MVS System Messages
Volume 8 (IEF - IGD)
MVS System Messages
Volume 8 (IEF - IGD)

This is a major revision of SA22-7638-16.

This edition applies to Version 1 Release 11 of z/OS (5694-A01) and to all subsequent releases and modifications until otherwise indicated in new editions.

IBM welcomes your comments. A form for readers’ comments may be provided at the back of this document, or you may address your comments to the following address:

International Business Machines Corporation

iii
This document supports z/OS® (5694-A01).

The MVS™ System Messages documents primarily describe messages that are issued to the system operator at the system console and system messages that are logged. These include the following messages:

- Operator messages issued by the BCP and DFSMS/MVS™.
- Log messages issued by the BCP and DFSMS/MVS.
- Some SYSOUT messages issued by the BCP and DFSMS/MVS. SYSOUT messages are issued by utilities that normally run in batch, such as SPZAP.
- Batch job messages issued by the BCP. Messages issued by JES2 or JES3 for batch jobs are in the JES messages documents.

For the most part, messages issued at interactive terminals (like TSO/E and CICS® terminals) are documented by the specific elements and products that support those terminals.

The titles of the MVS System Messages documents indicate the range of message prefixes in the documents:

- z/OS MVS System Messages, Vol 1 (ABA-AOM), SA22-7631
- z/OS MVS System Messages, Vol 2 (ARC-ASA), SA22-7632
- z/OS MVS System Messages, Vol 3 (ASB-AS), SA22-7633
- z/OS MVS System Messages, Vol 4 (CBD-DMO), SA22-7634
- z/OS MVS System Messages, Vol 5 (EDG-GFS), SA22-7635
- z/OS MVS System Messages, Vol 6 (GOS-IEA), SA22-7636
- z/OS MVS System Messages, Vol 7 (IEB-IEE), SA22-7637
- z/OS MVS System Messages, Vol 8 (IEF-IGD), SA22-7638
- z/OS MVS System Messages, Vol 9 (IGF-IWM), SA22-7639
- z/OS MVS System Messages, Vol 10 (IXC-IZP), SA22-7640

If you do not know which document describes a particular message, try using LookAt (see “Using LookAt to look up message explanations” on page vii). Here are some of the documents on that bookshelf:

- The MVS System Messages documents
- z/OS MVS Dump Output Messages, SA22-7590
- z/OS MVS System Codes, SA22-7626
- z/OS and z/VM HCD Messages, SC33-7986
- z/OS JES2 Messages, SA22-7537
- z/OS JES3 Messages, SA22-7552
- z/OS TSO/E Messages, SA22-7786
- z/OS UNIX System Services Messages and Codes, SA22-7807

For a list of message documents sorted by message prefix, see “Message directory” on page 15.

This document also contains the routing and descriptor codes that IBM assigns to the messages that z/OS components, subsystems, and products issue. Routing and descriptor codes are specified by the ROUTCDE and DESC keyword parameters on WTO and WTOR macros, which are the primary methods that programs use to issue messages. The routing code identifies where a message will be displayed. The descriptor code identifies the significance of the message and the color of the message on operator consoles with color.
Who should use these MVS System Messages documents

The system messages documents are for people who receive messages from the system. Usually, these people are system operators, system programmers, and application programmers who do any of the following tasks:

- Initialize the operating system and its subsystems
- Monitor system activity
- Keep the system running correctly
- Diagnose and correct system problems
- Diagnose and correct errors in problem programs

How to use these documents

The system messages documents contain descriptions of messages, along with the following topics:

- "Building your own message library" on page 25 tells how to create a customized message library.
- "Message directory" on page 15 lists all message prefixes and the documents containing the message descriptions.
- Chapter 1, "Introduction," on page 1 describes how the system issues messages, where it places them, and their formats.
- "Routing codes" on page 9 and "Descriptor codes" on page 12 contain an introduction to routing and descriptor codes. These sections describe:
  - The meaning of each code
  - How to specify these codes
  - How the system uses these codes

For information on using routing and descriptor codes to route messages, see z/OS MVS Planning: Operations.

Message Explanations: Message chapters are arranged alphabetically by the message prefixes. In each chapter, the messages are arranged numerically by the numbers following the prefix. For a general description of message explanations, see "Message description" on page 8.

Where to find more information

Where necessary, the message documents reference information in other books, using shortened versions of the book title. For complete titles and order numbers of the books for all products that are part of z/OS, see z/OS Information Roadmap.

Many message descriptions refer to the following terms. You need to consult the reference listed below for more information:

- **Data areas and control blocks**: See z/OS MVS Data Areas, Vol 1 (ABEP-DALT), z/OS MVS Data Areas, Vol 2 (DCCB-ITZYRETC), z/OS MVS Data Areas, Vol 3 (IVT-RCWK), z/OS MVS Data Areas, Vol 4 (RD-SRRA), and z/OS MVS Data Areas, Vol 5 (SSAG-XTLST).
- **Dumps**: For examples of ABEND, stand-alone, and SVC dumps and how to read them, see z/OS MVS Diagnosis: Tools and Service Aids. For examples of component output from dumps and how to read and request it, see z/OS MVS Diagnosis: Reference.
- **Identification of a component, subsystem, or product**: See z/OS MVS Diagnosis: Reference to identify the component, subsystem, or product from the name of an IBM® module or for a macro. The module prefix and macro tables give the program identifier to be used in a PIDS symptom in a search argument.
- **System completion and wait state codes**: See z/OS MVS System Codes.
- **Logrec data set error records**: For the formatted records, see z/OS MVS Diagnosis: Reference.
• **Trace output**: For the formats and the meaning of the information in the generalized trace facility (GTF) trace, instruction address trace, master trace, system trace, and component trace, see [z/OS MVS Diagnosis: Tools and Service Aids](http://www.ibm.com/systems/z/os/zos/).

• **Hardware**: Use the appropriate *Principles of Operation* document for the hardware you have installed.

## Where to find the most current message information

The MVS System Messages documents are cumulative. As messages are added to the system they are added to the documents. Similarly, when messages are changed on the system, they are changed in the documents. However, when a message is deleted from the system (no longer issued), the message is *not* deleted from the document. This means that users can look in the most recent message documents for the most current descriptions of system messages.

To find the most current edition of a document, you can look on the Web. Point your browser to the z/OS home page and click on Library:

When you are in the z/OS library area, use the messages and codes database to search for the message ID you are interested in.

## Information updates on the web

For the latest information updates that have been provided in PTF cover letters and Documentation APARs for z/OS, see the online document at:

This document is updated weekly and lists documentation changes before they are incorporated into z/OS publications.

## Using LookAt to look up message explanations

LookAt is an online facility that lets you look up explanations for most of the IBM messages you encounter, as well as for some system abends and codes. Using LookAt to find information is faster than a conventional search because in most cases LookAt goes directly to the message explanation.

You can use LookAt from these locations to find IBM message explanations for z/OS elements and features, z/VM®️, z/VSE™️, and Clusters for AIX®️ and Linux®️:

• **The Internet.** You can access IBM message explanations directly from the LookAt Web site at [www.ibm.com/servers/eserver/zseries/zos/bkserv/lookat/](http://www.ibm.com/servers/eserver/zseries/zos/bkserv/lookat/).

• **Your z/OS TSO/E host system.** You can install code on your z/OS systems to access IBM message explanations using LookAt from a TSO/E command line (for example: TSO/E prompt, ISPF, or z/OS UNIX®️ System Services).

• **Your Microsoft®️ Windows®️ workstation.** You can install LookAt directly from the z/OS Collection (SK3T-4269) or the z/OS and Software Products DVD Collection (SK3T-4271) and use it from the resulting graphical user interface (GUI). The command prompt (also known as the DOS > command line) version can still be used from the directory in which you install the Windows version of LookAt.

• **Your wireless handheld device.** You can use the LookAt Mobile Edition from [www.ibm.com/servers/eserver/zseries/zos/bkserv/lookat/lookatm.html](http://www.ibm.com/servers/eserver/zseries/zos/bkserv/lookat/lookatm.html) with a handheld device that has wireless access and an Internet browser.

You can obtain code to install LookAt on your host system or Microsoft Windows workstation from:

• A CD in the *z/OS Collection* (SK3T-4269).

• The *z/OS and Software Products DVD Collection* (SK3T-4271).
• The LookAt Web site (click Download and then select the platform, release, collection, and location that suit your needs). More information is available in the LOOKAT.ME files available during the download process.

**The z/OS Basic Skills Information Center**

The z/OS Basic Skills Information Center is a Web-based information resource intended to help users learn the basic concepts of z/OS, the operating system that runs most of the IBM mainframe computers in use today. The Information Center is designed to introduce a new generation of Information Technology professionals to basic concepts and help them prepare for a career as a z/OS professional, such as a z/OS system programmer.

Specifically, the z/OS Basic Skills Information Center is intended to achieve the following objectives:

• Provide basic education and information about z/OS without charge
• Shorten the time it takes for people to become productive on the mainframe
• Make it easier for new people to learn z/OS.

To access the z/OS Basic Skills Information Center, open your Web browser to the following Web site, which is available to all users (no login required): [http://publib.boulder.ibm.com/infocenter/zos/basics/index.jsp](http://publib.boulder.ibm.com/infocenter/zos/basics/index.jsp)
Summary of changes

New, changed, or deleted messages can affect your system’s automation routines. To ensure that your installation’s automation routines are current, review the new, changed, and deleted messages listed in [z/OS Summary of Message and Interface Changes](http://www.ibm.com/servers/eserver/zseries/zos/bkserv/).

Summary of changes for SA22-7638-17
z/OS Version 1 Release 11

The document contains information previously presented in z/OS MVS System Messages, Vol 8 (IEF-IGD), SA22-7638-16, which supports z/OS Version 1 Release 10.

You may notice changes in the style and structure of some content in this document—for example, headings that use uppercase for the first letter of initial words only, and procedures that have a different look and format. The changes are ongoing improvements to the consistency and retrievability of information in our documents.

This document contains terminology, maintenance, and editorial changes. Technical changes or additions to the text and illustrations are indicated by a vertical line to the left of the change.

Summary of changes for SA22-7638-16
z/OS Version 1 Release 10
as updated April 2009

This document contains terminology, maintenance, and editorial changes, including changes to improve consistency and retrievability.

Summary of changes for SA22-7638-15
z/OS Version 1 Release 10

The document contains information previously presented in z/OS MVS System Messages, Vol 8 (IEF-IGD), SA22-7638-14, which supports z/OS Version 1 Release 9.

This document contains terminology, maintenance, and editorial changes, including changes to improve consistency and retrievability.

Summary of changes for SA22-7638-14
z/OS Version 1 Release 9
as updated April 2008

This document contains terminology, maintenance, and editorial changes, including changes to improve consistency and retrievability.

© Copyright IBM Corp. 1988, 2009
Summary of changes
for SA22-7638-13
z/OS Version 1 Release 9

The document contains information previously presented in z/OS MVS System Messages, Vol 8 (IEF-IGD), SA22-7638-12, which supports z/OS Version 1 Release 8.

This document contains terminology, maintenance, and editorial changes, including changes to improve consistency and retrievability.
Chapter 1. Introduction

The z/OS operating system issues messages from z/OS elements and features, and from program products and application programs running on the system. The system issues messages in different ways and to different locations:

- **WTO and WTOR macros**: Most messages are issued through WTO and WTOR macros to one of the following locations:
  - Console
  - Operations log (OPERLOG)
  - System log (SYSLOG)
  - Job log
  - SYSOUT data set

Routing codes determine where the messages are displayed or printed. The routing codes for messages issued by the operating system are included with each message.

- **WTL macro or the LOG operator command**: Some messages are issued through the WTL macro or the LOG operator command to the system log (SYSLOG).

- **Dumping services routines**: Dump messages are issued through the Dumping services routines and can appear in one of the following locations:
  - SVC dumps, stand-alone dumps, or SYSMDUMP ABEND dumps formatted by the interactive problem control system (IPCS)
  - Trace data sets formatted by the interactive problem control system (IPCS)
  - ABEND dumps or SNAP dumps produced by the dumping services

In dump or trace data sets formatted by IPCS, the messages appear interactively on a terminal or in a printed dump.

- **DFSMS/MVS access methods**: Some messages are issued through DFSMS/MVS access methods directly to one of the following locations:
  - Output data set
  - Display terminal

Messages are sent to different locations to meet some specific needs. For example, messages routed to a console usually show the result of an operator command and sometimes require an operator reply, while messages recorded in the hardcopy log permanently are often used for auditing. Understanding the locations where you receive messages can help you manage your message flow.

**Console**

Messages sent to a multiple console support (MCS) console, an SNA multiple console support (SMCS) console, or an extended MCS (EMCS) console are intended for the operators. Operations can control which messages are displayed. See [z/OS MVS Planning: Operations](http://www.ibm.com) for information about controlling message display.

The system writes in the hard-copy log all messages sent to a console, whether the message is displayed or not.

**Operations log**

The operations log (OPERLOG) records all message traffic from each system in a sysplex that activates the OPERLOG. The operations log consists of the following data:

- Messages to and from all consoles
- Commands and replies entered by the operator

**System log**

The system log (SYSLOG) is a SYSOUT data set that stores the messages and commands from the current system. SYSOUT data sets are output spool data sets on direct access storage devices (DASD) provided by the job entry subsystem (either JES2 or JES3). An installation usually prints the system log periodically. The system log consists of:
• All messages issued through WTL macros
• All messages entered by operator LOG commands
• Usually, the hard-copy log
• Any messages routed to the system log from any system component or program

Job log
Messages sent to the job log are intended for the programmer who submitted a job. The job log is specified in the system output class on the MSGCLASS parameter of the JCL JOB statement.

SYSOUT data set
Messages sent to a SYSOUT data set are intended for a programmer. These messages are issued by an assembler or compiler, the linkage editor and loader, and an application program. If the SYSOUT data set and the MSGCLASS parameter on the JCL JOB statement specify the same class, all messages about a program will appear in the same SYSOUT listing.

Message format
A displayed or printed message can appear by itself or with other information, such as a time stamp. The following topics show the format of the message body and the formats of accompanying information when the message is sent to various locations.

Format of the message body
The message body consists of three parts: the reply identifier (optional), the message identifier, and the message text. The following formats are possible:

<table>
<thead>
<tr>
<th>id</th>
<th>CCCnnn text</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>CCCnnns text</td>
</tr>
<tr>
<td>id</td>
<td>CCCnnnnns text</td>
</tr>
<tr>
<td>id</td>
<td>CCCSnnns text</td>
</tr>
</tbody>
</table>

id  Reply identifier: It is optional. It appears if an operator reply is required. The operator specifies it in the reply.

CCCnnn, CCCnnns, CCCnnnnns, CCCSnnns
Message identifier.

CCC  A prefix to identify the component, subsystem, or product that produced the message. The prefix is three characters.

S  The subcomponent identifier, which is an optional addition to the prefix to identify the subcomponent that produced the message. The subcomponent identifier is one character.

nnn, nnnn, nnnnn
A serial number to identify the individual message. The serial number is three, four, or five decimal digits.

s  An optional type code, which is one of the following:

A  Action: The operator must perform a specific action.
D  Decision: The operator must choose an alternative.
E  Eventual action: The operator must perform action when time is available.
I  Information: No operator action is required.
S  Severe error: Severe error messages are for a system programmer.
W  Wait: Processing stops until the operator performs a required action.
text

Text: The text provides information, describes an error, or requests an operator action.

Note: The following messages have special format for the message body. Refer to the specific message chapters for details.

- ADR messages
- CNL messages
- EWX messages
- IDA messages
- IEW messages
- IGW01 messages

Messages sent to MCS/SMCS consoles

Messages sent to MCS/SMCS consoles appear in one of the following formats:

```
f hh.mm.ss sysname jobname message
f hh.mm.ss sysname message
f hh.mm.ss jobname message
f hh.mm.ss message
f sysname jobname message
f sysname message
f jobname message
f message
```

f A screen character to indicate the status of certain messages, as follows:

- The operator has performed the action required for the message. The message has been deleted.
- The message is for information only; no operator action is required. The message was issued by the system or by a problem program.
* The message requires specific operator action and was issued by a WTOR or by an authorized program. The message has a descriptor code of 1, 2, or 11.
@ The message requires specific operator action and was issued by a WTOR or by a problem program. The message has a descriptor code of 1, 2, or 11.
+ The message requires no specific operator action and was issued by a problem program using a WTO macro.

blank The message requires no specific operator action.

hh.mm.ss
Time stamp: the hour (00-23), minute (00-59), and second (00-59).

sysname
System name for the system that issued the message.

jobname
Job name for the task that issued the message. This field is blank if a job did not issue the message.

message
Reply identifier, message identifier, and text.

Messages sent to hardcopy log in JES2 system

Multiple console support (MCS) handles message processing in:

- A JES2 system
- A JES3 system on a local processor
A JES3 system on a global processor, if JES3 has failed

MCS sends messages with routing codes 1, 2, 3, 4, 7, 8, and 10 to the hardcopy log when display consoles are used or more than one console is active. All other messages can be routed to the hard-copy log by a system option or a VARY HARDCOPY operator command.

Messages sent to the hardcopy log appear in the format:

```
tcrrrrrr sysname yyddd ident msgflags message
t        message
t        lid  message
t```

- **t**: The first character on the line indicates the record type:
  - **D**: Data line of a multiple-line message; this line may be the last line of the message.
  - **E**: End line or data-end line of a multiple-line message.
  - **L**: Label line of a multiple-line message.
  - **M**: First line of a multiple-line message.
  - **N**: Single-line message that does not require a reply.
  - **O**: Operator LOG command.
  - **S**: Continuation of a single-line message or a continuation of the first line of a multi-line message. This continuation may be required because of the record length for the output device.
  - **W**: A message that requires a reply.
  - **X**: A log entry that did not originate with a LOG command or a system message.

- **c**: The second character on the line indicates whether the line was generated because of a command:
  - **C**: Command input.
  - **R**: Command response.
  - **I**: Command issued internally. The job identifier contains the name of the internal issuer.
  - **blank**: Neither command input nor command response.

- **rrrrrr**: Hexadecimal representation of the routing codes 1 through 28. To understand this hexadecimal number, convert it to binary; each binary 1 represents a routing code. For example, X'420C' represents routing codes 2, 7, 13, and 14 as shown here:

```
Hexadecimal:  4  2  0  C
Binary:       0 1 0 0  0 0 1 0  0 0 0 0  1 1 0 0
Routing Codes: 1 2 3 4  5 6 7 8  9 10 11 12  13 14 15 16
```

- **sysname**: The system name from the SYSNAME parameter in parmlib.

- **yyddd**: The Julian date, given as the year (00-99) and the day of the year (000-366).

  **Note**: If HCFORMAT(CENTURY) is specified in the CONSOLxx parmlib member, the Julian date appears as yyyyddd.

- **hh:mm:ss.th**: Time stamp, given as the hour (00-23), minute (00-59), second (00-59), and hundredths of a second (00-99).
ident
The job identifier for the task that issued the message, if the second character on the line is blank.

If the second character on the line is C or R, this field contains one of the following:

jobid The job identifier of the task that issued the message, if it was issued by a job.
conname Console name of the console which issued the command or received the message.
INTERNAL For a command generated by a problem program or the system.
INSTREAM For a command read from the input stream.
blank If MCS could not determine the source or destination for the message.

lid Multiple-line identifier for the second and succeeding lines of a multiple-line message. This field appears after the message text (1) on the first line or (2) in the message area and is not followed by text on a continuation of the first line. The identifier appears on all lines of the same message.

msgflags Installation exit and message suppression flags. For information about the description of the hardcopy log message flags, see HCL in z/OS MVS Data Areas, Vol 2 (DCCB-ITZYRETC).

message Reply identifier, message identifier, and text. The reply identifier and message identifier appear only on the first line of a multiple-line message.

Messages sent to hardcopy log in JES3 system
Messages sent to the JESMSG hardcopy log in a JES3 system appear in the format:

```
hh:mm:ssst message
```

Messages sent to the MLOG/DLOG hardcopy log appear in the format:

```
dest console yyddd hhmsstia[prefix] message
```

dest
JES3 destination class, which corresponds to the MVS routing code.

console
JES3 or MVS console name, as follows:

blank For a message issued without a console name.
nnnnn The JES3 console name (JNAME) from the JES3 initialization stream. This applies to remote consoles only.
cnname The MCS console name, as specified on the NAME(cnname) parameter under the CONSOLE definition in SYS1.PARMLIB(CONSOLxx).
INTERNAL For a command generated by a problem program or operating system routine.
NETWORK For a message issued to the network job entry (NJE) console.

yyddd The Julian date, given as the year (00-99) and the day of the year (000-366).

Note: If HCFORMAT(CENTURY) is specified in the CONSOLxx parmlib member, the Julian date appears as yyyyddd.
hhmmsst
Time stamp, given as the hour (00-23), minute (00-59), second (00-59), and tenth of a second (0-9).

Attention indicator for JES3 space constraints, as follows:

- **blank**: Normal output or no action required.
- **#**: The message is rerouted automatically or by a command from another console.
- **%**: Minimum space (track) situation (JSAM).
- **=**: Marginal space (track) situation (JSAM).
- **<**: Minimum buffer situation (JSAM).

**Note**: The above four symbols can be changed by a CONSTD statement in the JES3 initialization stream.

Action prefix character, as follows:

- **blank**: Normal message.
- **+**: JES3 input command, issued on the global processor.
- **-**: MVS input command, issued on the global processor.

Operator action required.

Optional prefix for messages issued outside the JES3 address space or on a local processor, as follows:

- **sysname**
  - The name of the system where the issuing program is running. JES3 determines the name from the ID parameter on the MAINPROC statement in the JES3 initialization stream.

- **jobname**
  - The job name of the issuing program. It is all blanks for a system routine.

Reply identifier, message identifier, and text.

**Messages sent to the job log, to other data sets, and to display terminals**

Messages sent to the job log, to other data sets, and to display terminals appear in the format designed by the program that issued them.

**Truncated data in multi-line messages**

Under any one of the following conditions, the system might need to truncate a multi-line message:

- When a message is being transported from one system to another in a sysplex, the sending or receiving system might encounter an error that prevents some or all of the message text from appearing. This can be caused by any of the following:
  - The issuing system is stopped or quiesced.
  - The issuing system fails to end a multi-line message.
  - The issuing system has an XCF buffer shortage.
  - A disruption occurs in sysplex communication.
  - An error occurs on the receiving system.

When one of the above conditions occurs, one of the following messages can appear within the message text, indicating such an error:
• When no data line or endline has been issued for a multi-line message after an interval of thirty seconds, the system issues the following endline:
  MESSAGE TIMED OUT - MESSAGE COMPLETION FORCED

• When a connect request exceeds the limit of 65533 lines, the system truncates the message with the following text:
  EXCEEDED LINE LIMIT - MESSAGE COMPLETION FORCED

• When a multi-line message is issued with no end line, and it is not possible for the system to obtain space to temporarily store the message, the system truncates the message with the following text:
  CONNECT UNAVAILABLE - MESSAGE COMPLETION FORCED

• When a multi-line connect request is issued, and the system is unable to obtain space to store the connecting lines, the system truncates the message with the following text:
  CONNECT UNSUCCESSFUL - MESSAGE COMPLETION FORCED

• When a message is too long to fit into 80% of the Console message cache, the system truncates the message with the following text:
  MESSAGE TRUNCATED FOR CONSOLE MESSAGE CACHE

• When there is a shortage of WTO buffers for display on MCS consoles, the screen display may be truncated with one of the following lines of text:
  NUMBER OF LINES EXCEEDED MLIM - MESSAGE TRUNCATED
  STORAGE CONSTRAINT - MESSAGE TRUNCATED
Message description

The following topics describes the different message description items, and in particular, the routing and descriptor codes.

Description items

The message explanation information is presented by the following items:

Explanation

The meaning of the message, including why the system issued the message.

System Action

- What the system did as a result of the system condition reported by the message. A system condition could include running out of storage, a hardware or software failure, an abend, a wait state.
- What the system did as a result of user input. User input can include a system command, a job running on the system, a transaction, a query, or another user-system interaction.

Operator Response

Instructions for the system operator, including, as appropriate, decisions to make and actions to take.

Only provided for messages that could appear at the operator console.

User Response

Instructions for the end user.

Only provided for messages that could appear at an interactive interface such as a TSO/E terminal or ISPF application.

Note: Most user messages are explained in other message books, such as z/OS TSO/E Messages.

Application Programmer Response

Instructions for an application programmer.

Only provided for messages that could appear in SYSOUT produced by a job, for example SPZAP.

System Programmer Response

Instructions for the system programmer.

Only provided for messages that require additional action beyond the operator response, user response, or application programmer response.

Storage Administrator Response

Instructions for the DFSMSdfp™ storage administrator.

Security Administrator Response

Instructions for the security administrator.

Only provided for security-related messages.

Problem Determination

Additional instructions for determining the cause of the problem, searching problem databases, and, if necessary, reporting the problem to the IBM support center. These instructions are for a customer support person who can troubleshoot problems, such as the system programmer or system administrator, an experienced security administrator, or an experienced storage administrator.
For additional information on performing problem determination procedures, see \textit{z/OS Problem Management} and the appropriate diagnosis guide for the product or element issuing the message, such as:

- DFSMS/MVS diagnosis guides and references
- \textit{z/OS JES2 Diagnosis}
- \textit{z/OS JES3 Diagnosis}

\textbf{Source}

Element, product, or component that issued the message.

\textbf{Detecting Module}

Name of the module or modules that detected the condition that caused the message to be issued.

\textbf{Routing Code}

For WTO or WTOR messages, the routing code of the message. See \textit{Routing codes} for more information about the code meaning.

\textbf{Descriptor Code}

For WTO or WTOR messages, the descriptor code of the message. See \textit{Descriptor codes} for more information about the code meaning.

\section*{Routing codes}

Routing codes send system messages to the consoles where they are to be displayed. More than one routing code can be assigned to a message to send it to more than one console. For more information on message routing, see the following books:

- \textit{z/OS MVS Programming: Authorized Assembler Services Guide}
- \textit{z/OS MVS Programming: Authorized Assembler Services Reference SET-WTO}
- \textit{z/OS MVS Installation Exits}
- \textit{z/OS MVS Initialization and Tuning Reference}

\textbf{Specification}

The routing codes are specified in the ROUTCDE parameter of the WTO or WTOR macro. If you specify a message which contains no routing codes, MVS may provide one or more default routing codes, based upon the presence or lack of other queuing specifications.

If you specify a message containing descriptor codes but no routing codes and no target console, MVS will not assign any routing codes and will write the message to the hardcopy log.

If you specify a message containing no routing codes, no descriptor codes, and no target console, MVS will assign a default set of routing codes. This set of default routing codes is specified at MVS initialization on the DEFAULT statement in your CONSOLxx parmlib member. If a set of default routing codes was not provided on the DEFAULT statement, MVS will assign routing codes 1 through 16.

\subsection*{Routing code meaning}

Routing codes appear within the associated message. The routing code field can contain the following numeric values, special characters, or notes:

\begin{table}[h]
\begin{tabular}{|c|c|}
\hline
\textbf{Code} & \textbf{Meaning} \\
\hline
1 & Operator Action \\
& The message indicates a change in the system status. It demands action by a primary operator. \\
2 & Operator Information \\
& The message indicates a change in system status. It does not demand action; rather, it alerts a primary operator to a condition that might require action. \\
\hline
\end{tabular}
\end{table}
This routing code is used for any message that indicates job status when the status is not requested specifically by an operator inquiry. It is also used to route processor and problem program messages to the system operator.

3 **Tape Pool**
The message gives information about tape devices, such as the status of a tape unit or reel, the disposition of a tape reel, or a request to mount a tape.

4 **Direct Access Pool**
The message gives information about direct access storage devices (DASD), such as the status of a direct access unit or volume, the disposition of a volume, or a request to mount a volume.

5 **Tape Library**
The message gives tape library information, such as a request by volume serial numbers for tapes for system or problem program use.

6 **Disk Library**
The message gives disk library information, such as a request by volume serial numbers for volumes for system or problem program use.

7 **Unit Record Pool**
The message gives information about unit record equipment, such as a request to mount a printer train.

8 **Teleprocessing Control**
The message gives the status or disposition of teleprocessing equipment, such as a message that describes line errors.

9 **System Security**
The message gives information about security checking, such as a request for a password.

10 **System/Error Maintenance**
The message gives problem information for the system programmer, such as a system error, an uncorrectable I/O error, or information about system maintenance.

11 **Programmer Information**
This is commonly referred to as write to programmer (WTP). The message is intended for the problem programmer. This routing code is used when the program issuing the message cannot route the message to the programmer through a system output (SYSOUT) data set. The message appears in the JESYSMSG data set.

12 **Emulation**
The message gives information about emulation. (These message identifiers are not included in this publication.)

13-20 For customer use only.

21-28 For subsystem use only.

29 Disaster recovery.

30-40 For IBM use only.

41 The message gives information about JES3 job status.

42 The message gives general information about JES2 or JES3.
For JES use only.

Messages associated with particular processors.

Messages associated with particular devices.

The message will be routed back to the consoles that initiated the associated requests.

The message will be routed to different locations according to the task issuing it. For example, "*/2/3" means the message is routed back to the console that initiated the request, to a primary operator, or to the tape pool.

The message will be routed in one of the following ways:
- According to the routing indicators specified by the operator
- According to the default routing instructions previously specified by the operator
- Back to the console that initiated the associated request

The message has no routing code.

A routing code is not applicable for the message.

The message is issued by a WTO or WTOR macro, but has no routing or descriptor codes (old format WTO or WTOR macro).

The message has a routing code of 1, which sends the message to a primary operator, and the message is also routed to the console that it describes.

The message is sent to all active consoles; this is a broadcast message.

The message has a routing code of 2, which sends the message to a primary operator.

The message is routed only to non-printer consoles. This message is not issued by a WTO or WTOR macro.

The message is routed to consoles where one or more of the following are active:
- MONITOR JOB NAMES
- MONITOR SESSIONS
- MONITOR STATUS

The message is issued during the nucleus initialization program (NIP) processing.

The message is issued by the WTL macro.

The message is routed to a SYSPRINT data set by data management.

The message is issued by a WTO or WTOR macro with SYNCH=YES. See z/OS MVS Initialization and Tuning Reference for more information.

The message is routed only to receivers of the hardcopy message set.

The message is routed back to the console that initiated the request and to all associated consoles.

The message is routed to the IPCS print file IPCSPRINT.

The message is issued by JES3. A JES3 destination class is specified either by the initialization stream or by operator commands.

The message is sent in response to a command to the console where the command was entered.

The message is written to a data set. If routing and descriptor codes are also included for the message, the message might also be displayed according to the specified routing and descriptor codes. (The descriptor code does not apply to writing the message to the data set.)
Note 20 JES3 does not issue the message. JES3 sends the message to another subsystem for processing.

Note 21 This message is a trailer attached to multiple messages previously issued. It has the same routing and descriptor codes as the first line of the conglomerate.

Note 22 This message is routed to the transaction program (TP) message log.

Note 23 This message is issued by the device controller. The routing code will vary according to the device controller’s task.

Note 24 This message is routed to the assembly listing.

Note 25 When this message is issued during IPL, the routing codes are 2 and 10 and the descriptor code is 12. When it is issued after IPL, it has no routing code and the descriptor code is 5.

Note 26 When this message is issued during NIP processing, the descriptor code is 12. When it is issued after NIP processing, the descriptor code is 4.

Note 27 The indicated route codes are used only if this message is issued in response to a reply of CKPTDEF during a JES2 checkpoint reconfiguration. This message might be issued to a specific console rather than directed by route code. For further information concerning the routing of JES2 messages issued during a reconfiguration, see [z/OS JES2 Initialization and Tuning Guide].

Note 28 These routing and descriptor codes apply only when SMS issues the message. If SMS returns the message to its caller and the caller issues the message, the codes do not apply.

Note 29 This message is written to the JES3OUT data set.

Note 30 This message is issued by JES3. The message is written to the *MODIFY CONFIG (*F MODIFY) log and/or the issuer of the *F CONFIG command.

Note 31 The routing and descriptor codes for this message are dependent on the setting of indicator bits within the S99EOPTS field in the SVC 99 Request Block Extension (S99RBX). See the [z/OS MVS Programming: Authorized Assembler Services Guide], Processing Messages and Reason Codes from Dynamic Allocation for additional information.

Note 32 Routing code 2 is only applicable if message IYP050D was issued.

Note 33 Routing code 2 is only applicable if message IZP050D was issued.

Note 34 This message is only displayed on the SMCS Console Selection screen, and is not issued via WTO support.

Note 35 By default, IBM Health Checker for z/OS messages does not use routing codes, but the installation can override the default to use routing codes using either the MODIFY hzsproc command or in the HZSPRMxx parmlib member. See [IBM Health Checker for z/OS: User’s Guide] for more information.

Note 36 This message is written to the JESYSMSG data set.

Descriptor codes
Descriptor codes describe the significance of messages. They indicate whether the system or a task stops processing, waits until some action is completed, or continues. This code also determines how the system will display and delete the message.

Association with message type code
Descriptor codes are associated with message type codes, specified by a letter following the message serial number, as follows:
<table>
<thead>
<tr>
<th>Descriptor Code</th>
<th>Type Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>W (wait)</td>
</tr>
<tr>
<td>2</td>
<td>A (action) or D (decision)</td>
</tr>
<tr>
<td>3</td>
<td>E (eventual action)</td>
</tr>
<tr>
<td>4 through 10</td>
<td>I (information)</td>
</tr>
<tr>
<td>11</td>
<td>E (critical eventual action)</td>
</tr>
<tr>
<td>12 and 13</td>
<td>I (information)</td>
</tr>
</tbody>
</table>

**Valid combinations and restrictions for descriptor codes**

Descriptor codes are specified in the DESC parameter of the WTO or WTOR macro. The following restrictions apply when specifying descriptor codes:

- Descriptor codes 1 through 6, 11, and 12 are mutually exclusive. Assign only one of these codes to a message. If you assign two mutually exclusive codes to one message, the system uses the most important code and ignores the other.
- Descriptor codes 7 through 10 and 13 can be assigned in combination with any of the mutually exclusive codes.
- Descriptor code 9 can be used only with descriptor code 8.

Under certain conditions, the system uses a descriptor code other than that specified in the macro as follows:

- The system assigns descriptor code 6 if the macro specifies a ROUTCDE parameter, but no DESC parameter.
- The system assigns descriptor code 7 if all of the following are true:
  1. A problem program issued the macro.
  2. The macro omits both DESC and ROUTCDE parameters, or specifies descriptor codes 1 or 2.
  3. The message is not a multiple-line WTO message.
- The system assigns no descriptor code if all of the following are true:
  1. An authorized program issued the macro.
  2. The macro omits both DESC and ROUTCDE parameters.
  3. The message is not a multiple-line WTO message.

**Note:** An authorized program has at least one of these characteristics:
- Authorized by the authorized program facility (APF)
- Runs in supervisor state
- Runs under PSW key 0 through 7

**Message deletion**

With multiple console support (MCS), action messages with descriptor code 1 or 2 issued by problem programs are assigned descriptor code 7; thus, they are automatically deleted from the system at task or address space ending.

The system deletes messages issued by any program when that program issues the DOM macro for a message.

The operator can manually remove all messages from a display console screen or can set the console to roll messages off the screen.
Message Color
On operator consoles with color, the descriptor code determines the color of the message. The use of color is explained in [z/OS MVS System Commands](#). Also see the descriptions of the CONSOLxx and MPFLSTxx parmlib members in [z/OS MVS Initialization and Tuning Reference](#).

Descriptor code meaning
Descriptor codes appear within the associated message. The descriptor code field can contain the following numeric values, special characters or note.

<table>
<thead>
<tr>
<th>Code</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>System Failure</td>
</tr>
<tr>
<td></td>
<td>The message indicates an error that disrupts system operations. To continue, the operator must reIPL the system or restart a major subsystem. This causes the audible alarm to be sounded.</td>
</tr>
<tr>
<td>2</td>
<td>Immediate Action Required</td>
</tr>
<tr>
<td></td>
<td>The message indicates that the operator must perform an action immediately. The message issuer could be in a wait state until the action is performed or the system needs the action as soon as possible to improve performance. The task waits for the operator to complete the action. This causes the audible alarm to be sounded.</td>
</tr>
<tr>
<td></td>
<td><strong>Note:</strong> When an authorized program issues a message with descriptor code 2, a DOM macro <em>must</em> be issued to delete the message after the requested action is performed.</td>
</tr>
<tr>
<td>3</td>
<td>Eventual Action Required</td>
</tr>
<tr>
<td></td>
<td>The message indicates that the operator must perform an action eventually. The task does not wait for the operator to complete the action.</td>
</tr>
<tr>
<td></td>
<td>If the task can determine when the operator has performed the action, the task should issue a DOM macro to delete the message when the action is complete.</td>
</tr>
<tr>
<td>4</td>
<td>System Status</td>
</tr>
<tr>
<td></td>
<td>The message indicates the status of a system task or of a hardware unit.</td>
</tr>
<tr>
<td>5</td>
<td>Immediate Command Response</td>
</tr>
<tr>
<td></td>
<td>The message is issued as an immediate response to a system command. The response does not depend on another system action or task.</td>
</tr>
<tr>
<td>6</td>
<td>Job Status</td>
</tr>
<tr>
<td></td>
<td>The message indicates the status of a job or job step.</td>
</tr>
<tr>
<td>7</td>
<td>Task-Related</td>
</tr>
<tr>
<td></td>
<td>The message is issued by an application or system program. Messages with this descriptor code are deleted when the job step that issued them ends.</td>
</tr>
<tr>
<td>8</td>
<td>Out-of-Line</td>
</tr>
<tr>
<td></td>
<td>The message, which is one line of a group of one or more lines, is to be displayed out-of-line. If a message cannot be displayed out-of-line because of the device being used, descriptor code 8 is ignored, and the message is displayed in-line with the other messages.</td>
</tr>
<tr>
<td>9</td>
<td>Operator’s Request</td>
</tr>
<tr>
<td></td>
<td>The message is written in response to an operator’s request for information by a DEVSERV, DISPLAY, or MONITOR command.</td>
</tr>
</tbody>
</table>
10 Not defined
Descriptor code 10 is not currently in use.

11 Critical Eventual Action Required
The message indicates that the operator must perform an action eventually, and the action is important enough for the message to remain on the display screen until the action is completed. The task does not wait for the operator to complete the action. This causes the audible alarm to be sounded.

Avoid using this descriptor code for non-critical messages because the display screen could become filled.

If the task can determine when the operator has performed the action, the task should issue a DOM macro to delete the message when the action is complete.

12 Important Information
The message contains important information that must be displayed at a console, but does not require any action in response.

13 Automation Information
Indicates that this message was previously automated.

14-16 Reserved for future use.
/
The message will have different descriptor codes according to the task issuing it. For example, 4/6 means the message can describe system status or job status.

— The message has no descriptor code.

N/A A descriptor code is not applicable for the message.

Note 1
The descriptor code for an IBM Health Checker for z/OS check exception message might vary, because the installation can override the descriptor code either using the MODIFY hzsproc command or in the HZSPRMxx parmlib member. See IBM Health Checker for z/OS: User’s Guide for more information. In addition to the descriptor code selected by the installation, one of the following descriptor codes is also included based on the severity of the check:
- High severity checks use a descriptor code of 11.
- Medium severity checks use a descriptor code of 3.
- Low severity checks use a descriptor code of 12.

Message directory
To use a message prefix to locate the document containing a specific message, see the following table.

### Building your own message library

If you are operators or programmers in an installation, you can build your own libraries of the message and code information that fits your specific needs. You can place into binders the chapters and documents containing only the messages and codes you receive.
Basic documents

Each installation requires at least one copy of each of the MVS System Messages documents and of [z/OS MVS Dump Output Messages]. Regardless of the specific options of your system, you will receive at the console or in listings some subset of the messages in these documents.

Each installation also requires at least one copy of [z/OS MVS System Codes] which contains the 3-digit hexadecimal system completion codes (abend codes) and the wait state codes produced by all the components of the system.

Note: 4-digit decimal user completion codes appear in documents for the component, subsystem, or product that produces the codes. Codes produced by installation-provided programs do not appear in IBM documents.

All programming and operations personnel need access to the basic documents, although application programmers might not need to have their own copies.

Optional documents

For information about message changes for multiple z/OS elements including JES2, JES3, RACF, TCP/IP, and others, see [z/OS Summary of Message and Interface Changes].

CD-ROM collection

A comprehensive source of messages for IBM products is contained in the IBM Online Library Productivity Edition: Messages and Codes Collection, SK2T-2068.

Translating messages

Using the MVS message service (MMS), you can translate MVS system messages into other languages. The following messages cannot be translated:

- Initialization messages
- DFSMS/MVS messages
- JES3 messages
- Some complicated multiple-line messages

See [z/OS MVS Planning: Operations] and [z/OS MVS Programming: Assembler Services Guide] for information about using the MMS.

Finding changes to system message texts

Automation routines are sensitive to message text changes between releases. So before migrating from your current release to another one, you might need to check out the message changes. The summary of changes of the related messages books can be a helpful reference; an alternative can identify changes to message texts more accurately: comparing the SYS1.MSGENU data set.

IBM supplies a data set containing the text of system messages that are translated. This data set, called SYS1.MSGENU, contains the text of system messages in the form of message skeletons.

Note that this method will not show changes to messages that are not translated:

- MVS system messages that are not translated, such as IPL and NIP messages (which are issued before the MVS message service is available)
- Other product messages that are not translated, such as DFSMS/MVS messages, and JES3 messages.

You can compare the new data set with the data set on the system from which you are migrating. Depending on how you do the comparison, you can get output like the following.
For new messages, the output might show an I (for Insert) on the left:
I - IEA403I VALUE OF RMAX HAS BEEN CHANGED TO 99

For messages with changed text, the output might show both an I and a D, indicating that a record in the message file has been replaced:
I - IEE162I 46 &NNN. ROLL &A. MESSAGES (DEL=R OR RD)
D - IEE162I 46 &NNN. ROLL &A. MESSAGES (DEL=R, RD)

This means that, in message IEE162I, (DEL=R, RD) was replaced by (DEL=R OR RD).

Using this information, you can decide if your automation routines need to be changed.
Chapter 2. IEF messages

IEF001I   ERROR ON WRITE TO SYSTEM MESSAGE FILE

Explanation: The system found an error while attempting to write to the system message file.

System action: The system issues message IEF001I and continues processing the job.

Application Programmer Response: This message indicates that an error was found while attempting to write to the system message file. The error in writing to this file does not impede restart processing, but may be of interest in the context of record keeping. Inform the installation system programmer of the error.

System programmer response: If the error persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

Source: Scheduler restart

Detecting Module: IEFXB601
Routing Code: 11
Descriptor Code: 6

IEF002W   PENDING DEVICE PROCESSING MODULE IEFHBPDDB HAS FAILED

Explanation: While attaching or reattaching the IEFHBPDDB task in the Allocation Address Space (ALLOCAS), the task exceeded the number of consecutive errors allowed. A non-restartable wait state is loaded because UNLOAD, VARY OFFLINE or VARY ONLINE commands cannot be processed without this task.

System action: The system enters wait state X'204' with reason X'007'.

Operator response: See the operator response for the wait state.

System programmer response: See the system programmer response for the wait state.

Source: Device Allocation

Detecting Module: IEFHBPD
Routing Code: 1
Descriptor Code: 6

IEF003I  jobname procstep stepname ddname + xxx - DD THAT IS CAUSING THE ABEND05C RC309

Explanation: This message identifies the DD statement for which an ABEND05C RC309 is issued and the device(s) selected for an allocation by JES3 and the device(s) selected for allocation by the MVS Allocation component.

In the message text:

jobname  The name of the job.
procstep  The name of the step in the procedure.
stepname  The name of the job step.
ddname    The name of the DD statement.
+xxx      The relative position of a concatenated DD statement in relation to the first DD.

IEF004I  jobname procstep stepname ddname + xxxx ERROR PROCESSING UNIT AFFINITY REQUEST

Explanation: The system detected an error while processing a VOLUME=REF reference to a DD statement with a UNIT=AFF reference.

In the message text:

jobname  The name of the job.
procstep  The name of the step in the cataloged procedure.
stepname  The name of the job step.
ddname    The name of the DD statement.
+xxx      The relative position of a concatenated DD statement in relation to the first DD.

© Copyright IBM Corp. 1988, 2009
Application Programmer Response: Check that the step name on the refer back is unique. Check the spelling of the names on the refer back and the unit affinity request on the referenced statement. After correcting the error, submit the job again.

System programmer response: Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

Source: Allocation

Detecting Module: The detecting module is IEFAB421.
The containing module is IEFBB4M5.
Routing Code: Hardcopy only
Descriptor Code: 6

IEF006I  jobname RESTARTING AT xxxxxxxx K,
         yyyyyyy K, aaaaaaaa K, bbbbbbbb K

Explanation: During restart operation of a checkpointed job, the virtual storage indicated in the message text was requested.

In the message text:
jobname The name of the checkpointed job undergoing a restart operation.
xxxxxxxxx The lowest address in the private area (below 16 megabytes).
yyyyyyyyy The highest address in the private area (below 16 megabytes).
aaaaaaaa The lowest address in the extended private area.
bbbbbbbb The highest address in the extended private area.

System action: If the requested areas are currently unavailable, a restart operation is delayed until the areas become available.

Operator response: If a restart operation is delayed for a long period of time, enter the DISPLAY A command to determine if the required areas are occupied by system tasks or by other job step tasks.
• If the area is occupied by another system task, either allow the system task to continue and end (if the task is a reader), or stop the system task (if the task is a reader or writer).
• If the area is occupied by another job step task, either allow the job step task to continue and end, or cancel the job step task.

Source: Scheduler restart

Detecting Module: IEFXB609
Routing Code: 2
Descriptor Code: 6
Explanation: An error occurred during checkpoint restart for a job. In the message text:

jobname  The name of the checkpointed job.
reason-code  A decimal reason code that indicates why the restart was not successful, as follows:

031  A DD statement was DUMMY in the original running of the job, but is not DUMMY in the restart.
034  A DD statement is missing for the restarted step.
038  An uncorrectable input/output error occurred when the system read the checkpoint data set.
230  The checkpoint data set was not secure.
231  An error occurred during dynamic allocation of the checkpoint data set.
232  The system could not open the checkpoint data set successfully.
233  In a partitioned checkpoint data set, the system could not find the specified entry.
235  The system encountered a checkpoint entry record of an undetermined type, or did not find an END record when expected.
237  The system could not find a specified checkpoint entry.
238  An error occurred during dynamic allocation or dynamic deallocation for a private or implied catalog needed to process the data set descriptor record (DSDR).
239  During a deferred restart, the system found a non-DUMMY DD entry for a virtual input output (VIO) data set, or allocated a dynamically allocated VIO data set after taking the checkpoint.
260  The scheduler work area (SWA) for the checkpointed job resides above 16 megabytes. This indicates that the job is not eligible for checkpoint restart.
261  An error occurred while the system was establishing the recovery environment for checkpoint restart processing.
262  An error occurred while the system was processing a data set descriptor record (DSDR) representing a DD names table (DDNT).
263  Scheduler restart found a unit affinity request that was not valid.
266  Opening of the checkpoint data set abnormally ended.
267  An error occurred during a request to convert a device type to a look-up value for the checkpoint data set.
280  An error occurred during processing of a scheduler work area (SWA) manager request.
281  No external parameter area (EPA) pointer was specified for a SWA manager request.
282  An incorrect scheduler work area (SWA) Manager request type was specified.
283  An incorrect scheduler work area virtual address (SVA) was specified in the external parameter area (EPA).
300  The data set descriptor record (DSDR) type read is not the requested type.
301  A Data Facility Product (DFP) routine returned an error.
320  The requested function is not supported by the restart step input output table / job file control block (SIOT/JFCB).
321  An error occurred during unit verification for a request to convert device type to look-up value.
340  An error occurred during processing of a data set descriptor record (DSDR)
that represents a dynamically allocated step input output table (SIOT).

341 An error occurred during processing of a data set descriptor record (DSDR) that represents a dynamically allocated generation data group (GDG) ALL step input output table (SIOT).

380 An error occurred during processing of a step input output table/job file control block (SIOT/JFCB) that had no matching data set descriptor record (DSDR).

400 An error occurred during processing of a request to update the data set enqueue table.

420 An error occurred during processing of a merge request.

The system does not support the requested function.

441 An incorrect type of scheduler work block (SWB) data set descriptor record (DSDR) was issued.

442 An error was returned for a request to delete a scheduler work block (SWB) request.

443 An error was returned for a request to delete a scheduler work block (SWB) request.

A DASD device number was not valid.

System action: The system ends restart of the job. The system may issue additional messages. Other system processing continues.

System programmer response: Depending on the reason code, do one of the following:

031 Change the DD statement to DUMMY.

034 Supply the missing DD statement. Then resubmit the job.

038 Restart at an earlier checkpoint, or run the job again, using a different volume. For a deferred restart, attempt the restart again after varying the device containing the checkpoint data set offline.

230 Ask the operator to verify the secure status of the volume.

231 See the system programmer response for the accompanying message

232 Submit the job again.

233, 237 Verify the accuracy of CHECKID for the checkpoint entry in the RESTART parameter of the JOB statement. Submit the job again.

235 Select another checkpoint entry. Submit the job again.

238 Verify the status and contents of all private and implicit catalogs used by this job.

239 Change virtual input output (VIO) data sets to DUMMY. Submit the job again.

260 Submit the job for a deferred checkpoint restart in a job class that will keep the SWA below 16 megabytes.

263 Verify that all unit affinity requests are valid. See [z/OS DFSMSdfp Checkpoint/Restart] for restrictions on using dynamic concatenation. Correct unit affinity requests. Resubmit the job.

For reason code 261, 262, 266, 267, 280, 281, 282, 283, 300, 320, 321, 340, 341, 380, 400 or 420 resubmit the job. If the error occurs again, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

Routing Code: 2,11

Descriptor Code: 6

IEF008I DASD DEVICE devnum NOT VARIED ONLINE - VOLUME SERIAL NOT VALID

Explanation: The system detected a volume serial number that was not valid for a direct access storage device (DASD) during allocation processing of one of the following:

- A VARY online command
- An offline device that was selected for the VARY command either by response to message IEF238D or the allocated/offline installation exit.

In the message text:

devnum The direct access storage device.

System action: The system does one of the following:

- For the VARY online command, the system leaves the requested device online.
- For an offline device that was selected for the VARY command, the system leaves the device offline, and issues message IEF490I followed by message IEF238D.

Operator response: Notify the system programmer of the problem. If the problem occurred because of:
The VARY online command, select another device.

For an offline device that was selected, either reply to message IEF238D with another device from the list displayed by previous messages IEF448I, IEF877E or IEF878I or reply 'CANCEL' to cancel the job.

**System programmer response:** Ensure that the device is functioning correctly. Verify that the device has a correct standard label. If necessary, refresh the volume label and try to vary the device online so that the system can attempt to verify the volume serial. Further errors can indicate that the device experienced a hardware failure; in this case, contact hardware support.

**Source:** Allocation

**Detecting Module:** IEFAB4F8

**Routing Code:** *

**Descriptor Code:** /

---

**IEF009I**

**CONCATENATE REQUEST FAILED - ACTUAL/CAPTURED UCB ATTRIBUTES OF SPECIFIED DD STATEMENTS DO NOT MATCH**

**Explanation:** A request has been made to dynamically concatenate 2 or more DD statements. One or more of the DD statements to be included in the concatenation had its UCB(s) CAPTURED to below-the-line storage and one or more of the DD statements to be included in the concatenation did not have its UCB(s) CAPTURED to below-the-line storage. In order for the system to honor the concatenation request, all DD statements must either have all of their allocated device UCBs CAPTURED to below-the-line storage or none of their allocated device UCBs CAPTURED to below-the-line storage.

**Note:** All UCBs for batch allocated DD statements (JCL) are CAPTURED to below-the-line storage. Dynamically Allocated DD statements can request that their allocated device UCBs not be CAPTURED to below-the-line storage by setting the S99ACUCB indicator in the SVC 99 Request Block (S99RB). S99ACUCB requests that the UCB(s) for the device(s) being allocated be addressed by its actual address rather than being CAPTURED to below-the-line storage.

**System action:** The system disallows the dynamic concatenation and returns dynamic allocation error reason code RCACUCB (X'04E0').

**Application Programmer Response:** If the program is attempting to concatenate Batch (JCL) DD statements and dynamically-allocated (SVC 99) DD statements, change the program not to set S99ACUCB. If the program is attempting to concatenate dynamically-allocated (SVC 99) DD statements only, change the program so it consistently sets S99ACUCB either on or off.

---

**IEF010I**

**CHECKPOINT RESTART OF JOB**

**jobname ABENDED - code**

**Explanation:** During initialization for restart of a checkpointed job, an error in the processing of the checkpoint data set caused an abend.

In the message text:

- **jobname** The name of the checkpointed job.
- **code** The abend code.

**System action:** The system writes an SVC dump. The system abnormally ends the job.

**System programmer response:** See the system programmer response for the abend.

**Source:** Scheduler restart

**Detecting Module:** IEFX0609

**Routing Code:** 2,11

**Descriptor Code:** 6

---

**IEF011I**

**jobname [procstep] stepname ddname[+xxx] — DEVICE dev IS BOXED — CANNOT BE ALLOCATED**

**Explanation:** The DD statement requested a specific device. The system could not allocate the device, because some earlier processing (hot I/O processing or VARY dev,OFFLINE,FORCE command processing, for example) boxed the device.

When a device is boxed, these events occur:

- I/O on the device ends.
- Any new I/O requests result in permanent I/O errors.
- No new allocations are done for the device.
- If the device was online, it is marked pending offline. The device goes offline when these conditions occur, in this order:
  1. The device is no longer allocated to any job.
  2. Allocation can get the necessary resources to process the request.

If the device was offline, it remains offline.

In the message text:

- **jobname** The name of the job.
- **procstep** The name of the step in the procedure.
IEF013I • IEF016I

**IEF013I**  jobname CANNOT BE CANCELLED BECAUSE IT IS WAITING ON I/O

**Explanation:** An attempt was made to cancel the job jobname, however it cannot be cancelled while it is waiting for I/O that was initiated as part of job or step termination.

In the message text:

<table>
<thead>
<tr>
<th>jobname</th>
<th>The name of the job which could not be cancelled.</th>
</tr>
</thead>
</table>

**System action:** The system continues to wait for the I/O to complete. The cancel command is not processed and the job will end normally when the I/O completes or is timed out.

**Operator response:** None. The job will finish when the I/O has completed.

**Application Programmer Response:** None.

**Source:** Allocation

**Detecting Module:** IEFAB4FD

---

**IEF016I**  jobname procstep stepname ddname +xxx UNABLE TO ALLOCATE UNINITIALIZED SPOOL DATASET

**Explanation:** During a spool data set browse allocation request, JES2 determined that the data set was uninitialized (PDBMTTR was zero).

In the message text:

<table>
<thead>
<tr>
<th>jobname</th>
<th>The name of the job that made the request.</th>
</tr>
</thead>
<tbody>
<tr>
<td>procstep</td>
<td>The name of the step in the procedure.</td>
</tr>
<tr>
<td>stepname</td>
<td>The name of the step.</td>
</tr>
<tr>
<td>ddname</td>
<td>The name of the DD.</td>
</tr>
</tbody>
</table>

**System action:** The allocation request is failed.

**Operator response:** Contact your system programmer.

**System programmer response:**
- If the failure occurs in a DB2® environment, contact DB2 support for a possible workaround.
- If not in a DB2 environment, either reduce the number of concurrent system-generated DDNAME allocations or avoid using system-generated ddnames.

**Source:** Allocation

**Detecting Module:** IEFDB4Fd
System action: The Allocation request is failed.

Application Programmer Response: Resubmit the spool browse request.

Source: Allocation

Detecting Module: IEFAB427

IEF017I  
*jobname procstep stepname ddbname*  
+xxx FAILED TO UNLOAD VOLUME  
*volser from DEVICE devnum - text*

Explanation: Allocation attempted to unload a volume needed by this job from the device where it is currently mounted but failed.

In the message text:

*jobname*  
The name of the job that made the request.

*procstep*  
The name of the step in the procedure.

*stepname*  
The name of the step.

*ddname*  
The name of the DD.

+xxx  
The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User's Guide](https://www.ibm.com/support/docview.wss?uid=swg21172005) for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

*volser*  
The volume serial number

*devnum*  
The device number

*text*  
Indicates the cause of the failure and is one of the following:  
* DEVICE ENQ FAILED  
* DEVICE ASSIGN FAILED*

System action: The Allocation request is failed.

Application Programmer Response: Resubmit the spool browse request.

Source: Allocation

IEF018I  
CRITICAL INTERNAL ALLOCATION  
TAPE PROCESSING ERROR DETECTED

Explanation: Allocation detected a corrupted hash value for tape processing. Ramifications of a corrupted hash value may include erroneous D UAS processing, failure to reclaim devices that are no longer assigned to a foreign host (AFH), and outstanding device enqueues.

System action: The system issues an abend 05C reason code 254 and takes a dump.

Operator response: Notify the System Programmer about the message and abend.

System programmer response: The corruption can be cleared by reIPLing. If you need assistance, contact the IBM Support Center.

Source: Allocation

Detecting Module: IEFHTSWT, IEFABFX and IEECB859

IEF019I  
*jobname procstep stepname ddbname*  
+xxx THE ALLOCATED/OFFLINE EXIT,  
IEF_ALLC_OFFLN, DIRECTED ALLOCATION TO WAIT

Explanation: The Recovery Allocation Allocated/Offline Exit requested the special Wait/Nohold Action (XWAITNHL - X'04') to direct Allocation to enter into a Wait/Nohold state even though Allocation does not detect any eligible devices to Wait on.

In the message text:

*jobname*  
The name of the job.

*procstep*  
The name of the step in the procedure.

*stepname*  
The name of the step.

*ddname*  
The name of the DD statement.

+xxx  
The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User's Guide](https://www.ibm.com/support/docview.wss?uid=swg21172005) for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The Allocation request will be posted from its waiting condition for the following actions:  
* An eligible device is Unallocated by another Job on this system.  
* An eligible Offline device is brought Online on this system.  
* The Job is Cancelled.

Application Programmer Response: None

Source: Recovery Allocation

Detecting Module: IEFAB48A

Routing Code: 4
IEF020I jobname procstep stepname TCT I/O TABLE SIZE EXCEEDS THE 16MB MAXIMUM.

Explanation: In the message text:

jobname     The name of the job.
procstep    The name of the step in the procedure.
stepname    The name of the job step.

System action: The system fails the dynamic allocation or dynamic concatenation request with dynamic allocation error reason code X'04FC'.

Application Programmer Response: If the job that received the message has JCL DD statements which specify a high volume count or the job that received the message uses dynamic allocation to allocate data sets and specifies a high volume count, reduce the volume count and rerun the job. If the volume count is derived from the Data Class, use a Data Class which has a lower volume count and dynamic volume count, or contact the Storage Administrator.

Storage Administrator Response: Reduce the volume count or dynamic volume count specified in the DATACLAS.

Source: Allocation

Detecting Module: IEFDB4F8 and IEFDB4F9

IEF022I jobname [procstep] stepname ddname [+] xxx ALLOCATION FAILED - REQUESTED DEVICE IS MARKED UNAVAILABLE

Explanation: The allocation request failed because the system programmer marked the required tape device as unavailable to allocation by the VARY xxxx,UNAVAILABLE command.

If a VARY ONLINE or VARY AVAILABLE command was done while the job was in allocation, any new devices made available by the command are not available to the job, because jobs in the recovery allocation are still locked onto the eligible device table (EDT) as existed at the start of device allocation processing. The newly available device becomes available only after the job ends, or is cancelled, and then is submitted again.

In the message text:

jobname     The name of the job.
procstep    The name of the step in the procedure.
stepname    The name of the job step.
ddname    The name of the DD statement.
xxx         The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See z/OS MVS JCL User's Guide for more information about GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The allocation request fails. If the request is from a batch job, the job fails. If the request is from Dynamic Allocation, the request fails but the job continues processing unless the application program decides to end.

Operator response: None.

System programmer response: If EAV volumes are needed, use the SETSMS command to change the USEEAV setting in IGDSMSxx.

Source: Allocation

Detecting Module: IEFAB424, IEFAB433

Routing Code: None.

Descriptor Code: None.
implicitly concatenated (through GDG ALL or OPTCD=B requests). See \textit{z/OS MVS JCL User's Guide} for more information about GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

**System action:** System processing continues.

**Operator response:** None

**System programmer response:** None

**Problem determination:** Use the display units command (D U,,devnum,1) to determine the status of the device as coded in the JCL or dynamic allocation request. If the JCL or dynamic allocation request cannot be updated to request a different device number, use the VARY ONLINE or VARY AVAILABLE commands to change the device status and make it available for allocation. Use the D U,TAPE,UNAVAIL command to show all offline, unavailable tape devices and determine a different device.

**Source:** Allocation

**Detecting Module:** IEFAB424

**Routing Code:** 11,Note 36.

**Descriptor Code:** N/A

**IEF023I**

**jobname** [procstep] **stepname** **ddname** [+ xxx] ALLOCATION FAILED - NOT ENOUGH ELIGIBLE LIBRARY DEVICES

**Explanation:** The allocation request failed because the request required more tape devices than the number of available devices contained in any eligible system-managed tape library.

In the message text:

- **jobname** The name of the job.
- **procstep** The name of the step in the procedure.
- **stepname** The name of the job step.
- **ddname** The name of the DD statement.
- **+ xxx** The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See \textit{z/OS MVS JCL User's Guide} for more information about GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

**System action:** The system ends the job.

**Operator response:** Reduce the unit count and resubmit the job. If the problem persists, notify the System Programmer.

**System programmer response:** The problem might be because some tape library devices are marked unavailable. Because the system cannot use unavailable devices, there might be fewer than the requested number of devices available for allocation. Make more devices available to Allocation by varying them online or by varying them available and resubmit the job. If the problem recurs, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM support center.

**Routing Code:** 11,Note 36.

**Descriptor Code:** N/A

**IEF030I**

**VOLUME actvol DOES NOT MATCH REQUESTED VOLUME reqvol**

**Explanation:** This message indicates that the response to IEF238D was for a DASD device with a volume that did not match the volume in message IEF877E. The IEF238D message will be issued again if another unit cannot be found to satisfy the allocation request. This message is issued as part of IEF104I, which describes why allocation could not bring a device online.

In the message text:

- **actvol** The volume serial number that is mounted on the device.
- **reqvol** The volume serial number that is being required by the allocation request.

**System action:** The system attempts the allocation again. If a device with the required volume has not been made available by other means, such as an operator vary command, the system issues message IEF238D again.

**Operator response:** Reply to IEF238D, specify a device number with the required volume, or specify one of the other options.

**Storage Administrator Response:** Reduce the volume count or dynamic volume count specified in the DATACLAS.

**Source:** Allocation

**Detecting Module:** IEFAB4ON

**Routing Code:** 2,3/4,7

**Descriptor Code:** N/A
IEF031I  DEVICE CANNOT BE USED

Explanation:  This message is issued as part of IEF104I which describes why Allocation could not bring a device online. IEF031I indicates that Allocation encountered a problem with the device that was specified in the response to IEF238D. One of the following problems occurred:

- The device was assigned to another system.
- The device has a volume serial that duplicates another device already online to the system.
- Device is not accessible.
- An I/O error occurred.
- The device has NED value that is the same as that of another online device. Refer to message IEF293I that is issued along with this message for more information.

System action:  The system attempts the allocation again. If a usable device has not been made available by other means, such as an operator vary command, or deallocation by another job, the system issues message IEF238D again.

Operator response:  Reply to IEF238D, specifying a device number that can be used on this system or one of the other options.

IEF042I  JOB CANCELLED BY INSTALLATION EXIT - xxxxxxxx

Explanation:  The exit indicated in the message returned control to the system with a completion code of four.

xxxxxxx  The name of the exit which set a completion code of four, causing the job to be cancelled.

System action:  The system ends the job.

Application Programmer Response:  Contact the programmer responsible for the specified exit to determine what local JCL standards have been violated. Correct the violations and resubmit the job.

Source:  Interpreter/System Management Facilities (SMF)
Detecting Module:  IEFVHH/IEFTB722

IEF083I  UNIDENTIFIED PARAMETER IN THE parameter FIELD

Explanation:  The system did not recognize the value specified for a parameter in a JCL statement. The value might be misspelled or incorrect.

In the message text:

parameter  The JCL parameter for which an incorrect value was specified.

System action:  The system ends the job but scans the remaining job control statements for syntax errors. The system issues messages about this job to the job log.

System programmer response:  Correct the parameter and resubmit the job.

Source:  Converter/interpreter
Detecting Module:  IEFVJDTI

IEF085I  REGION UNAVAILABLE, ERROR CODE=cde

Explanation:  During initialization of a job step, the initiator could not obtain a region for the step.

In the message text:

cde  The error code, in decimal, as follows:

08  The job step requested a V=V (virtual=virtual) region. The requested address is outside the bounds of the extended private area.

16  The job step requested a V=R (virtual=real) region, but one of the following occurred:
- The initiator could not obtain the requested V=R region because of long-fixed or damaged pages in the V=R region.
- Storage within the requested V=R region was varied offline so there is not enough contiguous V=R storage available.
- There is not enough system queue area (SQA) storage available for the system to complete the request.

20  Error code 20 may appear for one of several reasons:
- The job step requested a V=V region, but there was not enough virtual storage in the region.
- Fragmentation of the local system queue area (LSQA), scheduler work area (SWA) or subpools 229, 230, or 249 occurred, making it impossible to obtain the region requested by the job step.
- The job step requested a V=R region that exceeds the global V=R area size.
The job step requested a V=R region that exceeds the defined limits at your installation.

**System action:** The system abnormally ends the step with abend code X'822'.

**Operator response:** See the operator response for abend X'822'.

**System programmer response:** Resubmit the job.

If cde is 08, it might be necessary to either decrease the size requested for the region or to submit the job to be run on a system with a larger amount of V=R storage available or a larger private area. For a V=V region, storage above the line might become available by specifying a value greater than 16 megabytes.

If cde is 16, display storage (D M operator command) to determine if any offline storage is within the requested V=R region. If there is offline storage in the requested V=R region, vary the offline storage online before resubmitting the job.

If cde is 20, and if a V=V region with a size approximately equal to the private area was requested, it might be necessary to decrease the region size. Or, storage above the line might become available by specifying a value greater than 16 megabytes.

If cde is 24, request a region whose size is not greater than the limit set by the installation GETPART exit routine.

See the system programmer response for abend X'822'.

**IEF086I**  ERROR IN SWA RECOVERY - RESTART CANCELLED. REASON CODE = reason-code

**Explanation:** During restart of a checkpointed job, the system found an error while merging control blocks from the job journal with those already in the scheduler work area (SWA). The system could not find a control block that required updating. The following are the decimal reason codes:

1. Failing step not found on journal.
2. VIO merge failed.
3. Template mismatch in system merge.
4. VAT and journal ID's do not match.
5. Critical block without a matching VAT entry.
6. Not all SVAs were matched.
7. Template mismatch in checkpoint merge.
8. Template mismatch in step merge.
9. SJF delete failed.
10. SJF put failed.

In the message text:

