action:** The Monitor III data gatherer wrote over the samples that the system did not record. (1) A data set support performance problem exists or (2) the wraparound storage (WSTOR value) for the Monitor III data gatherer is too small, causing the data to wrap too fast.

**Operator response:** You can do one of the following:
- Reroute the data sets to a different channel/volume.
- Increase the region size for the Monitor III gatherer.
- Increase the WSTOR option value.

**Routing Code:** 2

**Descriptor Code:** 4

---

**ERB807I**  
*sid: MONITOR III DATA SET SUPPORT ABENDED {Scde|Ucde} IN MODULE xxxxxxx*

**Explanation:** The data set support error recovery routine ERB3GESV gained control due to a program check or a user abend. For a further explanation of the user completion code *(Ucde)*, and the system completion code *(Scde)*, refer to *z/OS RMF Messages and Codes*.

**Source:** Resource Measurement Facility (RMF)

**System action:** The system ends the data set support subtask.

**System programmer response:** If the user completion code is U500, the abnormal ending is a result of a VSAM error in connection with a GENCB, MODCB or SHOWCB macro.

**Routing Code:** 2

**Descriptor Code:** 4

---

**ERB810I**  
*sid: MONITOR III DATA SET SUPPORT ABNORMALLY TERMINATING DURING ERROR RECOVERY {Ucde|Scde}*

**Explanation:** The data set support error recovery routine ERB3GESV gained control due to a program check or a user abend. However, error recovery cannot proceed normally because either a retry is not possible, or the error is recursive. For a further explanation of the user completion code *(Ucde)*, and the system completion code *(Scde)*, refer to *z/OS MVS System Codes*.

**Source:** Resource Measurement Facility (RMF)

**System action:** The system ends the data set support subtask.

**Operator response:** Follow the actions specified in the message that preceded ERB810I.

**System programmer response:** Contact your IBM Support Center.

**Routing Code:** 2

**Descriptor Code:** 4

---

**ERB811I**  
*sid Monitor III data set support for service policy terminated.*

**Explanation:** Too many consecutive errors occurred while trying to copy a service policy to the current active VSAM dataset. Policies are no longer written to the data set.

**Source:** Resource Measurement Facility (RMF)

**System action:** A dump is taken. The Monitor III gatherer continues processing. Data set support remains active.

**System programmer response:** Restart the Monitor III gatherer.

**Routing Code:** 2
**ERB812I • ERB818I**

Descriptor Code:  4

---

**ERB812I**  
*sid:* MONITOR III DATA RECORDING INTO DATA SET *dsname* STOPPED.

**Explanation:** Data set support issues this message indicating the current data set before switching the recording of data to another data set. This message is followed by message ERB813I.

**System action:** None.

**System programmer response:** None.

**Routing Code:** 2

**Descriptor Code:**  4

---

**ERB813I**  
*sid:* ACTIVE MONITOR III DATA SET IS NOW ‘*dsname*’.

**Explanation:** Data set support issues this message indicating the active data set *dsname* after one of the following situations occurred:

- Data set support start.
- Data set support modification.

**Source:** Resource Measurement Facility (RMF)

**System action:** Data set support continues.

**Operator response:** None.

**System programmer response:** None.

**Routing Code:** 2

**Descriptor Code:**  4,5

---

**ERB816I**  
*xxx:* MONITOR III DATA SET SUPPORT VSAM ERROR DURING [OPEN|CLOSE] ON ‘*dsname*’.  
**RETURN CODE** *return-code*  
**REASON CODE** *rsnc*

**Explanation:** A VSAM error occurred during the open or close of *dsname*.

**Source:** Resource Measurement Facility (RMF)

**System action:** One of the following system actions may occur:

- If the Monitor III gatherer issues this message at initialization or modification time, the data set is unusable, but the session continues.
- If the Monitor III gatherer issues this message for a selected data set, data set recording ends.

**Operator response:** Check the return code *return-code* in connection with the reason code *rsnc* for the VSAM error. See z/OS DFSMS Macro Instructions for Data Sets for an explanation of the return codes.

**Routing Code:** 2

**Descriptor Code:**  4,5

---

**ERB818I**  
*sid:* MONITOR III DATA SET SUPPORT DYNAMIC ALLOCATION/UNALLOCATION ERROR ON DATASET ‘*dsname*’.  
**RETURN CODE** *return-code*  
**ERROR CODE** *eeee*  
**INFORMATION CODE** *iiii*

**Explanation:** An attempt to allocate or unallocate the Monitor III data set *dsname* failed.

**Source:** Resource Measurement Facility (RMF)

**System action:** One of the following system actions may occur:

- If the Monitor III gatherer issues this message at initialization or modification time, the data set is unusable, but the session continues.
- If the Monitor III gatherer issues this message for a selected data set, data set recording ends.

**Operator response:** Check the return code rc in connection with the error code *eeee* and the information code *iiii*. 
Then correct the reason for the error. See z/OS MVS Programming: Authorized Assembler Services Guide for an explanation of the return error codes.

ERB823I  •  ERB827I

ERB823I AN INTERNAL OR EXTERNAL SWITCH WAS PERFORMED. NO EMPTY DATASET IS AVAILABLE AND THE DATA SET 'dsname'. WITH THE OLDEST DATE CAN NOT BE REUSED

Explanation: One of two conditions may have caused this message.
  • The current active data set became full causing an internal switch,
  • A switch option was issued. dsname was selected as the new active data set, but the system can not open it for reuse because another user had dsname permanently open.

Source: Resource Measurement Facility (RMF)
System action: The system detaches the data set support subtask.
System programmer response: Add an empty data set, and restart data set support.
Routing Code: 2
Descriptor Code: 4

ERB824I MIII DATASET dsname CONTAINS AN INVALID CI SIZE

Explanation: Data set dsname, which you added to the data set names list, has an invalid CISIZE.

Source: Resource Measurement Facility (RMF)
System action: The gatherer continues processing, but does not write data to data set dsname.
System programmer response: Define a new VSAM data set using the CLIST ERBVSDEF.
Routing Code: 2
Descriptor Code: 4

ERB825I MIII DATASET dsname CONTAINS INVALID RECORD LENGTH

Explanation: Data set dsname, which you added to the data set names list, has an invalid record length.

Source: Resource Measurement Facility (RMF)
System action: The gatherer continues processing, but does not write data to data set dsname.
System programmer response: Define a new VSAM data set using the CLIST ERBVSDEF.
Routing Code: 2
Descriptor Code: 4

ERB826I MIII DATASET dsname CONTAINS DIFFERENT SYSTEM ID

Explanation: During data set support initialization, data set analysis found that data set dsname contains Monitor III records from another system.

Source: Resource Measurement Facility (RMF)
System action: The gatherer continues processing, but does not write data to data set dsname.
System programmer response: Define a new VSAM data set using the CLIST ERBVSDEF, and ensure that each data set is used for records from the same system each session.
Routing Code: 2
Descriptor Code: 4

ERB827I MIII DATASET dsname CONTAINS DIFFERENT SYSPLEX ID

Explanation: During data set support initialization, data set analysis found that data set dsname contains Monitor III records from another sysplex.

Source: Resource Measurement Facility (RMF)
System action: The gatherer continues processing, but does not write data to data set dsname.
System programmer response: Define a new VSAM data set using the CLIST ERBVSDEF, and ensure that each data set is used for records from the same sysplex each session.

Routing Code: 2
Descriptor Code: 4

ERB853I sid: MONITOR III DATA SET SUPPORT VSAM ERROR DURING xxxx ON 'dsname'. RETURN CODE return-code REASON CODE rsnc

Explanation: A VSAM error occurred during a VSAM request xxxx on dsname.

Source: Resource Measurement Facility (RMF)

System action: One of the following system actions may occur:

- If the Monitor III gatherer issues this message at initialization or modification time, the data set is unusable, but the session continues.
- If the Monitor III gatherer issues this message for the active data set, data set recording ends.

Operator response: You can continue the session without obtaining data from dsname. If the current session is with preallocated data sets, check the return code and correct the error. See [z/OS DFSMS Macro Instructions for Data Sets] for an explanation of the return codes.

System programmer response: Check the return code return-code in connection with the reason code rsnc. If the VSAM error is a user error, take the necessary actions to correct it.

Descriptor Code: 4,5
Chapter 5. LANRES messages (EWX, ACP, ASD)

Each message produced by LANRES is preceded by a 10-character prefix of the form **EWXxxnnnn**:

- **EWX** The LANRES product code
- **xx** Task identifier
- **nnnn** Message number
- **s** Severity code
  - **E** Error. Operator action is required. LAN Server continues to function.
  - **I** Information. Operator action is not required.
  - **W** Warning. Operator action may be required.

LANRES on a Front-end Processor uses OS/2 facilities for displaying messages. With these facilities, prefixes are displayed in the form **BFSnnnn**: 

- **BFS** The LANRES product code
- **nnnn** Message number

**EWX Host Messages**

**EWXxx0000I** **DEBUG** p1 p2 p3 p4 p5 p6 p7 p8 p9

**Explanation:** This is a generic diagnostic message used during LANRES software development and debug.

**System action:** Command processing continues.

**User response:** No additional information is given, except for information in the message itself.

**System programmer response:** None.

**Source:** LANRES

**EWXxx0001E** A member name is not allowed when the data set name has special character(s).

**Explanation:** The user attempted to EWXDS GET or EWXDS PUT a member of a partitioned data set where the data set name contained special characters (*). 

**System action:** Command processing ends. The system status remains the same.

**User response:** To EWXDS GET or EWXDS PUT a single member of a partitioned data set, you must state the entire data set name with no special character(s) in the name. To EWXDS GET or EWXDS PUT all the members of a partitioned data set, you need to write a routine that will repeatedly call EWXDS GET or EWXDS PUT specifying a different member with each call.

**System programmer response:** None.

**Source:** LANRES

**EWXxx0004E** Function *function* was unsuccessful. Reason: *reason*.

**Explanation:** The application attempted to perform function, *function*. The attempt was unsuccessful with reason, *reason*.

**System action:** Command processing ends. The system status remains the same.
EWXxx0005E • EWXxx0010E

User response: If possible, correct the reason for the error. Otherwise, contact your system programmer.

System programmer response: If the error cannot be corrected, contact your IBM service representative.

Source: LANRES

EWXxx0005E Conflicting option(s) option(s) specified.

Explanation: Options entered on the command line were in conflict with other options.

System action: Command processing ends. The system status remains the same.

User response: Correct the conflict and reenter the command.

System programmer response: None.

Source: LANRES

EWXxx0006E Duplicate option(s) option specified.

Explanation: Duplicate options were entered on the command line.

System action: Command processing ends. The system status remains the same.

User response: Correct the duplication and reenter the command.

System programmer response: None.

Source: LANRES

EWXxx0008E Incorrect option(s) option(s) specified.

Explanation: The indicated option(s) are not correct. The error may be a misspelling, missing information, incorrect information, incomplete information, or improper abbreviation.

System action: Command processing ends. The system status remains the same.

User response: Correct the error and reenter the command. If the error message did not supply a option(s) value, see z/OS LANRES Configuration Files and Commands for the correct syntax.

System programmer response: None.

Source: LANRES

EWXxx0009E Incorrect parameter(s) parameter(s) specified.

Explanation: The indicated parameter(s) are not correct. The error may be a misspelling, missing information, incorrect information, incomplete information, or improper abbreviation.

System action: Command processing ends. The system status remains the same.

User response: Correct the error and reenter the command. If the error message did not supply a parameter(s) value, see z/OS LANRES Configuration Files and Commands for the correct syntax.

System programmer response: None.

Source: LANRES

EWXxx0010E Too many parameters entered.

Explanation: Extraneous parameters were entered on the command line.

System action: Command processing ends. The system status remains the same.

User response: Correct the error and reenter the command.

System programmer response: None.

EWXxx0011S  Level mismatch between Host and Server programs.
Explanation:  The host is connecting to a NetWare server running an unsupported version of the LANRES NLMs.
System action:  Command processing ends. The system status remains the same.
User response:  Notify your system programmer.
System programmer response:  Verify that the NetWare server is running LANRES NLMs at version 3.0 or greater.
Source:  LANRES

EWXxx0012S  Incorrect function connected or being connected.
Explanation:  The job is attempting to connect to an incorrect function or already has connected to an incorrect function.
System action:  Command processing ends. The system status remains the same.
User response:  Use the EWXCONN LINK command to connect the correct function.
System programmer response:  None.
Source:  LANRES

EWXxx0013S  Request cannot be processed by the server.
Explanation:  A LANRES command has been entered, but the NLM on the server does not recognize the command.
System action:  Command processing ends. The system status remains the same.
User response:  First, verify that the command is correct. If it is and the problem persists, notify your system programmer.
System programmer response:  Check to see if LANRES is installed correctly. Reinstall LANRES if necessary.
Source:  LANRES

EWXxx0014S  Server program version is not compatible with NetWare version.
Explanation:  Your request was directed to a LANRES NLM that requires a different version of NetWare than the one that is installed.
System action:  Command processing ends. The system status remains the same.
User response:  Notify your system programmer.
System programmer response:  Verify whether LANRES is installed correctly. Reinstall LANRES if necessary.
Source:  LANRES

EWXxx0015E  Command not valid before EWXCONN LINK login.
Explanation:  You cannot enter any administration or distribution commands until you are logged into the NetWare server.
System action:  Command processing ends. The system status remains the same.
User response:  Establish a connection to the NetWare server with the EWXCONN LINK command. If you do not have a user ID on the server, notify your system programmer.
System programmer response:  Provide the user with a user ID and, optionally, a password on the server.
Source:  LANRES
EWXxx0016E  The user ID password entered is longer than 127 characters.
Explanation:  The user ID password specified was longer than 127 characters.
System action:  Command processing ends. The system status remains the same.
User response:  If the spelling of the specified user ID password is incorrect, correct it. If the specified password is to be assigned to a user ID, choose a password with less than 127 characters. Reenter the command.
System programmer response:  None.
Source:  LANRES

EWXxx0017E  Cannot open the host file filename. Error returned was: error_text
Explanation:  An error occurred while trying to open the file, filename, on the host. The explanation for the error, error_text, was returned in the message.
System action:  Command processing ends. The system status remains the same.
User response:  Correct the problem indicated by error_text. Reenter the command.
System programmer response:  None.
Source:  LANRES

EWXxx0018E  Cannot read the host file filename. Error returned was: error_text
Explanation:  An error occurred while trying to read the file, filename, on the host. The explanation for the error, error_text, was returned in the message.
System action:  Command processing ends. The system status remains the same.
User response:  Correct the problem indicated by error_text. Reenter the command.
System programmer response:  None.
Source:  LANRES

EWXxx0019E  Insufficient parameters specified.
Explanation:  Additional parameters are required for this command.
System action:  Command processing ends. The system status remains the same.
User response:  Correct the error and reenter the command.
System programmer response:  None.
Source:  LANRES

EWXxx0020W  Cannot close the host file filename. Error returned was: error_text
Explanation:  An error occurred while trying to close the host file, filename. The explanation for the error, error_text, was returned in the message. The command will continue processing even though the indicated file is not closed.
System action:  Command processing continues but the file is not closed.
User response:  Correct the problem indicated by error_text to close the file.
System programmer response:  None.
Source:  LANRES

EWXxx0021E  Permission denied by NetWare server.
Explanation:  The user has insufficient authority to perform the operation. Depending on the task being performed, the proper trustee rights, security equivalences, or work group manager rights may be required. This message may also indicate that you are performing an operation on a read-only file or a directory.
**System action:** Command processing ends. The system status remains the same.

**User response:** Obtain the appropriate authority to perform the action. Or, if the file is read-only and a change does need to be done, the owner of the file, or the supervisor, needs to change the read attribute of the file, then perform the operation again. It is also possible that the operation that you are performing may be on a directory and not a file. Determine if the filename is a directory. You can do this by using the distribution command to list the files and specify the same filename that you entered when you received this message.

**System programmer response:** If appropriate, grant the proper authority to the user.

**Source:** LANRES

---

**EWXxx0029E** Connected to the `function1` function, not the `function2` function.

**Explanation:** You are connected to the `function1` function on the NetWare server, but tried to enter a command to the `function2` function. The command cannot complete.

**System action:** Command processing ends. The system status remains the same.

**User response:** If the problem is in the administration or distribution function, enter the EWXCONN LINK command to establish a connection to the correct function on the NetWare server. Reenter the command that caused the error.

If the problem is in the disk, host-to-LAN print, or LAN-to-host print function, reenter the command that caused the error.

If the problem persists, notify your system programmer.

**System programmer response:** Unload the LANRES NLMs from the NetWare server and load them again. If the problem persists, contact your IBM service representative.

**Source:** LANRES

---

**EWXxx0031E** Cannot write to host file `filename`. Error was: `error_text`

**Explanation:** An error occurred while trying to write to the file, `filename`, on the host. The explanation for the error, `error_text`, was returned in the message.

**System action:** Command processing ends. The system status remains the same.

**User response:** Correct the problem indicated by `error_text`. Reenter the command.

**System programmer response:** None.

**Source:** LANRES

---

**EWXxx0032S** Authentication error. Connection to the NetWare server will be dropped.

**Explanation:** Packets sent between the host and the NetWare server contain signatures to verify that the packet originated from the correct function. If this signature does not match what is expected, then a communications error has occurred and the connection to the NetWare server will be dropped.

**System action:** Command processing ends. The connection to the NetWare server is dropped.

**User response:** Enter the EWXCONN LINK command to establish a new connection to the NetWare server. Reenter the command that caused the error. If the problem persists, notify your system programmer.

**System programmer response:** Unload the LANRES NLMs from the NetWare server and load them again. If the problem persists, check the NetWare server for error messages and contact your IBM service representative.

**Source:** LANRES

---

**EWXxx0033E** Cannot find host file `filename`.

**Explanation:** The host file indicated in the message cannot be found in the search path.

**System action:** Command processing ends. The system status remains the same.

**User response:** Make sure the file name was spelled correctly. If the file name is correct, make sure the file is in
your search path. Correct the problem and reenter the command.

**System programmer response:** None.

EWXX0042E Incorrect user name user specified.

**Explanation:** A user name must be between 1 and 47 characters long, and cannot contain spaces or any of the following special characters:

```
/   (slash)
\   (backslash)
:   (colon)
;   (semicolon)
,   (comma)
*   (asterisk)
?   (question mark)
```

NetWare may also restrict the user name from containing other special characters.

**System action:** Command processing ends. The system status remains the same.

**User response:** Correct the spelling of the specified user name. Reenter the command.

**System programmer response:** None.

**Source:** LANRES

---

EWXX0043E Value missing for option option.

**Explanation:** The specified option requires that an additional value be assigned to it.

**System action:** Command processing ends. The system status remains the same.

**User response:** Correct the error and reenter the command.

**System programmer response:** None.

**Source:** LANRES

---

EWXX0046E Host and Server security passwords do not match for the function function.

**Explanation:** You tried to connect to a LANRES function on the NetWare server but the passwords you used did not match those expected by the server function. Please note that different servers may have different security passwords.

**System action:** Command processing ends. The connection to the NetWare server is dropped.

**User response:** Retry the server connection request specifying the correct security passwords for the server function.

**System programmer response:** None.

**Source:** LANRES

---

EWXX0050E Double-byte characters cannot be specified on the command line.

**Explanation:** Double-type characters were specified on the command line but these characters cannot be processed by the command.

**System action:** Command processing ends. The system status remains the same.
EWXxx0063I  EWXxx0067E

User response: Correct the error and reenter the command.
System programmer response: None.
Source: LANRES

EWXxx0063I  A value for parameter was previously specified; the new value value will be used.
Explanation: A value was already specified for the parameter listed; because the parameter was specified again, the last value associated with the same parameter will be used.
System action: Processing continues.
User response: If the value needed was the first value, retype the command using the parameter only once with the correct data.
System programmer response: None.
Source: LANRES

EWXxx0065E Incorrect nickname nickname specified.
Explanation: A nickname must be between 1 and 47 characters long. A nickname also cannot be the keywords ADMIN, DISK, DIST, HLPRT, or LHPRT.
System action: Command processing ends. The system status remains the same.
User response: Enter the command with a shorter or different nickname.
System programmer response: None.

EWXxx0066E Incorrect component password data set dsname specified.
Explanation: A component password data set was specified in the command but the data set name is incorrect.
System action: Command processing ends. The system status remains the same.
User response: Correct the data set name and reenter the command.
System programmer response: None.
Source: LANRES

EWXxx0067E Incorrect print server name server specified.
Explanation: A print server name must be between 1 and 47 characters long, and cannot contain spaces or any of the following special characters:
/  (slash)
\  (backslash)
:  (colon)
;  (semicolon)
,  (comma)
*  (asterisk)
?  (question mark)

NetWare may also restrict the print server name from containing other special characters.
System action: Command processing ends. The system status remains the same.
User response: Correct the spelling of the specified print server name. Reenter the command.
System programmer response: None.
Source: LANRES
EWXxx0068E Incorrect print queue name queue specified.

Explanation: A print queue name must be between 1 and 47 characters long, and cannot contain spaces or any of the following special characters:

/ (slash)
\ (backslash)
: (colon)
; (semicolon)
, (comma)
* (asterisk)
? (question mark)

NetWare may also restrict the print queue name from containing other special characters.

System action: Command processing ends. The system status remains the same.

User response: Correct the spelling of the specified print queue name. Reenter the command.

System programmer response: None.

Source: LANRES

EWXxx0069E Incorrect group name group specified.

Explanation: A group name must be between 1 and 47 characters long, and cannot contain spaces or any of the following special characters:

/ (slash)
\ (backslash)
: (colon)
; (semicolon)
, (comma)
* (asterisk)
? (question mark)

NetWare may also restrict the group name from containing other special characters.

System action: Command processing ends. The system status remains the same.

User response: Correct the spelling of the specified group name. Reenter the command.

System programmer response: None.

Source: LANRES

EWXxx0070E Incorrect volume name volume specified.

Explanation: A volume name must be between 2 and 15 characters long, and cannot contain spaces or any of the following special characters:

/ (slash)
\ (backslash)
: (colon)
; (semicolon)
, (comma)
* (asterisk)
? (question mark)

NetWare may also restrict the volume name from containing other special characters.

System action: Command processing ends. The system status remains the same.
EWXxx0071E  Your login to the NetWare server has been lost.

Explanation: You cannot issue any more administration or distribution commands to your target NetWare server
because your login to that NetWare server has been lost. The server may no longer be running or the system
administrator may have logged you off the server.

System action: Command processing ends. The connection to the NetWare server is dropped.

User response: Try to reestablish your connection to the NetWare server. If that fails, make sure the server is still
running or ask your system administrator to verify that you still have access to the server.

System programmer response: Verify that the user still has a valid user ID on the NetWare server.

Source: LANRES

EWXxx1003E  No valid procedure names found in procedures file(s).

Explanation: The LAN-to-host service machine program reads the procedures file(s) and extracts the names it finds
to be used as user exits. No user exit programs were found to be valid in the procedures file(s).

System action: The LAN-to-host print service machine stops.

User response: Notify your system programmer.

System programmer response: Verify that the names in the procedures file(s) are correct. Verify that the exits exist
on the system and are accessible by the LAN-to-host print service machine. Restart the LAN-to-host print service
machine after the corrections have been made.

Source: LANRES
EWXxx1005I  The maximum number of queues has been reached.
Explanation:  The number of queues to be serviced exceeds the allowable number. All other queues will be ignored.
System action:  The LAN-to-host print service machine operates on the queues defined.
User response:  None.
System programmer response:  Reduce the number of queues this job processes; start another job to handle any number of queues above 80.
Source:  LANRES

EWXxx1006E Error on the NetWare server. Check the NetWare server console for messages.
Explanation:  An error condition in the LAN-to-host print NLM occurred that the host did not recognize. A message stating the error will be displayed by the NLM and can be found on the NetWare server console.
System action:  The LAN-to-host print service machine stops; the LAN-to-Host print NLM may or may not stop, depending upon the severity.
User response:  Notify your system programmer.
System programmer response:  Check the NetWare server console and perform the instructions that the message states. Restart the service machine after the necessary steps have been taken.
Source:  LANRES

EWXxx1007I Shutting down the LAN-to-host print service machine at the user's request.
Explanation:  The service machine is being shutdown as a result of a interrupt from the keyboard.
System action:  A shutdown can only occur when there is no job currently printing; therefore the shutdown will be normal.
User response:  None.
System programmer response:  None.
Source:  LANRES

EWXxx1008I LAN-to-host print servicing has ended.
Explanation:  The service machine has stopped processing.
System action:  Processing ended. The return code will be the most severe value encountered, among the warning messages.
User response:  None.
System programmer response:  Refer to the previous messages to determine the cause of the service machine stopping.
Source:  LANRES
EWXxx1009E  An unknown packet was received.

**Explanation:** The service machine has received an unknown packet type. The host and NetWare server are out of sync.

**System action:** The LAN-to-host print machine will restart.

**User response:** None.

**System programmer response:** None.

**Source:** LANRES

EWXxx1010E  The print server, *server*, does not exist on the NetWare server.

**Explanation:** The print server entered from the LAN-to-host print service invocation or the default of HOSTPRT does not exist on the NetWare server being connected to.

**System action:** The LAN-to-host print service machine stops.

**User response:** Verify that the correct print server was specified. If correct, contact the NetWare system programmer to have the print queue added to the file server.

**System programmer response:** If a new print server is needed, add it to the NetWare server attached to the LAN-to-host print service machine. A new print server can be added by using the NetWare PCONSOLE utility or the EWXADMIN functions in LANRES.

**Source:** LANRES

EWXxx1011E  No print queues in the Lan-To-Host configuration file for, *Server*.

**Explanation:** There are no print queues associated with the specified print server. Therefore, no jobs would ever be printed.

**System action:** The LAN-to-host print service machine stops.

**User response:** Verify that the correct print server was specified when starting the LAN-to-host print service machine. If so, contact your NetWare system programmer to have the desired queues associated with the requested print server.

**System programmer response:** If the requested print queue does not exist, it must first be created. After the print queue exists, it must be associated with the specified print server, by using the NetWare PCONSOLE utility or the EWXADMIN functions in LANRES.

**Source:** LANRES

EWXxx1012I  The user exit, *exit* has unknown type.

**Explanation:** The user exit listed in the procedures file cannot be processed.

**System action:** The queue associated with the particular exit will not be added to the list of queues for host processing.

**User response:** None.

**System programmer response:** Check the processing type of the user exit and make the necessary changes. Valid types are EXEC, OLDEEXEC, TSO, PGM and INTERNAL.

**Source:** LANRES

EWXxx1013I  The user exit, *exit* listed in the procedures file cannot be found.

**Explanation:** The user exit listed in the procedures file cannot be found in the search order.

**System action:** The queue associated with the particular exit will not be added to the list of queues for host processing.

**User response:** None.
**System programmer response:** Check the accesses granted to the service machine and make the necessary changes.

**Source:** LANRES

---

**EWXxx1014I** Could not translate print queue name, *queue*.

**Explanation:** The queue specified associated with the NPRINT command could not be translated correctly. Therefore the LAN-to-host print service machine cannot determine which user exit to call.

**System action:** The print job is not printed; the LAN-to-host print function continues to run.

**User response:** None.

**System programmer response:** If the translation routine is incorrect there will be other similar messages. Otherwise the name of the print queue may not be correct in EBCDIC.

**Source:** LANRES

---

**EWXxx1015I** Execution of user exit associated with queue, *queue* stopped.

**Explanation:** The user exit associated with the queue specified stopped, because it cannot be found, not executing correctly, or any other possibility.

**System action:** The LAN-to-host print service machine is not stopped. The queue is removed from the list of available queues for LANRES. The queue will no longer be valid until the service machine is stopped and the problem corrected.

**User response:** None.

**System programmer response:** Determine why the user exit cannot be executed.

**Source:** LANRES

---

**EWXxx1016I** Job status message could not be translated.

**Explanation:** The message returned from the user exit stating the status of the print job could not be translated from EBCDIC to ASCII correctly.

**System action:** The print job status is unknown; the LAN-to-host print function continues to run.

**User response:** Notify your system programmer.

**System programmer response:** If the translation routine is in error there will be other similar messages. Otherwise the message may not be correct in terms of translating to ASCII.

**Source:** LANRES

---

**EWXxx1017I** The user exit for queue *queue* is not using the stack correctly.

**Explanation:** The expected amount of data is not on the stack.

**System action:** The service machine continues to run. The status message may not be presented to the client.

**User response:** None.

**System programmer response:** Change the user exit to ensure the proper data is used and returned to the LAN-to-host print service machine.

**Source:** LANRES

---

**EWXxx1018E** Error allocating storage.

**Explanation:** An error was returned when allocating storage.

**System action:** The service machine continues.

**User response:** None.

**System programmer response:** Stop the service machine, free storage, then restart the service machine.
EWXxx1019E  The user exit definition for queue, queue, is incorrect.

Explanation: The syntax of the queue line in the procedures file is incorrect.

System action: The service machine is not stopped, though the queue will not be placed on the available queue list.

User response: None.

System programmer response: Correct the line in procedures file associated with the queue.

Source: LANRES

EWXxx1020E  Translation of the NetWare print server name is not possible.

Explanation: The NetWare print server name could not be translated from EBCDIC to ASCII.

System action: The LAN-to-host print service machine is stopped.

User response: None.

System programmer response: Determine why the server name is not being translated and make the necessary changes.

Source: LANRES

EWXxx1021I  Using the default NetWare print server name, server.

Explanation: No NetWare print server was specified on the command line. The default is being used.

System action: None.

User response: None.

System programmer response: None.

Source: LANRES

EWXxx1022E  Did not specify a NetWare print server after keyword QS.

Explanation: The keyword QS exists in the command but the NetWare print server name did not follow.

System action: Command processing ends.

User response: Reenter the command with a print server name or do not use the QS keyword. If you do not use the QS keyword, the default print server name will be used.

System programmer response: None.

Source: LANRES

EWXxx1023I  All the fields in the print job configuration structure may not be translated correctly.

Explanation: The routine translating the text fields in the print job configuration structure indicated that the translations may not be complete. Some of the fields may not have translated successfully.

System action: The LAN-to-host print service machine is not stopped. This data is not used by the service machine. It is passed directly to the user exits. Though it is probable the user exit will not succeed.

User response: None.

System programmer response: Determine why the translation routine is not translating correctly; keeping in mind it may be the type of data being sent from the NLM.

Source: LANRES
EWXxx1024I The message was longer than 57 bytes.
Explanation: The length of the message exceeded 57 bytes which is the maximum length of a message sent to a client.
System action: The service machine continues to run.
User response: None.
System programmer response: Change the user exit such that the message length does not exceed the maximum.
Source: LANRES

EWXxx1025I The queue name is being truncated to its maximum length of length.
Explanation: The length of the queue name has been exceeded. The queue name will be truncated to fit into the desired length.
System action: The service machine continues to run.
User response: None.
System programmer response: The queue name can be changed to a valid queue name to avoid truncation. Truncation may result in unexpected results.
Source: LANRES

EWXxx1026I The file name is being truncated to its maximum length of length.
Explanation: The length of the file name has been exceeded. The file name will be truncated to fit into the desired length.
System action: The service machine continues to run.
User response: None.
System programmer response: The file name can be changed to a valid file name to avoid truncation. Truncation may result in unexpected results.
Source: LANRES

EWXxx1027I The execution type is being truncated to its maximum length of length.
Explanation: The length of the execution type has been exceeded. The execution type will be truncated to fit into the desired length.
System action: The service machine continues to run.
User response: None.
System programmer response: The execution type may be changed to a valid type to avoid truncation. Truncation may result in unexpected results.
Source: LANRES

EWXxx1028E Could not open procedure file procs. Error was: error_text
Explanation: The program found the procedures file but cannot open the file to read.
System action: LAN-to-host print service machine stops.
User response: Notify your system programmer.
System programmer response: Ensure that the procedures file is not accessed by another process.
Source: LANRES
EWXxx1029E  EWXxx1033E

**EWXxx1029E** Did not specify a debug value after keyword DEBUG.
Explanation: The keyword DEBUG exists in the command but the value did not follow.
System action: Command processing ends.
User response: Re-enter the command with a value for debug, or do not use the DEBUG keyword thus defaulting debug to off.
System programmer response: None.
Source: LANRES

**EWXxx1030E** Cannot create the print job file, *file*. Error was: *error_text*
Explanation: The file, *file*, cannot be created. This file contains the print job the user exits will process. The explanation for the error, *error_text*, was returned in the message.
System action: The service machine stops.
User response: None.
System programmer response: Determine why the file cannot be opened.
Source: LANRES

**EWXxx1031E** Cannot write to print job file *filename*. Error was: *error_text*
Explanation: An error occurred while trying to write to the file, *filename*, on the host. The explanation for the error, *error_text*, was returned in the message.
System action: Command processing ends. The system status remains the same.
User response: None.
System programmer response: Correct the problem indicated by *error_text*.
Source: LANRES

**EWXxx1032E** Unable to run user exit: *error_text*
Explanation: An error occurred while trying to run a user exit. The explanation for the error, *error_text*, was returned in the message.
System action: Command processing ends. The system status remains the same.
User response: None.
System programmer response: Correct the problem indicated by *error_text*.
Source: LANRES

**EWXxx1033E** Incorrect user exit name *user_exit*.
Explanation: A qualified name is not allowed for this exit type. Please specify a simple name for the exit in the EWXLHPRT.PROCS file.
System action: The system status remains the same.
User response: None.
System programmer response: Correct the entry in the procedures file.
Source: LANRES
EWXxx1034E  LANRES connection already established for another function.

Explanation:  A connection to the NetWare server already exists for another LANRES function. LANRES supports only one connection at a time to the NetWare server.

System action:  Command processing ends.

User response:  Drop the existing LANRES connection and restart the LAN-to-Host print server.

System programmer response:  None.

Source:  LANRES

EWXxx1035E  All user exits have been disabled.

Explanation:  All the user exits defined have been disabled due to errors.

System action:  Command processing ends.

User response:  None.

System programmer response:  Review the error messages in the log, correct the problems, and restart the LAN-to-host print server.

Source:  LANRES

EWXxx1036E  Unknown internal exit, exit_name.

Explanation:  The exit name specified is not defined.

System action:  The system status remains the same.

User response:  None.

System programmer response:  Correct the entry in the LAN-to-host print procedures file.

Source:  LANRES

EWXxx1037E  Cannot delete the print job file, file. Error was: error_text.

Explanation:  The file, file, cannot be deleted. This file contains the print job the user exits will process. The explanation for the error, error_text, was returned in the message.

System action:  The service machine stops.

User response:  None.

System programmer response:  Determine why the file cannot be deleted. An exit may not have freed the file.

Source:  LANRES

EWXxx1038E  The print server, server, is in use.

Explanation:  The print server entered from the LAN-to-host print service invocation or the default of HOSTPRT is already being serviced by LANRES.

System action:  Command processing ends.

User response:  None.

System programmer response:  Determine where the print server should be started from or create another print server. If you need to create another print server, a new print server can be added by using the NetWare PCONSOLE utility or the EWXADMIN functions in LANRES.

Source:  LANRES
EWXxx1100E  Cannot open output device. Error returned was: error_text
Explanation: An error occurred while opening the output device.
System action: The print exit is stopped.
User response: None.
System programmer response: Use the error text to determine why the output device cannot be opened, then correct the problem.
Source: LANRES

EWXxx1101E  File file queued for printing.
Explanation: The named file has been processed successfully by LANRES and has been given to the host operating system to print.
System action: The system status remains the same.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx1102E  Printing of file failed.
Explanation: LANRES processing for the named file has failed. Examine other messages in the log to determine the cause of the failure.
System action: The system status remains the same.
User response: Correct any errors and resubmit print job. If problem persists, contact system programmer.
System programmer response: Determine cause of error and take corrective action.
Source: LANRES

EWXxx1103E  Options not found for exit exitname.
Explanation: Print exit exitname expects options to be passed in.
System action: The system status remains the same.
User response: None.
System programmer response: Change the EWXLHPRT.PROCS file to include the necessary options.
Source: LANRES

EWXxx1104E  Incorrect translation type type specified.
Explanation: The translation type specified is incorrect. Valid types are: LINE, SEND, and NONE.
System action: The system status remains the same.
User response: None.
System programmer response: Correct the translation type in the EWXLHPRT.PROCS file.
Source: LANRES

EWXxx1105E  Error writing print data. Error was error_text.
Explanation: An error occurred while writing the processed print data. Use the error text to determine the cause of the failure.
System action: The system status remains the same.
User response: Correct any errors and resubmit print job. If problem persists, contact system programmer.
System programmer response: Determine cause of error and take corrective action.
Source: LANRES

EWXxx1106E Incorrect device type device_type.
Explanation: The device type specified in the LAN-to-host print procedures file is incorrect. The device type must be 3820 or 38PP.
System action: The system status remains the same.
User response: Have the system programmer correct the entry in the LAN-to-host print procedure file.
System programmer response: Correct the entry in the LAN-to-host print procedure file.
Source: LANRES

EWXxx1107E Error writing JCL. Error was error_text.
Explanation: An error occurred while writing JCL needed to print data. Use the error text to determine the cause of the failure.
System action: The system status remains the same.
User response: Correct any errors and resubmit print job. If problem persists, contact system programmer.
System programmer response: Determine cause of error and take corrective action.
Source: LANRES

EWXxx1108E Unable to open JCL member member. Error was error_text.
Explanation: An error occurred while trying to read the member member. The member will be found in the dataset pointed to by DD EWXLHJCL or prefix.EWXLHPRT.JCL if the DD does not exist. Member EWXLHJOB is the JOB statement that will be used for all JCL members that do not start with their own JOB statements. Use the error text to determine the cause of the failure.
System action: The system status remains the same.
User response: Have the system programmer correct the error then resubmit the print job.
System programmer response: Determine cause of error and take corrective action.
Source: LANRES

EWXxx1109E Unable to open job. Error was error_text.
Explanation: An error occurred while trying to open the job. Use the error text to determine the cause of the failure.
System action: The system status remains the same.
User response: Have the system programmer correct the error then resubmit the print job.
System programmer response: Determine cause of error and take corrective action.
Source: LANRES

EWXxx1151E Incorrect AFP structured field.
Explanation: An Incorrect structured field was found in the input to Enhanced Print stream transformation.
System action: The print stream currently being translated is terminated.
User response: Re-submit the print job. If it still fails, there is probably a problem with the print stream to be translated.
System programmer response: None.
Source: LANRES
### EWXxx1152E  Begin Document AFP structured field not found.

**Explanation:** An Begin Document AFP structured field was not found in the first 100 bytes of information to be translated.

**System action:** The print stream currently being translated is terminated.

**User response:** Re-submit the print job. If it still fails, there is probably a problem with the print stream to be translated.

**System programmer response:** None.

**Source:** LANRES

### EWXxx1153E  Incorrect AFP structured field length.

**Explanation:** An AFP structured field was found with an incorrect length.

**System action:** The print stream currently being translated is terminated.

**User response:** Re-submit the print job. If it still fails, there is probably a problem with the print stream to be translated.

**System programmer response:** None.

**Source:** LANRES

### EWXxx1154E  Incorrect AFP SF identifier detected.

**Explanation:** An incorrect AFP structured field identifier was found.

**System action:** The print stream currently being translated is terminated.

**User response:** Re-submit the print job. If it still fails, there is probably a problem with the print stream to be translated.

**System programmer response:** None.

**Source:** LANRES

### EWXxx1155E  Dataset *dataset_name* is not a PDS dataset.

**Explanation:** While trying to locate a file need for transformation, a dataset was encountered that was not properly allocated.

**System action:** The print stream currently being translated is terminated.

**User response:** Re-allocate the dataset as a PDS dataset then re-submit the print job.

**System programmer response:** None.

**Source:** LANRES

### EWXxx1156E  Unable to open file *filename*.

**Explanation:** While trying to open file *filename* needed for transformation, an error occurred.

**System action:** The print stream currently being translated is terminated.

**User response:** None.

**System programmer response:** Verify that the file exists and re-submit the print job.

**Source:** LANRES
EWXxx1157W  Unable to use scalable font file filename.
Explanation: While trying to read file filename a problem was encountered.
System action: Transformation continues, but the output will not use this font.
User response: None.
System programmer response: Verify that the file filename is in PCL Scalable font.
Source: LANRES

EWXxx1158I The maximum number of Soft fonts soft_font_max has been reached.
Explanation: While trying to add a soft font, it was the maximum number of soft fonts was reached. The maximum number of soft fonts is 200.
System action: Transformation continues.
User response: None.
System programmer response: Update the queue profile to contain fewer soft fonts.
Source: LANRES

EWXxx1159W  Font font_name font bitmap file_name does not exist.
Explanation: The font file file_name cannot be found.
System action: Transformation continues, but the output will not use this font.
User response: None.
System programmer response: Make sure file file_name exists.
Source: LANRES

EWXxx1160W  font_type entry font_name dataset file_name is incorrect.
Explanation: The font_type entry file file_name cannot be found.
System action: Transformation continues, but the output will not be in this font.
User response: None.
System programmer response: Make sure file file_name exists.
Source: LANRES

EWXxx1161E Mode entry not found in queue profile file_name.
Explanation: No valid mode entries were found in file file_name.
System action: Transformation is terminated.
User response: None.
System programmer response: Add a mode entry into the queue profile file_name.
Source: LANRES

EWXxx1162W  Incorrect entry_type entry in queue profile file_name.
Explanation: An incorrect entry_type was found in file file_name.
System action: Transformation continues but the option specified by entry_type will not be used.
User response: None.
System programmer response: Correct the entry_type entry in the queue profile file_name.
Source: LANRES
EWXxx1163W  Duplicate entry_type entry in queue profile file_name is ignored.
Explanation: A duplicate entry_type was found in file file_name.
System action: Transformation continues.
User response: None.
System programmer response: Remove the additional entry_type entry in the queue profile file_name.
Source: LANRES

EWXxx1164W  Incorrect class definition class in AFPFONT entry afpfont_name in queue profile file_name is ignored.
Explanation: An incorrect AFPFONT entry afpfont_name was detected in queue profile file_name.
System action: Transformation continues but this AFPFONT entry is ignored.
User response: None.
System programmer response: Correct the AFPFONT entry afpfont_name in the queue profile file_name.
Source: LANRES

EWXxx1165W  Incorrect scale scale_type of scale_value in queue profile file_name.
Explanation: A scale_type scale of scale_value is not valid. Valid values are between 50 and 200.
System action: Transformation continues but scaling is set to the default of 100. If no other scale entry was found in queue profile file_name.
User response: None.
System programmer response: Correct the Scale entry in the queue profile file_name to have both the horizontal and vertical scales between 50 and 200.
Source: LANRES

EWXxx1166W  Scalfont entry class in queue profile file_name is incorrect.
Explanation: An incorrect class was found on a Scalfont entry in the queue profile file_name.
System action: Transformation continues but this scalfont is not used.
User response: None.
System programmer response: Check the class and attribute specified on the Scalfont entry.
Source: LANRES

EWXxx1167W  No file specified on Scalfont entry class in queue profile file_name.
Explanation: The file name is missing from scalfont entry class.
System action: Transformation continues but this scalfont is not used.
User response: None.
System programmer response: Add the file name on the specified on the Scalfont entry.
Source: LANRES

EWXxx1168W  Unable to open file file_name.
Explanation: The file file_name cannot be opened.
System action: Transformation continues but this file is not used.
User response: None.
System programmer response: Verify that the file file_name exists.
EWXxx1169W Incorrect font header in file file_name.
Explanation: The file file_name does not have a valid font header.
System action: Transformation continues but this font file is not used.
User response: None.
System programmer response: Verify that the file file_name is a PCL font bit map.
Source: LANRES

EWXxx1170W Incorrect Setup index setup_index in queue profile file_name.
Explanation: The Setup string index setup_index is not between 1 and 4.
System action: Transformation continues but this Setup string is not used.
User response: None.
System programmer response: Change the Setup string index to be between 1 and 4.
Source: LANRES

EWXxx1171W Font entry class is incorrect.
Explanation: The class, pitch or attribute on the font entry are incorrect.
System action: Transformation continues but this font entry is not used.
User response: None.
System programmer response: Enter a valid class pitch or attribute.
Source: LANRES

EWXxx1173E Error found in Host-to-LAN print Transformation file.
Explanation: An internal error has been detected with one of the LANRES enhanced print stream transformation files.
System action: Transformation is terminated.
User response: None.
System programmer response: Verify that all of the LANRES Transformation files are accessible and re-submit the print job. If the problem persists, contact your IBM service representative.
Source: LANRES

EWXxx1178E No free storage available.
Explanation: There is no storage available for a free storage request.
System action: The command terminates.
User response: None.
System programmer response: Allocate more storage for host-to-LAN print and restart host-to-LAN Print.
Source: LANRES

EWXxx1179E No User parameters specified for user exit EWXLTRN.
Explanation: There is no queue profile specified for the EWXLTRN user exit.
System action: The command terminates.
User response: None.
EWXxx1180E • EWXxx1345E

System programmer response: Place the name of the queue profile as a parameter to the EWXHLTRN user exit.
Source: LANRES

EWXxx1180E Transformation output buffer full.
Explanation: The buffer used to store transformed data is full.
System action: The print stream currently being translated is terminated.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx1341E The Host to LAN print queue context could not be set.
Explanation: The entry specified for the print queue in the configuration dataset is probably incorrect.
System action: The print job is not processed at the server.
User response: Correct the queue name and context in the Host to LAN configuration dataset.
System programmer response: None.
Source: LANRES

EWXxx1342E Host to LAN print storage allocation failure.
Explanation: A storage allocation request has failed on the server.
System action: The print job is not processed at the server.
User response: Verify that sufficient storage is available on the server or increase storage if necessary.
System programmer response: None.
Source: LANRES

EWXxx1343E The server internal address was not found.
Explanation: The address of the server on which the print queue resides cannot be obtained.
System action: The print job is not processed at the server.
User response: Verify that the selected server is operational and that the proper volume is mounted.
System programmer response: None.
Source: LANRES

EWXxx1344E A file server connection could not be established.
Explanation: An attempt to connect to the server on which the print queue resides has failed.
System action: The print job is not processed at the server.
User response: Verify that the server user licenses have not been exceeded.
System programmer response: None.
Source: LANRES

EWXxx1345E The server connection cannot be authenticated.
Explanation: The LANRES object does not have access to resources on the server.
System action: The print job is not processed at the server.
User response: Unload and reload the LANRES object with access to server resources.
System programmer response:  None.
Source:  LANRES

EWXxx1351E  Print user exit exitname has incorrect type type

Explanation:  The type specified for the user exit exitname in the host-to-LAN print procedures file is not EXEC or PGM.

System action:  The user exit is ignored. The system status remains the same.
User response:  Correct the user exit type so that it is EXEC or PGM.
System programmer response:  None.
Source:  LANRES

EWXxx1352E  No valid exit names were found in the print exits file.

Explanation:  The host-to-LAN print server reads the print exits file and verifies that the exits are of the proper type. No exit names were found with correct exit types.

System action:  Command processing ends. The system status remains the same.
User response:  Correct the user exit types so that they are EXEC or MODULE.
System programmer response:  None.
Source:  LANRES

EWXxx1353E  An error occurred on the NetWare server.

Explanation:  An error on the NetWare file server that the host did not recognize. The error will be displayed on the NetWare system console.

System action:  The host server stops.
User response:  Notify your NetWare system programmer.
System programmer response:  Check the NetWare console for error messages and refer to the explanation associated with the NetWare error messages.
Source:  LANRES

EWXxx1354E  File server fileserver does not exist.

Explanation:  A NetWare file server was selected for the print request, but the file server could not be found.

System action:  The print job is canceled.
User response:  Correct the file server name in the host-to-LAN print defaults file and restart the host-to-LAN print server.
System programmer response:  If a file server that was started no longer exists, check the file server console for error messages. Restart the file server when the error is corrected and verify operation of the system.
Source:  LANRES

EWXxx1355E  An error occurred while sending print data to the NetWare server.

Explanation:  An error occurred during the transmission of a print job from the host to the NetWare server. The most probable cause is the loss of a data packet.

System action:  The job attempts to print again.
User response:  If necessary, contact your system programmer.
System programmer response:  If this error continues on a regular basis, verify that the communications method is properly configured.
EWXxx1356E  Print queue printqueue was not found.

Explanation:  The specified print queue on the NetWare server was not found.

System action:  The print job is canceled.

User response:  Correct the print queue name in the host-to-LAN print defaults file and restart the host-to-LAN print server. Notify the system programmer if a new print queue is needed.

System programmer response:  If needed, add a new print queue by using either the NetWare PCONSOLE utility or the LANRES Add NetWare Print Server-Queue command.

Source:  LANRES

EWXxx1357E  The timeout value specified, timeout, is not numeric.

Explanation:  The timeout value used to determine how often the host-to-LAN print server checks for completed jobs is not numeric data. The data must be in terms of the number of seconds to wait between checks.

System action:  Command processing ends. The system status remains the same.

User response:  Reenter the command with a numeric timeout value.

System programmer response:  None.

Source:  LANRES

EWXxx1358E  The timeout value specified, timeout, is not in a range of 1 through 359999.

Explanation:  The timeout value cannot exceed 359999 seconds. It must be a positive number.

System action:  Command processing ends. The system status remains the same.

User response:  Reenter the command with a numeric timeout value in the correct range.

System programmer response:  None.

Source:  LANRES

EWXxx1359I  The timeout value specified is timeout.

Explanation:  The timeout value specified on the command is displayed.

System action:  The command continues.

User response:  None.

System programmer response:  None.

Source:  LANRES

EWXxx1360E  API error. Check NetWare server console for messages.

Explanation:  An error occurred while trying to process an internal NetWare API call.

System action:  The job will be printed after the error is corrected.

User response:  Notify your NetWare system programmer.

System programmer response:  Look on the NetWare server console for additional messages. Follow the directions for those messages.

Source:  LANRES
EWXxx1361I Print job jobnumber (jobid) is ready for printing on the server.
Explanation: The specified print job is waiting to be printed.
System action: None.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx1362I Print job jobnumber (jobid) has been printed.
Explanation: The specified print job was transferred from the NetWare print queue to the printer.
System action: The specified operation was performed.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx1363I No print jobs currently waiting to be printed.
Explanation: There are no print jobs, for the user ID specified, residing in the NetWare print queues.
System action: None.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx1364I Error specifying option option, value value used.
Explanation: The option option in the host-to-LAN print defaults file was not set to one of the required values. It is set to value
System action: Processing continues.
User response: Correct the value specified in the host-to-LAN printing defaults file.
System programmer response: None.
Source: LANRES

EWXxx1365I The host-to-LAN print server is ending.
Explanation: A stop command was entered for the host-to-LAN print server.
System action: The host-to-LAN print server stops.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx1366E Error reading parameter parameter on line line of the host-to-LAN print definition data set dsname.
Explanation: The host-to-LAN print server detected an error in parameter parameter on line line of the definition data set allocated dsname.
System action: The line is ignored.
User response: Correct the error in the definition data set.
System programmer response: None.
EWXxx1374E  Cannot create a REXX stack buffer.
The error returned was:  error_text

Explanation:  An error occurred while trying to create a REXX stack buffer on the host. The explanation for the error, error_text, was returned in the message.

System action:  Command processing ends. The system status remains the same.

User response:  Correct the problem indicated by error_text.  Reenter the command.

System programmer response:  None.

Source:  LANRES

EWXxx1377I  Printer printer Host ID hostid NetWare Queue queue NetWare Server server ASCII NOTIFY Exit Name exitname exittype (exitparms

Explanation:  The message lists the value of an entry in the host-to-LAN print printer definition table.

System action:  None.

User response:  None.

System programmer response:  None.

Source:  LANRES

EWXxx1378I  Printer printer has already been started.

Explanation:  The printer printer is currently connected to JES or VTAM® and does not need to be started.

System action:  The command to start the printer is not processed.

User response:  None.

System programmer response:  None.

Source:  LANRES

EWXxx1379I  Printer printer_name is not an active printer.

Explanation:  The command issued for printer printer_name failed because the printer was not found in the list of active printers.

System action:  The operator command is not processed.

User response:  Reenter the operator command with the correct printer name.

System programmer response:  None.

Source:  LANRES

EWXxx1380I  An unknown command subcommand was entered.

Explanation:  An operator command other than F or P was entered.

System action:  The operator command is not processed.

User response:  Reenter the operator command with the correct command.

System programmer response:  None.

Source:  LANRES
EWXxx1381I  An unknown printer subcommand *subcommand* was entered.
Explanation: A printer subcommand other than, F, A, D, or Z was entered.
System action: The operator command is not processed.
User response: Reenter the operator command with the correct subcommand.
System programmer response: None.
Source: LANRES

EWXxx1382I  An incomplete operator command was entered.
Explanation: The LANRES host-to-LAN print server did not find a complete operator command statement.
System action: The operator command is not processed.
User response: Reenter the operator command with the required information.
System programmer response: None.
Source: LANRES

EWXxx1383I  The printer definition on line *lineno* is incomplete.
Explanation: The LANRES host-to-LAN print server did not find a complete printer definition statement.
System action: The printer definition is not processed.
User response: If one of the parameters in the printer definition statement was incorrect, correct it. Otherwise add the missing parameters to the printer definition statement.
System programmer response: None.
Source: LANRES

EWXxx1384I  Error in parameter *parameter* in command buffer.
Explanation: The LANRES/MVS host-to-LAN print server found an error in parameter *parameter* in the command buffer.
System action: The operator command is not processed.
User response: Correct the error and try the command again.
System programmer response: None.
Source: LANRES

EWXxx1385E  The JES START command must be used to start a JES printer.
Explanation: A host START command was issued for a host-to-LAN JES printer. JES local printers must be started using the JES $S command.
System action: The operator command is not processed.
User response: Retry the operation using the JES $S command.
System programmer response: None.
Source: LANRES

EWXxx1387E  The LANRES host-to-LAN Print server could not connect with JES.
Explanation: The LANRES host-to-LAN print server received a non-zero return code from the FSIREQ CONNECT service.
System action: The LANRES host-to-LAN print server ends.
User response: Contact your system programmer.
EWXxx1388I • EWXxx1392I

System programmer response: Check the FSSDEF statements to make sure that the host-to-LAN printer server was correctly defined to JES. If no errors are found contact your IBM service representative.

Source: LANRES

---

EWXxx1388I All printer routines have not been stopped

Explanation: JES requested that the Host-to-LAN print server end, but there were still active printers.

System action: The host-to-LAN print server ends.

User response: Issue the JES commands to stop the printers, then try to stop LANRES host-to-LAN print.

System programmer response: None.

Source: LANRES

---

EWXxx1389I The host-to-LAN print server has ended.

Explanation: The LANRES host-to-LAN print server received a shut-down command from JES, or ended abnormally.

System action: The LANRES host-to-LAN print server ends.

User response: None.

System programmer response: None.

Source: LANRES

---

EWXxx1390E The host-to-LAN print server could not start printer printer_name

Explanation: The LANRES host-to-LAN print server received a start printer command from JES, but could not start the printer routine.

System action: Processing continues.

User response: Contact your system programmer.

System programmer response: Check the message log for the host-to-LAN print server for other error messages to determine why the ATTACH failed. If necessary, contact your IBM service representative.

Source: LANRES

---

EWXxx1391I The host-to-LAN print server could not find the specified printer printer_name

Explanation: The LANRES host-to-LAN print server received a start printer command, but no printer definition with the specified printer ID was found.

System action: Processing continues.

User response: Contact your system programmer.

System programmer response: Check the message log for the host-to-LAN print server for other error messages to determine why the printer was not found. If no definition exists for the printer, it may be added using the MODIFY operator command.

Source: LANRES

---

EWXxx1392I The host-to-LAN print server received error error_text when requesting a session with PLU luname

Explanation: The LANRES host-to-LAN print server’s attempt to connect to the PLU luname ended with error error_text.

System action: The printer is not started.

User response: Contact your system programmer.

System programmer response: Check the message log for the host-to-LAN print server for other error messages to determine why the session could not be established.
EWXxx1393I  The option option is no longer used. It is ignored.
Explanation:  The option specified is no longer used in the current release of LANRES.
System action:  The printer is not started.
User response:  Contact your system programmer.
System programmer response:  Check the message log for the host-to-LAN print server for other error messages to determine why the session could not be established.
Source:  LANRES

EWXxx1394E  The server name server was not found in the host-to-LAN print servers file.
Explanation:  The host-to-LAN print command could not find the server name server in the host-to-LAN print servers file.
System action:  The host-to-LAN print command ends.
User response:  Add the entry for the server to the servers file.
System programmer response:  None.
Source:  LANRES

EWXxx1395E  LANRES connection already established for another function.
Explanation:  A connection to the NetWare server already exists for another LANRES function. LANRES supports only one connection at a time to the NetWare server.
System action:  Command processing ends.
User response:  Drop the existing LANRES connection and restart the host-to-LAN print server.
System programmer response:  None.
Source:  LANRES

EWXxx1396E  Error specifying parameter parameter of the host-to-LAN print servers file.
Explanation:  The value of parameter parameter in the host-to-LAN print servers file is incorrect.
System action:  Command processing ends.
User response:  Correct the error and retry the print command.
System programmer response:  None.
Source:  LANRES

EWXxx1397E  Line number number of the host-to-LAN print servers file is incomplete.
Explanation:  Not enough parameters were specified in the line of the host-to-LAN print servers file.
System action:  Command processing ends.
User response:  Correct the error in the file.
System programmer response:  None.
Source:  LANRES
EWXxx1398I • EWXxx1406E

EWXxx1398I  The file server fileserver is on the network.

Explanation:  The file server specified in this message is currently active on the LAN. This message should appear only once for each active file server currently on the LAN when an EWXCONN QUERY PRINT (TYPE SLIST) function is requested.

System action:  None.

User response:  None.

System programmer response:  None.

Source:  LANRES

EWXxx1403E  The host-to-LAN print server could not create a linkage table entry.

Explanation:  An error occurred when the host-to-LAN print server attempted to create a linkage table entry.

System action:  The host-to-LAN printer task ends.

User response:  Contact your system programmer.

System programmer response:  Search problem reporting databases for a fix for the problem. If no fix exists, contact the IBM Support Center.

Source:  LANRES

EWXxx1404E  The host-to-LAN print server could not create an entry table entry.

Explanation:  An error occurred when the host-to-LAN print server attempted to add an entry to the entry table.

System action:  The host-to-LAN printer task ends.

User response:  Contact your system programmer.

System programmer response:  Search problem reporting databases for a fix for the problem. If no fix exists, contact the IBM Support Center.

Source:  LANRES

EWXxx1405E  The host-to-LAN print server is not a started task.

Explanation:  The host-to-LAN print server determined that it was not started by JES.

System action:  The host-to-LAN printer task ends.

User response:  Contact your system programmer.

System programmer response:  Define the necessary JES statements to start the host-to-LAN print server as a functional subsystem.

Source:  LANRES

EWXxx1406E  The host-to-LAN print server could not find module EWXHLPJS.

Explanation:  An error occurred when the host-to-LAN print server attempted to access module EWXHLPJS in STEPLIB.

System action:  The host-to-LAN printer task ends.

User response:  Contact your system programmer.

System programmer response:  Check that a STEPLIB DD exists in the procedure used to run the host-to-LAN print functional subsystem, and that module EWXHLPJS is contained in the library.

Source:  LANRES
EWXxx1407E  The host-to-LAN print server could not open STEPLIB.
Explanation:  An error occurred when the host-to-LAN print server attempted to access a module in STEPLIB.
System action:  The host-to-LAN printer task ends.
User response:  Contact your system programmer.
System programmer response:  Check that a STEPLIB DD exists in the procedure used to run the host-to-LAN print functional subsystem.
Source:  LANRES

EWXxx1408E  The host-to-LAN print server could not create the vector table.
Explanation:  An error occurred when the host-to-LAN print server attempted to save the address of the vector table.
System action:  The host-to-LAN printer task ends.
User response:  Contact your system programmer.
System programmer response:  Search problem reporting databases for a fix for the problem. If no fix exists, contact the IBM Support Center.
Source:  LANRES

EWXxx1409E  The host-to-LAN print server could not connect to JES.
Explanation:  An error occurred when the host-to-LAN print server attempted to connect to JES.
System action:  The host-to-LAN printer task ends.
User response:  Contact your system programmer.
System programmer response:  Check that the definition of the host-to-LAN print functional subsystem is correct. If it is, contact IBM support.
Source:  LANRES

EWXxx1410I  The host-to-LAN print server received error error_text when opening the ACB for printer printer_name.
Explanation:  The host-to-LAN printer server attempted to open an ACB for printer printer_name and received an error.
System action:  The host-to-LAN printer task ends.
User response:  Correct the error. If the error cannot be corrected, notify your system programmer.
System programmer response:  Check that the VTAM definition for the printer is correct.
Source:  LANRES

EWXxx1411I  The DELETE\MODIFY command cannot be issued for an active printer.
Explanation:  The host-to-LAN printer server received an operator request to delete an entry from the printer definition table. However, a printer with name printer_name is currently active.
System action:  The host-to-LAN printer definition table is not updated.
User response:  None.
System programmer response:  None.
Source:  LANRES
EWXxx1412I  The definition for printer printer_name was not found.

Explanation:  The host-to-LAN printer server received an operator request to delete an entry from the printer definition table. However, an entry with name printer_name does not exist.

System action:  The host-to-LAN printer definition table is not updated.

User response:  None.

System programmer response:  None.

Source:  LANRES

EWXxx1413I  The definition for printer printer_name already exists.

Explanation:  The host-to-LAN printer server received an operator request to add an entry to the printer definition table. However, an entry with name printer_name already exists.

System action:  The host-to-LAN printer definition table is not updated.

User response:  None.

System programmer response:  None.

Source:  LANRES

EWXxx1414I  The host-to-LAN print server could not start a printer because communications are not active.

Explanation:  The host-to-LAN printer server received a request to start a printer from JES. However, communications with the NetWare server are not active.

System action:  The host-to-LAN printer server continues. No printers will be started.

User response:  Contact your system programmer.

System programmer response:  Ensure that the communications definition for the host-to-LAN print server is correct. A communications definition may be changed using the MODIFY operator command. Communications may be restarted using the MODIFY operator command.

Source:  LANRES

EWXxx1415I  The host-to-LAN print server could not establish communications with the NetWare server.

Explanation:  The host-to-LAN printer server received a non-zero return code when it attempted to communicate with the NetWare file server.

System action:  The host-to-LAN printer server continues. No printers will be started.

User response:  Contact your system programmer.

System programmer response:  Ensure that the communications definition for the host-to-LAN print server is correct. A communications definition may be changed using the MODIFY operator command.

Source:  LANRES

EWXxx1416E  The host-to-LAN print services module EWXHLPC could not be initialized.

Explanation:  The host-to-LAN printer server received a non-zero return code when it attempted to define the services module EWXHLPPC to MVS.

System action:  The host-to-LAN printer server ends.

User response:  Contact your system programmer.

System programmer response:  Contact your IBM service representative.

Source:  LANRES
EWXxx1417E The host-to-LAN print services module EWXHLPC could not be found.

Explanation: The host-to-LAN printer server received a non-zero return code when it attempted to LOAD the services module EWXHLPPC.

System action: The host-to-LAN printer server ends.

User response: Contact your system programmer.

System programmer response: Ensure that the host-to-LAN print services module EWXHLPPC is in the library concatenation for the job.

Source: LANRES

EWXxx1418I No host-to-LAN printer definitions were processed.

Explanation: Either the host-to-LAN printer definition data set could not be read, or no valid printer definitions were found in it.

System action: The host-to-LAN printer server continues. No printers will be started.

User response: Contact your system programmer.

System programmer response: Ensure that the entries in the host-to-LAN printer definition data set are correct. Printer definitions may be added dynamically using the MODIFY operator command.

Source: LANRES

EWXxx1419E No START parameters were specified for the host-to-LAN print server.

Explanation: The length of the command input buffer returned by the EXTRACT service was 0.

System action: The host-to-LAN printer server ends.

User response: Contact your system programmer.

System programmer response: Ensure that the FSS-related statements in the JES initialization data set are correct.

Source: LANRES

EWXxx1420E The LANRES host-to-LAN Print server was not started by JES.

Explanation: The LANRES host-to-LAN print server determined that it was started by an operator command, rather than by JES.

System action: The LANRES host-to-LAN print server ends.

User response: Contact your system programmer. Do not start the host-to-LAN print server by using the START command.

System programmer response: Add the necessary FSSDEF statements to JES to start the host-to-LAN Print serving FSS.

Source: LANRES

EWXxx1421E The LANRES host-to-LAN Print server could not obtain the command scheduler communications list.

Explanation: The LANRES host-to-LAN print server received a non-zero return code from the EXTRACT service.

System action: The LANRES host-to-LAN print server ends.

User response: Contact your system programmer.

System programmer response: Contact your IBM service representative.

Source: LANRES
EWXxx1422E  The LANRES host-to-LAN Print server could not run non-swappable.

Explanation:  The LANRES host-to-LAN print server received a non-zero return code from the SYSEVENT DONTSWAP service.
System action:  The LANRES host-to-LAN print server ends.
User response:  Contact your system programmer
System programmer response:  Ensure that the PPT entry for the host-to-LAN Print server allows the server to become non-swappable, but does not specify that the server is non-swappable.
Source:  LANRES

EWXxx1423E  The LANRES host-to-LAN Print server could not find the FSI ORDER routine EWXHLORD.

Explanation:  The LANRES host-to-LAN print server received a non-zero return code when it attempted to LOAD module EWXHLORD.
System action:  The LANRES host-to-LAN print server ends.
User response:  Contact your system programmer
System programmer response:  Ensure that EWXHLORD is in the library concatenation used by the host-to-LAN print server.
Source:  LANRES

EWXxx1424E  The LANRES host-to-LAN Print server could not establish a recovery routine.

Explanation:  The LANRES host-to-LAN print server received a non-zero return code from the ESTAE service.
System action:  The LANRES host-to-LAN print server ends.
User response:  Contact your system programmer
System programmer response:  Contact your IBM service representative.
Source:  LANRES

EWXxx1425E  Storage not available for LANRES Print FSS.

Explanation:  The LANRES host-to-LAN print server could not obtain storage.
System action:  The LANRES host-to-LAN print server ends.
User response:  Contact your system programmer
System programmer response:  Ensure there is enough storage available for LANRES host-to-LAN print serving to run.
Source:  LANRES

EWXxx1600E  Disk image name name is more than 8 characters.

Explanation:  The name for a LANRES disk image is longer than 8 characters.
System action:  Command processing ends.
User response:  Specify a disk image name with no more than 8 characters.
System programmer response:  None.
Source:  LANRES
EWXxx1601E  Error occurred while processing LANRES command options.

Explanation: An error was detected while processing the LANRES command options. A previous message describes the error condition.

System action: Command processing ends.

User response: Correct the error and retry the command.

System programmer response: None.

Source: LANRES

EWXxx1602W  Incorrect request received from the LANRES disk driver running on the NetWare server.

Explanation: The LANRES disk driver program that runs on the NetWare file server sent a request that was not recognized by this LANRES disk server program.

System action: The LANRES disk serving function continues.

User response: None.

System programmer response: If the error persists, contact IBM service personnel.

Source: LANRES

EWXxx1603S  Error reading data from the NetWare server: error_text.

Explanation: An attempt to read data from the LANRES disk program that runs on the NetWare file server was unsuccessful.

System action: The connection to the NetWare file server is closed and the LANRES disk server program continues.

User response: If this error message is the result of a data link going down, then do nothing because the LANRES disk server will regularly attempt to re-establish the connection to the NetWare server. Otherwise, investigate the cause of the error and correct it.

System programmer response: None.

Source: LANRES

EWXxx1604W  Error opening disk image disk_image_name: error_text.

Explanation: An attempt to open the indicated disk image was unsuccessful.

System action: The initialization of the LANRES disk server continues. The disk image which failed to open will not be used.

User response: If it is desired for this disk image to be used by this LANRES disk server program, correct the problem and restart the LANRES disk server.

System programmer response: None.

Source: LANRES

EWXxx1605E  No disk images specified or no disk images successfully opened.

Explanation: Either no disk images were specified when the LANRES disk server was started or none of the disk images specified were successfully opened.

System action: The LANRES command ends and the disk server is not started.

User response: Verify that at least one disk image was specified when the LANRES disk server was started. If at least one was specified, then for each disk image specified, error message EWXDSK1604W should have been displayed to explain the reason why it could not be opened. Correct the problem or problems and retry.

System programmer response: None.

Source: LANRES
EWXxx1606E  Not enough free storage available.
Explanation:  An attempt to obtain free storage was unsuccessful.
System action:  The LANRES command ends and the disk server is not started.
User response:  Make more free storage available for this LANRES disk server and restart it.
System programmer response:  None.
Source:  LANRES

EWXxx1607W  Disk image file_name has not been initialized.
Explanation:  The indicated disk image has not been initialized.
System action:  The disk image will not be used by the LANRES disk server.
User response:  Initialize the disk image using the EWXLDCRT command and then restart the LANRES disk server.
System programmer response:  None.
Source:  LANRES

EWXxx1608S  Error sending data to the NetWare server: error_text.
Explanation:  An attempt to send data to the LANRES disk driver program that runs on the NetWare file server was unsuccessful.
System action:  The connection to the NetWare file server is closed and the disk server program continues.
User response:  If this error message is the result of a data link going down, then do nothing because the LANRES disk server will regularly attempt to re-establish the connection to the NetWare server. Otherwise, investigate the cause of the error and correct it.
System programmer response:  None.
Source:  LANRES

EWXxx1609I  Disk driver program closed the connection.
Explanation:  The LANRES disk program that runs on the NetWare file server closed the connection.
System action:  The LANRES disk server program continues.
User response:  None.
System programmer response:  None.
Source:  LANRES

EWXxx1610I  Disk server shutting down per request.
Explanation:  This LANRES disk server is ending in response to a shutdown request.
System action:  The LANRES disk server ends.
User response:  None.
System programmer response:  None.
Source:  LANRES

EWXxx1611I  Disk server stopped at request of disk driver program.
Explanation:  The LANRES disk driver program that runs on the NetWare file server has sent a request to end this LANRES disk server.
System action:  The LANRES disk server ends.
User response:  None.
System programmer response: None.
Source: LANRES

**EWXxx1612S** System error code occurred when attempting to start a timer.
Explanation: An attempt to start a timer was unsuccessful.
System action: The LANRES disk server program ends.
User response: Correct the error and restart this LANRES disk server.
System programmer response: None.
Source: LANRES

**EWXxx1613E** LANRES connection already established for another function.
Explanation: A connection to the NetWare server already exists for a LANRES function other than disk serving.
LANRES supports only one connection at a time to the NetWare server.
System action: Command processing ends.
User response: Drop the existing LANRES connection and restart the LANRES disk server.
System programmer response: None.
Source: LANRES

**EWXxx1614E** NetWare server connection information not available.
Explanation: The LANRES disk server is unable to re-establish a connection to the NetWare server because no connection options were specified on the LANRES command line and the initial server connection was established before the EWXLDDSK command was issued.
System action: Command processing ends.
User response: Specify the connection options on the LANRES disk server command line and retry the LANRES disk server command.
System programmer response: None.
Source: LANRES

**EWXxx1615W** Server connection signature mismatch.
Explanation: The signature information in a request received from the NetWare server is incorrect. This can occur if the NetWare server was restarted after a connection had been established.
System action: The current NetWare server connection will be terminated and a new connection will be established.
User response: None.
System programmer response: Report this problem to IBM if it continues to occur and the NetWare server is not being restarted.
Source: LANRES

**EWXxx1616W** Actual number bytes were read from the disk driver program when expected_number bytes were expected.
Explanation: More or less data than expected was read from the LANRES disk driver program that runs on the NetWare file server.
System action: The connection to the NetWare file server is closed and the disk server program continues.
User response: None.
System programmer response: If the error persists, contact IBM service personnel.
EWXxx1617S  •  EWXxx1635E

Source:  LANRES

EWXxx1617S  Unable to commit disk image disk_image_name: error_text.
Explanation:  An attempt was made to commit the data written to the disk image but it was unsuccessful.
System action:  The LANRES disk server ends.
User response:  Restart the LANRES disk server program and rewrite any data that may have been written immediately preceding the error.
System programmer response:  None.
Source:  LANRES

EWXxx1618I  Disk Server Release release Modification modification Service level service_level started.
Explanation:  The LANRES disk server has successfully completed its initialization and is about to attempt communications with the LANRES disk driver program that runs on the NetWare file server.
System action:  The LANRES disk server continues.
User response:  None.
System programmer response:  None.
Source:  LANRES

EWXxx1619S  Error closing disk image disk_image_name: error_text.
Explanation:  LANRES was unable to close the indicate disk image and commit the changes.
System action:  The LANRES disk server continues to end.
User response:  Investigate the error indicated and correct the error condition before restarting the LANRES disk server. The disk image may not contain all of the changes made by the NetWare server as a result of the close failure.
System programmer response:  None.
Source:  LANRES

EWXxx1625E  Incorrect value of value specified for RETRY.
Explanation:  The value indicated is not a valid specification for the RETRY option. Valid values must be in a range from 10 through 3,600.
System action:  The LANRES command ends and the disk server is not started.
User response:  Restart the LANRES disk server with a valid value.
System programmer response:  None.
Source:  LANRES

EWXxx1635E  Error opening file filename: error_text.
Explanation:  An attempt to open the indicated file was unsuccessful.
System action:  The LANRES command ends and the disk server is not started.
User response:  Investigate the cause of the error, correct it, and retry the LANRES command.
System programmer response:  None.
Source:  LANRES
EWXxx1637E Error reading file filename: error_text.

Explanation: An attempt to read the indicated file was unsuccessful.
System action: The LANRES command ends and the disk server is not started.
User response: Investigate the cause of the error, correct it and restart the LANRES disk server.
System programmer response: None.
Source: LANRES

EWXxx1638E Disk name disk_name in configuration file filename is too long.

Explanation: The disk name field within the indicated configuration file was longer than 8 characters.
System action: The LANRES command ends and the disk server is not started.
User response: Correct the configuration file and restart the LANRES disk server.
System programmer response: None.
Source: LANRES

EWXxx1640E Missing Dataset Name field in configuration file filename.

Explanation: The Dataset Name field in the indicated configuration file is missing for a disk image definition record.
System action: The LANRES command ends and the disk server is not started.
User response: Correct the configuration file and restart the LANRES disk server.
System programmer response: None.
Source: LANRES

EWXxx1643E Dataset name dsname in configuration file filename is too long.

Explanation: The dataset name field of a disk image definition record in the indicated configuration file is longer than 10 characters.
System action: The LANRES command ends and the disk server is not started.
User response: Correct the configuration file and restart the LANRES disk server.
System programmer response: None.
Source: LANRES

EWXxx1644E No disk image definitions found in configuration file filename.

Explanation: There were no disk image definition records found in the indicated configuration file.
System action: The LANRES command ends and the disk server is not started.
User response: Add one or more disk image definition records to the configuration file and restart the LANRES disk server.
System programmer response: None.
Source: LANRES

EWXxx1645S Error reading disk image disk_image_name: error_text.

Explanation: An attempt to read data from the indicated disk image was unsuccessful.
System action: This LANRES disk server informed the LANRES disk driver program of the error and continued its usual operations.
User response: Investigate and correct the error. Then stop and restart this LANRES disk server.
EWXxx1646S • EWXxx1654E

System programmer response: None.
Source: LANRES

EWXxx1646S  Error writing disk image disk_image_name: error_text.
Explanation: An attempt to write data to the indicated disk image was unsuccessful.
System action: This LANRES disk server informed the LANRES disk driver program of the error and continued its usual operations.
User response: Investigate and correct the error. Then stop and restart this LANRES disk server.
System programmer response: None.
Source: LANRES

EWXxx1650E DBCS characters are not allowed in the disk image name.
Explanation: A SHIFT OUT (X'0E') or SHIFT IN (X'0F') character was found in the disk image name.
System action: Command processing ends.
User response: Specify a disk image name that does not contain DBCS characters.
System programmer response: None.
Source: LANRES

EWXxx1651E Invalid window size size specified in configuration file filename.
Explanation: The window size field in the indicated configuration file is incorrect. The window size must be a decimal number between 1 and 2048.
System action: The LANRES command ends and the disk server is not started.
User response: Correct the configuration file and restart the LANRES disk server.
System programmer response: None.
Source: LANRES

EWXxx1653E Duplicate disk image name disk_name specified.
Explanation: Two or more disk images with the same name were specified when this LANRES disk server was started.
System action: The LANRES command ends and the disk server is not started.
User response: Remove the specification of all but one of the disk images and restart this LANRES disk server.
System programmer response: None.
Source: LANRES

EWXxx1654E Incorrect Access Mode field access_mode in configuration file filename.
Explanation: The access mode field in the indicated configuration file is incorrect. Only a single character 'W' or 'R' is correct.
System action: The LANRES command ends and the disk server is not started.
User response: Correct the configuration file and restart the LANRES disk server.
System programmer response: None.
Source: LANRES
**EWXxx1655W**  More than 50 disk images defined.

**Explanation:** There were more than 50 disk images defined for this LANRES disk server. Only the first 50 images will be used.

**System action:** The LANRES disk serving function continues.

**User response:** Start another LANRES disk server to support the additional disk images.

**System programmer response:** None.

**Source:** LANRES

---

**EWXxx2001E** The error returned was *error*.

**Explanation:** There was an error returned when a query was made to determine what function was connected to your userid. The error is listed in the message.

**System action:** Command processing ends.

**User response:** From the error returned, fix the problem and try the command again. This may require having to bring the connection to the server back up again.

**System programmer response:** None.

**Source:** LANRES

---

**EWXxx2003E** Packets lost in the transmission; command cancelled.

**Explanation:** A read request has been sent but the number of packets read does not agree with the number of packets sent from the NetWare NLM server on the NetWare server.

**System action:** Command processing ends.

**User response:** Reenter the command. It may be necessary to restart the link with the NetWare server. If the condition persists, notify your system programmer.

**System programmer response:** Check the link between the host and the NetWare server.

**Source:** LANRES

---

**EWXxx2004E** DOS partition cannot be accessed by the server.

**Explanation:** A request has been sent to read to or write from the DOS partition on the server, however, an authorized user has entered the REMOVE DOS command to remove the memory used by DOS in the server.

**System action:** Command processing ends. The system status remains the same.

**User response:** Notify your system programmer.

**System programmer response:** Restart the server to load DOS back in the server.

**Source:** LANRES

---

**EWXxx2005E** An error occurred trying to view the log.

**Explanation:** A command was issued to view the log. The return code indicated that there was an error.

**System action:** Command processing ends. The system status remains the same.

**User response:** None.

**System programmer response:** None.

**Source:** LANRES
**EWXxx2006E • EWXxx2010E**

**EWXxx2006E** File *filename* already exists. Specify REPLACE option.

**Explanation:** The specified file already exists.

**System action:** Command processing ends.

**User response:** If you want to overwrite the contents of the file, then reenter the command with the REPLACE option. Otherwise, use a different file name.

**System programmer response:** None.

**Source:** LANRES

**EWXxx2007E** File *filename* already exists; specify REPLACE option.

**Explanation:** The specified file already exists.

**System action:** Command processing ends. The system status remains the same.

**User response:** If you want to overwrite the file, reenter the command with the REPLACE option. If you want to keep the file, you can rename the file, using the command to rename, or you can specify a different file name for the new file. If you want to examine the file on the host, you can use the distribution command to receive the file to get a copy of it.

**System programmer response:** None.

**Source:** LANRES

**EWXxx2008E** File *filename* already exists; file name not changed.

**Explanation:** The distribution command to rename a file request was unsuccessful because the "new" file ID is already being used by another file.

**System action:** Command processing ends. The system status remains the same.

**User response:** Specify another file ID.

**System programmer response:** None.

**Source:** LANRES

**EWXxx2009E** Directory *dname* already exists.

**Explanation:** The specified directory already exists.

**System action:** Command processing ends. The system status remains the same.

**User response:** You can use the distribution command to list files to examine the existing directory. Use the distribution command to either remove a directory or rename the directory to give it a new directory name.

**System programmer response:** None.

**Source:** LANRES

**EWXxx2010E** File *filename* in use.

**Explanation:** The file could not be referenced because it is active.

**System action:** Command processing ends. The system status remains the same.

**User response:** Wait until the file is closed and then reenter the command.

**System programmer response:** None.

**Source:** LANRES
EWXxx2011E File `filename` is read-only.

**Explanation:** The command was unsuccessful because it attempted to write to, copy to, rename, or delete a read-only file.

**System action:** Command processing ends. The system status remains the same.

**User response:** If you want to change this file, change the file attributes to NORMAL using the CHANGE ATTRIBUTES distribution command and then reenter the command.

**System programmer response:** None.

**Source:** LANRES

EWXxx2012E The filename specified for the NetWare server, `dirname`, is a directory.

**Explanation:** A filename was entered for the NetWare server. However, the filename that was entered is really a directory.

**System action:** Command processing ends.

**User response:** Reenter the command entering a valid NetWare filename and not a directory.

**System programmer response:** None.

**Source:** LANRES

EWXxx2013E Unsuccessful creating the directory `dname`.

**Explanation:** A distribution command to copy a file or make a directory request was unsuccessful because it could not create the new directory on the NetWare server.

**System action:** Command processing ends. The system status remains the same.

**User response:** Check to see if a file with the same name as the directory already exists. Use the distribution command to list files. Verify that the volume name is correct. If the file exists, specify another directory name or rename the file using the distribution command. Then, reenter the command to copy files or make a directory.

**System programmer response:** None.

**Source:** LANRES

EWXxx2014E Error writing file `filename`

**Explanation:** An input/output error occurred when the specified file was being written on the server. The volume space limit may have been exceeded. It is possible that the primary File Allocation Table or Directory table was damaged.

**System action:** Command processing ends.

**User response:** Determine if the disk is full, or if you have exceeded your volume space limit. If so, remove files and purge the deleted files with the purge command, or request for your volume space limit to be increased. Reenter the command. If the error persists, notify your server administrator.

**System programmer response:** Verify disk usage and volume space limits. Determine if the volume is full. It may be necessary to purge deleted files on the volume. If the there does not appear to be a disk usage or limit problem, and the problem persists, run the NetWare VREPAIR NLM to correct the problems on the volume. VREPAIR will correct many of the problems that can occur if the primary File Allocation Table or Directory table is damaged.

**Source:** LANRES

EWXxx2015E An input/output error occurred when the specified file was being read.

**Explanation:** It is possible that the NetWare server’s primary File Allocation Table or Directory table was damaged.

**System action:** Command processing ends.

**User response:** Reenter the command. It may be necessary to reissue the EWXCONN LINK command to reset the connection. If the condition persists, notify your system programmer.
System programmer response: Run the NetWare VREPAIR NLM to correct hard disk problems on the volume. VREPAIR will correct minor problems that can occur if the primary File Allocation Table or Directory table is damaged.

Source: LANRES

EWXxx2016E  File filename is empty.
Explanation: An LANRES command was issued to copy the file from the server to the host, but the server file is empty. It is not possible to retrieve an empty file.
System action: Command processing ends.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx2017E  File filename has been changed since LASTMOD; file attributes not changed.
Explanation: The file attributes are not changed because the file was changed at some point after the last modification date and time information specified on the EWXDS ATTRIBUTES request.
System action: Command processing ends. The system status remains the same.
User response: Check the file using the EWXDS LIST command and reenter the command with a different LASTMOD date and time.
System programmer response: None.
Source: LANRES

EWXxx2018E  Message cannot be longer than nn characters; message not sent.
Explanation: The distribution command to send a message to a NetWare user has been entered with message text that is longer than the maximum allowed. For messages sent to all users or to a specific user ID, the maximum is 57 characters. For messages sent to the NetWare console, the maximum is 79 characters.
System action: Command processing ends. The system status remains the same.
User response: Reenter the command with a shorter message text.
System programmer response: None.
Source: LANRES

EWXxx2019E  User user is not logged in.
Explanation: The specified user is not logged in to the NetWare server, so no message has been sent. This message is applicable only when the userid option of the command is used.
System action: Command processing ends. The system status remains the same.
User response: Try again later after the user is logged in.
System programmer response: None.
Source: LANRES

EWXxx2021E  File filename not found.
Explanation: The specified file was not found. The file does not reside on the directory, the file identification was misspelled, or incomplete identification was provided.
System action: Command processing ends. The system status remains the same.
User response: Verify that the volume on which the file resides is mounted and that the complete file identification was spelled correctly.
System programmer response: None.
Source: LANRES

EWXxx2022E Directory dname not found.

Explanation: The specified directory was not found. Either the directory does not reside on the volume, the directory name was misspelled or incomplete identification was provided to cause the appropriate path to be searched.

System action: Command processing ends. The system status remains the same.
User response: To verify the directory exists, enter the command to list the files. Verify that the volume on which the directory resides is mounted.

System programmer response: None.
Source: LANRES

EWXxx2023E Cannot remove a nonempty directory.

Explanation: The distribution command to remove a directory has been entered to remove an existing directory and the specified directory contains files.

System action: Command processing ends. The system status remains the same.
User response: Enter the distribution command to list file and examine the files in the directory. If you decide to erase all the files in the directory, use the distribution delete command.

System programmer response: None.
Source: LANRES

EWXxx2024E Volume volname not found or volume is full.

Explanation: The distribution command to copy files was entered to copy files from one directory to another directory and the specified target volume does not exist or the target volume does not have any space left.

System action: Command processing ends. The system status remains the same.
User response: Enter the distribution command to list the volume information for your particular volume. If you get message 2021, the volume does not exist. Ask your system programmer for help. If the volume does exist, note the number of the blocks left in the volume. If you decide to erase some of the files, use the distribution command to delete files.

System programmer response: Check that all the volumes are correctly allocated. If the specified volume has not been created, determine if this volume should be added or a different volume should be used by the user.
Source: LANRES

EWXxx2025E Paths must end with a backslash when SUBDIR is specified.

Explanation: The SUBDIR option can only be used to copy entire subdirectories and neither a source not destination file name can be specified. The backslash (\) at the end of both the source path and destination path verifies that the previous characters are interpreted as subdirectory names instead of file names.

System action: Command processing ends. The system status remains the same.
User response: Correct the error and reenter the command.

System programmer response: None.
Source: LANRES
EWXxx2026E  Error opening the file filename.

Explanation: An input/output error occurred when the specified file was being opened, or the file is an execute-only file, or the file is being used by another user.

System action: Command processing ends. The system status remains the same.

User response: Check to see if the file is an execute-only file by using the command to list the files. If the file is not an execute-only file, reenter the command. If the error persists, notify your system programmer. The file may also be in use by another user. Be sure that there is no one else using the file.

System programmer response: Run the NetWare VREPAIR NLM to correct hard disk problems on the volume. VREPAIR will correct minor problems that occur if the primary File Allocation Table or Directory table is damaged, which may have been the reason for the error.

Source: LANRES

EWXxx2027I  The log file was cleared on date at time.

Explanation: This is an informational message indicating when the log was last cleared.

System action: Command processing ends. The system status remains the same.

User response: None.

System programmer response: None.

Source: LANRES

EWXxx2028E  File(s) must be on the local server.

Explanation: The distribution command that you entered cannot be used to process files on a remote server. You probably preceded the file name(s) with a remote server name. The server name should not be specified, or else it must be the local server name.

System action: Command processing ends. The system status remains the same.

User response: Verify that the local server, the server that your system is physically connected to, is the correct server.

System programmer response: None.

Source: LANRES

EWXxx2029E  Unable to load file filename on the server.

Explanation: An error occurred while loading the indicated file on the server. Possible causes for the error are: the NLM is already loaded on the server and the NLM cannot be loaded more than once, the NLM requires that other NLMs be loaded first, or the file is not an NLM.

System action: Command processing ends. The system status remains the same.

User response: Verify that you are specifying the correct NLM and that all prerequisite NLMs are already loaded.

System programmer response: None.

Source: LANRES

EWXxx2030E  command was unsuccessful. DOS error code-nn

Explanation: An unexpected error has occurred while working with files on the DOS partition of the server. It is possible that DOS has been removed from the server.

System action: Command processing ends.

User response: Verify that the command syntax is correct and retry the command. If the error persists, notify your server administrator.
System programmer response:  Verify that DOS has not been removed from the server. The DOS error code meaning can be found in the DOS reference manual.

Source:  LANRES

EWXx2032E  Incorrect distribution command name issued.
Explanation:  The user entered a command that was not recognized by the distribution.
System action:  Command processing ends. The system status remains the same.
User response:  Verify that the distribution command was spelled correctly. See z/OS LANRES Configuration Files and Commands for correct syntax.
System programmer response:  None.
Source:  LANRES

EWXx2033E  The UNIT parameter contains incorrect syntax. The 5th character must be a dash (-).
Explanation:  The fifth character must be a dash (-) when the six character format is specified.
System action:  The distribution command is not processed.
User response:  Correct and retry the failing command.
System programmer response:  None.
Source:  LANRES

EWXx2034E  The UNIT parameter has incorrect length. The length must be 4 to 6 characters.
Explanation:  The UNIT parameter must contain at least four characters and not more than six.
System action:  The distribution command is not processed.
User response:  Correct and retry the failing command.
System programmer response:  None.
Source:  LANRES

EWXx2036E  Error copying the file filename.
Explanation:  An input/output error occurred when the specified file was being copied. The primary File Allocation Table or Directory table may be damaged.
System action:  Command processing ends. The system status remains the same.
User response:  Reenter the command. If the error persists, notify your system programmer.
System programmer response:  Run the NetWare VREPAIR NLM to correct hard disk problems on the volume. VREPAIR will correct minor problems that can occur if the primary File Allocation Table or Directory table is damaged.
Source:  LANRES

EWXx2039E  End of file reached; no file was copied.
Explanation:  The server file contains only an end-of-file character. This file is considered to be empty and cannot be copied. This error will also occur when request is made to copy from a particular record of the file, and the file contains less than that number of records.
System action:  Command processing ends.
User response:  Verify that the file does contain data, and the number of records in the file. Reenter the command with the correct values or parameters.
System programmer response:  None.
EWXxx2040E • EWXxx2048E

Source: LANRES

EWXxx2040E Distribution command name ended with a server error code of nn.
Explanation: An unexpected error occurred while processing the command.
System action: Command processing ends. The system status remains the same.
User response: Verify that the command syntax is correct and reenter the command. If the error persists, notify your system programmer of the server error code.
System programmer response: See the NetWare System Messages for the server error code.
Source: LANRES

EWXxx2041I time renaming filename1 to filename2.
Explanation: The information message is displayed when the distribution command to rename a file with the option to TYPE out information messages is used.
System action: The specified operation is performed.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx2042I time copying filename1 to filename2.
Explanation: The information message is displayed when the distribution command to copy a file with the option to TYPE out information messages is chosen.
System action: The specified operation is performed.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx2044E The length of a directory name cannot be more than 254 characters.
Explanation: The user entered a directory name that was more than 254 characters in length.
System action: Command processing ends. The system status remains the same.
User response: Correct the directory name to be less than 254 characters.
System programmer response: None.
Source: LANRES

EWXxx2048E The two volume names vol1 and vol2 must be the same.
Explanation: The attempt to rename the directory or file was unsuccessful, because the files/directory to be renamed must reside on the same volume.
System action: Command processing ends. The system status remains the same.
User response: Enter the same volume name for both directories or files and reenter the command.
System programmer response: None.
Source: LANRES
EWXxx2049E Directory cannot be removed.

Explanation: The attempt to remove a directory on the NetWare server by specifying the option to remove the directory with the delete files command was unsuccessful. The error may be caused by: Not all files have been deleted from the directory, there are subdirectories inside that directory, or the DeleteInhibit flag was set on for that directory.

System action: Files may have been removed from the directory but the directory remains.

User response: Check to see if any of the reasons for the error listed above apply. Correct the situation and use the command to remove directories to remove the directory.

System programmer response: None.

Source: LANRES

EWXxx2052E You must be logged into the local server to run this command.

Explanation: You must be logged into the local server to enter this command. The local server is the server running the LANRES NLMs that you are directly connected to by one of the LANRES communication methods. If you enter the EWXDS QUERY ID command, your local server is shown opposite "File Server Name" and the server you are logged into is shown opposite "Logged in Server Name".

System action: Command processing ends. The system status remains the same.

User response: Enter the EWXCONN DROP command to drop the current connection. Then enter the EWXCONN LINK command and directly connect to the server that you want the command to run on.

System programmer response: None.