```
reason-code
The internal reason code.
```

**System action:** The system stops restart of the job.

**System programmer response:** Resubmit the job as a deferred step or a checkpoint/restart. If the problem recurs, contact the IBM Support Center and provide the internal reason code.

**Source:** Scheduler restart

---

**IEF089I** ERROR ON WRITE TO JOB JOURNAL-JOB NOT ELIGIBLE FOR RESTART.

**Explanation:** During journaling of a checkpointed job, the system found an error while attempting to write to the job journal.
IEF090E  PROTECT KEY UNAVAILABLE jobname PLACED ON HOLDQ

Explanation: During initialization of a job step, the initiator could not assign the job a needed protection key. The job requested ADDRSPC=REAL for at least one step; all protection keys, 9 through 15, were currently assigned to other jobs that require unique protection keys. The jobs that require unique protection keys are those that specify ADDRSPC=REAL for one or more steps.

In the message text:

jobname The job name.

System action: The initiator places the job on the HOLD queue.

Operator response: Either release the job from the HOLD queue at a time when a protection key is available or cancel the job. If a protection key does not become available soon, enter a DISPLAY A command to determine if fewer than 7 jobs are reserving a protection key. If there are fewer than 7 jobs, tell the system programmer.

System programmer response: Search problem reporting data bases for a fix for the problem. If no fix exists, contact the appropriate group at the IBM Support Center.

Descriptor Code: 3

IEF091I  jobname [procstep] stepname WAITING FOR xxxK REAL STORAGE

Explanation: During initiation of a procedure, real storage manager could not obtain the requested V=R region.

In the message text:

jobname The name of the job that requested real storage.

procstep The name of the step in the procedure.

stepname The name of the step.

xxxK The size of the requested region of real storage.

System action: The initiator waits until the storage is available.

Operator response: Do one of the following:
- Enter a CANCEL command for other jobs that are running in V=R storage, in an effort to free V=R storage.
- Enter a CANCEL command for the job.

System programmer response: If this message occurs frequently:
- Recreate the problem and ask the operator to enter a DUMP command and reply with the SDATA options NUC, PSA, and SQA.
- Analyze the dump for RSMDATA SUMMARY information.
- Analyze the dump for RSMDATA REALFRAME information.
- Increase the amount of non-preferred storage by increasing the size of the RSU parameter in the IEASYSxx parmlib member. If this does not correct the problem, continue with the next step.
• Increase the amount of V=R storage by increasing the size of the REAL parameter in the IEASYSxx parmlib member. If this does not correct the problem, continue with the next step.
• Change the attributes in the program property table (PPT) to make any job polluting the V=R region a preferred user in the PPT. Use the SCHEDxx parmlib member to update the PPT bits.

IEF093I INITIATOR TERMINATED DUE TO REGION LOSS location

Explanation: When ending a batch job, the initiator/terminator found that the maximum possible region size had decreased by more than the amount specified on the CHECKREGIONLOSS parameter in parmlib member DIAGxx. See [z/OS MVS Initialization and Tuning Reference] for more information on DIAGxx. The initiator will terminate to avoid abend 822 in a subsequent job that was selected by this initiator.

In the message text:

location The location is one of the following:
• ABOVE 16 MB
• BELOW 16 MB
• ABOVE AND BELOW 16 MB

System action: The system ends the current job normally. The initiator in this address space will be ended.

Operator response: Restart the initiator that ended.

System programmer response: If desired, a dump can be obtained by setting a SLIP trap which specifies MSGID=IEF094A and rerunning the job which caused the problem.

Source: Initiator/terminator
Detecting Module: IEFSD166

IEF101I text1 [text2] ABEND=cde[,REASON=rrrr]

Explanation: text1 is one of the following:
ALLOCAS FAILED
ERROR
FAILED

text2 is one of the following:
DURING CREATE,
DURING INITIALIZATION,
DURING PROCESSING,

An error occurred in allocation processing. In the message text:
ALLOCAS FAILED DURING phase
The error occurred in the allocation address space.

ERROR
The error occurred in allocation processing.

FAILED
The error causes the system to end the allocation address space.

If the system can determine when the error occurred, one of these phrases appears as phase:

CREATE
The error occurred while the system was creating the allocation address space.

INITIALIZATION
The error occurred while the system was initializing the allocation address space.

PROCESSING
The error occurred during allocation processing:
• In a PC (program call) instruction to the allocation address space.
• While manipulating data in the allocation address space.
• After processing a PT (program transfer) instruction from the allocation address space.

ABEND=cde
The system completion code that describes the error.

REASON=rrrr
Appears if the value for cde is 05C. Report this reason code to the IBM Support Center. See mvs system codes for more information on the abend and reason codes.

System action: If ERROR appears in the message text, allocation processing continues. If FAILED appears, the running unit of work is terminated. If DURING INITIALIZATION appears, the system ends the allocation address space and cannot allocate tape devices or run the DISPLAY U,,ALLOC command, which will likely require the system to be reIPLed. In either case, the system writes an SVC dump and a logrec data set error record.

Operator response: Notify the system programmer.

System programmer response: If the system ended the allocation address space, that address space does not restart until system reIPL.

Detecting Module: IEFAB488  
Routing Code: 2,3/4,7  
Descriptor Code: 6

### IEF107I  
**Explanation:** The SETLOAD PARMLIB command processed successfully.

In the message text:

- **loadxx**  
The name of the LOADxx parmlib member used to dynamically change the parmlib concatenation.

Source: Allocation/Unallocation

Detecting Module: IEFPSACT  
Routing Code:  
Descriptor Code: 5

### IEF106I  
**Explanation:** The system brought the specified device online. The device may or may not be usable depending on the hardware or software status of the device. This message is followed by additional information consisting of a name, a code, and details describing the status of the device. The system marks the end of the additional information with an end-of-message indicator.

In the message text:

- **jobname**  
The name of the job that is bringing the device online.
- **dev**  
The device number of the unit.
- **name**  
A 1- to 8-character name
- **code**  
An 8-digit number that, in conjunction with the name, uniquely identifies the condition
- **text**  
A set of messages that further describe the device status. If the device is not usable, these details may suggest remedial action.

**System action:** Check the additional information to determine if the device is usable. If the device is not usable in its current state, check the message text for a suggested remedial action and follow that procedure.

**System programmer response:** If the problem persists, search problem reporting databases for a fix. If no fix exists, contact the IBM Support Center.

Source: Allocation/Unallocation

Detecting Module: IEFAB488  
Routing Code: 2,3/4,7

IEF110I UNIT dddd DEALLOCATED BY SYSTEM DURING VARY OFFLINE PROCESSING BECAUSE NO ALLOCATED ASID WAS FOUND

Explanation: Unit dddd was in the process of being varied offline (either due to operator request, processing of a previously pending offline device, or due to system action), when it was found to be marked allocated. However, the allocation was not recorded in any currently-valid address space on the system; this means that no job, started task, or subsystem that allocated the unit using JCL or dynamic allocation remains allocated

IEF109I PARMLIB CONCATENATION WAS NOT UPDATED FROM loadxx. reason

Explanation: The SETLOAD PARMLIB command did not process successfully.

In the message text:

loadxx
   The name of the LOADxx parmlib member used to dynamically change the parmlib concatenation.

reason
   One of the following:
   • INSUFFICIENT STORAGE AVAILABLE
     – There was insufficient storage space to process the request
   • THE LIMIT OF DATA SETS WAS EXCEEDED WHEN PROCESSING DATA SET dsname
     – The LOADxx parmlib member specified more than 10 data sets. dsname is the name of the data set being processed when the limit was exceeded.
   • IEFPRMLB RETURN CODE=return-code
     REASON=reason
     – An unexpected error occurred. The return and reason codes are from the IEFPRMLB service. A message issued by the IEFPRMLB service accompanies this message.

System action: The system continues to use the parmlib concatenation that existed before the SETLOAD command was issued.

Operator response: Depending on the message text, do one of the following:

INSUFFICIENT STORAGE AVAILABLE
   Re-issue the SETLOAD command. If it fails again, contact the system programmer.

THE LIMIT OF DATA SETS WAS EXCEEDED WHEN PROCESSING DATA SET
   Contact the system programmer. Re-issue the SETLOAD command after the system programmer corrects the loadxx member.

IEFPRMLB RETURN CODE=return-code
REASON=reason
   Contact the system programmer.

System programmer response: Depending on the message text, do one of the following:

INSUFFICIENT STORAGE AVAILABLE
   Examine the system log to try and determine why the shortage occurred. Fix the problem, if possible, and have the operator re-issue the SETLOAD command. If unable to determine or fix the cause of the storage shortage, contact IBM Software Support.

THE LIMIT OF DATA SETS WAS EXCEEDED WHEN PROCESSING DATA SET
   Examine the loadxx member and ensure that no more than 10 parmlib data sets are specified.

IEFPRMLB RETURN CODE=return-code
REASON=reason
   Examine the console log to determine why the logical parmlib service failed. If necessary, contact IBM Software Support.

Source: Allocation/Unallocation
Detecting Module: IEFPSACT
Routing Code: -
Descriptor Code: 5
to the unit. Therefore, the allocation is treated as an invalid allocation and removed by the system.

**System action:** The unit is deallocated by the system. All system-maintained counts of users allocated to the unit are reinitialized. Vary offline processing continues.

**Application Programmer Response:** The unit may be varied back online and made available for use. Report message IEF110I to your system programmer, because this may indicate an unusual condition in the system.

**System programmer response:** Message IEF110I indicates the unit was marked allocated when it shouldn’t be marked allocated. Most likely, this is due to an IPL-time subsystem or system service that simply marked the Unit Control Block (UCB) allocated, and subsequently failed to mark the unit unallocated. However, if you know of a system service that marks a unit allocated in this way, and has not terminated yet (that is, the system service or program is still up and running and may actively be using the unit), leave the device offline (once it goes offline), since that system service is still allocated to it. Otherwise, it is probably safe to bring the unit back online, particularly if it is a sharable device (that is, DASD). If the unit is a non-sharable device (that is, tape), and you want to be absolutely sure that multiple users are not allocated to the unit at the same time, then leave the unit offline until the next IPL.

If this message appears repeatedly, examine the unit for possible hardware errors. If none are found, search problem reporting databases for a fix. If none is found, contact the IBM Support Center.

```
jobname [procstep] stepname ddname [ + xxx ] ALLOCATION FAILED - DEVICE dev IS NOT IN LIBRARY library
```

**Explanation:** The allocation request failed because the requested volume.

**In the message text:**

- `jobname` The name of the job.
- `procstep` The name of the step in the cataloged procedure.
- `stepname` The name of the job step.
- `ddname` The name of the DD statement.
- `dev` The device number of the device to be allocated to the volume.
- `library` The name of the library containing the volume to be allocated.

---

**IEF112I**

```
jobname [procstep] stepname ddname [ + xxx ] UNABLE TO ALLOCATE UNITS TO ONE GENERIC. REQUESTED ddd1, STILL NEEDED ddd2
```

**Explanation:** GENERICS generic {, generic...}

The allocation request failed because the request requires that all tape devices have the same generic unit name. The system could not assign all devices within one of the eligible generic unit names.

**In the message text:**

- `jobname` The name of the job.
- `procstep` The name of the step in the cataloged procedure.
- `stepname` The name of the job step.
- `ddname` The name of the DD statement.
- `+ xxx` The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See z/OS MVS JCL User’s Guide for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.
- `ddd1` The name of the device to be allocated to the volume.
- `ddd2` The name of the device still needed.
concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

**ddd1**
The number of tape devices requested.

**ddd2**
The number of tape devices still required.

**generic**
A generic unit name that is eligible for the request.

**System action:** The system fails the allocation request.

**Application Programmer Response:** Do one of the following:
- Reduce the number of devices required by the DD statement.
- Reduce the number of devices required by the step.
- Balance the total number of required devices among the DD statements in the step.

Then resubmit the job.

DEVICE POOLS devpool-list
```

**Explanation:** This message displays a list of the tape device pools associated with a prior message.

In the message text:

- **devpool-list**
  - The list of tape device pools.

**System action:** See the system action for the prior message.

**System programmer response:** See the system programmer response for the prior message.

**Source:** Allocation/Unallocation

**Detecting Module:** IEFAB423

**Routing Code:** 11

**Descriptor Code:** 6

---

**IEF115I**

```plaintext
jobname [procstep] stepname ddname [+xxx] ALLOCATION FAILED - ddd UNITS REQUIRED, BUT NO LIBRARY HAS ENOUGH UNITS
```

**Explanation:** The allocation request failed because the request required more tape devices than contained in any eligible system-managed tape library. Message IEF114I, which displays the eligible device pools, might accompany this message.

If a dynamic ACTIVATE was done while the job was in allocation, any new devices or device pools added by the new configuration are not available to the job, because jobs in the recovery allocation are still locked onto the Eligible Device Table (EDT) for the previous configuration. The new configuration does not become available until the job ends, or is cancelled, then is submitted again.

In the message text:

- **jobname**
  - The name of the job.
**IEF116I • IEF117I**

**procstep**  
The name of the step in the cataloged procedure.

**stepname**  
The name of the job step.

**ddname**  
The name of the DD statement.

+ xxx  
The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User’s Guide](https://www.ibm.com/support/knowledgecenter/ST40WM_1.10.0/com.ibm.mvs.jclref.doc/0070/0401/0402.htm) for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

**ddd**  
The number of tape devices required.

**System action:**  
The system fails the allocation request.

**Application Programmer Response:**  
Reduce the number of tape devices required by this DD statement and then resubmit the job. If this is not possible, notify the system programmer.

**System programmer response:**  
Ensure that sufficient tape device pools are defined to this system. Then, resubmit the job when the activate completes.

---

**IEF117I**  
**nnn ALLOCATABLE DEVICES REMAIN IN ESOTERIC esoteric**

**Explanation:**  
The listed tape devices are contained in both the specified esoteric unit name and a system-managed tape library. The system might not be able to consider allocating tape devices from the specified esoteric unit name. The system might consider allocating a device from the system-managed tape library associated with that device.

**Note:**  
In a JES3 system, this message can be ignored for automatic tape library esoteric devices because JES3 requires the user to define esoterics that contain library devices. Therefore, when the system builds the eligible devices table (EDT), it also issues this message.

In the message text:

**nnn**  
The number of tape devices remaining in the specified esoteric unit name.

**esoteric**  
The esoteric name.

**dev**  
The device number of a tape device that is defined in both a system-managed tape library and the specified esoteric unit name.

**System action:**  
For an allocation request from the specified esoteric unit name, one of the following occurs:

- If the UNIT parameter on the allocation request does not specify SMSHONOR, the system does not created on the non-specific volume is temporary [DISP=(NEW,DELETE) or DSN=&&tempname]. PRIVAT is used for all other cases of non-specific volumes.

In the message text:

**jobname**  
The name of the job.

**stepname**  
The name of the job step.

**ser**  
One of the following:

- a specific tape volume serial number
- SCRTCH
- PRIVAT

SCRTCH or PRIVAT indicate non-specific volume requests. SCRTCH is used when the dataset being
consider allocating the listed tape devices from the specified unit name. The system can only allocate those devices by allocating from the system-managed tape library that contains the device.

- If the UNIT parameter on the allocation request does specify SMSHONOR, the system attempts to honor the specified esoteric unit name, provided that the devices in the esoteric are part of the list of eligible library devices. The SMSHONOR keyword directs allocation to a subset of the eligible system-managed tape library devices.

**Operator response:** Notify the system programmer and provide the system log containing this message.

**System programmer response:** Remove the listed devices from the specified esoteric unit name to eliminate this message. Then, verify that the number of tape devices remaining in the specified esoteric unit name is adequate to fulfill system requirements.

**IEF118I**

**jobname** stepname MOUNT OF VOLUME ser ON DEVICE dev FAILED

**Explanation:** The system was unable to mount the volume because of an internal error.

In the message text:

- **jobname** The name of the job.
- **stepname** The name of the job step.
- **ser** The volume serial number, which is one of the following:
  - A specific tape volume serial number
  - SCRTCH
  - PRIVAT

SCRTCH or PRIVAT indicate non-specific volume requests. SCRTCH is used when the dataset being created on the non-specific volume is temporary [DISP=(NEW,DELETE) or DSN=&amp;tempname]. PRIVAT is used for all other cases of non-specific volumes.

- **dev** The device number of the tape device where the volume was to be mounted.

**System action:** The system fails the job, unloads the tape volume, and requests an SVC dump.

**System programmer response:** Search problem reporting databases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SVC dump.

**IEF119I**

ERROR VERIFYING INTERNAL VOLUME LABEL ser ON DEVICE dev

**Explanation:** An error occurred while the system was verifying the internal volume label of a previously-mounted system-managed tape library volume. Other error messages, that explain the cause of the failure, accompany this message.

In the message text:

- **ser** The internal volume serial number of the tape volume being verified.
- **dev** The device number of the tape device where the tape volume being verified is mounted.

**System action:** The system unloads the tape volume unless the verification is being done because of a VARY dev,ONLINE operator command.

**Operator response:** See the operator response for the accompanying message.

**System programmer response:** See the system programmer response for the accompanying message.

**Source:** Allocation/Unallocation

---

**IEF120I**

jobname [procstep] stepname ddname [+ xxx] ALLOCATION FAILED - A NON-LIBRARY REQUEST SPECIFIED A LIBRARY DEVICE dev

**Explanation:** The allocation request failed because a volume that is not in a system-managed tape library cannot be mounted on a system-managed tape library device.

In the message text:

- **jobname** The name of the job.
- **procstep** The name of the step in the cataloged procedure.
- **stepname** The name of the job step.
- **ddname** The name of the DD statement.
- **+ xxx** The relative position of a data set within a
concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See \textit{z/OS MVS JCL User's Guide} for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

\texttt{dev}

The device number of the specified system-managed tape library device.

**System action:** The system fails the job.

**Application Programmer Response:** If you can avoid requesting a specific device (also called a demand allocation request), change the UNIT parameter to specify a generic unit name or an esoteric unit name and resubmit the allocation request. Otherwise, specify a tape device that is not in a system-managed tape library.

### IEF128I

**Explanation:** The system cannot allocate space for the index of a new indexed sequential data set for one of the following reasons:

- A DD statement specified the index quantity subparameter in its SPACE parameter, thus requesting an embedded index for the index or overflow area.
- A DD statement specified an index quantity in the SPACE parameter, DNAME=name(PRIME), and a device number greater than 1 in the UNIT parameter. Thus, the DD statement requested an embedded index for multivolume prime area.

In the message text:

*jobname* The name of the job.

*procstep* The name of the step in the procedure.

*stepname* The name of the job step.

*ddname* The name of the DD statement.

+ xxx The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User's Guide](https://www.ibm.com/support/knowledgecenter/SSSLTM_2.2.0/com.ibm.zos.mvs/zos/rzsmvjsd.html) for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

**System action:** The system ends the job.

**Application Programmer Response:** If the data set is not new, correct the DISP parameter by specifying OLD, SHR, or MOD. If the data set is new, add a SPACE parameter. Then rerun the job.

Detecting Module: IEFAB431

Routing Code: 11

Descriptor Code: -

IEF140I jobname [procstep] stepname ddname[+ xxx] - DIRECTORY SPACE REQUEST LARGER THAN AMOUNT AVAILABLE ON THIS VOLUME

Explanation: The system did not allocate the directory for a new partitioned data set (PDS) because the space requested for the directory by the SPACE parameter on the DD statement exceeded the space available on the specified volume.

In the message text:

jobname
The name of the job.

procstep
The name of the step in the procedure.

stepname
The name of the job step.

ddname
The name of the DD statement.

+ xxx
The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See z/OS MVS JCL User's Guide for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The system ends the job.

Application Programmer Response: Reorder the DD statements for the data set, making sure that INDEX is placed before PRIME. List the volume table of contents (VTOC) of each volume that will contain the data set using the DFP LISTCAT command. If the name of this data set appears in any VTOC, remove it using the DEFINE and DELETE commands. Then rerun the job.

Source: Allocation

Detecting Module: IEFAB431

Routing Code: 11

Descriptor Code: -
IEF142I  jobname [procstep] stepname STEP WAS EXECUTED - COND CODE cde

Explanation: A step completed processing normally. The system issues this message to give the condition code from the step. An abend may have occurred within the step, but if it did and this message IEF142I is issued, it indicates that an ESTAE suppressed the abend and that the step itself terminated normally.

In the message text:

jobname
The name of the job.

procstep
The name of the step in the procedure. For started tasks, procstep will not appear.

stepname
The name of the job step. For started tasks, stepname will be one of the following:
- The identifier, if one was specified on the START command
- The device number, if the MOUNT or START command specified a device number or if the JCL for the started task included an IEFRDER DD statement. Note that the device number can have up to 4 digits and can be prefixed by a slash (/), for example, '/46FF'.
- The same as jobname, in all other cases

cde
The condition code from the contents of general purpose register 15 at the end of the step. If the last task of the step did not set a completion code in register 15, the cde in the message is meaningless. In the event of multiple failures in the same job step, the contents of register 15 refer only to the last failure.

Note: The condition code of the step is never altered by the operating system, whether as a result of a job failing due to a disposition error, or for any other reason. The condition code in this message will be whatever condition code was issued by the step, regardless of whether the job fails due to a disposition error.

System action: The system continues to process further steps of the job if allowed by the COND parameter of subsequent EXEC statements, and in the case of a disposition error, the system is not prevented by the installation option to fail jobs. Disposition processing for the step uses the value for normal termination.

Source: Initiator/terminator

IEF143I  jobname [procstep] stepname ddname[+xxx] - LAST CONCATENATED DD STATEMENT UNNECESSARY OR INVALID FOR THIS DATA SET

Explanation: In processing the DD statements defining an indexed sequential data set, the system found at least four concatenated DD statements for the data set. The DD statement(s) after the third statement are unnecessary. In the message text:

jobname
The name of the job.

procstep
The name of the step in the procedure.

stepname
The name of the job step.

ddname
The name of the DD statement.

+xxx
The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See z/OS MVS JCL User's Guide for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The system ends the job, and ignores the extra DD statements. If the system allocated any non-ISAM data sets in the concatenation, they are deleted.

Application Programmer Response: Remove the extra DD statements. List the volume table of contents (VTOC) of each volume that will contain the data set using the DFP LISTCAT command. If the name of this data set appears in any VTOC, remove it using the DEFINE and DELETE commands. Rerun the job.

Detecting Module: IEFAB431
Routing Code: 11
Descriptor Code: -

IEF147I jobname [procstep] stepname ddname [xxx] ALLOCATION FAILED - NO DEVICE POOLS AVAILABLE FOR ALLOCATION

Explanation: The allocation request failed because the Storage Management Subsystem (SMS) did not return any tape device pools that were defined in the current Eligible Device Table (EDT). Either no device pools at all were returned, or the job was in recovery allocation (message IEF238D) while at the same time, a dynamic ACTIVATE was done (message IOS500I) such that in the new configuration, no returned device pools matched those in the EDT for the previous configuration.

If a dynamic ACTIVATE was done while the job was in allocation, any new devices or device pools added by the new configuration are not available to the job, because jobs in the recovery allocation are still locked onto the Eligible Device Table (EDT) for the previous configuration. The new configuration does not become available until the job ends, or is cancelled, then is submitted again.

In the message text:

jobname
The name of the job.

procstep
The name of the step in the cataloged procedure.

stepname
The name of the job step.

ddname
The name of the DD statement.

+xxx
The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See z/OS MVS JCL User’s Guide for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The system fails the job.

System programmer response: Ensure that sufficient tape device pools are defined to this system. Then, resubmit the request. If the failure occurred while the job was in recovery allocation, and a dynamic ACTIVATE was done at the same time, resubmit the job when the activate completes.

Operator response: None
System programmer response: None

Problem determination: The display units command (D U,,devnum,1) can be used to determine the status of the device as coded in the JCL or dynamic allocation request. If the JCL or dynamic allocation request cannot be updated to request a different device number, the VARY ONLINE or VARY AVAILABLE commands can be used to change the device's status and make it available for allocation. D U,TAPE,OFFLINE will show all tape offline devices so that a different device can be determined.

[[FOR VOLUME(S): ser, [ser, [...]], ser]]
[SCRTCH-nn]
[PRIVAT-nnn]
I [LIBRARY: libname]
LIBRARY STATUS: status]]
ALL ELIGIBLE UNITS ARE CURRENTLY ALLOCATED

Explanation: A DD statement for a job needs more tape devices than are currently available to continue processing.

Because there are no offline devices available, the allocation request must wait for the allocated tape devices to become available.

In the message text:

jobname
The name of the job.

procstep
The name of the step in the cataloged procedure.

stepname
The name of the job step.

ddname
The name of the DD statement.

+xxx
The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User’s Guide] for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

ser
The volume serial number.

SCRTCH-nn
The number of scratch volumes requested. SCRTCH is used when the dataset being created on the non-specific volume is temporary [DISP=(NEW,DELETE) or DSN=&amp;tempname].

PRIVAT-nn
The number of private volumes requested. PRIVAT is used for all other cases of non-specific volumes.

LIBRARY: libname
The tape library name.

LIBRARY STATUS: status
The tape library status. It can be one of the following:

ONLINE
Tape library is currently online.

OFFLINE
Tape library is currently offline. A library is offline if a VARY LIBRARY offline command has been issued and completed.

PENDING OFFLINE
Tape library is currently pending offline. A library is pending offline if a VARY LIBRARY command has been issued and has not yet completed.

ddd
The number of tape devices required.

System action: Processing continues.

Operator response: See the operator response for accompanying message IEF238D.

Application Programmer Response: If the job was failed, make any changes as indicated by accompanying messages, and then resubmit the job.

**IEF170I**  
n jobname message

**Explanation:** A WTO or WTOR macro requested a write-to-programmer (WTP) operation. The system was unable to complete WTP processing due to an error.

In the message text:

**n**  
The reason code for the failure. The reason code is one of the following:

1  
No request parameter list (RPL) pointer existed; therefore, the system cannot find the access control block (ACB).

2  
The system issued an enqueue to serialize PUT macro processing. The enqueue was unsuccessful.

3  
The system issued the PUT macro to a system message data set, but failed.

4  
An unexpected abend occurred.

5  
TPUT for branch entry WTP failed.

**jobname**  
The name of the job or the name of the system task that requested the WTP operation.

**message**  
53 bytes of the message passed to WTP.

**System action:** The system issues this message. The system continues processing.

**System programmer response:** Depending on the reason code in the message text, do the following:

- For reason code 1, 2, 3, or 5, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the text of this message.
- For reason code 4, see the system programmer response for the associated abend code.

IEF186I  REGION UNAVAILABLE FOR RESTART, ERROR CODE=cde

Explanation: During initialization of a job being restarted from a checkpoint, the initiator could not obtain a required region.

In the message text:

cde
The error code, in decimal, as follows:

<table>
<thead>
<tr>
<th>Error Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>08</td>
<td>The region parameter was increased so the system could not allocate the region, or the configuration of the system changed so that the region could not be obtained. For ADDRSPC=REAL, the size of the REAL area was decreased. For ADDRSPC=VIRT, the size of the private area decreased, either because the size of the nucleus increased or the size of the system queue area (SQA) or the LPA increased.</td>
</tr>
<tr>
<td>16</td>
<td>If a REAL region was requested, either long-fixed or damaged pages in the REAL area made it impossible to obtain the required region.</td>
</tr>
<tr>
<td>20</td>
<td>Either a virtual or a real region was requested. Fragmentation by local system queue area (LSQA), scheduler work area (SWA), or subpools 229, 230, or 249 has made it impossible to obtain the requested region. This error code will also be issued when REGION=0M or REGION=0K is requested.</td>
</tr>
<tr>
<td>24</td>
<td>A request for a V=R region could not be satisfied because the installation GETPART exit routine rejected the request.</td>
</tr>
</tbody>
</table>
System action: The system abnormally ends the job step with abend X'822'.

### IEF187I  jobname FAILED - SYSTEM ERROR IN INITIATOR

**Explanation:** During job initialization, a system error occurred.

**System action:** The system does one of the following:
- Ends the job.
- Ends the job step with abend X'922'

The system writes a logrec data set error record, unless the ABEND was an OPEN failure. After a program check or a restart, the system writes a dump to the SYS1.DUMP data set.

**Application Programmer Response:** Resubmit the job.

**Source:** Initiator/terminator

### IEF188I  PROBLEM PROGRAM ATTRIBUTES ASSIGNED

**Explanation:** The initiator found that a program to be run did not satisfy all the requirements needed to obtain all the special properties designated by the program name.

- If the program to be run is not a single step job or task, the system nullifies the NODSI parameter. All other program properties remain in effect.
- If the program to be run is not a started task that runs only a single step, the system nullifies the SYST parameter. All other program properties remain in effect.
- If a non-APF authorized JOBLIB or STEPLIB statement is present, the system nullifies all Program Properties table (PPT) parameters.

**System action:** The system assigns problem program attributes in place of the special properties.

**System programmer response:** If no special properties are required and a JOBLIB or STEPLIB is in use, ensure that the JOBLIB or STEPLIB data sets are APF authorized. Also ensure the special attributes 'started only' or '1-step only' are satisfied for the required special properties.

**Source:** Initiator/terminator

IEF196I - SYSTEM ERROR DURING {ALLOCATION|UNALLOCATION}

Explanation: While the system was allocating or unallocating data sets for a job, one of the following failures occurred:

- The operator pressed the RESTART key
- A machine check
- An abnormal end
- A program check

One of the following inserts can appear following ALLOCATION or UNALLOCATION:

- MACHINE CHECK
- RESTART
- ABENDccc
- ABENDccc-rrrr

The message was from a job started under the MSTR subsystem. Because these data sets don't exist for jobs started under the MSTR subsystem, the system prefixes the message with IEF196I and issues it to the system log.

One of the following occurred:
where ccc is the System Completion Code, and rrrrr is an associated reason code.

**System action:** For an abend, program check, or restart, the system writes an SVC dump and a logrec data set error record.

**Application Programmer Response:** Resubmit the job.

**System programmer response:** If the problem recurs, determine the original failure. Correct it, if possible. Otherwise, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

**Source:** Allocation

**Detecting Module:** IEFAB424

**Routing Code:** 11

**Descriptor Code:** -

IEF198I  
**Explanation:** One of the following occurred:

- One or more devices have been requested on the UNIT parameter of a DD statement. There are not enough unrestricted units to satisfy the request. Devices marked restricted at system installation are not eligible for the request.
- JES3 selected a device that is both restricted and either JES3-managed or jointly managed by both MVS and JES3.

**System action:** The system ends the job.

**Application Programmer Response:** Make sure that the device type is correctly specified in the UNIT parameter.

**System programmer response:** If this message appears because JES3 selected a device that is restricted and either JES3-managed or jointly managed, remove the device from JES3 management.

**Source:** Allocation

**Detecting Module:** IEFAB424

**Routing Code:** 11

**Descriptor Code:** -

IEF199I  
**Explanation:** The catalog required to locate the volume on which the requested data set resides is not currently mounted. The installation does not allow mounting of a volume for the current job.

**System action:** The system ends the job.

**Operator response:** Mount the required volume.

**Application Programmer Response:** Resubmit the job.

**Source:** Allocation

**Detecting Module:** IEFAB4F5

IEF201I  
**Explanation:** A step ended normally or abnormally by issuing a RETURN or ABEND macro that specified a completion code. This completion code satisfied a condition test specified in the COND parameter of the JOB statement. In the message text:

**System action:** As requested, the system ends the job, so the remaining steps in the job are not run.

**Application Programmer Response:** If you intended for the job to end, no action is needed. If not, do one of the following:

- Correct the error that caused the application program to issue the completion code.
• Change the condition test specified in the COND parameter of the JOB statement, if the application program contained no errors.

Run the remainder of the job, including the application program, if it contained an error.

**Source:** Allocation

**Routing Code:** 11

**Descriptor Code:** -

---

**IEF202I**  
```
jobname [procstep] stepname - STEP WAS NOT RUN BECAUSE OF {CONDITION CODES|COND=ONLY}
```  

**Explanation:** One of the following, depending on the message text:

**CONDITION CODES**
A problem program ended by issuing a RETURN macro that specified a completion code. This completion code satisfied a condition test in the COND parameter of an EXEC statement.

**COND=ONLY**
The COND parameter of an EXEC statement specified ONLY, but no previous job steps had abnormally ended.

In the message text:

- **jobname** The name of the job.
- **procstep** The name of the step in the procedure.
- **stepname** The name of the job step. For started tasks, **stepname** will be one of the following:
  - The identifier, if one was specified on the START command
  - The device number, if the MOUNT or START command specified a device number or if the JCL for the started task included an IEFRDER DD statement. Note that the device number can have up to 4 digits and can be prefixed by a slash (/), for example, '/46FF'.
  - The same as **jobname**, in all other cases

**System action:** The system does not run the job step specified by the succeeding EXEC statement. The system does or does not run the remainder of the job, depending on the condition tests specified in the EXEC statement for each step.

**Application Programmer Response:** If you intended for the job to end, no action is needed.

---

If not, do one of the following:

• Correct the error that caused the application program to issue the completion code.

• Change the condition test specified in the COND parameter of the succeeding EXEC statement, if the application program contained no errors.

Run the application program, if it contained an error, and the job step that was not run.

**IEF206I**  
```
jobname [procstep] stepname - STEP WAS NOT RUN BECAUSE OF CONDITIONAL EXPRESSION ON STATEMENT xxxx
```  

**Explanation:** While preparing to run a job step, the system evaluated an IF/THEN/ELSE/ENDIF clause specified in a conditional parameter. The result indicated that the system should not run the step. In the message text:

- **jobname** The name of the job.
- **procstep** The name of the step in the procedure.
- **stepname** The name of the job step.
- **xxxx** The number of the statement containing the clause.

**System action:** The system does not run the job step specified by **stepname**. Following steps may or may not be run depending upon subsequent conditional expression evaluations.

**Application Programmer Response:** If you intended for the job to end, no action is needed.

If not, do one of the following:

• Correct the error that caused the conditional expression to be evaluated so that the job step is prevented from running. Rerun the job.

• Change the conditional parameter specified in the IF/THEN/ELSE/ENDIF clause of the statement number that is preventing the job step from running. Rerun the job.

**Detecting Module:** IEFINCND

**Routing Code:** 11

**Descriptor Code:** 6
Explanation: During restart of a checkpointed job, all or part of the virtual storage for the job was not available for one of the following reasons:

- During a deferred restart, the system requested a virtual storage area that was larger than the area used originally. Because the original area was adjacent to the link pack area (LPA), the virtual storage cannot be increased.
- During a deferred restart on the same system or a different system, the system found that the system queue area (SQA) occupied part or all of the region required for the job.
- During a deferred restart after IPL, the link pack area (LPA) expanded into the required virtual storage area.

In the message text:

jobname The name of the job.
procstep The name of the step in the procedure.
stepname The name of the job step.

data The name of the DD statement.
+ xxx The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See z/OS MVS JCL User’s Guide for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The system stops restart of the job.

Operator response: Restart the system and restart the job again. During system initialization, specify the same options that were used when the checkpoint was taken. If this rerun fails or is not feasible, use a system that is adequate for restart.

Source: Scheduler restart

Detecting Module: IEFXB609
Routing Code: 2,11
Descriptor Code: 6

Explanation: In a DD statement, the unit name subparameter in the UNIT parameter was incorrect:

- The unit is not defined to the current system configuration, or a demand request for a unit being added to the configuration occurred prior to the dynamic configuration change completing.
- If the DD statement specified a cataloged data set, the unit field in the catalog entry is incorrect.
- The DD statement did not contain a UNIT parameter for a non-cataloged, non-passed data set.
- The DD statement did not contain a DISP parameter, indicating a new data set, but did not contain a UNIT parameter, indicating an old data set.

In the message text:

jobname The name of the job.
procstep The name of the step in the procedure.
stepname The name of the job step.
+ xxx The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See z/OS MVS JCL User’s Guide for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The system ends the job.

Application Programmer Response: Correct the unit name subparameter. Submit the job again.

System programmer response: If the unit name subparameter correctly identifies a device in the current configuration and a dynamic configuration change has just occurred, submit the job again.

Routing Code: 11
Descriptor Code: -

Explanation: The system could not reserve a data set for a job. The type of data set requested and the problem are as follows:

- The DD statement requested a non-VIO, temporary, direct access data set. The data set name is the same as an existing system-generated data set name.
- The DD statement specified an alias name. After locating the real data set name in a catalog, the system found that the data set is already reserved by another user.
- The DD statement requested a generation of a generation data group (GDG). After locating the catalog-generated name for the generation, the system found that the data set was already reserved by another user.
- The DD statement requested all levels of a GDG. When checking the individual levels, the system found that one of the levels is already reserved by another user.
IEF212I

In the message text:

jobname     The name of the job.
procstep    The name of the step in the procedure.
stepname    The name of the job step.
ddname      The name of the DD statement.
+ xxx       The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User's Guide] for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The system ends the job to avoid impacting the availability of critical system resources.

Application Programmer Response: Change the DD statement. Resubmit the job for processing.

System programmer response: If the system programmer wants to allow jobs to wait for the requested resource rather than to fail, add the following statement into the ALLOCxx member of SYS1.PARMLIB: SDSN_WAIT WAITALLOC(YES). See [z/OS MVS Initialization and Tuning Reference, ALLOCxx, SDSN_WAIT] for additional information on WAITALLOC([NO|YES]).

Detected Module: IEFAB459, IEFAB4FJ

Routing Code: 11/Note 36

Descriptor Code: -

IEF212I jobname [procstep] stepname ddname[+xxx] - DATA SET NOT FOUND

Explanation: In processing a DD statement, the system found one of the following:

• The data set name in the DSNAME parameter did not contain all the levels of qualification, so that the system could not locate the cataloged data set.
• The data set name specified on the DCB parameter or on the REF subparameter of the VOLUME parameter was not cataloged or did not contain all the levels of qualification, so that the system could not locate the data set.
• The data set was not cataloged or passed.
• A level of index was either missing or incorrect in a generation data group (GDG).
• A step tried to receive a passed data set. However, the data set has been received as many times as it was passed.
• The DISP parameter specified MOD, SHR, or OLD on a DD statement requesting all levels of a GDG, but there are no levels.
• The DD statement requested a data set cataloged in a user catalog. The JCL did not contain a JOBCAT or STEPCAT DD statement.
• The SER subparameter of the VOLUME parameter specified an SMS-managed volume and the data set was not cataloged.