Source: LANRES

command.
System programmer response: None.
Source: LANRES
EWXxx2307W  Error_text  Error returned on close of file filename

Explanation:  The specified error was returned when attempting to close the identified file. The file may be intact.

System action:  Command processing ends.

User response:  Examine the file to determine if the content is correct. If not, the error text identifies the cause of the error. Correct the problem and reenter the command.

System programmer response:  None.

Source:  LANRES

EWXxx2308E  Incorrect server volume name: volname

Explanation:  The server volume name specified on the PC file name path was incorrect or missing. The volume name must be specified for all files.

System action:  Command processing ends.

User response:  Correct the volume name and reenter the command.

System programmer response:  None.

Source:  LANRES

EWXxx2309E  Incorrect server file name: filename

Explanation:  The server file name specified was incorrect or missing. A PC file name must be specified, or the wildcard * must be used. If a wildcard is used, then the wildcard may not be accompanied by any other characters. For example, sys:\t.ext is incorrect because the t appears before the *. The length server path specified must be less than the NetWare restricted length of 254 characters.

System action:  Command processing ends.

User response:  Correct the file name and reenter the command.

System programmer response:  None.

Source:  LANRES

EWXxx2310E  Error matching file filename_pattern - Error_message

Explanation:  While attempting to determine the host files that matched the specified file name pattern the identified error occurred.

System action:  Command processing ends.

User response:  User response will depend on the error text. If the file was not found, the user should reenter the command using a different pattern. If the error was a protection problem, the user should contact their system programmer to obtain access.

System programmer response:  None.

Source:  LANRES

EWXxx2311E  Incorrect host dataset name dataset

Explanation:  The dataset name specified was not valid. Correct the dataset name and reenter the command.

System action:  Command processing ends.

User response:  Correct the error and reenter the command.

System programmer response:  None.

Source:  LANRES
EWXxx2312W  An incorrect line received: dataline

Explanation: The LANRES list file command returned an incorrect line of data. The line of data will be ignored. It is possible that undetected I/O errors are occurring on the disk, or that undetected communications errors are occurring between the host and the server. If the problem persists, contact your support programmer.

System action: Command processing continues. Warning message only.
User response: If the message persists, contact your support programmer.
System programmer response: Determine if any I/O errors are occurring on the host system disks or over the data link.
Source: LANRES

EWXxx2313E  Error_text error returned on write to dataset dataset.

Explanation: The specified error was returned when writing to the identified dataset.

System action: Command processing ends.
User response: The cause of the error is identified in the error text. Correct the problem and reenter the command.
System programmer response: None.
Source: LANRES

EWXxx2314W  Error_text returned on open of dataset dataset.

Explanation: An attempt to open the translation defaults dataset was unsuccessful. The reason for the error is identified by error_text.

System action: Command processing continues.
User response: The file transfer will continue using the system default values. If these are not correct, remove the transferred file and reenter the command with the correct translation defaults file specified in the EWXTRANS ddname. If the error text indicates improper authorization, see your system programmer.
System programmer response: If the user was denied access, grant them access to the dataset.
Source: LANRES

EWXxx2315I  Time starting transfer of name

Explanation: name is being transferred to the server or from the server. This message is informational only.
System action: None. Message is informational only.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx2316I  Time completed transfer of name

Explanation: name is being transferred to the server or from the server. This message is informational only.
System action: None. Message is informational only.
User response: None.
System programmer response: None.
Source: LANRES
EWXxx2317W  The entry filename in defaultname is too long.

Explanation: The entry, filename, in the translation defaults, defaultname, was incorrect. Names must be shorter than the system identified maximum length.

System action: Command processing continues. Warning message only.

User response: If you are using your own file, correct the entry. If you are using the system defaults file, contact your system programmer.

System programmer response: If the problem is in the system translation defaults, correct the identified entry.

Source: LANRES

EWXxx2318W  Extension entry extension in defaultname exceeds 3 characters.

Explanation: The specified extension entry in the translation defaults identified above was incorrect. Extensions must be less than or equal to 3 characters in length.

System action: Command processing continues. Warning message only.

User response: If you are using your own file, correct the entry. If you are using the system defaults file, contact your system programmer.

System programmer response: If the problem is in the system EWXTRANS default file, correct the identified entry.

Source: LANRES

EWXxx2319W  Error_text error returned on read of dataset dataset

Explanation: This error error_text was returned when reading from dataset dataset. The dataset opened was not critical to the success of the command.

System action: Command processing continues. Warning message only.

User response: The cause of the error should be identified in the error text. Correct the problem and if necessary, reenter the command.

System programmer response: None.

Source: LANRES

EWXxx2320W  Unable to create directory dirname DOS Return code dos-return-code

Explanation: While attempting to create a directory on the NetWare server, an unexpected error condition occurred. File transfers will continue, but other errors may occur. The DOS return code given is displayed to help in finding the cause of the error.

System action: Command processing continues. Warning message only.

User response: Determine the cause of the error, correct, and if necessary reenter the command.

System programmer response: None.

Source: LANRES

EWXxx2323E  Error_text returned from read file list.

Explanation: As part of the command processing, LANRES created a list of the datasets. While reading from this list an error occurred. The error text describes the error that occurred.

System action: Command processing ends.

User response: Determine the cause of the error from the error text. If necessary contact your software support personnel.

System programmer response: None.

Source: LANRES
**EWXxx2325W**  Server File extension *file_extension* too long - truncated.

**Explanation:** The server file extension given to LANRES was too long. The file extension is truncated to 3 characters.

**System action:** Command processing continues.

**User response:** None.

**System programmer response:** None.

**Source:** LANRES

**EWXxx2326W**  Server File name *file_name* too long - truncated.

**Explanation:** The server file name given to LANRES was too long. The file name is truncated to 8 characters.

**System action:** Command processing continues.

**User response:** None.

**System programmer response:** None.

**Source:** LANRES

**EWXxx2328E**  Unable to delete dataset - *filename* Reason *error_text*

**Explanation:** An error occurred while transferring the file from the NetWare server. As a result, an attempt was made to clean up and delete the dataset that was created. However, the error, *error_text*, occurred while trying to delete the dataset.

**System action:** Command processing ends.

**User response:** Based on the error text, determine why the dataset could not be removed. The dataset may contain incomplete data and should be removed. Or, if the dataset is EWXLANDS.LISTUT1, then an attempt was made to erase the dataset that contained the list of server files. You need to just erase this dataset.

**System programmer response:** None.

**Source:** LANRES

**EWXxx2329E**  Option SUBDIR must be specified when server directory is specified.

**Explanation:** The NetWare file name given identified a server directory and the SUBDIR option was not specified, or the SUBDIR option was specified and the NetWare file name was not a directory name. LANRES considers a path a directory when it ends with a slash (/) or a backslash (\).

**System action:** Command processing ends.

**User response:** Reenter the command, specifying a file for the server directory, or adding the SUBDIR option.

**System programmer response:** None.

**Source:** LANRES

**EWXxx2330E**  File *filename* cannot be created. No space on device.

**Explanation:** The NetWare server returned and indication that the volume is full. The file cannot be allocated.

**System action:** Command processing ends.

**User response:** This condition may only be temporary. Retry the command at a later time. If the problem persists, contact the system programmer.

**System programmer response:** The volume may give a full indication because deleted files have not been purged. Issue the PURGE command to free up space. If this does not free sufficient space, add a new volume segment to the volume.

**Source:** LANRES
EWXxx2331E  Server File extension file_extension too long
Explanation: The server file extension given to LANRES was too long. When copying a file from the NetWare server, the server file extension given must be 3 characters or less.
System action: Command processing ends.
User response: Reissue the command, specifying a valid extension.
System programmer response: None.
Source: LANRES

EWXxx2332E  Server File name file_name too long
Explanation: The server file name given to LANRES was too long. When copying a file from the NetWare server, server file name must be between 1 and 8 characters.
System action: Command processing ends.
User response: Reissue the command, specifying a valid file name.
System programmer response: None.
Source: LANRES

EWXxx2333E  Subdirectory option not allowed to DOS partitions.
Explanation: A command was issued that requested copying subdirectories to or from the server's DOS partition. Subdirectory operations are not supported for DOS partitions.
System action: Command processing ends.
User response: Reissue the command without the subdirectory option.
System programmer response: None.
Source: LANRES

EWXxx24061   VOLUME MOUNTED - STATISTICS NOT AVAILABLE
Explanation: This is used for a header that will be formatted and displayed.
System action: None.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx2408E The file specified, *fname*, is a directory.
Explanation: The filename that was specified is not a file, but a directory.
System action: Command processing ends. The system status remains the same.
User response: Determine the correct filename to be used for the operation to perform and retry the operation.
System programmer response: None.
Source: LANRES

EWXxx2409E The file name or directory specified, *filename*, is on a DOS partition.
Explanation: The file name or directory entered exists on a DOS partition. The command or command option that you entered does not support a file or directory names on a DOS partition.
System action: Command processing ends. The system status remains the same.
User response: Specify a file or directory name that is not on a DOS partition.
System programmer response: None.
Source: LANRES
EWXxx2410W  EWXxx2414E

EWXxx2410W  EWXDS LIST does not display DOS partition subdirectory information.

Explanation:  The EWXDS LIST does not support showing subdirectory information for a DOS partition. The
SUBDIR option is ignored.

System action:  Command processing ends. The system status remains the same.

User response:  Either specify a file name that is not a DOS partition or find a way to get to the DOS partition. One
way is to DOWN the server.

System programmer response:  None.

Source:  LANRES

EWXxx2411I  The two files names are identical.

Explanation:  The two file names entered are the same. No request was sent to the NetWare server.

System action:  Command processing ends. The system status remains the same.

User response:  Determine if the correct file names were entered. If not, enter the command again with the correct
file names.

System programmer response:  None.

Source:  LANRES

EWXxx2412I  Successfully received nnn of mmm files.

Explanation:  This message indicates how many of the files were successfully received from the server.

System action:  Command processing ends. The system status remains the same.

User response:  None.

System programmer response:  None.

Source:  LANRES

EWXxx2413I  Successfully sent nnn of mmm files.

Explanation:  This message indicates how many of the files were successfully sent to the server.

System action:  Command processing ends. The system status remains the same.

User response:  None.

System programmer response:  None.

Source:  LANRES

EWXxx2414E  Dataset dsname not found.

Explanation:  The dataset indicated in the error message was not found. If you were doing an EWXDS
PUT, this could indicate that you specified a partitioned dataset without a member specified versus a sequential
dataset. If you were doing an EWXDS LOG VIEW, the log dataset does not exist. If you were doing EWXDS GET, the
PDS/E dataset needs to exist when specifying a member.

System action:  Command processing ends. The system status remains the same.

User response:  If you are trying to run an EWXDS PUT or GET command, enter a valid dataset name. If you are
trying to run the EWXDS LOG VIEW command, you need to have things in the log before it can be viewed. Set
logging on by issuing EWXDS LOG ON.

System programmer response:  None.

Source:  LANRES
EWXxx2450I  No compression was done because no algorithms are available.
Explanation: COMPRESS option was specified, but there are no compression algorithms on the system.
System action: The file will be saved uncompressed.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx2451E  Compressed data could not be expanded because the needed algorithm was not available.
Explanation: A file written to the host with the COMPRESS option could not be retrieved because this system did not have the needed expansion algorithm.
System action: The PUT function stops.
User response: None.
System programmer response: Ensure that host compression/expansion algorithms are available.
Source: LANRES

EWXxx2452I  No compression was done because storage was not decreased for host file filename.
Explanation: COMPRESS option was specified, but was not used because the amount of saved data was not decreased.
System action: The file will be saved uncompressed.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx2453E  Error_text error - compression could not be done.
Explanation: COMPRESS option was specified, but there was an error when trying to compress data.
System action: Command processing ends.
User response: None.
System programmer response: The cause of the error is identified in the error text. Correct the problem.
Source: LANRES

EWXxx2454I  No page aligned storage available for compression dictionary.
Explanation: COMPRESS option was specified, but there was an error when trying to get page aligned storage for a compression/expansion dictionary. An attempt will be made to compress without using a dictionary.
System action: Command processing continues.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx2455I  No storage available to compress file.
Explanation: COMPRESS option was specified, but there was an error when trying to get storage for compressing a file.
System action: The file will be saved uncompressed.
User response: None.
EWXxx2456E  Storage not available to check if should expand file filename.

Explanation: A file may have been saved on a GET using the COMPRESS option. Storage needed to determine if the file was compressed was unavailable.

System action: The PUT function stops.

User response: Ensure there is sufficient virtual storage available and reenter the command.

System programmer response: None.

Source: LANRES

EWXxx2457E  Error expanding compressed dictionary - error_text.

Explanation: A file written to the host with the COMPRESS option could not be retrieved because its dictionary was compressed and could not be expanded.

System action: The PUT function stops.

User response: None.

System programmer response: Correct the problem causing the compression dictionary to not be able to be expanded.

Source: LANRES

EWXxx2458E  Data was compressed using a later level of code than PUT expansion code supports.

Explanation: The level of code used when data was compressed on the GET is newer than the level of code available to expand the code on the PUT. The code cannot be expanded.

System action: The PUT function stops.

User response: None.

System programmer response: Ensure that the newest level of the PUT code is available on the system.

Source: LANRES

EWXxx2459I  No compression was done because compression dictionary could not be built - error_text.

Explanation: COMPRESS option was specified, but was not used because a compression dictionary could not be built and an alternate algorithm not requiring a dictionary was not available.

System action: The file will be saved uncompressed.

User response: None.

System programmer response: Correct the problem causing the compression dictionary to not be built. Also, ensure that all host compression/expansion algorithms are available.

Source: LANRES

EWXxx2461E  COMPRESS option invalid when output is to the display device.

Explanation: The COMPRESS option was specified, but no output dsname was specified. The output to the display device would be unreadable.

System action: GET processing for this file stops.

User response: Specify a dsname for a file that is to be compressed, or do not specify the COMPRESS option if the file is to be displayed.

System programmer response: None.
EWXxx3001E  User or group already exists.

Explanation:  The user or group already exists. Two causes of this message are:
  • Attempting to add an already existing user or group.
  • Attempting to rename a user or group to an already existing user or group.

If you are using NetWare Version 4.01 or later, this message may indicate that there is another directory services
object by the same name on the server. Directory services does not allow objects of different object types to use the
same object name. For example, you cannot have a user and a print queue named SAM on the same server.

System action:  Command processing ends. The system status remains the same.

User response:  Check the spelling of the specified user or group name. If the spelling is incorrect, correct it. Reenter
the command.

If you are using NetWare Version 4.01 or later, make sure there is no other object by the same name on the server.

System programmer response:  None.

Source:  LANRES

EWXxx3002E  Incorrect user or group name.

Explanation:  A command was entered specifying a user or group that could not be found. The use of special
characters could produce this message.

System action:  Command processing ends. The system status remains the same.

User response:  Check the spelling of the specified user or group name. If the spelling is incorrect, correct it. Reenter
the command.

System programmer response:  None.

Source:  LANRES

EWXxx3003E  Special characters not allowed in user or group name.

Explanation:  A user or group name cannot contain spaces or any of the following special characters:

/  (slash)
\  (backslash)
:  (colon)
;  (semicolon)
,  (comma)
*  (asterisk)
?  (question mark)

NetWare may also restrict the user or group name from containing other special characters. This message may appear
if no name is specified.

Note:  Not all commands produce this message when a user or group name contains one of the above characters.
Some commands will return message 3002E Incorrect user or group name.

System action:  Command processing ends. The system status remains the same.

User response:  Reenter the command with a valid name.

System programmer response:  None.

Source:  LANRES
EWXxx3004E  User or group does not exist.

Explanation:  A command was entered specifying a user or group that could not be found.

System action:  Command processing ends. The system status remains the same.

User response:  Check the spelling of the specified user or group name. If the spelling is incorrect, correct it. Reenter the command with a valid name.

System programmer response:  None.

Source:  LANRES

EWXxx3005E  Volume does not exist.

Explanation:  A command was entered specifying a volume that could not be found.

System action:  Command processing ends. The system status remains the same.

User response:  Check the spelling of the specified volume name. If the spelling is incorrect, correct it. If you are unsure of the spelling, use the VOLUMES command at the NetWare server console to view the list of volumes mounted on the server. Reenter the command with a valid volume name.

System programmer response:  None.

Source:  LANRES

EWXxx3006E  Command rejected: "Require Password" is set to "no".

Explanation:  A command was entered which requires the “Require Password” field on the Account Restrictions screen of SYSCON to be set to “YES”.

If you are using NetWare Version 4.01 or later, the “Require Password” field can be found in the Password Restrictions screen of the NETADMIN or NWADMIN utility.

System action:  Command processing ends. The system status remains the same.

User response:  Enter the EWXADMIN REQPASSW command and specify the “YES” parameter.

System programmer response:  None.

Source:  LANRES

EWXxx3007E  Command rejected: "Allow User To Change Password" is set to "no".

Explanation:  A command was entered which requires the “Allow User To Change Password” field in the Account Restrictions screen of SYSCON to be set to “YES”.

If you are using NetWare Version 4.01 or later, the “Allow User To Change Password” field can be found in the Password Restrictions screen of the NETADMIN or NWADMIN utility.

System action:  Command processing ends. The system status remains the same.

User response:  Ask your system programmer or someone who manages your account to change your user ID’s “Allow User To Change Password” field to “YES”. If you want your password changed, your system programmer or someone who manages your account can change it for you.

System programmer response:  Load the NetWare SYSCON utility at a client workstation. Select Account Restrictions on the User Information panel. Change the “Allow User To Change Password” field in SYSCON to “YES”. If the user ID’s password needs to be changed, you may use the SYSCON utility or enter the LANRES change password command, EWXADMIN CHPW.

If you are using NetWare Version 4.01 or later, you can use the NETADMIN or NWADMIN utility to change the “Allow User To Change Password” field in the Password Restrictions screen.

Source:  LANRES
EWXxx3008E Command rejected: "Force Periodic Password Changes" is set to "no".

Explanation: A command was entered which requires the “Force Periodic Password Changes” field in the Account Restrictions screen of SYSCON to be set to “YES”.

If you are using NetWare Version 4.01 or later, the “Force Periodic Password Changes” field can be found in the Password Restrictions screen of the NETADMIN or NWADMIN utility.

System action: Command processing ends. The system status remains the same.

User response: Enter the following command with the interval parameter set to a suitable non-zero value (SYSCON uses a default of 40):
• Enter the EWXADMIN PWEXPINT command.

System programmer response: None.

Source: LANRES

EWXxx3009E Print queue or print server already exists.

Explanation: The command was unsuccessful because the print queue or print server already exists. Two causes of this message are:
• Attempting to add an already existing print queue or print server
• Attempting to rename a print queue or print server to an already existing print queue or print server.

If you are using NetWare Version 4.01 or later, this message may indicate that there is another directory services object by the same name on the server. Directory services does not allow objects of different object types to use the same object name. For example, you cannot have a user and a print queue named SAM on the same server.

System action: Command processing ends. The system status remains the same.

User response: Check the spelling of the specified print queue or print server name. If the spelling is incorrect, correct it. Reenter the command.

If you are using NetWare Version 4.01 or later, make sure there is no other object with the same name on the server.

System programmer response: None.

Source: LANRES

EWXxx3010E Incorrect print queue or print server name.

Explanation: A command was entered specifying a print queue or print server that could not be found.

System action: Command processing ends. The system status remains the same.

User response: Check the spelling of the specified print queue or print server name. If the spelling is incorrect, correct it. Reenter the command.

System programmer response: None.

Source: LANRES

EWXxx3011E Special characters not allowed in print queue or print server name.

Explanation: A print queue or print server name cannot contain spaces or any of the following special characters:

/ (slash)
\ (backslash)
: (colon)
; (semicolon)
, (comma)
* (asterisk)
? (question mark)
EWXxx3012E • EWXxx3015E

NetWare may also restrict the print queue or print server name from containing other special characters. This message may appear if no name is specified.

Note: Not all commands produce this message when a print queue or print server name contains one of the above characters. Some commands will return message 3010E Incorrect print queue or print server name.

System action: Command processing ends. The system status remains the same.

User response: Examine the specified print queue or print queue name. If the name contains any of the special characters, remove them. Reenter the command with a valid print queue or print server name.

System programmer response: None.

Source: LANRES

EWXxx3012E Print queue or print server does not exist.

Explanation: A command was entered specifying a print queue or print server that could not be found.

System action: Command processing ends. The system status remains the same.

User response: Check the spelling of the specified print queue or print server name. If the spelling is incorrect, correct it. Reenter the command.

System programmer response: None.

Source: LANRES

EWXxx3013E Print queue not deleted; print jobs still present.

Explanation: The command to delete the print queue was unsuccessful because print jobs were still present in the print queue.

System action: Command processing ends. The system status remains the same.

User response: If you want to delete the print queue regardless of the existing job count, reenter the command with the FORCE parameter.

System programmer response: None.

Source: LANRES

EWXxx3014E Directory could not be created.

Explanation: The attempt to create a directory was unsuccessful. The directory path for the directory being created may not exist.

System action: Command processing ends. The system status remains the same.

User response: Connect to the distribution function and enter the following command to determine the cause of the error:
• Enter the EWXDS MKDIR command.

System programmer response: None.

Source: LANRES

EWXxx3015E Specified file(s) or directory could not be removed.

Explanation: The attempt to remove a file or files was unsuccessful. Probable causes are:
• Subdirectories are present
• “Delete inhibit” flags set in the directory

System action: Command processing ends. The system status remains the same.

User response: Connect to the distribution function and enter the following commands to determine the cause of the error:
• Enter the EWXDS DELETE and EWXDS RMDIR commands.
System programmer response: None.
Source: LANRES

EWXxx3016E  The path indicated is a directory, not a path to a file.
Explanation: The command attempted to remove one or more files but determined that the specified path identified a directory only.
System action: Command processing ends. The system status remains the same.
User response: Correct the path name to specify the desired file to remove. Reenter the command.
System programmer response: None.
Source: LANRES

EWXxx3017E  Directory could not be removed.
Explanation: The attempt to remove a directory was unsuccessful. The most likely cause is that the directory is not empty.
System action: Command processing ends. The system status remains the same.
User response: Connect to the distribution function and enter the following command to determine the cause of the error:
   • Enter the EWXDS RMDIR command.
System programmer response: None.
Source: LANRES

EWXxx3018E  Command rejected: Command chaining cannot be nested.
Explanation: If you enter an EWXADMIN BEGINCC command to begin command chaining, you must enter an EWXADMIN ENDCC or EWXADMIN RESTSYS command to stop command chaining before you can enter a second EWXADMIN BEGINCC command.
System action: Command processing ends. The system status remains the same.
User response: Change the command sequence.
System programmer response: None.
Source: LANRES

EWXxx3019E  Administration command name was unsuccessful with internal error code xxx nnn.
Explanation: An unexpected error has occurred while processing the administration command name. The error code returned from the NLM is displayed. The internal error code has two parts, the LANRES error code xxx and the NetWare error code nnn.
System action: Command processing ends. The system status remains the same.
User response: Notify your system programmer of the internal error code.
System programmer response: Look up the NetWare error code nnn in the NetWare System Messages. The LANRES error code is only used by IBM service.
If the NetWare error code is not sufficient to indicate the problem, enter the following sequence of commands and perform the indicated actions:
1. Enter EWXADMIN DEBUG ON. This places the administration function in trace mode.
2. Run the command sequence that caused the error again. The assumption here is that the error is repeatable.
3. Enter EWXADMIN D15PDB. This displays the trace information on the host terminal screen and also writes it to a trace file. The LANRES trace file is prefix.EWXADMIN.DEBUGMSG.
4. Enter EWXADMIN DEBUG OFF. This returns the administration function to normal mode.
5. Examine the trace file for problem determination and fault isolation.
Source: LANRES
EWXxx3020E  Command rejected: Command chaining is not active.

Explanation: The EWXADMIN ENDCC command cannot be used unless a EWXADMIN BEGINCC command is in progress.

System action: Command processing ends. The system status remains the same.

User response: Change the command sequence.

System programmer response: None.

Source: LANRES

EWXxx3021E  Command rejected: Command chaining is not active.

Explanation: The EWXADMIN RESTSYS command cannot be used unless a EWXADMIN BEGINCC command is in progress.

System action: Command processing ends. The system status remains the same.

User response: Change the command sequence.

System programmer response: None.

Source: LANRES

EWXxx3022E  Command rejected: Bindery cannot be saved during command chaining.

Explanation: The EWXADMIN SAVEBIND command cannot be used while a EWXADMIN BEGINCC command is in progress. If a EWXADMIN SAVEBIND command is processed, the bindery files saved during the start of command chaining would be overlaid. In this case, the EWXADMIN RESTSYS command would not be able to restore the originally saved bindery files.

System action: Command processing ends. The system status remains the same.

User response: Change the command sequence.

System programmer response: None.

Source: LANRES

EWXxx3023E  Command rejected: Bindery cannot be restored during command chaining.

Explanation: The EWXADMIN RESTBIND command cannot be used while a EWXADMIN BEGINCC command is in progress. If a EWXADMIN RESTBIND command is processed, the bindery files saved during the start of command chaining would be restored. In this case, any bindery modifications after the EWXADMIN BEGINCC command and prior to the EWXADMIN RESTBIND command would be lost.

System action: Command processing ends. The system status remains the same.

User response: Change the command sequence.

System programmer response: None.

Source: LANRES

EWXxx3024E  Login script file exceeds the limit of 4000 bytes.

Explanation: The command cannot process login script files longer than 4000 bytes.

System action: Command processing ends. The system status remains the same.

User response: You must use the distribution function to copy the login script file to the server. For example, assume there is a user named BIGUSER and a login script file on the host named prefix.BIGLOGIN.SCRIPT is longer than 4000 bytes.

Enter the following sequence of commands to install the file on the server:

1. While still attached to the administration function, enter:
   
   EWXADMIN USERINFO BIGUSER SYS

   EWXxx3020E  EWXxx3024E
BIGUSER's internal ID is returned along with other information. Assume the internal ID returned is 1F000037.

2. Use the EWXCONN DROP command to drop the connection to the administration function and the EWXCONN LINK command to connect to the distribution function.

3. If this system is using DOS as an operating system, enter:
   EWXDS PUT 'prefix.BIGLOGIN.SCRIPT'
   SYS:\MAIL\1F000037\LOGIN (REPLACE

   If this system is using OS/2 as an operating system, enter:
   EWXDS PUT 'prefix.BIGLOGIN.SCRIPT'
   SYS:\MAIL\1F000037\LOGIN.OS2 (REPLACE

**System programmer response:** None.

---

EWXxx3027E Debug facility in use on target server.

**Explanation:** The debug facility is already in use by another user on the target server. You must wait for that user to stop use of the debug facility before you can use it.

**System action:** Command processing ends. The system status remains the same.

**User response:** Wait and retry the operation.

**System programmer response:** Tell the user of the debug facility to stop the debug facility by entering the following command:

- Enter:
  EWXADMIN DEBUG OFF

**Source:** LANRES

---

EWXxx3028E Command rejected: Debug mode is off.

**Explanation:** This command requires that debug mode be enabled.

**System action:** Command processing ends. The system status remains the same.

**User response:** Enable the debug facility with the following command:

- Enter:
  EWXADMIN DEBUG ON

You must have trustee rights to LANADME.DBG and LANADMO.DBG in the SYS:\SYSTEM\directory to use the debug function. Reenter the unsuccessful command.

**System programmer response:** None.

**Source:** LANRES

---

EWXxx3029E Unable to open debug file.

**Explanation:** The debug file could not be opened on the server. This is usually because the user has insufficient trustee rights or the operating system is unable to open the file (for example, if it is out of disk space).

**System action:** Command processing ends. Debug mode is not enabled.

**User response:** None.

**System programmer response:** If the user should be able to use the debug facility, give the user trustee rights to LANADME.DBG and LANADMO.DBG in SYS:\SYSTEM\.

**Source:** LANRES
**EWXxx3030E  •  EWXxx3034E**

**EWXxx3030E  Unable to open bindery information file.**

**Explanation:** The bindery information file could not be opened on the server. This is usually because the user has insufficient trustee rights or the operating system is unable to open the file (for example, if it is out of disk space). The file is **BINDERY.LST** in **SYS:SYSTEM\**, and is used by the **EwXadmin QUERY BINDERY** command.

**System action:** Command processing ends. The system status remains the same.

**User response:** None.

**System programmer response:** If the user should be able to enter the query bindery command, give the user trustee rights to **BINDERY.LST** in **SYS:SYSTEM\**.

**Source:** LANRES

**EWXxx3031E  Current password not entered or incorrect.**

**Explanation:** A password in the correct format must be supplied. in the format required.

**System action:** Command processing ends. The system status remains the same.

**User response:** Use the keyword **NULL** for the password if you are trying to assign a null password (which means no password) to a user. Otherwise, retry the command with a valid password.

**System programmer response:** None.

**Source:** LANRES

**EWXxx3032E  Unable to close debug file.**

**Explanation:** The system could not close the debug file. This might happen if you lost trustee rights to the file (for example, someone removed them) before you disabled the debug facility.

**System action:** Command processing ends. The system status remains the same.

**User response:** None.

**System programmer response:** Connect to the administration function as the SUPERVISOR and enter the following command:

- Enter: **EwXadmin DEBUG OFF**

**Source:** LANRES

**EWXxx3033E  Command rejected: New password duplicated current or previous passwords.**

**Explanation:** The new password must be different from the current password. In addition, if the user is required to have unique passwords, then the new password must be different from the eight previous passwords.

**System action:** Command processing ends. The system status remains the same.

**User response:** Reenter the command with a new password.

**System programmer response:** None.

**Source:** LANRES

**EWXxx3034E  Command rejected: SUPERVISOR or equivalent authority required.**

**Explanation:** The attempted operation requires that the user be the NetWare SUPERVISOR or have security equivalence to SUPERVISOR.

**System action:** Command processing ends. The system status remains the same.

**User response:** Ask a user with SUPERVISOR authority to perform the action for you, or to assign SUPERVISOR security equivalence to your user ID.

**System programmer response:** If required, assign SUPERVISOR security equivalence to the user.
EWXxx3035E Command rejected: Target server busy command chaining.

**Explanation:** The function you requested cannot be performed at this time because another user has begun command chaining operations on the target server. You must wait until that user finishes and then retry the command.

**System action:** Command processing ends. The system status remains the same.

**User response:** Wait and retry the operation.

**System programmer response:** Inform the user performing command chaining to stop it by entering the following command:
- Enter:
  `EWXADMIN ENDCC`
- or
  `EWXADMIN RESTSYS`

Source: LANRES

EWXxx3036E Member already exists.

**Explanation:** The command was unsuccessful. Two causes are:
- Attempting to add a user to a group when the user is already a member of that group
- Attempting to make a user a work group manager when the user is already a work group manager

**System action:** Command processing ends. The system status remains the same.

**User response:** Check the spelling of the user or group name specified on the command line. If the spelling is correct, you may have entered the command previously. If the spelling is incorrect, correct it. Reenter the command.

**System programmer response:** None.

Source: LANRES

EWXxx3037E Incorrect path specified, or trustee rights to the path required.

**Explanation:** A command was entered specifying a path that was incorrect or nonexistent, or the proper trustee rights are required for the path before the command can be processed.

**System action:** Command processing ends. The system status remains the same.

**User response:** Verify that the correct volume name and path were entered correctly on the command line. If the path is correct and you need trustee rights for the path, ask your system programmer to assign the trustee rights to you.

**System programmer response:** Assign trustee rights, if required, to the user for the path specified on the command line.

Source: LANRES

EWXxx3038E Member does not exist.

**Explanation:** The command tried to remove an existing user or group as a member when the user or group is not a member.

**System action:** Command processing ends. The system status remains the same.

**User response:** Check the spelling of the user or group name specified on the command line. If the spelling is correct, you may have entered the command previously. If the spelling is incorrect, correct it. Reenter the command.

**System programmer response:** None.

Source: LANRES
EWXxx3039E  The password is shorter than the minimum password length or greater than 127 characters.

**Explanation:** The user ID's password must have a length greater than or equal to the value of the “Minimum Password Length” field, but not greater than 127 characters long.

**System action:** Command processing ends. The system status remains the same.

**User response:** Specify a password with a shorter or longer length. You may use the NetWare SYSCON utility or enter the EWXADMIN USERINFO command to view the minimum password length for your user ID.

**System programmer response:** None.

**Source:** LANRES

EWXxx3040W  Current password was not required and was not used.

**Explanation:** A command was entered to change a user ID's password, and the user issuing the command has SUPERVISOR authority or manages the specified user ID. A SUPERVISOR or the user ID's manager need not specify the current password when changing the user ID's password.

**System action:** The command continues.

**User response:** Verify that you have changed the correct user ID's password.

**System programmer response:** None.

**Source:** LANRES

EWXxx3041W  Print queue created but print server name contains special characters.

**Explanation:** The command tried to create a print queue and assign a print server to it. The print queue was created successfully, but the command was unsuccessful while attempting to assign a print server to the print queue. A print server name cannot contain spaces or any of the following special characters:

```
/  (slash)
\  (backslash)
:  (colon)
;  (semicolon)
,  (comma)
*  (asterisk)
?  (question mark)
```

NetWare may also restrict the print server name from containing other special characters. This message may appear if no name is specified.

**Note:** Not all commands produce this message when a print queue or print server name contains one of the above characters.

**System action:** The print queue is created but the print server is not assigned to it.

**User response:** Examine the specified print server name. If the name contains any of the special characters listed, remove them. Use the EWXADMIN ASQSERV command to assign the correct print server to the new print queue.

**System programmer response:** None.

**Source:** LANRES

EWXxx3042W  Print queue created but the print server does not exist.

**Explanation:** The command tried to create a print queue and assign a print server to it. The print queue was created successfully, but the command was unsuccessful while attempting to assign a print server to the print queue. The specified print server name could not be found. Use the NetWare PCONSOLE utility to verify that the print server exists.

**System action:** The print queue is created but the print server is not assigned to it.
User response: Check the spelling of the specified print server name. If the spelling is incorrect, correct it. Use the EWXADMIN ASQSERV command to assign the correct print server to the new print queue.

System programmer response: None.

Source: LANRES

EWXxx3043W Print queue created but print server not assigned to it.

Explanation: The command tried to create a print queue and assign a print server to it. The print queue was created successfully, but the command was unsuccessful while attempting to assign a print server to the print queue. This error message may appear when the server is out of memory or when the bindery is locked.

System action: The print queue is created, but the print server is not assigned to it.

User response: Use the EWXADMIN ASQSERV command to assign the print server to the new print queue. If the command fails, notify your system programmer.

System programmer response: Use the NetWare PCONSOLE utility to verify that the print server exists. Assign the print server to the print queue from PCONSOLE.

Source: LANRES

EWXxx3044E Security equivalence does not exist.

Explanation: The command tried to withdraw a security equivalence from a user, but the user did not possess that security equivalence.

System action: Command processing ends. The system status remains the same.

User response: Check the spelling of the user or group name entered on the command line. If the spelling is correct, you may have entered the command previously. If the spelling is incorrect, correct it. Reenter the command with the correct information.

System programmer response: None.

Source: LANRES

EWXxx3045E Command rejected: "Require Password" is set to "yes". No null passwords.

Explanation: A command was entered which requires the “Require Password” field in the Account Restrictions screen of SYSCON to be set to “NO”.

System action: Command processing ends. The system status remains the same.

User response: Enter the EWXADMIN REQPASSW command and specify the “YES” parameter.

System programmer response: None.

Source: LANRES

EWXxx3046W Print queue renamed but print server was incorrect or does not exist.

Explanation: The command tried to rename a print queue and inform the LAN-to-host print server of the change. The print queue was renamed successfully, but the specified print server name was incorrect or could not be found. Use the NetWare PCONSOLE utility to verify that the print server exists. A print server name cannot contain spaces or any of the following special characters:

/  (slash)
\  (backslash)
:  (colon)
;  (semicolon)
,  (comma)
*  (asterisk)
?  (question mark)
EWXxx3047E • EWXxx3049E

NetWare may also restrict the print server name from containing other special characters.

System action: The print queue is renamed and the LAN-to-host print server is not informed.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx3047E Print queue does not exist.
Explanation: The specified print queue name could not be found.
System action: Command processing ends. The system status remains the same.
User response: Check the spelling of the specified print queue name. If the spelling is incorrect, correct it. Reenter the command.
System programmer response: None.
Source: LANRES

EWXxx3048E Special characters are not allowed in print queue name.
Explanation: A print queue name cannot contain spaces or any of the following special characters:

/ (slash)
\ (backslash)
: (colon)
; (semicolon)
, (comma)
* (asterisk)
? (question mark)

NetWare may also restrict the print queue name from containing other special characters.
System action: Command processing ends. The system status remains the same.
User response: Examine the specified print queue name. If the name contains any of the special characters, remove them. Reenter the command.
System programmer response: None.
Source: LANRES

EWXxx3049E Command rejected: Another QUERY BINDERY command is being processed.
Explanation: The administration function only allows one user to enter the EWXADMIN QUERY BINDERY command at a time. The first EWXADMIN QUERY BINDERY command must be completed before the next EWXADMIN QUERY BINDERY command can be entered by another user.
System action: Command processing ends. The first EWXADMIN QUERY BINDERY command will continue to be processed.
User response: Wait for the first EWXADMIN QUERY BINDERY command to be finished before reentering your EWXADMIN QUERY BINDERY command.
System programmer response: None.
Source: LANRES
EWXxx3050E  Print server already assigned to print queue.
Explanation: The print server has already been assigned to service the print queue.
System action: Command processing ends. The system status remains the same.
User response: Check the spelling of the print server and print queue entered on the command line. If the spelling is incorrect, correct it. Reenter the command.
System programmer response: None.
Source: LANRES

EWXxx3051E  Print server not servicing print queue.
Explanation: The print server cannot be removed from the print queue because it is not servicing the print queue.
System action: Command processing ends. The system status remains the same.
User response: Check the spelling of the print server and print queue entered on the command line. If the spelling is incorrect, correct it. Reenter the command.
System programmer response: None.
Source: LANRES

EWXxx3052E  Unable to open the filename file.
Explanation: The attempt to open the specified file in the SYS:\ETC\ directory was unsuccessful. This could occur if the SYS:\ETC\ directory does not exist, you lack the necessary trustee rights, or the file is locked.
System action: Command processing ends. The system status remains the same.
User response: Determine which of the conditions mentioned in the explanation exist. Correct the problem and reenter the command.
System programmer response: None.
Source: LANRES

EWXxx3053E  Unable to create a temporary file.
Explanation: The attempt to create a temporary file in the SYS:\ETC\ directory was unsuccessful. This could occur if the SYS:\ETC\ directory does not exist, you lack the necessary trustee rights, or the file is locked.
System action: Command processing ends. The system status remains the same.
User response: Determine which of the conditions mentioned in the explanation exist. Correct the problem and reenter the command.
System programmer response: None.
Source: LANRES

EWXxx3054E  The NFS ID specified already exists.
Explanation: The attempt to add an NFS ID to the NFSSUSERS or NFSGROUP file in the SYS:\ETC\ directory was unsuccessful because the specified ID already exists in the file.
System action: Command processing ends. The system status remains the same.
User response: Be sure that the NFS ID specified is correct. If it is, delete the NFS ID and then add it with the new NetWare ID.
System programmer response: None.
Source: LANRES
EWXX3055E  •  EWXX3060E

EWXX3055E Unable to unlock the filename file that is locked.
Explanation:  The attempt to unlock the specified file in the SYS\ETC\ directory was unsuccessful.
System action:  Command processing ends. The system status remains the same.
User response:  Determine why the file is locked. It is possible that someone is using it. Unlock the file and reenter the command.
System programmer response:  None.
Source:  LANRES

EWXX3056E The server is out of memory to lock the filename file.
Explanation:  The attempt to lock the specified file in the SYS\ETC\ directory was unsuccessful because the server ran out of memory.
System action:  Command processing ends. The system status remains the same.
User response:  Make more memory available and reenter the command.
System programmer response:  None.
Source:  LANRES

EWXX3057E There was a time-out trying to lock the filename file.
Explanation:  The attempt to lock the specified file in the SYS\ETC\ directory was unsuccessful. The file is already locked.
System action:  Command processing ends. The system status remains the same.
User response:  Determine why the file is locked. It is possible that someone is using it. Unlock the file and reenter the command.
System programmer response:  None.
Source:  LANRES

EWXX3058E There was an error trying to lock the filename file.
Explanation:  The attempt to lock the specified file in the SYS\ETC\ directory was unsuccessful.
System action:  Command processing ends. The system status remains the same.
User response:  Determine why the file cannot be locked. Correct the problem and reenter the command.
System programmer response:  None.
Source:  LANRES

EWXX3059E The NFS ID must be an integer between 0 and (2**32-1).
Explanation:  An incorrect NFS ID was specified. The NFS ID value must be from 0 to (2**32-1).
System action:  Command processing ends. The system status remains the same.
User response:  Change the NFS ID to a value from 0 to (2**32-1) and reenter the command.
System programmer response:  None.
Source:  LANRES

EWXX3060E The NetWare ID must be less than or equal to 47 characters in length.
Explanation:  The NetWare ID specified was longer than 47 characters.
System action:  Command processing ends. The system status remains the same.
User response:  Change to a correct NetWare ID and reenter the command.
**EWXxx3061E • EWXxx3065E**

**EWXxx3062E Unable to rename the temporary file to filename.**

**Explanation:** The attempt to rename a temporary file in the SYS:\ETC\ directory to the specified file name was unsuccessful.

**System action:** Command processing ends. The system status remains the same.

**User response:** The temporary file still exists in the SYS:\ETC\ directory. Rename the temporary file to NFSUSERS if the request is to work with an NPS user, otherwise, rename the temporary file to NFSGROUP.

**System programmer response:** None.
**Source:** LANRES

---

**EWXxx3063E The NFS ID did not exist in the filename file.**

**Explanation:** The request to delete an NFS ID from the specified file in the SYS:\ETC\ directory was unsuccessful because the NFS ID does not exist in the file.

**System action:** Command processing ends. The system status remains the same.

**User response:** Make sure the correct NFS ID was entered.

**System programmer response:** None.
**Source:** LANRES

---

**EWXxx3064E Unable to create the filename file.**

**Explanation:** The attempt to create the specified file in the SYS:\ETC\ directory was unsuccessful. The SYS:\ETC\ directory may not exist, the user may not have trustee rights to SYS:\ETC\, or the NetWare for NFS product may not be installed on the server.

**System action:** Command processing ends. The system status remains the same.

**User response:** Make sure the SYS:\ETC\ directory exists or that you have the trustee rights to the SYS:\ETC\ directory. If the directory does not exist, either create the directory or install the NetWare for NFS product on your server.

**System programmer response:** None.
**Source:** LANRES

---

**EWXxx3065E The filename file did not exist to delete the NFS ID.**

**Explanation:** The attempt to delete an NFS user or group was unsuccessful. The specified file does not exist in the SYS:\ETC\ directory. It is possible that NetWare for NFS may not be installed on the server.

**System action:** Command processing ends. The system status remains the same.

**User response:** There is no NFS ID to delete. NetWare for NFS may need to be installed.
EWXxx3066E  EWXxx3068E

System programmer response:  None.
Source:  LANRES

EWXxx3066E  Directory cannot be removed.

Explanation:  You attempted to remove a directory on the NetWare server but the attempt failed. The failure may be caused by:
- Not all files have been deleted from the directory
- Subdirectories exist inside that directory
- The DeleteInhibit flag was set on for that directory.

System action:  Command processing ends. Files may have been removed from the directory but the directory remains.

User response:  Check to see if any of the reasons for failure listed above applies. Correct the situation and use the EWXADMIN RMDIR command to remove the directory.

System programmer response:  None.
Source:  LANRES

EWXxx3067E  This command is not supported on a NetWare Version 4.01 or later server.

Explanation:  Certain LANRES administration commands cannot be entered when you are logged-in to a NetWare Version 4.01 or later server.

The new NetWare Version 4.01 architecture does not support the following administration commands:
- EWXADMIN BEGINCC
- EWXADMIN ENDC
- EWXADMIN RESTBIND
- EWXADMIN RESTSYS
- EWXADMIN SAVEBIND

There are no substitutes for these unsupported administration commands.

System action:  Command processing ends. The system status remains the same.

User response:  Enter a supported command.

System programmer response:  None.
Source:  LANRES

EWXxx3068E  Insufficient rights to create and configure print queue or print server.

Explanation:  Your attempt to create a new print queue or print server failed because you did not have sufficient authority to create or configure the print queue or print server. The system administrator must grant you the authority to create and configure the print queue or print server. Ideally, you should have security equivalence to the SUPERVISOR user ID to enter this command.

System action:  Command processing ends. The system status remains the same.

User response:  Ask the system administrator to give you the proper authority to create the print queue or print server, or to create the print queue or print server for you.

System programmer response:  If appropriate, create the print queue or print server, or grant the proper authority to the user. To grant the proper authority, you may give the user security equivalence to the SUPERVISOR user ID or to another user ID with the authority to create print queues or print servers.

Source:  LANRES
EWXxx3069E Cannot configure print queue or print server, and cannot delete it.

Explanation: Your attempt to create a new print queue or print server succeeded but you did not have sufficient authority to configure the print queue or print server. The command then tried to delete the print queue or print server but was unable to delete it. The system administrator must grant you the authority to configure the print queue or print server. Ideally, you should have security equivalence to the SUPERVISOR user ID to enter this command.

System action: Command processing ends. The print queue or print server was created but not properly configured.

User response: Ask the system administrator to give you the proper authority to configure the print queue or print server, or to configure the print queue or print server for you.

System programmer response: If appropriate, configure the print queue or print server, or grant the proper authority to the user. To grant the proper authority, you may give the user security equivalence to the SUPERVISOR user ID or to another user ID with the authority to configure print queues or print servers.

Source: LANRES

EWXxx3070E Permission denied by NetWare server. Insufficient trustee rights.

Explanation: You do not have sufficient authority to perform the operation. The proper file or directory trustee rights may be required.

System action: Command processing ends. The system status remains the same.

User response: Obtain the appropriate trustee rights to perform the operation.

System programmer response: If appropriate, grant the proper trustee rights to the user.

Source: LANRES

EWXxx3071W Name has no trustee rights or you are not authorized for them.

Explanation: You tried to query the file and directory trustee rights assigned to a user ID or a group ID, but the trustee rights information cannot be displayed. This user or group has no trustee rights, or you do not have sufficient authority over the user or group to see their trustee rights.

System action: The command completes and this warning message is displayed on the screen or written to a file.

User response: If necessary, obtain the appropriate authority to perform the operation.

System programmer response: If appropriate, grant the proper authority to the user.

Source: LANRES

EWXxx3072E Parameter parameter must be USER or GROUP.

Explanation: The command syntax requires that the indicated parameter be either the keyword USER or the keyword GROUP.

System action: Command processing ends. The system status remains the same.

User response: Correct the error and reenter the command.

System programmer response: None.

Source: LANRES

EWXxx3073E The full name entered is more than 127 characters.

Explanation: The full name must be less than or equal to 127 characters in length.

System action: Command processing ends. The system status remains the same.

User response: Correct the error and reenter the command.

System programmer response: None.

EWXxx3076E  Incorrect data set name dsname specified.
Explanation: An incorrect data set name was specified in the command.
System action: Command processing ends. The system status remains the same.
User response: Correct the data set name and reenter the command.
System programmer response: None.
Source: LANRES

EWXxx3077E  Incorrect date value date specified.
Explanation: The date value must be in the format defined for your system, and be a date that NetWare accepts. The following restrictions on the year also applies. The year must be in the range 81 to 99 (1981 to 1999) or in the range 00 to 80 (2000 to 2080).
System action: Command processing ends. The system status remains the same.
User response: Correct the date and reenter the command.
System programmer response: None.
Source: LANRES

EWXxx3078E  Cannot assign or remove security equivalence from same user.
Explanation: A user cannot have security equivalence to himself. Therefore, you cannot make a user security equivalent to himself and you cannot make a user not security equivalent to himself.
System action: Command processing ends. The system status remains the same.
User response: Verify the two user names in the command. If the user names are incorrect, correct them and reenter the command.
System programmer response: None.
Source: LANRES
EWXxx3079E  Incorrect path name path specified.
Explanation:  A NetWare path name consists of a correct volume name, a colon, and the file or directory name within the volume. The file or directory name is usually optional.
System action:  Command processing ends. The system status remains the same.
User response:  Correct the path name and reenter the command.
System programmer response:  None.
Source:  LANRES

EWXxx3080E  File or directory is read-only.
Explanation:  The command was unsuccessful because it attempted to write to, copy to, rename, or delete a read-only file or directory.
System action:  Command processing ends. The system status remains the same.
User response:  Change the file or directory's read-only attribute and reenter the command. The file or directory's attributes may be changed with a NetWare utility, such as FLAG or FLAGDIR.
System programmer response:  None.
Source:  LANRES

EWXxx3081E  File or directory not found.
Explanation:  The specified file or directory was not found. The file or directory does not reside on the volume, the volume was not mounted, the file or directory name was misspelled, or incomplete identification was provided.
System action:  Command processing ends. The system status remains the same.
User response:  Verify that the file or directory name was spelled correctly, and that the volume was mounted.
System programmer response:  None.
Source:  LANRES

EWXxx3082E  Cannot remove a non-empty directory.
Explanation:  A directory which contains files or subdirectories cannot be deleted.
System action:  Command processing ends. The system status remains the same.
User response:  Delete all files and subdirectories from the directory. Reenter the command.
System programmer response:  None.
Source:  LANRES

EWXxx3083E  File or directory already exists.
Explanation:  The file or directory already exists and cannot be overwritten.
System action:  Command processing ends. The system status remains the same.
User response:  Reenter the command with a different file or directory name.
System programmer response:  None.
Source:  LANRES

EWXxx3084E  Incorrect directory name specified.
Explanation:  The command to create a directory failed. The volume was not mounted, the directory name was misspelled, part of the directory path does not exist, or incomplete identification was provided.
System action:  Command processing ends. The system status remains the same.
EWXxx3085E  EWXxx3088E

User response:  Reenter the command with a correct directory name.
System programmer response:  None.
Source:  LANRES

EWXxx3085E  The DS option is not supported on a NetWare Version 3.x server.

Explanation:  You are logged-in to a NetWare Version 3.x server and you specified the DS (Directory Services) option on the EWXADMIN ADDLS command. The DS option is accepted only when you are logged-in to a NetWare Version 4.01 or later server.
System action:  Command processing ends. The system status remains the same.
User response:  Change the operating system parameter to DOS or OS2 and reenter the command.
System programmer response:  None.
Source:  LANRES

EWXxx3086E  Cannot find Directory Services functions on the NetWare server.

Explanation:  The command requires Directory Services functions on the NetWare server in order to perform its task, but these functions are not available. There are several probable causes for this problem: 1) you are logged-in to a NetWare Version 3.x server; 2) you are logged-in to a NetWare Version 4.x server but the administration NLM, EWXADMIN.NLM, is running on a NetWare Version 3.x server; or 3) the NetWare DSAPI.NLM is not loaded on the server. Directory Services functions are only available when NetWare's DSAPI.NLM is loaded on the server.
System action:  Command processing ends. The system status remains the same.
User response:  Make sure you are connected to and logged-in to a NetWare Version 4.x server. If you are running on a NetWare Version 4.x server, ask your system programmer to load DSAPI.NLM on the server.
System programmer response:  Load DSAPI.NLM on the server.
Source:  LANRES

EWXxx3087E  Cannot login with Directory Services.

Explanation:  The administration function attempted to login with your user ID through Directory Services to use Directory Services functions but the attempt failed. The problem is probably caused by using the SUPERVISOR user ID on a NetWare Version 4.x server.
System action:  Command processing ends. The system status remains the same.
User response:  Use the ADMIN user ID or a user ID security equivalent to the ADMIN user ID. You may also create a SUPERVISOR user ID with NETADMIN or NWADMIN and make it security equivalent to the ADMIN user ID.
System programmer response:  None.
Source:  LANRES

EWXxx3088E  EWXADMIN PROGRAM CANNOT BE FOUND.

Explanation:  You have invoked the EWXADMIN REXX procedure which is provided only for compatibility with previous releases. The procedure tried to call the main EWXADMIN program but the program was not found.
System action:  Command processing ends. The system status remains the same.
User response:  Make sure you have access to the EWXADMIN program.
System programmer response:  None.
Source:  LANRES
EWXxx3089I  You are logged on tree . . . . . . . . . tree_name
Explanation: This is the NetWare Directory Services tree name that you are logged in to.
System action: None.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx3090I  Your current context . . . . . . . . . context_name
Explanation: This is the current context the user is logged into the NetWare Directory Services.
System action: None.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx3091I  You have logged-in under context context as user user.
Explanation: You are now logged-in as user user on the NetWare server under context.
System action: None.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx3092E  Invalid syntax. Check the syntax in context field.
Explanation: An invalid syntax was entered - most likely the context field is entered wrong.
System action: Command processing ends. The system status remains the same.
User response: Check the syntax and reenter.
System programmer response: None.
Source: LANRES

EWXxx3093E  Object objname not found.
Explanation: The specified object was not found. Either the object does not reside in the context specified, the object
name was misspelled or incomplete identification was provided to cause the appropriate path to be searched.
System action: Command processing ends. The system status remains the same.
User response: To verify the object exists, enter the command with correct name or syntax.
System programmer response: None.
Source: LANRES

EWXxx3094E  Login unsuccessful: User tried to login to NDS.
Explanation: The file server or user ID specified on the command tried to login to NetWare Directory Services.
NetWare Directory services not installed.
System action: Command processing ends. The system status remains the same.
User response: Use the proper syntax to login. Reenter the command.
System programmer response: None.
EWXxx3095E Not logged in to NDS. Reenter the command with correct syntax.

Explanation: The syntax used in the command is for NetWare Directory Services. Use the non-NDS syntax for the command.

System action: Command processing ends. The system status remains the same.

User response: Use the proper syntax of the command Reenter the command.

System programmer response: None.

EWXxx3096E The two context names context1 and context2 must be the same.

Explanation: The attempt to rename/swap the directory or file was unsuccessful, because the files/directory to be renamed must reside in the same context.

System action: Command processing ends. The system status remains the same.

User response: Enter the same context name for both directories or files and reenter the command.

System programmer response: None.

EWXxx4001E Cannot find user or system configuration file to establish connection.

Explanation: Not all the required values were specified on the command line. The command tried to use the configuration files to fill in the missing values but neither the user configuration file nor the system configuration file can be found. Without these files, the connection to the NetWare server cannot be established. The user configuration file is:

- EWXCONFG.LINKUSER

The system configuration file is:

- EWXCONFG.LINK

System action: Command processing ends. The system status remains the same.

User response: Notify your system programmer if you need access to the system configuration file or you may create your own user configuration file. You may also connect to the NetWare server by specifying all the required values on the command line.

System programmer response: Verify that the user has access to the system configuration file that was customized during installation.

Source: LANRES

EWXxx4002E Parameter parameter not in the form "server/user" or NDS format.

Explanation: The indicated parameter is not correct. It must be in the form server/user to specify the NetWare server and user ID to login to. In case logging in to NDS, use NDS format of the parameter.

System action: Command processing ends. The system status remains the same.

User response: Correct the error and reenter the command.

System programmer response: None.

Source: LANRES
EWX003E Login was unsuccessful (server error code=nn).
Explanation: An unexpected error has occurred while trying to login to the NetWare server.
System action: Command processing ends. The system status remains the same.
User response: Call your system programmer with the server error code.
System programmer response: Look up the server error code nn in the NetWare System Messages. Correct the problem which caused the server error code.
Source: LANRES

EWX004I Logging of LANRES messages is on.
Explanation: Messages from LANRES programs will be recorded in a log file.
System action: None.
User response: None.
System programmer response: None.
Source: LANRES

EWX005I Logging of LANRES messages is off.
Explanation: Messages from LANRES programs will not be recorded in a log file.
System action: None.
User response: None.
System programmer response: None.
Source: LANRES

EWX006E Command request to the host-to-LAN print function is too long.
Explanation: The request from the EWXCONN PRINT or EWXCONN QUERY PRINT command cannot be sent to the host-to-LAN print server on the host. The command that was entered is longer than the maximum length for a valid EWXCONN PRINT or EWXCONN QUERY PRINT command.
System action: Command processing ends. The system status remains the same.
User response: Check the command for misspellings or duplicate values. Correct the error and reenter the command.
System programmer response: None.
Source: LANRES

EWX007E Cannot connect to the function function. Password exchange was unsuccessful.
Explanation: The LANRES functions on the host and the NetWare server perform a password exchange to verify that both sides are authorized to connect to each other. This password exchange was unsuccessful. The error indicates that the PWIN password value on the host does not match the PWOUT password value on the NetWare server.
System action: Command processing ends. The system status remains the same.
User response: Make sure that you are using the correct passwords. On the host, the passwords may be found in one of the following places (xxxx may be ADMIN, DISK, DIST, HLPRT, or LHPRT):
- EWXxxxx.MVSPW file
- Specified by the PWIN and PWOUT options on the EWXCONN LINK command
On the NetWare server, the passwords may be found in one of the following places (xxxx may be ADMIN, DISK, DIST, HLPRT, or LHPRT):
- EWXCOMM.INI file
- EWXxxxx.NPW file
EWXxx4009E • EWXxx4012I

- Specified by the PWIN and PWOUT parameters when the NLMs were loaded
You may have to ask the system programmer for the NetWare server passwords.

**System programmer response:** Give the user the NetWare server passwords for the function to be connected to.

**Source:** LANRES

---

**EWXxx4009E** Connection to the NetWare server will be dropped.

**Explanation:** An error has occurred which caused the connection to the NetWare server to be dropped. Additional error messages may be displayed to help determine the problem.

**System action:** Command processing ends. The connection to the NetWare server is dropped.

**User response:** If additional error messages are available, use them to determine the problem. Correct the problem and reenter the command.

**System programmer response:** None.

**Source:** LANRES

---

**EWXxx4010E** Cannot connect to the `function` function on the NetWare server.

**Explanation:** No connection can be made to the `function` function on the NetWare server. Probable causes are:
- You specified an incorrect or unavailable connectivity path
- You specified an incorrect server name or user name for the administration or distribution function and a matching line cannot be found in the configuration files.

Other error messages may be displayed to indicate the cause of the problem.

**System action:** Command processing ends. The system status remains the same.

**User response:** If other error messages were displayed, use them to find and correct the problem. If possible, specify all the parameters and options required by the command so the command will not have to use the configuration files.

**System programmer response:** None.

**Source:** LANRES

---

**EWXxx4011E** Cannot connect to the NetWare server with the nickname `nickname`.

**Explanation:** No connection can be made to the NetWare server with the specified nickname. Probable causes are:
- You specified an incorrect or unavailable connectivity path
- You specified an incorrect server name or user name for the administration or distribution function and a matching line cannot be found in the configuration files
- You specified an incorrect nickname and a matching line cannot be found in the configuration files

Other error messages may be displayed to indicate what the problem was.

**System action:** Command processing ends. The system status remains the same.

**User response:** If other error messages were displayed, use them to find and correct the problem. If possible, specify all the parameters and options required by the command so the command will not have to use the configuration files.

**System programmer response:** None.

**Source:** LANRES

---

**EWXxx4012I** Connection established to the `function` function on the NetWare server.

**Explanation:** You are now connected to the `function` function on the NetWare server.

**System action:** Connection made to the NetWare server.

**User response:** None.
System programmer response: None.
Source: LANRES

EWXxx4013E Cannot read login password. Error returned was: error_text
Explanation: The user was prompted to type in a password to login to the NetWare server but an error occurred while getting this password. The explanation for the error, error_text, was returned in the message.
System action: Command processing ends. The system status remains the same.
User response: Correct the problem indicated by error_text. Reenter the command.
System programmer response: None.
Source: LANRES

EWXxx4015E No matching line in configuration data sets to establish connection.
Explanation: All the required values were not specified on the command line. The command tried to use the configuration data sets to fill in the missing values but cannot find a matching line in the configuration data sets. For the administration and distribution functions, the command tried to match the nickname, server name, user name, protocol, and target values. For the disk, host-to-LAN print, and LAN-to-host print functions, the command tried to match the nickname, protocol, and target values. Without these missing values, the connection to the NetWare server cannot be established. The possible configuration data sets are the data sets allocated to the EWXCONF DDname, the EWXCONF.LINK data set, and the data set defined by the Link_Connection_Configuration option of the host configuration options data set.
System action: Command processing ends. The system status remains the same.
User response: Notify your system programmer if you need access to the system configuration data set. You may create your own configuration data set. You may also connect to the NetWare server by specifying all the required values on the command line.
System programmer response: Verify that the user has access to the configuration data set that was customized during installation.
Source: LANRES

EWXxx4016E Login unsuccessful: Unknown file server or user ID.
Explanation: The file server or user ID specified on the command was incorrect or nonexistent.
System action: Command processing ends. The system status remains the same.
User response: Check the spelling of the file server name and user ID. If the spelling is incorrect, correct it. Reenter the command.
System programmer response: None.
Source: LANRES

EWXxx4017E Login unsuccessful: Access to server denied.
Explanation: The most probable causes for getting this message are:
• The supplied password was incorrect.
• The user account has been locked out of the server by the NetWare “Intruder Detection/Lockout” feature.
• The user tried to login when they were not allowed access to the server.
• The administrator has disabled logins by entering the DISABLE LOGIN command at the server console.
System action: Command processing ends. The system status remains the same.
User response: Reenter the command with the correct user ID and password. If the error persists, ask your system programmer to grant you access to the server.
System programmer response: Use the NetWare SYSCON utility or another utility to unlock the user ID or to grant
the user access to the server during the required time period. Enter the ENABLE LOGIN command on the server console to allow users to login to the server.

Source: LANRES

EWXxx4018I  You have logged-in to server server as user user.

Explanation: You are now logged-in as user user on the NetWare server server.

System action: None.

User response: None.

System programmer response: None.

Source: LANRES

EWXxx4020E  Symdestname symdestname is not a valid symbolic destination name.

Explanation: When using the APPC protocol, the target operand specified an incorrect symbolic destination name. It must be an alphanumeric string of up to 8 characters.

System action: Command processing ends. The system status remains the same.

User response: Correct the error and reenter the command.

System programmer response: None.

Source: LANRES

EWXxx4021E  Raddr raddr is not a valid real subchannel address.

Explanation: When using the CHANNEL or MMC protocol, the raddr operand on the EWXCONN LINK command was incorrectly specified. (It must be a three- or four-character hexadecimal number specifying the even subchannel address of a read/write address pair.)

System action: Command processing ends. The system status remains the same.

User response: Reenter the EWXCONN LINK command with the correct subchannel address.

System programmer response: None.

Source: LANRES

EWXxx4022E  The raddr operand must be the EVEN address of the subchannel pair.

Explanation: When using the CHANNEL or MMC protocol, the raddr operand on the EWXCONN LINK command was incorrectly specified. (It must be a three- or four-character hexadecimal number specifying the even subchannel address of a read/write address pair.)

System action: Command processing ends. The system status remains the same.

User response: Reenter the EWXCONN LINK command with the correct subchannel address.

System programmer response: None.

Source: LANRES

EWXxx4024E  Login unsuccessful: Maximum number of concurrent connections exceeded.

Explanation: NetWare has placed a restriction on the number of stations that the user may login to at one time. The login attempt exceeded this number.

System action: Command processing ends. The system status remains the same.

User response: Logout of another station before reentering the command to login to the server. You can also ask your system programmer to raise the maximum number of concurrent connections for your user ID.

System programmer response: Increase the maximum number of concurrent connections for the user.
EWXxx4025E  EWXxx4033W

Source:  LANRES

EWXxx4025E Login unsuccessful: User account has expired or been disabled.
Explanation: The user's account on the server is either expired or disabled.
System action: Command processing ends. The system status remains the same.
User response: Ask your system programmer to enable your user account on the server and change your account expiration date. Reenter the command to login to the server.
System programmer response: Remove the user ID's account disabled restriction and change his account expiration date on the server.
Source:  LANRES

EWXxx4026E Login unsuccessful: Password has expired.
Explanation: The user ID's password on the server has expired.
System action: Command processing ends. The system status remains the same.
User response: Ask your system programmer to change your user ID's password, if required, and password expiration date. You may also login to the server from a PC client and change your password when prompted for a new one. Reenter the command to login to the server. Supply the new password if it has been changed.
System programmer response: Change the user ID's password and password expiration date on the server, if required.
Source:  LANRES

EWXxx4027E Login unsuccessful: Grace login limit exceeded.
Explanation: The user ID's password has expired and the login attempt exceeded the number of grace logins permitted.
System action: Command processing ends. The system status remains the same.
User response: Ask your system programmer to change your user ID's password and password expiration date, if required. Reenter the command to login to the server. Supply the new password if it has been changed.
System programmer response: Change the user ID's password and password expiration date on the server, if required.
Source:  LANRES

EWXxx4032W Line number of configuration file filename has an incorrect format.
Explanation: The line indicated in the message is in an incorrect format. Values may be missing or specified out of order.
System action: The line in error is bypassed.
User response: Edit the configuration file and correct the specified line. Follow the formats listed in [z/OS LANRES Configuration Files and Commands](z/OS LANRES Configuration Files and Commands). You may have to notify the system programmer if the incorrect line is in the system configuration file and you do not have write access to the system configuration file:
• EWXCONFG.LINK
System programmer response: Correct the system configuration file if necessary.
Source:  LANRES

EWXxx4033W Line number of configuration file filename is too long.
Explanation: The line indicated in the message is too long.
System action: The line in error is bypassed.
User response: Edit the configuration file and correct the specified line. You may have to notify the system
programmer if the incorrect line is in the system configuration file and you do not have write access to the system configuration file:

- EWXCONFGLINK

**System programmer response:** Correct the system configuration file if necessary.

**Source:** LANRES

---

**EWXxx4035E**  **Hostname name is not a valid host name.**

**Explanation:** When using the TCP/IP protocol, the `hostname` operand was incorrectly specified. (It must be specified as a character string of up to 63 characters.)

**System action:** Command processing ends. The system status remains the same.

**User response:** Correct and reenter the EWXCONN LINK command.

**System programmer response:** None.

**Source:** LANRES

---

**EWXxx4036W**  **Dropping previous connection before trying new connection.**

**Explanation:** You tried to establish a connection to a LANRES function on the NetWare server when there is already a connection to the NetWare server. There can be only one LANRES connection at a time so your previous connection will be dropped before a new connection is attempted.

**System action:** The previous connection to the NetWare server will be dropped.

**User response:** None.

**System programmer response:** None.

**Source:** LANRES

---

**EWXxx4041E**  **Incorrect component password specified.**

**Explanation:** A component password must be between 1 and 8 characters long, and be an alphanumeric string (0-9, a-z, A-Z). The password is not case sensitive.

**System action:** Command processing ends. The system status remains the same.

**User response:** Correct the error and reenter the command.

**System programmer response:** None.

**Source:** LANRES

---

**EWXxx4043E**  **Component password file filename cannot be found.**

**Explanation:** The component password file contains the two component passwords required to authorize the connection between the host and the NetWare server. The command was unsuccessful because these passwords were not specified with the command and a file containing these passwords cannot be found.

**System action:** Command processing ends. The system status remains the same.

**User response:** You may specify these component passwords when you enter the command or you may create a default component password file to hold these passwords.

The default password file should be created as EWXADMIN.MVSPW, EWXDISK.MVSPW, EWXDIST.MVSPW, EWXHLPR.MVSPW, or EWXHLPR.MVSPW.

Notify your system programmer if you do not know what these component passwords are.

**System programmer response:** Find out what the component passwords are and inform the user.

**Source:** LANRES
EWXxx4044E The PWIN and PWOUT values must be specified as a pair.

Explanation: If the PWIN and PWOUT component passwords are to be specified on the command line, then they must be specified together or not at all.

System action: Command processing ends. The system status remains the same.

User response: Correct the error and reenter the command.

System programmer response: None.

Source: LANRES

EWXxx4045E No connection to drop. You were not connected to the server.

Explanation: You were not connected to a LANRES function on the NetWare server so there was no connection to drop.

System action: Command processing ends. The system status remains the same.

User response: None. You are no longer connected to a LANRES function on the NetWare server.

System programmer response: None.

Source: LANRES

EWXxx4046I Dropping protocol connection through server to function function.

Explanation: Your connection to the specified function is being dropped.

System action: The connection to the NetWare server is dropped.

User response: None.

System programmer response: None.

Source: LANRES

EWXxx4049E Error dropping the connection. Error returned was: error_text

Explanation: An error occurred while trying to drop your connection. The explanation for the error, error_text, was returned in the message.

System action: Command processing ends. The system status remains the same.

User response: Correct the problem indicated: error_text. Reenter the command. If the problem persists, notify your system programmer.

System programmer response: Unload the LANRES NLMs from the NetWare server and load them again. If the problem persists, contact your IBM service representative.

Source: LANRES

EWXxx4054I protocol connection through server established to function function.

Explanation: Your connection to the NetWare server has been established.

System action: None.

User response: None.

System programmer response: None.

Source: LANRES
EWXxx4059E  Cannot connect to the function function. Error returned was: error_text.

Explanation: An error occurred while trying to connect to the function function on the NetWare server. The explanation for the error, error_text, was returned in the message.

System action: Command processing ends. The system status remains the same.

User response: Correct the problem indicated by error_text. If error_text is NLM NOT LOADED, load the NLM. If the NLM is LOADED, reenter the command. If the problem persists, notify your system programmer.

System programmer response: If necessary, load additional LANRES NLMs on the server. If the problem persists, unload the LANRES NLMs from the NetWare server and load them again. If the problem still persists, contact your IBM service representative.

Source: LANRES

EWXxx4060I  Attempted protocol connection through target.

Explanation: A connection was attempted through the indicated protocol and target but the attempt failed.

System action: Command continues with next connection attempt.

User response: None.

System programmer response: None.

Source: LANRES

EWXxx4061E  Line number of component password file filename is too long.

Explanation: The line indicated in the message is longer than 128 characters. Correct lines should not require more than 128 characters.

System action: Command processing ends. The system status remains the same.

User response: Edit the component password file and correct the specified line.

System programmer response: None.

Source: LANRES

EWXxx4062E  Incorrect password in line number of component password file filename.

Explanation: A component password must be between 1 and 8 characters long, and be an alphanumeric string (from 0 to 9, a to z, and A to Z). The password is not case sensitive.

System action: Command processing ends. The system status remains the same.

User response: Correct the component password file and reenter the command.

System programmer response: None.

Source: LANRES

EWXxx4063E One or both component passwords cannot be found in filename.

Explanation: Both component passwords are required to connect the host to a NetWare function.

System action: Command processing ends. The system status remains the same.

User response: Correct the component password file and reenter the command.

System programmer response: None.

EWXxx4064I  Information
Explanation:  This is a message used to display information requested by the user.
System action:  None.
User response:  None.
System programmer response:  None.
Source:  LANRES

EWXxx4065W  Lines in file filename may have been truncated.
Explanation:  The program tried to write information to the host file filename, but the record length of the file was not long enough and lines in the file may have been truncated.
System action:  None.
User response:  Set up a file with the correct record length and reenter the command.
System programmer response:  None.
Source:  LANRES

EWXxx4066E  The command specified in the CMD option is too long.
Explanation:  The host command string specified between the CMD option delimiters cannot be longer than the maximum length of 255 characters. The CMD option must also be the last option on the command line.
System action:  Command processing ends. The system status remains the same.
User response:  If possible, shorten the command specified between the CMD option delimiters. If not, put the lengthy command in a REXX procedure and then specify the name of the REXX procedure for the CMD option value.
System programmer response:  None.
Source:  LANRES

EWXxx4067E  CMD command "command" was unsuccessful. Resulting return code is return-code.
Explanation:  The command specified as the CMD option value was unsuccessful.
System action:  Connection is established with the NetWare server but the command failed.
User response:  Check the resulting return code found in the message to determine why the command was unsuccessful.
System programmer response:  None.
Source:  LANRES

EWXxx4201E  Error opening disk image disk_image_name: error_text.
Explanation:  An attempt to open the indicated disk image was unsuccessful.
System action:  Command processing ends.
User response:  Correct the problem and retry the failing command.
System programmer response:  None.
Source:  LANRES

EWXxx4202E  Error reading disk image disk_image_name: error_text.
Explanation:  An attempt to read the indicated disk image was unsuccessful.
System action:  Command processing ends.
User response:  Correct the problem and retry the failing command.
EWXxx4203E  EWXxx4208I

System programmer response: None.
Source: LANRES

EWXxx4203E  Error writing disk image disk_image_name: error_text.
Explanation: An attempt to write the indicated disk image was unsuccessful.

User response: Correct the problem and retry the failing command.
System programmer response: None.
Source: LANRES

EWXxx4204E  Unable to commit disk image disk_image_name: error_text.
Explanation: An attempt to commit the indicated disk image was unsuccessful.
System action: Command processing ends.
User response: Correct the problem and retry the failing command.
System programmer response: None.
Source: LANRES

EWXxx4205E  Error closing disk image disk_image_name: error_text.
Explanation: An attempt to close the indicated disk image was unsuccessful.
System action: Command processing ends.
User response: Correct the problem and retry the failing command.
System programmer response: None.
Source: LANRES

EWXxx4206I  Building compression dictionary for disk image disk_image_name.
Explanation: LANRES is building the data compression dictionary for the indicated disk image dataset.
System action: Processing continues.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx4207I  Compression dictionary built for disk image disk_image_name.
Explanation: LANRES has finished building the data compression dictionary for the indicated disk image dataset.
System action: Processing continues.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx4208I  Disk image statistics for dsname.
Explanation: This is the VSAM linear dataset name.
System action: None.
User response: None.
EWXxx4209I  NetWare volume size is \textit{nwsize}K, actual volume size is \textit{ldsize}K.

**Explanation:** The NetWare volume size is the size of the volume reported to the NetWare server while the actual volume size is the size of the VSAM linear dataset. The actual size is the same as the NetWare volume size for an uncompressed disk image.

**System action:** None.

**User response:** None.

**System programmer response:** None.

**Source:** LANRES

EWXxx4210I  \textit{size}K is being used by \textit{blocks} disk blocks, compression ratio is \textit{ratio}\%.

**Explanation:** Each NetWare disk block is 512 bytes. When disk compression is enabled, LANRES will compress each group of 8 disk blocks before writing the data to the VSAM linear dataset. The compression ratio is the ratio between the number of bytes actually written to the VSAM dataset and the number of bytes written by the NetWare server.

**System action:** None.

**User response:** None.

**System programmer response:** None.

**Source:** LANRES

EWXxx4211I  \textit{used}K in use, \textit{unused}K not in use, \textit{unallocated}K not allocated.

**Explanation:** Space in the VSAM linear dataset is either in use by a NetWare disk block, allocated but not in use, or not allocated. Initially, all space in the dataset is unallocated. As the NetWare server writes to the disk volume, space will be allocated to handle the changed disk blocks. As the disk blocks change in size due to different compression ratios, the old disk block space will be placed in a pool of unused space to be re-used by future space allocations. Disk fragmentation increases as the unallocated space decreases and the unused space increases. You should use the EWXLDCMP and EWXLDST commands to rebuild the VSAM linear dataset when the unallocated space becomes zero.

**System action:** None.

**User response:** None.

**System programmer response:** None.

**Source:** LANRES

EWXxx4212E  Linear dataspace \textit{dsname} has not been initialized.

**Explanation:** The indicated VSAM linear dataspace has not been initialized for use with LANRES.

**System action:** Command processing ends.

**User response:** Use the EWXLDCRT command to initialize the dataspace and then retry the failing command.

**System programmer response:** None.

**Source:** LANRES

EWXxx4213E  DIV request for \textit{dsname} failed with error \textit{error}, reason code \textit{reason-code}.

**Explanation:** A data-in-virtual request for the indicated VSAM linear dataspace failed with the indicated error and reason codes. See [z/OS MVS Programming: Assembler Services Reference ABE-HSP](https://www.ibm.com) for a description of the DIV error codes.

**System action:** Command processing ends.
EWXxx4214E  EWXxx4218E

User response: Correct the problem and then retry the failing command.
System programmer response: None.
Source: LANRES

EWXxx4214E DSPSERV request for *dsname* failed with error *error*, reason code *reason code*.

Explanation: A dataspace request for the indicated VSAM linear dataspace failed with the indicated error and reason codes. See z/OS MVS Programming: Assembler Services Reference ABE-HSP for a description of the DIV error codes.
System action: Command processing ends.
User response: Correct the problem and then retry the failing command.
System programmer response: None.
Source: LANRES

EWXxx4215E Data compression support is not available.

Explanation: Data compression is not available on the current system. The EWXLDDMP and EWXLDRST commands use data compression services in order to process the dump dataset. This error can occur if the EWXLDRST command is issued on a system without ZIV data compression support to restore a dataset created by the EWXLDDMP command on a system with ZIV data compression support.
System action: Command processing ends.
User response: Use the EWXLDDMP command with the RLE option to create the dump dataset using RLE data compression instead of ZIV data compression.
System programmer response: None.
Source: LANRES

EWXxx4216E Error opening the EWXDUMP dataset: *error_text*.

Explanation: LANRES was unable to open the dump dataset defined by the EWXDUMP DD statement.
System action: Command processing ends.
User response: Correct the problem and retry the failing command.
System programmer response: None.
Source: LANRES

EWXxx4217E Error reading from the EWXDUMP dataset: *error_text*.

Explanation: LANRES was unable to read from the dump dataset defined by the EWXDUMP DD statement.
System action: Command processing ends.
User response: Correct the problem and retry the failing command.
System programmer response: None.
Source: LANRES

EWXxx4218E Error writing to the EWXDUMP dataset: *error_text*.

Explanation: LANRES was unable to write to the dump dataset defined by the EWXDUMP DD statement.
System action: Command processing ends.
User response: Correct the problem and retry the failing command.
System programmer response: None.
Source: LANRES
EWXxx4219E  Error closing the EWXDUMP dataset: error_text.
Explanation:  LANRES was unable to close the dump dataset defined by the EWXDUMP DD statement.
System action:  Command processing ends.
User response:  Correct the problem and retry the failing command.
System programmer response:  None.
Source:  LANRES

EWXxx4220E  The EWXDUMP dataset does not have variable-length 4100-byte records.
Explanation:  The EWXDUMP dataset used by the EWXLDDMP and EWXLRST commands must have RECFM=VB and LRECL=4100. The BLKSIZE can be any value which is supported by the device.
System action:  Command processing ends.
User response:  Correct the problem and retry the failing command.
System programmer response:  None.
Source:  LANRES

EWXxx4221E  Unable to build compression dictionary: error.
Explanation:  LANRES was unable to build the compression dictionary for the indicated reason.
System action:  Command processing ends.
User response:  Correct the problem and retry the failing command.
System programmer response:  None.
Source:  LANRES

EWXxx4222I  countK bytes written to dump dataset for disk image dsname.
Explanation:  The dump dataset was successfully created for the indicated LANRES host disk image.
System action:  None.
User response:  None.
System programmer response:  None.
Source:  LANRES

EWXxx4223E  The EWXDUMP dataset was not created by the EWXLDDMP command.
Explanation:  The dataset specified by the EWXDUMP DD statement does not contain a valid LANRES disk image dump.
System action:  Command processing ends.
User response:  Use the EWXLDDMP command to create the dump dataset.
System programmer response:  None.
Source:  LANRES

EWXxx4224I  Dumping disk image dsname.
Explanation:  The data for the indicated disk image is being written to the EWXDUMP dataset.
System action:  None.
User response:  None.
System programmer response:  None.
EWXxx4225E  Disk image dsname must be sizeK in order to restore disk image.

Explanation: The disk image dataset for the EWXLDRST command must be the same size as the disk image dataset which was dumped using the EWXLDMP command when data compression is not being used.

System action: Command processing ends.

User response: Allocate a new disk image dataset with the required size.

System programmer response: None.

Source: LANRES

EWXxx4226I  Restoring disk image dsname.

Explanation: The indicated disk image is being restored from the EWXDUMP dataset.

System action: None.

User response: None.

System programmer response: None.

Source: LANRES

EWXxx4227I  Disk image dsname restored.

Explanation: The indicated disk image has been restored from the EWXDUMP dataset.

System action: None.

User response: None.

System programmer response: None.

Source: LANRES

EWXxx4228E  Insufficient storage available to allocate work buffers.

Explanation: LANRES was unable to allocate its internal work buffers.

System action: Command processing ends.

User response: Increase the region size and retry the failing command.

System programmer response: None.

Source: LANRES

EWXxx4229W  Disk image page page has been discarded due to a damaged disk image dataset.

Explanation: The VSAM dataset containing the host disk image has been damaged. This can occur if the LANRES disk server is abnormally terminated while it is updating the VSAM dataset. All disk blocks in the damaged image page will be discarded and the page contents will be set to zero.

System action: The dump operation continues.

User response: Run the EWXLDRST command to restore the VSAM dataset from an earlier dump file or from the current dump file. If you restore the VSAM dataset from the current dump file, you should run VREPAIR on the NetWare server to correct any disk structure problems. You may also need to recreate one or more of the NetWare disk files.

System programmer response: None.

Source: LANRES
EWXxx4251E  Dataset disk_image_name already exists.
Explanation:  The VSAM linear dataspace dataset already exists.
System action:  Command processing ends.
User response:  Issue the EWXLDLDT command to delete the current disk image dataset and then retry the EWXLDLCRT command.
System programmer response:  None.
Source:  LANRES

EWXxx4253E The disk image size of size is less than the minimum size of 2 megabytes.
Explanation:  The size specified for a new LANRES disk image was less than 2 megabytes.
System action:  Command processing ends.
User response:  Specify a disk image size of at least 2 megabytes.
System programmer response:  None.
Source:  LANRES

EWXxx4254E The disk image size of size is greater than the maximum size of 4 gigabytes.
Explanation:  The size specified for a new LANRES disk image is greater than 4 gigabytes.
System action:  Command processing ends.
User response:  Specify a disk image size no greater than 4 gigabytes.
System programmer response:  None.
Source:  LANRES

EWXxx4255E Volume volume is not available.
Explanation:  LANRES is unable to create a disk image dataset because the indicated volume is not available. A volume serial of ‘******’ will be displayed if the volume information is being obtained from the system catalog.
System action:  Command processing ends.
User response:  Specify a valid volume serial on the EWXLDLCRT command if you are creating a new VSAM dataset. Ensure that the system catalog entry contains the correct volume serial if you are using an existing VSAM dataset.
System programmer response:  None.
Source:  LANRES

EWXxx4256E The NetWare volume segment size specified by the COMPRESS option is invalid.
Explanation:  The NetWare volume segment size must be greater than the VSAM linear dataspace size but not greater than 4 gigabytes.
System action:  Command processing ends.
User response:  Specify a valid NetWare volume segment size.
System programmer response:  None.
Source:  LANRES

EWXxx4257E A volume must be specified when SMS is not active.
Explanation:  A volume serial must be specified on the EWXLDLCRT command in order to create a new disk image dataset when System Managed Storage is not active.
System action:  Command processing ends.
EWXxx4258I  EWXxx4266E

User response:  Specify a volume serial on the EWXLDCRT command.
System programmer response:  None.
Source:  LANRES

EWXxx4258I  disk_image_name has been deleted.
Explanation:  The LANRES disk image has been successfully deleted.
System action:  The command ends successfully.
User response:  None.
System programmer response:  None.
Source:  LANRES

EWXxx4261E Unable to create disk_image_name for number_of_blocks blocks: error_text.
Explanation:  LANRES was unable to create the specified disk image.
System action:  Command processing ends.
User response:  Correct the problem and retry the command.
System programmer response:  None.
Source:  LANRES

EWXxx4263I  disk_image_name was created for number_of_blocks blocks.
Explanation:  The LANRES disk image has been successfully created. There are 512 bytes per disk image block.
System action:  The command ends successfully.
User response:  None.
System programmer response:  None.
Source:  LANRES

EWXxx4264E Unable to delete disk image disk_image_name: error_text.
Explanation:  LANRES was unable to delete the specified disk image.
System action:  Command processing ends.
User response:  Correct the problem and retry the command.
System programmer response:  None.
Source:  LANRES

EWXxx4266E  The disk image size parameter is invalid.
Explanation:  An invalid disk image size was specified. The minimum disk image size is 2 megabytes and the maximum disk image size is 4 gigabytes.
System action:  Command processing ends.
User response:  Specify a valid LANRES disk image size.
System programmer response:  None.
Source:  LANRES
EWXxx5001S  Unable to create TCP/IP socket: Error error.
Explanation: LANRES was unable to create a TCP/IP socket. The error code is the value returned for the TCP/IP socket() function. See the z/OS Communications Server: IP Programmer’s Guide and Reference for a description of the error codes.
System action: Command processing ends.
User response: Report the problem to the system programmer.
System programmer response: Report the problem to IBM.
Source: LANRES

EWXxx5002S  TCP/IP socket number is too large.
Explanation: The socket number returned by the TCP/IP socket() function is too large. LANRES supports a maximum of 32 TCP/IP connections per LANRES command.
System action: Command processing ends.
User response: Report the problem to the system programmer.
System programmer response: Report the problem to IBM.
Source: LANRES

EWXxx5003E  TCP/IP select() function failed with error error.
Explanation: The TCP/IP select() function failed with the indicated error code. See the z/OS Communications Server: IP Programmer’s Guide and Reference for a description of the error codes.
System action: Command processing ends.
User response: Report the problem to the system programmer.
System programmer response: None.
Source: LANRES

EWXxx5004E  TCP/IP connect() function failed with error error.
Explanation: The TCP/IP connect() function failed with the indicated error code. See the z/OS Communications Server: IP Programmer’s Guide and Reference for a description of the error codes.
System action: Command processing ends.
User response: Report the problem to the system programmer.
System programmer response: None.
Source: LANRES

EWXxx5005E  TCP/IP recv() function failed with error error.
Explanation: The TCP/IP recv() function failed with the indicated error code. See the z/OS Communications Server: IP Programmer’s Guide and Reference for a description of the error codes.
System action: Command processing ends.
User response: Report the problem to the system programmer.
System programmer response: None.
Source: LANRES
EWXxx5006E  TCP/IP send() function failed with error error.

Explanation: The TCP/IP send() function failed with the indicated error code. See the z/OS Communications Server: IP Programmer's Guide and Reference for a description of the error codes.

System action: Command processing ends.
User response: Report the problem to the system programmer.
System programmer response: None.
Source: LANRES

EWXxx5007E  Incorrect protocol name specified.

Explanation: An incorrect or unsupported protocol was specified.
System action: Command processing ends.
User response: Specify a valid communications protocol.
System programmer response: None.
Source: LANRES

EWXxx5008E  Incorrect destination name specified.

Explanation: An incorrect destination name was specified. For a channel connection, the destination is the even subchannel address assigned to the NetWare server. For an APPC connection, the destination is either the symbolic destination name or the fully-qualified partner LU name. For a TCP/IP connection, the destination is the host name assigned to the NetWare server.
System action: Command processing ends.
User response: Specify a valid destination.
System programmer response: None.
Source: LANRES

EWXxx5009E  Service distribution rejected by server server.

Explanation: The service distribution request was rejected by the target NetWare server because the distribution service level is less than or equal to the current service level installed on the server. You can force the service to be distributed by re-issuing the command and specifying that service level checking is to be bypassed.
System action: Command processing ends.
User response: Retry the command.
System programmer response: None.
Source: LANRES

EWXxx5010E  Service distribution to destination destination failed.

Explanation: The LANRES service distribution controller was unable to send the current service level to the NetWare server at the indicated destination. For an APPC connection, the destination name is either the symbolic destination name or the fully-qualified partner LU name. For a TCP/IP connection, the destination name is the server host name. For a channel connection, the destination name is the channel device address assigned to the server.
System action: The current service level is not sent.
User response: Correct the cause of the error.
System programmer response: None.
Source: LANRES
EWXxx5011E  The NetWare service package file has been modified.

Explanation: The NetWare service package file has been modified.

System action: Command processing ends.

User response: Verify that you are accessing the correct NetWare service package file. If the problem persists, report the problem to the system programmer.

System programmer response: Re-install the LANRES product. Contact IBM if the problem persists.

Source: LANRES

EWXxx5012E  Service distribution is not enabled for destination destination.

Explanation: The ACCEPT_SERVICE parameter in the EWXCOMM.INI control file on the NetWare server is set to NO.

System action: Command processing ends.

User response: Change the EWXCOMM.INI file to specify ACCEPT_SERVICE=YES.

System programmer response: None.

Source: LANRES

EWXxx5013E  I/O error on device address address: Device status devstat, Channel status chanstat, Sense sense.

Explanation: LANRES encountered an I/O error on one of the channel device addresses.

System action: Command processing ends.

User response: Report the problem to the system programmer.

System programmer response: Correct the error condition. See the S/390® Principles of Operation for more information on the channel and device status codes.

Source: LANRES

EWXxx5014E  Device address has been halted.

Explanation: One of the LANRES channel device addresses was halted by the operating system. This can occur if the missing interrupt handler determines that the channel device is not responding to I/O requests or if the NetWare NLM is unloaded after a connection has been established.

System action: Command processing ends.

User response: Report the problem to the system programmer.

System programmer response: Ensure that the NetWare server is operational and has not abnormally terminated.

Source: LANRES

EWXxx5015E  Device address is offline.

Explanation: LANRES was unable to allocate one of the channel device addresses because the device is offline.

System action: Command processing ends.

User response: Vary the device online or use a different pair of device addresses.

System programmer response: None.

Source: LANRES
EWXxx5016E  EWXxx5020E

EWXxx5016E  Device address is not a supported device type.
Explanation:  The indicated device is not supported by LANRES.
System action:  Command processing ends.
User response:  Make sure that you have specified the correct device addresses for the channel-attached NetWare server. Also make sure that the correct control unit tables are specified in the channel configuration file on the NetWare server.
System programmer response:  None.
Source:  LANRES

EWXxx5017E  Device address is allocated to another job.
Explanation:  LANRES was unable to allocate one of the channel device addresses because the device address is allocated to another job.
System action:  Command processing ends.
User response:  End the other job or use a different pair of device addresses.
System programmer response:  None.
Source:  LANRES

EWXxx5018E  Device address does not exist.
Explanation:  The indicated device address is not defined to the operating system.
System action:  Command processing ends.
User response:  Report the problem to the system programmer.
System programmer response:  Ensure that the device address is correct and that the NetWare server is online and operational.
Source:  LANRES

EWXxx5019E  Device address is not a 3088/CTCA type device.
Explanation:  The device at the specified address is not supported by LANRES for channel attachment.
System action:  Command processing ends.
User response:  Report the problem to the system programmer.
System programmer response:  Ensure that the device address is correct and that the NetWare server is online and operational.
Source:  LANRES

EWXxx5020E  Device address is not operational.
Explanation:  The indicated device is not operational. Intervention required status was reported on the I/O request.
System action:  Command processing ends.
User response:  Make sure that the NetWare server is powered on and that the channel device driver has been loaded.
System programmer response:  None.
Source:  LANRES
The EWXISPF command is valid only in the TSO environment.

**Explanation:**
The EWXISPF command must be invoked as a command processor under TSO.

**System action:**
Command processing ends.

**User response:**
Issue the EWXISPF command while logged on to TSO in the foreground or when the Terminal Monitor Program is active in the background.

**System programmer response:**
None.

**Source:** LANRES

---

**EWXISPF is already active.**

**Explanation:**
The EWXISPF command must be invoked from the TSO READY prompt. It cannot be executed once ISPF has been started.

**System action:**
Command processing ends.

**User response:**
Issue the EWXISPF command from the TSO READY prompt.

**System programmer response:**
None.

**Source:** LANRES

---

**LANRES READY**

**Explanation:**
The EWXEXEC command processor is ready to process a new command. When running in a TSO environment, any TSO command may be entered as well as the TSO, PGM, and REXX special commands. When running in a non-TSO environment, TSO commands are not supported and only the PGM and REXX special commands may be entered.

The TSO special command tells EWXEXEC to process the rest of the command line as a TSO command and not to check for special commands. This is necessary if you want to run a TSO command named PGM or REXX.

The PGM special command tells EWXEXEC to process the rest of the command line as an MVS program invocation. The first token following the PGM command specifies the dataset name and member of the MVS load module. The remainder of the command line will be passed to the MVS program as the parameter string. The dataset name prefix will be added unless the dataset name is enclosed in quotation marks. If the load module is located in a STEPLIB, JOBLIB, or link list dataset, omit the dataset name and specify just the member name enclosed in parentheses. If a dataset name is specified, it will be used as a tasklib on the ATTACH command.