In the message text:

jobname     The name of the job.
procstep    The name of the step in the procedure.
stepname    The name of the job step.
ddname      The name of the DD statement.
+ xxx       The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User's Guide] for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The system ends the job.

Application Programmer Response: Do one of the following:

• If the data set name was specified incorrectly, correct it.
• If the DCB or VOLUME parameters were incorrect, correct them.
• If the data set was not cataloged, either catalog it or, on the DD statement, specify the volume serial number of the volume on which the data set resides.
• If the DD statement was correct, recatalog the data set.
• If the data set name is of the form G0000V00, notify the system programmer.

System programmer response: For a data set name of the form G0000V00, do the following:

1. Using IEHLIST, list all the data set names for that GDG.
2. Using IEHPROGM, rename the data sets in the same order as they exist, starting with G0001V00 or higher. Uncatalog the data sets using the original data set names, then catalog the data sets using the new names.

IEF221I jobname [procstep] stepname - PGM=*..DD - REFERENCED STEP WAS NOT EXECUTED - OR DATA SET TYPE INVALID

Explanation: An EXEC statement specified the program name by a reference to the ddname on a DD statement in a previous step of the job. One of the following occurred:

- The previous step, which contained the DD statement, was not run because a condition test in the COND parameter of the step's EXEC statement was satisfied.
- The data set was not direct access or virtual access, or it was a subsystem data set, such as SYSIN or SYSOUT, or an HFS file.

In the message text:

jobname The name of the job.
procstep The name of the step in the procedure.
stepname The name of the job step.

System action: The system ends the job.

Application Programmer Response: Do one of the following:

- In the EXEC statement for this step, include the condition tests specified in the previous step's EXEC statement.
- Make sure that the data set is direct access or virtual access and neither a subsystem data set nor an HFS file.

Rerun the job.
**IEF223I**

**ERROR(S) IN ALLOC**\textsubscript{xx} **PARMLIB MEMBER(S), REFER TO HARDCOPY LOG**

**Explanation:** The system detected one or more errors in the ALLOC\textsubscript{xx} parmlib member. In the message text:

\textbf{ALLOC}\textsubscript{xx}

The parmlib member, with a suffix of \textit{xx}.

**System action:** The system writes the error message(s) to the hard-copy log. The system continues processing.

**System programmer response:** Examine the message(s) in the hard-copy log. Edit the ALLOC\textsubscript{xx} member to correct the indicated error(s).

**IEF233A**

**M dev,ser,[labtyp], jobname [stepname] [dsname] [mediatype] [storgrp]**

**Explanation:**

**Note:** For Automated Tape Library dataservers (including Virtual Tape Servers), message IEF233A is not issued to any operator console. It is only issued to the System Log. Also, for tapes that have been premounted using the operator MOUNT command, message IEF233A is issued, but not to any operator console.
The message asks the operator to mount a volume. This message is issued by allocation for batch allocations (that is, JCL) which do not specify DEFER. (For mounts with DEFER coded, see message IEC501A.)

In the message text:

- **dev** The device number.
- **ser** The volume to be mounted as follows:
  - A 6-digit serial number. The volume with that serial number is to be mounted on device `dev`.
  - SCRTCH: A scratch volume is to be mounted. SCRTCH is used when the dataset being created on the non-specific volume is temporary [DISP=(NEW,DELETE) or DSN=&amp;tempname].
  - PRIVAT: A private volume is to be mounted. PRIVAT is used for all other cases of non-specific volumes. It will be marked PRIVATE and demounted at the end of the job.
  - A number beginning with L: The volume to be mounted is unlabeled. The number is an internal serial number assigned by the system to the unlabeled volume. It is of the form `xxxxy`, where `xxx` is the data set number and `yy` is the volume sequence number for the data set.
- **labtyp** The scratch tape volume must have the type of label specified by `labtyp`: SL for standard label or standard user label, NSL for non-standard label, AL for ANSI label, or NL for no label or by-pass label.
- **jobname** The name of the job.
- **stepname** The name of the job step.
- **dsname** If a MONITOR DNAME command is active, the `dsname` is of a nontemporary data set requiring the volumes. The data set name will not be specified for data sets being deleted. If the data set name causes the message to exceed 70 characters, the data set name will appear on the second line of the message text.
- **mediatype** The media type that is to be mounted to satisfy this scratch request.
- **storgrp** The storage group of the device being mounted.

**System action:** The job step waits for the volume to be mounted if the device is direct access. If a scratch volume is to be mounted, all other jobs requiring the same device group will not be allocated until the operator responds to this message.

**Operator response:** For a reel tape, if `ser` is SCRTCH or PRIVAT, make sure that the file protect ring has been inserted in the volume. For a cartridge tape, if `ser` is SCRTCH or PRIVAT, make sure that the file protect tab is set to allow writing.

Mount volume `ser` on the device; then ready the device.

If a mount is requested for a device with a non-removable volume, ready the device to indicate that the volume is mounted.

If the volume cannot be mounted, enter a CANCEL command to stop the job. Separate commands are necessary to cancel all jobs requiring the volume.

---

IEF233D M `dev`,`ser`,[`labtyp`], `jobname` [,`stepname`] [,`dsname`] [,`mediatype`] [,`storgrp`] OR RESPOND TO IEF455D MESSAGE

**Explanation:** The message asks the operator to mount a volume. This message is issued to operator consoles by allocation for non-library dynamic allocations (that is, non-ATL, non-VTS) which do not specify DEFER. (For mounts with DEFER coded, see message IEC501A.)

**Notes:**
1. For dynamic allocations to Automated Tape Library dataservers (including Virtual Tape Servers), message IEF233D is only written to the System Log.
2. Message IEF455D is not issued for Automated Tape Library dataserver devices, including ATL and VTS.

In the message text:

- **dev** The device number.
- **ser** The volume to be mounted as follows:
  - A 6-digit serial number. The volume with that serial number is to be mounted on device `dev`.
  - SCRTCH: A scratch volume is to be mounted. SCRTCH is used when the dataset being created on the non-specific volume is temporary [DISP=(NEW,DELETE) or DSN=&amp;tempname].
  - PRIVAT: A private volume is to be mounted. PRIVAT is used for all other cases of non-specific volumes.
• A number beginning with L: The volume to be mounted is unlabeled. The number is an internal serial number assigned by the system to the unlabeled volume. It is of the form xxxyy, where xxx is the data set number and yy is the volume sequence number for the data set.

labtyp The scratch tape volume must have the type of label specified by labtyp: SL for standard label or standard user label, NL for no label or by-pass label, NSL for non-standard label, or AL for ANSI label.

jobname The name of the job.

stepname The name of the job step.

dsnname If a MONITOR command is active, the dsnname is of a nontemporary data set requiring the volumes. The data set name will not be specified for data sets being deleted. If the data set name causes the message to exceed 70 characters, the data set name will appear on the second line of the message text.

mediatype The media type that is to be mounted to satisfy this scratch request.

storgrp The storage group of the device being mounted.

System action: The job step waits for the volume to be mounted or for the operator to reply NO to message IEF455D. The job will not proceed until the operator responds to this message.

Operator response: For a reel tape, if ser is SCRTCH or PRIVAT, make sure that the file protect ring has been inserted in the volume. For a cartridge tape, if ser is SCRTCH or PRIVAT, make sure that the file protect tab is set to allow writing.

Mount volume ser on the device; then ready the device.

If a mount is requested for a device with a non-removable volume, ready the device to indicate that the volume is mounted.

If for any reason the volume cannot be mounted, reply NO. A reply of NO to this message also serves as a reply of NO to any other mount message for the step.

Routing Code: 3/4,5/6

Descriptor Code: 3

IEF234E  text1. dev [ser, text2, jobname[,stepname]] [,SPACE=cpcc,tttt,aaaa/yyyy,zzzz]

Explanation:

Note: For Automated Tape Library dataservers (including Virtual Tape Servers), message IEF234E is not issued to any operator console. It is only issued to the System Log.

text1 is one of the following:

K The volume is to be demounted and returned to the library.

D The volume is to be demounted and used subsequently as a scratch volume.

R the volume on device dev is to be demounted and retained near the computer for use in the near future.

dev The device number.

ser The volume to be mounted as follows:

• A 6-digit serial number. The volume with that serial number is to be mounted on device dev.

• A number beginning with L: The volume to be demounted is unlabeled. The number is an internal serial number assigned by the system to the unlabeled volume. It is of the form xxxyy, where xxx is the data set number and yy is the volume sequence number for the data set.

• If ser is absent from the message text, the volume is unlabeled and is not being passed between job steps.

PVT A private volume was used.

PUB A public volume was used.
A storage volume was used.

The name of the job.

The name of the job step.

If a MONITOR SPACE command is active, the field SPACE=cpcc,tttt,aaaa/yyyy,zzzz is specified where:

- **cpcc** The total number of free cylinders on the volume.
- **tttt** The total number of tracks in addition to the free cylinders.
- **aaaa** The areas or extents dividing the cylinders and tracks.
- **yyyy** The maximum number of contiguous free cylinders of the largest extent within the total remaining space.
- **zzzz** The number of tracks in addition to the free cylinders of the largest extent within the total remaining space.

If an error occurred during the listing of the parameters in the SPACE field, one of the following messages is specified:

- LSPACE-PERMANENT I/O ERROR
- LSPACE-NON-STANDARD OS VOLUME
- LSPACE-NOT A DIRECT ACCESS VOL
- LSPACE-INVALID PARAMETER
- LSPACE-UCB NOT READY

In the message text, the jobname may appear and the step name will be given if a step name was specified on the EXEC statement.

**System action:** The system marks the device as ‘not ready’.

**Operator response:** Demount the volume.

If K appeared, demount the volume and return it to the library.

If D appeared, use the volume later when a scratch volume is requested.

If R appeared, retain the volume nearby. If it is not externally marked with its serial number, mark the 6-digit or internally assigned number on the volume. The internally assigned number should appear externally on the volume in case a subsequent step needs the volume; for the subsequent mounting, the system will specify the volume by the internally assigned number. The message gives the name of the job that needs the volume.

When the job ends, the system issues message IEF471E to list all retained volumes no longer needed by the job.

However, the system does not issue message IEF471E when the job ends in two cases:

- The device was permanently resident, and the following three events occurred **before** the job ended:
  - Message IEF234E appeared.
  - The operator entered a VARY dev,OFFLINE command for the device.
  - Message IEF281I appeared to indicate that the device is offline.
- The device had the reserved mount attribute, and the following three events occurred **before** the job ended:
  - Message IEF234E appeared.
  - The operator issued an UNLOAD command for the device.
  - Message IEF282I appeared to indicate that the device is offline.

In these cases, return the volume to the library when the job ends.

**IEF235D**

jobname stepname WAITING FOR VOLUMES, TO CANCEL WAIT REPLY ‘NO’

**Explanation:** The system was unable to satisfy the volume requests for a data set. Message IEF690I precedes this message and indicates which volumes were unavailable. In the message text:

- **jobname** The name of the job.
- **stepname** The name of the job step needing the data set.

**Note:** While this message remains outstanding, no HCD Activates will be able to complete processing.

**System action:** Initiation of the step waits until the requested volumes have been unallocated by ending tasks and are available for use. Other jobs requiring the same volumes cannot go through allocation until this wait has ended and current allocation processing has completed.

**Operator response:** If desired, reply ‘NO’ to cancel the wait. If a DD statement requested the data set, the system ends the job. If the allocation was requested dynamically, a return code will indicate that the request failed.

**Source:** Allocation

**Routing Code:** 2
IEF236I  ALLOC. FOR jobname [procstep] stepname

Explanation: The system allocated the devices for a job. The IEF237I messages that follow describe the device allocations.

In response to a MONITOR JOBNAMES command, this message will appear only for unit record devices being allocated. In the message text:

jobname The name of the job.
procstep The name of the step in the procedure.
stepname The name of the job step.

Operator response: None.

Detecting Module: IEFAB4EE

Routing Code: 2,7

Descriptor Code: 6

IEF237I  dev ALLOCATED TO ddname

Explanation: The system allocated a device to the data set defined in a DD statement. In the message text:

dev The device number of a DASD, tape cartridge, unit record or other device, or one of the following:

DMY A DD DUMMY was allocated.

Subsystem name (JES2 or JES3, for example) A SYSIN, SYSOUT, or SUBSYS data set was allocated.

VIO A paging data set was allocated.

TRM A terminal was allocated.

QNM A QNAME data set was allocated.

ddname The name of the DD statement or blank if there is no DD name for the concatenated DDs.

In response to a MONITOR JOBNAMES command, this message will appear only for unit record devices being allocated.

Operator response: None.

Source: Allocation

Detecting Module: IEFAB4EE

Routing Code: 2,7

Descriptor Code: 6

IEF238D  jobname - REPLY [DEVICE NAME] [ \{ 'WAIT' \} OR 'CANCEL' ]

Explanation: The system cannot complete an allocation with the devices currently available. One or more devices are needed for one of the following reasons:

The Request needs a unit or volume that:
1. is currently allocated to another job.
2. is currently dynamically allocated to this job
3. cannot be shared with this job
4. is offline
5. is pending offline

In the message text:

jobname The name of the job.

DEVICE NAME Eligible devices are currently offline or are not accessible. The system issues message IEF877E or IEF878I.

‘WAIT’ The system determined that if you wait for currently allocated, eligible devices to become available, your request can be satisfied.

This message permits the operator to respond to preceding message IEF157E, IEF488I, IEF877E or IEF878I.

Notes:
1. While this message is outstanding (that is, has not yet been replied to), no VARY OFFLINE activity can take place, due to an ENQ conflict for the SYSIEFSD / Q4 resource. Any device(s) targeted by a VARY OFFLINE command will not be processed, and message CNZ0010A will be issued indicating the conflict on the SYSIEFSD / Q4 resource.

2. While this message remains outstanding, no other allocations for any device(s) within the esoteric (group name) or generic being waited for in the reply to this message can proceed. That is, if a job is in allocation recovery trying to allocate a 3490 device (UNIT=3490), then no other D/T3490 allocations will take place until after this message is satisfied. Similarly, if a job was trying to allocate a device in an esoteric group named CARTNK (UNIT=CARTNY), then no devices in that esoteric group would be allocated until this message is satisfied.

3. While this message remains outstanding or if the reply to this message is WAIT, no other allocations, unallocations, OPENs, CLOSEs, Catalog LOCATEs, data set OBTAINs, or End-of-Volume (EOV or FEOV) processing will be able to take place within
this address space until this message is replied to and the wait is fulfilled. This is because the address space’s SYSZTIOT resource is held EXCLusive by this allocation. This statement is true even if an unallocation would free up the device required by this allocation.

4. While this message remains outstanding or if the reply to this message is WAIT, no HCD Activates will be able to complete processing.

System action: The system action depends on the operator's response as follows:

Reply of WAIT
Requests device allocation for this job to wait until the required units and/or volumes are released or are brought online; that is, no other allocations for any device(s) will be able to be done within the address space which issued the message until the wait is satisfied. Further, no services which require the SYSZTIOT resource within that address space will be able to proceed until the wait is satisfied. This includes services such as OPEN, OPENJ, CLOSE, LOCATE, OBTAIN, CATALOG and SCRATCH. The wait does not take effect, however, until all DD statements that require devices for case two above have been processed and the operator has responded to message IEF433D. The system issues message IEF877E OR IEF878I for any remaining DD statements and this message.

Note: A unit must be unallocated or varied online in order for the wait to be satisfied. Simply unloading a unit which was made unavailable to other jobs via a MOUNT command will not satisfy the wait.

Reply of a device name in the list of message IEF877E or IEF878I.
Causes the system to place the device online and retry device allocation.

Note: The system may or may not actually use the specified device to satisfy the allocation request. If other eligible devices are found when the allocation is retried (for example, an eligible device was unallocated before the IEF238D message was replied to), then the system may choose from any of the eligible devices. Alternatively, after the device is brought online, but before the device allocation is retried, it is possible for another job to allocate the device that was brought online. This can result in message IEF238D being reissued.

Reply of CANCEL
For JCL Allocations:
Causes the system to end the job without further attempts to complete allocation.

For Dynamic Allocations:
Causes only the allocation request to fail; it does not end the entire job.

Reply of DUMP
Causes the system to issue an SVC DUMP to gather diagnostic information that can be provided to IBM Support. This option should generally only be used if IEF238D was issued unexpectedly, or upon request of IBM Support. After the dump is issued, the system will reissue message IEF238D to allow another operator response.

Note: DUMP is always a valid reply to message IEF238D. However, DUMP is never listed in the text of message IEF238D as an option.

If the reply was not valid for the options given in this message, the system issues message IEF490I and repeats this message.

Operator response: Reply as follows:
- REPLY id,'dev', where dev is a device number in message IEF877E or IEF878I and the device can be brought online. If device dev was listed as NOT ACCESSIBLE, enter a VARY CPU/CH/PATH command before this reply. Enter a DISPLAY MATRIX command to get the status of the central processor and channel.
- REPLY id,'WAIT' to cause device allocation to wait for devices and/or volumes to be freed.
- REPLY id,'CANCEL' to end the job.

Notes:
1. For JCL Allocations: Although an operator CANCEL command may be issued while this message is outstanding, the command will not take effect until the system processes all the DD statements for the current job step that still requires a device.
2. For Dynamic Allocations: If an operator CANCEL command is issued while this message is outstanding, the command will take effect immediately, causing the entire job to be cancelled.

System programmer response: If a manual operator response to this message is not desired, refer to MVS Initialization and Tuning Reference for information on how to use the ALLOCxx parmlib member to set a policy that will allow the system to automatically reply "CANCEL' or 'WAIT'.

**IEF240I • IEF244I**

*Detecting Module:* IEFAB488  
*Routing Code:* 2,3/4/7  
*Descriptor Code:* 2

---

**IEF240I**

**jobname** [**procstep**] **stepname** - TASK I/O TABLE EXCEEDS TIOT LIMIT OF **xxxxK**

**Explanation:** A job step specified more DD statements than the system can process and/or a job step specified more units than the system can process. In the message text:

- **jobname** The name of the job.
- **procstep** The name of the step in the procedure.
- **stepname** The name of the job step.
- **xxxxK** The maximum size of the task input/output table (TIOT).

The maximum number of DD statements may be exceeded for one of two reasons: the step JCL explicitly requested too many DD statements and units, or the system generated DD statements and units beyond those explicitly requested.

Additional DD statements are generated when:
- All members of a generation data group (GDG) are requested. A DD statement is generated for each member.
- A private catalog is needed to locate or catalog a data set. A DD statement is generated for the catalog if it was not defined in a JOBCAT or STEPCAT DD statement.
- A VSAM data set requires multiple device types. A DD statement is generated for each additional device type.
- JOBCAT or JOBLIB DD statements are associated with the job. The applicable DD statements are generated for each step.

Four bytes are required in the TIOT for each unit to which a DD statement is assigned. Specifying a large number of units, either implicitly by a data set having a large number of volumes, each of which requires a separate unit (for example, many DASD volumes in the catalog or many SMS candidate volumes), or explicitly, can cause the TIOT to exceed its maximum allowable size.

The system sometimes increases the total number of units associated with a step by overriding JCL requests for volumes to share the same unit. This occurs when one of the volumes is not eligible for demounting:
- A volume has the permanently resident or reserved attribute.
- A volume is required by multiple DD statements, unless UNIT=AFF is specified for tape devices.

For more information, see the information about the TIOT parameter in the [ALLOCxx parmlib member in Z/OS MVS Initialization and Tuning Reference](https://www.ibm.com/support/knowledgecenter/sz2wtt_11.0.0/com.ibm.zos.v1r11.jes.cat.doc/CN38612.html).

**System action:** The system ends the job.

**Application Programmer Response:** The total number of DD statements and units for the step must be reduced. If all data sets are not needed simultaneously, consider using dynamic allocation facilities.

---

**IEF242I**

**ALLOC. FOR** **jobname** [**procstep**] **stepname** AT ABEND

**Explanation:** The JOB statement specified MSGLEVEL=0. In the message text:

- **jobname** The name of the job.
- **procstep** The name of the step in the procedure.
- **stepname** The name of the job step.

**System action:** Because the application program failed while running, the system overrides the MSGLEVEL and assumes MSGLEVEL=1. Unit allocation messages IEF237I, IGD100I, IGD101I, and/or IGD103I follow this message.

**Source:** Allocation

*Detecting Module:* IEFAB4EE  
*Routing Code:* 11  
*Descriptor Code:* -

---

**IEF244I**

**jobname** [**procstep**] **stepname** - UNABLE TO ALLOCATE **nnn UNIT(S)** **text**

**Explanation:** **text** is one of the following:
- AT LEAST **nnn** ALLOCATED UNIT(S) NEEDED
- AT LEAST **nnn** OFFLINE UNIT(S) NEEDED
- AT LEAST **nnn** ALLOCATED AND **nnn** OFFLINE UNIT(S) NEEDED

The system cannot complete the allocation for a step with the devices currently available online and not allocated. To recover from this situation, units must be varied online and/or become unallocated. Note that this total may include allocated units containing volumes that must be moved to an eligible unit to satisfy the allocation requirements for this step.

If the second line of the message appears the system has determined the minimum number of allocated and/or offline units required. In the message text:
jobname The name of the job.
procstep The name of the step in the procedure.
stepname The name of the job step.
nnn The number or units that must be varied online and/or become unallocated.

System action: The system issues more detailed messages about each of the DD statements that require further allocation action. Messages IEF488I and IEF877E might be issued following this message.

Source: Allocation
Detecting Module: IEFAB487
Routing Code: 2,3,4,
Descriptor Code: 6

IEF245I jobname [procstep] stepname ddname[+xxx] - INCONSISTENT UNIT NAME AND VOLUME SERIAL

Explanation: The system cannot complete the allocation for a step because a requested volume is not of the correct type for the device. The cause is either:

• In a DD statement, the SER subparameter of the VOLUME parameter specified the volume serial number of a volume that was mounted on a device that was not consistent with the device type specified in the UNIT parameter.

For example, a request was made to mount a tape having volume serial number vvvvv, but vvvvv is already being used as the volume serial number of an online DASD volume. Ask the system operator to enter the command DISPLAY U,VOL=vvvvv to find out where volume serial number vvvvv is currently mounted. Note that it is possible that volume serial vvvvv does not physically exist on the system, but that there is currently an outstanding mount pending for it. (This might occur if someone had asked for that volume serial number on a DIFFERENT device type — either a DASD device type or a different type of tape device that exists on the system, such as 3420 instead of 3490.)

• In a DD statement, the SER subparameter of the VOLUME parameter specified the same volume serial number as another DD statement; the device types were inconsistent.

• In a DD statement, the SER subparameter of the VOLUME parameter specified volume serial numbers that are not of the same device type.

• The affinity index parameter was incorrect for the generic specified.

• In the case of library requests with UNIT=AFF coded, the secondary request is not eligible to the generic and/or library used to allocate the primary request.

In the message text:

jobname The name of the job.
procstep The name of the step in the procedure.
stepname The name of the job step.
ddname The name of the DD statement.

+ xxx The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See z/OS MVS JCL User's Guide for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The system ends the job.

Application Programmer Response: Correct the DD statement. Submit the job again. If the DD statement was correct, notify the system programmer.

System programmer response: Verify that the I/O configuration was built correctly. If so, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

IEF251I  jobname [procstep] stepname - JOB CANCELLED (in SYSOUT)

--or--

IEF251I  jobname JOB CANCELLED (on console)

Explanation: During device allocation for a job, one of the following occurred:
- The operator entered a CANCEL command.
- The operator replied CANCEL to message IEF238D.
- A subsystem requested cancellation in response to a request to allocate a subsystem data set.

The system issues this message when a job must wait for any of:
- a specific volume or unit
- a volume to be mounted
- an allocated or offline device

and:
- either any of the following are specified in the ALLOCxx member of the parmlib data set:
  - VOLUME_ENQ POLICY (CANCEL)
  - VOLUME_MNT POLICY (CANCEL)
  - SPEC_WAIT POLICY (CANCEL)
  - ALLC_OFFLN POLICY (CANCEL)
- or any of the following Installation exits requests that the job be cancelled:
  - IEF_VOLUME_ENQ (Volume ENQ Installation Exit)
  - IEF_VOLUME_MNT (Volume Mount Installation Exit)
  - IEF_SPEC_WAIT (Specification Waits Installation Exit)
  - IEF_ALLC_OFFLN (Allocation/Offline Device Installation Exit)

In the message text:

jobname     The name of the job.
procstep    The name of the step in the procedure.
stepname    The name of the job step.

System action: The system ends the job.

Application Programmer Response: Correct any errors indicated by other messages. Submit the job again.

IEF253I  jobname [procstep] stepname ddname [+xxx] - DUPLICATE NAME ON DIRECT ACCESS VOLUME

Explanation: In a DD statement, the data set name in the DSNAME parameter was the same as a data set name already in the volume table of contents (VTOC) for the requested direct access volume. In the message text:

jobname     The name of the job.
procstep    The name of the step in the procedure.
stepname    The name of the job step.
dname      The name of the DD statement.
+xxx        The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User's Guide] for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The system ends the job.

Application Programmer Response: If the data set being specified is a new data set, select a unique name for it.
If the DD statement intended to specify the data set that is already on the direct access device, specify OLD, SHR, or MOD in the DISP parameter. Then submit the job again.

Source: Allocation

Detecting Module: IEFAB431
Routing Code: 11
IEF254I  jobname [procstep] stepname ddname[+xxx] - NO SPACE IN VTOC OR VTOC INDEX

Explanation: A DD statement requested space on a direct access volume for a new data set, but one of the following conditions exists:

- The volume table of contents (VTOC) for the requested volume did not have the minimum number of format-0 data set control blocks (DSCB) required to allocate the data set.
- Not enough space remained in the VTOC index for a new entry.

In the message text:

jobname  The name of the job.
procstep  The name of the step in the procedure.
stepname  The name of the job step.
ddname   The name of the DD statement.
+xxx     The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User's Guide] for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. Detecting Module: IEFAB431
Routing Code: 2,3,10
Descriptor Code: 4

IEF260I jobname [procstep] stepname ddname[+xxx] - WRONG DSORG OR DISP

Explanation: During allocation of an indexed sequential data set, the system detected one of the following:

- A DD statement requiring that direct access space be obtained was found concatenated to a DD statement that indicated that the data set already existed.

Example: A concatenated DD statement specifies DISP=(NEW,KEEP). A preceding DD statement for the ISAM data set specified DISP=(OLD,KEEP). Note that the system does not check secondary dispositions for consistency.

- A DD statement specifying DSORG=IS or ISU was concatenated to a DD statement that is for the same data set and that specified a DSORG other than IS or ISU.

- A DD statement that specified DSORG=IS or ISU specified a unit other than a direct access device. ISAM data sets can reside only on direct access devices.

In the message text:

jobname The name of the job.
procstep The name of the step in the procedure.
stepname The name of the job step.
ddbname The name of the DD statement.
+xxx The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See z/OS MVS JCL User’s Guide for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The system ends the job.

Descriptor Code: -

IEF263I jobname [procstep] stepname ddname[+ xxx] - SPACE REQUEST WRONG - MUST BE ON CYLINDER BOUNDARY

Explanation: The SPACE parameter of a DD statement defining an indexed sequential data set is incorrect. The space parameter requested absolute tracks (ABSTR), but either:

- The beginning address subparameter does not specify a cylinder boundary.
- The parameter does not specify, in tracks, an integral number of cylinders.

In the message text:

jobname The name of the job.
procstep The name of the step in the procedure.
stepname The name of the job step.
ddname The name of the DD statement.
+ xxx The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See z/OS MVS JCL User's Guide for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The system ends the job.

Application Programmer Response: The operating system no longer supports the creation or use of indexed sequential data sets. See z/OS DFSMS Using Data Sets for information about converting programs and data sets to avoid using ISAM.

IEF274I • IEF278I

Descriptor Code: -

IEF274I  jobname [procstep] stepname ddname [+ xxx] - SPACE REQUEST REJECTED BY INSTALLATION EXIT, REASON CODE nnnn

Explanation: Installation exit routine IGGPRE00 or IGGPOSTG0 rejected the space request specified on a DD statement. In the message text:

jobname  
The name of the job.

procstep  
The name of the step in the procedure.

stepname  
The name of the job step.

ddname  
The name of the DD statement.

+ xxx  
The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See z/OS MVS JCL User's Guide for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

nnnn  
The reason code assigned by the installation.

System action: The system ends the job.

Application Programmer Response: Refer to your installation procedures to determine the cause of the failure as indicated by reason code nnnn. Check the DD statement to ensure that it follows installation requirements for space requests. If it does not, change the DD statement and resubmit the job. If the DD statement is correct, notify your system programmer of the problem.

Source: Allocation

Detecting Module: IEFAB431

Routing Code: 11

Descriptor Code: -

Explanation: The unit affinity request could not be honored because of system restrictions.

In the message text:

jobname  
The name of the job that requested unit affinity.

procstep  
The name of the step in the procedure.

stepname  
The name of the step.

ddname  
The name of the DD statement.

+ xxx  
The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See z/OS MVS JCL User's
Guide for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

reason-code
The reason code, as follows:

1 One of the requests is an SMS-managed tape request and the other request is not. These requests cannot be honored because the devices required for the requests do not intersect.

2 The DDs request incompatible generic data sets. These requests cannot be honored because the devices required for the DDs do not intersect.

3 The requests are for incompatible tape libraries. These tape library requests cannot be honored because the devices eligible to the requests do not intersect.

4 The referenced request’s device eligibility is not a subset of the referencing request. Because the referenced request is always allocated first, the device or devices allocated to it must also be eligible to all referencing requests.

5 The referencing request is a non SMS-managed data set that is referencing an SMS-managed request.

unitname
The unit name chosen by the system to replace the unit affinity specification.

System action: The system allocates the DD statement using the unit name specified.

User response: Change the job to not request unit affinity.

Source: Allocation

Routing Code: 11
Descriptor Code: 6

IEF280I
jobname (procstep) stepname STEP FAILED, UNABLE TO RESOLVE INCONSISTENT DEVICE CATEGORIES BETWEEN ddname1, ddname2

Explanation: The user requested data set stacking, but inconsistent device categories were specified for the requests that make up the data set collection. The system was unable to resolve the inconsistency. The storage management subsystem (SMS) is not at the proper level to resolve the inconsistency; DFSMS/MVS 1.3.0, or higher, is required.

In the message text:

jobname
The name of the job that requested data set stacking.

procstep
The name of the step in the procedure.

stepname
The name of the step.

ddname1
The DD name that the system determined is part of a data set collection, but for which an inconsistent device category was specified as compared with ddname2.

ddname2
The DD name that the system determined is part of a data set collection, but for which an inconsistent device category was specified as compared with ddname1.

System action: The system ends the job.

System programmer response: Ensure that DFSMS/MVS 1.3.0 or higher is installed, or modify the ACS routines to have the DDs directed to consistent device categories.

Detecting Module: IEFAB42B
Routing Code: 11
Descriptor Code: 6

IEF281I dev NOW OFFLINE [-DEVICE IS BOXED]

Explanation: In response to a VARY command, a device has been placed offline. In the message text:

dev The device number.

DEVICE IS BOXED
The device was boxed because of a hardware I/O error, or VARY dev,OFFLINE,FORCE command processing.

When the system boxes a device, these events occur:

- I/O on the device ends.
- Any new I/O requests result in permanent I/O errors.
- No new allocations are done for the device.
- If the device was online, it is marked pending offline. The device goes offline when these conditions occur, in this order:
1. The device is no longer allocated to any job.
2. Allocation can get the necessary resources to process the request.

If the device was offline, it remains offline.

System action: Processing continues.

Operator response: To recover a boxed device, proceed as follows:
1. In most cases, make the boxed device offline to all sharing systems.
2. Determine the cause for the boxing, and take any required hardware repair actions.
   a. In the case of a broken device, the device must be repaired before proceeding to step 3.
   b. In the case of a broken control unit, the device should be used only over the other (good) control unit paths. The broken control unit may be repaired at a later time. Proceed to step 3.
   c. In the case of a broken channel, the device should be used only over other (good) channel paths. The broken channel may be repaired at a later time. Proceed to step 3.
3. To bring the device online to allow the system programmer to verify the data on the boxed device, proceed with one of the following:
   a. If the device is offline and boxed (F-BOX), vary the device online using the following command:
      \texttt{VARY dev,ONLINE}
   b. If the device is allocated and boxed (A-BOX), determine the users of the device using the following command:
      \texttt{DISPLAY U,,ALLOC,dev,1}
      Use your installation procedures to unallocate users of the device. You may have to cancel jobs or TSO/E users. If you cannot unallocate all users of the device (for example, a system task), then proceed to step 3c. Then vary the device online, using the following command:
      \texttt{VARY dev,ONLINE}
      For a boxed, allocated device, these actions are the preferred method for bringing the device online, as it allows the device to be taken offline before it is brought back online. This causes the operating system to perform VOLSER verification and path validation.
      Proceed to step 4 to verify the data on the volume.
   c. A device that is allocated and boxed, but not offline, may be brought online, using the following form of the VARY command:
      \texttt{VARY dev,ONLINE,UNCOND}
      \textbf{Note:} When this form of the command is used to bring the device online, the operating system does not verify the VOLSER.
4. Verify or repair the data, if necessary, or at least notify the owners of data on the volume. If a potential data integrity problem exists, the system programmer must check the data before the device is placed online to any system for starting productive work.

System programmer response: Use the following tools to verify the data:
\begin{itemize}
   \item LIST VTOC for VTOC
   \item IDCAMS with DIAGNOSE option for VSAM catalogs
   \item IDCAMS with VERIFY option for VSAM data sets
\end{itemize}

\textbf{IEF282I} \texttt{dev NOW UNLOADED [ -DEVICE IS BOXED]}

Explanation: In response to an UNLOAD command, the system unloaded a volume from a device. In the message text:
\begin{itemize}
   \item \texttt{dev} The device number.
\end{itemize}

\textbf{DEVICE IS BOXED}

The device was boxed because of a hardware I/O error, or VARY \texttt{dev,OFFLINE,FORCE} command processing, or VARY CH(x),OFFLINE,FORCE command processing.

When the system boxes a device, these events occur:
\begin{itemize}
   \item I/O on the device ends.
   \item Any new I/O requests result in permanent I/O errors.
   \item No new allocations are done for the device.
   \item If the device was online, it is marked pending offline. The device goes offline when these conditions occur, in this order:
      1. The device is no longer allocated to any job.
      2. Allocation can get the necessary resources to process the request.
\end{itemize}

If the device was offline, it remains offline.

System action: Processing continues.

Operator response: See the operator response for message IEF281I for information on recovering a boxed device.

Detecting Module: IEFHBUNL

Routing Code: 2/3/4/7/8

92 z/OS V1R11.0 MVS System Messages, Vol 8 (IEF-IGD)
**Descriptor Code:** 5

**IEF283I**

**Explanation:** A DD statement specified DELETE as the disposition of a data set, but the system did not delete the data set from the volumes listed in the message text.

If the data set was not deleted from any of its volumes, the volumes listed are all of the volumes on which the data set resides. If the data set was partially deleted, message IEF285I precedes this message in the SYSOUT data set and lists the volumes from which the data set was deleted.

Five volume serial numbers are listed per line until all the volumes are listed. The last volume serial number is followed by a period. In the message text:

- **dsname** The data set name. If the data set name is ...PATH=.SPECIFIED..., the problem was with an HFS file.
- **rc** The return code, as follows:
  - 1 The expiration date had not occurred. When the data set was created, the expiration date was specified by the EXPDT or RETPD subparameter in the LABEL parameter of the DD statement.
  - 4 No device was available for mounting during deletion.

**Note:** Under JES3, return code 4 might appear for a data set that was passed from a job step but was not received by the step where it was to be deleted. Return code 4 appears if one of the following has occurred:

- The data set was allocated to a permanently resident device that was online to MVS but offline to JES3.
- JES3 set up the data set on a device that was varied offline to JES3 before the data set could be deleted.

- 5 Too many volumes were specified for deletion. Because of this, not enough storage was available to perform the specified deletion. Deletion may be accomplished in several job steps by specifying some of the volume serial numbers in each step.

- **ser** The volumes involved, as follows:
  - A 6 digit number: The serial number of the volume, which contains labels.
  - A number beginning with a slash or L: the volume is unlabeled. The number is an internal serial number assigned by the system to the unlabeled volume. If ser begins with L, the number after the L is of the form xxxyy, where xxx is the data set number and yy is the volume sequence number for the data set.

- **z** A code indicating why the data set was not deleted from a volume, as follows:
  - 1 The system could not find the data set on the volume.
  - 2 The data set is security protected and the correct password was not given.
  - 3 The expiration date had not occurred. When the data set was created, the expiration date was specified by the EXPDT or RETPD subparameter in the LABEL parameter of the DD statement.

- **UNCATALOGED**
  - The data set was not found on all the volumes listed in the catalog. It was deleted from the volumes listed in message IEF285I and was uncataloged.
  - The volumes involved, as follows:
    - A 6 digit number: The serial number of the volume, which contains labels.
    - A number beginning with a slash or L: the volume is unlabeled. The number is an internal serial number assigned by the system to the unlabeled volume. If ser begins with L, the number after the L is of the form xxxyy, where xxx is the data set number and yy is the volume sequence number for the data set.

- 8 A code, z, following each volume serial number, explains why the data set was not deleted from that volume.
  - C The system found an error in the parameter list, as follows:
    - An incorrect parameter list address
    - An incorrect volume list address
    - An incorrect volume count
    - Conflicting options

- 10 The storage management subsystem is not active, so the DELETE request could not be processed. (The request was for an SMS-managed data set.

- 11 A system error occurred while trying to delete an SMS-managed or VSAM data set; SMS failed the DELETE request.

- 14 An attempt to delete a migrated data set was unsuccessful. Error messages from the archive product, such as DFSMSHSM, might appear in the joblog.

Chapter 2. IEF messages 93
An uncorrectable I/O error occurred in deleting the data set from the volume.

The system could not have the volume mounted to delete it.

The system asked the operator to mount the volume, but the operator did not. Or, in a system with MSS and JES3, JES3 would not allow the virtual volume to be mounted.

The data set cannot be deleted because it is currently in use.

Either the caller is not authorized by RACF to access the data set, or the data set DSCB indicates that it is RACF-defined but no profile exists for the data set in the RACF data set. (This code is generated only in systems containing the resource access control facility (RACF).)

The data set is associated with one or more RACF-defined entities. (This code is generated only in systems containing RACF).

Application Programmer Response: Depending on the value of rc and z, do the following:

rc Action
1 Do not attempt to delete the data set.
4 Make sure that the correct volumes can be mounted. If JES3 is being used, be sure the device containing the data set is online to JES3.
5 Delete the data set in several job steps.
6 Make sure that the correct volumes can be mounted.
8 And z is 1, 5, or 6, make sure that the correct volumes can be mounted.
And z is 2, supply the correct password.
And z is 3, do not attempt to delete the data set.
And z is 4, resubmit the job.
And z is 7, do not specify SHR as the disposition for the data set.
And z is 8, contact the installation RACF administrator to correct the problem by properly defining the data set or by providing correct RACF authorization.
And z is 9, have the owners of the RACF-defined entities delete the profiles from the RACF data set.

Ask the system programmer to verify the status of SMS.

Check for SMS messages; resubmit the job.

Correct the condition described by the error messages. If none appears, resubmit the job, as the data set might have been recalled while the job was running. If the condition persists, recall the data set manually before submitting the job.

Detecting Module: IEFAB4A2
Routing Code: 2/3/4
Descriptor Code: 4

IEF284I jobname stepname procname ddname
+relpos UNABLE TO ALLOCATE - DEVICE devnum IS ASSIGNED TO A FOREIGN HOST

Explanation: The automatically switchable device is assigned to a system that is outside the sysplex, or is within the sysplex but is using the device as a dedicated device.

In the message text:

jobname The name of the job.
stepname The name of the job step.
procname The name of the step in the procedure./ddname The name of the DD statement or dynamic allocation request.
relpos The position of a concatenated DD statement relative to the first DD in the concatenated group.
devnum The device number.

System action: The system fails the job step or dynamic allocation request.

Operator response: Determine which system has the device assigned. Issue the DISPLAY U,, command from each system that could vary the device online. In response, message IEE457I identifies devices assigned to the system with the letter "R", meaning "reserved".

If message IEE457I does not also identify the device with the letter "A", meaning "allocated", or one of the other status codes for message IEE457I meaning either "SYS", "allocated to system", "BOX", "hardware error", "BSY", "device busy", or other code indicating the device is unavailable, and you want to make the device available to the system on which the job (or application) was running, do the following:

- Vary the device OFFLINE from the system to which it is currently assigned.
• Vary the device ONLINE to the system the job or application was running on at the time of error.
• Rerun the job or restart the application that encountered the error.

Otherwise, CANCEL the job or application and try again later when the device becomes available.

**Source:** Allocation
**Detecting Module:** IEFAB48B
**Routing Code:** 11
**Descriptor Code:** -

---

**Explanation:** The system performed the disposition requested for a data set.

`dsname` The data set name. If the data set name is `...PATH=.SPECIFIED...`, the data set was an HFS file.

`dsp` One of the following:

- CATALOGED
- DELETED
- HDELETED
- KEPT
- PASSED
- RECATALOGED
- SUBSYS
- SYSIN
- SYSOUT
- UNCATALOGED

`rc` The hex return code, as follows:

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>10</td>
<td>The storage management subsystem (SMS) was not active while trying to process the disposition for an SMS-managed data set.</td>
</tr>
<tr>
<td>11</td>
<td>A system error occurred while trying to process the disposition of an SMS-managed data set.</td>
</tr>
</tbody>
</table>

`ser` The volumes involved, as follows:

- A 6-digit number: The serial number of the volume, which contains labels.
- A number beginning with L: The volume is unlabeled. The number is an internal serial number assigned by the system to an unlabeled volume. It is of the form `xxxxy`, where `xxx` is the data set number and `yy` is the volume sequence number for the data set.

If no `VOL SER` line is issued, the system disposed of either a VIO data set or a subsystem data set (For example SYSIN, SYSOUT, SUBSYS).

The message lists five volume serial numbers per line until all the volumes are listed. A period follows the last volume serial number.

For data sets which are deleted prior to being unallocated, this message may show a disposition of KEPT. This can happen in the case of data sets deleted by

- the TSO/E DELETE command,
- the IDCAMS DELETE command, or
- any system or application program which issues the SCRATCH SVC.

To determine the actual disposition of the data sets, check the message sent for the DELETE command or SCRATCH SVC to:

- the TSO/E terminal,
- the IDCAMS SYSPRINT data set, or
- messages issued by the system or application program (if any).

When this message indicates deletion of a passed, unreceived data set that was created during the job, another IEF285I message may indicate that another temporary data set was kept. This data set is actually a dummy data set occupying no space. It was allocated so SCRATCH processing could access the volume.

When IDCAMS is running, inexplicable IEF285I messages with system-generated temporary data set names and a disposition of KEEP appear frequently. The data sets do not exist and the names, which are generated when a program allocates a volume with a disposition of OLD or SHR, do not appear on any of the specified volumes. Ignore these messages.

Message IEF285I will appear for all data sets on any console on which a MONITOR STATUS operator command has been issued.

**System action:** When you specify a status subparameter of OLD, SHR, or MOD on a DD statement for a data set that does not exist, the system proceeds based on whether you have supplied `VOLUME` and `UNIT` information on the DD statement.

Depending on the value for `dsp` the system responds as follows:

- **CATALOGED**
  - The system catalogs the data set.
DELETED
   The system deletes the data set.

HDELETED
   The system deletes the data set without recalling it.

KEPT
   The system takes no action for this request, although another request for the same data set during the same job might cause the data set to be cataloged or deleted.

PASSED
   See z/OS MVS JCL User's Guide for more information about disposition processing for data sets that do not exist.

RECATALOGED
   The catalog entry for this data set has been updated (for example, additional volumes for a multi-volume data set).

SUBSYS
   A subsystem data set was allocated.

SYSIN
   A system input data set was allocated.

SYSOUT
   A system output data set was allocated.

UNCATALOGED
   The data set was uncataloged.

Source: Allocation
Detecting Module: IEFAB4A2
Routing Code: 11
Descriptor Code: -

IEF286I jobname [processtep] stepname ddname[+xxx] - DISP FIELD INCOMPATIBLE WITH DSNM

Explanation: The disposition specified in a DD statement does not agree with the status of the data set. The DD statement defined either:
   A new generation data group (GDG) data set, but the data set already exists.
   An old GDG data set, but the data set does not exist.

Note: This message will be received for a relative reference to a GDS which is cataloged, but which is not rolled into the GDG base.

In the message text:
   jobname The name of the job.
   proctstep The name of the step in the procedure.
   stepname The name of the job step.
   ddname The name of the DD statement.

IEF287I dsname dsp w VOL SER NOS=

Explanation: The DISP parameter of a DD statement was CATLG or UNCATLG, but the system could not catalog or uncatalog the data set.

The message lists five volume serial numbers per line until all the volumes are listed. A period follows the last volume serial number. In the message text:
   dsname The data set name.
   dsp The disposition of the data set. If CATLG was specified in the DD statement, then dsp appears in the message text as NOT CATLGD (not cataloged) or NOT RECTLGD (not recataloged) or NOT ROLLED (not rolled in). NOT ROLLED is issued when a new storage management subsystem (SMS)-managed generation data group member with a disposition of CATLG fails to get rolled into the generation data group base. If UNCATLG was specified in the DD statement, dsp appears in the message text as NOT UNCTLGD (not uncataloged).
   w Explains why the data set was not cataloged, recataloged, rolled in, or uncataloged, as follows:

   w   Explanation
   1   A control volume or user catalog was required and a utility program must be used to catalog the data set.
   2   One of the following has occurred:
The data set to be cataloged had been cataloged previously. Either a catalog entry already exists for the DSNAME specified, or a catalog entry for an ALIAS of another data set matches the DSNAME specified.

The data set to be uncataloged could not be located.

The data set name of the data set to be cataloged in an ICF catalog has the same low-level qualifier (GnnnnVnn) as a GDG (generation data group) generation. This is not supported by the ICF catalog.

The data set name of a data set to be cataloged in a user catalog or CVOL has the same high level qualifiers as the name of a catalog entry that already exists in the user catalog or CVOL. For example, data set A.B.C.D cannot be cataloged in a CVOL if A.B or A.B.C is already in the catalog.

The data set name to be cataloged or uncataloged has been improperly constructed or modified. For example, by means of READJFCB and OPEN TYPE=J.

A specified index did not exist.

The data set could not be cataloged because space was not available in the catalog data set.

Too many volumes were specified for the data set; because of this, not enough storage was available to perform the specified cataloging.

The data set to be cataloged in a generation index is improperly named.

The data set to be cataloged was not opened and the following information was not provided on the DD statement or via the retrieved source (VOL=REF or passed data set):

Density
  For dual density tape requests only

Recording mode
  For requests where compaction information is required

One of the following has occurred:

- An input/output error that cannot be corrected occurred in reading or writing the catalog because of a GDG sequencing error. This can happen when the system is trying to catalog a new GDS whose generation number is lower than an existing GDS, such as when the generation numbers wrap from G9999V00 to G0001V00.
- A catalog is expiration date protected but the purge date has not passed.
- The user is denied access to a catalog by the Resource Access Control Facility (RACF).
- The size of the catalog record required to hold all of the information for the data set would exceed the LRECL of the catalog.

A specified index did not exist.

The data set could not be cataloged because space was not available in the catalog data set.

Too many volumes were specified for the data set; because of this, not enough storage was available to perform the specified cataloging.

The data set to be cataloged in a generation index is improperly named.

The data set to be cataloged was not opened and the following information was not provided on the DD statement or via the retrieved source (VOL=REF or passed data set):

Density
  For dual density tape requests only

Recording mode
  For requests where compaction information is required

One of the following has occurred:

- An input/output error that cannot be corrected occurred in reading or writing the catalog because of a GDG sequencing error. This can happen when the system is trying to catalog a new GDS whose generation number is lower than an existing GDS, such as when the generation numbers wrap from G9999V00 to G0001V00.
- A catalog is expiration date protected but the purge date has not passed.
- The user is denied access to a catalog by the Resource Access Control Facility (RACF).
- The size of the catalog record required to hold all of the information for the data set would exceed the LRECL of the catalog.

A specified index did not exist.

The data set could not be cataloged because space was not available in the catalog data set.

Too many volumes were specified for the data set; because of this, not enough storage was available to perform the specified cataloging.

The data set to be cataloged in a generation index is improperly named.

The data set to be cataloged was not opened and the following information was not provided on the DD statement or via the retrieved source (VOL=REF or passed data set):

Density
  For dual density tape requests only

Recording mode
  For requests where compaction information is required

One of the following has occurred:

- An input/output error that cannot be corrected occurred in reading or writing the catalog because of a GDG sequencing error. This can happen when the system is trying to catalog a new GDS whose generation number is lower than an existing GDS, such as when the generation numbers wrap from G9999V00 to G0001V00.
- A catalog is expiration date protected but the purge date has not passed.
- The user is denied access to a catalog by the Resource Access Control Facility (RACF).
- The size of the catalog record required to hold all of the information for the data set would exceed the LRECL of the catalog.

A specified index did not exist.

  For requests where compaction information is required

One of the following has occurred:
If \( w \) is 4, increase the size of the catalog data set or delete unused catalog entries, and use a utility program to catalog the data set.

If \( w \) is 5, reduce the number of volumes specified for the data set.

If \( w \) is 6, and \( dsname \) is G0000V00, do the following:
1. Using IEHLIST, list all the data set names for that GDG (generation data group).
2. Using IEHPROGM, rename the data sets in the same order as they exist, starting with G0001V00 or higher. Uncatalog the data sets using the original data set names, then catalog the data sets using the new names.

If \( dsname \) is not G0000V00, correct the DSNAME parameter of the DD statement and submit the job step again.

If \( w \) is 9, resubmit the job, or catalog the data set using some alternate method, such as the IDCAMS utility.

If \( w \) is A, either scratch or move the split cylinder data set that is creating the error, and run the job again.

If \( w \) is 10 or 11, use the access method services command ALTER ROLLIN to roll in the generation data set. Generation data sets in a deferred roll-in state can be referred to by their absolute generation numbers.

If \( w \) is 12, contact the Security Administrator to obtain proper authorization.

\( jobname \) \( stepname \) WAITING FOR VOLUME(S) OR UNIT(S)

**Explanation:** A job step is waiting for volume(s) or unit(s).

In the message text:

\( jobname \)  
The name of the job.

\( stepname \)  
The name of the job step.

The system issues this message when a job must wait for an allocated or offline device and either:

- one of the following is specified in the ALLOCxx member of the parmlib data set:
  - ALLC_OFFLN POLICY (WAITHOLD)
  - ALLC_OFFLN POLICY (WAITNOH)
  - SPEC_WAIT POLICY (WAITHOLD)
  - SPEC_WAIT POLICY (WAITNOH)
- or IEF_ALLC_OFFLN (the Allocated/Offline Device Installation Exit) or IEF_SPEC_WAIT (the Specific Waits Installation Exit) requests to let the job wait, either holding or not holding resources.

**System action:** The system does not run the step until the required volume(s) or unit(s) that the step is waiting for become available.

**Operator response:** Search problem reporting databases for a fix for the problem. If no fix exists, contact the IBM Support Center for direction in obtaining a Symptom Record for information about the volume(s) or unit(s) for which the step is waiting.

Detecting Module: IEFAB4FJ

Routing Code: 11/Note 36

Descriptor Code: -

```
IEF300I jobname WTR CLOSED - SUBSYSTEM INTERFACE ERROR xxxx/yyyy
```

Explanation: A serious error occurred either while the external writer was attempting to obtain a SYSOUT data set from JES2 or JES3 or to dynamically allocate a SYSOUT data set received from JES2 or JES3.

In the message text:

jobname
The jobname assigned to the external writer processing the SYSOUT data set.

xxxx/yyyy
The error code received by the external writer. Interpret the error code as follows:

- If yyyy = 0000, the IEFSSREQ macro instruction was issued, and xxxx is the return code (in register 15) from IEFSSREQ macro processing. See the description of the subsystem options block (SSOB) in [z/OS MVS Data Areas, Vol 5 (SSAG-XTLST)] for the explanation of the register 15 return codes.

- If yyyy = FF00, the IEFSSREQ macro instruction was issued, and xxxx is the value of the SSOBRETN field in the subsystems option block (SSOB). See the description of the SSOB in [z/OS MVS Data Areas, Vol 5 (SSAG-XTLST)] for the explanation of the return codes in SSOBRETN. These codes are listed under ‘Process SYSOUT Data Sets Return Codes’.

- If yyyy is any value except 0000 or FF00, SVC 99 was issued; yyyy is the error reason code (S99ERROR), and xxxx is the return code in register 15 from SVC 99 processing. See [z/OS MVS Programming: Authorized Assembler Services Guide] for the explanation of the SVC 99 error reason codes and return codes.