The REXX special command tells EWXEXEC to process the rest of the command line as a REXX procedure invocation. The first token following the REXX command specifies the dataset name and optional member of the REXX procedure. The remainder of the command line will be passed to the REXX procedure as the argument string. The dataset name prefix will be added unless the dataset name is enclosed in quotation marks. If the REXX procedure is located in a SYSEXEC dataset, omit the dataset name and specify just the member name enclosed in parentheses.

**System action:**
EWXEXEC waits for a command. In the foreground TSO environment, commands are read from the terminal. In the background TSO environment, commands are read from SYSTSIN. In the batch environment, commands are read from EWXINPUT.

**User response:**
Enter a command.

**System programmer response:**
None.

**Source:** LANRES

---

**Unable to read from the EWXINPUT dataset:** *error.*

**Explanation:**
The EWXEXEC command was unable to read a record from the command dataset specified by the EWXINPUT DD statement.

**System action:**
Command processing ends.

**User response:**
Correct the error and re-issue the EWXEXEC command.

---

Chapter 5. LANRES messages (EWX, ACP, ASD) 625
EWXxx5304E • EWXxx5308I

System programmer response:  None.
Source: LANRES

EWXxx5304E Unable to get command line: PUTGET error error.
Explanation: The EWXEXEC command was unable to get the next command line.
System action: Command processing ends.
User response: Correct the error and re-issue the EWXEXEC command. See the z/OS TSO/E Programming Services for a description of the PUTGET error codes.
System programmer response:  None.
Source: LANRES

EWXxx5305E Command is too long.
Explanation: The command read by EWXEXEC exceeds the maximum length of 512 characters.
System action: The command is not executed.
User response: Enter a shorter command.
System programmer response:  None.
Source: LANRES

EWXxx5306E Premature end of data while reading the EWXINPUT dataset.
Explanation: The EWXEXEC command reached the end of the EWXINPUT dataset while constructing a command to be executed.
System action: The command is not executed.
User response: Make sure that the last command in the dataset does not end with a continuation character.
System programmer response:  None.
Source: LANRES

EWXxx5307S Insufficient storage available.
Explanation: The EWXEXEC command was unable to allocate storage for work buffers.
System action: Command processing ends.
User response: Run the EWXEXEC command in a larger region.
System programmer response:  None.
Source: LANRES

EWXxx5308I command
Explanation: This message is issued by the EWXEXEC command when it is reading commands from the EWXINPUT dataset. Each command is displayed before it is run.
System action: None.
User response: None.
System programmer response:  None.
Source: LANRES
EWXxx5309E  APPC is not available.

Explanation: This message is issued if the APPC functions cannot be found in the current step library, job library, or link library. APPC is available only on MVS/ESA 4.2 and later.

System action: The APPC connection is not established.

User response: Make sure that SYS1.CSSLIB is in the step library, job library, or link library and then retry the failing request.

System programmer response: None.

Source: LANRES

EWXxx5310E  APPC error error occurred on connection to server.

Explanation: An error was detected on an APPC request. The fully-qualified partner LU name will be included in the message if it is known at the time of the error. Otherwise, the symbolic destination name used to establish the connection will be included in the message.

System action: The connection to the NetWare server is dropped.

User response: Correct the cause of the error and then retry the failing request.

System programmer response: None.

Source: LANRES

EWXxx5402E  Unable to execute command: error.

Explanation: LANRES was unable to execute a system command for the indicated reason.

System action: The request is not performed.

User response: Correct the problem and retry the failing command.

System programmer response: None.

Source: LANRES

EWXxx6001E User ID is a required input

Explanation: The NetWare user ID is a required input for this command.

System action: The command is not executed, and the ISPF panel is re-displayed with the cursor placed on the Userid input field.

User response: Type the NetWare Userid in the field and retry the command.

System programmer response: None.

Source: LANRES

EWXxx6002E Group ID is a required input

Explanation: The NetWare Groupid is a required input for this command.

System action: The command is not executed, and the ISPF panel is re-displayed with the cursor placed on the Groupid input field.

User response: Type the NetWare Groupid in the field and retry the command.

System programmer response: None.

Source: LANRES
EWXxx6003E Login script file name is a required input

Explanation: The name of a host data set that contains or will contain the NetWare login script file is a required input for this command.

System action: The command is not executed, and the ISPF panel is re-displayed with the cursor placed on the login script file name input field.

User response: Type the NetWare login script file name in the field and retry the command.

System programmer response: None.

Source: LANRES

EWXxx6005E Print queue name is a required input

Explanation: Print queue name is a required input for this command.

System action: The ISPF panel is re-displayed with the cursor placed at the beginning of the print queue name field.

User response: Enter the print queue name and retry the command.

System programmer response: None.

Source: LANRES

EWXxx6006E Print server name is a required input

Explanation: Print server name is a required input for this command.

System action: The ISPF panel is re-displayed with the cursor placed at the beginning of the print server name field.

User response: Enter the print server name and retry the command.

System programmer response: None.

Source: LANRES

EWXxx6009E A user/group ID must be specified

Explanation: A NetWare user or group ID is a required input for this panel.

System action: The ISPF panel is re-displayed with the cursor placed at the beginning of the field.

User response: Enter the NetWare user or group ID in the field.

System programmer response: None.

Source: LANRES

EWXxx6015E A password expiration interval of 0 to 365 must be specified

Explanation: The time interval between forced password changes must be a positive integer less than 365. Entering 0 means that the password will never expire.

System action: The ISPF panel is re-displayed with the cursor placed at the beginning of the password expiration interval field.

User response: Re-type the password expiration interval with a value between 0 and 365.

System programmer response: None.

Source: LANRES

EWXxx6016E A password length of 1 to 20 must be specified

Explanation: The minimum password length is a number between 1 and 20.

System action: The ISPF panel is re-displayed with the cursor placed at the beginning of the password length interval field.
User response: Re-type the password length with a value between 1 and 20.
System programmer response: None.
Source: LANRES

EWXxx6017E The name of the restricted volume must be specified
Explanation: The name of the NetWare volume where the restriction on user disk space will apply must be entered.
System action: The ISPF panel is re-displayed with the cursor placed at the beginning of the volume name field.
User response: Enter the volume name in the volume name field.
System programmer response: None.
Source: LANRES

EWXxx6019E A valid TSO data set name must be entered
Explanation: A TSO data set name is required for this input field. A valid TSO data set name may be up to 44 characters in length and have as many as 5 levels of qualification.
System action: The ISPF panel is re-displayed with the cursor placed at the beginning of the TSO data set name field.
User response: Re-type the TSO data set name.
System programmer response: None.
Source: LANRES

EWXxx6021E A numeric value must be specified for the data set size
Explanation: The size of the VSAM Linear Data set is a required input for this panel.
System action: The ISPF panel is re-displayed with the cursor placed at the beginning of the VSAM LDS size field.
User response: Enter a numeric value for the size of the VSAM LDS in the specified field.
System programmer response: None.
Source: LANRES

EWXxx6022E Message text must be specified
Explanation: No message text was specified to be sent as a message.
System action: The ISPF panel is re-displayed with the cursor placed at the beginning of the VSAM LDS size field.
User response: Type the message text in the specified field.
System programmer response: None.
Source: LANRES

EWXxx6025E A date in the form of MM/DD/YY must be specified
Explanation: Either a date was not entered, or a date was not entered in the format MM/DD/YY.
System action: The ISPF panel is re-displayed with the cursor placed at the beginning of the date field.
User response: Re-type the date in the correct format in the specified field.
System programmer response: None.
Source: LANRES
**EWXxx6026E** A time in the form of HH:MM:SS must be specified

**Explanation:** Either a time was not entered, or a time was not entered in the format HH:MM:SS.

**System action:** The ISPF panel is re-displayed with the cursor placed at the beginning of the time field.

**User response:** Re-type the time in the correct format in the specified field.

**System programmer response:** None.

**Source:** LANRES

**EWXxx6027E** A valid PC path/file name must be specified

**Explanation:** The field was left blank or a valid PC path/file name was not entered.

**System action:** The ISPF panel is re-displayed with the cursor placed at the beginning of the PC path/file name field.

**User response:** Enter a valid PC path/file name in the specified field.

**System programmer response:** None.

**Source:** LANRES

**EWXxx6028E** A number between 0 and 200 must be specified for grace logins

**Explanation:** The number of times a user can log in with an expired password is a number between 1 and 200. Entering 0 means that the number of grace logins is unlimited.

**System action:** The ISPF panel is re-displayed with the cursor placed at the beginning of the grace logins field.

**User response:** Enter a number between 0 and 200 in the grace logins field.

**System programmer response:** None.

**Source:** LANRES

**EWXxx6029E** A number between 0 and 250 must be specified for concurrent logins

**Explanation:** The number of workstations a user may be concurrently logged into is a number between 1 and 250. Entering 0 means that the number of concurrent logins is unlimited.

**System action:** The ISPF panel is re-displayed with the cursor placed at the beginning of the concurrent logins field.

**User response:** Enter a number between 0 and 250 in the concurrent logins field.

**System programmer response:** None.

**Source:** LANRES

**EWXxx6031E** A valid volume name must be specified

**Explanation:** A valid volume name must be specified to complete the operation.

**System action:** None.

**User response:** None.

**System programmer response:** None.

**Source:** LANRES

**EWXxx6032E** A valid device address must be specified

**Explanation:** A valid device address must be specified to complete the operation.

**System action:** None.

**User response:** None.

**System programmer response:** None.

EWXxx6040E  Password data set cannot be specified with passwords.
Explanation:  Cannot specify a password data set if the passwords are also listed.
System action:  None.
User response:  None.
System programmer response:  None.
Source:  LANRES

EWXxx6041E  LANRES function not specified.
Explanation:
System action:  None.
User response:  None.
System programmer response:  None.
Source:  LANRES
EWXxx6042E  A value between 1 and 1000000 must be specified for line limit.
Explanation:  The maximum number of lines allowed in the log data set is a number from 1 to 1000000.
System action:  None.
User response:  None.
System programmer response:  None.
Source:  LANRES

EWXxx6043E  A value between 1 and 255 must be specified for copies.
Explanation:  You may make from 1 to 255 copies.
System action:  None.
User response:  None.
System programmer response:  None.
Source:  LANRES

EWXxx6044E  Command not recognized
Explanation:  An invalid command was entered in the prefix area.
System action:  The ISPF panel is redisplayed.
User response:  Enter an S to select an entry for display and modification or a D to mark an entry for deletion.
System programmer response:  None.
Source:  LANRES

EWXxx6045W  Some exit parameter data cannot be displayed due to field constraints
Explanation:  The amount of exit parameter data for the entry exceeds the length of the parameter fields. This situa
tion can occur if long parameter values are specified because values are not wrapped across multiple fields.
System action:  The exit parameter data is truncated.
User response:  Data may be lost if the entry is saved.
System programmer response:  None.
Source:  LANRES

EWXxx6046S  Error encountered displaying ISPF panel
Explanation:  A severe ISPF error occurred.
System action:  LANRES will attempt to redisplay the previous panel.
User response:  Restart the ISPF session.
System programmer response:  If the problem persists, contact your IBM service representative.
Source:  LANRES

EWXxx6047I  Initializing data with information from sample data set
Explanation:  The specified data set does not exist. The table summarizing data set entries has been initialized from
the sample LANRES configuration data set.
System action:  Entries from the sample configuration data set are displayed.
User response:  You can add, modify, or delete entries.
System programmer response:  None.
EWXxx6048E  Data set name is not valid
Explanation:  An invalid data set name was specified.
System action:  The ISPF panel is redisplayed with the cursor placed at the beginning of the data set name field.
User response:  Enter a valid data set name.
System programmer response:  None.
Source:  LANRES

EWXxx6049E  Member specified, but data set is not partitioned
Explanation:  The data set name is conflicting because the data set is sequential, but a member was specified.
System action:  The ISPF panel is redisplayed with the cursor placed at the beginning of the data set name field.
User response:  Enter a valid data set name.
System programmer response:  None.
Source:  LANRES

EWXxx6050E  Protected data set cannot be accessed
Explanation:  The specified data set is protected so it cannot be accessed through this interface.
System action:  The ISPF panel is redisplayed with the cursor placed at the beginning of the data set name field.
User response:  Enter a nonprotected data set name, or get authorization for the protected data set.
System programmer response:  None.
Source:  LANRES

EWXxx6051E  Error processing requested data set
Explanation:  The specified data set name could not be used successfully.
System action:  The ISPF panel is redisplayed with the cursor placed at the beginning of the data set name field.
User response:  Verify the data set name, and reenter it.
System programmer response:  None.
Source:  LANRES

EWXxx6052E  Password expected from server and reentered value do not match
Explanation:  The value specified for the password expected from the NetWare server does not match the reentered value.
System action:  The ISPF panel is redisplayed with the cursor placed at the beginning of the password field.
User response:  Reenter the password expected from the server and the verification password.
System programmer response:  None.
Source:  LANRES

EWXxx6053E  Password expected by server and reentered value do not match
Explanation:  The value specified for the password expected by the NetWare server does not match the reentered value.
System action:  The ISPF panel is redisplayed with the cursor placed at the beginning of the password field.
User response:  Reenter the password expected by the server and the verification password.
**EWXxx6054E**  
*The password must consist of alphanumeric characters*

**System action:** The ISPF panel is redisplayed with the cursor placed at the beginning of the password field.

**User response:** Retype the information in the field using only the characters A-Z, a-z, and 1-9.

**System programmer response:** None.

**Source:** LANRES

---

**EWXxx6055E**  
*The disk image name must consist of alphanumeric characters*

**System action:** The ISPF panel is redisplayed with the cursor placed at the beginning of the disk image name field.

**User response:** Retype the information in the field using only the characters A-Z, a-z, and 1-9.

**System programmer response:** None.

---

**EWXxx6056E**  
*The disk image name must start with an alphabetic character*

**System action:** The ISPF panel is redisplayed with the cursor placed at the beginning of the disk image name field.

**User response:** Retype the information in the field using only a character in A-Z and a-z for the first character.

**System programmer response:** None.

**Source:** LANRES

---

**EWXxx6057E**  
*When data space size is specified, access mode must be specified*

**System action:** The ISPF panel is redisplayed with the cursor placed at the beginning of the access mode field.

**User response:** Enter a value for the access mode, or blank out the value in the data space size field.

**System programmer response:** None.

**Source:** LANRES

---

**EWXxx6058E**  
*Data space size must be in the range of 1 to 2048 megabytes or left blank*

**System action:** The ISPF panel is redisplayed with the cursor placed at the beginning of the data space size field.

**User response:** Reenter the data space size with a value between 1 and 2048 or blank out the field.

**System programmer response:** None.

**Source:** LANRES
EWXxx6059E Access mode must be R, W, or left blank
Explanation: If the access mode is specified, it must indicate Read only or Write.
System action: The ISPF panel is redisplayed with the cursor placed at the beginning of the access mode field.
User response: Indicate an access mode value of Read only or Write, or blank out the field.
System programmer response: None.
Source: LANRES

EWXxx6060E The translation option field must indicate ASCII, ASCIITAB, or BINARY
Explanation: The translation option field must indicate a value of ASCII, ASCIITAB, or BINARY.
System action: The ISPF panel is redisplayed with the cursor placed at the beginning of the translation option field.
User response: Indicate a translation option value of ASCII, ASCIITAB, or BINARY.
System programmer response: None.
Source: LANRES

EWXxx6061E If type qualifier is "BLANK", PC extension cannot be specified
Explanation: BLANK was specified as the type qualifier, and a value was entered in the PC extension field.
System action: The ISPF panel is redisplayed with the cursor placed at the beginning of the PC extension field.
User response: Blank out the PC extension field, or change the type qualifier value.
System programmer response: None.
Source: LANRES

EWXxx6062E If PC extension is not specified, type qualifier must be "BLANK"
Explanation: A value was not specified for the PC extension field, and the type qualifier was set to a value other than BLANK.
System action: The ISPF panel is redisplayed with the cursor placed at the beginning of the type qualifier field.
User response: Change the type qualifier value to BLANK, or provide a value in the PC extension field.
System programmer response: None.
Source: LANRES

EWXxx6063E Data was truncated when written to the data set
Explanation: Data was lost when the entry was written to the configuration data set because the data set logical record length is smaller than the length of the specified data.
System action: A truncated version of the entry is stored in the data set.
User response: Increase the logical record length of the data set and reenter the data, or use a different interface to enter this data.
System programmer response: None.
Source: LANRES

EWXxx6064E Unable to allocate data set
Explanation: The attempt to allocate the data set so that the entry could be written to it failed. The data has not been stored in the data set.
System action: The ISPF panel showing the summary of entries is redisplayed.
User response: Verify that you have write authority for the specified data set.

Chapter 5. LANRES messages (EWX, ACP, ASD)  635
EWXxx6065E  EWXxx6069E

System programmer response: None.
Source: LANRES

---

EWXxx6065E  The notify when printed field must be set to YES or NO

Explanation: Either YES or NO must be selected for the notify when printed field.

System action: The ISPF panel is redisplayed with the cursor placed at the beginning of the notify when printed field.

User response: Indicate YES, that the print job owner should be notified when the data has been printed, or NO, that the owner should not be notified.

System programmer response: None.
Source: LANRES

---

EWXxx6066E  The translate data field must be set to YES or NO

Explanation: Either YES or NO must be selected for the translate data field.

System action: The ISPF panel is redisplayed with the cursor placed at the beginning of the translate data field.

User response: Indicate YES, that the data should be translated from EBCDIC to ASCII, or NO, that the data should not be translated.

System programmer response: None.
Source: LANRES

---

EWXxx6067E  The user exit type field must be set to EXEC, INTERNAL, or PGM

Explanation: A value other than EXEC, INTERNAL, or PGM was entered in the user exit type field.

System action: The ISPF panel is redisplayed with the cursor placed at the beginning of the user exit type field.

User response: Reenter a value for the user exit type field using EXEC, INTERNAL, or PGM.

System programmer response: None.
Source: LANRES

---

EWXxx6068E  For internal exit type, exit name must be EWXHLINE, EWXHLTRN, or EWXHSCS

Explanation: An exit type of INTERNAL was specified, but the exit name field was not set to a valid IBM-supplied exit.

System action: The ISPF panel is redisplayed with the cursor placed at the beginning of the exit name field.

User response: Reenter a value for the exit name field using EWXHLINE, EWXHLTRN, or EWXHSCS, or change the exit type.

System programmer response: None.
Source: LANRES

---

EWXxx6069E  The exit type must be set to EXEC, INTERNAL, OLDEXEC, PGM, or TSO

Explanation: A value other than EXEC, INTERNAL, OLDEXEC, PGM, or TSO was entered in the exit type field.

System action: The ISPF panel is redisplayed with the cursor placed at the beginning of the exit type field.

User response: Reenter a value for the exit type field using EXEC, INTERNAL, OLDEXEC, PGM, or TSO.

System programmer response: None.
Source: LANRES
EWXxx6070E  For internal exit type, exit name must be EWXLHJOB or EWXLHLNP

Explanation: An exit type of INTERNAL was specified, but the exit name field was not set to a valid IBM-supplied exit.

System action: The ISPF panel is redisplayed with the cursor placed at the beginning of the exit name field.

User response: Reenter a value for the exit name field using EWXLHJOB or EWXLHLNP, or change the exit type.

System programmer response: None.

Source: LANRES

EWXxx6071E  The function field must be set to DISK, HLPRT, or LHPRT

Explanation: A value indicating disk serving, host-to-LAN print, or LAN-to-host print must be entered in the function field.

System action: The ISPF panel is redisplayed with the cursor placed at the beginning of the function field.

User response: Select the disk serving, host-to-LAN print, or LAN-to-host print option for the function field.

System programmer response: None.

Source: LANRES

EWXxx6072E  The function field must be set to ADMIN or DIST

Explanation: A value indicating administration or distribution must be entered in the function field.

System action: The ISPF panel is redisplayed with the cursor placed at the beginning of the function field.

User response: Select the administration or distribution option for the function field.

System programmer response: None.

Source: LANRES

EWXxx6073E  The protocol field must be set to APPC, CHANNEL, or TCPIP

Explanation: A value indicating APPC, Channel, or TCP/IP must be entered in the protocol field.

System action: The ISPF panel is redisplayed with the cursor placed at the beginning of the protocol field.

User response: Select the APPC, Channel, or TCP/IP option for the protocol field.

System programmer response: None.

Source: LANRES

EWXxx6074E  An entry already exists for the specified name

Explanation: The specified name matches an existing entry in the configuration data set.

System action: The ISPF configuration action selection panel is redisplayed.

User response: Enter a unique name to add a new entry, or enter an S by the entry in the summary table to modify the existing entry.

System programmer response: None.

Source: LANRES

EWXxx6075E  The conversion indicator must be set to YES or NO

Explanation: Either YES or NO must be selected for the conversion indicator field.

System action: The ISPF panel is redisplayed with the cursor placed at the beginning of the conversion indicator field.
**EWXxx6076E • EWXxx9003E**

**User response:** Indicate YES, that the entry should be stored in the new format, or NO, that the entry should be stored in the old format.

**System programmer response:** None.

**Source:** LANRES

---

**EWXxx6076E Clear and view options require an established ADMIN or DIST connection**

**Explanation:** A connection to the administration or distribution function has not been established. Clear and view options are not valid until after a connection to one of these functions is successfully established.

**System action:** The ISPF panel is redisplayed with the cursor placed at the beginning of the message logging field.

**User response:** Select an option other than clear or view, or establish an administration or distribution connection and retry the operation.

**System programmer response:** None.

**Source:** LANRES

---

**EWXxx9000S No storage is available to initialize the heap.**

**Explanation:** LANRES was unable to obtain its initial storage requirements.

**System action:** Command processing ends.

**User response:** None.

**System programmer response:** Contact your IBM representative.

**Source:** LANRES

---

**EWXxx9001E Log file dsname does not have fixed-length records.**

**Explanation:** The LANRES log file must consist of fixed-length records when wrap mode is selected for message logging.

**System action:** The log file is not used.

**User response:** Change the log file format to fixed-length records or use the cumulative mode for LANRES message logging.

**System programmer response:** None.

**Source:** LANRES

---

**EWXxx9002S Unable to open the LANRES message repository: Error error.**

**Explanation:** LANRES was unable to access its message repository in order to display a message.

**System action:** The requested message is not displayed.

**User response:** Report the problem to the system support programmer.

**System programmer response:** Make sure that the EWXMSGS DD is defined for the job and specifies the correct LANRES message repository dataset name.

**Source:** LANRES

---

**EWXxx9003E Message msgid was not found in the LANRES message repository.**

**Explanation:** LANRES was unable to locate a message in its message repository.

**System action:** The requested message is not displayed.

**User response:** Report the problem to the system support programmer.

**System programmer response:** Make sure that the EWXMSGS DD is defined for the job and specifies the correct LANRES message repository dataset name.
EWXxx9004E Unable to read message `msgid` from the LANRES message repository.

Explanation: LANRES was unable to display a message due to an error while reading the message repository.

System action: The requested message is not displayed.

User response: Report the problem to the system support programmer.

System programmer response: Make sure that the EWXMSGS DD is defined for the job and specifies the correct LANRES message repository dataset name.

Source: LANRES

EWXxx9005S LANRES requires MVS/ESA Release 3.1.3 or later.

Explanation: LANRES does not support the current level of the host operating system.

System action: Command processing ends.

User response: None.

System programmer response: None.

Source: LANRES

EWXxx9006E Unable to write message to `dsname: error`

Explanation: LANRES was unable to write a log message to the indicated log file.

System action: The log message is not written to the file.

User response: Correct the problem indicated by the error text.

System programmer response: None.

Source: LANRES

EWXxx9007R Enter the password for user `user`.

Explanation: A question mark was specified for the user password. This causes the LANRES command to prompt the user to enter the actual password.

System action: Wait for the user to enter the password.

User response: Enter the password for the displayed user ID.

System programmer response: None.

Source: LANRES

EWXxx9008E Unable to read from terminal: Error `error`.

Explanation: LANRES was unable to read a user response from the terminal because the PUTGET function failed with the indicated error. See z/OS TSO/E Programming Services for a description of the error codes.

System action: Command processing ends.

User response: Report the problem to the system support programmer.

System programmer response: None.

Source: LANRES
**EWXxx9010S** • **EWXxx9015I**

**EWXxx9010S** Connection open exchange was unsuccessful with internal error error.

Explanation: The session initialization exchange with the NetWare server was unsuccessful with the specified internal error code.

System action: Command processing ends. The connection to the NetWare server is dropped.

User response: None.

System programmer response: Report the problem to IBM.

Source: LANRES

**EWXxx9011E** Unable to read filename error.

Explanation: An I/O error occurred while reading a LANRES configuration file.

System action: Configuration file processing ends.

User response: Correct the problem and reenter the command.

System programmer response: None.

Source: LANRES

**EWXxx9012E** 'keyword' is an incorrect configuration keyword.

Explanation: An incorrect keyword was specified in the LANRES configuration options file.

System action: The configuration option is not processed.

User response: Correct the configuration options file by specifying a valid configuration option.

System programmer response: None.

Source: LANRES

**EWXxx9013E** 'option' is an incorrect value for the keyword configuration option.

Explanation: An incorrect option was specified in the LANRES configuration options file.

System action: The configuration option is ignored.

User response: Correct the configuration options file by specifying a valid configuration option.

System programmer response: None.

Source: LANRES

**EWXxx9014E** Unable to read NetWare service file: error.

Explanation: An I/O error occurred while reading the NetWare service package file. This file contains the current service level for the LANRES NetWare server code.

System action: NetWare service distribution will not be done.

User response: Report the problem to the system programmer.

System programmer response: Re-install the LANRES product. Contact IBM if the problem persists.

Source: LANRES

**EWXxx9015I** Connection established to server server at service level level.

Explanation: A connection has been established with the NetWare server. The LANRES code running on the server is at the indicated service level.

System action: None.

User response: None.
System programmer response: None.
Source: LANRES

EWXxx9016E Unable to send service to destination destination error.
Explanation: The LANRES service distribution controller was unable to send the current service level to the NetWare server at the indicated destination. For an APPC connection, the destination name is either the symbolic destination name or the fully-qualified partner LU name. For a TCP/IP connection, the destination name is the server host name. For a channel connection, the destination name is the channel device address assigned to the server.
System action: The current service level is not sent.
User response: Correct the cause of the error.
System programmer response: None.
Source: LANRES

EWXxx9017I Service level level sent to server server.
Explanation: The LANRES service distribution controller has sent a new LANRES service level to the indicated NetWare server. This service update will take effect the next time the NetWare server is started.
System action: None.
User response: None.
System programmer response: None.
Source: LANRES

EWXxx9018E File I/O error detected by server server.
Explanation: The service distribution catcher on the NetWare server was unable to write the new service files to disk.
System action: Service distribution ends for the server with the error.
User response: Check the NetWare console for error messages explaining the cause of the error. If the error persists, disable service distribution for the server with the error.
System programmer response: None.
Source: LANRES

EWXxx9019E File CRC error detected by server server.
Explanation: The service distribution catcher on the NetWare server detected a CRC error for one of the service files. The file was corrupted during transmission to the server.
System action: Service distribution ends for the server with the error.
User response: Check the NetWare console for error messages explaining the cause of the error. If the error persists, disable service distribution for the server with the error.
System programmer response: None.
Source: LANRES

EWXxx9020E Packet sequence error detected by server server.
Explanation: The service distribution catcher on the NetWare server detected a packet sequence error for one of the service files. The data was corrupted during transmission to the server.
System action: Service distribution ends for the server with the error.
User response: Check the NetWare console for error messages explaining the cause of the error. If the error persists, disable service distribution for the server with the error.

**System programmer response:**  None.

**Source:** LANRES

EWXxx9150E Dynamic allocation request for dataset *dsname* failed with return code *return-code* and error code *error*.

**Explanation:** A dynamic allocation request failed for the indicated dataset. The return code is the decimal value returned in register 15 by SVC 99 and the error code is the hexadecimal value returned in the error reason field of the SVC 99 request block. See [z/OS MVS Programming: Authorized Assembler Services Guide](https://www.ibm.com/support/docview/pgg/101592) for a description of the error and possible recovery actions.

**System action:** The dataset is not allocated.

**User response:** Correct the problem and retry the request.

**System programmer response:** None.

**Source:** LANRES

EWXxx9151E Dynamic unallocation request for DD *ddname* failed with return code *return-code* and error code *error*.

**Explanation:** A dynamic unallocation request failed for the indicated DD. The return code is the decimal value returned in register 15 by SVC 99 and the error code is the hexadecimal value returned in the error reason field of the SVC 99 request block. See [z/OS MVS Programming: Assembler Services Guide](https://www.ibm.com/support/docview/pgg/101596) for a description of the error and possible recovery actions.

**System action:** The dataset is not freed.

**User response:** Correct the problem and retry the request.

**System programmer response:** None.

**Source:** LANRES

EWXxx9152E Dynamic allocation request for device *ddname* failed with return code *return-code* and error code *error*.

**Explanation:** A dynamic allocation request failed for the indicated device. The return code is the decimal value returned in register 15 by SVC 99 and the error code is the hexadecimal value returned in the error reason field of the SVC 99 request block. See [z/OS MVS Programming: Authorized Assembler Services Guide](https://www.ibm.com/support/docview/pgg/101592) for a description of the error and possible recovery actions.

**System action:** The device is not allocated.

**User response:** Correct the problem and retry the request.

**System programmer response:** None.

**Source:** LANRES

EWXxx9153E Unable to delete member *member* from dataset *dsname*: STOW error *error*, reason code *reason-code*.

**Explanation:** LANRES was unable to delete the indicated partitioned dataset member due to a STOW failure. See [z/OS DFSMS Macro Instructions for Data Sets](https://www.ibm.com/support/docview/pgg/101590) for a description of the error and possible recovery actions.

**System action:** The member is not deleted.

**User response:** Correct the problem and retry the request.

**System programmer response:** None.

**Source:** LANRES

EWXxx9154E Error reading *dsname*: *error*.

**Explanation:** An I/O error occurred while reading the indicated dataset. The error text consists of the messages returned by the SYNADAF system function.

**System action:** Command processing ends.
User response: Correct the problem and retry the request.
System programmer response: None.
Source: LANRES

EWXxx9155E Error writing dsname: error.

Explanation: An I/O error occurred while writing the indicated dataset. The error text consists of the messages returned by the SYNADAF system function.
System action: Command processing ends.
User response: Correct the problem and retry the request.
System programmer response: None.
Source: LANRES

EWXxx9156E Unable to open member member in dataset dsname: FIND error error, reason code reason-code.

Explanation: LANRES was unable to open the indicated partitioned dataset member due to a FIND failure. See [z/OS DFSMS Macro Instructions for Data Sets] for a description of the error and possible recovery actions.
System action: The dataset is not opened.
User response: Correct the problem and retry the request.
System programmer response: None.
Source: LANRES

EWXxx9157E Unable to store member member in dataset dsname: STOW error error, reason code reason-code.

Explanation: LANRES was unable to create the indicated partitioned dataset member due to a STOW failure. See [z/OS DFSMS Macro Instructions for Data Sets] for a description of the error and possible recovery actions.
System action: The member is not stored.
User response: Correct the problem and retry the request.
System programmer response: None.
Source: LANRES

EWXxx9158E Unable to store member member in dataset dsname because the dataset directory is full.

Explanation: LANRES was unable to create the indicated partitioned dataset member because there is no room available in the dataset directory.
System action: The member is not stored.
User response: Correct the problem and retry the request.
System programmer response: None.
Source: LANRES

EWXxx9159E 'name' terminated due to attention.

Explanation: A TSO command or program was terminated by an attention interrupt.
System action: The command is terminated.
User response: None.
System programmer response: None.
Source: LANRES
**EWXxx9160E • EWXxx9164E**

**EWXxx9160E** *name* abnormally terminated: Completion code code, Reason code reason-code.

Explanation: A TSO command, REXX procedure, or host system program abnormally terminated. The completion code is either a hexadecimal system completion code (Sxxx) or a decimal user completion code (Unnnn).

System action: The command is terminated.

User response: For a system completion code, see z/OS MVS System Codes for a description of the completion code. For a user completion code, refer to the command or program documentation for a description of the completion code.

System programmer response: None.

Source: LANRES

**EWXxx9161E** TSO service routine IKJEFTSR ended with return code code and reason code reason-code.

Explanation: The IKJEFTSR service routine ended with an unexpected return code. See z/OS TSO/E Programming Services for a description of the return codes and possible recovery actions.

System action: The TSO command is not executed.

User response: None.

System programmer response: None.

Source: LANRES

**EWXxx9162E** *name* was not found.

Explanation: The indicated TSO command, REXX procedure, or host program program was not found.

System action: The command or program is not run.

User response: Make sure that the name is correct and that the proper DD statements are defined.

System programmer response: None.

Source: LANRES

**EWXxx9163E** The *name* command is not supported in a non-TSO environment.

Explanation: A TSO command was issued in a non-TSO environment. A non-TSO environment exists when either the Terminal Monitor Program (TMP) is not running or the CALL command was used to start the LANRES program.

System action: The command is not processed.

User response: None.

System programmer response: None.

Source: LANRES

**EWXxx9164E** Unable to run program name: error.

Explanation: LANRES was unable to run a host system program.

System action: The program is not executed.

User response: Correct the problem indicated by the error text.

System programmer response: None.

Source: LANRES
EWXxx9165E Syntax error in command 'command'
Explanation: LANRES detected a syntax error in a system command.
System action: The command is not run.
User response: Specify a valid system command.
System programmer response: None.
Source: LANRES

EWXxx9166E Unable to locate program name BDL error error, reason code reason-code.
Explanation: LANRES was unable to locate the indicated program due to a BDL failure. See z/OS DFSMS Macro Instructions for Data Sets for a description of the error and possible recovery actions.
System action: The program is not executed.
User response: Correct the problem and retry the request.
System programmer response: None.
Source: LANRES

EWXxx9167E Unable to create REXX environment: IRXINIT error error, reason code reason-code.
Explanation: LANRES was unable to create the REXX environment. See z/OS TSO/E REXX Reference for a description of the error and possible recovery actions.
System action: Command processing ends.
User response: Correct the problem and retry the request.
System programmer response: None.
Source: LANRES

EWXxx9168E Unable to issue REXX stack request: IRXSTK error.
Explanation: LANRES was unable to issue a REXX data stack request. See z/OS TSO/E REXX Reference for a description of the error and possible recovery actions.
System action: The stack operation is not performed.
User response: Correct the problem and retry the request.
System programmer response: None.
Source: LANRES

EWXxx9169E Unable to run REXX procedure: IRXEXEC error error.
Explanation: LANRES was unable to run a REXX procedure. See z/OS TSO/E REXX Reference for a description of the error and possible recovery actions.
System action: The REXX procedure is not executed.
User response: Correct the problem and retry the request.
System programmer response: None.
Source: LANRES

EWXxx9170E Unable to run REXX procedure name error.
Explanation: LANRES was unable to run a REXX procedure.
System action: The REXX procedure is not executed.
User response: Correct the problem indicated by the error text.
EWXxx9171S  EWXxx9175E

System programmer response:  None.
Source:  LANRES

EWXxx9171S  LANRES task name terminated by attention interrupt.
Explanation:  A TSO attention interrupt was received while a LANRES task was active. A U0024 user abend will be issued to terminate the current task.
System action:  Command processing ends.
User response:  None.
System programmer response:  None.
Source:  LANRES

EWXxx9172E  Online help is not available.
Explanation:  Online LANRES help was requested but LANRES is not running in a foreground TSO session.
System action:  The help information is not displayed.
User response:  Online help is available only when LANRES is invoked as a TSO command in a foreground TSO session. Retry the help request when logged on to TSO.
System programmer response:  None.
Source:  LANRES

EWXxx9173E Unable to display help panel name: ISPTUTOR return code code.
Explanation:  Online LANRES help was requested but the ISPTUTOR program either was not available or encountered an error while displaying the help information.
System action:  The help information is not displayed.
User response:  Make sure ISPF is available and that the proper DD statements have been defined.
System programmer response:  None.
Source:  LANRES

EWXxx9174E Unable to display help panel name: error.
Explanation:  The requested help panel either was not found in the ISPF panel library or an error occurred while attempting to open the panel member.
System action:  The help information is not displayed.
User response:  Make sure that the LANRES ISPF panel library dataset is allocated to the ISPPLIB DD.
System programmer response:  None.
Source:  LANRES

EWXxx9175E  IDCAMS error error detected while listing catalog level level.
Explanation:  The IDCAMS utility returned an error for the indicated catalog level. The error is usually the last three digits of the IDCAMS error message. For example, a return code of 12 indicates that message IDC3012I was issued by IDCAMS. See the z/OS DFSMS Access Method Services for Catalogs for more information on IDCAMS. See the z/OS MVS System Messages, Vol 6 (GOS-IEA) for a description of the IDC messages.
System action:  The catalog list is not created.
User response:  Correct the problem and retry the failing command.
System programmer response:  None.
Source:  LANRES
EWXxx9176E DIV request for dsname failed with error error, reason code reason-code.

Explanation: A data-in-virtual request for the indicated VSAM linear dataspace failed with the indicated error and reason codes. See the z/OS MVS Programming: Authorized Assembler Services Reference ALE-DYN for a description of the DIV error codes.

System action: Disk serving is terminated for the failing LANRES volume.

User response: Correct the problem and restart the disk server job.

System programmer response: None.

Source: LANRES

EWXxx9177E Linear dataspace dsname has not been initialized.

Explanation: The indicated VSAM linear dataspace has not been initialized for use with LANRES.

System action: Command processing ends.

User response: Use the EWXLDCRT command to initialize the dataspace and then retry the failing command.

System programmer response: None.

Source: LANRES

EWXxx9178E DSPSERV request for dsname failed with error error, reason code reason-code.

Explanation: A dataspace request for the indicated VSAM linear dataspace failed with the indicated error and reason codes. See the z/OS MVS Programming: Authorized Assembler Services Reference ALE-DYN for a description of the DIV error codes.

System action: Disk serving is terminated for the failing LANRES volume.

User response: Correct the problem and restart the disk server job.

System programmer response: None.

Source: LANRES

EWXxx9179E Dynamic allocation request for SYSOUT failed with return code return-code and error code error.

Explanation: A dynamic allocation request failed for a SYSOUT dataset. The return code is the decimal value returned in register 15 by SVC 99 and the error code is the hexadecimal value returned in the error reason field of the SVC 99 request block. See the z/OS MVS Programming: Assembler Services Reference ABE-HSP for a description of the error and possible recovery actions.

System action: The dataset is not allocated.

User response: Correct the problem and retry the request.

System programmer response: None.

Source: LANRES

EWXxx9180E IDCAMS error error detected while allocating VSAM dataset dsname.

Explanation: The IDCAMS utility returned an error for the indicated VSAM dataset. The error code is usually the last three digits of the IDCAMS error message. For example, a return code of 12 indicates that message IDC3012I was issued by IDCAMS. See the z/OS DFSMS Access Method Services for Catalogs for more information on IDCAMS. See the z/OS MVS System Messages, Vol 6 (GOS-IEA) for a description of the IDC messages.

System action: The LANRES disk image dataset is not created.

User response: Correct the problem and retry the EWXLDCRT command.

System programmer response: None.

Source: LANRES
EWXxx9181E  EWXxx9185E

EWXxx9181E IDCAMS error **error** detected while deleting VSAM dataset **dsname**.

**Explanation:** The IDCAMS utility returned an error for the indicated VSAM dataset. The error code is usually the last three digits of the IDCAMS error message. For example, a **return code** of 12 indicates that message IDC3012I was issued by IDCAMS. See the [z/OS DFSMS Access Method Services for Catalogs](https://www.ibm.com/support/knowledgecenter/SSD77Q_1.3.0/com.ibm.dft.doc/dfsms办ecm20020109910_01.html) for more information on IDCAMS. See [z/OS MVS System Messages, Vol 6 (GOS-IEA)](https://www.ibm.com/support/knowledgecenter/SSD77Q_1.3.0/com.ibm.dft.doc/dfsms办ecm20020109910_01.html) for a description of the IDC messages.

**System action:** The LANRES disk image dataset is not deleted.

**User response:** Correct the problem and retry the EWXLDDLT command.

**System programmer response:** None.

**Source:** LANRES

---

EWXxx9182I  **message_text**

**Explanation:** This message is used by the EWXWTO command to send a message to a host system operator console. The message text is supplied by the caller of EWXWTO.

**System action:** None.

**User response:** None.

**System programmer response:** None.

**Source:** LANRES

---

EWXxx9183E DSPSERV request failed with error **error** and reason code **reason-code**.

**Explanation:** A dataspace request failed with the indicated error and reason codes. See the [z/OS MVS Programming](https://www.ibm.com/support/knowledgecenter/SSD77Q_1.3.0/com.ibm.dft.doc/dfsms办ecm20020109910_01.html) for a description of the DSPSERV error codes.

**System action:** Command processing ends.

**User response:** Correct the problem and retry the failing command.

**System programmer response:** None.

**Source:** LANRES

---

EWXxx9184E Internal error detected - dictionary tree corrupted.

**Explanation:** LANRES detected an internal error while building a data compression dictionary.

**System action:** Command processing ends.

**User response:** None.

**System programmer response:** Report the problem to IBM.

**Source:** LANRES

---

EWXxx9185E Unable to read dictionary **dsname: error**.

**Explanation:** An I/O error occurred while reading the data compression dictionary dataset.

**System action:** Command processing ends.

**User response:** Correct the problem and retry the failing command.

**System programmer response:** None.

**Source:** LANRES
EWXxx9186E  dsname does not contain a valid dictionary.
Explanation: The indicated dataset does not contain a valid data compression dictionary.
System action: Command processing ends.
User response: Change the EWXDICT DD statement to point to a valid data compression dictionary dataset and retry the failing command.
System programmer response: None.
Source: LANRES

EWXxx9187W  Disk image dsname is too small for data compression.
Explanation: Data compression was requested but the disk image dataset is not large enough to contain the data compression control tables. As a general rule, the disk image dataset should not be smaller than one half the size of the NetWare volume segment.
System action: Data compression is not used for the disk image.
User response: If the error occurred while creating a new disk image dataset, specify either a larger image dataset size or a smaller NetWare volume segment size. If the error occurred while restoring a disk image dataset from a dump file, create a new disk image dataset and either specify a larger disk image dataset size or do not request data compression.
System programmer response: None.
Source: LANRES

EWXxx9188E  Unable to enqueue dataset dsname: Error error.
Explanation: LANRES was unable to issue an enqueue for a sequential or partitioned dataset. The error code is the return code from the ENQ macro.
System action: The dataset is not opened.
User response: Report the problem to the system programmer.
System programmer response: Report the problem to IBM.
Source: LANRES

EWXxx9195S  Unable to attach the communication subsystem task: Error error.
Explanation: LANRES was unable to start the communication subsystem task. This task performs all inter-task and inter-system communication functions as well as message display and logging functions.
   Error codes between 0 and 99 are the ATTACH return code.
   Error codes between 100 and 199 are the IDENTIFY return code + 100.
System action: The current task is terminated.
User response: Report the problem to the system programmer.
System programmer response: Report the problem to IBM. and is not translated.
Source: LANRES

EWXxx9196S  The communication subtask is not responding to requests.
Explanation: The LANRES communication subtask is not responding to requests. This task performs all inter-task and inter-system communication functions as well as message display and logging functions. This error can occur if a read has been issued for data from the NetWare server and the server does not respond.
System action: The current task is terminated with a U0020 abend.
User response: Make sure that the NetWare server is operational and that the LANRES NLM has not terminated.
System programmer response: None.
EWXxx9197S 0101

Source: LANRES

EWXxx9197S LANRES task name abnormally terminated with completion code code reason code reason-code.

Explanation: A LANRES task was abnormally terminated. The completion code is either a hexadecimal system completion code (Sxxx) or a decimal user completion code (U00nnn). The reason code is always a hexadecimal value. See z/OS MVS System Codes for a description of the system completion codes.

LANRES uses the following user completion codes:
- 0016 - The C/370™ abort() function was requested.
- 0020 - Communication subtask abnormally terminated.
- 0024 - Task terminated by attention interrupt.

System action: The LANRES command is terminated.

User response: Correct the problem and retry the command.

System programmer response: None.

Source: LANRES

EWXxx9198E Unable to locate C/370 save area during exit processing.

Explanation: The LANRES ESTAE exit was unable to locate a C/370 save area for use during recovery processing.

System action: ESTAE recovery is not attempted and the task is terminated.

User response: Report the problem to the system support programmer.

System programmer response: Report the problem to IBM.

Source: LANRES

EWXxx9199S The communication subtask has abnormally terminated.

Explanation: The LANRES communication subtask has terminated. This task performs all inter-task and inter-system communication functions as well as message display and logging functions. There should be additional messages in the job log indicating the cause of the failure.

System action: The current task is terminated with a U0020 abend.

User response: Correct the problem and retry the request.

System programmer response: None.

Source: LANRES

EWX Server Messages

0100I progrname initialized.

Explanation: The progrname program has been loaded and successfully initialized.

System action: The program is ready to process transactions.

User response: None.

System programmer response: None.

Source: LANRES

0101I progrname Service Level level initialized.

Explanation: The progrname program at service level level has been loaded and successfully initialized.

System action: The program is ready to process transactions.

User response: None.
0102E  Communications RECEIVE command error (RC=return-code).

Explanation: An error occurred while reading data from the host.

System action: The communication session ends, but the failing program will start to listen for a connection from the host again. Other messages from EWXCOMM should be issued.

User response: None.

System programmer response: The problem could be that the host ended the conversation or it could be that the communication link had an error. Use the other messages to determine the problem.

Source: LANRES

0103E  Unable to start communications (RC=return-code).

Explanation: The communications driver was unable to start a session on behalf of an application. The possible error return codes are:

1 Communication layer could not find an empty control block
6 Communication layer failed to initialize and will unload. Other messages will be issued indicating the failure(s).
8 An error occurred after finding the session control block. Other messages will be issued to help determine the problem. The session is cleaned up.

System action: The failing program is unloaded or restarted.

User response: None.