System action: The external writer closed the output data set on device dev and ends.
enter REPLY xx,'N'. If the external writer is to use another writer name, enter REPLY xx, ‘N,ccccc’, where ccccccc is the other writer name. Finally, if aaaaaaaa is not valid and the operator wants the external writer to use the IBM-supplied default writer name, enter REPLY xx,'D' and the external writer will use the default writer name to write the data set.

IEF303I  jobname WTR CLOSED - OUTPUT ERROR

Explanation:  The external writer closed its SYSOUT data set and stopped itself, because of an uncorrectable input/output error while writing the data set. The data that was being written will be written on the device specified in the next START XWTR command that also specifies the data’s selection criteria.

In the message text:

jobname
  The jobname assigned to the external writer.

Operator response:  Enter another START XWTR command, specifying the same selection criteria of the data that was being written.

Contact hardware support.

System programmer response:  Obtain the JCL for the job.

Collect all printed output and output data sets related to the problem.

Source:  JES2
Routing Code:  *,7,10
Descriptor Code:  4

IEF307I  jobname WTR CLOSED-OUTPUT DCB FAILED TO OPEN

Explanation:  While processing a START XWTR command, the system was either:

• unsuccessful in opening the system output data set, or
• unsuccessful in determining the device type associated with the output data set.

In the message text:

jobname
  The jobname assigned to the external writer.

System action:  The external writer will terminate itself.

Operator response:  Restart the writer.

System programmer response:  Make sure that the UCS/FCB parameters are correctly specified on the DD statement.

Problem determination:  Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again.

Obtain the program listing for the job.

If the problem recurs and if the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

Source:  JES2
Routing Code:  *,7,11
Descriptor Code:  6

IEF314I  SYSIO

Explanation:  While an External Writer was reading a SYSOUT data set, one of the following was detected:

• An uncorrectable input/output error in reading the input data set.
• For an input data set containing blocked variable format records, a logical record that was too short; that is, less than 5 characters for blocked variable format with control characters or less than 4 characters for blocked variable format with no control characters.
• For an input data set containing fixed or fixed blocked records, the BLKSIZE or LRECL of the data is not the same as the BLKSIZE or LRECL which describe the attributes of the data set.

Obtain the JCL for the job.

If the problem recurs and if the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

Source:  JES2
Routing Code:  *,7,10
Descriptor Code:  4
System action: The External Writer stopped processing the input data set and will go on to process other input data sets.

System programmer response: Probable user error. Make sure that the input data set does not have a blocked variable format record that is too short. Then recreate the data set by again executing the job step that produced it.

Obtain the SYSOUT output for the job. Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. Volume containing the SYSOUT data set, 29.

Source: JES2
Routing Code: Note 11
Descriptor Code: -

IEF316I CCBAD

Explanation: While an External Writer was writing a SYSOUT data set, an invalid machine control character was detected in the input data set. The External Writer could not translate the character into an ASA character.

System action: The External Writer stops processing the input data set and goes on to process other input data sets.

System programmer response: Probable user error. Make sure that the input data set contains valid control characters.

Obtain the program listing for the job. Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again.

If the problem recurs and if the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

Descriptor Code: 12

**Explanation:**

The system cannot satisfy an allocation request.

In the message text:

- **jobname** The name of the job.
- **procstep** The name of the step in the procedure.
- **stepname** The name of the job step.
- **ddname** The name of the DD statement.
- **+ xxx** The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User’s Guide](https://www.ibm.com/support/pages/zos-jcl-user-guide) for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

### NOT ENOUGH SYSTEM MANAGED VOLUMES ELIGIBLE

A request was made for a data set that resides on a volume that the storage management subsystem (SMS) manages. There are not enough eligible volumes or eligible devices to satisfy the request. Note that for tapes, this could mean that there are no tape drives available in the Automated Tape Library.

### NOT ENOUGH NON-SYSTEM MANAGED VOLUMES ELIGIBLE

A request was made for a volume that SMS does not manage. There are not enough eligible volumes or eligible devices to satisfy the request. Note that for tapes, this could mean that there are no tape drives available outside of the Automated Tape Library, or that the SMS-managed tape volume being requested is not currently in the library (that is, it has been ejected), and the user exit for Volume Not in Library (CBRUXVNL) has not been implemented.

**REQUIRED STORAGE MANAGER IS NOT AVAILABLE**

SMS is not initialized or is unavailable to satisfy a request for a data set.

**System action:** The system ends the job.

**Application Programmer Response:** Do the following:

1. Determine whether the data set currently resides on or is to reside on an SMS-managed volume.
2. Change the UNIT, VOLUME, or STORCLAS requirements on the allocation request to specify an eligible volume.

**Source:** Allocation

Detecting Module: For **NOT ENOUGH SYSTEM MANAGED VOLUMES ELIGIBLE**, the detecting module is IEFAB424.

For **NOT ENOUGH NON-SYSTEM MANAGED VOLUMES ELIGIBLE**, the detecting module is IEFAB424.

For **REQUIRED STORAGE MANAGER IS NOT AVAILABLE**, the detecting modules are IEFAB42A, IEFAB42B, IEFAB431, IEFAB434, IEFAB457, IEFAB464, IEFAB469, IEFAB490, IEFAB492, and IEFDB413.

Routing Code: 11

Descriptor Code: 6

**Explanation:** The system cannot allocate a data set due to an unrecoverable error.

In the message text:

- **jobname** The name of the job.
- **procstep** The name of the step in the procedure.
- **stepname** The name of the job step.
- **ddname** The name of the DD statement.
- **+ xxx** The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User’s Guide](https://www.ibm.com/support/pages/zos-jcl-user-guide) for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.
IEF345I  jobname [procstep] stepname - ddname [+ xxx] ALLOCATION FAILED DUE TO SCHEDULER JCL FACILITY ERROR.

Explanation: The system cannot allocate the specified DD statement due to an unrecoverable error encountered by the Scheduler JCL Facility (SJF).

In the message text:

jobname The name of the job.
procstep The name of the step in the procedure.
stepname The name of the job step.
ddname The name of the DD statement.
+ xxx The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See z/OS MVS JCL User's Guide for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

deve The device number.

System action: The job fails because the allocation request cannot be satisfied.

Application Programmer Response: Request a device to which you are authorized or notify your security administrator.

Source: Allocation

Detecting Module: IEFAB4FD
Routing Code: 9,11
Descriptor Code: 6

IEF348I AUTOSWITCH DEVICE dddd WILL NOT BE CONSIDERED FOR THIS ALLOCATION DUE TO AN I/O ERROR DURING ASSIGN PROCESSING

Explanation: The subject AutoSwitchable device experienced an I/O error during Assign processing, or the Assign did not complete within the allotted time. The device will not not be considered further for the current job step or dynamic allocation.

In the message text:

dddd The device number.

System action: The system removes the subject device from any further allocation consideration for the remainder of the current job step or dynamic allocation.

Operator response: Vary the subject device offline. Repeated instances of this message for the same
device should be reported to Hardware Support.

### IEF350I CHECKPOINT OF JOB jobname STEP stepname.procstep ABENDED Sahn REASON=rc

**Explanation:** A program in a job step issued a CHKPT macro to ask the system to write a checkpoint. An abnormal end occurred during the checkpoint processing.

In the message text:

- **jobname** The name of the job.
- **stepname** The name of the job step being checkpointed.
- **procstep** The procedure name.
- **Sahn** The abend code.
- **rc** The reason code.

**System action:** The system issues message IHJ001I. The system writes an SVC dump. The system returns control to the issuer of the CHKPT macro with a return code indicating that the checkpoint failed.

**Operator response:** See the operator response for message IHJ001I.

**System programmer response:** See the system programmer response for message IHJ001I.

**Source:** Scheduler restart

**Detecting Module:** IEFAB4FX

**Routing Code:** 3

**Descriptor Code:** 4

---

### IEF352I ADDRESS SPACE UNAVAILABLE

**Explanation:** When ending a batch job, started task, or TSO user, the initiator/terminator found that this address space had been used to provide services to other address spaces through space-switching PC routines. In order to maintain system integrity, the address space is ended and is marked as unavailable. This does not necessarily indicate an error in the program or in the initiator.

**System action:** The system ends the current job, started task, or TSO user normally. The address space is also ended and the address space identifier (ASID) is marked as unavailable. This ASID might be temporarily or permanently unavailable. If a batch job caused this situation to occur, the initiator in this address space will be ended and then automatically restarted in another address space.

**System programmer response:** Determine which program established the outstanding space switch entries. If it is determined that no error exists, then no action needs to be taken. If an error does exist, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

**Note:** If batch jobs, started tasks, or TSO users that create unusable ASIDs end enough times, they will exhaust all available ASIDs and an IPL will be required. When IPLing is not an acceptable option, determine which programs caused the problems and fix them. Contact the IBM Support Center for information about fixing these programs.

---

In the message text:

- **dddd** The AutoSwitch device that timed out.

**System action:** The system processing continues.

**Operator response:** If this message is issued repeatedly for the same AutoSwitch device, notify your System Programmer.

**System programmer response:** Determine why the subject AutoSwitch device is timing out. To do this, it may be necessary to contact your Customer Engineer (CE) after gathering any available Logrec data. Further analysis may be required by Tracing I/O to the subject device. If this message is issued repeatedly for the same AutoSwitch device, a VARY dddd, OFFLINE, FORCE command can be issued against the device to prevent it from being eligible to future allocations.

**Source:** Allocation

**Detecting Module:** IEFAB4FX

**Routing Code:** 3

**Descriptor Code:** 4

---

### IEF351I ASSIGN PROCESSING TIMED OUT FOR AUTOSWITCH DEVICE dddd

**Explanation:** The Assign processing for AutoSwitch device dddd failed. Specifically, the Assign took longer than the allowed one (1) minute to complete.

If an Assign timeout error occurs two (2) consecutive times for the same device within the same Job Step during batch (JCL) allocation, that device will be ignored by Allocation for the remainder of the DD statements within that Job Step. However, for each dynamic allocation request, the device will remain eligible to that request until it receives two (2) consecutive Assign timeout errors.

This message is to be used primarily as a warning that there could be a potential hardware problem with the subject device dddd.
For methods that prevent running out of ASIDs, see z/OS MVS Programming: Extended Addressability Guide.

Source: Initiator/terminator

Detecting Module: IEFSD166
Routing Code: 2,11
Descriptor Code: 6

**IEF353A** INITIATOR TERMINATED DUE TO CROSS MEMORY BIND, RESTART INITIATOR

**Explanation:** When ending a batch job, the initiator/terminator found that this address space had been used to provide services to other address space through space-switching PC routines. In order to maintain system integrity, the address space is ended and is marked as unavailable. This does not necessarily indicate an error in the program or in the initiator.

**System action:** The system ends the current job normally. The address space itself are also ended and the address space identifier (ASID) is marked as unavailable. The ASID might be temporarily or permanently unavailable.

**Operator response:** Restart the initiator that ended.

**System programmer response:** Determine which program established the outstanding space switch entries. If it is determined that no error exists, then no action needs to be taken. If an error does exist, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

**Guideline:** If batch jobs that create unusable ASIDs end enough times, they will exhaust all available ASIDs and an IPL will be required. When IPLing is not an acceptable option, determine which programs caused the problems and fix them. Contact the IBM Support Center for information about fixing these programs. For methods that prevent running out of ASIDs, see z/OS MVS Programming: Extended Addressability Guide.

**IEF354I** DISABLED DASD DEVICE `dev` NOT VARIED ONLINE

**Explanation:** Device `dev` is a disabled, permanently-resident DASD device. The device was not brought online because it presented a unit check indicating an intervention required status.

In the message text:

`dev`

The device number of the disabled DASD device.

**System action:** The system continues processing; the device remains offline.

**Operator response:** Have the system programmer enable the device and then vary the device online.

If the device is to be varied online, then ready the device.

Source: Allocation/Unallocation

Detecting Module: IEFAB473, IEFAB4FN
Routing Code: 3
Descriptor Code: 4

**IEF355A** ADDRESS SPACE UNAVAILABLE DUE TO CROSS MEMORY BIND

**Explanation:** When ending a batch job, the initiator/terminator found that this address space had been used to provide services to other address space through space-switching PC routines. In order to maintain system integrity, the address space is ended and is marked as unavailable. This does not necessarily indicate an error in the program or in the initiator.

**System action:** The system ends the current job normally. The address space is also ended, but the address space identifier (ASID) is marked as unavailable. The ASID might be temporarily or permanently unavailable. The initiator in this address
space will be ended and then automatically restarted in possibly another address space.

**System programmer response:** Determine which program caused the outstanding cross memory access. If it is determined that no error exists, then no action needs to be taken. If an error does exist, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

**Source:** Initiator/terminator

### IEF359I  

**RESERVED OR BROKEN DASD DEVICE dev NOT VARIED ONLINE**

**Explanation:** A VARY command to bring a direct access storage device (DASD) online failed because input/output (I/O) to the device either timed out or had a permanent I/O error. Possible causes are:

- When the VARY command was issued, a device RESERVE on the device was currently held by another system.
The DASD is not accepting I/O requests and may be broken.

In the message text:

*dev*

The device number of the DASD.

**System action:** The system does not bring the requested device online. The system continues processing.

**Operator response:** To determine if the problem is that the DASD is reserved by another system, look for message IOS431I, which would identify a system holding a reserve on the device. If IOS431I is not issued or does not identify a system holding a reserve, enter the following command on all systems that share the device:

```
DISPLAY U,,OFFLINE,dev,1
```

In the response, message IEE457I, look for an R in the STATUS field. If present, the device is reserved. Try the VARY command later when the device is no longer reserved.

If the device is not reserved, contact hardware support to determine why the device is not accepting I/O requests.

IEF366I jobname [procstep] stepname ddname[+xxx] - RELATIVE GENERATION NUMBER SPECIFIED FOR GDG CONTAINS SYNTAX ERROR

Explanation: In a DD statement, the relative generation number specified for a generation data group (GDG) in the DSNAME parameter contained a syntax error. One of the following guidelines was violated:

- The first character of a relative generation number must be +, - , or 0.
- A relative generation number prefaced with a + or - must be 1 or greater.
- A relative generation number cannot exceed 255.
- All characters of a relative generation number must be numeric (0-9).
- A relative generation number must be expressed in 1-3 numeric characters. It may be prefaced by a + or -, for example +101, -002, +4, -09, 000.

In the message text:

jobname The name of the job.
procstep The name of the step in the procedure.

The system ends the job.

Application Programmer Response: Correct the relative generation number. Resubmit the job.

**IEF374I**
STEP/stepname/STOP yyyyddd.hhmm

**Explanation:** At step ending, system management facilities (SMF) issues this message to give information about the step.

In the message text:

**yyyyddd.hhmm**
The date and time given as the year (using the 4-digit year number, such as 1996 or 2150), and the day of the year (001-366), the hour (00-23), and the minute (00-59).

**CPU xxxx MIN xx.xx SEC**
For processor time, which includes enclave time, preemptive class SRB time, client SRB time, and normalized IFA service time, xxxx MIN specifies the minute and xx.xx SEC specifies the second (in seconds and hundredths of a second).

**SRB xxxx MIN xx.xx SEC**
For system request time, xxxx MIN specifies the minute and xx.xx SEC specifies the second (in seconds and hundredths of a second).

**stepname**
The name of the job step.

**REAL/VIRT xxxxK SYS xxxxK**
REAL/VIRT xxxxK indicates the maximum kilobytes of storage (high-water mark) that a step used from the user region of the private area. SYS xxxxK indicates the maximum kilobytes of storage (high-water mark) that the address space used from the following areas: LSQA, SWA, and high private area. The word REAL appears if ADDRSPC=REAL was specified; otherwise, VIRT appears.

**EXT xxxxK SYS xxxxK**
EXT xxxxK indicates the maximum kilobytes of storage (high-water mark) that a step used from the user region of the extended private area. SYS xxxxK indicates the maximum kilobytes of storage (high-water mark) that the address space used from the following areas: extended LSQA, extended SWA, and extended high private area.

**Source:** System Management Facilities (SMF)

**IEF376I**
JOB/jobname/STOP yyyyddd.hhmm

**Explanation:** At job ending, system management facilities (SMF) issues this message to indicate the time and date that the job started.

In the message text:

**jobname**
The name of the job.

**yyyyddd.hhmm**
The date and time given as the year (using the 4-digit year number, such as 1996 or 2150), and the day of the year (001-366), the hour (00-23), and the minute (00-59).

**CPU xxxx MIN xx.xx SEC**
For processor time, which includes enclave time, preemptive class SRB time, client SRB time, and normalized IFA service time, xxxx MIN specifies the minute and xx.xx SEC specifies the second (in seconds and hundredths of a second).

**SRB xxxx MIN xx.xx SEC**
For system request time, xxxx MIN specifies the minute and xx.xx SEC specifies the second (in seconds and hundredths of a second).

**Source:** System Management Facilities (SMF)

**Detecting Module:** IETF722

**Routing Code:** 11

**Descriptor Code:** -
Explanation: One of the following conditions occurred during data set disposition processing of a batch unallocated data set:

- Inability to catalog a new data set for which a disposition of CATLG was specified.
- Inability to catalog an old uncataloged data set for which a disposition of CATLG was specified.
- Inability to recatalog an old cataloged data set for which the volume list was extended and a disposition of CATLG, KEEP or PASS was specified.
- Inability to roll a storage management subsystem (SMS)-managed generation data set (GDS) into the generation data group (GDG) base.

This message is only issued if one of the following conditions is true:

- The system installation default was set requesting that this message be issued if any of the above conditions occurred.
- MSGLEVEL=(,1) is specified on the JOB statement.
- The JES installation default, specified at initialization, sets the message level to MSGLEVEL=(,1).
- The job abnormally ends.

In the message text:

- **jobname** The name of the job.
- **procstep** The name of the step in the procedure.
- **stepname** The name of the job step.
- **dsname** The name of the data set that could not be (re)cataloged.
- **disp** One of the following:
  - CATLGD if an attempt was made to catalog a new or uncataloged data set.
  - RECATLGD if an attempt was made to recatalog a cataloged data set.
- **w** The reason the data set was not cataloged or recataloged. See message [IEF287I on page 96](#) for an explanation of the values for **w**.

System action: If the installation option to end all jobs for which one of the conditions described above was chosen, the system ends the job. Otherwise, the system continues processing unless this message was issued by an abend.

Notes:

1. The setting of the condition code has not been affected.

2. The job is NOT abended, unless the step which encountered the error had itself already abended. “Terminated” means simply that subsequent steps will not be executed.

3. The “normal” disposition for data sets is taken, unless the step which encountered the error had itself already abended, in which case the “abnormal” (or “conditional”) disposition is taken.

Operator response: Notify the system programmer.

System programmer response: Determine and correct the error. Determine if the job should be resubmitted.

Source: Allocation

Detecting Module: IEFAB4A2

Routing Code: 2

Descriptor Code: 6

---

Explanation: The system installation default was set requesting that the job be ended if one of the following conditions occurred during data set disposition processing of a batch unallocation data set:

- Inability to catalog a new data set for which a disposition of CATLG was specified.
- Inability to catalog an old uncataloged data set for which a disposition of CATLG was specified.
- Inability to recatalog an old cataloged data set for which the volume list was extended and a disposition of CATLG, KEEP or PASS was specified.
- Inability to roll a storage management subsystem (SMS)-managed generation data set (GDS) into the generation data group (GDG) base.

This message is routed to any console that issued a MONITOR JOBNAME command. If the T operand was specified in the command, the time appears in the message.

In the message text:

- **jobname** The name of the job.
- **procstep** The name of the step in the procedure.
- **stepname** The name of the job step.
- **hh.mm.ss** The time, given as the hour (00-23), the minute (00-59), and the second (00-59).

System action: The job will be terminated at the end of the step which encountered this error.
Notes:
1. The setting of the condition code has not been affected.
2. The job is NOT abended, unless the step which encountered the error had itself already abended. “Terminated” means simply that subsequent steps will not be executed.
3. The “normal” disposition for data sets is taken, unless the step which encountered the error had itself already abended, in which case the “abnormal” (or “conditional”) disposition is taken.

Source: Allocation
Detecting Module: IEFBB410

Explanation: The system installation default was set requesting that the job be ended if one of the following conditions was encountered during data set disposition processing of a batch unallocated data set:

- Inability to catalog a new data set for which a disposition of CATLG was specified.
- Inability to catalog an old uncataloged data set for which a disposition of CATLG was specified.
- Inability to recatalog an cataloged data set for which the volume list was extended and a disposition of CATLG, KEEP or PASS was specified.
- Inability to roll a storage management subsystem (SMS)-managed generation data set (GDS) into the generation data group (GDG) base.

In the message text:

jobname The name of the job.
procstep The name of the step in the procedure.
stepname The name of the job step.

System action: The system reduces the non-specific volume count for the data set so that the number of specific and non-specific volumes is equal to 59. The system continues processing.

Application Programmer Response: If necessary, change the program so that fewer volumes are required.

IEF433D  

**jobname** - WAIT REQUESTED -- REPLY 'HOLD' OR 'NOHOLD'  

**Explanation**: During data set allocation, the operator requested that allocation for a job wait until the needed units or volumes are free. The system is waiting for the operator to respond, based on the following:

- **For a batch job**, the system can either:
  - Release the devices that have already been allocated to the job and cannot be shared with other jobs.
  - Leave the devices allocated until the job can be completely allocated.

- **If the allocation is dynamic**, the system can either:
  - Release only the devices requested by that particular SVC 99
  - Leave the devices allocated until the job's outstanding requests can be completely allocated.

- **If no online devices are available**, then pending offline devices may be allocated to satisfy the request.

In the message text:

**jobname** The name of the job.

**System action**: The system action depends on whether the operator responds with HOLD or NOHOLD. In either case, allocations to direct access devices are not released. If these allocations are for NEW data sets, the space those data sets are to occupy is already allocated but not used until all the devices needed by this job are available (that is, until the WAIT situation has been relieved).

- If the reply is HOLD, the system will not release any of the devices that have already been allocated to this job before it waits for the required units or volumes.
  
  Be aware that using the HOLD reply might cause a deadlock situation, particularly when the device is being used by a job that is going to wait. The system does not release any non-sharable devices (that is, non-DASD) that have already been allocated to the job before it waits for required units and volumes. To avoid this problem, only one job in the system should use the HOLD option at a time.

Also Note that replying HOLD prevents any subsequent vary offline requests from completing successfully, until either the HOLD is satisfied (required devices become available) or the job is cancelled. Vary offline requests issued while HOLD is in effect receive message IEE794I, and the device to be varied offline is placed in a pending offline condition. When the HOLD condition is relieved, the system completes vary offline processing normally.

When devices for a job are held during a wait, and a device that was eligible for allocation to the job becomes ineligible for allocation (because of its use by a system utility, for example), the job might fail because it does not have enough devices to complete successfully. Message IEF700I in the job log identifies this failure. Refer to message IEF700I for information on how to respond to this failure.

- If the reply is NOHOLD, the system will release those devices that have been allocated to this job, but that cannot be shared with other jobs.

- Regardless of whether the reply to this message is HOLD or NOHOLD, or if the message is left outstanding (not replied to), no other allocations, unallocations, OPENs, CLOSEs, Catalog LOCATES, data set OBTAINs, or End-of-Volume (EOV or FEOV) processing will be able to take place within this address space until this message is replied to and the WAIT is fulfilled. This is because the address space’s SYSZTIOT resource is held EXCLUSIVE by this allocation. This statement is true even if an unallocation would free up the device required by this allocation.

For an example of the HOLD versus NOHOLD options, assume that JOBA owns an automatically switchable device and is waiting for a printer. Assume also that JOB2 owns the printer JOB1 needs and is waiting for the automatically switchable device JOB1 owns.

- If the reply is HOLD for each job, the two jobs will wait until one job is cancelled. This deadlock can be even more complex depending on the number of jobs waiting.

- If the reply is NOHOLD for each job, allocation responds on a first-come, first-served basis. After the first job finishes using a resource, it is available to the second.

- If the reply is NOHOLD for JOB1 and HOLD for JOB1, the system will release the automatically switchable device that had been allocated to JOB1. This device is now available for JOB1. JOB1 will wait until JOB1 unallocates the printer.

- If the reply is NOHOLD for JOB2 and HOLD for JOB2, the system will release the printer that had been allocated to JOB2. This device is now available for JOB2. JOB2 will wait until JOB2 unallocates the automatically switchable device.

**Operator response**: Do one of the following:

- Reply xx,’HOLD’ to have the system wait while holding the devices already allocated.
IEF434D • IEF449I

- Reply xx,'NOHOLD' to have the system release the devices that are not shareable before it waits.

**System programmer response:** If a manual response to this message is not desired, refer to [z/OS MVS Initialization and Tuning Reference](https://www.ibm.com/support/docview.wss?rs=180&context=TS0530&uid=swg21843316) for information on how to use the ALLOCxx parmlib member to set a policy that will allow the system to automatically reply 'HOLD' or 'NOHOLD'.

IEF450I  jobname [procstep] stepname - ABEND
   [Scde I Ucde] REASON=xxxxxxxx
   [TIME=hh.mm.ss]

Explanation: A job step abnormally ended.
In the message text:

jobname  The name of the job.
procstep  The name of the step in the procedure.
stepname  The name of the job step.
Scde  The system completion code. If a system completion code appears in the message text, the control program of the operating system ended the job step.
Ucde  The user completion code. If a user completion code appears in the message text, the user program ended the job step.
xxxxxxxx  The hexadecimal reason code. The reason code is meaningful only if the REASON keyword is coded on the ABEND macro instruction. A hex reason code of 4 could be the result of a partitioned data set or a VIO data set exceeding the one volume limit and exceeding a maximum of 65535 tracks. For additional information, see z/OS DFSMS Using Data Sets.

hh.mm.ss  In response to a MONITOR JOBNAMES,T command, the time appears as the hour (00-23), the minute (00-59), and the second (00-59).

System action: The system ends the job and issues message IEF472I to the SYSOUT data set.

IEF452I  jobname - JOB NOT RUN - JCL ERROR
   [- TIME=hh.mm.ss]

Explanation: The system detected an error in a JCL statement, or the job was cancelled while on the input queue.
In the message text:

jobname  The specified jobname.

hh.mm.ss  In response to a MONITOR JOBNAMES,T command, this message gives the time, in hours (00-23), minutes (00-59), and seconds (00-59).

The error message appears in the SYSOUT data set.
This message is also issued if one of the following is true:
• Either message IEF099I or message IEF092I was issued and the operator cancelled the job while it was waiting. The message is routed to any console that entered a MONITOR command with JOBNAMES in its operand.
• The job was a Time Sharing Option Extensions (TSO/E) foreground job, therefore, it could not wait for data sets.
• Message IEF173I was issued for a step other than the first step of the job.

System action: If the operator cancelled the job, all steps of the job, beginning with the step currently being processed, will be ended. Otherwise, the job will not be initiated; no steps will be processed.
Operator response: Check the job for errors.

IEF453I  jobname - JOB FAILED - JCL ERROR [-TIME=hh.mm.ss]

Explanation: One of the following occurred:
- The system detected an error in a job control statement.
- A system error occurred during allocation.
- The system has been restarted after a system failure.
  The job was running when the failure occurred, but the job did not request a restart. In this case, this message accompanies abend X'2F3'.

Note: The message might be issued when the job ended after the abend of one of the job steps. In this case, there might be no error in the job control language.

This message is routed to any console that issued a MONITOR JOB NAMES command. If the T operand was specified in the command, the time appears in the message.

In the message text:
- `jobname` The name of the job.
- `hh.mm.ss` The time, given as the hour (00-23), the minute (00-59), and the second (00-59).

System action: The system ends the job.

Application Programmer Response: Correct the JCL for the job, if it was incorrect. Run the job again.

System programmer response: If the JCL was correct, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

IEF455D  MOUNT ser on dev FOR jobname [procstep] stepname OR REPLY ‘NO’

Explanation: The system issued message IEF233D to request mounting of a volume. This message is issued by allocation for non-library dynamic allocations (that is, non-ATL, non-VTS) which do not specify DEFER. (For mounts with DEFER coded, see message IEC501A.)

Note: Message IEF455D is not issued for Automated tape library dataserver volumes, including ATL and VTS.

In the message text:
- `ser` The volume serial.
- `dev` The device number.
### IEF458D

**Routing Code:** 11  
**Descriptor Code:** -

**Explanation:** For authorized dynamic allocation, the system requires a data set that is in use by another job. Message IEF863I names the data set.

In the message text:

- **jobname** — The name of the job.
- **stepname** — The name of the job step.

**System action:** The job waits for the data set to become available or for a reply of NO.

**Operator response:** None. However, if you do not want the job to wait for the data set, reply NO.

**Source:** Allocation

**Detecting Module:** IEFGB4DC

**Routing Code:** 2  
**Descriptor Code:** -

### IEF462I

**jobname [procstep] stepname ddname[+xxx] - NO AVAILABLE OFFLINE DEVICES ELIGIBLE FOR ALLOCATION**

**Explanation:** No available offline devices were eligible for the allocation request. The system could not enter Recovery Allocation (message IEF238D) because there were no offline units within the specified UNIT that could be brought online.

Possible reasons for this error are that the allocation request specified an incorrect volume serial, or that the volume serial is valid but mounted on a device that is not within the specified UNIT name.

In the message text:

- **jobname** — The name of the job.
- **procstep** — The name of the step in the procedure.
- **stepname** — The name of the job step.
- **ddname** — The name of the DD statement.
- **+xxx** — The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User's Guide](https://publib.boulder.ibm.com/infocenter/prodguid/v2r11/lzj101086.html) for more information about GDG ALL or OPTCD=B requests when a data set is used within a set of concatenated data sets. The first data set of a concatenation can be +000, but the value +000 is never shown.

**System action:** The system ends the job.

**System programmer response:** Check for CSA shortage and correct if necessary; otherwise, search problem reporting data bases for a fix for the problem.
no fix exists, contact the IBM Support Center.

Source: Allocation
Detecting Module: IEFAB427
Routing Code: 11
Descriptor Code: -

```
IEF464I  jobname [procstep] stepname ddname[+xxx] - DEVICE IS BOXED - CANNOT BE ALLOCATED
```

**Explanation:** The DD statement requested a specific device. The system could not allocate the device, because some earlier processing (hot I/O processing or VARY dev,OFFLINE,FORCE command processing, for example) boxed the device.

When a device is boxed, these events occur:
- I/O on the device ends.
- Any new I/O requests result in permanent I/O errors.
- No new allocations are done for the device.
- If the device was online, it is marked pending offline.

The device goes offline when these conditions occur, in this order:
1. The device is no longer allocated to any job.
2. Allocation can get the necessary resources to process the request.
   - If the device was offline, it remains offline.

In the message text:
- `jobname` The name of the job.
- `procstep` The name of the step in the procedure.
- `stepname` The name of the job step.
- `ddname` The name of the DD statement.
- `+xxx` The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User’s Guide](https://www.ibm.com) for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

**System action:** The system ends the job.

**Application Programmer Response:** Resubmit the job when the device has been brought back online.

Detecting Module: IEFAB427
Routing Code: 11
Descriptor Code: -

```
IEF466I  jobname [procstep] stepname ddname[+xxx] - UNABLE TO RECOVER FROM DADSM FAILURE
```

**Explanation:** Several DD statements in a step requested scratch volumes. When the system attempted to do direct access device space management (DADSM) on the volume, an error occurred. The system attempted to unallocate data sets that had been allocated to the volume for previous DD statements in the step, so that a new volume could be tried. The unallocation attempt failed.

In the message text:
- `jobname` The name of the job.
- `procstep` The name of the step in the procedure.
- `stepname` The name of the job step.
- `ddname` The name of the DD statement.
- `+xxx` The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User’s Guide](https://www.ibm.com) for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

**System action:** The system ends the job.

**Application Programmer Response:** Resubmit the job when the device has been brought back online.

**Source:** Allocation
Detecting Module: IEFAB4FD
Routing Code: 11
Descriptor Code: -
set of a concatenation would be +000, but the value +000 is never shown.

System action: The system ends the job.

Application Programmer Response: Resubmit the job.

Source: Allocation

Detecting Module: IEFAB4FD

Routing Code: 11

Descriptor Code: -

IEF467I  

Explanation: Another job is using the unit requested. The system does not allow waiting for the unit to become available. For example:
- For telecommunications lines.
- For Time Sharing Option Extensions (TSO/E) users at logon time.

If a step is trying to allocate more internal readers than the system defines, the system again does not allow waiting.

In the message text:

jobname The name of the job.
procstep The name of the step in the procedure.
stepname The name of the job step.
ddname The name of the DD statement.
+xxx The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See \[z/OS MVS JCL User's Guide\] for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The system ends the job.

Application Programmer Response: Try resubmitting the job or logging on again when the unit is available. If applicable, remove excess DD statements for internal readers.

IEF476I  jobname [procstep] stepname ddname[+xxx] - OVERLAPPING DATA SETS IN VTOC

Explanation:  The system attempted to allocate the space requested. A previous allocation or deallocation was interrupted before the system updated the volume table of contents (VTOC). For this allocation, the system found two data sets allocated to the same space on the volume.

In the message text:

   jobname  The name of the job.
   procstep  The name of the step in the procedure.
   stepname  The name of the job step.
   ddname  The name of the DD statement.
   + xxx  The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See z/OS MVS JCL User’s Guide for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action:  The system ends the job.

System programmer response:  Scratch one of the two data sets that are allocated to the same space.
Then, tell the application programmer to resubmit the job.

**Source:** Allocation

**Detecting Module:** IEFAB4FD

**Routing Code:** 11

**Descriptor Code:** -

---

**Explanation:** The system attempted to allocate space on a volume. Space was previously allocated on the volume under the disk operating system (DOS). The system could not convert the volume table of contents (VTOC) to a standard format because a split cylinder data set was located on cylinder zero or on the same cylinder as a non-split cylinder data set.

In the message text:

- **jobname** The name of the job.
- **procstep** The name of the step in the procedure.
- **stepname** The name of the job step.
- **ddname** The name of the DD statement.
- **+ xxx** The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User’s Guide](https://www.ibm.com/support/knowledgecenter/en/SSLTBW_2.2.0/com.ibm.zos.mvs/jcl/launch.html) for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

**System action:** The system ends the job.

**System programmer response:** Either scratch or move the split cylinder data set that is causing the error. Then, tell the application programmer to resubmit the job.

**Source:** Allocation

**Detecting Module:** IEFAB4FD

**Routing Code:** 11

**Descriptor Code:** -

---

**Explanation:** The system attempted to allocate space on a volume. Updating of the volume table of contents (VTOC) on this volume had previously been interrupted. The system could not convert the VTOC because of an installation modification to the system.

In the message text:

- **jobname** The name of the job.
- **procstep** The name of the step in the procedure.
- **stepname** The name of the job step.
- **ddname** The name of the DD statement.
- **+ xxx** The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User’s Guide](https://www.ibm.com/support/knowledgecenter/en/SSLTBW_2.2.0/com.ibm.zos.mvs/jcl/launch.html) for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

**System action:** The system ends the job.

**System programmer response:** Analyze the VTOC to determine the severity of the VTOC error. Convert the VTOC by either removing the installation modification or resetting the DIRF bit to 0 and the DOS bit to 1 in the Format 4 DSCB and allocating a non-ISAM data set to the volume. Then, tell the application programmer to resubmit the job.

**Source:** Allocation

**Detecting Module:** IEFAB4FD

**Routing Code:** 11

**Descriptor Code:** -

---

**Explanation:** The system attempted to allocate space on a volume. The updating of the volume table of contents (VTOC) on this volume had previously been interrupted. The system could not convert the VTOC because the data set being allocated was the second or subsequent volume of an ISAM PRIME data set.

In the message text:

- **jobname** The name of the job.
- **procstep** The name of the step in the procedure.
- **stepname** The name of the job step.
- **ddname** The name of the DD statement.
- **+ xxx** The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User’s Guide](https://www.ibm.com/support/knowledgecenter/en/SSLTBW_2.2.0/com.ibm.zos.mvs/jcl/launch.html) for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.
within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User’s Guide] for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The system ends the job.

System programmer response: Analyze the VTOC to determine the severity of the VTOC error. Convert the VTOC by resetting the DIRF bit to zero, setting the DOS bit to one in the Format 4 DSCB, and allocating a non-ISAM data set to the volume. Then, tell the application programmer to resubmit the job.

**IEF481I**  
**jobname [procstep] stepname ddname[+xxx] - SAME UNIT REQUESTED TWICE - CONFLICTS EXIST**

**Explanation:** The same unit address was specified as another DD statement for the step. The request cannot be allocated for one of the following reasons:

- Different volume serial numbers are specified on each of the requests.
- A use attribute conflict exists:
  - One request is public and the other is private.
  - One request specifies a volume serial and the other is private and non-specific.
  - The address of a unit record device has been specified twice.

In the message text:

jobname  The name of the job.

procstep  The name of the step in the procedure.

stepname  The name of the job step.

ddname  The name of the DD statement.

+xxx  The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User’s Guide] for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The system ends the job.

Application Programmer Response: For different volume serial numbers, do one of the following:

- Change the address in the UNIT parameter on one of the DD statements.
- Specify the same volume serial number on both DD statements.
- Specify UNIT=AFF in the second DD statement to request the same unit as the first DD statement for the unit.

If a use attribute conflict exists, either change the use attributes to avoid the conflict, or change one of the unit addresses.

If the address of a unit record device is specified twice, either change one of the unit addresses or, in the second DD requesting the unit, specify UNIT=AFF to the first DD requesting the unit.
Resubmit the job.

  - text is one of the following:
    - DEVICE IS NOT ACCESSIBLE.
    - REQUIRED SYSTEM MANAGED VOLUME ser IS NOT AVAILABLE.
    - REQUIRED VOLUME ser IS NOT AVAILABLE.
    - REPLIED DEVICE IS NOT ELIGIBLE.
    - DEVICE dev COULD NOT BE FOUND IN THE CONFIGURATION.
    - DEVICE dev FOUND IN AN OFFLINE LIBRARY.

- **System action:** The operator’s response to message IEF238D is incorrect.

---

In the message text:

- **jobname**
  - The name of the job.

- **ddname**
  - The name of the DD statement.

- **+nnn**
  - The relative position of a concatenated DD statement in relation to the first DD in the concatenated group.

- **dev**
  - The device number of the unit.

- **ser**
  - The volume serial.
Subsystem (SMS) is required, but none of the devices brought online contains an SMS-managed volume.

ser  The volume serial number.

REQUIRED VOLUME  ser IS NOT AVAILABLE.
None of the devices brought online contains the required volume, or the device being brought online is managed by the Storage Management Subsystem (SMS), but a non-SMS-managed volume is required.

REPLIED DEVICE IS NOT ELIGIBLE.
The device is not valid or the device is allocated to another job.

DEVICE  dev COULD NOT BE FOUND IN THE CONFIGURATION.
The system was unable to find the specified device in the configuration.

dev  The device number.

DEVICE  dev FOUND IN AN OFFLINE LIBRARY.
The system-managed tape library where the tape device resides is either offline or pending offline.

No text
One of the following:
• The reply was not recognized as one of the options given in the message.
• The device number given is not valid for the DD statement being processed.
• The device cannot be accessed physically. For example, the device does not exist, the power is off, or the meter switch is disabled.
• The device number is not valid for the first volume from the list shown in message IEF877E or IEF878I for a multi-volume data set.
• The device is a direct access storage device (DASD) and has a volume serial number that is not valid. In this case, the system issues message IEF007I before this message.
• The device is a direct access storage device (DASD) and contains the first volume from the list in message IEF877E or IEF878I.
• If the tape device appeared in the LIBRARY OFFLINE list, issue a VARY LIBRARY online command before replying to IEF238D.
• If the system issued message IEF008I before issuing this message, then follow the operator response for IEF008I. Reply to message IEF238D with another device or with 'CANCEL' to cancel the job.

System programmer response: If you cannot resolve the problem, search the problem reporting data bases for a fix. If no fix exists, contact the IBM Support Center, providing the logrec error record.

IEF491I  jobname [procstep] stepname - DD GENERATIONS CAUSE TOTAL DD STATEMENTS TO EXCEED TIOT LIMIT OF xxxK

Explanation: The total number of DD statements that the system generates during allocation processing exceeds the maximum limit for a job step. The reason why this problem occurred may be one of the following:
• A data set spanning multiple device types.
• A data set requiring an implied private catalog.
• A generation data group (GDG) request for all data sets in the group.

In the message text:
jobname  The name of the job.
procstep  The name of the step in the procedure.
stepname  The name of the job step.
xxxxK  The maximum size of the task input/output table (TIOT).

System action: The system repeats message IEF238D until the operator enters a valid response.

Operator response: Check the following:
• The reply given was an option specified in the message.
• The option was spelled correctly.
• If the reply was a device number be sure that:
  – The device was listed in message IEF877E or IEF878I.
  – The appropriate VARY command has been issued if the device was listed as NOT ACCESSIBLE.
  – The device can be physically accessed.
  – The device is not boxed. Use the DISPLAY U command to find out.

Application Programmer Response: Decrease either the number of DD statements in the step or the number of DD requests of the type indicated in the preceding list. Resubmit the job.

Source: Allocation
Detecting Module: IEFAB466
Routing Code: 11
Descriptor Code: -
Explanation: During allocation processing, the system found that a data set specified by the JOBCAT or STEPCAT DD statement was not a VSAM private catalog. JOBCAT and STEPCAT are reserved ddnames for describing VSAM private catalogs. Therefore, the DD statement cannot be a generation data group (GDG) request for all levels of the GDG, multi-volume data sets, or a multi-device type data set.

In the message text:

**jobname** The name of the job.

**procstep** The name of the step in the procedure.

**stepname** The name of the job step.

**ddname** The name of the DD statement.

**+ xxx** The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See z/OS MVS JCL User's Guide for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

**System action:** The system ends the job.

**Application Programmer Response:** List the system catalog to obtain further information about your private catalog.

**IEF500I**

**ddtype DD ddname IS ERRONEOUSLY MARKED AS AN SMS LIBRARY MANAGED TAPE REQUEST**

Explanation: MVS Allocation found the DD identified in this message to be erroneously marked as an SMS Library Managed Tape Request and IBM does not support this type of modification to a DD.

In the message text:

**ddtype** Type of DD: DUMMY or SUBSYS.

**ddname** Name of the offending DD.

**System action:** The job step containing this DD will be failed.

**Operator response:** Notify the System Programmer.

**System programmer response:** Search problem reporting databases for a fix for the problem. If the product or program that is modifying the subject DD is not known, contact the IBM Support Center to obtain further direction in identifying the errant product or program.
**IEF502I** • **IEF503I**

Source: MVS Allocation
Detecting Module: IEFAB421
Routing Code: 11
Descriptor Code: 4

---

**IEF502I**

**Explanation:** text is one of the following:

**DUPLICATE VOLUME SERIAL**
A volume has been found with the same serial number as another volume.

**UNIT dev1 UNLOADED**
The system unloaded the volume on dev1 during normal processing to detect premounted volumes.

**UNIT dev1 NOT VARIED**
The system did not vary dev1 online. When a tape or direct access device (DASD) device is varied online, the system reads the volume serial. While trying to vary dev1 online, the system found the same volume name on online unit dev2. The system cannot vary unit dev1 online; it remains offline.

**DUPLICATE VOLUME vol IS ON UNIT dev2**
A volume label read for the volume mounted on unit dev1 found a volume, but a volume with the same name is already mounted on online unit dev2. The system does not support duplicate volume serial numbers.

**System action:** Depending on the message text, the system does the following:

**DUPLICATE VOLUME SERIAL**
The system unloads the volume and issues message IEF234E.

**UNIT dev1 UNLOADED**

**UNIT dev1 NOT VARIED**

**DUPLICATE VOLUME vol IS ON UNIT dev2**
If unit dev1 is online, the system unloads the unit. If the volume label was read during a vary online request, the system leaves unit dev1 offline.

**Operator response:** Depending on the message text, do the following:

---

**IEF503I**

**Explanation:** During allocation processing, an error occurred when the system read a volume label. The error can be one of the following:

- An uncorrectable I/O error occurred.
- An unlabeled tape was mounted before it had been requested.
- A non-standard label tape was mounted. The user non-standard label handling routine rejected the label or the installation had provided no user non-standard label handling routine.
- The system detected a volume serial number that was not valid on a direct access storage device (DASD).

**System action:** The system unloads the volume and issues message IEF234E.

**Operator response:** Do one of the following:

- If an uncorrectable I/O error or an incorrect volume serial number was the problem, and the message recurs for the same volume, ensure that the label is correct.
- If an unlabeled volume had been mounted before it was requested, this is the problem. Do not remount the volume until it is requested.
- If a non-standard label volume was being used, notify the system programmer.

**System programmer response:** If the volume should use a non-standard label, ensure that a non-standard label handling routine exists. Otherwise, provide a standard label for the volume.

If the system issued this message for a DASD, ensure that the device is functioning correctly. Verify that the device has a correct standard label. If necessary:
• Refresh the volume label and try to vary the device online so that the system can attempt to verify the volume serial number.
• If the device is mountable, you also can replace the volume with one having a standard label.

Try to vary the device online so that the system can attempt to verify the volume serial. Further errors can indicate that the device experienced a hardware failure; in this case, contact hardware support.

**IEF506I  jobname [procstep] stepname ddname[+xxx] - NO STORAGE VOLUMES. ‘VOLUME=PRIVATE’ ASSUMED.**

**Explanation:** The DD statement requested space for a new data set on a non-private volume. The statement did not specify a volume serial number.

The system could not find enough storage volumes to satisfy the request. An attempt will be made to allocate the data set to a private volume.

In the message text:

- **jobname** The name of the job.
- **procstep** The name of the step in the procedure.
- **stepname** The name of the job step.
- **ddname** The name of the DD statement.
- **+xxx** The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User’s Guide](https://www.ibm.com/support/knowledgecenter/SSLTBW_2.4.0/com.ibm.zos.zos.jcl.doc.html) for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

**System action:** If there are demountable devices, the system will ask the operator to mount a volume which can be allocated as private to this request. If there are no demountable devices but there are offline devices, the system will go into allocation recovery and issue IEF238D. The system will then allow a private PERMRES volume to be chosen and allocated. If there are no demountable devices and no offline devices, the job will fail with message IEF462I.

**Source:** Allocation

**Detecting Module:** IEFAB436

---

**IEF524I  dev{, VOLUME ser} PENDING OFFLINE**

**Explanation:** The device listed was varied offline but could not be taken offline on the first attempt.

In the message text:

- **dev** The device number.
- **ser** The volume serial number.

**System action:** The system will continue to try to take the device offline.

**Operator response:** Verify that this device should be taken offline. If not, vary the device back online.

**Source:** Allocation

**Detecting Module:** IEFAB429

**Routing Code:** 3,4,7,8,2

**Descriptor Code:** 5

---

**IEF525E  dev{, VOLUME ser} STILL PENDING OFFLINE**

**Explanation:** The device listed was varied offline but could not be processed during the past 15 minutes. Depending on the system load, the pending process may have tried to process this device many times.

In the message text:

- **dev** The device number.
- **ser** The volume serial number.

**System action:** The system will continue to try to take the device offline.
Operator response: Verify that this device should be pending offline. If not, undo the original command by varying the device back online.

IEF550I jobname {procstep} stepname STEP FAILED, UNABLE TO RESOLVE DATA SET STACKING, REASON reason-code

Explanation: The user specified data set stacking, but JES3 and the BCP did not process the data set collections in the step in the same manner.

In the message text:

jobname
The name of the job that requested data set stacking.

procstep
The name of the step in the procedure.

stepname
The name of the step.

reason-code
One of the following:

1 The BCP did not detect data set stacking, while JES3 detected at least one data set stack.

2 JES3 did not detect data set stacking, while the BCP detected at least one data set stack.

System action: The system ends the job.

User response: Notify the system programmer.

System programmer response: For reason code 2, ensure that you have the JES3 5.2.1 TMM SPE installed. If this is not the problem, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

IEF572I [jobname.stepname] VOLUME VERIFICATION ERROR ON ser

Explanation: The system issued a mount request to the 3850 for a volume for a data set in the step of a job. When the system verified the volume, it found that the volume label read did not match the name of the volume in the mount request, or an I/O error occurred while reading the volume label.

In the message text:

jobname.stepname
The name of the job and job step.

jobname.stepname is not in the message text if the error condition is detected during PRESRES processing or during the processing of the VARY and UNLOAD commands.

ser
The volume serial number, which is one of the following:

- A specific tape volume serial number
- SCRTCH
- PRIVAT

SCRTCH or PRIVAT indicate non-specific volume requests. SCRTCH is used when the dataset being created on the non-specific volume is temporary [DISP=(NEW,DELETE) or DSN=&amp;temppname]. PRIVAT is used for all other cases of non-specific volumes.

System action: The system cancels the job if, during allocation, the label read was not as expected or an I/O error occurred while reading the volume label. Otherwise, the system issues a message and does not process the volume.

Operator response: Report this error condition to the system programmer.

System programmer response: If this message is preceded by message ICB194E for the same volume with restart code X'80' (incorrect cell location), follow the recovery actions.

If this message is preceded by message IEA000I (with 28 bytes of sense data), the volume verification error is due to an I/O error.

If the failure was due to an I/O error and ser was not SCRTCH, you have two options:

- Option 1: if you want to avoid getting an ICB096I message for another virtual volume, and this is a convenient time to assign an alternate track, do the following:
  1. Use the PURGE command with the VOLID parameter equal to ser to demount the volume. Vary offline the SSID shown in the previous IEA000I message.
  2. If the SSID is that of the drive with the primary or secondary tables pack, it is necessary to free the pack from tables use before processing. If the SSID is that of the drive with the secondary tables pack, run the COPYT command. If the SSID is that of the drive with the primary tables
pack, run the SWAPT command to make the pack secondary tables pack, and then run the COPYT command. The pack with the error no longer contains the primary or secondary tables.

3. Mount the staging pack on a read drive. Use the DFSMSdss™ utility to assign an alternate track. Remount the pack on an offline staging drive. Vary the SSID for the staging drive online. Restart the failing job step.

• Option 2: If you can specify the mount on another staging drive group to avoid the failing SSID, use the PURGE command with the VOLID parameter equal to ser to demount the volume. Restart the failing step with the changed job control language.

If an I/O error occurred and ser is SCRTCH, do the following:
1. Vary the virtual unit address offline. The device is in the previous 28-byte IEA000I message.
2. Restart the failing step.
3. At a convenient time, reassign the track in error. To do this, mount the staging pack on a real drive, and use the DFSMSdss utility to assign an alternate track. Remount the pack on an offline staging drive and vary the SSID of the staging drive online.

If there was no preceding ICB194E or IEA000I message, the verification error was due to a mismatch between the volume label and the volume in the mount request. The MODIFYV command will change the volume label to match the volume information that is in the Inventory data set, Mass Storage Control tables, and the operating system. Do the following:
1. Issue the UNLOAD command to demount the volume.
2. If an MSS Access Method Services command was being attempted to correct a volume label mismatch flag condition, check to see if the deferred mount parameter was used in the DD statement. If the deferred mount parameter was not used, correct the JCL DD statement, and restart the failing step.
3. If a specific volume request (with job control language, by the catalog, or by load) for this volume caused the verification attempt, use the previous messages or the LISTMSVI command output to determine if the volume label mismatch flag is on. If the mismatch flag is on, the LISTMSVI command output will have a Note (Note: Prior rename failed for above volume;) printed after the volume record of the volume that encountered the problem.
4. If the volume label mismatch flag is on, run the MODIFYV command with the deferred mount parameter specified in the JCL DD statement and with the serial number from the Inventory data set specified for both the volume parameter and the NEWSERIAL parameter to rewrite the volume label so that the volume label matches the volume name.

5. If the volume label mismatch flag is off, use the MODIFYV command to correct the improper volume label.

IEF632I FORMAT ERROR text

Explanation: text is one of the following:

IN THE parameter FIELD
ON THE cntr STATEMENT
IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD

The system detected an error in a parameter in a JCL statement. Examples of errors detected are:

- Too many or too few specified levels of qualification
- An operand missing in a COND parameter
- The EVEN and ONLY subparameters were both specified in the COND parameter of the EXEC statement

In the message text:

IN THE parameter FIELD
The keyword must be followed by an equal sign to be considered correctly specified.

In the message text:

parameter
The last correctly specified keyword parameter preceding the error.

ON THE cntr STATEMENT
The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement.

In the message text:

cntr
The statement on which the error occurred.

IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD
The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME.

In the message text:

parameter1
The minor keyword parameter associated with a major keyword parameter.

parameter2
The major keyword parameter.

System action: The system ends the job and scans the remaining job control statements for syntax errors. The system issues messages about the job to the job log.

Application Programmer Response: Check that the parameters are specified according to the format that is documented in the z/OS MVS JCL Reference.

System programmer response: Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

**Explanation:**

`text` is one of the following:

**IN THE parameter FIELD**

**ON THE cntr STATEMENT**

**IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD**

**IN THE SYMBOLIC PARAMETER**

**IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER**

**IN THE parameter OVERRIDE FIELD**

In a JCL statement, the system found that a parameter or subparameter value contains a valid number of digits, but exceeds the maximum numeric limit.

For example, when using ISO, ANSI, or FIPS tape labels, this message will occur if the user specified a value larger than 16383 kilobytes on the DD statement LRECL parameter.

In the message text:

**IN THE parameter FIELD**

The keyword must be followed by an equal sign to be considered correctly specified.

In the message text:

`parameter`

The last correctly specified keyword parameter preceding the error.

**ON THE cntr STATEMENT**

The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement.

In the message text:

`cntr`

The statement on which the error occurred.

**IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD**

The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME.

In the message text:

`parameter1`

The minor keyword parameter associated with a major keyword parameter.

`parameter2`

The major keyword parameter.

**IN THE SYMBOLIC PARAMETER**

The error was detected in the symbolic parameter.

**IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER**

The error was detected in the field that assigns a value to a symbolic parameter.

**IN THE parameter OVERRIDE FIELD**

The error was detected in an override field.

In the message text:

`parameter`

An override keyword parameter on an EXEC statement.

**System action:** The system ends the job. The system scans the remaining job control statements for syntax errors and issues messages about the job to the job log.

**Application Programmer Response:** Correct the parameter or subparameter value. Submit the job again.

For ISO/ANSI/FIPS tape labels, specify the DD LRECL value as nnnnn kilobytes (where nnnnn=1 to 16383). This requires the problem program DCB macro to include the LRECL=OK or LRECL=nnnnnK format.

**System programmer response:** Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

- IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER
- IN THE parameter OVERRIDE FIELD

In a JCL statement, the system found that the class name specified as the operand of a parameter or subparameter was not one of a set of names or values acceptable for that parameter or subparameter.

In the message text:

IN THE parameter FIELD
    The keyword must be followed by an equal sign to be considered correctly specified.

ON THE cntr STATEMENT
    The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement.

In the message text:

cntr The statement on which the error occurred.

IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD
    The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME.

IN THE SYMBOLIC PARAMETER
    The error was detected in the symbolic parameter.

IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER
    The error was detected in the field that assigns a value to a symbolic parameter.

IN THE parameter OVERRIDE FIELD
    The error was detected in an override field.

IEF640I • EXCESSIVE NUMBER OF POSITIONAL PARAMETERS text

Explanation:

text is one of the following:

- IN THE parameter FIELD
- ON THE cntr STATEMENT
- IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD
- IN THE SYMBOLIC PARAMETER
- IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER
- IN THE parameter OVERRIDE FIELD

The system found too many positional parameters in a JCL statement. A misplaced comma, a duplication, or a null operand field could cause such an error.

In the message text:

IN THE parameter FIELD
    The keyword must be followed by an equal sign to be considered correctly specified.

ON THE cntr STATEMENT
    The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement.

In the message text:

cntr The statement on which the error occurred.
The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME. In the message text:

`parameter1`  
The minor keyword parameter associated with a major keyword parameter.

`parameter2`  
The major keyword parameter.

**IN THE SYMBOLIC PARAMETER**  
The error was detected in the symbolic parameter.

**IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER**  
The error was detected in the field that assigns a value to a symbolic parameter.

**IN THE parameter OVERRIDE FIELD**  
The error was detected in an override field.

In the message text:

`parameter`  
An override keyword parameter on an EXEC statement.

**System action:** The system ends the job. The system scans the remaining job control statements for syntax errors and issues messages about the job to the job log.

**Application Programmer Response:** Check for duplicate positional parameters or misplaced commas. Submit the job again.

**System programmer response:** Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

**IEF642I**  
**EXCESSIVE PARAMETER LENGTH text**

**Explanation:**  
In a JCL statement, the system found a parameter that was longer than permitted.

In the message text:

`parameter`  
A job control statement contains an incorrect subparameter list for a positional parameter. Either the subparameter list is required and is missing, or is not permitted but is present.

`text`  
is one of the following:

**IN THE parameter FIELD**  
prm is the last correctly specified keyword

**ON THE cntr STATEMENT,**  
cntr is the job control statement on which the error occurred. The system usually displays this text if the error was detected before any keyword parameters were processed (for example, the system found an error in the name field of a statement).

**IN THE prm1 SUBPARAMETER OF THE prm2 FIELD**  
prm1 is a minor keyword parameter associated with major keyword parameter prm2. (For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME.)

**IN THE SYMBOLIC PARAMETER**  
The error was detected in the symbolic parameter.

**IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER**  
The system found the error in the field that assigns a value to a symbolic parameter.

**IN THE prm OVERRIDE FIELD**  
prm is an override keyword parameter on an EXEC statement.

**System action:** The system ends the job. The system scans the remaining job control statements for the job for syntax errors.

**Application Programmer Response:** Correct the parameter. Resubmit the job.

**Routing Code:** 2,10

**Descriptor Code:** 4

---

**IEF641I**  
**IMPROPER SUBPARAMETER LIST text**

**Explanation:** A job control statement contains an incorrect subparameter list for a positional parameter. Either the subparameter list is required and is missing, or is not permitted but is present.

`text`  
is one of the following:

**IN THE prm FIELD**  
prm is the last correctly specified keyword

(The keyword must be followed by an equal sign.)

**ON THE cntr STATEMENT,**  
cntr is the job control statement on which the error occurred. The system usually displays this text if the error was detected before any keyword parameters were processed (for example, the system found an error in the name field of a statement).
**IN THE parameter FIELD**
The keyword must be followed by an equal sign to be considered correctly specified.

In the message text:

```
parameter
```

The last correctly specified keyword parameter preceding the error.

**ON THE cntr STATEMENT**
The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement.

In the message text:

```
parameter
```

The statement on which the error occurred.

**IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD**
The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME.

In the message text:

```
parameter1
```

The minor keyword parameter associated with a major keyword parameter.

```
parameter2
```

The major keyword parameter.

**IN THE SYMBOLIC PARAMETER**
The error was detected in the symbolic parameter.

**IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER**
The error was detected in the field that assigns a value to a symbolic parameter.

**IN THE parameter OVERRIDE FIELD**
The error was detected in an override field.

In the message text:

```
parameter
```

An override keyword parameter on an EXEC statement.

**System action:** The system ends the job. The system scans the remaining job control statements for syntax errors and issues messages about the job to the job log.

**Application Programmer Response:** Shorten the parameter to the maximum permitted length or less. Then submit the job again.

**System programmer response:** Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

**UNIDENTIFIED POSITIONAL PARAMETER**

**Explanation:** text is one of the following:

- **IN THE parameter FIELD**
- **ON THE cntr STATEMENT**
- **IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD**
- **IN THE SYMBOLIC PARAMETER**
- **IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER**
- **IN THE parameter OVERRIDE FIELD**

In a JCL statement, the system did not recognize a positional parameter that has certain permitted values. It may be incorrect or misspelled.

In the message text:

```
parameter
```

The last correctly specified keyword parameter preceding the error.

**ON THE cntr STATEMENT**
The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement.

In the message text:

```
parameter
```

The statement on which the error occurred.

**IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD**
The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME.

In the message text:

```
parameter1
```

The minor keyword parameter associated with a major keyword parameter.

```
parameter2
```

The major keyword parameter.

**IN THE SYMBOLIC PARAMETER**
The error was detected in the symbolic parameter.
IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER
The error was detected in the field that assigns a value to a symbolic parameter.

IN THE parameter OVERRIDE FIELD
The error was detected in an override field.

In the message text:

parameter
An override keyword parameter on an EXEC statement.

System action: The system ends the job. The system scans the remaining job control statements for syntax errors and issues messages about the job to the job log.

Application Programmer Response: Correct the bad positional parameter. Submit the job again.

System programmer response: Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

IEF644I INVALID NUMERIC text

Explanation:

text is one of the following:

IN THE parameter FIELD
ON THE cntr STATEMENT
IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD
IN THE SYMBOLIC PARAMETER
IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER
IN THE parameter OVERRIDE FIELD

In a JCL statement, the system found an alphabetic or special character in a parameter that can contain only numeric characters.

In the message text:

IN THE parameter FIELD
The keyword must be followed by an equal sign to be considered correctly specified.

In the message text:

parameter
The last correctly specified keyword parameter preceding the error.

ON THE cntr STATEMENT
The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement.

In the message text:

cntr The statement on which the error occurred.

IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD
The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME.

In the message text:

parameter1 The minor keyword parameter associated with a major keyword parameter.

parameter2 The major keyword parameter.

IN THE SYMBOLIC PARAMETER
The error was detected in the symbolic parameter.

IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER
The error was detected in the field that assigns a value to a symbolic parameter.

IN THE parameter OVERRIDE FIELD
The error was detected in an override field.

In the message text:

parameter An override keyword parameter on an EXEC statement.

System action: The system ends the job. The system scans the remaining job control statements for syntax errors and issues messages about the job to the job log.

Application Programmer Response: Correct the erroneous parameter. Submit the job again.

System programmer response: Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

Source: Interpreter
Detecting Module: IEFVGT
Routing Code: 2,10
Descriptor Code: 4
Explanation:

text is one of the following:

IN THE parameter FIELD
ON THE cntr STATEMENT
IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD
IN THE SYMBOLIC PARAMETER
IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER
IN THE parameter OVERRIDE FIELD

In a JCL statement, the system found a parameter that specified the name of a previous statement. However, a statement with that name was not found, or the statement contained the DYNAM parameter.

In the message text:

IN THE parameter FIELD
The keyword must be followed by an equal sign to be considered correctly specified.

In the message text:

parameter
The last correctly specified keyword parameter preceding the error.

ON THE cntr STATEMENT
The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement.

In the message text:

 cntr
The statement on which the error occurred.

IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD
The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME.

In the message text:

parameter1
The minor keyword parameter associated with a major keyword parameter.

parameter2
The major keyword parameter.

IN THE SYMBOLIC PARAMETER
The error was detected in the symbolic parameter.

IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER
The error was detected in the field that assigns a value to a symbolic parameter.

IN THE parameter OVERRIDE FIELD
The error was detected in an override field.

System action: The system ends the job. The system scans the remaining job control statements for syntax errors and issues messages about the job to the job log.

Application Programmer Response: Check that the conditions on the refer back match the conditions on the referenced statement. Check the spelling of the parameter containing the reference and of the name in the statement to which it refers. Determine if the parameter containing the reference can validly contain a reference. After correcting the error, submit the job again.

System programmer response: Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

**Explanation:** \texttt{text} is one of the following:

- **IN THE \texttt{parameter} FIELD**
- **ON THE \texttt{cntr} STATEMENT**
- **IN THE \texttt{parameter1} SUBPARAMETER OF THE \texttt{parameter2} FIELD**
- **IN THE SYMBOLIC PARAMETER**
- **IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER**
- **IN THE \texttt{parameter} OVERRIDE FIELD**

In a JCL statement, the system found that the first character in a name is not alphabetic or national. The name can be the name field, a procedure name in a parameter, a program name in a parameter, a data set name, or a part of a qualified data set name. This message will also appear when a relative generation number of a generation data group is used without a plus or minus sign. For example, DSNAME=dsnname(+1) is correct, whereas DSNAME=dsnname(1) is incorrect.

In the message text:

- **IN THE \texttt{parameter} FIELD** The keyword must be followed by an equal sign to be considered correctly specified.
- **ON THE \texttt{cntr} STATEMENT**

In the message text:

\texttt{cntr} The statement on which the error occurred.

**Note:** A symbolic parameter consists of a single ampersand (\&) followed by a maximum of 154.
seven alphanumeric (A through Z and 0 through 9) and national (@, #, $) characters. The first character after the ampersand must be alphabetic or national, that is, it cannot be a number.

**IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER**
The error was detected in the field that assigns a value to a symbolic parameter.

**IN THE parameter OVERRIDE FIELD**
The error was detected in an override field.

In the message text:

*parameter*

An override keyword parameter on an EXEC statement.

**System action:** The system ends the job. The system scans the remaining job control statements for syntax errors and issues messages about the job to the job log.

**Application Programmer Response:** Correct the name field and submit the job again.

**System programmer response:** Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

IEF671I  MISPLACED JOBCAT DD STATEMENT

Explanation: The system found that a JOBCAT DD statement appeared after an EXEC statement, or a second JOBCAT DD statement appeared in the JCL for the job.

A JOBCAT DD statement, which defines a user catalog for the job, must precede the first EXEC statement in a job. Only one statement containing JOBCAT in its name field may appear in the control statements of a job. If a JOBLIB DD statement appears in the same job, it must immediately precede the JOBCAT statement.

System action: The system ends the job. The system scans the remaining control statements for syntax errors.

Application Programmer Response: Make sure that the JOBCAT DD statement precedes the first EXEC statement. If two or more user catalogs are to be used as one catalog, put blanks in the name field of the concatenated DD statements, and make sure that the concatenated DD statements immediately follow the JOBCAT DD statement. Then run the job again.

**IEF683I**  (CONVERTER | INTERPRETER) TERMINATED DUE TO abendcde

**Explanation:** The system found an uncorrectable error while processing a JCL statement.

In the message text:

**CONVERTER**

The converter ended.

**INTERPRETER**

The interpreter ended.

**abendcde**

The system completion code.

**reason-code**

The reason code associated with the abend code or zero, if there is no reason code. The value is significant only if the REASON= keyword is coded on the ABEND macro instruction.

**System action:** The system ends the job and issues messages about the job to the job log.

**Application Programmer Response:** Notify the system programmer. Provide a copy of the output.

**System programmer response:** See the system programmer response for the abend code. Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

Descriptor Code: 4

**IEF685I**  STATIC PLUS DYNAMIC DD COUNT EXCEEDS MAX - DYNAMIC DD'S REDUCED

**Explanation:** In a job step, the system found that the total number of the following DDs exceeds the value specified in the allocation default module:

- The number of DDs
- The number of DD DYNAMs
- The value that is the object of the DYNAMNBR keyword

**System action:** The system reduces the number of dynamic DDs so that the number of DDs for the job step is now equal to the value specified in the allocation default module. The system issues messages about the job to the job log.

**Application Programmer Response:** Delete static DDs or DD DYNAM statements, or correct the DYNAMNBR value. Resubmit the job if necessary.
System programmer response:  Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

Source:  Interpreter
Detecting Module:  IEFVHH
Routing Code:  2,10
Descriptor Code:  4

### IEF686I  DDNAME REFERRED TO ON DDNAME KEYWORD IN PRIOR STEP WAS NOT RESOLVED

**Explanation:**  In a job step, the system could not find a referenced DD statement. A DD statement in the previous step or the last step of the job contains a DDNAME keyword parameter, but the DD statement referred to by the parameter is not defined in that step.

**Note:**  The statement number that precedes the message is one of the following:
- The number of the EXEC statement following the step containing the DD statement in error
- The number of the last DD statement in the job when the DD statement in error is in the last step of the job

**System action:**  The system continues to process the job. The DD statement containing the DDNAME keyword parameter is treated as a DD DUMMY statement. The system issues messages about the job to the job log.

**Application Programmer Response:**  Check the spelling of the DDNAME parameter and make sure that the DD statement referred to by the parameter is included in the same step. Resubmit the job.

Source:  Interpreter
Detecting Module:  IEFVHH
Routing Code:  2,10

### IEF687I  jobname [procstep] stepname ddname [+ xxx] - REQUESTED VOLUME MOUNTED ON JES3 MANAGED UNIT

**Explanation:**  For a DD statement, the volume specified in the VOLUME parameter or retrieved from the catalog is mounted on a JES3-managed unit. The UNIT parameter did not specify the name of a group of units managed by JES3.

In the message text:

- *jobname*  The name of the job.
- *procstep*  The name of the step in the procedure.
- *stepname*  The name of the job step.
- *ddname*  The name of the data definition (DD) statement.
- + *xxx*  The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User’s Guide](https://www.ibm.com/support/knowledgecenter/SSLTBW_2.2.0/com.ibm.zos.v2r2.jcl.doc/zcl_search_contents.jsp) for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

**System action:**  The system ends the job.

**Application Programmer Response:**  Change the UNIT parameter of the DD statement to specify the name of a JES3-managed unit. Resubmit the job.

Source:  Allocation
Detecting Module:  IEFAB4FD
Routing Code:  11
Descriptor Code:  -

### IEF688I  jobname [procstep] stepname ddname [+ xxx] - NULLFILE AND DSNAME CONFLICT IN ISAM CONCATENATION

**Explanation:**  The system found a DD statement that specifies DSORG=IS or ISU and DSN=NULLFILE concatenated to a DD statement that specifies DSORG=IS or ISU and a data set name other than NULLFILE.

In the message text:

- *jobname*  The name of the job.
- *procstep*  The name of the step in the procedure.
- *stepname*  The name of the job step.
- *ddname*  The DD statement name with the conflict in ISAM concatenation.
+ xxx  The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See z/OS MVS JCL User’s Guide for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The system ends the job and issues messages.

Application Programmer Response: Change the dsname for the DD statements in the concatenation either to all NULLFILE or to all not NULLFILE. Run the job again.

Source: Allocation

Detecting Module: IEFAB490

IEF689I  JOB jobname FAILED
{JOBLIB|STEPLIB|PGM=*.DD} DID NOT OPEN

Explanation: During initialization of a job, the system found an error when the initiator issued an open for a DCB.

If PGM=*.DD appears in the message text, the EXEC statement specified a backward reference to a DD statement. The DD statement defined the program as a member of partitioned data set.

In the message text:
jobname  The name of the job that failed.

System action: The system ends the job.

Source: Initiator/terminator

Detecting Module: IEFSD162

Routing Code: 11

Descriptor Code: -

IEF690I  FOLLOWING VOLUMES UNAVAILABLE
TO jobname stepname ser1 ser2 ... ser9

Explanation: The system was unable to satisfy all the volume requests in the step. The message lists the unavailable volumes in the following line(s) of the message, printing up to nine volume serial numbers per line.

In the message text:
jobname  The name of the job.
stepname  The name of the job step.
ser  The volume serial number.

System action: The system issues message IEF235D and waits for the volumes to become available as other jobs end or for a negative response to message IEF235D.

Operator response: To cancel the wait, if so desired, respond to message IEF235D. This will cancel the job if the wait was to satisfy a batch DD request. It will cause the dynamic allocation request to fail if the wait was to satisfy a dynamic allocation request.

IEF691I  jobname [procstep] stepname ddname[+xxx] - DATA SET/VOLUME COULD NOT BE RACF PROTECTED - USER NOT DEFINED TO RACF

Explanation: The dynamic allocation protection key was specified or the PROTECT keyword was coded on the DD statement, but it could not be honored because the user is not defined to RACF.

In the message text:
jobname  The name of the job.
procstep  The name of the step in the procedure.
stepname  The name of the job step./ddname  The name of the DD statement.
+ xxx  The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See z/OS MVS JCL User’s Guide for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The system ends the job.

Application Programmer Response: If the DASD data set or tape volume protection is required, contact the RACF administrator for assistance in getting defined to RACF.

Detecting Module: IEFAB4FD

Routing Code: 11

Descriptor Code: -
IEF692I  INVALID REFERENCE TO HIERARCHICAL FILE [text]

Explanation:  text is one of the following:
 IN THE parameter FIELD
 IN THE subparameter SUBPARAMETER OF THE parameter FIELD

A JCL statement attempted to refer to a DD statement for an HFS file. Neither parameter nor subparameter will appear in the message if the incorrect reference was made using the DD DDNAME parameter. In this case, the message will be associated with the referenced DD (representing the HFS), rather than the referencing DD containing the DDNAME parameter.

In the message text:

parameter
 The JCL keyword containing the incorrect reference.

subparameter
 The JCL subparameter containing the incorrect reference.

System action:  The system ends the job and scans the remaining job control statements for syntax errors. The system issues messages about the job to the job log.

System programmer response:  Eliminate the incorrect reference and resubmit the job.

Source:  Interpreter
Detecting Module:  IEFVDA
Routing Code:  Note 19
Descriptor Code:  -

IEF694I  DDNAME REFERENCE TO DD CONCATENATION RefERS ONLY TO FIRST DD

Explanation:  THE JCL DDNAME keyword has been used to refer to a DD concatenation. When the object of a DDNAME reference is a concatenation of multiple DDs, only the first DD in the concatenation is actually referenced.

System action:  The system issues message IEF677I and continues processing the job. The first DD in the referenced concatenation is associated with the referencing DD. The remaining (unlabeled) DDs in the referenced concatenation are concatenated to the labeled DD immediately preceding the concatenation.

User response:  If the DDNAME reference was intended to refer to the entire concatenation, move the concatenated DDs to follow the referencing DD rather than the referenced DD. This will ensure that the concatenation is correctly defined to the system.

**IEF702I**

jobname [procstep] stepname ddname[+xxx] UNABLE TO ALLOCATE

**Explanation:** The system could not allocate one or more devices to a step.

Possible causes are:

1. The UNIT parameter(s) in a DD statement, or combination of DD statements, specified a device collection and requested more than the number of devices available within the collection. This can occur due to a volume serial number in conflict between DD statements, such as when stacking multiple data sets onto one or more tape volumes within a single step. This can also occur because, under certain conditions, the number of devices available within a collection can be reduced.
   - Any devices in the collection that are boxed are unavailable.
   - Any devices in the collection that already contain the data set being created (possibly an uncataloged duplicate data set) are unavailable.

2. For DASD, the required volume is not online (perhaps no longer exists) and either volume mounting is not allowed or there are no offline devices in the specified or defaulted UNIT name.

3. The required volume is online but outside the requested UNIT name and there are no offline devices within the UNIT name.

4. The required volume is online and within the requested UNIT name, but is on a different device type (e.g., 3380 vs 3390).

5. For DASD, the request is for a new non-SMS-managed data set but a volume serial number was not supplied and no volumes in the UNIT name are mounted STORAGE.
6. The request is for a new non-SMS-managed data set, but all of the devices within the requested UNIT name are SMS-managed.

7. For tape, all devices within the UNIT name are either offline or allocated, and waiting for offline and/or allocated devices is not allowed.

8. JES3 selected a device which is in use by a system function (UCBNALOC).

9. The JES3 tape definitions are incorrect.

In the message text:

| jobname | The name of the job. |
| procstep | The name of the step in the procedure. |
| stepname | The name of the job step. |
| ddname | The name of the DD statement. |
| +xxx | The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User's Guide](https://www.ibm.com/support/knowledgecenter/ST300W_8.4.0/com.ibm.mvs.doc/pc_jcluser_g.htm) for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown. |

**System action:** The system ends the job.

**Application Programmer Response:**

1. Check the UNIT parameter(s) to make sure that the device collections can supply the number of devices needed, taking into account the conditions noted above. If necessary, change the UNIT parameters.

2., 3., 4. Ensure that the desired volume serial number was specified and spelled correctly. Also ensure that the volume is online, within the correct esoteric, and that the device is of the proper type.

5. Ensure that at least one volume within the requested UNIT name has sufficient space and is mounted STORAGE, or specify a volume serial number.

6. To create a non-SMS-managed data set, select a non-SMS-managed UNIT name.

7. Change the dynamic allocation to allow waiting for offline devices, allocated devices or both offline and allocated devices.

8. Wait until the system function (e.g. SWAP) has completed.

9. Verify that the JES3 tape definitions (SETNAME, HWSNAME, DEVICE) are correct.

Resubmit the job.

**System programmer response:** If the device(s) should have been available based on the configuration defined to the system, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

```

```
IEF704I  - jobname [procstep] stepname ddname[+xxx] - UNABLE TO ACCESS REQUIRED SYSCTLG DATA SET ON CONTROL VOLUME

Explanation: During allocation processing, the system could not access a control volume (CVOL) required to
locate a cataloged data set, for one of the following reasons:

- No SYSCTLG data set was contained on the required volume.
- A permanent I/O error occurred while the system was attempting to open the catalog.
- An attempt was made to create a CVOL environment or access an existing CVOL as DYNAMIC.

In the message text:

- **jobname** The name of the job.
- **procstep** The name of the step in the procedure.
- **stepname** The name of the job step.
- **ddname** The name of the DD statement.
- +xxx The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User's Guide](https://www.ibm.com) for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

**System action:** The system ends the job.

**Application Programmer Response:** In the first case, make sure that the correct SYSCTLG data set exists on the control volume specified in the master catalog.

In the second case, rerun the job.

In the third case, do not define devices containing CVOLs as dynamic devices.

DIAGNOSTIC INFORMATION FOR UNSUCCESSFUL ALLOCATION
DETECTED AT date time BY module
INSTANCE instance
  jobname [procstep] stepname ddname [+xxx]
DIAGNOSTIC UNIT/DEVICE TYPE INFO:
  unitinfo
  [DEFAULT UNIT APPLIED FROM [PARMLIB USER PROFILE]]
  [STORCLAS: storclas DATACLAS: dataclas MGMTCLAS: mgmtclas]
  [DYNAMIC ALLOCATION REQUEST FLAGS: flg1 flg2]

**Explanation:** An attempt was made to select a device for the jobname/stepname/DDname listed. Allocation was unable to select an appropriate device and no error situations were encountered. This message contains diagnostic data to help IBM Service locate the module where the error was detected and determine the cause of the error.

In the message text:

- **date** The date of the error.
- **time** The time of the error.
- **module** The module which detected the error.
- **instance** The instance within module that detected the error.
- **jobname** The name of the job.
- **stepname** The name of the job step.
- **procstep** The name of the step in the procedure.
- **ddname** The name of the DD statement.
- +xxx The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User's Guide](https://www.ibm.com) for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation is +000, but the value +000 is never shown.

**unitname** The unit specified on the allocation request

**TOTAL:** nnn The total number of devices in unit.

**OFFLN:** nnn The number of devices in unit unitname that are offline.

**ALLOC:** nnn The total number of devices in unit unitname that are allocated elsewhere.

**AVAIL:** nnn The total number of devices in unit unitname that are available for allocation.

**unitinfo** Internal unit/device type information. This information is provided for IBM Service only.

**DEFAULT UNIT APPLIED FROM [PARMLIB USER PROFILE]**
Indicates for a dynamic allocation request that a default unit was used. If PARMLIB is indicated, the default unit used was specified in the ALLOCxx Parmlib member. If USER PROFILE was indicated, the default unit used was applied by TSO as described by the TSO ALLOCATE command in the [z/OS TSO/E Command Reference](https://www.ibm.com)
STORCLAS: storclas
Indicates the SMS STORCLAS that was used by the allocation request. If no STORCLAS was used, N/A is present. If no STORCLAS, DATACLAS, or MGMTCLAS was used, the entire line is not present.

DATACLAS: dataclas
Indicates the SMS DATACLAS that was used by the allocation request. If no DATACLAS was used, N/A is present. If no STORCLAS, DATACLAS, or MGMTCLAS was used, the entire line is not present.

MGMTCLAS: mgmtclas
Indicates the SMS MGMTCLAS that was used by the allocation request. If no MGMTCLAS was used, N/A is present. If no STORCLAS, DATACLAS, or MGMTCLAS was used, the entire line is not present.

flg1 flg2
The flag data from the dynamic allocation request, if applicable. flg1 is S99FLAG1 and flg2 is S99FLAG2.

System action: The allocation fails. If the request was dynamic allocation request from a program or subsystem, the program or subsystem can continue processing. If the request was a batch allocation request (a DD statement from a JCL job), the job is failed.

Application Programmer Response: Consult with system programmer to determine if this message indicates an error that must be pursed with IBM Service.

System programmer response: Allocation failures of this type are expected. Consult with the application owner to determine if the error is expected and if the application will retry the allocation. If the error is not expected, call IBM Service for assistance in determining the cause of the error.

IEF707I INTERNAL ALLOCATION ERROR
description

Explanation: An internal Device Allocation error was detected. The description is:

FOR DEVICE dddd - NO IGDE WAS FOUND
The system could not locate the IGDE control block for tape device dddd.

System action: For FOR DEVICE dddd - NO IGDE WAS FOUND, the system issues ABEND X'05C' reason code X'229' and a dump is taken.

Operator response: For FOR DEVICE dddd - NO IGDE WAS FOUND, issue the VARY dev,O\nOFFLINE command to attempt to take the device offline. If the device cannot be taken offline, issue the VARY dev,O\nOFFLINE,FORCE command to box the device and take it offline. For AutoSwitchable tape devices, it may be necessary to perform these actions on every system in the sysplex. Contact the system programmer.

Application Programmer Response: Resubmit the job. If the error recurs, contact the system programmer.

System programmer response: Verify that the device is functioning properly. Manually unload the volume from the device if necessary. Search problem reporting databases for a fix for the problem. If no fix is found, contact the IBM Support Center.

IEF719I   jobname [procstep] stepname ddname [+xxx] - DATA SET PREVIOUSLY DEFINED

Explanation:  During allocation processing, the system found that a profile for the specified data set on this volume already exists in the Resource Access Control Facility (RACF) data set.

In the message text:
jobname  The name of the job.
procstep  The name of the step in the procedure.
stepname  The name of the job step.
ddname  The name of the DD statement.
+xxx  The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User's Guide] for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action:  The system ends the job.

Application Programmer Response:  Change the data set name or volume serial, or have the installation RACF administrator delete from the RACF data set the profile for the specified data set on this volume. Then, resubmit the job.

\textbf{IEF721I} \textit{jobname [procstep] stepname ddname [+xxx]} - \textbf{PROTECTION CONFLICT IN ISAM REQUESTS}

Explanation: During allocation processing, the system could not perform automatic data set protection because a concatenated ISAM DD statement contained one or more of the following errors:

- The data set status was not either NEW or MOD treated as NEW.
- The data set disposition or conditional disposition was DELETE.
- The DSNAME parameter specified a system-generated name.

In the message text:

- \textit{jobname} The name of the job.
- \textit{procstep} The name of the step in the procedure.
- \textit{stepname} The name of the job step.
- \textit{ddname} The name of the DD statement.
- \textit{+xxx} The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See \textit{z/OS MVS JCL User's Guide} for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The system ends the job.

Application Programmer Response: Ensure that the conditions for automatic data set protection are met by each DD statement of the concatenation. Then, resubmit the job.

\textbf{IEF722I} \textit{jobname - FAILED - text}

Explanation: \textit{text} is one of the following:

- USERID IS REQUIRED
- INVALID PASSWORD GIVEN
- EXPIRED PASSWORD GIVEN
- NEW PASSWORD NOT VALID
- USER NOT PART OF GROUP
- USER PROFILE NOT FOUND
- FAILED BY INSTALLATION
- USER ACCESS IS REVOKED
- OIDCARD IS REQUIRED
- GROUP ACCESS REVOKED
- RETURN CODE NOT VALID

Depending on the message text, the resource access control facility (RACF) found one of the following while the system was processing a job:

- USERID IS REQUIRED
  A valid user identifier was not entered on the JCL JOB statement.

- INVALID PASSWORD GIVEN
  The user entered an incorrect password.

- EXPIRED PASSWORD GIVEN
  The user entered an expired password.

- NEW PASSWORD NOT VALID
  A new password is not valid, or it is the same as the old password.

- USER NOT PART OF GROUP
  The user is not part of the specified group.

- USER PROFILE NOT FOUND
  The system could not find the user's profile.

- FAILED BY INSTALLATION
  The system ended the job at job initiation.

- USER ACCESS IS REVOKED
  The system revoked the user's access.

- OIDCARD IS REQUIRED
  The user must supply an operator identifier magnetic stripe card when logging on to the system.

- GROUP ACCESS REVOKED
  The system revoked the user's access to a group.

- RETURN CODE NOT VALID
  The security product found an error while checking user access.
System action: The system abnormally ends the job.

Application Programmer Response: Depending on the message text, do one of the following:

**USERID IS REQUIRED**

Enter a valid userid on the JCL JOB statement.

**INVALID PASSWORD GIVEN**

**EXPIRED PASSWORD GIVEN**

**NEW PASSWORD NOT VALID**

**USER NOT PART OF GROUP**

Enter the correct value for PASSWORD or GROUP. Run the job again.

**USER PROFILE NOT FOUND**

**FAILED BY INSTALLATION**

**USER ACCESS IS REVOKED**

**OIDCARD IS REQUIRED**

**GROUP ACCESS REVOKED**

**RETURN CODE NOT VALID**

Contact the RACF administrator.

System action: The system uses the master catalog for the catalog functions requested by the step.

System programmer response: List the master catalog and STEPCAT catalogs. Then, correct the problems in the subsequent job.

**Descriptor Code:** 4

---

IEF739D  

**Explanation:** The system is delaying the configuration change requested in the ACTIVATE command because allocation requests are still using an eligible device table (EDT) from IPL or a previous configuration change. The allocation requests are waiting for MOUNTs or exclusive access to a shared device or data set. Before this message, the system issues one or more of the following messages: IEF690I, IEF235D, IEF488I, IEF458D, IEF863I, or IEF289E.

This message will be issued once a minute until either the ACTIVATE completes or until the operator responds “TERM”.

**System action:** The system delays the configuration change until the operator responds to this message. One of the following then occurs.

- If WAIT is specified in response to this message, the system continues waiting for the previous EDT to be freed before continuing with the configuration change request.
- If TERM is specified in response to this message, the system attempts to cancel the configuration change and to back out to the old configuration. However, if the ACTIVATE is deleting devices from the EDT, then an intermediate EDT will have been built. If new jobs are using that intermediate EDT, then the attempt to back out the configuration change will not be able to proceed until all jobs have released the Intermediate EDT, so replying TERM would cause the configuration change to wait until that time.

**Operator response:** Do one of the following:

- To continue waiting, satisfy all MOUNT requests and either continue to wait or cancel all jobs waiting for allocation; the previous messages identify these jobs or issue 'DISPLAY IOS,CONFIG(EDT)' to determine the ASIDs and jobnames. Then reply WAIT to this message.
- If jobs currently waiting for allocation should not be cancelled and the configuration change has been waiting for some time, reply TERM to this message. This will cause the system to attempt to end the ACTIVATE request and free system resources, but this will only be possible when the Intermediate EDT, if one was built, is no longer in use. When allocations to the intermediate EDT no longer exist so it is no longer in use, the ACTIVATE command will proceed to back out the configuration changes and return to the configuration which was active prior to the issuance of the ACTIVATE command.

If you end the configuration change, enter the ACTIVATE command again when jobs currently waiting for allocation have completed or have been cancelled.

IEF741I  
jobname [procstep] stepname ddname[+xxx] - PROTECT REQUEST FAILED - INVALID DATA SET/VOLUME SPECIFICATION

Explanation: The dynamic allocation protection key was specified or the PROTECT keyword was coded on the DD statement. The request did not meet the requirements as follows:

- If PROTECT was specified for a DASD data set, the data set must be a new, non-temporary data set. That is, the status of the data set is ‘NEW’ or ‘MOD’ treated as ‘NEW’. Normal and abnormal dispositions if specified are other then DELETE, and the data set has a non-temporary data set name.

- If PROTECT was specified for a tape volume, the tape label specification must be SL, AL, SUL, AUL, or NSL. Both the file sequence count and volume sequence count must be set to one (except for NSL), or must default to one, and the tape volume must have a volume use attribute of PRIVATE. If the file sequence count or the volume sequence count is greater than one, the RACF TAPEDSN option must be active for successful processing.

In the message text:

jobname The name of the job.
procstep The name of the step in the procedure.
stepname The name of the job step.
ddname The name of the DD statement.
+ xxx The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User’s Guide] for more information on GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

IEFJSSNT NOT FOUND
DESCRIPTION NOT FOUND IN SYS1.PARMLIB
ABEND DURING SUBSYSTEM INITIALIZATION

One or more subsystems are unavailable.

In the message text:

IEFJSSNT NOT FOUND
The system could not find module IEFJSSNT in SYS1.LINKLIB or in a library concatenated to SYS1.LINKLIB via a LNKLSTxx parmlib member.

DESCRIPTION NOT FOUND IN SYS1.PARMLIB
The system could not find one or more IEFSSNxx parmlib members, each naming one or more subsystems to be initialized.

ABEND DURING SUBSYSTEM INITIALIZATION
An ABEND occurred while the system was initializing one of the subsystems specified in IEFJSSNT or in an IEFSSNxx parmlib member.

System action: The system does the following when the following appears in the message text:

IEF759I [xxxx] SUBSYSTEM UNAVAILABLE, text

Explanation: text is one of the following:
GETMAIN FAILED CODE=y
ABEND DURING INITIALIZATION

One or more subsystems or the subsystem hash table (SHAS) is unavailable.

In the message text:

xxxx
The name of the unavailable subsystem.

GETMAIN FAILED CODE=y
The system requested virtual storage for a control block, but the request failed.

y Identifies the failure. It is one of the following:
1 The unsuccessful GETMAIN was for a subsystem communication vector table
The unsuccessful GETMAIN was for a subsystem vector table (SSVT) for the specified subsystem. The subsystem is undefined to the system, but is unavailable for subsystem interface requests.

The unsuccessful GETMAIN was for storage to build the SHAS. The subsystems are available, but the SHAS is not. In this case, the xxxx field is blank.

The unsuccessful GETMAIN was for storage to re-build the subsystem allocation sequence table (SAST). Subsystems appearing in IEFSSNxx parmlib members are not available to process subsystem allocation requests. In this case, the xxxx field is blank.

ABEND DURING INITIALIZATION
An abend occurred at one of the following points in system initialization:

• The system was initializing subsystem xxxx. The subsystem might be unavailable, depending on when the abend occurred.
• The system was running the initialization routine for subsystem xxxx. The subsystem may not be available, depending on when the abend occurred.
• The system was building the SHAS. Subsystems are available, but the SHAS is not. The xxxx field is blank.
• The system was rebuilding the SAST. If the rebuilding process was not complete when the abend occurred, subsystems specified in IEFSSNxx parmlib members are not added to the SAST and are not available for processing subsystem allocation requests. The xxxx field is blank.

System action: If ABEND DURING INITIALIZATION appears in the message text, and the abend occurred while the system was initializing a subsystem, the system writes an ABEND dump. If the abend occurred during processing of an initialization routine the system writes an abend dump only if the initialization routine specifies it.

System programmer response: If GETMAIN FAILED CODE= appears in the message text, correct the GETMAIN macro and ask the operator to reIPL the system.

If ABEND DURING INITIALIZATION appears in the message text, obtain the ABEND dump if one was written.

If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the abend dump if it is available.

IEF760I ERROR IN memname, CODE=yyyc
incorrect-record

Explanation: One of the parameters on a record in the specified parmlib member contains an error.

In the message text:

memname
The parmlib member containing the erroneous parameter.

yyy
The position of the incorrect parameter in the record. For example, if yyy is 003, the third parameter in the record is incorrect.

rc
A hexadecimal reason code that identifies the error:

Code Explanation
01 A delimiter is missing.
02 A quotation mark is missing.
03 The parameter length is incorrect.
04 A required parameter is missing.
05 A field within single quotation marks should not be within quotation marks.
06 A subsystem name has a syntax error.
07 The number of parameters exceeds the maximum allowed.
08 A right parenthesis is missing.
09 A required item is missing.
0A An item has incorrect parentheses.
0B Records conflict.
0C A keyword is incorrect.
0D A duplicate keyword was specified.

incorrect-record
The first 70 characters of the record containing the error.

System action: The system issues this message for the first incorrect parameter on a record. The system does not check the rest of the record. The system ignores the erroneous record and continues with the next record.

System programmer response: Correct the parameter in error. If the information on the record is crucial to system processing, enter the command again. Then ask the operator to reIPL the system.
If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

```
jobname [procstep] stepname ddname
callername DD IS ALREADY ALLOCATED AND WILL BE USED BY THIS TASK
```

**Explanation:** The caller of the IEFPRMLB service passed a DDname that is already allocated.

In the message text:

- **jobname**
  
  The name of the job.

- **procstep**
  
  The name of the step in the procedure.

- **stepname**
  
  The name of the job step.

- **ddname**
  
  The name of the DD statement.

- **callername**
  
  The name of the program or process that issued IEFPRMLB.

**System action:** The system will use the DD statement that is already allocated.

**IEF765I**

```
jobname [procstep] stepname ddname
callername PARMLIB READ FAILED FOR MEMBER membername DUE TO AN I/O ERROR.
```

**Explanation:** There was an I/O error while attempting to read the specified parmlib member.

In the message text:

- **jobname**
  
  The name of the job.

- **procstep**
  
  The name of the step in the procedure.

- **stepname**
  
  The name of the job step.

- **ddname**
  
  The name of the DD statement.

- **callername**
  
  The name of the program or process that issued IEFPRMLB.

- **membername**
  
  The name of the parmlib member.

**System action:** The logical parmlib service stops trying to read the parmlib member. If IEFPRMLB was issued with REQUEST=ALLOCATE and the DD statement was not allocated before IEFPRMLB was issued, the logical parmlib service unallocates the DD statement.

**Application Programmer Response:** Verify if the specified member exists in the logical parmlib or the data set specified on the DD statement used to allocate PARMLIB. If the member does exist, contact the system programmer.

**System programmer response:** Examine the system log to determine if there are messages that might assist in diagnosing the problem. If necessary, contact IBM Software Support and provide any diagnostic messages found in the system log.

IEF766I  jobname [procstep] stepname ddname callername PARMLIB READ FAILED FOR MEMBER membername DUE TO AN OPEN ERROR.

**Explanation:** There was an error while attempting to open the logical parmlib.

In the message text:

- **jobname**
  - The name of the job.

- **procstep**
  - The name of the step in the procedure.

- **stepname**
  - The name of the job step.

- **ddname**
  - The name of the DD statement.

- **callername**
  - The name of the program or process that issued IEFPRMLB.

- **membername**
  - The name of the parmlib member.

**System action:** The logical parmlib service stops trying to read the parmlib member. If IEFPRMLB was issued with REQUEST=ALLOCATE and the DD statement was not allocated before IEFPRMLB was issued, the logical parmlib service unallocates the DD statement.

**Application Programmer Response:** Contact the system programmer.

---

IEF767I  jobname [procstep] stepname ddname callername ALLOCATE FAILED FOR dsname

**Explanation:** There was an error while attempting to allocate one of the logical parmlib data sets.

In the message text:

- **jobname**
  - The name of the job.

- **procstep**
  - The name of the step in the procedure.

- **stepname**
  - The name of the job step.

- **ddname**
  - The name of the DD statement.

- **callername**
  - The name of the program or process that issued IEFPRMLB.

- **dsname**
  - The name of the data set which failed allocation.

**System action:** The logical parmlib service unallocates any data sets that were successfully allocated as part of the logical parmlib.

**Application Programmer Response:** Contact the system programmer.

**System programmer response:** Examine the system log to determine if there are any messages that might assist in diagnosing the problem. If necessary, contact IBM Software Support and provide any diagnostic messages found in the system log.

*dev [PENDING] OFFLINE - \{ASSIGNED TO ANOTHER SYSTEM\|ASSIGN FAILED, RETURN CODE=return-code}*

**Explanation:** The system could not assign a device.

In the message text:

- **dev**
  - The device number.
- **PENDING**
  - The device is marked pending offline, but remains allocated to another system. If PENDING is not in the message, the device is marked offline to this system.
ASSIGNED TO ANOTHER SYSTEM
The device is assigned to another system and cannot be accessed by this system.

ASSIGN FAILED, RETURN CODE = return-code
The device could not be assigned because of an I/O error, as indicated by return code return-code. Possible values for return-code are:

16  A timeout occurred when the system was performing I/O to assign the device.
20  Either (1) a permanent I/O error occurred when the system was trying to assign the device, or (2) the device is currently boxed (forced offline).

System action: If ASSIGNED TO ANOTHER SYSTEM appears in the message and the program to which the device is allocated tries to use it, this system will reject I/O to the device.

Operator response: Notify the system programmer.

System programmer response: Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

IEF773I  TIOT SIZE = xxxxK, MAXIMUM SINGLE UNIT DD ENTRIES = zzzzzzz
Explanation: The message indicates the number of DD statements the system supports for each step.

In the message text:

xxxaK   The size of the task I/O table (TIOT), which the system programmer defined.
zzzzzz   The number of DD statements per job step.

System action: The system continues processing.

Source: Allocation

Routing Code: 11, Note 13
Descriptor Code: 4

IEF775I  jobname [procstep] stepname ddname callername UNALLOCATION OF THE LOGICAL PARMLIB FAILED - NOT CLOSED.

Explanation: The logical parmlib service failed while attempting to unallocate the logical parmlib because the logical parmlib was still open.

In the message text:

jobname    The name of the job.
procstep    The name of the step in the procedure.
stepname    The name of the job step.
ddname    The name of the DD statement.
callername    The name of the program or process that issued IEFPRMLB.

System action: The logical parmlib service does not unallocate the logical parmlib.

Application Programmer Response: If the program requesting the system to unallocate the logical parmlib is an installation program, change the program to close the logical parmlib before issuing IEFPRMLB to unallocate it. Otherwise, contact the system programmer.

System programmer response: If the program requesting the system to unallocate the logical parmlib is already attempting to close the logical parmlib prior to the call to the Logical Parmlib Service, examine the system log. If necessary, contact IBM Software Support. Otherwise, contact the owner of the program.

Source: Allocation/Unallocation

Detecting Module: IEFPIS01
Routing Code: 11, Note 13

IEF818E  JCL USAGE LIMITED - text

Explanation: text is one of the following:
- MODULE name NOT FOUND
- STORAGE UNAVAILABLE
- UNABLE TO SET UP RECOVERY ENVIRONMENT
- SYSTEM ERROR IN JCL INITIALIZATION

During system initialization, an error occurred that could limit use of JCL.

In the message text:

MODULE name NOT FOUND
The system could not find a module in SYS1.LINKLIB.
name The module name.

STORAGE UNAVAILABLE
The system could not obtain enough virtual storage.

UNABLE TO SET UP RECOVERY ENVIRONMENT
The system could not establish a recovery routine.

SYSTEM ERROR IN JCL INITIALIZATION
An abend occurred when the system tried to initialize the JCL definition tables for the system.

System action: System initialization continues. The system may write an SVC dump. Some JCL jobs could fail because of unrecognized keywords or verbs, even though the keywords and verbs are correct.

Operator response: Do the following:
- Notify the system programmer.
- After the system programmer fixes the problem, reIPL the system.

System programmer response: If MODULE name NOT FOUND appears in the message, check SYS1.LINKLIB for the module. Correct the problem. Ask the operator to reIPL the system.

If STORAGE UNAVAILABLE appears in the message, enlarge the storage for the system. Then ask the operator to reIPL.

Otherwise, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

WITHOUT SPECIFYING ANY DEVICE
NUMBER

Explanation: An ALLC_OFFLN installation exit tried to
bring devices online, but failed to specify the device
numbers of the devices to be brought online.

In the message text:
jjj     The name of the job.
proc    The name of the step in the procedure.
sss     The name of the job step.
ddname  The name of the DD statement.

System action: The allocation request fails.

Application Programmer Response: Correct the
ALLC_OFFLN exit so that not all devices in the device
list are excluded when the ISSUE WTOR option is
specified. See [z/OS MVS Installation Exits] for details
about how to exclude or not exclude devices from the
device list.

Source: Allocation

Detecting Module: IEFAB48A

Routing Code: 11
Descriptor Code: 6

IEF875I  jobname [procstep] stepname ddname
+ xxx] ALLC_OFFLN EXIT
CHOSE “ISSUE WTOR” AND EXCLUDED
ALL DEVICES IN THE DEVICE LIST

Explanation: An ALLC_OFFLN installation exit
requested to issue WTOR IEF238D, but also excluded
all the devices in the device list.

In the message text:
jobname   The name of the job.
procstep  The name of the step in the procedure.
stepname  The name of the job step.
ddname    The name of the DD statement.
+ xxx     The relative position of a data set
within a concatenation of data sets, including all
data sets implicitly concatenated (through GDGD ALL
or OPTCD=B requests). See [z/OS MVS
JCL User’s Guide] for more information
about GDGD ALL or OPTCD=B
requests when used within a set of
concatenated data sets. The first data
set of a concatenation would be +000,
but the value +000 is never shown.

System action: The system makes a last attempt to
allocate the request, in the hope that an eligible device
has become online and available. If that attempt fails,
the allocation request fails and is handled as follows:
• For a batch (JCL) allocation, the job is cancelled.
• For a dynamic allocation, the request fails with error
reason code X’0484’.

Application Programmer Response: Correct the
ALLC_OFFLN exit so that not all devices in the device
list are excluded when the ISSUE WTOR option is
specified. See [z/OS MVS Installation Exits] for details
about how to exclude or not exclude devices from the
device list.

Detecting Module: IEFAB48A

Routing Code: 11
Descriptor Code: 6

IEF876I  jobname [procstep] stepname JOB
CANCELLED BY {VOLUME_ENQ}
INSTALLATION (POLICYEXIT)

Explanation: A job was cancelled by either an
allocation installation policy or an installation exit. This
message is step-related whereas IEF336I is DD-related.

In the message text:
VOLUME_ENQ
An allocation request has to wait for a volume or a
series of volumes.

System action: The system cancels the job.

System programmer response: If the cancellation is
unexpected, verify the ALLOCxx and EXITxx members
of the parmlib data set and verify the installation exit
routines.

Detecting Module: IEFAB421

Routing Code: 11
Descriptor Code: -

IEF877E  jobname NEEDS xxx UNIT(S) FOR
stepname procsname ddname[ +zzz]  
[[FOR VOLUME(S):  ser, [ser, [.....,ser]]]
[SCRTCH-nnn] [PRIVAT-nnn] ]  
[LIBRARY: libname LIBRARY STATUS:  
status]]

state1  
[dev[dev ... dev]]
  ...
state2  
[dev[dev ... dev]]
Explanation: For a DD statement, the system needs the indicated number of units to continue processing the job step.

In the message text:

jobname  
The name of the job.

stepname  
The name of the job step.

procname  
The name of the procedure.

ddname  
The name of the DD statement.

+zzz  
The relative position of a concatenated DD statement in relation to the first DD in the concatenated group.

xxx  
The number of units needed by the DD statement.

ser  The volume serial number.

SCRATCH-nnn  
The number of scratch volumes requested. SCRATCH is used when the dataset being created on the non-specific volume is temporary [DISP=(NEW,DELETE) or DSN=&&tempname].

PRIVAT-nn  
The number of private volumes requested. PRIVAT is used for all other cases of non-specific volumes.

libname  
The tape library name.

status  
The tape library status. It can be one of the following:

ONLINE  
Tape library is currently online.

OFFLINE  
Tape library is currently offline. A library is offline if a VARY LIBRARY offline command has been issued and completed.

PENDING OFFLINE  
Tape library is currently pending offline. A library is pending offline if a VARY LIBRARY command has been issued and has not yet completed.

dev  
A list of the device numbers. If dev is preceded by an asterisk (*), the device is pending offline. Device numbers may be represented as single devices (either offline or pending offline) (for example, 0274 or *0274) or as ranges of devices (either offline or pending offline) (for example, 0274-0279 or *0274-0279).

state1, state2, ... state2  
Describes the state of all the listed devices. The possible states are: are:

OFFLINE  
Eligible devices that are currently offline or pending offline because the operator issued a VARY offline command for the devices.

OFFLINE, LIBRARY OFFLINE  
Eligible devices that are currently offline or pending offline because the operator issued a VARY offline command for the devices and because the tape library in which the devices reside is offline or pending offline.

LIBRARY OFFLINE  
Eligible tape devices that are currently offline or pending offline only because the tape library in which the devices reside is offline or pending offline.

CONFIGURATION OFFLINE  
Eligible devices that are currently offline or pending offline to the installation configuration because the configuration manager issued a VARY OFFLINE.

CONFIGURATION OFFLINE, LIBRARY OFFLINE  
Eligible devices that are currently offline or pending offline to the installation configuration because the configuration manager issued a VARY OFFLINE and because the tape library in which the devices reside is offline or pending offline.

NOT ACCESSIBLE  
Eligible devices that are currently offline because there are no paths to the devices.

OFFLINE, NOT ACCESSIBLE  
Eligible devices that are currently offline because the operator issued a VARY offline command for the devices and because there are no paths to the devices.

LIBRARY OFFLINE, NOT ACCESSIBLE  
Eligible tape devices that are currently offline because the tape library in which the devices reside is offline or pending offline and because there are no paths to the devices.

OFFLINE, LIBRARY OFFLINE, NOT ACCESSIBLE  
Eligible devices that are currently offline because the operator issued a VARY offline command for the devices and because the tape library in which the devices reside is offline or pending offline and because there are no paths to the devices.
Eligible devices that are currently offline to the installation configuration because the configuration manager issued a VARY OFFLINE and because there are no paths to the devices.