System programmer response:
- For RC=1, a session will have to be made available for the program to successfully load. Free up one of the sessions by unloading LANRES functions that are not being used or add more sessions using the SESSIONS field in the EWXCOMM.INI file (this requires unloading and reloading all the LANRES NLMs).
- For RC=6, correct the problem using the other messages. Then restart the EWXCOMM NLM.
- For RC=8, use the other messages to determine and correct the problem. Then restart the failing program.

Source: LANRES

0107E  progname level mismatch between Host and Server programs.

Explanation: The version, release, and modification numbers of program progname do not match the release and modification numbers of the corresponding program on the host.

System action: The server program remains loaded waiting for the correct version of the host program to be run.

User response: None.

System programmer response: Check the levels of the server and host programs. Then determine which level should be run and make the necessary changes.

Source: LANRES

0109S  A request has been received that cannot be executed by progname.

Explanation: The server program progname has received an incorrect command request from the host.

System action: The request is ignored and a return code is passed back to the host program.

User response: None.

System programmer response: Ensure the LANRES host programs are installed at the correct release level that matches the NetWare NLMs. Do this by entering either the EWXADMIN QUERY ID or EWXDS QUERY ID command. The user may need to enter the EWXCONN LINK command to establish a new connection to the server.
Source: LANRES

0110I  progname has been unloaded.
Explanation: The program progname has been unloaded by a request from the NetWare console.
System action: The program is unloaded. Any session being used by progname becomes available.
User response: None.
System programmer response: None.
Source: LANRES

0111I  Host timeout on session session.
Explanation: The host program has not responded to a request within the time specified by the disk timeout value.
System action: The program stays loaded waiting for a connection. The EWXDISK component will deactivate all disks associated with that line and reactivate the disks when the connection is reestablished.
User response: None.
System programmer response: Restart the host program related to the NLM used to reestablish a connection.
Source: LANRES

0112S  Host did not read the correct number of packets.
Explanation: The server application tried to send a certain number of packets of data to the host program. The host program was interrupted and all the packets were not read.
System action: The server program remains operational. The packets received at the host program are discarded.
User response: None.
System programmer response: Other error messages may indicate why all the packets were not read and should be used to correct the problem.
Source: LANRES

0115E  Host program is not a progname server.
Explanation: The program on the NetWare server does not match the program on the host. The server is connected to a host program that performs a different function.
System action: The program remains loaded, waiting for a request from the correct program.
User response: None.
System programmer response:Unload the NLM and restart it, or enter a EWXCONN DROP command from the host user ID connected to the NLM.
Source: LANRES

0130I  Connection established with host disk server program, session session.
Explanation: The host disk server has responded with disk information necessary for connection to the server.
System action: The disks are now allocated to NetWare and available for use.
Source: LANRES

0132E  Insufficient memory to initialize disks.
Explanation: The disk driver, EWXDISK, was unable to allocate the storage needed to add the disks.
System action: The disks are not allocated to the NetWare server. The disk driver, EWXDISK, will continue to service disk requests for currently allocated disks. If this occurs during initialization, EWXDISK will unload.
0133I  Number of disks equals zero on session session.
Explanation: The disk driver, EWXDISK, received a response from the host program indicating that there are no disks.
System action: The disk driver, EWXDISK, will remain loaded.
System programmer response: Restart the disk server with the required disks.
Source: LANRES

0134E  Disks are currently active; use QUIESCE or FORCE option.
Explanation: The EWXCMD DROP DISK command was entered while disks were still active.
System action: The disk is not dropped.
User response: None.
System programmer response: Enter the EWXCMD DROP DISK command again with the QUIESCE or FORCE option; for example:
LOAD SYS:\EWXNLM\EWXCMD DROP DISK 20 QUIESCE
For more information about the EWXCMD DROP DISK command and the QUIESCE and FORCE options, see z/OS LANRES Configuration Files and Commands.
Source: LANRES

0135S  Initialization failed; unable to add disk device.
Explanation: The disk driver, EWXDISK, received an unacceptable return code from NetWare when adding a disk to the system.
System action: The disk driver, EWXDISK, unloads.
User response: None.
System programmer response: Reload the disk driver.
Source: LANRES

0136S  Initialization failed; unable to add disk card.
Explanation: The disk driver, EWXDISK, received an unacceptable return code from NetWare when adding a disk to the system.
System action: The disk driver, EWXDISK, will unload.
User response: None.
System programmer response: Retry the operation.
Source: LANRES

0137E  The subchannel specified is not active.
Explanation: The subchannel specified on the DROP DISK command is not being used by the disk driver, EWXDISK.
System action: The disk driver, EWXDISK, continues to process requests.
User response: None.
System programmer response: Enter the DROP DISK command again specifying a subchannel that the disk driver, EWXDISK, is using. To see which subchannels the disk driver is using, use the EWXCMD Query Connections command.

For more information about the EWXCMD DROP DISK command, see "z/OS LANRES Configuration Files and Commands." 

Source: LANRES

0141I  Mounting nn volumes; please do not issue MOUNT command until done.

Explanation: The disk driver, EWXDISK, sends this message before mounting the volumes.

System action: The EWXDISK program mounts the volumes associated with a host server.

User response: None.

System programmer response: Do not enter a MOUNT command on the server while the disk driver, EWXDISK, is mounting these volumes.

Source: LANRES

0143I  Log file copied to: log-fname.

Explanation: The current log has been saved in file log-fname.

System action: None.

User response: None.

System programmer response: Since the log file has been saved, it may be desirable to clear the log file using the "Reset log file" menu option.

Source: LANRES

0144I  Message Buffer dumped to: MB-dumped.

Explanation: The wrapping buffer used to save trace messages has been dumped to file MB-dumped.

System action: None.

User response: None.

System programmer response: The file may be used to view the last trace messages saved. Tracing to this buffer is started by selecting the "Selective Trace to Buffer" option from the "Trace options" menu.

Source: LANRES

0146E  Log file buffer full, lost-message-count message(s) were lost.

Explanation: The log file buffer is used to process messages before writing them to the log file. The buffer overflowed before writing completed and lost-message-count messages were unable to be processed.

System action: Message logging continues after the loss.

User response: None.

System programmer response: The log buffer size may be increased in the configuration file using the LOG_BUFFER_SIZE keyword.

Source: LANRES

0199S  An internal processing error occurred with symptom string: symptom.

Explanation: The system detected that it was in an invalid state.

System action: Unpredictable.

User response: Record the symptom string and notify IBM service.
System programmer response: None.
Source: LANRES

**0501E** Insufficient parameters specified.
Explanation: Additional parameters are required for this command.
System action: The program is unloaded from the NetWare server.
User response: None.
System programmer response: Load the program using the correct syntax. For syntax information, see [z/OS LANRES Configuration Files and Commands](https://www.ibm.com). 
Source: LANRES

**0502E** Incorrect parameter(s) specified.
Explanation: Incorrect parameter(s) were entered on the command line following the program name. They were possibly misspelled, incorrect, incomplete, or improperly abbreviated.
System action: The program is unloaded from the NetWare server.
User response: None.
System programmer response: Load the program using the correct syntax. For syntax information, see [z/OS LANRES Configuration Files and Commands](https://www.ibm.com). 
Source: LANRES

**0503E** Too many parameters entered.
Explanation: Extraneous parameters were entered on the command line following the program name.
System action: The program is unloaded from the NetWare server.
User response: None.
System programmer response: Load the program using the correct syntax. For syntax information, see [z/OS LANRES Configuration Files and Commands](https://www.ibm.com). 
Source: LANRES

**0504E** The password entered is longer than 127 characters.
Explanation: The password can not be longer than 127 characters in length for a NetWare object such as a user ID or the LANRES object.
System action: The program is unloaded from the NetWare server.
User response: None.
System programmer response: Load the program using the correct syntax. For syntax information, see [z/OS LANRES Configuration Files and Commands](https://www.ibm.com). 
Source: LANRES

**0505E** API NetWare API error (RC=return-code).
Explanation: A LANRES call to the NetWare API API returned with the error return-code.
System action: Error recovery is initiated.
User response: None.
System programmer response: Retry the operation that failed. If the problem persists, look up the return code in the NetWare library.
Source: LANRES
0506E  Duplicate parameter(s) specified.
Explanation: The parameter(s) listed in the message are part of the program syntax, but the parameter(s) have been entered more than once.
System action: The program is unloaded from the NetWare server.
User response: None.
System programmer response: Load the program using the correct syntax. For syntax information, see z/OS LANRES Configuration Files and Commands.
Source: LANRES

0507E Incorrect server name specified.
Explanation: A server name must be between 2 and 47 characters long and cannot contain spaces or any of the following special characters:
/ (slash)
\ (back slash)
: (colon)
; (semicolon)
, (comma)
* (asterisk)
? (question mark)
System action: The program is unloaded from the NetWare server.
User response: None.
System programmer response: Load the program using the correct syntax. For syntax information, see z/OS LANRES Configuration Files and Commands.
Source: LANRES

0508E Conflicting parameter(s) specified.
Explanation: The parameter(s) listed in the message can not be used with another parameter entered on the command line.
System action: The program is unloaded from the NetWare server.
User response: None.
System programmer response: Load the program using the correct syntax. For syntax information, see z/OS LANRES Configuration Files and Commands.
Source: LANRES

0509E Directory name in parameter is too long.
Explanation: The directory associated with the parameter listed in the message exceeds the allowable length of 254 characters.
System action: The program is unloaded from the NetWare server.
User response: None.
System programmer response: Load the program using the correct syntax. For syntax information, see z/OS LANRES Configuration Files and Commands.
Source: LANRES
0510E  Program unloaded. Required values were not successfully initialized.

Explanation:  Multiple copies of the program listed in the message were loaded on the NetWare server at the same time. These copies are dependent on certain values being initialized by the first copy of the program to be loaded. Not all the required values were initialized successfully. All copies of the program will be unloaded from the server.

System action:  All copies of the program are unloaded.

User response:  None.

System programmer response:  Verify all required values, such as component passwords or the LANRES object password, are available to the first copy of the program being loaded.

Source:  LANRES

0511E  Parameter parameter can only be specified by the first NLM that is loaded for this function.

Explanation:  The program that issued this message can be loaded multiple times on the NetWare server, but certain parameters, such as the parameter listed in the message, can be specified only by the first copy of this program to be loaded. The value obtained from this parameter will be used by subsequent copies of the program to be loaded.

System action:  The copy of the program that issued this message is unloaded from the NetWare server.

User response:  None.

System programmer response:  If you want to use the parameter listed in the message, unload all copies of this program from the server and load the program using your parameters. Otherwise, load the program with the correct syntax. For syntax information, see z/OS LANRES Configuration Files and Commands.

Source:  LANRES

0512E  Parameter parameter can only be specified by the first EWXHLPR,T.NLM or EWXDIST.NLM loaded.

Explanation:  Multiple copies of the EWXHLPR,T.NLM and EWXDIST.NLM can be loaded on the NetWare server at the same time, but certain parameters, such as the parameter listed in the message, can only be specified by the first copy of either EWXHLPR,T.NLM or EWXDIST.NLM to be loaded. The value obtained from this parameter will be used by subsequent copies of EWXHLPR,T.NLM and EWXDIST.NLM to be loaded.

System action:  The copy of the program that issued this message is unloaded from the NetWare server.

User response:  None.

System programmer response:  To use the parameter listed in the message, unload all copies of EWXHLPR,T.NLM and EWXDIST.NLM from the server and load the program using the parameters. Otherwise, load the program with the correct syntax. For syntax information, see z/OS LANRES Configuration Files and Commands.

Source:  LANRES

0513E  The PWIN and PWOUT parameters must be specified as a pair. If one parameter is specified, the other parameter must also be specified.

Explanation:  The PWIN and PWOUT parameters designate the values for the component passwords and must be specified as a pair.

System action:  The program is unloaded from the NetWare server.

User response:  None.

System programmer response:  Load the program using the correct syntax. For syntax information, see z/OS LANRES Configuration Files and Commands.

Source:  LANRES
0514E Cannot open component password file filename. Program will be unloaded.

Explanation: The program listed in the message tried to open the component password file but the file cannot be found or opened.

System action: The program is unloaded from the NetWare server.

User response: None.

System programmer response: Verify the component password file exists. The location where the file can be found can be specified by using the function or communication driver command line or from the communication driver initialization file. Default component password files can be created. The default file name should be EWXxxxx.NPW (xxxx should be replaced by the function ADMIN, DIST, DISK, HLPRT, or LHPRT) and the file should be located in the directory the program is loaded from or in the SYS:\EWXNLM directory.

Source: LANRES

0515E Line number of component password file filename is too long. Program will be unloaded.

Explanation: Lines in the component password file, except comments, are limited to 128 characters in length. Line number in filename exceeded this limit.

System action: The program is unloaded from the NetWare server.

User response: None.

System programmer response: Correct the file filename and load the program again.

Source: LANRES

0516E Incorrect password specified in line number of component password file filename. Program will be unloaded.

Explanation: A component password must be between 1 and 8 characters in length, and be an alphanumeric string (from 0 to 9, a to z, and A to Z). The password is not case sensitive. Line number in filename contains a password that does not fit this format.

System action: The program is unloaded from the NetWare server.

User response: None.

System programmer response: Correct the file filename and load the program again. Verify comments in the file start with '*', '/', or ';' in the first column.

Source: LANRES

0517I Trace option turned on for function function.

Explanation: The TRACE parameter was specified on the command line or in the initialization file. The program that issued this message will now run in TRACE mode.

System action: Processing continues.

User response: None.

System programmer response: The TRACE parameter should be used with the help of an IBM service representative.

Source: LANRES

0518E Authentication error. Signature mismatch between host and server programs. Connection will be dropped.

Explanation: Packets sent between the host and the NetWare server contain signatures to verify the packet originated from the correct function. If a signature that is received does not match what is expected, then a communications error has occurred and the connection to the host will be dropped.
**System action:** Connection to the host is dropped. The program on the NetWare server tries to recover from this error.

**User response:** The user on the host should enter a EWXCONN LINK command to establish a new connection with the NetWare server.

**System programmer response:** This problem may occur if the user on the host is using subchannels for communications and does not use the LANRES LINK command to change the set of subchannels used for communications. If the problem persists, contact an IBM service representative.

**Source:** LANRES

---

**0519E**  
**Error sending data to the host (RC=return-code).**

**Explanation:** A communications error occurred while sending data to the host.

**System action:** The program on the NetWare server tries to recover from this error.

**User response:** None.

**System programmer response:** Verify the communications method is operating correctly.

**Source:** LANRES

---

**0520W**  
**Error receiving data from the host (RC=return-code).**

**Explanation:** A communications error occurred while receiving data from the host.

**System action:** The program on the NetWare server tries to recover from this error.

**User response:** None.

**System programmer response:** Verify the communications method is operating correctly.

**Source:** LANRES

---

**0521E**  
**Cannot open a connection for the function function because there are no available sessions.**

**Explanation:** The SESSIONS parameter in the communications driver command line or in the initialization file specifies how many sessions are available to the LANRES functions. Each of the EWXADMIN.NLMs, EWXDIST.NLMs, EWXLHLPRT.NLMs, and EWXLHPRT.NLMs loaded on the server take up one of the available sessions. The EWXDISK.DSK program takes up as many available sessions as specified by its DISK_SESSIONS parameter. This message was issued because all the available sessions were taken, so no new LANRES function can be loaded or started.

**System action:** If the function is ADMIN, DIST, HLPRT, or LHPRT, then the program is unloaded from the NetWare server. If the function is DISK, then the new session is not started.

**User response:** None.

**System programmer response:** Add additional sessions with the EWXCMD server command or free up some sessions by unloading one of the LANRES functions.

**Source:** LANRES

---

**0522E**  
**Incorrect component password password specified.**

**Explanation:** A component password must be between 1 and 8 characters in length, and be an alphanumeric string (from 0 to 9, a to z, and A to Z). The password is not case sensitive.

**System action:** The program is unloaded from the NetWare server.

**User response:** None.

**System programmer response:** Load the program using the correct syntax. For syntax information, see [z/OS LANRES Configuration Files and Commands](https://www.ibm.com).  

**Source:** LANRES
**0523E**  Cannot find or open a file which contains the LANRES object password. *Program will be unloaded.*

**Explanation:** The program listed in the message tried to find the LANRES object password in a designated LANRES object password file or in default LANRES object password files, but these files could not be found or opened.

**System action:** The program is unloaded from the NetWare server.

**User response:** None.

**System programmer response:** Ensure the LANRES object password file exists. Specify where the file can be found by using the function or the communications driver command line, or the communications driver initialization file. A default LANRES object password file can be created. The default file name should be EWXLOBJ.PWF, and the file should be located in the directory the program is loaded from or in the SYS:EWXNLM directory.

**Source:** LANRES

---

**0524E**  Line *number* of LANRES object password file *filename* is too long. *Program will be unloaded.*

**Explanation:** Lines in the LANRES object password file, except comments, are limited to 128 characters in length. Line *number* in *filename* exceeded this limit.

**System action:** The program is unloaded from the NetWare server.

**User response:** None.

**System programmer response:** Correct the file *filename* and load the program again.

**Source:** LANRES

---

**0525E**  Password specified in line *number* of LANRES object password file *filename* is too long. *Program will be unloaded.*

**Explanation:** A password can not be longer than 127 characters in length for the LANRES object. Line *number* in *filename* contains a password that exceeds this limit.

**System action:** The program is unloaded from the NetWare server.

**User response:** None.

**System programmer response:** Correct the file *filename* and load the program again.

**Source:** LANRES

---

**0526I**  Program has initialized or restarted.

**Explanation:** The program listed in the message has performed one of the following:

- The program has been loaded on the NetWare server and has initialized successfully.
- The program has recovered from an error and restarted successfully.

**System action:** None.

**User response:** None.

**System programmer response:** None.

**Source:** LANRES

---

**0527E**  Cannot allocate memory for data encryption or decryption. *Program will restart.*

**Explanation:** Not enough memory is available on the NetWare server to run the data encryption program for processing component passwords.

**System action:** The connection to the host will be dropped.

**User response:** None.

**System programmer response:** If the problem persists, free up server memory by unloading NLMs or add additional system memory to the server.
0528S  An unauthorized connection was attempted to the function function. Connection to the host will be dropped.

Explanation: Component passwords are used to authorize the connection between the host and the NetWare server. These component passwords must be the same on the host and the server for the connection to be maintained. The server program received an incorrect password, which means the connection is not authorized and will be dropped.

System action: Connection to the host is dropped.

User response: None.

System programmer response: Verify the component passwords are the same on the host and on the server.

Source: LANRES

0529E  Value missing for parameter parameter.

Explanation: The parameter parameter requires an associated value.

System action: The program is unloaded from the NetWare server.

User response: None.

System programmer response: Load the program using the correct syntax. For syntax information, see z/OS LANRES Configuration Files and Commands.

Source: LANRES

0530E  Logfile is full.

Explanation: The log file has reached its maximum size and the current message cannot be logged.

System action: The message is not logged.

User response: None.

System programmer response: Remove the log file or increase the maximum size for the log file in the EWXCOMM.INI file.

Source: LANRES

0531W  The size of the logfile has exceeded the threshold.

Explanation: While logging a message, the log file's size exceeded the specified threshold.

System action: None.

User response: None.

System programmer response: None.

Source: LANRES

0532E  Parameter parameter is longer than the maximum of number characters.

Explanation: The parameter listed in the message is too long.

System action: The program is unloaded from the NetWare server.

User response: None.

System programmer response: Load the program using the correct syntax. For syntax information, see z/OS LANRES Configuration Files and Commands.

Source: LANRES
0533E  Incorrect value value specified for parameter parameter.
Explanation: The value listed in the message was specified on the command line, but it is not an acceptable value for the parameter listed in the message.
System action: The program is unloaded from the NetWare server.
User response: None.
System programmer response: Load the program using the correct syntax. For syntax information, see z/OS LANRES Configuration Files and Commands.
Source: LANRES

0534E  One or both passwords cannot be found in the component password file filename. Program will be unloaded.
Explanation: Both component passwords are required to connect the host to a NetWare function.
System action: The program is unloaded from the NetWare server.
User response: None.
System programmer response: Correct the file filename and load the program again.
Source: LANRES

0535S  Unable to load as EWXCOMM failed initialization.
Explanation: EWXCOMM did not initialize. All other LANRES NLMs will not start.
System action: The NLM will unload.
User response: None.
System programmer response: Examine the log file or console to determine why EWXCOMM did not initialize. Fix the problem and then restart EWXCOMM followed by required LANRES NLMs.
Source: LANRES

0536E  API NetWare API error (RC=return-code; message).
Explanation: A call was made to the NetWare API listed in the message and an error was returned. The return code from the API and, if available, an explanation for the error are also displayed.
System action: Error recovery is initiated.
User response: None.
System programmer response: Retry the operation that failed. If the problem persists, look up the return code in the NetWare library.
Source: LANRES

0537I  NLM_name has established a connection to the host on session session_number.
Explanation: The NLM has established a connection to a program on the host. The internal session number is displayed.
System action: None.
User response: None.
System programmer response: None.
Source: LANRES
0538I  Connection between NLM_name and the host on session session_number will be dropped.

Explanation: The program on the host has requested that the connection to the NLM be dropped. The internal session number is displayed.

System action: None.

User response: None.

System programmer response: None.

Source: LANRES

0539E  Cannot obtain a communication buffer to send to the host.

Explanation: The NLM asked the communication layer for a buffer to send to the host but the communication layer was unable to fulfill the request. Suspect insufficient server memory for the buffer.

System action: The connection to the host is restarted or the NLM is unloaded.

User response: None.

System programmer response: If the problem persists, free up server memory by unloading NLMS or add more memory to the server.

Source: LANRES

0540I  NetWare Directory Services not installed / DS.API not loaded.

Explanation: Either Netware Directory Services is not installed or DS.API not loaded.

System action: Bindery Emulation will be used.

User response: If NDS is installed, load DS.API to use NetWare Directory Services and then reload this NLM. Otherwise, use bindery services for this NLM.

System programmer response: Uses bindery services.

Source: LANRES

0541E  API NetWare API error (RC=return-code).

Explanation: A LANRES call to the NetWare API API returned with the error return-code.

System action: Error recovery is initiated.

User response: None.

System programmer response: Check the file(s) in the Print Queue. If the size is blank, delete it and retry the operation. If the problem persists, look up the return code in the NetWare library.

Source: LANRES

1201I  LAN-to-host printing has established host communications.

Explanation: A communications link has been established between the server and the host.

System action: The file server will wait indefinitely for the message from the host. When the proper message is received and processing of print jobs is to begin, this message is displayed. Should the connection be lost and regained, this message will be displayed.

User response: None.

System programmer response: None.

Source: LANRES
1203S  •  1208E

1203S  No print queues found for the print server.
Explanation:  There were no print queues set up on the NetWare server that could be attached to the LAN-to-host
print server.
System action:  The program is unloaded.
User response:  None.
System programmer response:  Use PCONSOLE or EWXADMIN to create the necessary print queues. See EWXADMIN
ADDPRTQ in \zos\lanres\Configuration Files and Commands.
Source:  LANRES

1204S  Print server name already in use.
Explanation:  The print server specified during the start up of print on the host, or the default name: HOSTPRT, is
already being serviced by another print server utility such as PSERVER.NLM.
System action:  The host side of print exits, and the NLM waits for the host to restart.
User response:  None.
System programmer response:  Verify that the print server name specified in the host start up is the desired print
server to use. If it is the correct name, determine what printer utility is using the print server and unloaded it; check
PSERVER first.
Source:  LANRES

1205S  Error returned using the AddINC function (RC=return-code).
Explanation:  While trying to call the AddINC program, an internal error was generated.
System action:  The program is unloaded.
User response:  None.
System programmer response:  If the return code is 1, 3, or 4, report the error to an IBM service representative. If
the return code is 2, operation will continue normally.
Source:  LANRES

1206I  EWXLHPRT.NLM stopped because print server was deleted.
Explanation:  The NetWare print server associated with EWXLHPRT.NLM was deleted. When this happens, the
EWXLHPRT.NLM no longer has access to the NetWare Queue Management System and cannot process print jobs.
System action:  The EWXLHPRT.NLM which issued the message is unloaded.
User response:  None.
System programmer response:  None.
Source:  LANRES

1208E  Print queue file read error. Print server restarting.
Explanation:  A system I/O error was detected while trying to read a print queue file.
System action:  The program will reset and try to read the file again.
User response:  None.
System programmer response:  None.
Source:  LANRES
1209E Number of print queues exceeded 100; excess queues discarded.

Explanation: The print server was assigned more than 100 print queues. The first 100 are queued, the others are not queued.

System action: Subsequent print queues after the first 100 are discarded. Processing continues normally for the first 100 queues.

User response: None.

System programmer response: Use EWXADMIN DELPRTQ to delete some queues that are not needed. This will allow the system to restart and pick up the new queues. For details about the EWXADMIN DELPRTQ command, see z/OS LANRES Configuration Files and Commands.

Source: LANRES

1210E A shared print queue, printq, was found.

Explanation: The print server detected that the named print queue is configured in the NetWare bindery as a shared print queue. Shared print queue are not supported.

System action: The shared print queue will not be serviced by EWXLHPRT.

User response: None.

System programmer response: Use either the EWXADMIN RMVQSERV command on the host, or the PCONSOLE utility on the NetWare console to disassociate the shared print queue from all but one print server. Then restart the LAN-to-host print connection(s) which received this error. For information on the EWXADMIN RMVQSERV command, see z/OS LANRES Configuration Files and Commands. Use PCONSOLE to display which print queues are associated with which print servers.

Source: LANRES

1211I Queue queue_name not defined at the Host.

Explanation: The queue specified in the NPRINT command was not recognized by the Host service machine.

System action: Processing of jobs for other queues continues.

User response: Use another print queue or contact your system programmer with the queue name to be added to the LAN-to-host print configuration.

System programmer response: Add the queue name and corresponding data into the LAN-to-host print configuration file, EWXLHPRT PROCS.

Source: LANRES

1212I Print job sent to host; status unknown.

Explanation: A user exit processed the job, but no message information was returned. The status of the print job is unknown. The job may or may not have printed. This message is generated at the host print service machine, and displayed at the client terminal.

System action: Processing of jobs continues.

User response: None.

System programmer response: Determine why the user exit associated with the queue is not returning any message information.

Source: LANRES

1213I Print job purged; empty file.

Explanation: The print job specified to print contained no data to print.

System action: Print job is discarded. Processing of jobs continues.

User response: Do not send empty jobs to be printed at the host.
**1214I • 1218I**

**System programmer response:** None.

**1426I** Host-to-LAN printing

**Explanation:** This is a data dictionary lookup.

**User response:** None

**System programmer response:** None

**Source:** LANRES

---

**1427E** Error writing data into the print queue (RC=return-code).

**Explanation:** An I/O error was detected while trying to write the data into the NetWare print queue. This could be caused by a hardware problem on a disk or a NetWare system problem such as no disk space left.

**System action:** The NLM closes the file and removes the queue entry from the system. The NLM resets and waits for the next request.

**User response:** None.

**System programmer response:** If the problem persists, either the NLM should be unloaded or the host service machine should be stopped, or both should be done. The cause of the problem should be determined. When the problem is found, then the NLM should be reloaded and the host service machine restarted.

**Source:** LANRES

---

**1428E** Cannot start the function function (RC=return-code; message).

**Explanation:** EWXHLPRTNLM tried to start the function indicated in the message as a separate process in the NetWare server but the attempt failed. The return code and, if available, an explanation for the error are displayed.

**System action:** Error recovery is initiated.

**User response:** None.

**System programmer response:** Retry the operation that failed. If the problem persists, look up the return code in the NetWare library.

**Source:** LANRES

---

**1429E** Insufficient memory for internal print job information.

**Explanation:** EWXHLPRTNLM creates internal tables to store information about file servers and print jobs. This error message is displayed when the NLM cannot obtain enough memory from the server to add to these internal tables.

**System action:** The print job is canceled and the connection to the host is restarted.

**User response:** None.

**System programmer response:** The host-to-LAN print program on the host should automatically reconnect to the NLM and resubmit the print job. If the problem persists, free up server memory by unloading NLMs or add more memory to the server.

**Source:** LANRES
1430W  Insufficient memory to save information for querying host-to-LAN print jobs.

Explanation: The host-to-LAN print NLM cannot save the information necessary for the EWXCONN QUERY PRINT command.

System action: Processing continues. The print job will print. The EWXCONN QUERY PRINT command will not produce any status on the print job.

User response: None.

System programmer response: If other messages are being displayed because of the shortage on memory, follow the direction associated with the other messages or increase the memory on the NetWare server.

Source: LANRES

1431E Insufficient memory for number read buffer records.

Explanation: EWXHLPRT.NLM cannot obtain enough memory from the server to create an internal table which is used to receive packets from the host. The number of records for the internal table is taken from the BUFFERS=number option or the default value.

System action: The NLM is unloaded.

User response: None.

System programmer response: Load the NLM with a smaller number in the BUFFERS=number option. If the problem persists, free up server memory by unloading NLMs or add more memory to the server.

Source: LANRES

1432E Insufficient memory for number thread group records.

Explanation: EWXHLPRT.NLM cannot obtain enough memory from the server to create an internal table which is used to keep track of the separate processes started by the NLM. The number of processes is taken from the PROCESSES=number option or the default value.

System action: The NLM is unloaded.

User response: None.

System programmer response: Load the NLM with a smaller number in the PROCESSES=number option. If the problem persists, free up server memory by unloading NLMs or add more memory to the server.

Source: LANRES

1433E Incorrect initialization packet received from the host.

Explanation: EWXHLPRT.NLM expected an initialization packet but did not receive one.

System action: The connection to the host is restarted.

User response: None.

System programmer response: The host-to-LAN print program on the host should automatically reconnect to the NLM and send another initialization packet.

Source: LANRES

1434E The host packet that was received is too small.

Explanation: EWXHLPRT.NLM received a packet from the host that did not contain all the required information to be a valid packet.

System action: The connection to the host is restarted.

User response: None.

System programmer response: If the problem persists, contact an IBM service representative.

Source: LANRES
1435E All the thread groups have not ended.

Explanation: EWXHLPRRT.NLM is waiting for all the separate processes to end before unloading or restarting the connection to the host, but all the processes have not ended.

System action: The NLM is unloaded which will force all processes to end.

User response: None.

System programmer response: If the problem persists, contact an IBM service representative.

Source: LANRES

1436E Unknown host packet type number received.

Explanation: EWXHLPRRT.NLM does not recognize the type of the packet received from the host.

System action: The connection to the host is restarted.

User response: None.

System programmer response: If the problem persists, contact an IBM service representative.

Source: LANRES

1437W The list of file servers has been locked the last number minutes.

Explanation: EWXHLPRRT.NLM is processing a lot of work and is slow in responding to the task that issued this message. The list of file servers is an internal list used by the NLM. This message may appear occasionally on a busy file server.

System action: The task continues to wait for the list of file servers.

User response: None.

System programmer response: If this message appears frequently, contact an IBM service representative.

Source: LANRES

1438W No receive buffer has been freed the last minutes minutes.

Explanation: EWXHLPRRT.NLM is processing a lot of work and is slow in processing the requests from the host. Receive buffers are used internally by the NLM to read information from the host. This message may appear occasionally on a busy file server.

System action: The task continues to wait for a receive buffer.

User response: None.

System programmer response: Increase the BUFFERS value on the LOAD EWXHLPRRT.NLM command line. If this message still appears frequently, contact an IBM service representative.

Source: LANRES

1751E Incorrect value value given for DISKTIMEOUT.

Explanation: An incorrect value was given for the DT= option when loading EWXDISK.

System action: EWXDISK will unload.

User response: None.

System programmer response: Specify a value of 1 to 3600 for DT.

Source: LANRES
1753E Incorrect value value given for IDLETIMEOUT.
Explanation: An incorrect value was given for the IT= option when loading EWXDISK.
System action: EWXDISK will unload.
User response: None.
System programmer response: Specify a value of 1 to 3600 for IT.
Source: LANRES

1754E Incorrect value value given for DISK_SESSIONS.
Explanation: An incorrect value was given for the DISK_SESSIONS option when loading EWXDISK.
System action: EWXDISK will unload.
User response: None.
System programmer response: Specify a correct value for DISK_SESSIONS. If a number is not specified, one additional EWXDISK session will be started.
Source: LANRES

1755S Initialization failed because of a session that was not valid.
Explanation: A session number greater than the allowed number of sessions was passed to the communication layer during initialization.
System action: The connection to the host is dropped.
User response: None.
System programmer response: Determine what application is causing the problem and correct it.
Source: LANRES

1756E Unable to start connection.
Explanation: A EWXCMD START DISK command has encountered an error while starting connection to the host for the disk driver. Other error messages accompany this message.
System action: No more sessions will be started.
User response: None.
System programmer response: If more sessions are needed, determine the error from the other messages and correct it. Enter the EWXCMD START DISK command again.
Source: LANRES

1757S Not enough memory to begin thread (RC=return-code).
Explanation: Not enough memory was available to start a thread necessary for the disk driver to run.
System action: The disk driver unloads.
User response: None.
System programmer response: Using the NetWare MODULES command, determine what other programs have already been loaded, and unload any that are not currently needed. Otherwise, add additional memory to the server.
Source: LANRES
1758E  Not enough memory to begin thread (RC=return-code).

Explanation: A EWXCMD START DISK command has encountered an error. Not enough memory was available to start a thread that accepts connections from the host.

System action: No additional disk sessions will be started.

User response: None.

System programmer response: If more disk sessions are desired, use the NetWare MODULES command to determine what other programs have already been loaded, and unload any that are not currently needed. Otherwise, add additional memory to the server.

Source: LANRES

1759E  Unrecognized command to disk command routine.

Explanation: The disk command routine was not able to recognize the parameter passed by EWXCMD.

System action: The EWXCMD command request is discarded. Suspect memory has been overwritten.

User response: None.

System programmer response: Determine which NLM is causing the problem.

Source: LANRES

1760E  Error in internal read routine (RC=return-code).

Explanation: A communications error occurred during the internal read routine. The host session may have stopped.

System action: The session in which the error occurred ends. The disk driver starts another session that accepts a connection from the host. The host can then reconnect.

User response: None.

System programmer response: Determine what is causing the problem and correct it. The host side may have been intentionally stopped or a communications link could have gone down.

Source: LANRES

1761E  Error in internal write routine (RC=return-code).

Explanation: A communications error occurred during the internal write routine. The host session may have been stopped.

System action: The session in which the error occurred ends. The disk driver starts another session to allow the host to reconnect.

User response: None.

System programmer response: Determine what is causing the problem and correct it. The host side may have been intentionally stopped or the communications link could have gone down.

Source: LANRES

1762E  Not enough memory to get a buffer (RC=return-code).

Explanation: The buffer request was denied because there is not enough memory.

System action: The disks are deleted for this session and become not recognized by the server. The connection to the host is ended and the session becomes available for the next connection from the host.

User response: None.

System programmer response: Using the NetWare MODULES command, determine what other programs have already been loaded, and unload any that are not currently needed or add additional memory to the server. After adding more memory, restart the host connection using the LANRES LINK command.

Source: LANRES
1763E  Error initializing disks (RC=return-code).

Explanation: An error occurred while starting a disk image. If the return-code is -1, then the disk driver thread could not start. If the return-code is 8, then the SetThreadGroupID API failed. Other messages will be displayed with this.

System action: The disk image will not start and the session will close.

User response: None.

System programmer response: If the return-code is -1, the NetWare server is probably running out of memory. Unload unnecessary NLMs or add more memory to the server. If the return-code is 8, then follow the directions from the other message displayed.

Source: LANRES

1764E  Incompatible version of NetWare. This program was built for execution on NetWare Version Intended_NetWare_version but is being loaded on NetWare Version Actual_NetWare_version.

Explanation: There are two LANRES programs provided by LANRES for disk serving. One is intended for use on NetWare Version 3 and is named EWXDISK3.DSK and the other is intended for use on NetWare Version 4 and is named EWXDISK4.DSK. Both programs are shipped on the LANRES diskette and the LANRES installation installs both into the SYS:\EWXNLM subdirectory. The installation program also determines what version of NetWare is running on the NetWare file server from which the LANRES installation program is being invoked and copies the LANRES disk serving program that is compatible with that version, to the SYS:\EWXNLM subdirectory as the program named EWXDISK.DSK. Invoking the LANRES installation program from a NetWare 3.xx file server, three programs, EWXDISK3.DSK, EWXDISK4.DSK and EWXDISK.DSK are installed to the SYS:\EWXNLM subdirectory and the EWXDISK.DSK program is a copy of the EWXDISK3.DSK program and must be loaded only on NetWare version 3.xx file servers. Invoking the LANRES installation program from a NetWare 4.xx file server, three programs, EWXDISK3.DSK, EWXDISK4.DSK and EWXDISK.DSK are installed to the SYS:\EWXNLM subdirectory and the EWXDISK.DSK program is a copy of the EWXDISK4.DSK program and must be loaded only on NetWare version 4.xx file servers. This error message indicates that EWXDISK.DSK is being executed on a NetWare file server that is running a different version from that which the LANRES installation program was invoked.

System action: The program is unloaded from the NetWare server.

User response: None.

System programmer response: Verify that the LANRES Disk Driver program is being loaded on a version of NetWare that is supported by LANRES. See the LANRES Licensed Program Specifications for details on the versions supported. If the NetWare version is supported then determine what version of NetWare is running on the NetWare file server that the EWXDISK.DSK program is being loaded on. If it is version 3.xx then copy the EWXDISK3.DSK file as the EWXDISK.DSK file and reissue the LOAD EWXDISK command. If it is version 4.xx then copy the EWXDISK4.DSK file as the EWXDISK.DSK file and reissue the LOAD EWXDISK command.

Source: LANRES

1765E  Error on BeginThread call (ERRNO=errno).

Explanation: During the execution of LANRES disk serving, a call was made for the EWXCOMM NLM to begin a thread, via the NetWare BeginThread API, and the API failed with an errno as indicated.

System action: The program continues operation.

User response: None.

System programmer response: If the errno displayed is 5 then this indicates that the NetWare file server does not have enough memory. Using the NetWare MODULES command, determine which programs can be unloaded to free up memory. Otherwise, add more memory to the server.

Source: LANRES
Insufficient memory available for number_of_sessions sessions.

Explanation: EWXCOMM detected an error while trying to reserve memory for the number_of_sessions that were to be initialized. This number was either specified on the load command for EWXCOMM.NLM, in EWXCOMM.INI, or the default of 16.

System action: The program unloads.

User response: None.

System programmer response: Determine if all of the identified sessions are necessary, and if possible decrease the number of sessions. Using the NetWare MODULES command, determine what other programs have already been loaded and unload any that are not currently needed. Otherwise, add additional memory to the server.

Source: LANRES

Initializing TCP/IP.

Explanation: EWXCOMM is performing TCP/IP initialization.

System action: EWXCOMM creates a socket and binds it to the LANRES well known port number.

User response: None.

System programmer response: None.

Source: LANRES

Could not initialize TCP/IP (RC=return-code).

Explanation: The TCP/IP initialization failed with the specified return value. Possible return values are:

1 Cannot create socket
2 Cannot bind socket
3 Error occurred starting ListenTCPThread
4 Unable to locate a port number

System action: EWXCOMM attempts to initialize the other communications options. If any of the other communications options successfully initialize, then EWXCOMM continues to operate. If no other communications options are successfully initialized, EWXCOMM exits.

User response: None.

System programmer response: Examine the console to determine if any errors occurred in starting TCP/IP.

- If TCP/IP is a necessary connectivity, unload EWXCOMM, determine the problem, and correct it based on the return values, and then reload EWXCOMM.
- If the return value was 1, the server is probably running out of buffer space. Message EWXCOM5522E will also be displayed with more information to help determine the problem.
- If the return value was 2, another application might be using LANRES's well known port number, or TCP/IP has not closed up the port. It might be necessary to unload TCP/IP and restart it. Message EWXCOM5523E will also be displayed with more information to help determine the problem.
- If the return value was 3, there was not enough memory to start a thread. Using the NetWare MODULES command, determine what other programs have already been loaded, and unload any that are not currently needed. Otherwise, add additional memory to the server. Message EWXCOM5524E may also be displayed with this message.
- If the return value was 4, verify that the well known port address for LANRES has been added to the \ETC\SERVICES file.

Source: LANRES
5505I  Initialized TCP/IP successfully.
Explanation:  The TCP/IP communications code successfully initialized.
System action:  EWXCOMM continues communications initialization.
User response:  None.
System programmer response:  None.
Source:  LANRES

5508E  Could not initialize PWSCS (RC=return-code).
Explanation:  VM PWSCS initialization failed with the specified return-code:
1  Cannot declare resource
3  Error occurred starting ListenPWSCSThread
System action:  EWXCOMM attempts to initialize any other communications options. If any of the other communication options successfully initialize, then EWXCOMM continues to operate. If no other communication options are successfully initialized, EWXCOMM exits.
User response:  None.
System programmer response:  Examine the console to determine if any errors occurred in starting VM PWSCS. If the error code is 1, then EWXCOMM was unable to be identified as the private resource manager for the resource EWXCOMM. Verify no other programs on this server have already identified this resource using VM PWSCS Display/Configure.
Source:  LANRES

5509I  Initialized PWSCS successfully.
Explanation:  VM PWSCS communications code successfully initialized.
System action:  EWXCOMM continues communications initialization.
User response:  None.
System programmer response:  None.
Source:  LANRES

5512E  Error initializing NetWare for SAA (RC=return-code).
Explanation:  The NetWare CMLOGIN process returned return-code, indicating a possible problem with the NetWare for SAA side information file.
System action:  EWXCOMM attempts to initialize other communications options. If any of the other communications options successfully initialize, then EWXCOMM continues to operate. Otherwise, EWXCOMM exits.
User response:  None.
System programmer response:  Verify the NetWare for SAA side information file for EWXCOMM is correct. Verify there are available SNA sessions for this LU on the host connection being utilized. If sessions are not available, modify the NetWare for SAA side information file to increase the number of allowed sessions, or unload the programs using the sessions.
Source:  LANRES

5513I  Initialized NetWare for SAA successfully.
Explanation:  The NetWare for SAA communications code successfully initialized.
System action:  EWXCOMM continues communications initialization.
User response:  None.
System programmer response: None.
Source: LANRES

5516E Error initializing channel connection (RC=return-code).
Explanation: EWXCOMM could not initialize any of the identified subchannels.
System action: If any of the other communications options successfully initialized, then EWXCOMM continues to operate. Otherwise, EWXCOMM exits. An return-code value of 3 indicates that no threads started successfully.
User response: None.
System programmer response: Use the previous error messages for information as to which subchannel failed and take the appropriate action.
Source: LANRES

5517I Initialized channel connection successfully.
Explanation: The channel connections successfully initialized.
System action: EWXCOMM continues communications initialization.
User response: None.
System programmer response: None.
Source: LANRES

5519E No communication drivers loaded or initialized successfully.
Explanation: EWXCOMM was unable to initialize communications for any of the supported communications types.
System action: EWXCOMM unloads.
User response: None.
System programmer response: Use the previous error messages to determine what communications types were unsuccessfully initialized and take the necessary corrective action.
Source: LANRES

5520E An error occurred processing arguments (RC=return-code).
Explanation: An error occurred while processing the EWXCOMM command line arguments or the LANRES initialization file (the default name is EWXCOMM.INI).
System action: EWXCOMM unloads.
User response: None.
System programmer response: Verify the command arguments passed to EWXCOMM are valid and the LANRES initialization file exists and can be found. Examine the LANRES message log or the server console for further information as to which arguments or initialization values were incorrect.
Source: LANRES

5521I LANRES communications unloading.
Explanation: EWXCOMM is unloading because of an error.
System action: EWXCOMM unloads.
User response: None.
System programmer response: Using the other messages displayed, determine the error and correct the problem. Then reload EWXCOMM.
Source: LANRES
5522E  TCP/IP socket command failed during initialization (ERRNO=errno).

Explanation: An error was encountered creating the main socket. An errno of 55 indicates insufficient buffer space.

System action: This message may be displayed with message EWXCOM5504E. TCP/IP connections are not initialized, but EWXCOMM tries to initialize the other connectivities. If any of the other connectivities successfully initialize, EWXCOMM continues. Otherwise, EWXCOMM unloads.

User response: None.

System programmer response: If TCP/IP connectivity is necessary, unload EWXCOMM. Using the NetWare MODULES command, determine which programs can be unloaded to free memory on the server. Otherwise, add additional memory to the server. Then reload EWXCOMM.

Source: LANRES

5523E  TCP/IP bind on port portnumber failed during initialization (ERRNO=errno).

Explanation: The TCP/IP bind call failed during initialization with errno:

9  Socket is already bound to another address
48  Specified port is already in use (637 is the LANRES port number).
49  Specified port is not available (637 is the LANRES port number).

System action: This message may be displayed with message EWXCOM5504E. TCP/IP connections are not initialized, but EWXCOMM tries to initialize the other connectivities. If any of the other connectivities successfully initialize, EWXCOMM continues. Otherwise, EWXCOMM unloads.

User response: None.

System programmer response: If TCP/IP connectivity is necessary, unload EWXCOMM. Check \ETC\SERVICES to ensure no other application is using the LANRES well known port number, 637. If another application is using the port number, change the port number for LANRES or the other application, and make the corresponding changes on the host.

If LANRES is the only application using the port, then it is possible that TCP/IP has not cleaned up the socket. Wait five minutes and reload EWXCOMM. This will give TCP/IP a chance to clean up the socket. If this still does not work, unload the TCPIP.NLM and then restart TCP/IP.

Source: LANRES

5524E  Error starting TCP thread (ERRNO=errno).

Explanation: EWXCOMM could not start a thread, using a BeginThread call, because the server does not have enough memory.

System action: This message may be displayed with message EWXCOM5504E. TCP/IP connections are not initialized, but EWXCOMM tries to initialize the other connectivities. If any of the other connectivities successfully initialize, EWXCOMM continues. Otherwise, EWXCOMM unloads.

User response: None.

System programmer response: Using the NetWare MODULES command, determine which programs can be unloaded to free up memory. Otherwise, add more memory to the server.

Source: LANRES

5525E  Unable to locate port number.

Explanation: The LANRES well known port number was not found in the \ETC\SERVICES file.

System action: This message may be displayed with message EWXCOM5504E. TCP/IP connections are not initialized, but EWXCOMM tries to initialize the other connectivities. If any of the other connectivities successfully initialize, EWXCOMM continues. Otherwise, EWXCOMM unloads.