Eligible devices that are currently offline to the installation configuration because the configuration manager issued a VARY OFFLINE and because the tape library in which the devices reside is offline or pending offline and because there are no paths to the devices.

Notes:
1. Message IEF877E indicates a device state only if there are devices in that device state. However, when more than one device state is included in IEF877E, the ordering of the included device states will be consistent across all issuances of IEF877E.
2. If the device number is preceded by an asterisk (*), then the device is pending offline. A device is pending offline if a VARY LIBRARY,offline or a VARY device,offline command (either by the operator or the configuration manager) has been issued but has not yet completed.
3. The "LIBRARY: libname LIBRARY STATUS: status" line will not be displayed for new, single unit, ATL/VTS type allocation requests when an Allocated/Offline User Exit exists.

If the number of devices to be included in a single IEF877E would cause the message to contain more than 1,000 lines, one IEF877E will be issued containing the first 1,000 lines and a second IEF877E will be issued containing the remainder (or the next 1,000 lines if still more than 1,000 lines remain). Only one IEF238D will be issued. The operator may reply from any of the related IEF877E messages.

If it is necessary for the system to issue more than one IEF877E because there are more than 1000 lines, the device state description will indicate that it will be continued.

If the operator replies to message IEF238D with a device number, the device will be allocated to the job only if that device is eligible. The message sequence IEF877E and IEF238D will be repeated if there is another device offline or pending offline.

Note: A reply to message IEF238D of a device that is pending offline may result in that device being allocated to the request. The device will remain in the pending offline state. However, if an eligible device becomes available before the operator responds to IEF238D, that device will be allocated rather than the pending offline device that the operator indicates in the response.

In any system, a device listed in IEF877E could be allocated if the operator could vary its status from offline to online.

System action: The system may issue additional IEF877E messages if more than 1,000 lines is required to list all eligible devices. Following the last IEF877E for this request, the system issues IEF878I. Further action depends on the operator response to message IEF238D.

Operator response: Respond as indicated for message IEF238D.

To make devices available for allocation, do the following for each state:

OFFLINE
Reply to IEF238D with the desired device number.

OFFLINE, LIBRARY OFFLINE
Enter a VARY SMS library command to bring the library online. Reply to IEF238D with the device number.

LIBRARY OFFLINE
Enter a VARY SMS library command to bring the library online. Reply to IEF238D with the device number.

CONFIGURATION OFFLINE
Reply to IEF238D with the device number.

CONFIGURATION OFFLINE, LIBRARY OFFLINE
Enter a VARY SMS library command to bring the library online. Reply to IEF238D with the device number.

NOT ACCESSIBLE
Enter a VARY command to bring the path to the device online. Reply to IEF238D with the device number.

OFFLINE, NOT ACCESSIBLE
Enter a VARY command to bring the path to the device online. Reply to IEF238D with the device number.

LIBRARY OFFLINE, NOT ACCESSIBLE
Enter a VARY command to bring the path to the device online. Enter a VARY SMS library command to bring the library online. Reply to IEF238D with the device number.

OFFLINE, LIBRARY OFFLINE, NOT ACCESSIBLE
Enter a VARY command to bring the path to the device online. Enter a VARY SMS library command to bring the library online. Reply to IEF238D with the device number.
CONFIGURATION OFFLINE, NOT ACCESSIBLE
Enter a VARY command to bring the path to the device online. Reply to IEF238D with the device number.

CONFIGURATION OFFLINE, LIBRARY OFFLINE, NOT ACCESSIBLE
Enter a VARY command to bring the path to the device online. Enter a VARY SMS library command to bring the library online. Reply to IEF238D with the device number.

**Note:** If a device listed as NOT ACCESSIBLE has no physical paths, it cannot be made usable by entering a VARY PATH command.

**Application Programmer Response:** If the system failed the job, make any changes indicated by other messages. Submit the job again.

---

**IEF879I** dddd PENDING OFFLINE BY callerid

**Explanation:** The device listed was varied offline by the specified requester, but the device could not be taken offline on the first attempt.

In the message text:

- **ddd**
  The device number.

- **callerid**
  The caller ID that requested the device be varied offline.

**System action:** The system will continue to try to take the device offline.

**Operator response:** Verify that this device should be taken offline. If not, vary the device online.

**Source:** Allocation

**Detecting Module:** IEFAB429

**Routing Code:** *2,3,4,7,8,HRDCPY

**Descriptor Code:** 4

---

**IEF880I** dddd NOW OFFLINE BY callerid [-DEVICE IS BOXED]

**Explanation:** In response to a VARY command, a device has been placed offline. In the message text:

- **ddd**
  The device number.

- **callerid**
  The caller ID that requested the device be varied offline.

**DEVICE IS BOXED**
The device was boxed because of a hardware I/O error, or VARY dev.OFFLINE,FORCE command processing, or VARY CH(x).OFFLINE,FORCE command processing.

When the system boxes a device, these events occur:
- I/O on the device ends.
- Any new I/O requests result in permanent I/O errors.

**System action:** Processing continues.

**Operator response:** To recover a boxed device, proceed as follows:

1. In most cases, make the boxed device offline to all sharing systems.
2. Determine the cause for the boxing, and take any required hardware repair actions.

   In the case of a broken device, the device must be repaired before proceeding to step 3 on page 196.

   In the case of a broken control unit, the device should be used only over the other (good) control unit paths. The broken control unit may be repaired at a later time. Proceed to step 3 on page 196.
In the case of a broken channel, the device should be used only over other (good) channel paths. The broken channel may be repaired at a later time. Proceed to step 3.

3. To bring the device online to allow the system programmer to verify the data on the boxed device, proceed with one of the following:
   a. If the device is offline and boxed (F-BOX), vary the device online using the following command:
      `VARY dev,ONLINE`
   b. If the device is allocated and boxed (A-BOX), determine the users of the device using the following command:
      `DISPLAY U,,ALLOC,dev,1`
      Use your installation procedures to unallocate users of the device. You may have to cancel jobs or TSO/E users. If you cannot unallocate all users of the device (for example, a system task), then proceed to step 3c. Wait for the device to complete offline processing. Then vary the device online, using the following command:
      `VARY dev,ONLINE`
      For a boxed, allocated device, these actions are the preferred method for bringing the device online, as it allows the device to be taken offline before it is brought back online. This causes the operating system to perform VOLSER verification and path validation.
      Proceed to step 4 to verify the data on the volume.
   c. A device that is allocated and boxed, but not offline, may be brought online, using the following form of the VARY command:
      `VARY dev,ONLINE,UNCOND`
      Note: When this form of the command is used to bring the device online, the operating system does not verify the VOLSER.

4. Verify or repair the data, if necessary, or at least notify the owners of data on the volume. If a potential data integrity problem exists, the system programmer must check the data before the device is placed online to any system for starting productive work.

System programmer response: Use the following tools to verify the data:
- List VTOC for VTOC
- IDCAMS with DIAGNOSE option for VSAM catalogs
- IDCAMS with VERIFY option for VSAM data sets

Chapter 3. IEFA messages

IEFA001I  

hh.mm.ss ALLOC GROUPLOCKS

text

GROUP  g  HAS  THE  FOLLOWING
DEVICE(S)
{dddd  |  dddd-dddd}

... JOBNAME  ASID  STATUS
job  asid  status

... 

Explanation: This message is displayed in response to a DISPLAY ALLOC,GRPLOCKS command. There can be multiple blocks of devices if more than one line is needed to display all devices. If more than one job has group lock information, then each job is displayed. There can also be multiple blocks of group information if there is more than one group with information to be displayed. If there is no group lock information, then the group information is not displayed.

text is one of the following messages (depending on the options ALL, CONTENTION/C, JOBNAME/J = job, DEVICE/D = dddd):

• DISPLAYING ALL GROUP LOCKS.
• DISPLAYING GROUP LOCKS FOR JOBS IN CONTENTION ONLY.
• DISPLAYING GROUP LOCKS FOR JOBNAME job ONLY.
• DISPLAYING GROUP LOCKS FOR DEVICE dddd ONLY.
• THERE ARE NO OWNERS/WAITERS FOR GROUP LOCKS.
• THERE IS NO GROUP LOCK CONTENTION FOUND.
• JOBNAME job IS NOT RUNNING OR AN OWNER/WAITER FOR ANY GROUP LOCKS.
• DEVICE dddd HAS NO OWNERS/WAITERS FOR ANY GROUP LOCKS.

In the message text:

hh.mm.ss  The hour (00-23), minute (00-59), and second (00-59) that the system issued this message.
g  The group number.
dddd  The device number.
dddd-dddd  A range of devices.
job  The job name.
asid  The ASID in which the job resides.
status  The status pertaining to group locks (either owner or waiter).

IEF101I  jobname {procstep} stepname ddname {+ xxx} ALLOCATION FAILED - SMSSHONOR SPECIFIED text

Explanation: JCL specified SMSSHONOR keyword on the UNIT parameter, but it was not consistent with other attributes of the request. The text indicates the reason for failure.

text is one of the following:

ON A NON-LIBRARY REQUEST
   SMSSHONOR is specified on a non-library request.

AN INVALID UNIT
   The UNIT field specified an incorrect unit name. It is not defined to the current system configuration, or a demand request to the unit being added to the configuration occurs before the dynamic configuration change completes.

In the message text:

jobname
   The name of the job that requested SMSSHONOR.

procstep
   The name of the step in the procedure.

stepname
   The name of the step.

ddname
   The name of the DD statement.

+xxx
   The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [OS MVS JCL User's Guide] for more information about GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

System action: The system ends the job.

Operator response: None.

System programmer response: None.

Problem determination: See the text to determine why the request failed. If possible, correct the problem and resubmit the request.

Routing Code: 11/ Note 36

IEF101I  jobname {procstep} stepname ddname {+ xxx} ALLOCATION FAILED – UNIT unitname IS text

Explanation: JCL specified SMSSHONOR keyword on the UNIT parameter, but it was not consistent with other attributes of the request. The unitname indicates the UNIT NAME. The text indicates the reason for failure.

text is one of the following:

SPECIFIED BUT UNIT COUNT EXCEEDS 1
   The UNIT field specified a single device but the unit count is greater than one.

A BOXED DEVICE
   The UNIT field specified a single device but the device is boxed.

IN USE BY THE SYSTEM
   The UNIT field specified a single device but the device is in use by a system function.

A RESTRICTED DEVICE
   The UNIT field specified a single device but the device is marked restricted at system installation. Therefore, the device is not eligible for allocation.

NOT A TAPE DEVICE
   The UNIT field specified a single non-tape device.

NOT A LIBRARY DEVICE
   The device that the UNIT field specified is not a tape library device.

MARKED UNAVAILABLE
   The device that the UNIT field specified is marked unavailable for allocation.

NOT IN THE LIBRARY
   The UNIT field specified a single device that is not in the list of devices selected by SMS for the tape library request.

NOT AN ESOTERIC
   The UNIT field specified a unit name that is not an esoteric.

In the message text:

jobname
   The name of the job that requested SMSSHONOR.

procstep
   The name of the step in the procedure.
The name of the step.

The name of the DD statement.

The relative position of a data set within a concatenation of data sets, including all data sets implicitly concatenated (through GDG ALL or OPTCD=B requests). See [z/OS MVS JCL User's Guide](z/OS MVS JCL User's Guide) for more information about GDG ALL or OPTCD=B requests when used within a set of concatenated data sets. The first data set of a concatenation would be +000, but the value +000 is never shown.

The device name for a demand request that specified a particular device, or the esoteric / generic name on the input UNIT.

**System action:** The system ends the job.

**Operator response:** None.

**System programmer response:** None.

**Problem determination:** See the text to determine why the request failed. If possible, correct the problem and resubmit the request.

IEFC002I  INCLUDE GROUP group-name WAS EXPANDED USING text

Explanation:  The system found an INCLUDE statement to include a group of JCL statements. In the message text:

group-name  The name of the included group.

text  text is one of the following:

PRIVATE LIBRARY {nnnn|dsname}
  The include group was first found in a private library.

SYSTEM LIBRARY {nnnn|dsname}
  The include group was first found in a system library.

The system processes the procedure.

Application Programmer Response:  If the system finds the include group in an incorrect data set, check the data set specified on the JCLLIB statement. Resubmit the job.

Source:  Converter

Detecting Module:  IEFCNEXP

Routing Code:  -

Descriptor Code:  4

IEFC003I  ALLOCATION ERROR IN PROCESSING A cntr STATEMENT

Explanation:  The system could not allocate a data set specified on a JCLLIB or PROC statement.

In the message text:

cntr  The statement in error, either JCLLIB or PROC.

When cntr is JCLLIB:
  • The JCLLIB statement is in a task which is being started under the master subsystem.
  • Another user or job is using the data set.
  • The data set name is misspelled on the JCLLIB statement.
  • The data set does not exist.
  • The data set is not cataloged.
  • The JES2 JOBDEF parameter, CNVT_ENQ, is set to FAIL.

When cntr is PROC:
  • The system had a problem processing an instream procedure.

System action:  The system ends the job and issues a message about dynamic allocation.

Application Programmer Response:  When the error is for a JCLLIB statement check the following:
  • The failing task is not being started under the master subsystem.
  • The data set name is specified correctly on the JCLLIB statement.
  • Another user or job is not using the data set.
The data set exists.
The data set is cataloged.
Change the JES2 JOBDEF parameter, CNVT_ENQ, to WAIT.

When the error is for a PROC statement, record the error messages and report them to your system programmer.

System programmer response: When the error is for a JCLLIB statement on systems in which all data sets are not available to all processors, check that the job has affinity to a system that can allocate the data set during converter processing. Resubmit the job.

If the failing task is a Started Task, ensure that it is not being started under the master subsystem. Note that once a task is in the Subsystem Names table (either because it was in the IEFFSSNx member of Parmlib or because it was dynamically added), the system will always attempt to start that task under the master subsystem, even if SUB=MSTR is not specified on the start command. If the task name is now in the subsystems name table, the task can be forced not to start under the master subsystem by specifying in the start command to start it under the JES (SUB=JES2 or SUB=JES3).

When the error is for a PROC statement:
- If the procedure being executed is an in-stream PROC, which was started by a start command specifying SUB=MSTR, change the procedure to ensure that in-stream JCL is not used.
- If the procedure being executed is an in-stream PROC, ensure that there is either:
  - at least one unitname eligible to receive VIO datasets, or
  - at least one real DASD volume in unitname SYSALLDA which is mounted STORAGE and has available space.

If the problem cannot be resolved, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

IEFC005I statement1 STATEMENT WITHOUT MATCHING statement2 STATEMENT

Explanation: The system did not find a matching statement for a statement in the job. The job either is missing a matching closing statement or has an extra closing statement.

In the message text:
statement1                The statement found in the job.
statement2                The matching statement missing from the job.

System action: The system ends the job, but scans the remaining JCL statements for syntax errors.

Application Programmer Response: Locate and correct the following:
- A missing IF, THEN, ELSE, ENDF, CTNL, ENDCNTL, PROC, or PEND statement
- An extra IF, THEN, ELSE, ENDF, CTNL, ENDCNTL, PROC, or PEND statement
- A misplaced IF, THEN, ELSE, ENDF, CTNL, ENDCNTL, PROC, or PEND statement

Resubmit the job.

IEFC021I  EXTRANEOUS PARAMETERS SPECIFIED text

Explanation: The system found parameters that it did not recognize.

In the message text:

IN THE parameter FIELD
   The keyword must be followed by an equal sign to be considered correctly specified.

In the message text:

parameter
   The last correctly specified keyword parameter preceding the error.

ON THE cntr STATEMENT
   The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement.

In the message text:

parameter
   The statement on which the error occurred.

ON THE parameter1 SUBPARAMETER OF THE parameter2 FIELD
   The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME.

In the message text:

parameter1
   The minor keyword parameter associated with a major keyword parameter.
parameter
The major keyword parameter.

IN THE SYMBOLIC PARAMETER
The error was detected in the symbolic parameter.

IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER
The error was detected in the field that assigns a value to a symbolic parameter.

IN THE parameter OVERRIDE FIELD
The error was detected in an override field.
In the message text:

parameter
An override keyword parameter on an EXEC statement.

System action: The system ends the job, but scans the remaining JCL statements for syntax errors.

Application Programmer Response: Correct the extraneous parameters and submit the job again.

IEFC041I  INVALID MSGLEVEL, DEFAULTS (parameter1,parameter2) USED

Explanation: The system found that one or both subparameters on a JOB statement MSGLEVEL parameter were incorrect. (The message text indicates the incorrect subparameter or subparameters.) The system ignored any subparameter identified as incorrect and used the installation default for that subparameter instead.

In the message text:

parameter1
The first subparameter on the MSGLEVEL parameter

parameter2
The second subparameter on the MSGLEVEL parameter

System action: The system also issues message IEFC677I and executes the job, using the installation default in place of any subparameter that is incorrect.

Application Programmer Response: Correct the MSGLEVEL parameter and resubmit the job if necessary.

Source: Converter

Detecting Module: IEFCNJOB

IEFC042I  JOB CANCELLED BY INSTALLATION EXIT - IEFUJV

Explanation: The pre-scan instance of the IEFUJV exit returned control to the system with a completion code of four.

System action: The system ends the job but scans the remaining JCL statements for syntax errors.

Application Programmer Response: Contact the programmer responsible for the IEFUJV exit to determine what local JCL standards have been violated. Correct the violations and resubmit the job.

Source: Converter

Detecting Module: IEFCNGST, IEFCNJRT

IEFC043I  DATA SET dsname UNAVAILABLE - JOB job-name TO BE RESUBMITTED AUTOMATICALLY

Explanation: A data set required for conversion is unavailable for one of the following reasons:

The data set is migrated.
Another job has an exclusive ENQ on the data set.
The subsystem under which the job is being converted has specified that the Converter is not to wait for the data set to become available.

In the message text:

dsname
The name of the unavailable data set

jobname
The jobname of the submitted job

System action: If the data set is migrated, the system issues a recall for the data set but does not wait for it to become available. In either case (migrated or ENQed) the converting subsystem automatically resubmits the job until the data set becomes available. The system can process other jobs while the required data set remains unavailable.

Note - If the system detects a JCL error in the portion of the job that was processed before the unavailable data set was identified, the job fails and is not automatically resubmitted.

Operator response: If DFHSM (or the equivalent OEM product) is not active, start DFHSM. Determine if there are any outstanding ENQs against the required data set. If possible, take action to release the ENQs.

Source: Converter

Detecting Module: IEFCNLI

IEFC044I  DATA SET dsname UNAVAILABLE - JOB job-name WILL WAIT FOR THE DATA SET

Explanation: A data set required for conversion is unavailable because another job has exclusive ENQ on the data set.

In the message text:

dsname
The name of the data set.

job-name
The name of the job.

System action: The system issues message IEFC045D to explain the status of the job.

Source: Converter

Detecting Module: IEFCNLI

Routing Code: 2,10
Descriptor Code: 4
**IEFC044I**

**Explanation:** For authorized dynamic allocation, the system requires a data set that is in use by another job. Message IEFC044I names the data set and job.

The subsystem under which the job is being converted has specified that the Converter is to wait for the data set to become available.

**System action:** The job waits for the data set to become available, or for a reply of NO.

**Operator response:** None. However, if you do not want the job to wait for the data set, reply NO.

**Source:** Converter

**Detecting Module:** IEFCNJLI

**Routing Code:** 2,10

**Descriptor Code:** 4

---

**IEFC165I**

**Explanation:** A command was entered through the input stream.

In the message text:

- **cmd** The command that was entered.

**System action:** If the operator is requested to authorize running of commands entered through the input stream, the system issues message IEFC166D asking the operator to respond.

**Operator response:** Respond promptly to message IEFC166D, if issued.

**Source:** Converter

**Detecting Module:** IEFCNJLI

**Routing Code:** 2,10

**Descriptor Code:** 4

---

**IEFC166D**

**Explanation:** The system asks the operator to authorize running of the command displayed in message IEFC165I, which precedes this message.

**Operator response:** Respond promptly. The converter subtask does not process any other jobs until you reply to this message. If the command displayed in preceding message IEFC165I is to be run, enter REPLY id,'Y'. Otherwise, enter REPLY id,'N'.

**Source:** Converter

**Detecting Module:** IEFCNJLI

**Routing Code:** 2,10

**Descriptor Code:** 4

---

**IEFC417I**

**Explanation:** During the processing of a request for a procedure, either instream or cataloged, the system found an I/O error in reading or searching the SYS1.PROCLIB data set or a user procedure library.

In the message text:

- **jobname** The job with the request for a procedure.

**System action:** The job ends the job. If the error occurred in reading the procedure library, the job scheduler also issues message IEFC603I in the SYSOUT data set. If the error occurred in searching the procedure library, the job scheduler also issues message IEFC614I in the SYSOUT data set.

**Operator response:** Rerun the job, if available.

**System programmer response:** Look at the messages in the job log. If the problem cannot be resolved, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

**Source:** Converter

**Detecting Module:** IEFCNEXP, IEFCNGST, IEFCNINC, IEFCNISP

**Routing Code:** 2,10

**Descriptor Code:** 4

---

**IEFC452I**

**Explanation:** Depending on the message text, one of the following:

- **JOBFAIL** The error was detected on a JOB statement and the job name is not known.

- **INVALID** The system detected an error in a JOB or other JCL statement, and the job name (the label on the JOB statement) is invalid.

- **jobname** The system detected an error in a JCL statement, or the job was cancelled while on the input queue.

**procstep** The procedure was specified in the first operand of a START command. In this case, either the procedure was not found in SYS1.PROCLIB or, if found, the procedure had an error in a JCL statement. Message IEE122I or IEE132I will always follow this message.

The error message appears in the SYSOUT data set.
This message can also be issued for various environmental errors, such as an error occurring while trying to read a record from the JCL text data set or an I/O error occurring while trying to get procedure statements.

**System action:** If the operator cancelled the job, all steps of the job, beginning with the step currently being processed, will be ended. Otherwise, the job will not be initiated; no steps will be processed. If `procstep` appears, the START command will not be run.

**Operator response:** If the job name appears, none. If `procstep` appears, either reenter the START command with the correct procedure name, or, if the procedure name is correct, notify the application programmer.

**Application Programmer Response:** Check the procedure for errors.

IEFC607I  JOB HAS NO STEPS

Explanation:  The system did not find either:
  • An EXEC statement in the JCL statements following a JOB statement
  • A PEND statement in a job that contains a PROC statement prior to any EXEC or SYSCHK DD statement

System action:  The system ends the job, issues messages about the job, and scans the remaining JCL statements for syntax errors. The system either adds a dummy EXEC statement with EXECFAIL in its name field, or, if a PEND statement is missing, considers the remainder of the job part of the input stream procedure.

Application Programmer Response:  Insert an EXEC or PEND statement or correct the EXEC or PEND statement containing errors. Submit the job again.

System programmer response:  Obtain the SYSOUT output for the job. Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again.

If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

Routing Code:  2,10
Descriptor Code:  4

IEFC611I  OVERRIDDEN STEP NOT FOUND IN PROCEDURE

Explanation:  The system did not find a step name specified by an EXEC or DD statement. That EXEC or DD statement was to override a corresponding EXEC or DD statement in a cataloged or input stream procedure. One of the following may have occurred:
  • The step name was misspelled.
  • The DD override statements did not appear in the same order as the corresponding statements in the procedure.

System action:  The system ends the job, issues messages about the job, and scans the remaining JCL statements for syntax errors.

Application Programmer Response:  Do one of the following:
  • Correct the step name in the EXEC or DD statement in the input stream.
  • Correct the order of the step names in the EXEC statement in the input stream.
  • Correct the order of the DD override statements in the input stream.
  • Correct the procedure.

Submit the job again.

System programmer response:  Obtain the SYSOUT output for the job. Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again.

If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

Detecting Module:  IEFCSNOV, IEFCSNP0V
Routing Code:  2,10
Descriptor Code:  4

IEFC612I  PROCEDURE [procname] WAS NOT FOUND

Explanation:  The system could not find a procedure in the input stream procedure directory, in any library specified on the JCLLIB statement, or in the system procedure library concatenation. If the procedure is:
  • Processed by JES2 or JES3 and is invoked by a START command, then the system procedure library concatenation is specified by the PROCLIB statement on the JOBCLASS(STM) statement unless the name of the procedure being started is the same as the name of a subsystem (defined either via IEFSSNxx or dynamically). If the name of the procedure being started is the same as the name of a subsystem, the procedure will be started under the Master Subsystem (MSTR). Since the only procedure
libraries available to the Master Subsystem are those specified in the MSTJCLxx's IEFPDSI data set, any procedures being started which are defined in the job entry subsystem's PROC00 data set, but not in the MSTJXLxx IEFPDSI data set will be unavailable and will therefore receive message IEFC612I.

- Invoked by a batch job, then the system procedure library concatenation is specified by the PROCLIB statement on the job's corresponding JOBCLASS statement.
- Processed by the master scheduler address space, then the system procedure library concatenation is specified by the IEFPDSI DD statement of the current MSTJCLxx member.

The procedure name might be misspelled or the PEND statement ending the previous input stream procedure might not have been found.

In the message text:

procname
  The name of the procedure that the system could not find.

System action: The system ends the job, but scans the remaining job control statements for syntax errors. The system sends messages about the job to the job log.

Application Programmer Response: Verify that the procedure that was not found exists in one of the procedure libraries that was searched. Correct the procedure name in the EXEC statement in the input stream, in the PROC statement in the input stream, or in the procedure library. If the procedure name is correct, insert a missing PEND statement. Check that an input stream procedure appears in the job before any of the EXEC statements that call it. Then submit the job again. If the problem persists, contact the system programmer.

System programmer response: Look at the messages in the job log. If the problem cannot be resolved, Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

IEFC616I  SUBLIST WITHIN SUBLIST INCORRECT text

Explanation: The system found that a subparameter list was specified within a subparameter list. This arrangement is incorrect in a JCL statement. Possibly, too many parentheses were used, so that a list appeared to be within a list.

In the message text:

IN THE parameter FIELD
  The keyword must be followed by an equal sign to be considered correctly specified.

In the message text:

parameter
  The last correctly specified keyword parameter preceding the error.

ON THE cntr STATEMENT
  The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement.

In the message text:

cntr  The statement in error.

IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD
  The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME.

In the message text:

parameter1
  The minor keyword parameter associated with a major keyword parameter.

parameter2
  The major keyword parameter.

IN THE SYMBOLIC PARAMETER
  The error was detected in the symbolic parameter.
IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER
The error was detected in the field that assigns a value to a symbolic parameter.

IN THE parameter OVERRIDE FIELD
The error was detected in an override field.
In the message text:

parameter
An override keyword parameter on an EXEC statement.

System action: The system ends the job, issues messages about the job, and scans the remaining JCL statements for syntax errors.

Application Programmer Response: Correct the subparameter and submit the job again.

System programmer response: Obtain the SYSOUT output for the job. Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again.

If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

IEFC618I OPERAND FIELD DOES NOT TERMINATE IN COMMA OR BLANK

Explanation: The system found that the operand field in a JCL statement does not end with one of the following:
• A comma after the last parameter on a line, if the statement is to be continued on the next line. The comma must be before column 72.
• A blank after the last parameter, if the statement is not to be continued. The blank may be in column 72 or any previous column.

System action: The system ends the job. The system scans the remaining job control statements for syntax errors. The system issues messages about the job to the job log.

Application Programmer Response: Correct the operand field, then submit the job again.

System programmer response: Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

IEFC620I UNIDENTIFIABLE CHARACTER c text

Explanation: The system found an incorrect character in a JCL statement. All characters in a job control statement must belong to the character sets defined in z/OS MVS JCL User’s Guide.

In the message text:
c The incorrect character in the job statement.
text text is one of the following:

IN THE parameter FIELD
The keyword must be followed by an equal sign to be considered correctly specified. In the message text:

parameter
The last correctly specified keyword parameter preceding the error.

ON THE cntr STATEMENT
The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement. In the message text:

cntr The statement on which the error occurred.

IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD
The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME. In the message text:

parameter1 The minor keyword parameter associated with a major keyword parameter.

parameter2 The major keyword parameter.

IN THE SYMBOLIC PARAMETER
The error was detected in the symbolic parameter.

IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER
The error was detected in the field that assigns a value to a symbolic parameter.
IN THE parameter OVERRIDE FIELD

The error was detected in an override field. In the message text:

parameter

An override keyword parameter on an EXEC statement.

System action: The system ends the job. The system scans the remaining job control statements for syntax errors. The system issues messages about the job to the job log.

Application Programmer Response: Change any incorrect characters, and submit the job again.

System programmer response: Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

IEFC629I INCORRECT USE OF APOSTROPHE text

Explanation: In a JCL statement, the system found an incorrectly used apostrophe. Single apostrophes are used to enclose certain parameters containing special characters or blanks. Two apostrophes within a parameter enclosed in apostrophes are used to represent an apostrophe.

In the message text:

IN THE parameter FIELD
The keyword must be followed by an equal sign to be considered correctly specified.

In the message text:

parameter The last correctly specified keyword parameter preceding the error.

ON THE cntr STATEMENT
The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement.

In the message text:

cntr The statement on which the error occurred.

IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD
The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME.

In the message text:

parameter1 The minor keyword parameter associated with a major keyword parameter.

parameter2 The major keyword parameter.

IN THE SYMBOLIC PARAMETER
The error was detected in the symbolic parameter.

IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER
The error was detected in the field that assigns a value to a symbolic parameter.
IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER
The error was detected in the field that assigns a value to a symbolic parameter.

IN THE parameter OVERRIDE FIELD
The error was detected in an override field.

In the message text:

parameter
An override keyword parameter on an EXEC statement.

System action: The system ends the job. The system scans the remaining job control statements for syntax errors. The system issues messages about the job to the job log.

Application Programmer Response: If the statement contains any incorrect characters, correct it. Submit the job again.

System programmer response: Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

Descriptor Code: 4

IEFC630I UNIDENTIFIED KEYWORD text

Explanation: In a JCL statement, the system found one of the following:

- A character string followed a blank or comma and preceded an equal sign that could not be recognized as a valid keyword. Either the keyword was misspelled, the equal sign was misplaced or, because of the absence of a right parenthesis after the previous major keyword, a valid major keyword was considered a minor keyword.
- A valid subparameter keyword appeared without its corresponding parameter keyword; for example, SER without VOLUME.
- A valid keyword was not consistent with the statement operation code; for example, DNAME in an EXEC statement.

In the message text:

IN THE parameter FIELD
The keyword must be followed by an equal sign to be considered correctly specified.

In the message text:

parameter
The last correctly specified keyword parameter preceding the error.

ON THE cntr STATEMENT
The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement.

In the message text:

cntr
The statement on which the error occurred.

IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD
The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME.

In the message text:

parameter1
The minor keyword parameter associated with a major keyword parameter.

parameter2
The major keyword parameter.

IN THE SYMBOLIC PARAMETER
The error was detected in the symbolic parameter.

IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER
The error was detected in the field that assigns a value to a symbolic parameter.

IN THE parameter OVERRIDE FIELD
The error was detected in an override field.

In the message text:

parameter
An override keyword parameter on an EXEC statement.

System action: The system ends the job. The system scans the remaining job control statements for syntax errors. The system issues messages about the job to the job log.

Application Programmer Response: Check that the keyword is spelled correctly and positioned properly. Submit the job again.

System programmer response: Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

IEFC632I  FORMAT ERROR (IN THE prm FIELD ON THE cntr STATEMENT)

Explanation:  The system detected an error in a parameter in a job control statement.
Examples of errors detected by the converter are as follows:
  • No enclosing parenthesis appeared
  • A comma, right parenthesis, ampersand, or blank did not follow a right parenthesis in a SPACE parameter
  • The keyword specified is shorter than the required length
Examples of errors detected by the interpreter are as follows:
  • Too many or too few levels of qualification were specified
  • An operator was missing in the COND parameter
  • The EVEN and ONLY subparameters were both specified in the COND parameter of the EXEC statement

In the message text:
prm  The last correctly specified keyword parameter preceding the error.

On the cntr STATEMENT
The system ends the job.

System action:  The system ends the job.

Operator response:  Correct the parameter on the job control statement. Run the job again.

Source:  Converter
Detecting Module:  IEFCNCGST

IEFC640I  EXCESSIVE NUMBER OF POSITIONAL PARAMETERS

Explanation:  The system found too many positional parameters in a JCL statement. A misplaced comma, a duplication, or a null operand field could cause such an error.

In the message text:

IN THE parameter FIELD
The keyword must be followed by an equal sign to be considered correctly specified.

In the message text:
parameter
The last correctly specified keyword parameter preceding the error.

ON THE cntr STATEMENT
The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement.

In the message text:

ON THE cntr STATEMENT
The statement on which the error occurred.

IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD
The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME.

In the message text:

parameter1
The minor keyword parameter associated with a major keyword parameter.

parameter2
The major keyword parameter.

IN THE SYMBOLIC PARAMETER
The error was detected in the symbolic parameter.

IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER
The error was detected in the field that assigns a value to a symbolic parameter.

IN THE parameter OVERRIDE FIELD
The error was detected in an override field.

In the message text:
**parameter**

An override keyword parameter on an EXEC statement.

**System action:** The system ends the job. The system scans the remaining job control statements for syntax errors and issues messages about the job to the job log.

**Application Programmer Response:** Check for duplicate positional parameters or misplaced commas. Submit the job again.

**System programmer response:** Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

---

**IEFC641I**  IMPROPER SUBPARAMETER LIST

**Explanation:** The system found a JCL statement with an incorrect subparameter list for a positional parameter. Either such a list is required and is missing, or is not permitted but is present.

In the message text:

**IN THE parameter FIELD**

The keyword must be followed by an equal sign to be considered correctly specified.

In the message text:

parameter

The last correctly specified keyword parameter preceding the error.

**ON THE cntr STATEMENT**

The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement.

In the message text:

cntr

The statement on which the error occurred.

**IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD**

The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME.

---

**IEFC642I**  EXCESSIVE PARAMETER LENGTH

**Explanation:** In a JCL statement, the system found a parameter that was longer than permitted.

In the message text:

parameter1

The minor keyword parameter associated with a major keyword parameter.

parameter2

The major keyword parameter.

**IN THE SYMBOLIC PARAMETER**

The error was detected in the symbolic parameter.

**IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER**

The error was detected in the field that assigns a value to a symbolic parameter.

**IN THE parameter OVERRIDE FIELD**

The error was detected in an override field.

In the message text:

parameter

An override keyword parameter on an EXEC statement.

**System action:** The system ends the job. The system scans the remaining job control statements for syntax errors and issues messages about the job to the job log.

**Application Programmer Response:** Correct the parameter and submit the job again.

**System programmer response:** Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. Chapter 4. IEFC messages 227
parameter
The last correctly specified keyword parameter preceding the error.

ON THE cntr STATEMENT
The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement.
In the message text:
cntr The statement on which the error occurred.

IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD
The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME.
In the message text:
parameter1 The minor keyword parameter associated with a major keyword parameter.
parameter2 The major keyword parameter.

IN THE SYMBOLIC PARAMETER
The error was detected in the symbolic parameter.

IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER
The error was detected in the field that assigns a value to a symbolic parameter.

IN THE parameter OVERRIDE FIELD
The error was detected in an override field.
In the message text:
parameter An override keyword parameter on an EXEC statement.

System action: The system ends the job. The system scans the remaining job control statements for syntax errors and issues messages about the job to the job log.

Application Programmer Response: Shorten the parameter to the maximum permitted length or less. Then submit the job again.

System programmer response: Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

**IEFC647I FIRST CHARACTER OF NAME MUST BE ALPHABETIC OR NATIONAL**

**Explanation:** In a JCL statement, the system found that the first character in a name is not alphabetic or national. The name can be the name field, a procedure name in a parameter, a program name in a parameter, a data set name, or a part of a qualified data set name.

In the message text:

**IN THE parameter FIELD**

The keyword must be followed by an equal sign to be considered correctly specified.

In the message text:

parameter

The last correctly specified keyword parameter preceding the error.

**ON THE cntr STATEMENT**

The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement.

In the message text:

cntr

The statement on which the error occurred.

**IN THE parameter1 SUBPARAMETER OF THE parameter2 FIELD**

The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME.

In the message text:

parameter1

The minor keyword parameter associated with a major keyword parameter.

parameter2

The major keyword parameter.

**IN THE SYMBOLIC PARAMETER**

The error was detected in the symbolic parameter.

**Note:** A symbolic parameter consists of a single ampersand (&) followed by a maximum of seven alphanumeric (A through Z and 0 through 9) and national (@, #, $) characters. The first character after the ampersand must be alphabetic or national, that is, it cannot be a number.

**IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER**

The error was detected in the field that assigns a value to a symbolic parameter.

**IN THE parameter OVERRIDE FIELD**

The error was detected in an override field.

In the message text:

parameter

An override keyword parameter on an EXEC statement.

**System action:** The system ends the job. The system scans the remaining job control statements for syntax errors and issues messages about the job to the job log.

**Application Programmer Response:** Correct the name field and submit the job again.

**System programmer response:** Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

**IEFC650I INCORRECT USE OF SLASH**

**Explanation:** In a JCL statement, the system found a slash in a parameter or field in which a slash is not permitted.

In the message text:
IN THE `parameter` FIELD
The keyword must be followed by an equal sign to be considered correctly specified.

In the message text:
`parameter`
The last correctly specified keyword parameter preceding the error.

ON THE `cntr` STATEMENT
The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement.

In the message text:
`cntr`The statement on which the error occurred.

IN THE `parameter1` SUBPARAMETER OF THE `parameter2` FIELD
The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME.

In the message text:
`parameter1`The minor keyword parameter associated with a major keyword parameter.

`parameter2`The major keyword parameter.

IN THE SYMBOLIC PARAMETER
The error was detected in the symbolic parameter.

Note: A symbolic parameter consists of a single ampersand (&) followed by a maximum of seven alphanumeric (A through Z and 0 through 9) and national (@, #, $) characters. The first character after the ampersand must be alphabetic or national, that is, it cannot be a number.

IN THE VALUE FIELD OF THE SYMBOLIC PARAMETER
The error was detected in the field that assigns a value to a symbolic parameter.

IN THE `parameter` OVERRIDE FIELD
The error was detected in an override field.

In the message text:
`parameter`An override keyword parameter on an EXEC statement.

System action: The system ends the job. The system scans the remaining job control statements for syntax errors and issues messages about the job to the job log.

Application Programmer Response: Correct the parameter or field and submit the job again.

System programmer response: Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

IEFC651I INCORRECT USE OF HYPHEN

Explanation: In a JCL statement, the system found a hyphen sign in a parameter or field where a hyphen is not permitted.

In the message text:
IN THE `parameter` FIELD
The keyword must be followed by an equal sign to be considered correctly specified.

In the message text:
`parameter`
The last correctly specified keyword parameter preceding the error.

ON THE `cntr` STATEMENT
The error was detected before any keyword parameters were processed. For example, an error was detected in the name field of a statement.

In the message text:
`cntr`The statement on which the error occurred.

IN THE `parameter1` SUBPARAMETER OF THE `parameter2` FIELD
The error was detected in a subparameter. For example, SER is a minor keyword parameter that appears only when associated with major keyword parameter VOLUME.

In the message text:
`parameter1`The minor keyword parameter associated with a major keyword parameter.

`parameter2`The major keyword parameter.
In the symbolic parameter
The error was detected in the symbolic parameter.

In the value field of the symbolic parameter
The error was detected in the field that assigns a value to a symbolic parameter.

In the parameter override field
The error was detected in an override field.

In the message text:

- **parameter**
  - An override keyword parameter on an EXEC statement.

System action: The system ends the job. The system scans the remaining job control statements for syntax errors and issues messages about the job to the job log.

Application programmer response: Correct the parameter or field and submit the job again.

System programmer response: Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

**IEFC654I ILLEGAL USE OF SYMBOLIC ON SYSIN STATEMENT**

Explanation: A symbolic parameter, which resolved to an "*' or "data", was specified on a SYSIN type DD statement, but symbolic parameters are not permitted to be used in place of these positional parameters, which are used to designate a DD statement as a SYSIN.

System action: The system ends the job. The system scans the remaining job control statements for syntax errors and issues messages about the job to the job log.

User response: Remove the symbolic parameter reference on the SYSIN statement and rerun the job. See the z/OS MVS JCL Reference for guidelines on the use of symbols in JCL.

Operator response: See the system programmer response.

System programmer response: Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the corrected job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

Descriptor Code: 4

IEFC668I  PEND VERB STATEMENT OUT OF
SEQUENCE

Explanation: The system found a PEND statement
that does not end an input stream procedure for one of
the following reasons:
• The PEND statement is not preceded by a valid
PROC statement.
• The procedure contains data, a DD * statement, or a
DD DATA statement.
• The PEND statement is an incorrect continuation of
the previous statement.

The PEND verb is valid only as the last statement in the
input stream procedure.

System action: The system ends the job. The system
scans the remaining job control statements for syntax
errors.

Application Programmer Response: If the PEND
statement is unnecessary, remove it. Otherwise, do one
of the following:
• Supply a correct PROC statement.
• Remove from the input stream procedure the data,
DD * statement, or DD DATA statement.
• Correct the previous statement.

Resubmit the job.

**Descriptor Code:** 4
IEFC747I • IEFC822I

**IEFC747I  SUBSYSTEM ssysname IS NOT OPERATIONAL**

**Explanation:** The system found that a subsystem is defined to the system on which the job underwent JCL conversion, but has not been initialized or has not become operational. Either the subsystem had an error in system initialization, or it has not been started by the operator.

In the message text:

ssysname

The name of the subsystem.

**System action:** The system ends the job and issues messages about the job to the job log.

**Application Programmer Response:** Correct the subsystem name and resubmit the job.

**System programmer response:** Look at the messages in the job log. If the job statement did not specify MSGLEVEL=(1,1), specify it and run the job again.

If the problem persists, search problem reporting databases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

Source: Converter
Detecting Module: IEFCNWRT
Routing Code: 2,10
Descriptor Code: 4

**IEFC750I  SYSTEM ERROR IN PROCESSING SUBSYS DD PARAMETER**

**Explanation:** The system found an error while processing a DD statement containing a SUBSYS keyword parameter.

**System action:** The system ends the job. The system scans the remaining job control statements for syntax errors. The system issues messages about the job to the job log.

**Application Programmer Response:** Notify the system programmer.

**System programmer response:** Look at the messages in the job log. Ensure that the SUBSYS specified in the failing JCL statement is defined to the system on which the job was converted. You can do this through the D SSI,SUBSYS=xxxx command. See the [z/OS MVS JCL Reference](https://www.ibm.com/support/knowledgecenter/SSEPGG_2.11.0) for subsystem keyword information. If the problem cannot be resolved, search the problem reporting databases for a fix. If no fix exists, contact the IBM Support Center. Provide the SYSOUT from the failing job and the display command output.

Source: Converter
Detecting Module: IEFCNWRT
Routing Code: 2,10
Descriptor Code: 4

**IEFC822I  KEYWORD keyword NOT SUPPORTED (BEFORE | AFTER) FIRST EXEC STATEMENT**

**Explanation:** In a JCL statement, the system found an incorrectly specified keyword.

In the message text:

keyword

The incorrectly specified keyword.
BEFORE
The keyword came before the first EXEC statement.

AFTER The keyword came after the first EXEC statement.

System action: The system ends the job. The system scans the remaining job control statements for syntax errors. The system issues messages about the job to the job log.

Application Programmer Response: Place the keyword in proper relation to the first EXEC statement. Resubmit the job.

System programmer response: Look at the messages in the job log. If the JOB statement did not specify MSGLEVEL=(1,1), specify it and run the job again. If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

Chapter 5. IEFE messages

IEFE001I  ENF SYSPLEX-WIDE NOTIFICATION AVAILABLE

Explanation:   The event notification facility has initialized successfully. It can transmit ENF signals to other systems in the sysplex and receive signals from those systems.

System action:  The system continues processing.

Operator response:  None.

System programmer response:  None.

Source:  Event Notification Facility (BB131)

Detecting Module:  IEFENFAI

Routing Code:  2

Descriptor Code:  4

IEFE002I  ENF SYSPLEX-WIDE NOTIFICATION NOT AVAILABLE, REASON: reason

Explanation:   The event notification facility is unable to perform sysplex-wide notification. It cannot transmit cross-system signals to other systems in the sysplex, or receive them from other systems. ENF continues to process events on the local system, including both cross-system-capable events and non-cross-system-capable events.

The reason and explanation for the message text are:

XCF LOCAL OR MONOPLEX MODE
   The system is in XCF local or monoplex mode.

IEFSCHAS ADDRESS SPACE UNAVAILABLE
   The system could not create the IEFSCHAS address space.

CROSS-MEMORY FAILURE
   The system could not establish the ENF cross-memory environment.

XCF JOIN FAILURE
   The system could not join the ENF XCF group.

STORAGE REQUEST FAILURE
   The system could not obtain necessary storage.

MISSING LOAD MODULE
   The system could not locate a required load module.

XCF QUERY FAILURE
   The system could not obtain required information about the ENF XCF group.

LOCK REQUEST FAILURE
   The system could not obtain a required lock.

RECOVERY FAILURE
   The system was unable to establish recovery to protect the processing required to initialize the sysplex-wide notification function.

SYSTEM ERROR
   A system error other than those described above prevented the initialization of the IEFSCHAS address space.

System action:  The system continues processing. However:
   • The system will not notify other systems in the sysplex of system events occurring on this system that are normally signalled to other systems.
   • The system will not notify ENF listeners on this system of system events occurring on other systems.

Operator response:  Record the reason code provided with the message and notify the system programmer.

System programmer response:  If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

Descriptor Code: 6

IEFI002 - jobname CANCELLED BY IEFUAV INSTALLATION EXIT. RETURN CODE = return-code

Explanation: The IEFUAV installation exit returned a non-zero return code, indicating that the system should cancel the job.

In the message text:

jobname
  The name of the job.

return-code
  The value that the system returned in register 15 from IEFUAV.

System action: The system cancels the current APPC/MVS transaction.

System programmer response: Determine why the IEFUAV exit returned a non-zero return code. Check the APPC/MVS job log for additional messages issued by IEFUAV. For more information about the IEFUAV exit, see [z/OS MVS Installation Exits](http://www.ibm.com).
Chapter 7. IEFJ messages

IEFJ000I MASTER SUBSYSTEM DOES NOT SUPPORT SYSIN DATA

Explanation: The source JCL for the started task contains a JCL DD statement that references SYSIN data. The master subsystem does not support SYSIN data.

System action: The START command fails.

Operator response: Notify the system programmer. If the subsystem is the primary subsystem, re-IPL when the system programmer has corrected the problem. If the subsystem is not the primary subsystem, use the SETSSI ADD command to define the subsystem.

System programmer response: Check the IEFSSNx member for the invalid SUBSYS statement, and correct the error.

Source: Subsystem Interface (SSI)

Detecting Module: IEFJPSY

Routing Code: -

Descriptor Code: 10

IEFJ001I memname LINE line-number: ERROR IN SUBSYSTEM DEFINITION, REFER TO HARDCOPY LOG

Explanation: The system detected an error in the SUBSYS statement of IEFSSNx parmlib member memname on line number line-number. This message is accompanied by an ASAxxx message written to the hardcopy log, which further explains the error.

Note: The error may be caused by the system not recognizing the statement type of the next SUBSYS statement (for example, if it were spelled as “SYBSYS”).

In the message text:

memname The name of the parmlib member in which the error was found.

line-number The line number in the parmlib member memname that contains the syntax error.

System action: The system issues this message for the first syntax error in a subsystem definition (SUBSYS) statement. The system does not check the rest of the statement; the statement may contain other syntax errors. The system ignores the statement in error and continues with the next subsystem definition statement. The subsystem associated with this definition statement is not defined. One or more of the following messages will be issued to further explain the error:

- ASA002I
- ASA003I
- ASA006I
- ASA008I
- ASA009I

Operator response: Notify the system programmer. If the subsystem is the primary subsystem, re-IPL when the system programmer has corrected the problem. If the subsystem is not the primary subsystem, use the SETSSI ADD command to define the subsystem.

System programmer response: Check the IEFSSNx member for the invalid SUBSYS statement, and correct the error.

Source: Subsystem Interface (SSI)

Detecting Module: IEFJPSY, IEFJPSYS

Routing Code: -

Descriptor Code: 5

IEFJ002I memname LINE line-number: FORMAT CONFLICT. REMAINDER OF memname WILL NOT BE PROCESSED

Explanation: The system determined that this IEFSSNx member is in the positional format. However, the system detected the SUBSYS keyword as the first substring on line number line-number in IEFSSNx member memname, which is in the keyword format. The system assumes any IEFSSNx member whose first substring is not SUBSYS or /* is in the positional format.

In the message text:

memname The name of the parmlib member in which the error was found.

line-number The line number in the parmlib member memname that contains the syntax error.

System action: The system stops processing the IEFSSNx member. Processing continues with the next IEFSSNx member specified.

Operator response: Notify the system programmer. Check the IEFSSNx member to see which subsystem definitions will not be processed because they occur after the error point. If one of the subsystems not being processed is the primary subsystem, respond to message IEE736A with the name of the primary subsystem. Otherwise, use the SETSSI ADD command to define these subsystems.

System programmer response: Check to see if:

- The IEFSSNx member begins with a positional format subsystem definition
- The IEFSSNx member begins with a keyword format subsystem definition with extraneous text before the first comment block or subsystem definition
- The first SUBSYS keyword is misspelled.

If the first SUBSYS keyword is misspelled, correct the spelling. If the SYS1.PARMLIB member begins with a positional format subsystem definition and contains one
or more keyword format subsystem definitions, convert
all the subsystem definitions to the same format or
move all the definitions of one type of format to another
IEFSSNxx member. IBM recommends that you convert
all subsystem definitions to the keyword format.

Source: Subsystem Interface (SSI)
Detecting Module: IEFJSIN2
Routing Code: -
Descriptor Code: 5

IEFJ003I DUPLICATE SUBSYSTEM subroutine
NOT INITIALIZED

Explanation: The subsystem name subroutine is a
duplicate of an existing subsystem name.

In the message text:
subname
The subsystem name.

System action: The system ignores the duplicate
subsystem name. The system does not build a
subsystem communication vector table (SSCVT) for the
duplicate subsystem name.

System programmer response: Determine why the
same subsystem name subroutine was used more than
once.

If the subsystem subroutine is not properly initialized and
is needed for system processing, correct the error so
that the error does not occur again during subsequent
IPLs.

Source: Subsystem Interface (SSI)
Detecting Module: IEFJPACT, IEFJSINT, IEFJSIN2

Descriptor Code: 4

IEFJ004I SUBSYSTEM subroutine NOT
INITIALIZED - initialization-routine NOT
FOUND

Explanation: The system could not locate a usable
copy of the module containing the initialization entry
point specified in the IEFSSNxx member of
SYS1.PARMLIB.

For example:
• The module was not found.
• The module was found, but was not APF-authorized.

In the message text:
subname
The subsystem name.

initialization-routine
The name of the subsystem
initialization routine.

System action: The subsystem is defined to the
system, but not initialized. Some user jobs may fail.

System programmer response: Ensure that the
initialization routine is accessible through LINKLIB or
LPALIB and is APF-authorized.

Source: Subsystem Interface (SSI)
Detecting Module: IEFJPACT, IEFJSINT, IEFJSIN2
Routing Code: 2,10
Descriptor Code: 4

IEFJ005I subroutine INITIALIZATION ROUTINE
initialization-routine ABENDED

Explanation: The subsystem initialization routine
ended abnormally during its processing.

In the message text:
subname
The subsystem
name.

initialization-routine
The name of the
initialization routine
which ended
abnormally.

System action: The subsystem is defined, but the
subsystem initialization routine that was specified did
not complete successfully. The system writes an abend
dump only if the initialization routine does not.

System programmer response: Obtain the abend
dump.

---

IEFJ024I  SUBSYSTEM subname NOT DEFINED

Explanation:  The target subsystem of either the SETSSI ACTIVATE or SETSSI DEACTIVATE command is not defined.

In the message text:

subname

The subsystem name.

System action:  The system does not process the command.

Operator response:  For the SETSSI ACTIVATE command, if the target subsystem is the primary subsystem, notify the system programmer. Otherwise, add the subsystem using the SETSSI ADD command and reissue the SETSSI ACTIVATE command.

For the SETSSI DEACTIVATE command, reissue the command with the correct subsystem name.

System programmer response:  For the SETSSI ACTIVATE command, define the subsystem using either the IEFSSNxx parmlib member (keyword format), the IEFSSI REQUEST=ADD macro or the SETSSI ADD command.

Source:  Subsystem Interface (SSI)

Detecting Module:  IEFJPACT

Routing Code:  -

Descriptor Code:  5

---

IEFJ025I  SUBSYSTEM subname NOT DEFINED USING SSI SERVICES

Explanation:  The target subsystem of the SETSSI operator command has not been defined by the following intended SSI services:

- The IEFSSNxx parmlib member (keyword format)
- The IEFSSI REQUEST=ADD macro
- The SETSSI ADD command.

In the message text:

subname

The subsystem name.

System action:  The system does not process the command.

---

IEFJ026I  SUBSYSTEM subname IS ALREADY DEFINED TO THE SSI

Explanation:  The target subsystem of the SETSSI operator command is already defined to the SSI.

In the message text:

subname

The subsystem name.

System action:  The system does not process the command.

Operator response:  Determine whether the subsystem specified in the SETSSI ADD command invocation is a new version of an existing subsystem or is another subsystem whose name conflicts with that of an existing subsystem.

If the subsystem specified in the SETSSI ADD command invocation is a new version of an existing subsystem, notify the system programmer.

If the name of the subsystem specified in the SETSSI ADD operator command invocation conflicts with that of another existing subsystem, use a new subsystem name and reissue the SETSSI ADD command, specifying the new subsystem name. You can use the DISPLAY SSI command to determine the names that are already in use.

System programmer response:  If the subsystem specified in the SETSSI ADD command invocation is a new version of an existing subsystem, notify the system programmer.

If the name of the subsystem specified in the SETSSI ADD command invocation conflicts with that of another existing subsystem, use a new subsystem name and reissue the SETSSI ADD command, specifying the new subsystem name. You can use the DISPLAY SSI command to determine the names that are already in use.

---

IEFJ027I  SUBSYSTEM INITIALIZATION ROUTINE initialization-routine NOT FOUND

Explanation:  A usable copy of the subsystem initialization routine specified in the SETSSI ADD command could not be located.

For example:

- The module was not found.
• The module was found, but it was not APF-authorized.

In the message text:

```
initialization-routine
```

**System action:** The subsystem is defined, but the subsystem initialization routine that was specified in the command did not run.

**Operator response:** Determine if the subsystem initialization routine name was specified correctly in the command invocation. If it was specified correctly, notify the system programmer. If not, reissue the command with the correct name. You must use a new subsystem name because the first command invocation has already defined a subsystem with the original subsystem name.

**System programmer response:** Ensure that the initialization routine is accessible through LINKLIB or LPALIB and is APF-authorized.

**Source:** Subsystem Interface (SSI)

---

**IEFJ028I**  
**SUBSYSTEM initialization-routine ABENDED**

**Explanation:** The subsystem initialization routine specified in the SETSSI ADD command ended abnormally during its processing.

In the message text:

```
initialization-routine
```

**System action:** The subsystem is defined, but the subsystem initialization routine that was specified did not complete successfully. The system writes an abend dump only if the initialization routine specifies it.

**Operator response:** Obtain the abend dump if one was written.

**System programmer response:** Obtain the abend dump if one was written.

**Source:** Subsystem Interface (SSI)

---

**IEFJ031I**  
**SUBSYSTEM subname ALREADY INACTIVE**

**Explanation:** The SETSSI DEACTIVATE command was issued for a subsystem which was already inactive.

In the message text:

```
subname
```

**System action:** The system does not process the command.

**Operator response:** Ensure that the subsystem specified in the SETSSI DEACTIVATE command invocation is the subsystem that is intended to be deactivated. If it is, do nothing. Otherwise, re-issue the SETSSI DEACTIVATE command specifying the correct subsystem name.

**Source:** Subsystem Interface (SSI)

---

**IEFJ029I**  
**INSUFFICIENT STORAGE**

**Explanation:** The system could not obtain sufficient storage to process the SETSSI command.

**System action:** The system does not process the command.

**System programmer response:** If the problem persists, search problem reporting data bases for a fix for the problem. If a fix does not exist, contact the IBM support center.

**Source:** Subsystem Interface (SSI)

---

**IEFJ030I**  
**SUBSYSTEM subname ALREADY ACTIVE**

**Explanation:** The SETSSI ACTIVATE command was issued for a subsystem which is already active.

In the message text:

```
subname
```

**System action:** The system does not process the command.

**Operator response:** Ensure that the subsystem specified in the SETSSI ACTIVATE command invocation is the subsystem that is intended to be activated. If it is, do nothing. Otherwise, re-issue the SETSSI ACTIVATE command specifying the correct subsystem name.

**System programmer response:** None.

**Source:** Subsystem Interface (SSI)
SETSSI DEACTIVATE command specifying the correct subsystem name.

**IEFJ032I**  
**SUBSYSTEM subname VECTOR TABLE NOT AVAILABLE**  
**Explanation:** An eligible subsystem vector table (SSVT) does not exist for the subsystem specified in the SETSSI Activate command due to the following reason:

- The subsystem has not defined a vector table using the IEFSSVT macro.

In the message text:

`subname`  
The subsystem name.

**System action:** The system does not process the command.

**Operator response:** None.

**System programmer response:** Notify the application or system programmer.

---

**IEFJ035I**  
**A SYSTEM ERROR HAS OCCURRED**  
**Explanation:** A system error occurred while the SETSSI operator command was being processed.

**System action:** The system does not process the command. The system writes an abend dump.

**Operator response:** Notify the application or system programmer.

**System programmer response:** If the problem persists, search problem reporting data bases for a fix to the problem. If a fix does not exist, contact the IBM support center.

---

**IEFJ036I**  
**SUBSYSTEM subname IS NOT ENABLED FOR THE SETSSI COMMAND**  
**Explanation:** A SETSSI DEACTIVATE or SETSSI Activate command was issued for a subsystem that is not enabled for the SETSSI command.

In the message text:

`subname`  
The subsystem name.

**System action:** The system does not process the command.

**Operator response:** None.

**System programmer response:** None.

---

**IEFJ037I**  
**WARNING: IT MAY NOT BE POSSIBLE TO REACTIVATE SUBSYSTEM subname USING THE SETSSI COMMAND**  
**Explanation:** The SETSSI DEACTIVATE command was issued for a subsystem whose previously active vector table was not managed by the SSI. You may not be able to use the SETSSI Activate command to reactivate the subsystem.

In the message text:

`subname`  
The subsystem name.

**System action:** None.

**Operator response:** None.
System programmer response: Use the IEFSSVT macro to create the subsystem’s vector tables. This enables the SSI to locate an eligible vector table that can reactivate the subsystem following deactivation by the SETSSI command.

IEFJ100I  hh.mm.ss SSI DISPLAY [id]

Explanation:

**SUBSYS=** subsysname[(PRIMARY)]
**DYNAMIC=** ddd
**STATUS=** sssssss
**[FUNC=** function-code-list]**
**[function-code-list]**

This message displays information about all subsystems defined to the system when the operator enters the DISPLAY SSI command. The information is displayed in broadcast order; that is, the information for the subsystem which is first in the broadcast order (the order in which broadcast requests are processed) appears first in the display.

The first line of the message always appears.

In the first line of the message text:

**hh.mm.ss**

The hour, minute, and second at which the system processed the display command.

**00.00.00** appears in this field if the time-of-day (TOD) clock is not working.

**id**

A decimal identifier used with the CONTROL C,D command to cancel status displays that are written on typewriter or printer consoles or displayed inline on a display console. This identifier does not appear when the display appears in a display area on a display console.

If the command includes the LIST parameter, lines 2 through 3 appear for each subsystem that is defined to the system or that is selected by optional keyword parameters.

In lines 2 through 3 of the message text:

**SUBSYS=** subsysname[(PRIMARY)]

The subsystem name. If this is the primary subsystem, the subsystem name is followed by (PRIMARY).

**DYNAMIC=** ddd

Indicates whether the subsystem responds to dynamic SSI service requests. In order to be dynamic, the subsystem must have been
added using one of the dynamic SSI services. 

\( ddd \) is one of the following:

**YES**   
The subsystem responds to dynamic SSI service requests.

**NO**   
The subsystem does not respond to dynamic SSI service requests.

**STATUS=ssssssss**   
The status of the subsystem. \( ddd \) is one of the following:

**ACTIVE**   
The subsystem is active. It accepts function requests directed to it by the SSI.

**INACTIVE**   
The subsystem is inactive. It does not accept function requests directed to it by the SSI.

**COMMANDS=ccccccc**   
Indication of whether or not the subsystem accepts dynamic SSI commands. A dynamic subsystem is given the option of enabling or disabling the dynamic SSI commands (with the exception of the ADD command). \( cccccc \) is one of the following:

**ACCEPT**   
The subsystem accepts dynamic SSI commands.

**REJECT**   
The subsystem rejects dynamic SSI commands (with the exception of the ADD command).

**N/A**   
The subsystem is not dynamic. The option of enabling or disabling dynamic SSI commands does not apply.

If the DISPLAY SSI command includes the ALL parameter, the following lines appear in the message text:

- One occurrence of line 4 for each subsystem that is either defined to the system or that is selected by optional keyword parameters.
- Zero or more occurrences of line 5 as needed to list all of the function codes to which the subsystem responds.

In line 4 of the message text:

**FUNC=function-code-list**   
A list of all the function codes to which the subsystem responds. The function code values are separated by blanks. If there are too many function code values to fit on the line, the list is continued on line 5. This field contains \textbf{NONE} if either no function codes are supported by the subsystem or if the subsystem is inactive. Only

the function codes from the active subsystem vector table (SSVT) are displayed.

In line 5 of the message text:

**function-code-list**   
Continuation of the list of all the function codes to which the subsystem responds which began on line 4. This line is repeated as many times as necessary to list all the function codes supported by the subsystem.

**System action:**   
The system continues processing.

**Source:**

Chapter 8. IEH messages

IEH101I  NO CATALOG ON SPECIFIED VOLUME
Explanation:  No catalog exists on the volume identified in the LISTCTLG statement.
System action:  The request is ignored. The return code is 8.
Application Programmer Response:  Probable user error. Ensure that the correct volume is specified. (If a volume was not specified, the system residence volume is assumed.) If the volume was correct, insert a LISTVTOC statement for the other system volumes to determine where the SYSCTLG data set resides.
System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.
Source:  DFSMSdfp

IEH102I  THIS VOLUME DOES NOT CONTAIN DATA SET dsname
Explanation:  The data set specified in the LISTVOC or LISTPDS statement is not contained in the specified volume's table of contents.
In the message text:

dsname
  The data set name.
System action:  The request is ignored. The return code is 8.
Application Programmer Response:  Probable user error. Ensure that the data set name and volume are specified correctly. (If a volume was not specified, the system residence volume is assumed.) If the volume and data set name are correct, insert a LISTVTOC statement for the other system volumes to determine where the data set resides.
System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.
Source:  DFSMSdfp

IEH103I  INVALID CONTROL STATEMENT - xxx
Explanation:  A utility control statement is incorrect.
In the message text:

xxx  The entire incorrect statement.
System action:  The request is ignored. The return code is 8.
Application Programmer Response:  Probable user error. Correct any improper specifications and/or misspelled keywords. Resubmit the job.
System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.
Source:  DFSMSdfp

IEH104I  THE PDS ORGANIZATION DOES NOT APPLY FOR DATA SET dsname
Explanation:  The data set specified in the LISTPDS statement is not partitioned.
In the message text:

dsname
  The data set name.
System action:  The request is ignored. The return code is 8.
Application Programmer Response:  Probable user error. Ensure that the data set name specified is correct. If the name is correct, insert a LISTVTOC FORMAT statement specifying the data set name and volume; the true data set information will then be listed.
System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.
Source:  DFSMSdfp

IEH105I  ILLEGAL NODE POINT SPECIFIED, OR INCONSISTENT CATALOG STRUCTURE FOUND - REQUEST TERMINATED
Explanation:  Either the node point identified in the LISTCTLG statement is incorrect, or an incorrect catalog structure exists. A control volume (CVOL) catalog structure cannot be built against dynamic devices.
System action:  The request is ignored. The return code is 8.
**Application Programmer Response:** Ensure that the node point specified in the LISTCTLG statement is correct, or that no inconsistencies occur in the catalog structure.

Do not define devices containing CVOLs as dynamic devices.

**System programmer response:** Run Data Facility Data Set Services (dump to printer) for the catalog data set, and save the output. If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

**Source:** DFSMSdfp

---

**IEH106I**  
**UNAVAILABLE DEVICE TYPE OR VOLUME I.D. SPECIFIED**

**Explanation:** Either the VOL parameter of the control statement is incorrect, or the volume specified cannot be mounted.

**System action:** The request is ignored. The return code is 8.

**Application Programmer Response:** Probable user error. Ensure that a DD statement is included for the volume, the VOL parameter of the control statement is specified correctly, and the volume is mounted.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

**Source:** DFSMSdfp

---

**IEH107I**  
**JOB TERMINATED - I/O ERROR ON SYSIN**

**Explanation:** An input/output error occurred while reading the SYSIN data set; additional input statements cannot be read.

**System action:** The program is ended. The return code is 16.

**Application Programmer Response:** Resubmit the job with all the control statements that were not processed on the initial pass.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

**Source:** DFSMSdfp

---

**IEH110I**  
**JOB TERMINATED - INVALID DCB PARAMETER**

**Explanation:** The SYSIN DD statement specified a block size that was not a multiple of the specified logical record length.

**System action:** The program is ended. The return code is 16.

**Application Programmer Response:** Probable user error. Correct the BLKSIZE parameter on the SYSIN DD statement.

**System programmer response:** Run the same IEHLIST operation for some option other than the failing one (that is, if using LISTVTOC FORMAT, attempt IEHLIST LISTVTOC DUMP; if using LISTPDS FORMAT, attempt LISTPDS DUMP; if using LISTCTLG, attempt LISTCTLG NODE= for the failing node) and save the output. Run the program (dump to printer) for the failing data set (VTOC, SYSCTLG, or PDS), and save the output. Run Data Facility Data Set Services (dump to printer) for the failing data set (VTOC, SYSCTLG, or PDS), and save the output.

**Source:** DFSMSdfp
System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEH112I MEMBERS OF SPECIFIED PDS NOT CREATED BY LINKAGE EDITOR – DUMP OPTION OUTPUT GENERATED

Explanation: The directory entry is less than 34 bytes, indicating that this member was not created by the Linkage Editor.

System action: Processing continues as if the DUMP option was specified for this member. The program will attempt to format subsequent member(s) if they exist.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEH113I UNABLE TO OPEN DATA SET dname

Explanation: The data set specified in the LISTPDS statement cannot be opened.

In the message text:

dname

The specified data set name.

System action: The system ignores the request, and issues a return code of 8.

Application Programmer Response: Probable user error. Ensure that the correct volume containing the data set is allocated to the job via the DD statement. Correct the error and resubmit the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEH114I THE LAST CVAF CALL ENDED WITH CVSTAT=nnn

Explanation: The return code 4 from a common VTOC access facility (CVAF) macro was unexpected. CVSTAT=nnn refers to the CVAF status code.

In the message text:

nnn Identifies the status code. See DFSMSdfp Diagnosis for a description of the CVAF codes.

System action: Program processing is ended. The return code from IEHLIST is 8.

Application Programmer Response: Respond according to the status code.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEH115I DSCB-4 FIELD DS4VTOCI CONTAINS AN INVALID VALUE

Explanation: The VSE and index bits in DS4VTOCI (bits 0 and 7 respectively) should both be on for an indexed VTOC; or both off for a non-indexed VTOC; or only the VSE bit should be on, indicating that format-5 DSCBs do not contain free-space information. IEHLIST found only the index bit on in DS4VTOCI, which is incorrect.

The situation can be caused by moving an indexed VTOC volume to a system without indexed VTOC programming support. The VSE bit caused the DADSM Allocate or Extend component to process the volume with the VSE VTOC convert routines, and set the VSE bit to zero.

System action: Program processing is ended. The return code from IEHLIST is 8.

Application Programmer Response: Use the Device Support Facility (DSF) to rebuild the VTOC index data set.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp
IEH117I • IEH204I

IEH117I  DYNAMIC ALLOCATION FAILED FOR DSN=dsname, ERR RSN=xxxx, INF RSN=yyyy

Explanation: In the message text:

- dsname: Specified data set name.
- xxxx: Error reason code from SVC 99 for Dynamic Allocation.
- yyyy: Information reason code from SVC 99 for Dynamic Allocation.

System action: Program processing for current IEHLIST control statement is ended. The return code from IEHLIST is 8.

Application Programmer Response: Respond according to the error and information reason codes.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

Source: DFSMSdfp

IEH204I  THE SYSCTLG DATA SET IS NOT AVAILABLE OR FORMS A LOOP

Explanation: One of the following occurred:

- No catalog exists on the volume specified by the CVOL parameter of the control statement
- The CVOL is not properly cataloged in the master catalog
- The volumes are incorrectly connected to each other
- An attempt was made to build the CVOL catalog structure against dynamic devices

System action: The request is ignored. The return code is 8.

Application Programmer Response: Probable user error. Correct the error and resubmit the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

Source: DFSMSdfp

IEH203I  INVALID REQUEST. STATEMENT IGNORED

Explanation: In the utility statement preceding this message, the operation is incorrect.

System action: The request is ignored. Processing continues with the next change submitted, if any. The return code is 8.

Application Programmer Response: Probable user error. Correct the incorrect operation on the preceding statement and rerun the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEH202I  INVALID KEYWORD OR CONTROL STATEMENT SYNTAX

Explanation: In the utility statement preceding this message, the required keyword is incorrect, or the continuation does not start in column 16.

System action: The request is ignored. The return code is 8.

Application Programmer Response: Probable user error. Correct the incorrect operation on the preceding statement and rerun the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp
IEH205I  INFORMATION IN CONTROL STATEMENT IS (REDUNDANT NOT SUFFICIENT)

Explanation: In the utility statement preceding this message, either an incorrect parameter was specified, or all the required parameters were not specified for the operation requested.

System action: The request is ignored. The return code is 8.

Application Programmer Response: Probable user error. Ensure that the data set name is specified correctly on the control statement.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

Source: DFSMSdfp

IEH206I  CVOL IS NOT DIRECT-ACCESS

Explanation: In the utility statement preceding this message, the volume specified in the CVOL parameter is not a direct access volume.

System action: The request is ignored. The return code is 8.

Application Programmer Response: Probable user error. Correct the device-type specification in the CVOL parameter of the preceding statement and resubmit the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

Source: DFSMSdfp

IEH207I  STATUS OF USERS REQUEST TO SCRATCH VOLUME TABLE OF CONTENTS DATA SET dsname ACTION TAKEN xxxx REASON yyy END OF LISTING OF DATA SETS TO BE SCRATCHED OR RENAMED

Explanation: An unusual condition occurred during a SCRATCH or RENAME operation. In the message text, the VOLUME ID line appears for each volume on which the data set resides.

In the message text:

* dsname The data set name.
* ser The serial number of the volume.

* xxxx The action taken on the volume.
* yyy The condition.

System action: Processing continues.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

Source: DFSMSdfp

IEH208I  LIST TRUNCATED TO 1 VOLUME FOR SCRATCH VTOC

Explanation: In the SCRATCH VTOC statement preceding this message, more than one volume was specified.

System action: Only the data sets on the first volume specified are scratched; the remaining are ignored. The return code is 8.

Application Programmer Response: Probable user error. Insert a SCRATCH VTOC statement for each volume that was not processed and resubmit the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

Source: DFSMSdfp

IEH209I  STATUS OF USERS REQUEST TO SCRATCH THE VOLUME TABLE OF CONTENTS DATA SET NAME dsname ACTION TAKEN xxxx REASON yyy END OF SCRATCH VTOC

Explanation: Either an unusual condition occurred during a scratch VTOC operation, or a data set was successfully scratched.

In the message text:

* dsname The data set name.
* xxxx The data set name.
* yyy The condition.

System action: Processing continues.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.
reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

**IEH210I**  
**REQUEST CANNOT BE SERVICED**  
**Explanation:** An unusual condition occurred during a catalog or index operation. Following this message is a more specific message describing the error condition in detail.

**System action:** The request is ignored. The return code is 0 when there is an attempt to uncatalog a data set that is not cataloged; in all other cases, the return code is 8.

**Application Programmer Response:** Probable user error. Respond as indicated to the message that follows this message.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

**Source:** DFSMSdfp

**IEH211I**  
**REQUIRED VOLUME COULD NOT BE MOUNTED**  
**Explanation:** One of the following occurred:
- No device was allocated for the required volume; that is, the serial number of the required volume was not found in the unit control block, and no other volume allocated to the job could be unloaded to allow the mounting of the required volume.
- A device type was specified which is either nonexistent or not included for the system during system generation.

**System action:** The request is ignored. The return code is 8.

**Application Programmer Response:** Probable user error. Ensure that the volume serial number specified on the DD statement is the same as the volume serial number specified on the control statement.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

**Source:** DFSMSdfp

**IEH212I**  
**I/O ERROR ON SYSIN DATA SET - JOB TERMINATED**  
**Explanation:** An uncorrectable input/output error occurred while the SYSIN data set was being read.

**System action:** The program is ended. The return code is 8.

**Application Programmer Response:** Resubmit the job.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

**Source:** DFSMSdfp

**IEH213I**  
**JOB TERMINATED - INVALID BLOCKSIZE SPECIFIED IN SYSIN DCB**  
**Explanation:** In the SYSIN DD statement preceding this message, the block size specified is not a multiple of the logical record length (that is, it is not a multiple of 80).

**System action:** The program is ended. The return code is 16.

**Application Programmer Response:** Probable user error. Correct the error and resubmit the job.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

**Source:** DFSMSdfp

**IEH214I**  
**CONTINUATION STATEMENT EXPECTED - REQUESTS CANNOT BE SERVICED.**  
**Explanation:** The statement preceding this message is not a valid continuation statement; that is, the previous statement contains a non-blank character in column 72, indicating that a continuation statement is to follow.

**System action:** The request is ignored. The return code is 8.

**Application Programmer Response:** Probable user error. Correct the error and resubmit the job.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

**Source:** DFSMSdfp
IEH215I  SYNTAX ERROR ENCOUNTERED IN NAME FIELD OF CONTROL STATEMENT – PROCESSING IS CONTINUED

Explanation: In the statement preceding this message, the name field contains one of the following errors:

- The first character is not alphabetic.
- A character was encountered that is not alphameric or national.
- The name field is longer than 8 characters.

System action: Processing continues. The return code is 4.

Application Programmer Response: Probable user error. Correct the error and resubmit the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

Source: DFSMSdfp

IEH216I  SYSIN CANNOT BE OPENED - CHECK SYSIN DD STATEMENT

Explanation: Either the SYSIN DD statement was inadvertently omitted from the job step, or it was included, but the ddname was coded incorrectly.

System action: The program is ended. The return code is 16.

Application Programmer Response: Probable user error. Correct the error and resubmit the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

Source: DFSMSdfp

IEH217I  ERROR ENCOUNTERED IN A NAME, INDEX, ALIAS, OR MEMBER FIELD OF THE CONTROL STATEMENT ... REQUEST IGNORED

Explanation: Either a nonalphabetic character was found as the first character of a name, alias, or index level; an index level or member name has a length greater than eight characters; or a nonalphameric character was used in the name, index, alias, or member.

System action: The request is ignored. The return code is 8.

Application Programmer Response: Probable user error. Correct the error and resubmit the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

Source: DFSMSdfp

IEH218I  JOB TERMINATED. SIX INVALID PASSWORDS WERE SUPPLIED

Explanation: A maximum of five incorrect passwords are allowed for each job step.

System action: The program is ended. The return code is 16.

Application Programmer Response: Probable user error. Resubmit the request not satisfied and supply valid passwords.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job. If attempting to add, replace, or delete entries in the PASSWORD data set, use the LIST utility statement to list the entries associated with the incorrect passwords.

Source: DFSMSdfp

IEH219I  I/O ERROR IN THE PASSWORD DATA SET

Explanation: An uncorrectable input/output error occurred while reading or writing the PASSWORD data set.

System action: The program is ended. The return code is 12.

Application Programmer Response: Run IEHLIST program to list the VTOC of the system residence volume. Use the DUMP mode and set DSNNAME=PASSWORD. Have the resulting listing available for review by your systems programmer or service representative.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

Source: DFSMSdfp
IEH220A  jobname, stepname, 'utilstmt'  REPLY WITH 'PASWORD1' 'PASWORD2' 'CPASWORD'

Explanation: The specified password on the utility statement is incorrect or missing and must be supplied by the operator.

In the message text:

jobname
The job name.

stepname
The step name.

utilstmt The utility statement.

System action: The program enters the wait state until the operator responds.

Operator response: Enter REPLY xx, 'password', where password is the password supplied by the programmer for the job, step, and utility statement names in the message. The password can consist of up to eight characters. If no password was supplied, enter blanks for the password or simply two single quotation marks, as follows: REPLY xx,".

Application Programmer Response: Provide operator with correct password.

System programmer response: If attempting to add, replace, or delete entries in the PASSWORD data set, use the LIST utility statement to list the entries associated with the incorrect passwords.

Source: DFSMSdftp

IEH222I  UNABLE TO ALTER PROTECTION STATUS OF DATA SET

Explanation: The volume on which the specified data set resides cannot be accessed. The volume is not online, volume information on the utility control statement is incorrect or missing, the data set was allocated in this job the specified data set is in use by another job or the data set is not supported (as a VSAM data set).

System action: The PASSWORD data set is updated, but the protection status of the data set in the data set control block (DSCB) is not altered. The return code is 8.

Application Programmer Response: Probable user error. Action is required only if the protection status in the DSCB is incorrect.

If protection is being added and the protection status of the data set was not specified when the data set was created, or if the protection status of a data set is being changed between read/write protection and read-without-password protection:
1. Provide a data definition statement that defines the mountable volume on which the data set resides.
2. Change the protection status in the DSCB, using a REPLACE utility statement for the entry just added or changed in the PASSWORD data set. Supply the new protection status, and make sure the volume information is correct.

If protection is being deleted and the data set has not been scratched:
1. Provide a data definition statement that defines the mountable volume on which the data set resides.
2. Add the entry just deleted to the PASSWORD data set using an ADD utility statement.
3. Scratch the data set if desired.
4. Delete the entry again from the PASSWORD data set using a DELETEP utility statement.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

Source: DFSMSdftp

IEH223I  THE PASSWORD DATA SET DOES NOT EXIST

Explanation: The PASSWORD data set must reside on the system residence volume before using IEHPROGM to add, delete, or replace entries.

System action: The request is ignored. The return code is 8.

Source: DFSMSdftp
Application Programmer Response: Probable user error. Allocate a PASSWORD data set, and resubmit the job. Run IEHLIST to list the VTOC (FORMAT mode) of the system residence volume. Have the resulting listing available.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

System action: The PASSWORD data set is updated, but the protection status of the data set in the tape label is not altered. The return code is 8.

Application Programmer Response: Action is required only if the protection status in the tape label is incorrect. If protection is being added, use job control language (LABEL parameter) to set the desired protection status in the tape label when rewriting the data set. If protection is being deleted, use IEHINITT to relabel the tape and delete protection.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

System action: The request is ignored. The return code is 8.

Application Programmer Response: Probable user error. To interpret the return code, see [z/OS MVS System Messages, Vol 1 (ABA-AOM) Correct any errors and resubmit the ignored request.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

System action: The request is ignored. The return code is 8.

Application Programmer Response: Probable user error. (To interpret the return code, refer to [z/OS DFSMSdfp Advanced Services] Correct any errors and resubmit the ignored request.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

System action: The request is ignored. The return code is 8.

Application Programmer Response: Probable user error. More than two incorrect passwords have been supplied for the specified password in the utility statement preceding this message or PASWORD1 was

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.
incorrectly specified in the utility control statement.

**System action:** The request is ignored. The return code is 8.

**Application Programmer Response:** Probable user error. Resubmit the ignored request and supply a valid password.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

**Source:** DFSMSdfp

---

**IEH229I INVALID PARAMETER IN PARM FIELD OF EXEC STATEMENT**

**Explanation:** An incorrect parameter was found either in the PARM field of the EXEC statement or in the PARAM field of the LINK or ATTACH macro.

**System action:** Default values are assigned to the incorrect parameters. Processing continues. The return code is 4.

**Application Programmer Response:** Probable user error. Correct the error and resubmit the job.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

**Source:** DFSMSdfp

---

**IEH301I INCLUDE OP NOT VALID**

**Explanation:** The INCLUDE statement preceding this message is not valid with the specified MOVE or COPY operation.

**System action:** The request is ignored. The return code is 8.

**Application Programmer Response:** Probable user error. Correct the error and resubmit the job.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

**Source:** DFSMSdfp
IEH302I  EXCLUDE OP NOT VALID
Explanation:  The EXCLUDE statement preceding this message is not valid with the specified MOVE or COPY operation.
System action:  The request is ignored. The return code is 8.
Application Programmer Response:  Probable user error. Correct the error and resubmit the job.
System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.
Source:  DFSMSd fp

IEH303I  REPLACE OP NOT VALID
Explanation:  The REPLACE statement preceding this message is not valid with the specified MOVE or COPY operation.
System action:  The request is ignored. The return code is 8.
Application Programmer Response:  Probable user error. Correct the error and resubmit the job.
System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.
Source:  DFSMSd fp

IEH304I  SUBORDINATE REQ-SKIPPED
Explanation:  One of the following conditions occurred:
• The INCLUDE, EXCLUDE, REPLACE, or SELECT statement preceding this message is not preceded by a MOVE or COPY statement.
• The MOVE/COPY request is being ignored for the reason given in the preceding message.
• The data set is being loaded for the reason given in the preceding message.
System action:  The request is ignored. The return code is 8.
Application Programmer Response:  Probable user error. Correct the error and resubmit the job.
System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.
Source:  DFSMSd fp

IEH305I  MULTIPLE KEYWORD ERROR
Explanation:  In the statement preceding this message, duplicate or conflicting keywords are specified.
System action:  The request is ignored. The return code is 8.
Application Programmer Response:  Probable user error. Correct the error and resubmit the job.
System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.
Source:  DFSMSd fp

IEH306I  MISPLACED KEYWORD ERROR
Explanation:  A MOVE/COPY control statement contains a misplaced keyword.
System action:  The request is ignored. The return code is 8.
Application Programmer Response:  Probable user error. Correct the error and resubmit the job.
System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.
Source:  DFSMSd fp

IEH307I  KEYWORD NOT PERMITTED
Explanation:  In the statement preceding this message, a keyword is incorrect.
System action:  The request is ignored. The return code is 8.
Application Programmer Response:  Probable user error. Correct the error and resubmit the job.
System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the
problem and the source input for the job.

Source: DFSMSdfp

IEH308I  INVALID PARAMETER ERROR
Explanation:  A parameter is incorrect in (1) the statement preceding this message, or in (2) the parm information in the EXEC STATEMENT.

System action:  The request is ignored. The return code is 8. If the parameter information in the EXEC statement is incorrect, the return code is 16.

Application Programmer Response:  Probable user error. Correct the error and resubmit the job.

System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH309I  SYNTAX ERROR
Explanation:  The syntax of the statement preceding this message is incorrect.

System action:  The request is ignored. The return code is 8.

Application Programmer Response:  Probable user error. Correct the error and resubmit the job.

System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH310I  LENGTH ERROR
Explanation:  In the statement preceding this message, a keyword value contains too many characters (for example, DSNNAME=NINECHARS contains more than eight characters), or the EXPAND keyword does not specify a number in the decimal range 1-99.

System action:  The request is ignored. The return code is 8.

Application Programmer Response:  Probable user error. Correct the error and resubmit the job.

System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH311I  INCOMPLETE REQUEST
Explanation:  The statement preceding this message does not contain adequate information to perform the MOVE/COPY operation.

System action:  The request is ignored. The return code is 8.

Application Programmer Response:  Probable user error. Correct the error and resubmit the job.

System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH313I  DATA SET dsname HAS AN INCORRECT FORMAT FOR UNLOADED DATA SET
Explanation:  The format of the unloaded data set is incorrect; therefore, the data set cannot be moved or copied. The records are apparently out of sequence.

In the message text:

dsname
The data set name.

System action:  The request is ignored. The return code is 8.

Application Programmer Response:  Make sure that the correct tape or direct-access device is mounted, and that the data has not been altered.

System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH315I  UNABLE TO FIND FROM VOLUME
Explanation:  The ‘FROM’ volume cannot be located. Possibly, the FROM keyword was missing from the MOVE or COPY statement, or the CVOL keyword was specified, but the data set was not cataloged.
System action: The request is ignored. The return code is 8.

Application Programmer Response: If the data set is not cataloged, ensure that the FROM keyword is included on the MOVE or COPY statement. Also, make sure that a DD statement for the 'FROM' device exists and is compatible with the utility control information.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH316I MODEL DSCB FOR GENERATION DATA GROUP CANNOT BE WRITTEN

Explanation: An error (possibly, a permanent input/output error) occurred during an attempt to create the model data set control block (DSCB) for a generation data group, or there was no unused DSCB available in the VTOC.

System action: The request is ignored. The return code is 8.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH319I MEMBER mem NOT MOVED/COPIED. DUPLICATE NAME IN OUTPUT DATA SET

Explanation: A member with the same name as member mem is contained in the output partitioned data set; therefore, the member is not moved or copied.

In the message text:
mem The specified member name.

System action: The request is ignored. The return code is 4.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH320I MEMBER mem NOT FOUND IN DATA SET dsname

Explanation: The member cannot be located in the partitioned data set. Perhaps the data set name or member name was incorrectly specified.

In the message text:
mem The member name.
dsname The data set name.

System action: The request is ignored. The return code is 8.

Application Programmer Response: Probable user error. Correct the error and resubmit the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH321I MEMBER mem NOT MOVED/COPIED. OUTPUT DIRECTORY IS FULL

Explanation: The directory of the output partitioned data set is full; therefore, member mem cannot be moved or copied.

In the message text:
mem The specified member name.

System action: The request is ignored. The return code is 8.

Application Programmer Response: Increase the size of the directory, and selectively MOVE or COPY the member.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH322I I/O ERROR ENCOUNTERED IN MEMBER mem OF INPUT DATA SET dsname

Explanation: A permanent input/output error occurred while reading member mem of input data set dsname.

In the message text:
mem The member name.
dsname
The data set name.

System action: The request is ignored. The return code is 8.

Operator response: If requested by the system programmer, obtain a stand-alone dump.

Application Programmer Response: Ensure that the input data set is valid.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH323I I/O ERROR ENCOUNTERED IN MEMBER mem OF OUTPUT DATA SET dsname

Explanation: A permanent input/output error occurred while writing the member of the data set specified.

In the message text:
mem  The member name.

dsname  The data set name.

System action: The request is ignored. The return code is 8.

Application Programmer Response: Retry the operation. If the operation fails a second time, if the operation fails a second time with this same error message, in all probability the failure is due to a hardware error. Ensure the quality of the hardware medium on which the dataset resides. Resubmit the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH325I INVALID CATLG REQUEST IGNORED

Explanation: In the statement preceding this message, the specified receiving volume is not a direct access device.

System action: The moved or copied data set is not cataloged on the specific volume. The return code is 8.

Application Programmer Response: Probable user error. Correct the preceding statement so that the receiving volume is direct access or delete the CATLG keyword.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH327I A TTRN IN THE USER DATA FIELD OF THE DIRECTORY HAS NOT BEEN UPDATED

Explanation: A TTRN was not updated for the member named in the following message. A TTR in the source directory points to a record that is not in the member being copied.

System action: The member is copied.

- If copying from direct access to direct access, the incorrect TTR will be the same in the receiving directory as it was in the source directory.
- If loading, the incorrect TTR is zero in the receiving directory.

The program then attempts to copy the next member.

Application Programmer Response: Correct the incorrect TTR. This may require that the proper TTR be placed in both the source and receiving directories, or
that the source member be re-created and recopied. Check for an end-of-file record embedded within the source member.

Submit IEHLIST for both the source and receiving data sets with the LISTPDS option specified. Submit IEHLIST for both the source and receiving data sets with the LISTPTOC option specified (DUMP format). Submit Data Facility Data Set Services to dump the source data set to SYSPRINT or to tape.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH328I A TTR IN THE NOTE LIST RECORD HAS NOT BEEN UPDATED

Explanation: A TTR in the notelist record for the member named in the following message was not updated. The TTR is either pointing to a record that is not within this member or to a record within the member that is after the notelist record.

System action: The member is copied. However, the incorrect TTR will be the same in the receiving notelist as it was in the source notelist. The program then attempts to copy the next member.

Application Programmer Response: Correct the incorrect TTR. This may require that the correct TTR be placed in both the source and receiving notelists, or that the source be re-created and recopied.

Submit IEHLIST for both the source and receiving data sets with the LISTPDS option specified. Submit IEHLIST for both the source and receiving data sets with the LISTPTOC option specified (DUMP format). Submit Data Facility Data Set Services to dump the source data set to SYSPRINT or to tape.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH329I A TTR IN A NOTE LIST CANNOT BE UPDATED

Explanation: The TTR does not point to any record contained in the copied member that precedes the notelist or that follows a previous notelist (if any).

System action: The member is unloaded, but the TTR will not be updated during a reload. The program then attempts to unload the next member.

Application Programmer Response: Correct the incorrect TTR in the source notelist and unload the data set again. Use Data Facility Data Set Services to dump the source data set to SYSPRINT.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH331I USER LABELS ARE NOT MOVED/COPIED. NO USER LABEL TRACK ALLOCATED FOR INPUT

Explanation: A previously allocated data set did not provide a user label track.

System action: User labels are ignored. Normal MOVE/COPY processing continues.

Application Programmer Response: For the COPY operation, if user label information is desired, scratch the data set on the receiving volume and preallocate the data set correctly. For the MOVE operation, if user label information is desired, rebuild the user labels.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL, the SYSOUT output, and the source input for the job.

Source: DFSMSdfp

IEH332I PERMANENT I/O ERROR WHILE READING USER INPUT HEADER LABELS. NO MORE LABELS WILL BE PROCESSED

Explanation: The open routine encountered a permanent input/output error while attempting to read user input header labels.

System action: IEHMOVE returns to the user, points to the label in error, ignores the return code, and ends the operation.

Application Programmer Response: If user label information is desired, rebuild the user labels.

System programmer response: If the error recurs and the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

Source: DFSMSdfp
IEH333I  PERMANENT I/O ERROR WHILE READING USER INPUT TRAILER LABELS. NO MORE LABELS WILL BE PROCESSED

Explanation: The end-of-volume routine encountered a permanent input/output error while attempting to read user input trailer labels.

System action: IEHMOVE returns to the user, points to the label in error, ignores the return code, and ends the operation.

Application Programmer Response: If user label information is desired, rebuild the user labels.

System programmer response: If the error recurs and the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

Source: DFSMSdfp

IEH334I  PERMANENT I/O ERROR WHILE WRITING USER OUTPUT HEADER LABELS. NO MORE LABELS WILL BE PROCESSED

Explanation: The open routine encountered a permanent input/output error while attempting to write user output header labels.

System action: IEHMOVE returns to the user, points to the label in error, ignores the return code, and ends the operation.

Application Programmer Response: If user label information is desired, rebuild the user labels.

System programmer response: If the error recurs and the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

Source: DFSMSdfp

IEH335I  PERMANENT I/O ERROR WHILE WRITING USER OUTPUT TRAILER LABELS. NO MORE LABELS WILL BE PROCESSED

Explanation: The close routine encountered a permanent input/output error while attempting to write user output trailer labels.

System action: IEHMOVE returns to the user, points to the label in error, ignores the return code, and ends the operation.

Application Programmer Response: If user label information is desired, rebuild the user labels.

System programmer response: If the error recurs and the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

Source: DFSMSdfp

IEH336I  AN UNCORRECTABLE ERROR OCCURRED WHILE READING DATA SET dsname

Explanation: The data event control block (DECB) for the input data set indicated that an error, other than an input/output error or record length check, occurred for the record just read.

In the message text:

dcname  The data set name.

System action: The function is ended. The return code is 8.

Application Programmer Response: Ensure that the input data set is specified correctly.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the source input for the job.

Source: DFSMSdfp

IEH339I  I/O ERROR ENCOUNTERED IN INPUT DATA SET

Explanation: A permanent input/output error occurred while reading the input data set.

System action: The request is ignored. The return code is 8.

Application Programmer Response: Ensure that the input data set is valid.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the source input for the job.

Source: DFSMSdfp

IEH346I  CATALOG CANNOT BE LOCATED, OR CONTROL VOLUMES ARE CONNECTED TO EACH OTHER

Explanation: In the statement preceding this message, no catalog exists on the specified control volume, or the control volumes are connected to each other incorrectly.

System action: The request is ignored. The return code is 4.

Application Programmer Response: Make sure that there is a catalog on the specified volume, and that the
control volumes are correctly connected to each other.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

**Source:** DFSMSdfp

---

**IEH348I** NO DATA SETS FOUND FOR DSGROUP SPECIFIED

**Explanation:** No data sets with the DSGROUP name given were located in the catalog.

**System action:** The request is ignored. The return code is 4.

**Application Programmer Response:** Catalog the data sets using access method services.

**Source:** DFSMSdfp

---

**IEH349I** UNABLE TO MOUNT VOLUME ser xxxx

**Explanation:** No device was allocated for the volume specified.

In the message text:

- `xxxx` The action taken.
- `ser` The volume serial number.

**System action:** The request is ignored. The return code is 8.

**Application Programmer Response:** Ensure that a DD statement for the device exists, and that it is consistent with the utility control statements.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

**Source:** DFSMSdfp

---

**IEH351I** DATA SET dsname NOT CATALOGED. INDEX STRUCTURE INCONSISTENT.

**Explanation:** Either the index structure is incorrect, or the catalog already has an entry for the data set. Therefore, the data set cannot be cataloged.

In the message text:

- `dsname` The data set name.

**System action:** The data set is not cataloged. The return code is 4.

**Application Programmer Response:** If the data set is not already cataloged, catalog it.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

**Source:** DFSMSdfp

---

**IEH354I** SUFFICIENT SPACE NOT AVAILABLE FOR ALL DATA SETS IN DSGROUP

**Explanation:** The space needed to contain the entries for all the data sets in the DSGROUP could not be obtained.

**System action:** The request is ignored. The return code is 4.

**Application Programmer Response:** Specify a more exclusive DSGROUP name.

**Source:** DFSMSdfp

---

**IEH355I** DATA SET dsname NOT CATALOGED. SPACE NOT AVAILABLE IN THE CATALOG

**Explanation:** The catalog is full; therefore, the data set cannot be cataloged.

In the message text:

- `dsname` The data set name.

**System action:** The data set is not cataloged. The return code is 8.

**Application Programmer Response:** Increase the size of the catalog and catalog the data set.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job. Run Data Facility Data Set Services to obtain a printed copy of the catalog, and save the output.

**Source:** DFSMSdfp
return-code
The return code for VSAM catalog management.

System action: The request is ignored. Return code is 4.

Application Programmer Response: Probable user error. To interpret the return code, refer to the explanation of message IDC3009. Correct any errors and resubmit the request.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the job.

Source: DFSMSdfp

IEH356I   DATA SET dsname CATALOG SEARCH FAILED. RETURN CODE return-code
Explanation: An error occurred during processing of the VSAM CATLG macro for locate.

In the message text:
return-code
The return code from VSAM catalog management.

dname
The data set name.

System action: The data set is not moved/copied. Processing continues with the next data set in the DSGROUP. The return code is 4.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH357I   DATA SET AMASTCAT NOT CATALOGED. AMASTCAT NOT ALLOWED
Explanation: No VSAM catalog should be named AMASTCAT; therefore, AMASTCAT cannot be cataloged.

System action: AMASTCAT is not cataloged. The return code is 4.

Application Programmer Response: Rename the VSAM catalog and catalog the new name.

Source: DFSMSdfp

IEH358I   DATA SET dsname NOT CATALOGED. INVALID RETURN CODE FROM CATALOG
Explanation: An incorrect condition code was returned from catalog; therefore, the data set name, dsname, cannot be cataloged.

In the message text:

dname
The data set name.

System action: The data set is not cataloged. The return code is 4.

Application Programmer Response: Catalog the data set, if it is not already cataloged.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH361I   DATA SET dsname NOT MOVED/COPIED TO VOLUME(S)
Explanation: An abnormal condition (such as an input/output error) occurred. Therefore, data set dsname could not be moved or copied.

In the message text:

dname
The data set name.

System action: Processing continues with the next function to be performed. The return code is 4.

Application Programmer Response: Ensure that the input data set is valid.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH362I   DATA SET dsname NOT MOVED/COPIED TO VOLUME(S)
Explanation: An abnormal condition (such as an input/output error) occurred; therefore, the data set could not be scratched.

In the message text:
IEH363I  DATA SET dsname MAY STILL EXISTS ON VOLUME(S)

Explanation: An unusual condition (such as a permanent input/output error) occurred during the copy operation; therefore, the data set was copied but not cataloged on the specified volume(s).

In the message text:

dname  
The data set name.

System action: Processing continues with the next function to be performed. The return code is 4.

Application Programmer Response: Scratch the data set.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

---

IEH364I  THE DATA SET JUST COPIED WAS NOT SUCCESSFULLY CATALOGED

Explanation: The data set was copied but not cataloged on the “TO” volume for one of the following reasons:

- A catalog data set being sought by the IEBCOPY utility does not exist on the specified volume.
- The existing index structure does not permit the cataloging of the data set.
- No space is available in the catalog.
- A permanent input/output error occurred during the catalog operation.
- The data set is already cataloged on the receiving volume.

System action: Processing continues with the next function to be performed. The return code is 4.

Application Programmer Response: Probable user error. Correct the error and resubmit the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

---

IEH365I  DATA SET dsname MAY STILL EXIST ON VOLUME(S)

Explanation: An unusual condition (such as a permanent input/output error) occurred during the scratch operation; therefore, the data set was moved but not scratched from the source volume(s).

In the message text:

dname  
The data set name.

System action: Processing continues with the next function to be performed. The return code is 4.

Application Programmer Response: Scratch the data set, if required.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

---

IEH366I  THE DATA SET JUST MOVED MAY EXIST WITH AN INTERNALLY GENERATED NAME ON VOLUME(S)

Explanation: An unusual condition (such as a permanent input/output error) occurred; therefore, a specified rename operation was not successful. An internally generated name may have been assigned to the moved data set.

System action: Processing continues with the next function to be performed. The return code is 8.

Application Programmer Response: Use the AMASPZAP service aid to change the dsname field of the format-1 DSCB from **TEMP... to the required name.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp
**IEH367I**  
**THE DATA SET JUST MOVED WAS NOT SUCCESSFULLY UNCATALOGED**

**Explanation:** A permanent input/output error occurred during the uncatalog operation; therefore, the data set was moved but not uncataloged.

**System action:** Processing continues with the next function to be performed. The return code is 4.

**Application Programmer Response:** Uncatalog the data set.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

**Source:** DFSMSdfp

---

**IEH373I**  
**UNABLE TO MOUNT VOLUME ser. SOME INCLUDE OR REPLACE REQUESTS IGNORED**

**Explanation:** The volume cannot be mounted.

In the message text:

*ser*  
The volume serial number.

**System action:** The INCLUDE and REPLACE requests referring to the specified volume are ignored. The return code is 8.

**Application Programmer Response:** Ensure that a DD statement for the volume exists.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

**Source:** DFSMSdfp

---

**IEH374I**  
**DATA SET dsname NOT FOUND ON VOLUME ser. INCLUDE OR REPLACE REQUEST IGNORED**

**Explanation:** The data set does not reside on the volume.

In the message text:

*dsname*  
The data set name.

*ser*  
The volume serial number.

**System action:** The INCLUDE or REPLACE statements that refer to data set dsname are ignored. The return code is 8.

**Application Programmer Response:** Probable user error. Ensure that the DD statement for the indicated volume is correct.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

**Source:** DFSMSdfp
IEH375I  DATA SET dsname IS NOT PARTITIONED. INCLUDE OR REPLACE REQUEST IGNORED

Explanation:  The data set is not partitioned.
In the message text:

dsname  The data set name.

System action:  The INCLUDE request, or the “including” part of the REPLACE request, is ignored. The return code is 8.

Application Programmer Response:  Ensure that the data set is valid.

System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source:  DFSMSdfp

IEH376I  RECORD CHARACTERISTICS NOT COMPATIBLE xxxx. INCLUDE OR REPLACE REQUEST IGNORED

Explanation:  The attribute of the output data set is not compatible with that of the input data set.
In the message text:

xxxx  The attribute specified.

System action:  The INCLUDE request, or the “including” part of the REPLACE request, is ignored. The return code is 8.

Application Programmer Response:  Ensure that the record characteristics of the input and output data sets are compatible.

System programmer response:  If the error recurs and the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source:  DFSMSdfp

IEH377I  DATA SET dsname REQUIRES TRACK OVERFLOW FEATURE. INCL/REPL REQUEST IGNORED

Explanation:  The data set dsname was originally written with track overflow. The source device does not support the track overflow feature.
In the message text:

dsname  The data set name.

System action:  The INCLUDE or REPLACE request for this data set is ignored. The program continues. The return code is 8.

Application Programmer Response:  Change the JCL to specify a device that supports track overflow.

System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the SYSOUT output for the job.

Source:  DFSMSdfp

IEH380I  MEMBER mem NOT FOUND IN DATA SET dsname. INCLUDE OR REPLACE REQUESTS IGNORED

Explanation:  The member is not contained in partitioned the data set.
In the message text:

mem  The member name.

dname  The data set name.

System action:  The INCLUDE request, or the “including” part of the REPLACE request, is ignored. The return code is 8.

Application Programmer Response:  Ensure that the control statements are correct.

System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source:  DFSMSdfp

IEH381I  ERROR ENCONTERED IN SCRATCHING WORK FILES

Explanation:  Either a work file could not be located, or an input/output error occurred during the scratch operation. Therefore, the work file(s) could not be scratched.

System action:  The MOVE/COPY request is ignored. The return code is 12.

Application Programmer Response:  Ensure that a SYSUT1 DD statement exists and specifies a sufficient amount of space. If the POWER= n parameter is used, ensure that the space is equivalent to 80xn tracks.

System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all
printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

**IEH383I INVALID DEVICE NAME**

**Explanation:** In the statement preceding this message, a device name is incorrect.

**System action:** The request is ignored. The return code is 8.

**Application Programmer Response:** Probable user error. Correct the error and resubmit the job.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

**IEH384I GENERIC DEVICE NAME ERR**

**Explanation:** In the statement preceding this message, a device name is incorrect.

**System action:** The request is ignored. The return code is 8.

**Application Programmer Response:** Probable user error. Correct the error and resubmit the job.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

**IEH385I SELECT OP NOT VALID**

**Explanation:** The SELECT statement preceding this message is not valid with the specified MOVE or COPY operation.

**System action:** The request is ignored. The return code is 8.

**Application Programmer Response:** Probable user error. Correct the error and resubmit the job.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

**IEH390I INVALID DATA SET NAME SPECIFIED IN RENAME-PARAMETER**

**Explanation:** A dsname containing incorrect characters or a subname exceeding eight characters is specified in the RENAME parameter.

**System action:** Processing continues with the next function to be performed, if any. The return code is 8.

**Application Programmer Response:** Probable user error. Correct the error and resubmit the job.

**System programmer response:** If the error recurs...
and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

In the message text:

   dsname
   The data set name.

   xxxx
   The reason indicated.

System action: The data set is unloaded, or the MOVE/COPY request is ignored, as applicable. The return code is 4.

Application Programmer Response: Probable user error. Correct the error and resubmit the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH432I  DATA SET dsname {UNLOADED | NOT MOVED/COPIED} xxxx

Explanation: The data set was unloaded or was not moved or copied for the reason indicated.

In the message text:
The data set name.

The reason indicated.

System action: The data set is unloaded, or the MOVE/COPY request is ignored, as applicable. The return code is 4.

Application Programmer Response: Probable user error. Correct the error and resubmit the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH433I DATA SET NOT MOVED/COPied BECAUSE INCLUDE, EXCLUDE, SELECT, OR REPLACE REQUEST WHILE LOADING/UNLOADING

Explanation: INCLUDE, EXCLUDE, SELECT, or REPLACE requests cannot be processed while loading or unloading a data set.

System action: The MOVE/COPY request is ignored. The return code is 4.

Application Programmer Response: Either correct the cause of the UNLOAD indicated by message IEH405I, or remove the INCLUDE, EXCLUDE, SELECT, or REPLACE requests following the IEHMOVE control statement.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH435I ERROR ENCOUNTERED WHILE ANALYZING THE SYSCTLG DATA SET

Explanation: One of the following conditions has occurred:

- An input/output error occurred while the system was reading the SYSCTLG data set.
- An incorrect name was specified either as the name of an INCLUDE or EXCLUDE statement or as a value in the DSGROUP= or CATALOG= parameter. A name is incorrect if it does not exist in the specified catalog, or if it contains syntax errors.
- An error occurred while the system was trying to obtain a model DSCB for a generation data group.
- A structural error exists in the catalog.

System action: The request is ignored. The return code is 8.