User response: None.
**System programmer response:** Check the \ETC\SERVICES file on the server for a LANRES entry. If it has not been added, add a line similar to the following:

```
lanserver       637/tcp
```

**Source:** LANRES

---

**5526S**  Error accepting connection (ERRNO=errno).

**Explanation:** The TCP/IP accept call failed because memory has been overwritten.

**System action:** The thread that listens for TCP/IP connection from the host has stopped. No TCP/IP sessions can be started.

**User response:** None.

**System programmer response:** If TCP/IP is a needed connectivity, unload EWXCOMM and try to restart it.

**Source:** LANRES

---

**5527E**  function function is not available. Load the desired NLM.

**Explanation:** A host user tried to establish a connection to a LANRES NLM and there is no function of that type waiting for a connection. There are sessions still available to accept more host connections, but the desired LANRES function is not available because either the function is not loaded or all loaded copies are in use by another host user.

**System action:** The host connection fails, issuing an error message.

**User response:** None.

**System programmer response:** Load the requested LANRES NLM (EWXADMIN, EWXDIST, EWXDISK, EWXHLPRT, or EWXLHPRT) so the user can attach to it. If the EWXDISK is already loaded, add another session with EWXCMD START DISK 1.

**Source:** LANRES

---

**5528E**  No sessions were available to start connection for function function.

**Explanation:** A host user tried to establish a connection to a LANRES NLM, but there were no sessions available to satisfy the request.

**System action:** The host connection fails, issuing an error message.

**User response:** None.

**System programmer response:** Free up a session by entering the LANRES DROP command from a host using the specified LANRES function, enter the EWXADMIN TERM command from a user attached to the administration function, or unload EWXADMIN, EWXDIST, EWXDISK, EWXHLPRT, or EWXLHPRT.

**Attention:** By entering the UNLOAD command at the server console, ALL the NLMs by that name will be unloaded.

**Source:** LANRES

---

**5529E**  Error setting TCP/IP parameters (ERRNO=errno).

**Explanation:** The setsockopt API failed.

**System action:** TCP/IP communications does not start.

**User response:** None.

**System programmer response:** To use TCP/IP communications, unload the LANRES NLMs and then unload TCP/IP and restart it. Then reload the LANRES NLMs.

**Source:** LANRES
**5530E**  
Error starting TCP data thread (ERRNO=errno).

**Explanation:** During a LANRES LINK, EWXCOMM could not start a thread, using a `BeginThread` call, because the server does not have enough memory.

**System action:** The host and the NLM are notified of the error and the connection stops.

**User response:** None.

**System programmer response:** Using the NetWare `MODULES` command, determine which programs can be unloaded to free up memory. Otherwise, add more memory to the server.

**Source:** LANRES

---

**5531E**  
TCP/IP error from a read call (ERRNO=errno).

**Explanation:** An error occurred during the TCP/IP `read` call.

**System action:** EWXCOMM continues to accept more TCP/IP connections.

**User response:** None.

**System programmer response:** None.

**Source:** LANRES

---

**5532W**  
Error queuing buffer for session `session` (RC=return-code).

**Explanation:** An error occurred queuing the buffer.

**System action:** The buffer was not queued. The session is cleaned up and stops.

**User response:** None.

**System programmer response:** None.

**Source:** LANRES

---

**5533E**  
Host dropped connection during initialization.

**Explanation:** The host has stopped the connection.

**System action:** EWXCOMM continues to accept more TCP/IP connections.

**User response:** None.

**System programmer response:** None.

**Source:** LANRES

---

**5535E**  
Incorrect length sent. Cleaning up session `sessionnumber`.

**Explanation:** During a TCP/IP read, the length sent was greater than 4K.

**System action:** The session ends with the host and is cleaned up. The data received is discarded.

**User response:** None.

**System programmer response:** If the problem persists, contact an IBM service representative.

**Source:** LANRES

---

**5536S**  
TCP/IP error on read for session `sessionnumber` (ERRNO=errno).

**Explanation:** An error was returned on a TCP/IP read for session `sessionnumber`.

**System action:** The session is stopped.

**User response:** None.
**System programmer response:** The connection can be restarted and the data move can be retried. If the problem persists, contact an IBM service representative.

**Source:** LANRES

---

**5537W**  EOF received on TCP/IP read for session sessionnumber.

**Explanation:** The socket was closed causing the TCP/IP connection to receive an EOF.

**System action:** The session sessionnumber is stopped.

**User response:** None.

**System programmer response:** The connection may be restarted.

**Source:** LANRES

---

**5538E**  Error starting PWSCS thread (ERRNO=errno).

**Explanation:** EWXCOMM could not start the thread, from the BeginThread call, because the server does not have enough memory.

**System action:** PWSCS connections are not initialized, but EWXCOMM tries to initialize the other connectivities. If any of the other connectivities successfully initialize, EWXCOMM continues. Otherwise, EWXCOMM unloads.

**User response:** None.

**System programmer response:** If PWSCS connectivity is needed, unload EWXCOMM. Using the NetWare MODULES command, determine which programs can be unloaded to free up memory. Otherwise, add more memory to the server.

**Source:** LANRES

---

**5539E**  Error declaring PWSCS CPI-Communications resource (RC=return-code).

**Explanation:** An error occurred declaring EWXCOMM as a resource manager. The return-code is the return code from the PWSCS call.

**System action:** PWSCS connections are not initialized, but EWXCOMM tries to initialize the other connectivities. If any of the other connectivities successfully initialize, EWXCOMM continues. Otherwise, EWXCOMM unloads.

**User response:** None.

**System programmer response:** If the return-code is:

- **20** Use the PWSCS Display Configure Utility to examine the log file. If the resource table has overflowed, then increase the resources permitted by modifying the value in the PWSCS ACPLINI file. The new value will take effect when LANRES is restarted.

- **28** Another application has already declared this resource. Determine which application has the resource and remove that application.

**Source:** LANRES

---

**5540E**  reSetThreadGroupID failed (RC=return-code).

**Explanation:** The NetWare API SetThreadGroupID failed to reset the thread group ID back to the original ID. Memory may have been corrupted.

**System action:** EWXCOMM continues. LANRES function may terminate.

**User response:** None.

**System programmer response:** If memory corruption is suspected, contact an IBM service representative and report the return code.

**Source:** LANRES
**5541W**  An error occurred while closing session session (RC=return-code).

**Explanation:** An error occurred when one of the LANRES functions closed a session.

**System action:** EWXCOMM continues.

**User response:** None.

**System programmer response:** None.

**Source:** LANRES

---

**5542E**  Error sending data (RC=return-code).

**Explanation:** An error occurred sending data to the host with VM PWSCS or NetWare for SAA. The *return-code* is the return code from the CPI-Communications **CMSEND** call. This message could be displayed with either EWXCOM5527 or EWXCOM5528.

**System action:** The host does not get the error, but the conversation is closed as part of routine clean up.

**User response:** None.

**System programmer response:** Use the return code to determine the problem.

17  The host application has ended abnormally. The host has deallocated the conversation. Correct the host problem and restart the host application.

20  For PWSCS, use the PWSCS Display Configure Utility to examine the Log to determine the problem. For NetWare for SAA, examine the NetWare for SAA console to determine the problem.

**Source:** LANRES

---

**5543E**  Error deallocating conversation (RC=return-code).

**Explanation:** The CPI-Communications **CMDEAL** call failed.

**System action:** The conversation is not cleaned up.

**User response:** None.

**System programmer response:** The conversation has already been cleaned up or the conversation cannot be cleaned up. The next time the system is restarted the conversation will be cleaned up.

**Source:** LANRES

---

**5544E**  Error receiving data (RC=return-code).

**Explanation:** An error occurred receiving data from the host while using VM PWSCS or NetWare for SAA. The *return-code* is the return code from the CPI-Communications **CMRCV** call.

**System action:** The error is returned to the LANRES NLM that is using this conversation. The conversation is cleaned up. The LANRES NLM may unload or restart.

**User response:** None.

**System programmer response:** If the return code is:

17  The host application has ended abnormally. Correct the host problem and restart the host application.

20  For PWSCS, use the PWSCS Display Configure Utility to examine the Log to determine the problem. For NetWare for SAA, examine the NetWare for SAA console to determine the problem.

**Source:** LANRES

---

**5545E**  Error accepting conversation (RC=return-code).

**Explanation:** An error has occurred on the CPI-Communications **CMACCP** call.

**System action:** EWXCOMM keeps issuing CMACCP, trying to accept a conversation from the host.

**User response:** None.
System programmer response: Contact an IBM service representative.
Source: LANRES

5546E  Partner abnormally stopped.

Explanation: The host application has ended abnormally.
System action: The CPI-Communications CMRCV call received a status indicating the host application has abnormally stopped.
User response: None.
System programmer response: Correct the host error, and restart the host application.
Source: LANRES

5548E  Error setting dealllocation type (RC=return-code).

Explanation: The CPI-Communications CMSDT call has received an error.
System action: The conversation is not cleaned up.
User response: None.
System programmer response: The system will still be usable, but the conversation will not be cleaned up until the next time LANRES is restarted. If the problem persists, contact an IBM service representative.
Source: LANRES

5549E  Unexpected event: event

Explanation: The CPI-Communications XCWOE call has received an unexpected event.
System action: The PWSCS connectivity thread will end.
User response: None.
System programmer response: Contact an service representative.
Source: LANRES

5550E  Error wait on event failed (RC=return-code).

Explanation: The CPI-Communications XCWOE call has failed.
System action: The PWSCS connectivity thread stops.
User response: None.
System programmer response: Contact an IBM service representative.
Source: LANRES

5551E  Error starting NetWare for SAA listen thread (RC=return-code).

Explanation: The BeginThread call failed because of lack of storage.
System action: NetWare for SAA connections is not initialized, but EWXCOMM tries to initialize the other connectivities. If any of the other connectivities successfully initialize, EWXCOMM continues. Otherwise, EWXCOMM unloads.
User response: None.
System programmer response: If NetWare for SAA connectivity is needed, unload EWXCOMM. Using the NetWare MODULES command, determine which programs can be unloaded to free up memory. Otherwise, add more memory to the server.

<td>Contact an IBM service representative.</td>
<td>LANRES</td>
</tr>
<tr>
<td>5557E</td>
<td>Error starting channel thread on subchannel subchannel type adapter adapter.</td>
<td>The thread that accepts data from the host could not start because there was not enough memory. The subchannel is the even subchannel for the subchannel pair on type adapter adapter.</td>
<td>The session is no longer valid and the connection is dropped and restarted.</td>
<td>None</td>
<td>Using the NetWare MODULES command, determine what other programs have already been loaded and unload any that are not currently needed. Otherwise, add additional memory to the server.</td>
<td>LANRES</td>
</tr>
<tr>
<td>5558I</td>
<td>No subchannels were started.</td>
<td>The communications layer was unable to start a subchannel. This could be because no subchannels were specified in the EWXCOMM.INI file or on the LOAD command for EWXCOMM. Otherwise, other messages will be issued to determine the problem.</td>
<td>EWXCOMM attempts to initialize other communications options. If any of the other communications options successfully initialize, then EWXCOMM continues. Otherwise, EWXCOMM unloads.</td>
<td>None</td>
<td>If subchannel communication is necessary, use the error messages to determine what the problem is. Verify the EWXCOMM.INI file has the correct even subchannel and corresponding adapter identified</td>
<td>LANRES</td>
</tr>
</tbody>
</table>
on the "subchannel=" line. Check the adapter configuration file (PSCA1.CFG or PSCA2.CFG) to ensure the list of ALL the subchannels used (even and odd) for LANRES are in the file.

Source: LANRES

5559E  ReadHandle could not be opened for subchannel subchannel on type adapter adapter (RC=return-code).

Explanation: A read subchannel could not be opened because all the subchannel handles are currently in use. The MMC card has a limit of 128 simultaneous subchannels in use per adapter. The subchannel subchannel specified is the even (read) subchannel of the subchannel pair on type adapter adapter.

System action: The subchannel pair specified does not accept connections, but this does not effect the other pairs that initialize successfully nor the other connectivities.

User response: None.

System programmer response: Determine what subchannel pairs on the adapter are not needed and update the EWXCOMM.INI accordingly. Use EWXCMD DELETE to remove subchannels and EWXCMD ADD to add subchannels to be used. If more than 128 subchannels are needed, add another adapter.

Source: LANRES

5560E  WriteHandle could not be opened for subchannel subchannel on type adapter adapter (RC=return-code).

Explanation: A write subchannel could not be opened because all the subchannel handles are currently in use. The MMC card has a limit of 128 simultaneous subchannels in use per adapter. The subchannel subchannel specified is the odd (write) subchannel of the subchannel pair on type adapter adapter.

System action: The subchannel pair specified does not accept connections, but this does not effect the other pairs that initialize successfully nor the other connectivities.

User response: None.

System programmer response: Determine what subchannel pairs on the adapter are not needed and update the EWXCOMM.INI accordingly. Use EWXCMD DELETE to remove subchannels and EWXCMD ADD to add subchannels to be used. If more than 128 subchannels are needed, add another adapter.

Source: LANRES

5561E  Error return code from adapter status for subchannel subchannel on type adapter adapter (RC=return-code).

Explanation: An error occurred querying the status of the type adapter card.

System action: The subchannel is closed and made not available for use by LANRES.

User response: None.

System programmer response: Try to reopen the subchannel by using the EWXCMD ADD command.

Source: LANRES

5562E  Adapter error opening the subchannel subchannel. Command code=command_code (RC=return-code).

Explanation: An adapter error occurred while initializing the subchannel pair subchannel. Status was taken from the MMC and returned the command code.

System action: The subchannels are closed and the session is stopped.

User response: None.

System programmer response: If the error persists, contact an service representative.

Source: LANRES
5563E • 5567E

5563E  Could not assign READ handle during initialization, subchannel subchannel on type adapter adapter (RC=return-code).

Explanation:  An error occurred during initialization on the read subchannel. Other messages may be displayed with this message.

System action:  The subchannel pair does not complete initialization. EWXCOMM continues initializing other subchannels and the other communication options. If none successfully initialize, EWXCOMM unloads.

User response:  None.

System programmer response:  Try to reopen the subchannel by using the EWXCMD ADD command.

Source:  LANRES

5564E  Could not assign WRITE handle during initialization, subchannel subchannel on type adapter adapter (RC=return-code).

Explanation:  An error occurred during initialization on the write subchannel. Other messages may occur with a more detailed explanation of the error.

System action:  The subchannel pair does not complete initialization. EWXCOMM continues initializing other subchannels and the other communication options. If none successfully initialize, EWXCOMM unloads.

User response:  None.

System programmer response:  Try to reopen the subchannel by using the EWXCMD ADD command.

Source:  LANRES

5565E  Could not set extended mode during initialization, subchannel subchannel on type adapter adapter (RC=return-code).

Explanation:  An error occurred during subchannel initialization.

System action:  The subchannel pair does not complete initialization. EWXCOMM continues initializing other subchannels and the other communication options. If none successfully initialize, EWXCOMM unloads.

User response:  None.

System programmer response:  Try to reopen the subchannel by using the EWXCMD ADD command.

Source:  LANRES

5566I  Host encountered an error during initialization for subchannel subchannel on type adapter adapter (RC=return-code).

Explanation:  The host encountered an error and closed the subchannel connection.

System action:  EWXCOMM will clean up the connection and then prepare to accept another subchannel connection.

User response:  None.

System programmer response:  Restart the host connection using the EWXCONN LINK command.

Source:  LANRES

5567E  Adapter error reading for function (RC=return-code).

Explanation:  An error occurred on the MMC adapter. This message is issued with other messages.

System action:  The connection for the MMC stops and the subchannels close.

User response:  None.

System programmer response:  To make the subchannels available again, use the EWXCMD ADD command.

Source:  LANRES
5568E  Error reading initialization information from host (RC=return-code).
Explanation: An error occurred reading initialization information from the host on an MMC connection. This message is displayed with message EWXCOM5569I, which will indicate what subchannels had the error.
System action: The connection for the MMC stops and the subchannels close.
User response: None.
System programmer response: To make the subchannels available again, use the EWXCMD ADD command.
Source: LANRES

5569I  Subchannel pair at subchannel on type adapter adapter have not been brought on-line.
Explanation: This message is displayed with message EWXCOM5568E to identify the subchannels in error.
System action: The connection for the MMC stops and the subchannels close.
User response: None.
System programmer response: To make the subchannels available again, use the EWXCMD ADD command.
Source: LANRES

5571E  Error sending initialization information to host (RC=return-code).
Explanation: The host has ended the channel connection (either normally or abnormally).
System action: EWXCOM restarts the subchannels and accepts another connection.
User response: None.
System programmer response: Determine what error occurred on the host and restart the host side using the EWXCONN LINK command.
Source: LANRES

5572E  Adapter error sending initialization information (RC=return-code).
Explanation: An error occurred on the MMC adapter while sending initialization information to the host. Other messages explaining the cause of the error in more detail will be displayed with this message.
System action: The connection with the host is stopped and the subchannels are closed.
User response: None.
System programmer response: Using the other messages, determine what caused the error and correct it. Use the EWXCMD ADD command to reopen the subchannels and restart the host side using the EWXCONN LINK command.
Source: LANRES

5573E  Error sending return code to host (RC=return-code).
Explanation: An error occurred sending the initialization information to the host. The return codes are:
119  The MMC adapter did not have resources to complete request
122  The MMC adapter did not have available buffers to send data
130  The MMC adapter did not have available buffers to send a command
System action: The EWXCOMM retry count has been exhausted trying to send information to the host. The MMC connection and the subchannels are closed.
User response: None.
System programmer response: Use EWXCMD ADD to make the subchannels available.
Source: LANRES
5574E  Error reading data from host for session number session (RC=return-code).
Explanation: An error occurred reading data using MMC.
System action: The session stops. If the return-code is 12, the subchannels are closed. Otherwise, the subchannels are reset and made ready to accept a connection from the host.
User response: None.
System programmer response: If the return-code is 12, then use the EWXCMD ADD command to add the subchannels back on line. Use the EWXCONN LINK command to restart the host.
Source: LANRES

5575E  Error waiting for data from host (RC=return-code).
Explanation: EWXCOMM was waiting for data from the host when an MMC adapter error occurred on the connection.
System action: Status is taken on the adapter to determine the error. The subchannels are closed and the session is stopped. This message may occur with other messages.
User response: None.
System programmer response: Use the other messages to determine the error. After fixing the problem, use EWXCMD ADD to bring the subchannels back on-line.
Source: LANRES

5576E  Error querying adapter status (RC=return-code).
Explanation: An error occurred while trying to obtain status from the MMC adapter. This message may occur with other related messages.
System action: The subchannels are closed and the session is stopped.
User response: None.
System programmer response: Use EWXCMD ADD to add the subchannels.
Source: LANRES

5577E  Adapter error occurred on the read. Command code=command_code (RC=return-code).
Explanation: Status was taken from the MMC and returned the command code. This message may occur with other related messages.
System action: The subchannels are closed and the session is stopped.
User response: None.
System programmer response: If the error persists, contact an service IBM representative to report the command code.
Source: LANRES

5578E  Adapter error occurred on the write. Command code=command_code (RC=return-code).
Explanation: Status was taken from the MMC and returned the command code. This message may occur with other related messages.
System action: The subchannels are closed and the session is stopped.
User response: None.
System programmer response: If the error persists, contact an IBM service representative to report the command code.
Source: LANRES
5579S  SetThreadGroupID failed (RC=return-code).
Explanation: The NetWare API SetThreadGroupID failed to set the current thread group ID to EWXCOMM's ID. Memory has been corrupted.
System action: EWXCOMM continues. The LANRES function may terminate. Unpredictable results could occur.
User response: None.
System programmer response: DOWN the server and restart it. If the problem persists, contact an IBM service representative with the return code.
Source: LANRES

5580E  Adapter error sending EOF to host (RC=return-code).
Explanation: EWXCOMM was restarting the connection to the host by sending an EOF on the subchannel, but an error occurred.
System action: The connection does not restart. Status is taken on the MMC, and the subchannels are closed.
User response: None.
System programmer response: Determine the error from the other messages and correct it. Use EWXCMD ADD to restart the subchannels after the problem has been corrected.
Source: LANRES

5581E  Error restarting channel thread on subchannel subchannel for type adapter adapter (RC=return-code).
Explanation: EWXCOMM could not restart the connection because of a channel error.
System action: EWXCOMM made an attempt to communicate to the host, but failed. The connection stops and the subchannels are closed.
User response: None.
System programmer response: Use EWXCMD ADD to restart the subchannels.
Source: LANRES

5582E  Open received bad status (RC=return-code).
Explanation: A LANRES function (EWXADMIN, EWXDISK, EWXDIST, EWXHPRT, or EWXLHPRT) tried to start a connection with the host, but failed. This message may occur with other error messages.
System action: No connection is made to the host and the session is cleaned up. The LANRES functions try to restart the connection.
User response: None.
System programmer response: None.
Source: LANRES

5583W  Bad status was returned to read for session session, status=status.
Explanation: This could be caused by one of the LANRES functions dropping the connection from the host by issuing a EWXCONN DROP or EWXCONN LINK command. If an error occurred, other error messages will be displayed.
System action: The connection to the host is broken and the session is cleaned up.
User response: None.
System programmer response: If an error did occur, examine the LANRES message log for other errors to determine what happened.
Source: LANRES
5584W Host ended session session with connection.
Explanation: The host stopped the session with EWXCOMM.
System action: The connection is broken and the session is cleaned up. The LANRES function using this session tries to accept another connection.
User response: None.
System programmer response: None.
Source: LANRES

5586S An error occurred on TCP/IP write for session session (RC=return-code).
Explanation: A TCP/IP write error occurred. Suspect memory corruption.
System action: The connection is stopped and the session is cleaned up.
User response: None.
System programmer response: Contact an IBM service representative.
Source: LANRES

5587E Error on adapter sending data on subchannel subchannel on type adapter adapter (RC=return-code).
Explanation: Channel adapter encountered an error.
System action: Status is taken from the channel adapter. Other related messages are displayed.
User response: None.
System programmer response: Determine the cause of the problem from the other messages.
Source: LANRES

5588E An error occurred on channel write for session session (RC=return-code).
Explanation: An error occurred sending the data to the host. The return codes are:
119 The MMC adapter did not have resources to complete request
122 The MMC adapter did not have available buffers to send data
130 The MMC adapter did not have available buffers to send a command
System action: The EWXCOMM retry count has been exhausted trying to send the information to the host. The MMC connection and the subchannels are closed.
User response: None.
System programmer response: Use EWXCMD ADD to make the subchannels available.
Source: LANRES

5589E An error occurred on NetWare for SAA write for session session (RC=return-code).
Explanation: The CPI-Communications CMSEND call failed.
System action: The connection to the host is cleaned up.
User response: None.
System programmer response: Use the return code to determine the problem.
17 The host application has ended abnormally. The host has deallocated the conversation. Correct the host problem and restart the host application.
20 Examine the NetWare for SAA console to determine the problem.
Source: LANRES
5590E  An error occurred on PWSCS write for session session (RC=return-code).
Explanation:  The CPI-Communications CMSEND call failed.
System action:  The connection to the host is cleaned up.
User response:  None.
System programmer response:  Use the return code to determine the problem.
17   The host application has ended abnormally. The host has deallocated the conversation. Correct the host problem and restart the host application.
20   Use the VM PWSCS Display Configure Utility to examine the Log to determine the problem.
Source:  LANRES

5592W  Channel pair for subchannel subchannel on type adapter adapter not found when closing (RC=return-code).
Explanation:  While closing a session, the subchannel was not found in the control block structure.
System action:  The NLM continues to clean up the session.
User response:  None.
System programmer response:  None.
Source:  LANRES

5595W  Incorrect address for FreeBuf.
Explanation:  FreeBuf was told to deallocate a buffer with a 0 address.
System action:  The request is denied.
User response:  None.
System programmer response:  If this continues and the NetWare server runs out of memory, contact an IBM service representative.
Source:  LANRES

5597E  Error closing listening socket (RC=return-code).
Explanation:  When unloading EWXCOMM, an error occurred closing the TCP/IP socket that accepts incoming connections from the host during unload time.
System action:  EWXCOMM unloads.
User response:  None.
System programmer response:  If trouble occurs loading EWXCOMM, unload TCPIP NLM and restart TCP/IP.
Source:  LANRES

5598E  Error starting channel thread on subchannel subchannel for type adapter adapter. Thread not started (RC=return-code).
Explanation:  A command, like EWXCMD ADD, encountered an error starting a channel thread to accept connections on the subchannel because there was not enough memory.
System action:  EWXCMD continues and unloads when finished.
User response:  None.
System programmer response:  Using the NetWare MODULES command, determine what other programs have already been loaded and unload any that are not currently needed. Or, add additional memory to the server.
Source:  LANRES
5599E  Subchannel subchannel on type adapter adapter is not active.

Explanation: This may occur after entering the EWXCMD DELETE command. The subchannel being deleted is not being used by LANRES.

System action: The subchannel is not deleted.

User response: None.

System programmer response: Verify the correct subchannel was specified.

Source: LANRES

5600E  Unable to open message repository <name> (RC=return-code).

Explanation: EWXCOMM was unable to open the indicated message repository.

System action: EWXCOMM unloads.

User response: None.

System programmer response: Verify the identified message repository is in the LANRES installation directory. If the repository is not there, copy the repository from the EWXNLM directory of the LANRES installation diskette. If the repository is in the LANRES installation directory, examine the console for other messages that may suggest why the message repository did not open.

Source: LANRES

5601E  Duplicate subchannel subchannel specified.

Explanation: The same subchannel address was specified more than once on the command line.

System action: The program is unloaded from the NetWare server.

User response: None.

System programmer response: Load the program using the correct syntax. For syntax information, see z/OS LANRES Configuration Files and Commands.

Source: LANRES

5602E  Odd subchannel subchannel specified.

Explanation: The subchannel address specified on the command line must be a two digit hexadecimal number that corresponds to the even subchannel address of a read/write address pair.

System action: The program is unloaded from the NetWare server.

User response: None.

System programmer response: Load the program using the correct syntax. For syntax information, see z/OS LANRES Configuration Files and Commands.

Source: LANRES

5603E  Incorrect adapter number number specified.

Explanation: The adapter number must be 1 or 2.

System action: The program is unloaded from the NetWare server.

User response: None.

System programmer response: Load the program using the correct syntax. For syntax information, see z/OS LANRES Configuration Files and Commands.

Source: LANRES
5604E  The log file's full directory name will be too long.

Explanation: The directory name, which includes the volume name, for the log file cannot be greater than 254 characters in length.

System action: The program is unloaded from the NetWare server.
User response: None.

System programmer response: Load the program using the correct syntax. For syntax information, see z/OS LANRES Configuration Files and Commands.
Source: LANRES

5605W  Unable to begin thread to process log files. Messages will still be recorded.

Explanation: The communications driver tried to start a separate thread to process the log files, but failed. A possible cause is the lack of server memory to start a new thread.

System action: Log files are not processed at midnight, but messages continue to be recorded in the current log file.
User response: None.

System programmer response: Load the communications driver again. If the problem persists, free up server memory by unloading NLMs or add system memory to the server.
Source: LANRES

5606E  Cannot find or open an initialization file. Communications driver will be unloaded.

Explanation: The initialization file is required by the communications driver. The communications driver reads the file to set default values for certain program parameters.

System action: The program is unloaded from the NetWare server.
User response: None.

System programmer response: Use the INIT_FILE parameter on the command to specify the location of the initialization file, or create a default initialization file. The default file name should be EWXCOMM.INI and the file should be located in the directory that the program is loaded from or in the SYS:\EWXNLM directory.
Source: LANRES

5607W  Line number of initialization file filename is too long. Line will not be used.

Explanation: Lines in the initialization file, except comments, are limited to 500 characters in length.

System action: The line in error is bypassed.
User response: None.

System programmer response: Correct the initialization file filename.
Source: LANRES

5608W  Line number of initialization file filename has an incorrect format. Line will not be used.

Explanation: Lines in the initialization file must follow a specific format. For more information about the EWXCOMM.INI file, see z/OS LANRES Configuration Files and Commands.

System action: The line in error is bypassed.
User response: None.

System programmer response: Correct the initialization file filename.
Source: LANRES
5609W Duplicate keyword `keyword` in line `number` of initialization file `filename`. Previous value is replaced.

**Explanation:** A duplicate keyword is found in the initialization file. Values from keywords lower in the file will replace values from keywords higher in the file.

**System action:** The previous keyword value is replaced.

**User response:** None.

**System programmer response:** Correct the initialization file `filename` by deleting one of the duplicate keywords.

**Source:** LANRES

5610W Incorrect keyword `keyword` in line `number` of initialization file `filename`. Line will not be used.

**Explanation:** A keyword in the initialization file is not recognized.

**System action:** The line in error is bypassed.

**User response:** None.

**System programmer response:** Correct the initialization file `filename`.

**Source:** LANRES

5611W Keyword `keyword` in line `number` of initialization file `filename` has an incorrect value. Line will not be used.

**Explanation:** A value was assigned to the keyword listed in the message, but it is not an acceptable value for the keyword.

**System action:** The line in error is bypassed.

**User response:** None.

**System programmer response:** Correct the initialization file `filename`.

**Source:** LANRES

5612W Value missing for keyword `keyword` in line `number` of initialization file `filename`. Line will not be used.

**Explanation:** The specified keyword in the initialization file requires a value be associated with it.

**System action:** The line in error is bypassed.

**User response:** None.

**System programmer response:** Correct the initialization file `filename`.

**Source:** LANRES

5613W One or more incorrect subchannel addresses were found in line `number` of initialization file `filename`. The incorrect subchannel addresses were not used.

**Explanation:** One or more values specified in the SUBCHANNEL line of the initialization file were incorrect. The incorrect values were discarded, but the correct values will still be used. Possible causes of this message are:

- The subchannel address was not a two digit hexadecimal number.
- The subchannel address was not an even subchannel address.
- The subchannel address was a duplicate of a previous subchannel address on the same line or a previous line.
- The adapter number was not 1 or 2.
- An extra semicolon was encountered after the last subchannel address.

**System action:** The incorrect subchannel addresses are bypassed. Other subchannel addresses on the same line are used.

**User response:** None.
System programmer response: Correct the initialization file `filename`.
Source: LANRES

---

**5617W** Unable to close initialization file `filename`.
Explanation: An attempt to close the initialization file failed.
System action: The initialization file remains open. The program continues.
User response: None.
System programmer response: Unloading the communications driver and loading it may be required to access the initialization file.
Source: LANRES

---

**5618W** Unable to delete file `filename`.
Explanation: An attempt to delete the file listed in the message failed. The file may be opened or locked by another process.
System action: Processing continues.
User response: None.
System programmer response: Try to delete the specified file from a NetWare client or with the LANRES data distribution function.
Source: LANRES

---

**5619W** Reason for failure: error.
Explanation: This message is displayed with other messages to explain a failure.
System action: Processing continues.
User response: None.
System programmer response: Use this message to determine the cause of the error listed in the other error message.
Source: LANRES

---

**5620W** Out of space on volume to archive current log file `filename`.
Explanation: The current log file cannot be archived because there is no space to create the archive log file.
System action: Processing continues.
User response: None.
System programmer response: Free up space on the volume by deleting old files, or add more space to the volume.
Source: LANRES

---

**5621W** Unable to open current log file `filename`.
Explanation: An attempt to archive the current log file or record messages to it failed because the file cannot be opened. The file may be opened or locked by another process.
System action: Processing continues.
User response: None.
System programmer response: Unload and reload the communications driver if necessary.
Source: LANRES
Unable to open archived log file filename.

Explanation: An attempt to archive the current log file failed because the archived log file listed in the message cannot be opened. The file may be opened or locked by another process.

System action: Processing continues.

User response: None.

System programmer response: Unload and reload the communications driver if necessary.

Source: LANRES

Unable to archive current log file filename.

Explanation: An attempt to append the current log file to the appropriate archived log file failed.

System action: Processing continues.

User response: None.

System programmer response: Unload and reload the communications driver if necessary. Delete or archive the current log file with a NetWare client or with the LANRES Distribution function.

Source: LANRES

Unable to open log directory directory.

Explanation: Archived log files cannot be deleted because the attempt to open the log directory directory failed.

System action: Processing continues.

User response: None.

System programmer response: Unload and reload the communications driver if necessary. Delete the archived log files with a NetWare client or with the LANRES Distribution function.

Source: LANRES

Unable to close log directory directory.

Explanation: An attempt to close the log directory directory failed.

System action: Processing continues.

User response: None.

System programmer response: Unload and reload the communications driver.

Source: LANRES

Log file started on server server.

Explanation: This message is recorded in the current log file to indicate which server the log file is from.

System action: Processing continues.

User response: None.

System programmer response: None.

Source: LANRES

{Add|Delete} available for subchannel subchannel. Waiting for function.

Explanation: The requested connection is available, and waiting for the associated function NLM to load.

System action: None.

User response: Load the required NLM.
System programmer response: None.
Source: LANRES

6252E Incorrect parameter specified.
Explanation: An incorrect parameter was specified when loading EWXLSA.
System action: EWXLSA unloads.
User response: None.
System programmer response: Verify the load command is specified correctly. Refer to z/OS LANRES Configuration Files and Commands for the correct format of the LOAD EWXLSA command.
Source: LANRES

6253E Invalid subchannel specified.
Explanation: The subchannel on the LOAD EWXLSA command was not valid.
System action: EWXLSA unloads.
User response: None.
System programmer response: Verify the correct subchannel was specified. The subchannel is the last two digits of the host subchannel. For example, if on the host the subchannel is known as 25A, specify 5A as the subchannel. The subchannel must also be in the channel adapter’s configuration file (for example, PSCA1.CFG, PSCA2.CFG, or NSCA1.CFG). See the z/OS LANRES Configuration Files and Commands for more information on these files.
Source: LANRES

6254E Subchannel number missing from load statement.
Explanation: No subchannel number was specified on the LOAD EWXLSA command.
System action: EWXLSA unloads.
User response: None.
System programmer response: Specify the "Subchannel=subchannel" parameter on the LOAD EWXLSA command, where subchannel is the subchannel number. Refer to z/OS LANRES Configuration Files and Commands for the correct format of the LOAD EWXLSA command.
Source: LANRES

6255E Adapter type missing from load statement.
Explanation: The channel adapter type was not specified on the LOAD EWXLSA command and is needed.
System action: EWXLSA unloads.
User response: None.
System programmer response: EWXLSA cannot determine which adapter to use. Specify the "Adapter=adapt_type" parameter on the LOAD EWXLSA command, where adapt_type is either MMC1, MMC2, or ESCON. Refer to z/OS LANRES Configuration Files and Commands for the correct format of the LOAD EWXLSA command.
Source: LANRES

6256E Too many parameters specified on load statement.
Explanation: Two subchannels and one adapter type can be specified on the load command.
System action: EWXLSA unloads.
User response: None.
System programmer response: Correct the LOAD EWXLSA command. Refer to z/OS LANRES Configuration Files and Commands for the correct format of the LOAD EWXLSA command.
6257E  Subchannel number out of range.

Explanation: The subchannel number is out range for the channel adapter. The MMC adapter cannot use subchannel 0xFF. The ESCON adapter cannot use 0xFE and 0xFF.

System action: EWXLSA unloads.

User response: None.

System programmer response: Use a subchannel other than 0xFF or 0xFE depending on the adapter type.

Source: LANRES

6258E  Adapter type is not recognized.

Explanation: The adapter type specified on the LOAD EWXLSA was not an accepted value. The acceptable values are MMC1, MMC2, and ESCON.

System action: EWXLSA unloads.

User response: None.

System programmer response: Correct the LOAD EWXLSA line with the correct adapter type. Refer to z/OS LANRES Configuration Files and Commands for the correct format of the LOAD EWXLSA command.

Source: LANRES

6259E  Connection to adapter_type adapter could not be opened (RC=return-code).

Explanation: The adapter, adapter_type could not be opened.

System action: EWXLSA unloads.

User response: None.

System programmer response: Verify the adapter specified matches the one installed in the server. If the specified adapter is in the machine, contact an IBM service representative and report the return code, return-code.

Source: LANRES

6260E  Could not determine which adapter to use. Please reload using the Adapter option.

Explanation: EWXLSA could not determine which adapter to use.

System action: EWXLSA unloads.

User response: None.

System programmer response: Specify the adapter by using the "Adapter" parameter on the LOAD EWXLSA command. Refer to z/OS LANRES Configuration Files and Commands for the correct format of the LOAD EWXLSA command.

Source: LANRES

6261E  Subchannel assign failed (RC=return-code).

Explanation: EWXLSA could not assign the subchannel.

System action: EWXLSA unloads.

User response: None.

System programmer response: Verify the subchannel is not being used by another application. If the subchannel is free, unload and reload the channel adapter driver. If this does not work DOWN, then restart the server. Then restart the channel adapter. If the problem persists, contact an IBM service representative and report the return code, return-code.

Source: LANRES
6262E  Not enough resources available to allocate buffer.
Explanation:  EWXLSA tried to allocate a buffer, but there was not enough resources.
System action:  EWXLSA unloads.
User response:  None.
System programmer response:  The NetWare server may be running out of memory. Unload unnecessary NLMs or add more memory to the server.
Source: LANRES

6263E  Error receiving command command on the channel (RC=return-code).
Explanation:  EWXLSA did not receive the expected command command from VTAM,
System action:  EWXLSA unloads.
User response:  None.
System programmer response:  Verify VTAM is operational. It may be necessary to restart the VTAM list that defines the channel adapter for LANRES. Refer to z/OS LANRES Configuration Files and Commands for information on the VTAMLST. If the error persists, contact an IBM service representative and report the return code, return-code.
Source: LANRES

6264E  Error sending command command on the channel (RC=return-code).
Explanation:  An error occurred sending command to the host.
System action:  EWXLSA unloads.
User response:  None.
System programmer response:  Verify VTAM is operational. Reload EWXLSA. It may be necessary to restart the VTAM list that defines the channel adapter for LANRES. Refer to z/OS LANRES Configuration Files and Commands for information on the VTAMLST. If the error persists, contact an IBM service representative and report the return code, return-code.
Source: LANRES

6265E  Error setting VTAM mode (RC=return-code).
Explanation:  EWXLSA could not set the channel adapter to VTAM header mode.
System action:  EWXLSA unloads.
User response:  None.
System programmer response:  Restart LANRES, including unloading and reloading the channel adapter driver. If the error persists, contact an IBM service representative and report the return code, return-code.
Source: LANRES

6266W  Error reading data from channel (RC=return-code).
Explanation:  An error occurred reading data from the host.
System action:  EWXLSA will continue.
User response:  None.
System programmer response:  If the error persists, contact an IBM service representative and report the return code, return-code.
Source: LANRES
6267W  Error reading primitives from channel.

Explanation:  This message is displayed with message 6266. An error occurred while reading for primitives sent from the host.

System action:  EWXLSA will continue.

User response:  None.

System programmer response:  If the error persists, contact an IBM service representative and report the return code, return-code.

Source:  LANRES

6268W  Unknown primitive received from channel, 0xprimitive.

Explanation:  EWXLSA could not determine what the primitive was from VTAM. The primitive is skipped and processing continues.

System action:  EWXLSA continues.

User response:  None.

System programmer response:  None.

Source:  LANRES

6269W  VTAM sent a stop system.

Explanation:  VTAM has been stopped or restarted and is informing EWXLSA. EWXLSA will restart and be ready when VTAM starts.

System action:  EWXLSA continues.

User response:  None.

System programmer response:  None.

Source:  LANRES

6270W  Error writing data to channel (RC=return-code).

Explanation:  EWXLSA tried to send data to the host, but failed. The primitive is skipped and processing continues.

System action:  EWXLSA continues.

User response:  None.

System programmer response:  None.

Source:  LANRES

6271W  Error querying adapter status (RC=return-code).

Explanation:  EWXLSA could not determine what the primitive was from VTAM. The primitive is skipped and processing continues.

System action:  EWXLSA continues.

User response:  None.

System programmer response:  None.

Source:  LANRES
6272W  Adapter error occurred on the write (Command code=command; RC=return-code).
Explanation: An adapter error occurred while sending data to the host.
System action: EWXLSA continues.
User response: None.
System programmer response: If the problems persists and diagnostics do not detect an error, contact an IBM service representative to report the failing command and return-code.
Source: LANRES

6273W  Unknown VTAM request command=0xcmnd.
Explanation: VTAM sent an unrecognized request.
System action: The command, cmnd is not processed. EWXLSA continues.
User response: None.
System programmer response: None.
Source: LANRES

6274W  Unknown VTAM response command=0xcmnd.
Explanation: VTAM sent an unrecognized response.
System action: The response command, cmnd, is not processed. EWXLSA continues.
User response: None.
System programmer response: None.
Source: LANRES

6275W  Unknown VTAM primitive: 0xcmnd.
Explanation: VTAM sent an unrecognized primitive.
System action: The command, cmnd, is not processed. EWXLSA continues.
User response: None.
System programmer response: None.
Source: LANRES

6276W  Subchannel Reset received.
Explanation: EWXLSA received a subchannel reset indicating VTAM was restarted.
System action: EWXLSA resets; waiting for another connection from VTAM.
User response: None.
System programmer response: None.
Source: LANRES

6277I  VTAM header mode not reset (RC=return-code).
Explanation: The call to the adapter to reset the VTAM header mode failed.
System action: EWXLSA continues to close the channel.
User response: None.
System programmer response: None.
Source: LANRES
6278W • 6282W

6278W  Invalid length received for command 0xcommand.
Explanation: The command, command, received a negative length from VTAM.
System action: EWXLSA continues.
User response: None.
System programmer response: If the problem persists, contact an IBM service representative.
Source: LANRES

6279W  Wrong state for command 0xcommand; state = state.
Explanation: The state does not support execution of the command, command.
System action: EWXLSA continues.
User response: None.
System programmer response: If the problem persists, contact an IBM service representative.
Source: LANRES

6280E  LSL registration failed (RC=return-code).
Explanation: EWXLSA was unable to register with the LSL.
System action: EWXLSA will unload.
User response: None.
System programmer response: The Return Codes are:
-2  EWXLSA was unable to allocate a resource tag. DOWN the server and try again.
-3  EWXLSA was unable to allocate memory. DOWN the server and try again.
-119 The NetWare Server has run out of resources. DOWN the server and try again.
-125 Another program has previously registered the name EWXLSA is attempting to register.
-126 A system error has occurred. Contact an IBM service representative.

If the problem persists, contact an IBM service representative.
Source: LANRES

6281E  Error on BeginThread call (ERRNO=errno).
Explanation: EWXLSA attempt to begin a thread, via the NetWare BeginThread API, and the API failed with an
errno as indicated.
System action: EWXLSA will unload.
User response: None.
System programmer response: An errno of 5 indicates that the NetWare file server does not have enough memory.
Using the NetWare MODULES command, determine which programs can be unloaded to free up memory.
Otherwise, add more memory to the server.
Source: LANRES

6282W  CSUNLOAD has not been done on service profile.
Explanation: An attempt was made to unload the EWXLSA.NLM before unloading the corresponding service
profile. This message is also issued with the NetWare message "Unload module anyway?" and a prompt.
System action: EWXLSA waits for the prompt response. A "y" response may cause the server to go down or hang. A
"n" response should keep EWXLSA loaded. Follow the instructions in the System Programmer's Response.
7901E • 7905E

User response:  none.

System programmer response:  Answer the prompt with an "n". Then unload the following in this order:
1. Any applications using EWXLSA.NLM (including LANRES NLMs) for its communications
2. CPIC_SAA
3. The corresponding service profile using CSUNLOAD
4. EWXLSA
Source:  LANRES

7901E  No command specified.
Explanation: EWXCMD was started with a blank command line.
System action:  The program unloads.
User response:  None.
System programmer response:  Enter a valid command on the EWXCMD command line.
Source:  LANRES

7902E  No drop type specified.
Explanation: EWXCMD was started without a drop type on the command line.
System action:  The program unloads.
User response:  None.
System programmer response:  Enter a valid drop type on the EWXCMD command line.
Source:  LANRES

7903E  No query type specified.
Explanation: EWXCMD was started without a query type on the command line.
System action:  The program unloads.
User response:  None.
System programmer response:  Enter a valid query type on the EWXCMD command line.
Source:  LANRES

7904E  No start type specified.
Explanation: EWXCMD was started without a start type on the command line.
System action:  The program unloads.
User response:  None.
System programmer response:  Enter a valid start type on the EWXCMD command line.
Source:  LANRES

7905E  No subchannel specified.
Explanation: A subchannel was not specified on the command line.
System action:  The program unloads.
User response:  None.
System programmer response:  Enter the command again specifying the subchannel.
Source:  LANRES
7906E  **Time must be between 1 and 3600 seconds.**
Explanation: The optional time parameter must be between 1 and 3600 seconds.
System action: The program unloads.
User response: None.
System programmer response: Enter the command again specifying a valid time parameter.
Source: LANRES

7907E  **DROP DISK for subchannel subchannel on type adapter adapter failed (RC=return-code).**
Explanation: EWXCMD received an error while trying to drop the requested subchannel.
System action: The program unloads.
User response: None.
System programmer response: Determine why the DROP command failed and take any necessary action.
Source: LANRES

7908I  **DROP DISK was successful.**
Explanation: EWXCMD successfully dropped the requested subchannel.
System action: Processing continues.
User response: None.
System programmer response: None.
Source: LANRES

7909I  **Channel device driver is not loaded.**
Explanation: EWXCMD was unable to add or delete a subchannel because no channel device driver was loaded.
System action: The program unloads.
User response: None.
System programmer response: None.
Source: LANRES

7910E  **Incorrect command command.**
Explanation: EWXCMD detected a command on the command line that was not valid.
System action: The program unloads.
User response: None.
System programmer response: Enter a valid command.
Source: LANRES

7911E  **Incorrect drop type type.**
Explanation: EWXCMD detected a drop type on the command line that was not valid.
System action: The program unloads.
User response: None.
System programmer response: Reenter the command with a valid drop type.
Source: LANRES
### 7912E  Incorrect option on DROP Disk: options.

**Explanation:** EWXCMD detected an option on the command line that was not valid.

**System action:** The program unloads.

**User response:** None.

**System programmer response:** Enter the command with valid options.

**Source:** LANRES

### 7913E  Incorrect option on Query Connections: options.

**Explanation:** EWXCMD detected an option on the command line that was not valid.

**System action:** The program unloads.

**User response:** None.

**System programmer response:** Enter the command with valid options.

**Source:** LANRES

### 7914E  Incorrect option on Query Mmcstatus: options.

**Explanation:** EWXCMD detected an option on the command line that was not valid.

**System action:** The program unloads.

**User response:** None.

**System programmer response:** Enter the command with valid options.

**Source:** LANRES

### 7915E  Incorrect query type type.

**Explanation:** EWXCMD detected a query type on the command line that was not valid.

**System action:** The program unloads.

**User response:** None.

**System programmer response:** Enter the command with a valid query type.

**Source:** LANRES

### 7916E  Incorrect start type type.

**Explanation:** EWXCMD detected a start type on the command line that was not valid.

**System action:** The program unloads.

**User response:** None.

**System programmer response:** Enter the command with a valid start type.

**Source:** LANRES

### 7917E  Incorrect subchannel subchannel, subchannel must be even.

**Explanation:** EWXCMD detected an odd subchannel on the command line.

**System action:** The program unloads.

**User response:** None.

**System programmer response:** Enter the command specifying an even subchannel.

**Source:** LANRES
7918E  EWXDISK is not loaded.
Explanation: The Start and Drop commands are only valid if the LANRES disk driver is loaded.
System action: Processing continues.
User response: None.
System programmer response: None.
Source: LANRES

7919I  device_name Version version.modification.
Explanation: EWXCMD displays the requested device driver's version.
System action: Processing continues.
User response: None.
System programmer response: None.
Source: LANRES

7920E  Missing adapter number for subchannel subchannel.
Explanation: A comma was specified on the command line indicating an adapter number would be supplied, but the adapter number was not specified.
System action: The program unloads.
User response: None.
System programmer response: Enter the command either removing the comma or specifying a valid adapter number.
Source: LANRES

7921E  device_name device driver is not loaded.
Explanation: EWXCMD was unable to display the device driver version because the requested device driver is not loaded.
System action: Processing continues.
User response: None.
System programmer response: None.
Source: LANRES

7922E  Start for count sessions failed (RC=return-code).
Explanation: EWXCMD received an error while trying to start the requested sessions.
System action: The program unloads.
User response: None.
System programmer response: Determine why the failure occurred and correct the problem.
Source: LANRES

7923I  Start for count sessions was successful.
Explanation: EWXCMD successfully started the requested sessions.
System action: Processing continues.
User response: None.
System programmer response: None.
Source: LANRES

7924E Unexpected character <character> at non-blank position.
Explanation: EWXCMD found an unexpected character while parsing a subchannel list.
System action: The program unloads.
User response: None.
System programmer response: Enter the command with a valid subchannel list.
Source: LANRES

7925E Invalid adapter specified.
Explanation: An Invalid adapter was specified on the command.
System action: The program unloads.
User response: None.
System programmer response: Reenter the command with a valid adapter number.
Source: LANRES

7926E Please specify the device driver type.
Explanation: The program was unable to determine which device driver to add the subchannels on.
System action: The program unloads.
User response: None.
System programmer response: Reenter the command with a device driver.
Source: LANRES

7927I [Add|Delete] successful for subchannel subchannel on type adapter adapter.
Explanation: The requested add or delete function completed successfully.
System action: None.
User response: None.
System programmer response: None.
Source: LANRES

7928I LANRES service level is service_level.
Explanation: Informational message displayed when the service level is queried. This is the service level currently running on the NetWare server.
System action: Processing continues.
User response: None.
System programmer response: None.
Source: LANRES
7929I  LANRES service level service_level will be applied.
Explanation:  Informational message displayed when the service level is queried. This is the service level that will be applied to the NetWare server the next time LANRES starts.
System action:  Processing continues.
User response:  None.
System programmer response:  None.
Source:  LANRES

7930E  No clear type specified.
Explanation:  The Logfile to be cleared has not been specified.
System action:  Processing continues.
User response:  Enter the command with the a valid clear option.
System programmer response:  None.
Source:  LANRES

7931E  Incorrect clear type clear-type.
Explanation:  The clear type was not valid.
System action:  Processing continues.
User response:  Enter the command with a valid clear type.
System programmer response:  None.
Source:  LANRES

7932E  Not enough resources available to allocate buffer.
Explanation:  EWXCMD tried to allocate a buffer, but there wasn't enough resources.
System action:  EWXCMD command status is not processed.
User response:  None.
System programmer response:  Using the NetWare MODULES command, determine what other programs have already been loaded, and unload any that are not currently needed. Otherwise, add additional memory to the server.
Source:  LANRES

7950I  Service level service_level was successfully received.
Explanation:  EWXSRVC has successfully received a new service level from an attached host.
System action:  Processing continues.
User response:  None.
System programmer response:  None.
Source:  LANRES

7951E  Error receiving service level.
Explanation:  An error occurred while receiving service. See preceding messages to determine exact cause of error.
System action:  The program unloads.
User response:  None.
System programmer response:  Review preceding error messages to determine the cause of failure.
7952I  Canceling service level service_level.
Explanation: A host attempted to send an older service level to the NetWare server.
System action: Processing continues.
User response: None.
System programmer response: None.
Source: LANRES

7953E  Incorrect sequence number.
Explanation: An incorrect sequence number was detected while transferring data.
System action: The data transfer stops.
User response: None.
System programmer response: None.
Source: LANRES

7954E  Unable to create file filename (ERRNO=errno).
Explanation: An error occurred creating the file.
System action: Processing continues.
User response: None.
System programmer response: Use the errno to determine why creating the file failed.
Source: LANRES

7955E  Error writing to file filename (ERRNO=errno).
Explanation: An error occurred writing to the file.
System action: Processing continues.
User response: None.
System programmer response: Use the errno to determine why writing to the file failed.
Source: LANRES

7956E  CRC error.
Explanation: A CRC (cyclic redundancy check) error occurred while transferring data.
System action: The data transfer stops.
User response: None.
System programmer response: None.
Source: LANRES

7957E  Error removing file filename (ERRNO=errno).
Explanation: An error occurred while removing the file.
System action: Processing continues.
User response: None.
System programmer response: Use the errno to determine why removing the file failed.
7958E • 7979E

Source: LANRES

7958E  Error renaming file filename1 to filename2 (ERRNO=errno).
Explanation: An error occurred while renaming the file.
System action: Processing continues.
User response: None.
System programmer response: Use the errno to determine why renaming the file failed.
Source: LANRES

7975E  EWXSTART cannot be loaded while LANRES is active.
Explanation: LANRES cannot be restarted while LANRES NLMs are loaded.
System action: The program unloads.
User response: Stop all LANRES NLMs before restarting.
System programmer response: None.
Source: LANRES

7976E  Error opening file filename (ERRNO=errno).
Explanation: An error occurred while opening the file.
System action: Processing continues.
User response: None.
System programmer response: Use the errno to determine why opening the file failed.
Source: LANRES

7977E  Unknown error in ProcessBundle (RC=return-code).
Explanation: An unexpected error occurred with unpacking the LANRES service.
System action: Processing continues.
User response: None.
System programmer response: None.
Source: LANRES

7978E  Error opening file filename.
Explanation: An error occurred while opening a file contained in the service bundle.
System action: Processing continues.
User response: None.
System programmer response: Determine why an error occurred while opening the file.
Source: LANRES

7979E  Invalid header format in file filename.
Explanation: An invalid header was found in the service bundle.
System action: Processing continues.
User response: None.
System programmer response: Remove the service bundle from the NetWare server. If the problem reoccurs, disable
service distribution on the host with the incorrect service bundle.

Source: LANRES

---

7980I  Unpacking file *filename* from bundle *bundlename*.

Explanation: File *filename* was successfully extracted.

System action: Processing continues.

User response: None.

System programmer response: None.

Source: LANRES

---

7981E  CRC error unpacking file *filename* from bundle *bundlename*.

Explanation: A CRC (cyclic redundancy check) occurred while unpacking the file *filename*.

System action: Processing continues.

User response: None.

System programmer response: Remove the service bundle from the NetWare server. If the problem reoccurs, disable service distribution on the host with the incorrect service bundle.

Source: LANRES

---

7982E  Error opening output file *filename*.

Explanation: An error occurred opening file *filename* while unpacking the service bundle.

System action: Processing continues.

User response: None.

System programmer response: Determine why an error occurred while opening the file.

Source: LANRES

---

7983E  Error reading header from bundle *bundle_name* (RC=return-code).

Explanation: An error occurred while reading the header information from the service bundle.

System action: Processing continues.

User response: None.

System programmer response: Load EWXSTART again. If the problem persists, remove the service bundle from the NetWare server and the host.

Source: LANRES

---

7984E  Error reading from bundle *bundle_name* (RC=return-code).

Explanation: An error occurred while reading data from the service bundle.

System action: Processing continues.

User response: None.

System programmer response: Loading EWXSTART again. If the problem persists, remove the service bundle from the NetWare server and the host.

Source: LANRES
7985E  Error writing file filename (RC=return-code).
Explanation: An error occurred while writing to a file extracted from the service bundle.
System action: Processing continues.
User response: None.
System programmer response: Determine the cause of the write error and start EWXSTART again.
Source: LANRES

7986E  Error initializing expansion routine.
Explanation: An error occurred while initializing the service unpacking routines.
System action: Processing continues.
User response: None.
System programmer response: If the server is indicating a memory shortage, unload any unused NLMs or add more memory to the server. Restart EWXSTART.
Source: LANRES

7987E  Unable to set time for file filename (ERRNO=errno).
Explanation: An error occurred when changing the time stamp for the file.
System action: The data transfer stops.
User response: None.
System programmer response: Use the errno to determine why changing the time stamp for the file failed.
Source: LANRES

7988E  Cannot determine language type for file filename.
Explanation: The application was unable to determine the installed language type. The service bundle may be defective or the message repository is not where it is expected or the name has been changed.
System action: Processing continues.
User response: None.
System programmer response: Unload all the LANRES NLMs. Reload the LANRES product from diskette. If the problem persists, contact an IBM service representative.
Source: LANRES

7989I  Service was successfully applied.
Explanation: The previously received service bundle was processed successfully.
System action: Processing continues.
User response: None.
System programmer response: None.
Source: LANRES

7990E  Error(s) occurred while applying service.
Explanation: One or more errors occurred while processing the previously received service bundle successfully.
System action: Processing continues.
User response: None.
System programmer response: See the previous messages to determine what errors occurred.

Source: LANRES

8001E LANRES object already exists.

Explanation: The LANRES object cannot be added because it already exists in the NetWare server's bindery.

System action: Execution of the command is stopped. The system status remains the same.

User response: None.

System programmer response: The password for the LANRES object can be changed using the EWXOBJ CHANGE command. The LANRES object can be deleted using the EWXOBJ DELETE command and a new LANRES object can be added using the EWXOBJ ADD command.

Source: LANRES

8002E LANRES object does not exist.

Explanation: The LANRES object cannot be deleted because it cannot be located in the NetWare server's bindery.

System action: Execution of the command is stopped. The system status remains the same.

User response: None.

System programmer response: Verify the correct NetWare server is being used.

Source: LANRES

8003E Required parameter, PASSWORD or NEWPASSWORD, not specified.

Explanation: The PASSWORD or NEWPASSWORD parameter must be specified. If neither one of these parameters is specified, then both passwords will default to null passwords which would be the same. NetWare requires the new password be different from the current password.

System action: Execution of the command is stopped.

User response: None.

System programmer response: Load the program using the correct syntax. For syntax information, see [z/OS LANRES Configuration Files and Commands](#).

Source: LANRES

8004E Cannot login to LANRES object on server servername. Unknown server or LANRES object does not exist.

Explanation: The servername server cannot be found or the LANRES object does not exist in that server's bindery.

System action: Execution of the command is stopped.

User response: None.

System programmer response: Verify the correct server is being used.

Source: LANRES

8005E Cannot login to LANRES object on server servername. Access denied.

Explanation: The servername server denied the login attempt to the LANRES object in its bindery. The most probable cause is an incorrect password.

System action: Execution of the command is stopped.

User response: None.

System programmer response: Verify the password specified is correct.

Source: LANRES
The new password is a duplicate of the current password.

Explanation: NetWare requires the new password be different from the current password.

System action: Execution of the command is stopped.

User response: None.

System programmer response: Load the program using the correct syntax. For syntax information, see [z/OS LANRES Configuration Files and Commands](#).

Source: GPMP

FEW0604I  GPMP STOPPING – reason.

Explanation: The guest platform management provider (GPMP) is stopping.

In the message text:

reason

One of the following reasons apply:
1. STOPPED BY MODIFY
2. ARM IS DISABLED
3. NOT_AUTHORIZED_TO_CONNECT_TO_z/OS
4. TCPIP_NOT_AVAILABLE
5. NO_OSM_AVAILABLE
6. INTERNAL_COMMUNICATIONS_ERROR

System action: GPMP stops.

Operator response: None.

System programmer response: Search problem reporting databases for a fix for the problem. If no fix exists, contact IBM Support.
FEW0610I  UNABLE TO CONNECT TO THE MANAGEMENT NETWORK
Explanation:  The guest platform management provider (GPMP) cannot connect to the internal management network.
System action:  GPMP stops.
Operator response:  None.
System programmer response:  The system also issues message FEW0604I. Check the reason for the stop in FEW0604I, and then correct the problem and restart GPMP.
Source:  GPMP

FEW0612I  TRACE DESTINATION CHANGED FROM destination TO destination.
Explanation:  Change the destination of the internal tracing, between file or memory. The default destination is memory. In the message text:

destination
   Possible destination: MEMORY, FILE
System action:  The guest platform management provider (GPMP) writes trace entries to the new destination.
Operator response:  None.
System programmer response:  None.
Source:  GPMP

FEW0613I  TRACE DESTINATION UNCHANGED.
Explanation:  The trace command was issued which did not alter the trace destination.
System action:  The guest platform management provider (GPMP) continues to write trace entries to the same destination.
Operator response:  None.
System programmer response:  None.
Source:  GPMP

FEW0614I  TRACE LEVEL CHANGED FROM TraceLevel TO TraceLevel.
Explanation:  Change the trace level to collect the appropriate amount of information for problem determination. The default trace level is low. In the message text:

TraceLevel
   Possible trace level: NONE, LOW, MEDIUM, HIGH
System action:  The guest platform management provider (GPMP) collects the information according to the trace level that is set.
Operator response:  None.
System programmer response:  None.
Source:  GPMP

FEW0615I  TRACE LEVEL UNCHANGED.
Explanation:  The trace command was issued which did not alter the trace level.
System action:  The guest platform management provider (GPMP) continues tracing at the level set previously.
Operator response:  None.

Operator response:  None.
System programmer response:  Search problem reporting databases for a fix for the problem. If no fix exists, contact IBM Support.
Source:  GPMP

FEW1506E  REQUIRED PROPERTIES ARE NOT DEFINED.

Explanation:  There was an error customizing the guest platform management provider (GPMP). Required GPMP properties were not defined.
System action:  GPMP stops.
Operator response:  None.
System programmer response:  Search problem reporting databases for a fix for the problem. If no fix exists, contact IBM Support.
Source:  GPMP

FEW1507E  CONFLICTS DETECTED WITHIN PROPERTY SETTINGS.

Explanation:  There was an error customizing the guest platform management provider (GPMP). Conflicts were detected within the GPMP property settings.
System action:  GPMP stops.
Operator response:  None.
System programmer response:  Search problem reporting databases for a fix for the problem. If no fix exists, contact IBM Support.
Source:  GPMP

FEW1508E  PARAMETER VALIDATION ERRORS DETECTED.

Explanation:  There was an error customizing the guest platform management provider (GPMP). Errors were detected while validating parameters.
System action:  GPMP stops.
Operator response:  None.
System programmer response:  Search problem reporting databases for a fix for the problem. If no fix exists, contact IBM Support.
Source:  GPMP

FEW1511E  GPMP CUSTOMIZATION ERROR: LISTING PROPERTY SETTINGS.

Explanation:  There was an error listing the guest platform management provider (GPMP) property settings.
System action:  GPMP stops.
Operator response:  None.
System programmer response:  Search problem reporting databases for a fix for the problem. If no fix exists, contact IBM Support.
Source:  GPMP
FEW2001E  <time_stamp> ERROR: CONFIGURATION ID WAS NOT FOUND

SUGGESTED ACTION:
1. If SYSNAME exists, ensure that the file permissions allow userid to access the directory and all of its content.
2. Specify one of the existing configuration IDs: SYSNAME

Usage:
collectLogs –dir path

Command options:
-dir path Directory in which debug jar file is created

PROCESSING COMPLETE

Explanation: This message is issued when collectLogs.sh fails to create the debug jar file because the process could not find the configuration ID.

In the messages text:
<time_stamp>
The date and time the system tried to create the debug jar file.

System action: The collectLogs.sh fails to create the debug jar file.

Operator response: None.

System programmer response: Follow suggested action.

Source: GPMP

FEW2003E  <time_stamp> ERROR: Configuration ID configID is not valid for this command. Type: type

Explanation: Command failed because it does not have the appropriate subdirectory for the specified configuration ID.

In the messages text:
time stamp
The date and time the system encountered the error.

configID
The SYSNAME type.

type
The subdirectory in DATA_ROOT

System action: The command failed to start GPMP.

Operator response: None.

System programmer response: Ensure that the subdirectory in DATA_ROOT of guest platform management provider (GPMP) is appropriate for the specified configuration ID.

Source: GPMP

FEW2004E  <time_stamp> ERROR: CONFIGURATION ID configID AT WRONG VERSION AND RELEASE. CONFIGURATION ID VERSION AND RELEASE: configID level, EXPECTED VERSION AND RELEASE: expected level.

Explanation: The version information in the level.properties file in the DATA_ROOT directory does not match the expected version information.

In the messages text:
time stamp
The date and time the system encountered the error.
FEW2005E • FEW2007E

**configID**
The SYSNAME type.

**configID level**
The level.properties file the system encountered.

**expected level**
The level.properties file the system expected to encounter.

**System action:** The guest platform management provider (GPMP) failed to be configured.

**Operator response:** None.

**System programmer response:** If the expected version does not match the level.properties file, restore it to the original value.

**Source:** GPMP

---

**Explanation:** The command failed to activate the guest platform management provider (GPMP), the configuration ID is not valid because it contains invalid characters. For more details, see the example below.

In the messages text:

**time_stamp**
The date and time stamp.

**configID**
The SYSNAME type.

**Example:**

FEW2005E <Monday, October 4, 2010 2:20:34 PM ED> ERROR: Configuration ID JESSICA== is not valid. GPMP configuration ID can only contain alphanumeric characters.

SUGGESTED ACTION: Refer to the command usage information for the valid characters for the configuration ID.

at com.ibm.wlm.config.EWLManagedServer.create(EWLManagedServer.java:155)
at com.ibm.wlm.config.ActivateMS.processCmd(ActivateMS.java:400)
at com.ibm.wlm.config.ActivateMS.main(ActivateMS.java:156)

**System action:** The guest platform management provider (GPMP) failed to start.

**Operator response:** None.

**System programmer response:** Refer to the command usage information for the valid characters for the configuration ID. Follow the suggested action.

**Source:** GPMP

---

**Explanation:** The command failed as parameter specified (parm) is not valid.

In the messages text:

**time_stamp**
The date and time the system encountered the error.

**parm**
The parameter name.

**Example:**

FEW2007E <time_stamp> Parameter parm is not valid.
FEW2007E <time_stamp> Parameter d is not valid.

SUGGESTED ACTION: Refer to the command usage information for the correct syntax of this command.

Usage: collectLogs -dir path

Command options: -dir  path  Directory in which debug jar file is created

PROCESSING COMPLETE.

System action: The command failed.

Operator response: None.

System programmer response: Issue the command with correct syntax.

Source: GPMP

FEW2012E <time_stamp> ERROR: Required parameter parm is missing.

Explanation: The command failed to complete as the required parameter is missing.

In the messages text:
<time_stamp>
    The date and time the system encountered the error.

parm
    The parameter name.

Example:
FEW2012E < Monday, October 4, 2010 2:20:00 PM EDT > ERROR: No value is specified for parameter: -dir

SUGGESTED ACTION: Refer to the command usage information for the valid values that must be specified with this parameter.

Usage:
    collectLogs -dir path

Command options:
    -dir  path  Directory in which debug jar file is created.

PROCESSING COMPLETE

System action: The command failed.

Operator response: None.

System programmer response: Issue the command with the correct parameter.

Source: GPMP

FEW2014E <time_stamp> ERROR: No value is specified for parameter: parm.

Explanation: The command failed to complete because the required parameter is missing.

In the messages text:
<time_stamp>
    The date and time the system encountered the error.

parm
    The parameter name.

Example:
FEW2027E + FEW2037E

FEW2014E < Monday, October 4, 2010 2:20:00 PM EDT > ERROR: No value is specified for parameter: -dir

SUGGESTED ACTION: Refer to the command usage information for the valid values that must be specified with this parameter.

Usage:
   collectLogs -dir path

Command options:
   -dir path Directory in which debug jar file is created.

PROCESSING COMPLETE

System action: The command failed.

Operator response: None.

System programmer response: Issue the command with the correct parameter.

Source: GPMP

FEW2027E <time stamp> FATAL ERROR: Unable to process command.

Please contact IBM service and provide the diagnostics provided in this file: file

Use the appropriate stop command to stop the GPMP instance.

Explanation: When the guest platform management provider (GPMP) processed the command, a fatal error occurred.

In the message text:
<time stamp> The time the message was issued.

file The name of the file to provide to IBM Support.

System action: GPMP continues running.

Operator response: Enter F WLM,GPMP,STOP from operator console.

System programmer response: Run collectLogs.sh to gather diagnostic information and contact IBM Support.

FEW2037E <time stamp> Cannot update or create directory.

Explanation: The guest platform management provider (GPMP) cannot create log file root directory specified in JCL HVEENV.

In the message text:
<timestamp> The time the message was issued.

directory The name of the directory that was not created.

Example:
FEW2037E <time stamp> Cannot update or create directory.

SUGGESTED ACTION: Ensure that the following conditions are true:
1. The file permissions allow userid to update or create directory.
2. The file system has enough free space to allow the creation or extension of directory.

Usage: usage
FEW2038E  <time stamp > Cannot create directory.

SUGGESTED ACTION: Ensure that the following conditions are true:
1. The file permissions allow userid create directory.
2. The file system has enough free space to allow the creation of directory.

Explanation: The guest platform management provider (GPMP) cannot create file root directory specified in JCL HVEENV.

In the message text:
<timestamp>
   The time the directory was not created.

directory
   The name of the directory that was not created.

System action: GPMP not configured.
Operator response: None.
System programmer response: Determine the reason of the failure, correct the problem, and resubmit JCL HVEENV.

FEW2043E  <time stamp > ERROR: DIRECTORY directory CANNOT BE FOUND.

Explanation: The guest platform management provider (GPMP) failed to process the command because the directory specified does not exist.

In the message text:
<timestamp>
   The time the message was issued.

directory
   The directory that was not found.

Example:

SUGGESTED ACTION: Ensure that the following conditions are true:
1. The directory exists.
2. The directory must be specified using a fully qualified path name.
3. The file permissions are such that EWLIM can access the directory.

Usage:
    collectLogs -dir path

Command options:
    -dir path Directory in which debug jar file is created.

PROCESSING COMPLETE
System action: The command failed.
Operator response: None.
FEW2049E  FEW2049E

System programmer response: Issue the command with the existing directory, or with the fully qualified path name.

FEW2049E  <time_stamp> ERROR: CONFIGURATION ID configId IS NOT VALID. THE LENGTH OF THE ID MUST NOT EXCEED 32 CHARACTERS.

Explanation: The configuration ID for the guest platform management platform (GPMP) is not valid.

In the message text:
<time_stamp>
   The time the error was written.
configId
   The name of the configuration ID that was specified.

Example:
FEW2049E <Monday, October 4, 2010 2:13:54 PM EDT> ERROR: Configuration ID JESSICADONHERTYJESSICADONHERTY
JESSICADONHERTYJESSICADONHERTY is not valid. The length of the ID must not exceed 32 characters.

SUGGESTED ACTION: Refer to the command usage information for the valid usage for the configuration ID.

System action: GPMP fails to start.

Operator response: None.

System programmer response:
2. Correct the problem and restart GPMP.

FEW2107E  GPMP CANNOT BE ACTIVATED, CONFIGURATION FILE IS MISSING.

Explanation: This message is issued when the guest platform management provider (GPMP) cannot be activated through the normal interface. The configuration file created via JCL HVEENV is missing. HVEENV did not finish successfully or it has not been run.

System action: The system stops processing.

Operator response: None.

System programmer response: Run JCL JCL HVEENV to configure GPMP environment. If the error persists, search problem reporting databases for a fix for the problem. If no fix exists, contact IBM Support.

Source: GPMP

Detecting Module: activateMS.sh

FEW2108E  GPMP CANNOT BE ACTIVATED, CONFIGURATION FILE IS EMPTY.

Explanation: This message is issued when the guest platform management provider (GPMP) cannot be activated through the normal interface. The configuration file could be corrupted or the previous run of JCL HVEENV did not finish properly.

System action: The system stops processing.

Operator response: None.

System programmer response: Run JCL JCL HVEENV to configure GPMP environment.

Source: GPMP

Detecting Module: activateMS.sh
FEW2109E  GPMP CANNOT BE ACTIVATED, CONFIGURATION FILE IS NOT READABLE.

Explanation:  This message is issued when the guest platform management provider (GPMP) cannot be activated through the normal interface. The configuration file created does not have read permissions. The configuration file could be corrupted or the previous run of JCL HVEENV did not finish properly.

System action:  The system stops processing.

Operator response:  None.

System programmer response:  Change permission of configuration file (/etc/hvemca_environment.conf) to read.

Source:  GPMP

Detecting Module:  activateMS.sh

FEW2110E  GPMP CANNOT BE ACTIVATED, jrebin_root/java SET IN CONFIGURATION FILE DOES NOT EXIST.

Explanation:  This message is issued when the guest platform management provider (GPMP) cannot be activated through the normal interface. The jrebin_root set as one of the parameters in the JCL HVEENV does not exist.

System action:  The system stops processing.

Operator response:  None.

System programmer response:  Update jrebin_root to the directory on z/OS UNIX where the Java executable is located in the JCL HVEENV. Run JCL HVEENV to configure GPMP environment.

Source:  GPMP

Detecting Module:  activateMS.sh

FEW2111E  GPMP CANNOT BE CONFIGURED, CONFIGURATION DIRECTORY, conf_root IS NOT WRITABLE.

Explanation:  This message is issued when the guest platform management provider (GPMP) cannot be configured through the normal interface. The configuration directory conf_root set as one of the parameters in the JCL HVEENV does not have the proper write permissions.

System action:  The system stops processing.

Operator response:  None.

System programmer response:  Run the shell script and JCL with userid that has permission to write to configuration root directory.

Source:  GPMP

Detecting Module:  createMCAENV.sh

FEW2112E  GPMP CANNOT BE CONFIGURED, jrebin_root/java SET IN JCL ENV DOES NOT EXIST.

Explanation:  This message is issued when the guest platform management provider (GPMP) cannot be configured through the normal interface. jrebin_root set as one of the parameters in the JCL HVEENV does not exist.

System action:  The system stops processing.

Operator response:  None.

System programmer response:  Modify the JREBIN_ROOT parameter in the JCL to point to directory where the java executable is located.

Source:  GPMP

Detecting Module:  createMCAENV.sh

Chapter 6. FEW messages  737
FEW2113E  GPMP CANNOT BE CONFIGURED, data_root IS NOT CREATED.

Explanation:  This message is issued when the guest platform management provider (GPMP) cannot be configured through the normal interface. The user running JCL HVEENV does not have write permissions for creating data_root.

System action:  The system stops processing.

Operator response:  None.

System programmer response:  Run the shell script and JCL with userid that has permission to write to configuration root directory.

Source:  GPMP

Detecting Module:  createMCAENV.sh

FEW2114E  GPMP CANNOT BE CONFIGURED, CHANGE OWNER FAILED FOR data_root.

Explanation:  This message is issued when the guest platform management provider (GPMP) cannot be configured through the normal interface. Change ownership to mca_user : mca_group failed for data_root.

System action:  The system stops processing.

Operator response:  None.

System programmer response:  Run the shell script and JCL with userid that has permission to write to configuration root directory.

Source:  GPMP

Detecting Module:  createMCAENV.sh

FEW2115I  GPMP CHANGE OWNER SUCCESSFUL FOR data_root, CONTINUE ENVIRONMENT CONFIGURATION.

Explanation:  This message is issued when the guest platform management provider (GPMP) environment is being configured through the normal interface. Change ownership to mca_user : mca_group was a success for data_root.

System action:  The system continues processing.

Operator response:  None.

System programmer response:  None.

Source:  GPMP

Detecting Module:  createMCAENV.sh

FEW2116I  GPMP CONFIGURATION FILE BACKUP COMPLETE FOR conf_file, CONTINUE ENVIRONMENT CONFIGURATION.

Explanation:  This message is issued when the guest platform management provider (GPMP) environment is being configured through the normal interface. Configuration file backup is a success.

System action:  The system continues processing.

Operator response:  None.

System programmer response:  None.

Source:  GPMP

Detecting Module:  createMCAENV.sh

FEW2117E  GPMP CANNOT BE CONFIGURED, CHANGE OWNER FAILED FOR conf_file.

Explanation:  This message is issued when the guest platform management provider (GPMP) cannot be configured through the normal interface. Change ownership to mca_user : mca_group failed for conf_file.

System action:  The system stops processing.
Operator response: None.

System programmer response: Run the shell script and JCL with userid that has permission to write to configuration root directory.

Source: GPMP

Detecting Module: createMCAENV.sh

---

**FEW2118I**  GPMP CHANGE OWNER SUCCESSFUL FOR `conf_file`, CONTINUE ENVIRONMENT CONFIGURATION.

Explanation: This message is issued when the guest platform management provider (GPMP) environment is being configured through the normal interface. Change ownership to `mca_user:mca_group` was a success for `conf_file`.

System action: The system continues processing.

Operator response: None.

System programmer response: None.

Source: GPMP

Detecting Module: createMCAENV.sh

---

**FEW2119I**  GPMP ENVIRONMENT CONFIGURATION SUCCESSFUL, FINISH ENVIRONMENT CONFIGURATION.

Explanation: This message is issued when the guest platform management provider (GPMP) environment is being configured through the normal interface.

System action: Processing finished.

Operator response: None.

System programmer response: None.

Source: GPMP

Detecting Module: createMCAENV.sh

---

**FEW2120E**  GPMP CANNOT BE ACTIVATED, JAVA VERSION `jrebin_root` IS NOT SUPPORTED.

Explanation: The guest platform management provider (GPMP) does not support the JAVA version specified in variable `JREBIN_ROOT` in JCL `HVEENV`.

System action: GPMP cannot be configured.

Operator response: Contact your system programmer.

Detecting Module: createMCAENV.sh

---

**FEW2121I**  <time_stamp> INFO: Created `data_root` directory

Explanation: The directory in which the guest platform management provider (GPMP) stores the configuration and diagnostic data has been created.

In the message text:

- `<time_stamp>`
  - The time the directory was created.

- `data_root`
  - The directory that stores the configuration and diagnostic data.

Example:
**FEW2122W • FEW2123E**

FEW2121I < Fri Aug 13 08:37:19 EDT 2010 > INFO: Created /var/mca/ms directory.

**System action:** Data directory for GPMP has been created.

**Operator response:** None.

**System programmer response:** None.

**Source:** GPMP

**Detecting Module:** createMCAENV.sh

---

**FEW2122W**  
GPMP CANNOT LOCATE ENVIRONMENT PROFILE INDICATED BY THE ENV_PROFILE VARIABLE IN JCL HVEENV. THE env_profile CURRENTLY HAS THE VALUE OF env_profile. GPMP WILL BE STARTED, BUT IT MIGHT NOT OPERATE PROPERLY.

**Explanation:** This is a warning message. The guest platform management provider (GPMP) cannot locate the z/OS UNIX profile specified in variable env_profile in JCL HVEENV. This profile contains environmental information such as TimeZone, Locale, and others. This message will be issued while running JCL HVEENV and while starting GPMP.

In the message text:

```
env_profile
```

The z/OS UNIX profile to be used by GPMP. For example: /etc/profile.

**System action:** GPMP CONFIGURED. GPMP STARTED BUT MIGHT NOT OPERATE PROPERLY

**Operator response:** Contact your system programmer.

**System programmer response:** Determine if env_profile in JCL HVEENV points to the proper profile. If not:
1. Stop GPMP.
2. Specify the correct z/OS UNIX profile.
3. Resubmit the JCL HVEENV.
4. Restart GPMP.

**Source:** GPMP

**Detecting Module:** activateMS.sh, createMCAENV.sh

---

**FEW2123E**  
GPMP CANNOT BE CONFIGURED AS variable IN JCL HVEENV IS NOT DEFINED.

**Explanation:** The guest platform management provider (GPMP) cannot be configured as one or more of the variables specifies in JCL HVEENV is missing.

In the message text:

```
variable
```

The variable value can be:

- DATA_ROOT
- JREBIN_ROOT
- LOGFILE_ROOT
- MCA_USER
- MCA_GROUP
- ENV_PROFILE

**System action:** GPMP cannot be configured

**Operator response:** Contact your system programmer.

**System programmer response:** Add the missing variable in JCL HVEENV, and then submit JCL HVEENV again.

**Source:** GPMP

**Detecting Module:** createMCAENV.sh
Chapter 7. GDE messages

GDE001E DISTRIBUTED FILEMANAGER TARGET SYSTEM INITIALIZATION FAILED.  

Explanation: A problem occurred during initialization of the Distributed FileManager/MVS target function, which was requested via a START command. 

In the message text: 

One of the following: 

null-message-text

A system error occurred. Refer to preceding error messages to help determine the specific error and, if applicable, call the IBM Support Center. 

ECSA STORAGE COULD NOT BE OBTAINED. n HEX BYTES REQUIRED

A request for ECSA storage could not be fulfilled. n indicates the number of ECSA bytes, in hexadecimal, required to initialize the Distributed FileManager/MVS. Increase the size of ECSA by at least n hexadecimal bytes and try again. 

GDEIGBS COULD NOT BE LOADED. LOAD ABEND CODE=cccccccc REASON CODE=reason-code ALIAS NAME=alias-name

The DFM load module GDEIGBS could not be loaded because of an error detected by the LOAD function while attempting to obtain the address of the alias name CSECT. Check the LOAD abend and reason codes and take corrective action. If no corrective action solves the problem, call the IBM Support Center. (Note that an ABEND code of 99 and a reason code of 99 is set by the Distributed FileManager/MVS to indicate that the alias name loaded was linked edited above 16 megabytes but is required to be linked edited below 16 megabytes.) 

System action: The Distributed FileManager/MVS target function is not activated, except in the case where message GDE006E was issued with CDRA reason code X'FFFFFFFF'. See message GDE006E for details. 

System programmer response: See the abend or reason codes contained in either the message text or in any related console messages. If no corrective action can be taken, contact the IBM Support Center. 

Source: Distributed FileManager/MVS (DFM/MVS) 

Routing Code: Note 18 

Descriptor Code: 5,12 

GDE002I DISTRIBUTED FILEMANAGER TARGET CONVERSATION INITIALIZATION FAILED FOR ASID=aaaaaaaa USERID=uuuuuuuu PRTNRLU=nnnnnnnnnnnnnnnnnnn CONVID=cccccccc.  

Explanation: The Distributed FileManager/MVS was attempting to initialize the DFM target transaction program (TP) in address space aaaaaaaa in response to an APPC ALLOCATE request issued from a DFM source system. The DFM target TP initialization ended abnormally. 

In the message text: 

aaaaaaaa

The address space identifier (ASID). 

uuuuuuuu

The MVS user ID specified on the conversation allocation request. 

nnnnnnnnnnnnnnnnnnn

The name of the (partner) logical unit (LU) at which the DFM source server requesting the conversation allocation is located. 

cccccccc

The conversation ID assigned by APPC to this conversation. 

One of the following:
null-message-text

A system error occurred. Refer to preceding error messages to help determine the specific error and, if applicable, call the IBM Support Center.

PRIVATE STORAGE COULD NOT BE OBTAINED. \( n \) HEX BYTES REQUIRED

A request for private storage could not be fulfilled. \( n \) indicates the number of private storage bytes, in hexadecimal, required to initiate the conversation. Increase the region size of the conversation address space by at least \( n \) hexadecimal bytes and tell the DFM source LU to try again. The region size can be specified in the TP profile JCL or in the TPDEFAULT REGION(xx) parameter in the ASCHPMxx parmlib member.

ECSA STORAGE COULD NOT BE OBTAINED. \( n \) HEX BYTES REQUIRED

A request for ECSA storage could not be fulfilled. \( n \) indicates the number of ECSA bytes, in hexadecimal, required to initialize the conversation. Increase the size of ECSA by at least \( n \) hexadecimal bytes and tell the DFM source LU to try again.

ATTACH ERROR. ATTACH RTNCD=return-code

An error was detected by the ATTACH function. Check the ATTACH return code and correct the problem. Then tell the DFM source LU to try again.

APPC ERROR. VERB=vvvvvvv RTNCD=return-code

An error was detected by an APPC routine. The name of the APPC verb that was being processed is supplied along with the return code from the APPC verb routine. Correct the problem and tell the DFM source LU to try again.

System action: The conversation is ended. If a system error occurred, an abend is issued, the error is logged in the logrec data set, and a dump is produced and placed in a SYS1.DUMPnn data set. In all other cases, an abend is issued but the error is not recorded and no dump is taken.

System programmer response: Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the logrec data set and the dump, if available.

Source: Distributed FileManager/MVS (DFM/MVS)
Routing Code: 10
Descriptor Code: 6

GDE003I DISTRIBUTED FILEMANAGER TARGET SYSTEM INITIALIZATION COMPLETE

Explanation: Initialization of the Distributed FileManager/MVS target function was successful.

System action: The Distributed FileManager/MVS is available for use.

Source: Distributed FileManager/MVS (DFM/MVS)
Routing Code: Note 18
Descriptor Code: 5

GDE004E DISTRIBUTED FILEMANAGER TARGET CENTRAL ADDRESS SPACE FAILED [IN ASID=aaaaaaaa | ASID=aaaaaaaa REASON=bbbbbbbb]

Explanation: The main Distributed FileManager/MVS address space, named DFM, ended abnormally in the specified address space identifier (ASID).

System action: The Distributed FileManager/MVS DSAS ends. The Distributed FileManager/MVS conversation address spaces continue running. The system logs the error in the logrec data set and produces a dump in the SYS1.DUMPnn data set.

System programmer response: Determine the reason for the failure and take corrective action. Other error messages precede this one. Refer to their documentation for corrective action. DFM must be restarted to restore full Distributed FileManager/MVS target function.

Source: Distributed FileManager/MVS (DFM/MVS)
Routing Code: 10
Descriptor Code: 2,4,12
**GDE005I** DISTRIBUTED FILEMANAGER TARGET SYSTEM {ALREADY ACTIVE | NOT ACTIVE, START DFM}

Explanation: Either an attempt was made to start the Distributed FileManager/MVS target system using the START DFM command, but the target function is already active or an attempt was made to use the DFM/MVS, but the target function is not active and needs to be started.

System action: If DFM/MVS is already active, the system ignores the START DFM command. If DFM/MVS is not active, jobs requiring target DFM function will end with non-zero return codes.

Operator response: If DFM/MVS is active, none. If DFM/MVS is not active, enter a START DFM command.

Source: Distributed FileManager/MVS (DFM/MVS)
Routing Code: 10
Descriptor Code: 4

**GDE006E** INVALID [VALUE FOUND FOR] KEYWORD: kkkkkkk DISTRIBUTED FILEMANAGER TARGET SYSTEM NOT STARTED

Explanation: The DFMxx parmlib member contains an incorrect value for the indicated keyword. If the keyword in error is CCSID, a reason code is also provided. See Character Data Representation Architecture (CDRA). For example, RC=00010001 is used by CDRA to indicate that the CCSID is undefined and RC=00060001 is used to indicate that the CDRA resource files needed for data conversion cannot be located.

System action: DFM will not be started. There is an exception when the keyword is CCSID and the return code is 'X'FFFFFFFF', indicating that the Language Environment required by CDRA is not present. DFM will be started in a limited function mode that does not support data conversion.

System programmer response: Correct the DFMxx parmlib member with a correct value for the keyword.

Source: Distributed FileManager/MVS (DFM/MVS)
Routing Code: 10
Descriptor Code: 4

**GDE007E** module ERROR INVOKING FUNCTION: function return_code reason_code

Explanation: During DFM DataAgent processing the MVS function shown failed with the indicated return and reason codes.

However, common errors have more specific text. For example, if the DataAgent routine can't be found in JOBLIB, STEPLIB, or LPALIB, "LOCATING MODULE DataAgent_routine_name" will be substituted for function, return_code, and reason_code.

System action: DFM DataAgent processing is terminated.

Operator response: Notify your System Programmer.

System programmer response: Refer to documentation of the indicated function to determine the meaning of the return and reason codes. Refer to the job log for any related console messages that may have occurred at the time of the error.

Routing Code: 10
Descriptor Code: 4
Chapter 8. GFSA messages

Accessibility

Publications for this product are offered in Adobe Portable Document Format (PDF) and should be compliant with accessibility standards. If you experience difficulties when using PDF files, you may view the information through the z/OS Internet Library website or the z/OS Information Center. If you continue to experience problems, send an email to mhvrcfs@us.ibm.com or write to:

IBM Corporation
Attention: MHVRCFS Reader Comments
Department H6MA, Building 707
2455 South Road
Poughkeepsie, NY 12601-5400
U.S.A.

Accessibility features help a user who has a physical disability, such as restricted mobility or limited vision, to use software products successfully. The major accessibility features in z/OS enable users to:

• Use assistive technologies such as screen readers and screen magnifier software
• Operate specific or equivalent features using only the keyboard
• Customize display attributes such as color, contrast, and font size

Using assistive technologies

Assistive technology products, such as screen readers, function with the user interfaces found in z/OS. Consult the assistive technology documentation for specific information when using such products to access z/OS interfaces.

Keyboard navigation of the user interface

Users can access z/OS user interfaces using TSO/E or ISPF. Refer to z/OS TSO/E Primer, z/OS TSO/E User’s Guide and z/OS ISPF User’s Guide Vol I for information about accessing TSO/E and ISPF interfaces. These guides describe how to use TSO/E and ISPF, including the use of keyboard shortcuts or function keys (PF keys). Each guide includes the default settings for the PF keys and explains how to modify their functions.

z/OS information

z/OS information is accessible using screen readers with the BookServer or Library Server versions of z/OS books in the Internet library at:

http://www.ibm.com/systems/z/os/zos/bkserv/
Notices

This information was developed for products and services offered in the U.S.A. or elsewhere.

IBM may not offer the products, services, or features discussed in this document in other countries. Consult your local IBM representative for information on the products and services currently available in your area. Any reference to an IBM product, program, or service is not intended to state or imply that only that IBM product, program, or service may be used. Any functionally equivalent product, program, or service that does not infringe any IBM intellectual property right may be used instead. However, it is the user’s responsibility to evaluate and verify the operation of any non-IBM product, program, or service.

IBM may have patents or pending patent applications covering subject matter described in this document. The furnishing of this document does not give you any license to these patents. You can send license inquiries, in writing, to:

IBM Director of Licensing
IBM Corporation
North Castle Drive
Armonk, NY 10504-1785
U.S.A

For license inquiries regarding double-byte character set (DBCS) information, contact the IBM Intellectual Property Department in your country or send inquiries, in writing, to:

Intellectual Property Licensing
Legal and Intellectual Property Law
IBM Japan, Ltd.
1623-14, Shimotsuruma, Yamato-shi
Kanagawa 242-8502 Japan

The following paragraph does not apply to the United Kingdom or any other country where such provisions are inconsistent with local law:

INTERNATIONAL BUSINESS MACHINES CORPORATION PROVIDES THIS PUBLICATION “AS IS” WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Some states do not allow disclaimer of express or implied warranties in certain transactions, therefore, this statement may not apply to you.

This information could include technical inaccuracies or typographical errors. Changes are periodically made to the information herein; these changes will be incorporated in new editions of the publication. IBM may make improvements and/or changes in the product(s) and/or the program(s) described in this publication at any time without notice.

Any references in this information to non-IBM Web sites are provided for convenience only and do not in any manner serve as an endorsement of those Web sites. The materials at those Web sites are not part of the materials for this IBM product and use of those Web sites is at your own risk.
IBM may use or distribute any of the information you supply in any way it believes appropriate without incurring any obligation to you.

Licensees of this program who wish to have information about it for the purpose of enabling: (i) the exchange of information between independently created programs and other programs (including this one) and (ii) the mutual use of the information which has been exchanged, should contact:

Site Counsel
IBM Corporation
2455 South Road
Poughkeepsie, NY 12601-5400
USA

Such information may be available, subject to appropriate terms and conditions, including in some cases, payment of a fee.

The licensed program described in this information and all licensed material available for it are provided by IBM under terms of the IBM Customer Agreement, IBM International Program License Agreement, or any equivalent agreement between us.

Information concerning non-IBM products was obtained from the suppliers of those products, their published announcements or other publicly available sources. IBM has not tested those products and cannot confirm the accuracy of performance, compatibility or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

All statements regarding IBM's future direction or intent are subject to change or withdrawal without notice, and represent goals and objectives only.

If you are viewing this information softcopy, the photographs and color illustrations may not appear.

**Policy for unsupported hardware**

Various z/OS elements, such as DFSMS, HCD, JES2, JES3, and MVS, contain code that supports specific hardware servers or devices. In some cases, this device-related element support remains in the product even after the hardware devices pass their announced End of Service date. z/OS may continue to service element code; however, it will not provide service related to unsupported hardware devices. Software problems related to these devices will not be accepted for service, and current service activity will cease if a problem is determined to be associated with out-of-support devices. In such cases, fixes will not be issued.

**Trademarks**

IBM, the IBM logo, and ibm.com are trademarks or registered trademarks of International Business Machines Corp., registered in many jurisdictions worldwide. Other product and service names might be trademarks of IBM or other companies. A current list of IBM trademarks is available on the Web at [Copyright and trademark information](http://www.ibm.com/legal/copytrade.shtml).

Microsoft and the Windows logo are trademarks of Microsoft Corporation in the United States, other countries, or both.