Application Programmer Response: Make sure that the SYSCTLG data set is valid, and that the names specified in the CATALOG= and DSGROUP= parameters and the INCLUDE and EXCLUDE statements are correct.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH440I RECFM AND BLKSIZE ARE INCONSISTENT

Explanation: The record format (RECFM) and/or block size (BLKSIZE) specified for the unloaded data set are not the same as those specified for the receiving data set. IEHMOVE will not reblock or change record format while performing a load or unload operation.

System action: The request is ignored. The return code is 8.

Application Programmer Response: Probable user error. Correct the error and resubmit the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp
the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job. Run IEBPTPCH to print the first block of the unloaded data set and save the output.

Source: DFSMSdfp

IEH442I USER LABEL I/O ERROR CAUSED TERM

Explanation: An uncorrectable I/O error occurred when:

- A standard user label exit was present, and the error occurred during label processing.
- A user totaling exit was present, and the error occurred while IEHMOVE was writing data on the output data set.

System action: The program is ended. The return code is 12.

Application Programmer Response: If further handling of the error is desired, the user exit should be expanded to examine the standard status information and then issue an appropriate message.

Source: DFSMSdfp

IEH450I REQUEST TERMINATED BECAUSE DATA SET SPANS MORE THAN 5 VOLUMES

Explanation: The data set extends over the maximum of five volumes; therefore, the data set is not moved or copied.

System action: The request is ignored. The return code is 8.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH451I TRACK OVERFLOW FEATURE REQUIRED ON DEVICE THAT DOES NOT HAVE TRACK OVERFLOW FEATURE

Explanation: A data set to be moved or copied was originally written with track overflow, but the source device does not support the track overflow feature.

System action: The request is ignored. The return code is 8.

Application Programmer Response: Change the job control language to specify a device that supports track overflow.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem and the source input for the job.

Source: DFSMSdfp

IEH453I - IEH455I DATA SET dsname {UNLOADED | NOT MOVED/COPIED} xxxx

Explanation: The data set was unloaded or was not moved or copied for the reason indicated.

In the message text:

dsname The data set name.

xxxx The reason indicated.

System action: The data set is unloaded, or the MOVE/COPY request is ignored, as applicable. The return code is 4.

Application Programmer Response: Probable user error. Correct the error and resubmit the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all
IEH460I • IEH471I

printed output and output data sets related to the
problem and the source input for the job.

Source: DFSMSdfp

IEH460I  INVALID DATA SET ORGANIZATION

Explanation: One of the following error conditions occurred: the source data set is not a partitioned,
physical sequential, or direct access (BDAM) data set. Therefore, the data set cannot be processed by
IEHMOVE.

System action: The MOVE/COPY request is ignored. The return code is 12.

Application Programmer Response: Correct the data set organization specified in the data set control block
(DSCB).

System programmer response: If the error recurs and the program is not in error, look at the messages in
the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix
exists, contact the IBM Support Center. Provide all printed output and output data sets related to the
problem and the source input for the job.

Source: DFSMSdfp

IEH461I  UNABLE TO OPEN {INPUT | SYSIN} DATA SET

Explanation: Either no DD statement was provided to define the input or SYSIN data set, or the block size
specified for the data set is not a multiple of the logical record length.

System action: The MOVE/COPY request is ignored. The return code is 12.

Application Programmer Response: Probable user error. Correct the error and resubmit the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in
the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix
exists, contact the IBM Support Center. Provide all printed output and output data sets related to the
problem and the source input for the job.

Source: DFSMSdfp

IEH470I  CVOL NOT PERMITTED. DATA SET ASSUMED TO BE CATALOGED IN
MASTER CATALOG

Explanation: The parameter CVOL was encountered while scanning a MOVE, COPY, INCLUDE, or
REPLACE statement. SYSCTLG data sets are no longer supported. IEHMOVE will attempt to locate the
data set through the master catalog.

System action: IEHMOVE will attempt to locate the data set through the master catalog. If unable to locate,
message IEH471I will be issued. The return code is 8.

Application Programmer Response: The CVOL parameter should be removed from the affected control
statement as soon as possible.

Source: DFSMSdfp

IEH471I  DATA SET NOT FOUND IN CATALOG

Explanation: A data set assumed to be cataloged (because of CVOL parameter) was not found in any
available VSAM catalog.

System action: The MOVE/COPY request is ignored. The return code is 12.

Application Programmer Response: If the data set should be cataloged, run access method services to
catalog the data set. If the data set should not be cataloged, specify the from volume with the keyword
FROM=. In any case, the parameter CVOL should be removed.

Source: DFSMSdfp

• The record format is variable (V) or undefined (U),
and not all tracks were initialized when the data set
was created.

• An uncorrectable error occurred.

In the message text:

dname

The data set name.

System action: Message IEH361I is also issued. The return code is 8.

Application Programmer Response: Ensure that the data set conforms to the standards of a direct
organization data set.

System programmer response: If the error recurs and the program is not in error, look at the messages in
the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix
exists, contact the IBM Support Center. Provide all printed output and output data sets related to the
problem and the source input for the job.

Source: DFSMSdfp
CANNOT HONOR CATLG REQUEST. DATA SET NOT CATALOGED.

Explanation: For a COPY DSNAME or COPY PDS request, all of the following are true:
- The source data set is cataloged (FROM=device=list is not specified).
- The receiving data set is not to be renamed (RENAME= is not specified).
- CVOL processing has not been explicitly requested (CVOL= is not specified).

Since IEHMOVE has located the source data set through the catalog and the receiving data set has the same name, the master catalog operation would be unsuccessful. Therefore, the request is ignored.

System action: The COPY operation will proceed. The CATLG request is ignored. The return code is 8.

Application Programmer Response: The CATLG parameter should be removed from the affected control statement as soon as possible.

Source: DFSMSdfp

DATA SET WILL BE CATALOGED IN MASTER/USER CATALOG.

Explanation: In a COPY DSNAME, COPY PDS, COPY DSGROUP, or COPY VOLUME request, a CATLG parameter (implying a request to catalog in a SYSCTLG data set) has been encountered. Since CVOL is no longer supported, cataloging will proceed in the master catalog. If a user catalog is available, the cataloging will take place in the user catalog rather than in the master catalog.

System action: The COPY operation will proceed. The return code is 4.

Application Programmer Response: If the cataloging operation is unsatisfactory (takes place in the master catalog rather than in a user catalog), uncatalog the data set and recatalog in the proper catalog using access method services.

Source: DFSMSdfp

dataset or dataspnm HAS DATA ORGANIZATION THAT CANNOT BE MOVED/COPIED.

Explanation: The above is an ISAM data set or VSAM data space, which is not supported by IEHMOVE.

In the message text:
- dataset The data set name.
- dataspnm The data space name.

System action: MOVE/COPY request is ignored. If VOLUME operation or DSGROUP operation, the return code is 4. If DSNAME or PDS operation, the return code is 12.

Application Programmer Response: If ISAM or VSAM, use access method services to copy the data set/space.

Source: DFSMSdfp

IEH475I  dsname IS A MULTIVOLUME DATASET AND HAS NOT BEEN MOVED/COPIED.

Explanation: The data set is part of a multivolume data set (DS1IND80 'Last volume on which data set resides' was not on, in the DSCB) and only one volume was specified. If it is the last part of a multivolume data set, the MOVE/COPY will proceed normally without any message.

In the message text:
- dsname The data set name.

System action: The MOVE/COPY request is ignored. If a VOLUME operation, the return code is 4 and operation continues with the next data set. If a DSNAME operation, the return code is 12.

Application Programmer Response: To move a multivolume data set, use a MOVE/COPY DSNAME and specify all volumes that the data set resides on in the control statement and DD statement. Note: A maximum of five volumes can be specified.

Source: DFSMSdfp

MINIMUM BUFFER SPACE UNAVAILABLE - SINGLE BUFFERING USED

Explanation: The minimum of 2 input and 2 output buffers for enhanced IEHMOVE move/copy performance could not be obtained because space was not available.

System action: The system uses a single buffer for the move/copy operation. IEHMOVE performance remains unchanged.

Application Programmer Response: Specify or increase the value in the REGION parameter of the JOB or EXEC statement to allow sufficient buffers so that IEHMOVE multiple buffering can be used. See z/OS MVS JCL User’s Guide for information on specifying the REGION parameter.

Source: DFSMSdfp
IEH477I BUFFER ALLOCATION STATISTICS FOR SEQUENTIAL DATASET MOVE/COPY OPERATION ARE: INPUT buffers = xx - OUTPUT BUFFERS = yy BUFFER SPACE OBTAINED = nnnK INCREASE JCL REGION PARAMETER BY mmmK TO OBTAIN MAXIMUM BUFFERS

Explanation: The system obtained a buffer size of nnnK. The last line of the message appears only when the region size specified is not sufficient to obtain the maximum number of buffers.

In the message text:

xx The number of buffers that the system allocated for input.

yy The number of buffers that the system allocated for output.

nnnK The buffer space obtained in kilobytes.

mmmK The number of kilobytes needed to obtain maximum buffers.

System action: The data sets were copied/moved using enhanced IEHMOVE multiple buffers.

Application Programmer Response: If nnnK is less than the maximum, performance may be improved by increasing the value of the REGION parameter as indicated in the last line of the message.

Source: DFSMSdfp

IEH601I INVALID CONTROL STATEMENT

Explanation: The construction of the control statement preceding this message is incorrect.

System action: Processing continues with the next control statement. The return code is 8.

Application Programmer Response: Probable user error. Correct the construction of the preceding statement, and resubmit the job for those tapes that were bypassed.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL, the SYSOUT output for the job, and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEH478I MOVE/COPY REQUEST IGNORED BECAUSE THE TARGET VOLUME IS MANAGED BY THE STORAGE MANAGEMENT SUBSYSTEM

Explanation: MOVE or COPY DSNAME, PDS, CATALOG, DSGROUP, or VOLUME operations are not supported when the output volume is SMS managed.

System action: The system ends the requested MOVE or COPY operation.

Application Programmer Response: If the MOVE or COPY is a DSNAME or PDS operation, pre-allocate the data set on the output volume and rerun the job.

Source: DFSMSdfp

IEH479I SUBSYSTEM REQUEST TO THE STORAGE MANAGEMENT SUBSYSTEM FAILED

Explanation: While processing a MOVE or COPY request to SMS, the subsystem interface encountered an error that is further described by one of the following return codes:

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>8</td>
<td>The storage management subsystem exists, but is not active.</td>
</tr>
<tr>
<td>12</td>
<td>A functional or logical error exists, and cannot be processed.</td>
</tr>
</tbody>
</table>

System action: The system ignores the MOVE or COPY request.

Application Programmer Response: For a return code of 8, make sure SMS is active, and resubmit the MOVE or COPY operation. For a return code of 12, contact your programming support personnel.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL, the SYSOUT output for the job, and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEH602I INVALID KEYWORD

Explanation: In the control statement preceding this message, a keyword is either incorrect or invalid for the specified function.

System action: Processing continues with the next control statement. The return code is 8.

Application Programmer Response: Probable user error. Correct the keyword on the preceding statement, and resubmit the job for those tapes that were bypassed.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp
and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEH603I  INVALID PARAMETER VALUE
(parmvalue)

Explanation: In the control statement preceding this message, a parameter is incorrect. The incorrect parameter value is included in the message whenever possible.

In the message text:

parmvalue

The incorrect parameter value.

System action: Processing continues with the next control statement. The return code is 8.

Application Programmer Response: Probable user error. Correct the parameter on the preceding statement, and resubmit the job for those tapes that were bypassed.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEH604I  OPERATOR SUPPRESSED VOLUME
LABEL ser

Explanation: The tape that was to be labeled with the serial number was not mounted by the operator.

In the message text:

ser

The volume serial number.

System action: The current serial number is reserved for the unmounted tape, and the next number is used for the next tape to be labeled.

Application Programmer Response: Probable user error. Find out why the tape was not mounted and take any indicated action. Check the console log for additional background.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEH605I  INVALID DEVICE ALLOCATED ON ddd

Explanation: The device was removed from operation; that is, it is either unacceptable or not online.

In the message text:

ddd  The device indicated.

System action: The device is removed from the list of devices allocated to this job step by the associated DD statement. The return code is 8.

Application Programmer Response: Probable user error. Ensure that the parameters on the applicable DD statement are correct.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEH606I  PERMANENT I/O ERROR ON ddd

Explanation: A permanent input/output error was encountered on the device.

In the message text:

ddd  The device indicated.

System action: The device is removed from the list of devices allocated to this job step by the associated DD statement. The return code is 8.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEH607I  ALLOCATED DEVICES EXHAUSTED

Explanation: All devices allocated to this job step (specified in DD statement associated with the control statement being processed) have been eliminated as mountable devices.

System action: Processing continues with the next control statement. The return code is 8.

Application Programmer Response: Probable user error. If message IEH606i precedes this message, ensure that the parameters on the applicable DD statement are correct.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.
the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEH608I I/O ERROR ON SYSIN. JOB TERMINATED.

Explanation: A permanent input/output error was encountered while the SYSIN data set was either being opened or being read.

System action: The job is ended. The return code is 16.

Application Programmer Response: Probable user error. Ensure that the DCB parameters on the SYSIN DD statement are correct, particularly the BLOCKSIZE specification. If the DD statement is correct, the error probably occurred when the data set was being read.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEH609I INVALID DEVICE SPECIFIED FOR ASCII LABELING

Explanation: The tape to be initialized in ASCII code is not mounted on a magnetic tape drive.

System action: Processing continues with the next INITT control statement. The return code is 8.

Application Programmer Response: Probable user error. Change the corresponding DD statement to specify a magnetic tape drive.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEH610I INVALID PARM OR PARM LIST PASSED TO IEHINITT

Explanation: An incorrect parameter is coded in the EXEC statement or in the parameter list passed by a LINK or ATTACH macro.

System action: The job is ended. The return code is 16.

Application Programmer Response: Probable user error. Check the parameters passed to IEHINITT for validity, and resubmit the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEH611I INVALID DENSITY SPECIFIED, DEFAULT VALUE USED

Explanation: The density specified in the DCB parameter of the DD statement is incorrect for the unit requested.

System action: The default density value for the unit requested is used.

Application Programmer Response: Probable user error. If the labels are to be written at a different density than the default value, change the density value in the DCB parameter, and relabel the tape(s).

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEH612I INVALID VALUE FOR ACCESS CODE

Explanation: A character other than uppercase A-Z was specified as the access code for ANSI tape.

System action: Processing continues with the next INITT statement.

Application Programmer Response: Probable user error. Check the access code value on the indicated statement. Change to uppercase A-Z.

Source: DFSMSdfp

IEH613I ACCESS KEYWORD INVALID FOR NON-AL TAPE

Explanation: The ACCESS keyword was specified without LABTYPE=AL being specified. The result is an access code-protected standard label tape which is incorrect.

System action: Processing continues with next INITT command. The return code is 8.
IEH614I  
**Application Programmer Response:** Probable user error. Either specify LABTYPE=AL or remove ACCESS=xxx.

**Source:** DFSMSdfp

---

**IEH614I**  
**Invalid character in SERIAL/OWNERID**

**Explanation:** An incorrect character was found in the parameter for the ‘SER’ or the ‘OWNER’ keywords. The valid character set differs for SL and AL labels.

**System action:** Processing continues with the next control statement. The return code is 8.

**Application Programmer Response:** Probable user error. Correct the parameter value on the preceding statement and resubmit the job for those tapes that were bypassed.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

**IEH615I**  
**IEHINITT NOT SUPPORTED IN TAPE LIBRARY**

**Explanation:** IEHINITT may not be used to initialize tapes in a tape library.

**System action:** The job step is ended. The return code is 8.

**Application Programmer Response:** Probable user error. Do not use IEHINITT to initialize tapes in a tape library.

**Source:** DFSMSdfp

---

**IEH616I**  
**NUMBER OF TAPES EXCEEDS 255, RESET TO 255**

**Explanation:** The number of tapes specified on the NUMBTAPE keyword exceeds 255, therefore, the number has been reset to 255.

**System action:** The system resets to 255 the value specified on the NUMBTAPE keyword and sets a return code of 8. Processing continues.

See [z/OS DFSMSdfp Checkpoint/Restart](https://www.ibm.com) for information about return code 8.

**Application Programmer Response:** Probable user error. Correct the value specified on the NUMBTAPE keyword.

**Source:** Data Facility Storage Management Subsystem (DFSMS)

**Detecting Module:** IEHINITT

---

**IEH617I**  
**THE DDNAME PASSED TO IEHINITT IS INVALID OR BLANK. THE DDNAME WAS dddddddd.**

**Explanation:** The DDNAME on the utility control statement is invalid. Most likely, the name specified on the utility control statement did not match the ddname in the name field of the DD statement which defined the tape unit(s).

In the message text:

```
dddddd
dddddd
```

The ddname.

**System action:** None.

**User response:** Correct the JCL and rerun the job.

**Source:** IEHINITT

**IEH622I**

SERVO TRACKS MISSING AND THE DEVICE DOES NOT SUPPORT FORMATTING. RETURN CARTRIDGE TO SUPPLIER TO BE REFORMATTED.

**Explanation:** IEHINITT cannot label the tape because the tape does not contain servo track information and the device does not support the rewriting of servo tracks.

**System action:** None.

**Operator response:** Return the tape to the supplier so that the servo tracks can be rewritten.

**Source:** IEHINITT

---

**IEH623E**

INVALID SERIAL NUMBER. AT LEAST ONE OR MORE RIGHTMOST CHARACTERS MUST BE NUMERIC WHEN NUMBTAPE IS GREATER THAN 1

**Explanation:** The volser specified with the SER keyword was expected to have at least one or more rightmost characters being numeric but it was not. The reason that the volser was expected to have at least one rightmost character being numeric is that NUMBTAPE was specified with a value greater than 1. This indicates that tape volumes are to be mounted with volser values that are derived by incrementing numeric suffix of the volser that is indicated with the SER keyword. In order for this to happen properly, the volser specified with the SER keyword must have at least one or more rightmost characters specified as numeric.

**System action:** Processing continues with the next control statement.

**System programmer response:** The cause of the missing code must be determined and resolved by reinstating the missing code.

**Source:** DFSMSdfp

---

**IEH626I**

REQUIRED MODULE IGC0103I MISSING.

**Explanation:** The second load of the LABEL SVC is missing. This can be the result of an incorrect install or an erroneous linkedit.

**System action:** Processing terminates.

**System programmer response:** None.

**IEH627I**

VOLUME NOT LABELED, REASON CODE = wwxyyzz. PLEASE REFER TO MESSAGE MANUAL FOR BIT SETTING EXPLANATION.

**Explanation:** The volume was not labeled as a result of exit processing. The reason for the failure is encoded (hex representation) in the reason code, which maps directly to the settings in the four-byte field INXNLBRS in macro IEHUEXIT, which normally resides in SYS1.MACLIB. The macro should be referenced for the very latest mapping. However, the bit definitions current at the time of this edition are:

**Byte 1 ww**

\[\begin{align*}
\text{x'80'} & \quad \text{Error on call to CSVDYNEX.} \\
\text{x'40'} & \quad \text{An exit routine abended.} \\
\text{x'20'} & \quad \text{Invalid return code from exit routine (not 0, 4, 8).} \\
\text{x'10'} & \quad \text{Invalid reason code from exit routine (not 0, 4).} \\
\text{x'08'} & \quad \text{A previous exit indicated that the volume is not to be labeled.}
\end{align*}\]
Conflicts in the results from calls to exits have been encountered.

At least one exit routine returned rc=0 with a modified volser and either other exit routines returned rc=0 without modifying the volser, or the modified volser's didn’t match.

Two or more exits requested that the volser be changed, but the changed volser's don’t match.

An exit routine requested no OWNERID change, but another exit requested an OWNERID change.

Two or more exits requested that the OWNERID be changed, but the changed OWNERIDs don’t match.

An exit routine requested no ACCODE change, but another exit requested ACCODE change.

Two or more exits requested that the ACCODE be changed, but the changed ACCODEs don’t match.

A conflict in the return codes returned by the exit routines was detected. One routine returned a 0 and another returned an 8.

Invalid volser character supplied by an exit routine.

Invalid OWNERID character supplied by an exit routine.

Invalid ACCODE character supplied by an exit routine.

There is a conflict in rc=8 reason code processing. An exit routine returned rsn=4, requesting remount and another returned rsn=0, indicating don’t label the tape at all.

An exit routine requested remount but no new volser was provided.

Conflict in remount volser value. New volser values don’t match.

Failure in internal processing not related to dynamic exits services.

Operator replied to skip labeling the volume.

Mounted volume is file protected.

Reserved.

Reserved.

Processing will continue with next INITT control card, if possible. Conditions such as failures in the CSVDYNEX facility will prevent continuation.

None.

A System Programmer may need to investigate some failures, particularly those associated with the CSVDYNEX facility itself. Other failures that may require such attention would be those associated with conflicts between exit routines.

DFSMSdfp

Invalid return code from post-label exit routine: RC = xx

Explanation: One or more post-label exit routines returned a value other than 4. The post-label exit routines are called to allow them to review the result of pre-label exit processing and the result of the labelling I/O, if it occurred. In an effort to enforce compatibility with any future enhancements to post-label processing, the return and reason code will be inspected and if anything other than RC=4, RSN=0 is returned this warning message is issued.

Processing continues.

None.

The offending exit routine should be changed to return a return code of 4 and a reason code of 0.

DFSMSdfp

Invalid return code from post-label exit routine: RC = xx, RSN = yy

Explanation: The call to the Dynamic Exits Facility failed for either pre-label, post-label, or rekeying.

DFSMSdfp
processing. The return code and reason code from the call are displayed.

**System action:** Processing terminates if the failure occurred during the pre-label or post-label processing. Processing continues if the failure occurred during the rekeying processing.

**Operator response:** None.

**System programmer response:** Check the return and reason codes to determine the cause of the failure.

**Source:** DFSMSdfp

---

**IEH630I** REKEY FAILED FOR VOLUME, volser

**Explanation:** Rekeying processing failed for the volume.

**System action:** Processing terminates.

**Application Programmer Response:** Check other error messages for the cause of the failure.

**Source:** DFSMSdfp

---

**IEH631I** ONE KEYLABLX AND KEYENCDX ARE REQUIRED

**Explanation:** At least one key label and its associated encoding mechanism must be specified for rekeying processing.

**System action:** Processing continues with the next control statement.

**Application Programmer Response:** Probable user error. Correct the construction of the preceding statement, and resubmit the job for those tapes that were bypassed.

**Source:** DFSMSdfp

---

**IEH632I** KEYENCDX REQUIRED IF KEYLABLX IS SPECIFIED

**Explanation:** If a key label keyword is specified, its associated encoding mechanism keyword must also be specified. For example, KEYENCD1 must be specified if KEYLABL1 is specified, and vice versa.

**System action:** Processing continues with the next control statement.

**Application Programmer Response:** Probable user error. Correct the construction of the preceding statement, and resubmit the job for those tapes that were bypassed.

**Source:** DFSMSdfp

---

**IEH633I** KEYLABELX REQUIRED IF KEYENCDX IS SPECIFIED

**Explanation:** If an encoding mechanism keyword is specified, its associated key label keyword must also be specified. For example, KEYLABEL2 must be specified if KEYENCD2 is specified, and vice versa.

**System action:** Processing continues with the next control statement.

**Application Programmer Response:** Probable user error. Correct the construction of the preceding statement, and resubmit the job for those tapes that were bypassed.

**Source:** DFSMSdfp

---

**IEH635I** INVALID VALUE FOR KEYENCDX KEYWORD EXPECTED L FOR LABEL OR H FOR HASH

**Explanation:** A character other than uppercase L and H was specified as the encoding mechanism for key labels.

**System action:** Processing continues with the next control statement.

**Application Programmer Response:** Probable user error. Correct the value specified for the keyword and resubmit the job for those tapes that were bypassed.

**Source:** DFSMSdfp

---

**IEH636I** CALL TO DFSMSrmm API ENDED WITH RC=XXXX

**Explanation:** The call to the DFSMSrmm Application Programming Interface failed with return code RC=XXXX. The call is to notify DFSMSrmm of the new key label information for every successful rekeying processing.

**System action:** Processing continues.

**Application Programmer Response:** Check the return code from the DFSMSrmm API to determine the cause of the failure and ensure the new key label information is updated appropriately.

**Source:** DFSMSdfp

---

**IEH637I** DEVICE DOES NOT SUPPORT REKEY FEATURE

**Explanation:** The device does not support the REKEY feature or the microcode is not at the latest level.

**System action:** Processing terminates.

**Application Programmer Response:** Contact hardware support to ensure device compatibility.

**Source:** DFSMSdfp
IEH638I  TAPE IS NOT ENCRYPTED
Explanation:  The mounted tape is not encrypted.
System action:  Processing continues for the next volume.
Application Programmer Response:  None.
Source:  DFSMSdfp

IEH639I  CALL TO RMM API AND DYNAMIC EXIT FAILED DUE TO MODULE IGC0103I MISSING
Explanation:  The second load of the LABEL SVC is missing.  This can be the result of an incorrect installation or an erroneous linked edit.
System action:  Processing continues for the next volume.
Application Programmer Response:  The cause of the missing code must be determined and resolved by reinstating the missing code.
Source:  DFSMSdfp

IEH640I  KEY LABELS WERE NOT SUCCESSFULLY CHANGED
Explanation:  The key labels were not successfully changed even though the rekeying I/O was successful.
System action:  Job is ended with the return code 8.
Application Programmer Response:  Probable hardware error.  Contact hardware support or system programmer.
Source:  DFSMSdfp

IEH641I  THE NUMERIC SUFFIX OF SERIAL NUMBER EXCEEDED POSSIBLE MAXIMUM VALUE – THE LAST VOLUME PROCESSED WAS volser
Explanation:  The numeric suffix of the volume serial number exceeded its possible maximum value and could not be further incremented.
System action:  IEHINITT stops processing the remaining tapes and continues with the next control statement.
Operator response:  Probable user error.  Check the value of NUMBTAPE and the starting value of the volser number on the preceding statement, and resubmit the job for those tapes that were bypassed.
Source:  DFSMSdfp

IEH924I  VIRTUAL DEVICES ARE NOT SUPPORTED
Explanation:  A volume was detected with the Virtual Device or Virtual Volume flag turned on in its associated UCB.
System action:  Processing continues with the next control card.
Application Programmer Response:  Probable user error; a virtual unit should not be specified.  Specify a real device.
System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information.  Search problem reporting data bases for a fix for the problem.  If no fix exists, contact the IBM Support Center.  Provide the JCL.

IEW0012  ERROR - INPUT CONTAINS INVALID TWO-BYTE RELOCATABLE ADDRESS CONSTANT, CONSTANT HAS NOT BEEN RELOCATED.

Explanation:  A relocatable A-type or V-type address constant of less than 3 bytes has been found in the input.

System action:  The constant is not relocated.

Application Programmer Response:  Probable user error. Check assembler language input for V-type address constants, which cannot be relocated. Delete or correct the incorrect address constant.

System programmer response:  If the error recurs and the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the source input, the source program listing for the job, and the output used to isolate the address constant.

IEW0033  ERROR - INVALID ENTRY POINT FROM END CARD, NO ENTRY POINT ASSIGNED.

Explanation:  The entry point for the program was specified as a relative address in an END card. The entry point that was specified appeared to be valid when the END card was processed; however, the entry point was found to be incorrect when the entry point of the load module was being determined.

System action:  No entry point is assigned.

Application Programmer Response:  Check object module input for completeness. Then, either specify an entry point name on the ENTRY control statement; or, if entry points were specified at compilation or assembly, make sure the object module containing the desired entry point precedes all other object modules with assembled or compiled entry points.

System programmer response:  If the error recurs and the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem. Save the object module input.

Descriptor Code: -

IEW0132  ERROR - SYMBOL PRINTED IS AN UNRESOLVED EXTERNAL REFERENCE.

Explanation: An external reference is unresolved at the end of input processing. None of the following is specified: restricted no-call, never-call, or NCAL.

System action: The module cannot be processed unless LET is specified.

Application Programmer Response: Probable user error. Check that the reference is valid and not the result of a keypunch or programming error. If the reference is valid, add the needed module or alias to one of the input data sets. Make sure the SYSLIB data set DD statement has been specified, if needed. If resolution is not desired, specify NCAL, never-call, or restricted no-call. If the reference was found in a control section replaced by another control section not containing that same reference, delete the reference, or specify NCAL, never-call, or restricted no-call.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the source input, the source program listing for the job, and all printed output and output data sets related to the problem.

Detecting Module: HEWLFINP

Routing Code: Note 11

Descriptor Code: -

IEW0222  ERROR - CARD PRINTED CONTAINS INVALID INPUT FROM OBJECT MODULE.

Explanation: One of the following occurred during the processing of an object module:
- A record of incorrect type was encountered.
- A text (TXT) record was encountered in which the data length (columns 11-12) is incorrect or mispunched.
- An incorrect, probably mispunched relocation dictionary (RLD) record was encountered in an object module.

System action: The record in error is ignored, and processing continues.

Application Programmer Response:
1. Remove all extraneous records from the input to the linkage editor.
2. Ensure that linkage editor control statements are placed either before or after object modules.
3. Ensure that all records in the object module have a 12-2-9 punch in column 1.
4. Ensure that all records in the object module contain one of the following in columns 2-4: ESD, SYM, TXT, RLD, or END.
5. Locate the TXT or RLD record having the incorrect or mispunched data; regenerate the object module, or investigate the punching device or generating processor for malfunctions.

System programmer response: If the error recurs and the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the source input for the job.

Source: DFSMSdfp

Detecting Module: HEWLFINP, HEWLFESD, HEWLFRAT

IEW0234  ERROR - INPUT FROM LOAD MODULE IS INVALID.

Explanation: Either (1) the linkage editor has encountered a text record (in an input load module) that is larger than the load module buffer; (2) the linkage editor has read a member that does not contain a valid load module; (3) the programmer specified a region size that is too small to contain the largest load module; or (4) an EXPAND operation failed when the resulting text record was too large to be contained in the load module buffer.

System action: In case 3, the system ends the operation; in all other cases, processing continues and the resulting output module cannot be processed.

Application Programmer Response: In cases 1 and 4, specify value2 of the SIZE parameter as a number equal to or greater than the size of the largest text record in any input load module. (Value2 must be equal to or greater than one-half the size of the value2 in the link edit of any input load module.) You may also have to increase the value1 of the SIZE parameter, or increase the region size, or increase both. Then, run the job step again.

In case 2, check for correct DD statements for all of the input data sets. If no DD statements need correction, then you must try to isolate the incorrect load module by completing the following procedures in order.
1. Specify the NCAL option and run the job step again. If message IEW0234 reappears, the incorrect load module is in primary input; otherwise, it is in SYSLIB input.
2. Run the linkage editor with INCLUDE and NAME statements for each load module in either primary or SYSLIB input, depending on the result of procedure 1.
3. When you have isolated the incorrect load module by completing procedure 2, recreate that module and run the job step once again.

In case 3, increase the region size, and resubmit the job.

If the problem recurs for any of the cases, do the following before calling your programming support personnel:
- If an incorrect load module was created, run the service aid program, AMBLIST, using the OUTPUT=MODLIST option of the LISTLOAD function, and save the resultant listing.
- Make sure that the failing job step ran with the XREF and LIST options.

System programmer response: If the error recurs and the program is not in error, search problem
IEW0241 • IEW0264

IEW0241  WARNING - EXTERNAL SYMBOL PRINTED IS DOUBLY DEFINED - ESD TYPE DEFINITIONS CONFLICT.

Explanation: Two identical external names have been found in the input. (1) The incorrect match involves a label reference (LR) or label definition (LD) matching an existing section definition (SD), common (CM), or label reference (LR). The section definition for the input LR or LD must be marked delete in order for this not to be an error. (2) It is always incorrect for a CM to match an existing LR.

System action: References to the name are resolved with respect to the first occurrence of the name.

IEW0264  ERROR - TABLE OVERFLOW - INPUT LOAD MODULE CONTAINS TOO MANY EXTERNAL SYMBOLS IN ESD.

Explanation: Before the linkage editor could process all of the external symbols in an input load module, one of three conditions has occurred: (1) the ESD table has reached its design limit of 32768 entries; (2) the ESD table has reached the maximum number of entries set by the linkage editor; or (3) an input ESD record contains incorrect data.

System action: Processing ends.

Application Programmer Response: Probable user error. Depending on which condition caused the table to overflow, either
• Break down any large input module into a number of smaller modules so that the ESD table will not reach its design limit
• Reset the linkage editor’s table space by doing one or both of the following:
  – Increase value1 (or decrease value2) of the SIZE parameter (if SIZE is specified in the JCL)
  – Increase the region size if necessary
• Check that the input object modules are complete and valid.

System programmer response: If the error recurs and the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

Source: DFSMSdfp
Routing Code: Note 11
Descriptor Code: -

IEW0272  ERROR - LOAD MODULE FROM LIBRARY SPECIFIED UNACCEPTABLE.

Explanation: When the load module was created, it was marked not editable.

System action: The load module was not accepted as input.

Application Programmer Response: Probable user error. If the module is unacceptably because it is marked not editable, it must be recreated before it can be input to the linkage editor. Run the IEHLIST utility program, using the LISTPDS function with the FORMAT option, to print out the module’s directory entry and show the not editable indicator.

System programmer response: If the error recurs and the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

IEW0284  ERROR - DDNAME PRINTED CANNOT BE OPENED.

Explanation: The specified data set cannot be opened. The DD statement defining the data set is missing.

System action: Processing is ended.

Application Programmer Response: Probable user error. Either (1) supply the missing DD statement, or (2) correct erroneous information on the DD statement. If the linkage editor was invoked by a macro instruction such as LINK rather than through the EXEC statement, make sure the ddname list, if passed, was correct.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

IEW0354  ERROR - TABLE OVERFLOW - TOO MANY CALLS BETWEEN CONTROL SECTIONS.

Explanation: There are too many V-type address constants referring to external symbols in a program that is structured in overlay. The table recording these V-type address constants has overflowed for one of two reasons: the table has reached its design limit of 32768 entries, or has reached the maximum number of entries set by the linkage editor. If the table has reached its design limit, then either (1) reduce the number of V-type address constants by combining control sections; or (2) change V-type address constants that do not refer across segments to A-type address constants with EXTRN statements. If the table has reached the maximum number of entries set by the linkage editor, reset the linkage editor’s table space by doing one or both of the following:

1. Increase value1 (or decrease value2) of the SIZE parameter (if SIZE is specified in the JCL)
2. Increase the region size if necessary.

System action: Processing ends.

Application Programmer Response: Probable user error. If the table has reached its design limit, then either (1) reduce the number of V-type address constants by combining control sections; or (2) change V-type address constants that do not refer across segments to A-type address constants with EXTRN statements. If the table has reached the maximum number of entries set by the linkage editor, reset the linkage editor’s table space by doing one or both of the following:

1. Increase value1 (or decrease value2) of the SIZE parameter (if SIZE is specified in the JCL)
2. Increase the region size if necessary.

For case 2, if the table has reached its design limit, complete these steps:
1. Verify that all input object modules have ESD records;
2. Increase the linkage editor’s buffer space by doing one or both of the following:
   • Increase value1 (or decrease value2) of the SIZE parameter (if SIZE is specified in the JCL)
   • Increase the region size if necessary.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp
Detecting Module: HEWLFRAT
Routing Code: Note 11
Descriptor Code: -

IEW0364  ERROR - TABLE OVERFLOW - INPUT TEXT EXCEEDED MAXIMUM OR TOO MANY CHANGES OF ORIGIN IN INPUT.

Explanation: This message appears when one of three conditions has occurred.

1. The text of a single control section exceeds 512 times the block size for the SYSUT1 or SYSLMOD data set.
2. Either the text I/O table or the text note list table has overflowed for one of two reasons: the table has reached its design limit of 32768 entries, or has reached the maximum number of entries set by the linkage editor. (The linkage editor uses these tables to account for the text of a load module.)
3. The load module created by this link edit step exceeds the design limit of 16 megabytes.

System action: Processing ends.

Application Programmer Response: Probable user error. Depending on which condition caused the overflow, perform one of the following sets of responses.

For case 1, complete these steps:
1. Verify that all input object modules have ESD records;
2. Increase the linkage editor’s buffer space by doing one or both of the following:
   • Increase value1 (or decrease value2) of the SIZE parameter (if SIZE is specified in the JCL)
   • Increase the region size if necessary.
3. Place output and SYSUT1 data on a device with the largest available track size, and ensure that value2 of the SIZE parameter is at least two times larger than the track size of the output or SYSUT1 dataset.

For case 2, if the table has reached its design limit, complete these steps:
1. Increase value2 of the SIZE parameter as much as possible, and increase value1 by the same amount. Increase the region or partition size if necessary.
2. Reduce the number of ORG statements specified in assembler language routines;
3. Break down the link edit step into a number of link edit steps, with each step performing only part of the necessary function;
4. Sort object module text in ascending address sequence.

Otherwise, if the table has reached the maximum number of entries set by the linkage editor, reset the linkage editor’s table space by increasing value1 (or decreasing value2) of the SIZE parameter, also increasing the region or partition size if necessary.

For case 3, break down the link edit step into a number of link edit steps, with each step performing only part of the necessary function.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL
and all printed output and output data sets related to the problem.

Descriptor Code: -

IEW0374 ERROR - TABLE OVERFLOW - INPUT CONTAINS TOO MANY RELOCATABLE ADDRESS CONSTANTS OR TOO MANY CONTROL SECTIONS CONTAINING SUCH CONSTANTS.

Explanation: The table that records relocatable address constants has overflowed for one of two reasons: the table has reached its design limit of 32768 entries, or has reached the maximum number of entries set by the linkage editor.

System action: Processing ends.

Application Programmer Response: Probable user error. If the table has reached its design limit, reset the linkage editor's table space by doing one or both of the following:

- Increase value1 (or decrease value2) of the SIZE parameter (if SIZE is specified in the JCL)
- Increase the region size if necessary.

If the table has reached the maximum number of entries set by the linkage editor, reduce the number of relocatable address constants, possibly by combining two or more control sections into one.

System programmer response: If the error recurs and the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem.

Descriptor Code: -

IEW0432  ERROR - LIBRARY NAME PRINTED CANNOT BE OPENED, DD CARD MAY BE MISSING.

Explanation: The DD statement that defines the library is probably missing. This message also results when a sequential data set (encountered in the processing of an INCLUDE statement) cannot be opened.

System action: Processing continues without input from the specified library.

Operator response: Start a generalized trace facility (GTF) trace, and recreate the problem. Reply to message AHL100A with:

```
TRACE=SYS,USR,SLIP
```

On the DD statement for the data set in error, specify:

```
DCB=DIAGNS=TRACE
```

Application Programmer Response: Probable user error. Either supply the missing DD statement, or correct erroneous information on the DD statement. Run the IEHLIST utility program using the LISTVTOC statement to print out the data set control block for the data set that cannot be opened.

System programmer response: If the error recurs
and the program is not in error, look at the messages in
the job log for more information. Search problem
reporting data bases for a fix for the problem. If no fix
exists, contact the IBM Support Center. Provide the JCL
and all printed output and output data sets related to
the problem.

Descriptor Code: -

IEW0444 ERROR - TABLE OVERFLOW - TOO MANY DOWNWARD CALLS.

Explanation: There are too many V-type address
constants that refer to segments lower in the tree
structure. Therefore, the entry list table that records
downward calls has overflowed for one of two reasons:
the table has reached its design limit of 32768 entries,
or has reached the maximum number of entries set by
the linkage editor.

System action: Processing ends.

Application Programmer Response: Probable user
error. If the table has reached its design limit, reduce
the number of segments in the overlay structure. If the
table has reached the maximum number of entries set
by the linkage editor, reset the linkage editor’s table size
by doing one of the following:
  • Increase value1 (or decrease value2) of the SIZE
    parameter
  • Increase the region size if necessary.

System programmer response: If the error recurs
and the program is not in error, look at the messages in
the job log for more information. Search problem
reporting data bases for a fix for the problem. If no fix
exists, contact the IBM Support Center. Provide the JCL
and all printed output and output data sets related to
the problem.

Source: DFSMSdfp
Detecting Module: HEWLFREL
Routing Code: Note 11
Descriptor Code: -

IEW0454 ERROR - TABLE OVERFLOW - SEGMENT CONTAINS TOO MANY
DOWNWARD CALLS.

Explanation: The indicated segment in the overlay
structure contains too many V-type address constants
that refer to segments lower in the tree structure. The
maximum number of downward calls is equal to one
subtracted from the result of the SYSLMOD record size
divided by 12.

System action: Processing is ended.

Application Programmer Response: Probable user
error. Either (1) increase the size of an output load
module record by specifying SYSLMOD as a library with
a larger block size, or (2) incorporate some of the called
control sections in the requesting segment, or (3) divide
the requesting segment into two or more segments.

System programmer response: If the error recurs
and the program is not in error, look at the messages in
the job log for more information. Search problem
reporting data bases for a fix for the problem. If no fix
exists, contact the IBM Support Center. Provide the JCL
and all printed output and output data sets related to
the problem.

IEW0461 WARNING - SYMBOL PRINTED IS AN UNRESOLVED EXTERNAL
REFERENCE; NCAL WAS SPECIFIED, OR THE REFERENCE WAS MARKED
FOR RESTRICTED NO-CALL OR NEVERCALL.

Explanation: The NCAL option, restricted no-call, or
never-call function was specified for the external
reference.

System action: The automatic library call mechanism
does not attempt to resolve the external reference.

Application Programmer Response: Normally, no
response is necessary. Check that the reference is valid
and not the result of a keypunch or programming error.
If you wish the reference resolved, either (1) add the
needed module to the primary or included input data
sets; (2) remove the NCAL option, if specified; (3)
remove the LIBRARY statement specifying restricted
no-call or never-call; or (4) if an input load module
contained a never-call reference, recreate the load
module without specifying never-call.

System programmer response: If the error recurs
and the program is not in error, look at the messages in
the job log for more information. Search problem
reporting data bases for a fix for the problem. If no fix
exists, contact the IBM Support Center. Provide the JCL
and all printed output and output data sets related to
the problem.

IEW0502  ERROR - ALIAS NOT STORED IN LIBRARY - PERMANENT DEVICE ERROR.
Explanation:  Because of an input/output error, the alias could not be stored in the library directory.
System action:  The load module has already been stored.
Application Programmer Response:  Processing of the module is possible using the member name or aliases already stored. The module can be link edited again with the new alias specified. If message IEW0502 appears again, restore the library to a different volume and rerun the job. Run the IEHLIST utility program, using the LISTVTOC and LISTPDS statements to print out the data set control block and directory entries for the SYSLMOD data set.
System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem. Have the output from a run with the library on a different volume available.
Source:  DFSMSdfp
IEW0512  ERROR - INCLUDE STATEMENT SYNTAX CONFLICTS WITH RECORD FORMAT OF SPECIFIED DATA SET - DD NAME PRINTED.

Explanation: The INCLUDE statement syntax conflicts with the characteristics of the data set specified on the DD statement.

System action: The specified module is ignored.

Application Programmer Response: Probable user error. Either (1) specify a member name on the INCLUDE or DD statement if the data set is partitioned; or (2) remove all member names from the INCLUDE statement if the data set is not partitioned. Run the IEHLIST utility program, using the LISTVTOC statement to print out the data set control block for the specified data set.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEW0522  ERROR - SPECIFIED DATA SET HAS UNACCEPTABLE RECORD FORMAT - DDNAME PRINTED.

Explanation: The record format of the specified data set is not type U or F and cannot be processed by the linkage editor.

System action: The data set is not processed.

Application Programmer Response: Probable user error. Correct the data set specification. Run the IEHLIST utility program, using the LISTVTOC statement to print out the data set control block for the rejected data set.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEW0532  ERROR - BLOCKSIZE OF LIBRARY DATA SET EXCEEDED MAXIMUM - DDNAME PRINTED.

Explanation: The block size of the specified library data set cannot be handled by the linkage editor. This message is also issued if unlike libraries are concatenated on the SYSLIB DD statement.

System action: The data set is not processed.

Application Programmer Response: Probable user error. Either (1) decrease the block size of the data set, (2) rerun in a larger region or partition, (3) increase value2 of the SIZE parameter to allow for larger buffers, and, if necessary, increase value1 and region size accordingly.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp

IEW0543  ERROR - IDENTICAL NAME IN DIRECTORY.

Explanation: The member name already exists in the directory. In the case of a member, an attempt was made to store under TEMPNAME; however, TEMPNAME was also found in the directory.

System action: The output module is not stored under this member name.

Application Programmer Response: Probable user error. Either (1) specify a unique member name for the module on the NAME control statement or the SYSLMOD DD statement, or (2) specify the replace function on the NAME statement. Run the IEHLIST utility program, using the LISTPDS statement to print out the directory entries for the SYSLMOD data set.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.
IEW0552  ERROR - COMMON PRINTED EXCEEDED SIZE OF CONTROL SECTION WITH IDENTICAL NAME.

**Explanation:** A named COMMON area has been encountered that is larger than a control section with the same name.

**System action:** The linkage editor uses the length specified for the control section. Processing continues.

**Application Programmer Response:** Ensure that no named COMMON area is larger than the control section initializing it. FORTRAN programmers should make sure that any named COMMON in a BLOCK DATA subprogram is at least as large as any named COMMON with the same name in any other FORTRAN program or subprogram with which the BLOCK DATA subprogram is to be linked. To isolate the problem, you can run the step with the NCAL option specified. If the error recurs, the long COMMON occurs in the primary data set or in an included data set. Otherwise, it occurs in a module from the automatic call library. In either case, run the following functions of the service aid program AMBLIST. Run the LISTOBJ function to list all object module symbols, and run the LISTLOAD function with the OUTPUT=XREF option to list all load module symbols in the appropriate input data sets. Check the listings for all modules that contain the named COMMON in question, and correct the lengths.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IEW0594</td>
<td>ERROR - INPUT DATA SET BLOCKSIZE IS INVALID.</td>
</tr>
</tbody>
</table>

### Explanation:
The block size for the primary input data (SYSLIN) is not an even multiple of the logical record length, or exceeds the allowable maximum.

### System action: Linkage editor processing ends.

### Application Programmer Response:
Probable user error. Determine whether the values specified in the SIZE parameter are sufficient to accommodate the blocking factor of the primary input data set (SYSLIN). Blocking factors are discussed under “SIZE Option” in Z/OS MVS Program Management: User's Guide and Reference. If the SIZE values are not large enough, increase them and run the linkage editor step again. The region for the job step must be large enough to allow the size values specified, as described under “EXEC Statement - REGION Parameter,” in Z/OS MVS Program Management: User's Guide and Reference. If the region is not large enough, increase the REGION parameter before running the linkage editor step again.

If the blocking factor is greater than 40 to 1, or is not a multiple of the logical record length, correct the BLKSIZE field, or recreate the data set, or both. Run the linkage editor step again. If possible, run the IEHLIST utility program, using the LISTVTOC statement to print out the data set control block for the specified data set.

### System programmer response:
If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IEW0602</td>
<td>ERROR - INPUT FROM OBJECT MODULE IS INVALID - END CARD MISSING.</td>
</tr>
</tbody>
</table>

### Explanation:
The END card of an object module being processed by the linkage editor is missing.

### System action: Linkage editor processing continues. The load module produced cannot be processed unless the LET option has been specified.

### Application Programmer Response:
If input to the linkage editor was in the form of an object deck, verify that the last card is an END card (END in columns 2, 3, and 4). If the card is not an END card, recompile or reassemble the source program. If input to the linkage editor was not in the form of an object deck, recompile or reassemble the source program with the DECK option specified.

In either case, verify that the last card is an END card. Rerun the linkage editor step using the object deck. Run the service aid program, AMBLIST, using the LISTOBJ function and save the resultant listing of the questionable object module.

### System programmer response:
If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL, the source input, the source program listing for the job, and all printed output and output data sets related to the problem.

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IEW0614</td>
<td>ERROR - LENGTH NOT SPECIFIED FOR EXTERNAL SYMBOL PRINTED.</td>
</tr>
</tbody>
</table>

### Explanation:
An object module contained a control section that had a length field containing zero in its external symbol dictionary (ESD) entry, and either (1) the control section was not last in the object module, or (2) the length was not specified on the END card.

### System action: The module was not processed, and the linkage editor ended processing.

### Application Programmer Response:
Probable user error. Check the input object modules for completeness and proper sequence. If necessary, either (1) recreate any module that has been in card form, or (2) isolate the incorrect module by running the linkage editor with the NCAL option specified, using the NAME control statement for each input object module. Diagnostic IEW0614 should recur and isolate the incorrect module.
Recreate the module, and rerun the step.

**System programmer response:** If the error recurs and the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL, the source input, the source program listing for the job, and all printed output and output data sets related to the problem.

Routing Code: Note 11
Descriptor Code: -

---

**IEW0622**  ERROR - ADDRESS CONSTANT REFERENCES NULL UNNAMED CONTROL SECTION.

**Explanation:** An address constant has been found that references a symbol defined in an unnamed control section having a length of zero.

**System action:** The processing of the input RLD record is ended at the incorrect item. Processing resumes with the next record.

**Application Programmer Response:** Either recreate the input (referencing) module, by eliminating or changing the reference, or recreate the referenced module, by eliminating or redefining the symbol being referenced.

**System programmer response:** If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem. Save the output from the SYNADAF macro instruction.

Routing Code: Note 11
Descriptor Code: -

---

**IEW0642**  ERROR - SYMBOL PRINTED APPEARED ON CONTROL STATEMENT BUT WAS NOT MATCHED.

**Explanation:** Either (1) a control section name or common name appearing on an ORDER or PAGE control statement was not found in the primary or additional input sources; or (2) alignment or sequencing of a label reference (such as a FORTRAN ENTRY statement) was specified.

**System action:** The name is ignored. Processing continues.

**Application Programmer Response:** Probable user error. Either (1) include the specified control section or common area in the input, or delete the name from the control statement; or (2) verify that only control section or common area names are specified on the control statement.

Have available the job stream and associated output listings.

**System programmer response:** If the error recurs and the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Detecting Module: HEWLFAD
Routing Code: Note 11
Descriptor Code: -
IEW0652  ERROR - CONFLICT IN ORDER SPECIFIED FOR SYMBOL PRINTED.

Explanation:  A control section or common area was named more than once on one or in a series of ORDER statements. After a name appears once, any subsequent use of the name is incorrect unless the name appears as the last operand on one ORDER statement and as the first operand on the next.

System action:  The first use of the name determines the order of the control section or common area in the output load module. Any subsequent use of the name is ignored, as is the balance of the control statement it appears on. Any control sections or common areas named on the balance of the statement are included in the output load module but are not sequenced. Linkage editor processing continues.

Application Programmer Response:  Probable user error. Correct the ORDER statement so the name appears only once or appears as the last operand on one statement and the first operand on the next.

System programmer response:  If the error recurs and the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

IEW0670  THE SPECIFIED IDENTIFY DATA HAS BEEN ADDED TO THE IDR FOR THE CONTROL SECTION NAME PRINTED.

Explanation:  The linkage editor has added the data specified on the IDENTIFY control statement to the IDR record for the control section indicated.

System action:  Processing continues.

Source:  DFSMSdfp
Detecting Module:  HEWLFIDR
Routing Code:  Note 11
Descriptor Code:  -

IEW0682  ERROR - CONTROL SECTION NAME ON AN IDENTIFY CONTROL STATEMENT IS INCORRECT OR THE STATEMENT IS MISPLACED - IDENTIFY DATA IGNORED.

Explanation:  The control section named on the IDENTIFY control statement either (1) does not exist in the load module, or (2) had not been read in by the linkage editor by the time it encountered the IDENTIFY statement.

System action:  The data specified on the IDENTIFY statement is ignored. Linkage editor processing continues.

Application Programmer Response:  Probable user error. Check the IDENTIFY statement to verify that the control section name has been specified correctly and that the IDENTIFY statement has been placed correctly in the input. Verify that the required control section has been included in the input to the linkage editor step. Correct the input, and rerun the linkage editor step.

System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Routing Code:  Note 11
Descriptor Code:  -

IEW0654  ERROR - SIZE VALUE SPECIFIED NOT LARGE ENOUGH FOR TABLE REQUIREMENTS - LINKAGE EDITOR PROCESSING TERMINATED.

Explanation:  The space available for minimum internal tables was insufficient.

System action:  Linkage editor processing ends.

Application Programmer Response:  Rerun the linkedit, increasing the space available to the linkage editor by doing one or both of the following:
- Increase VALUE1 (or decrease VALUE2) of the SIZE parameter (if SIZE is specified in the JCL)
- Increase the region size if necessary.

System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source:  DFSMSdfp
IEW0694  ERROR - TABLE OVERFLOW - SIZE VALUE SPECIFIED NOT LARGE ENOUGH FOR CSECT IDR INPUT - LINKAGE EDITOR PROCESSING TERMINATED.

Explanation: The space available for CSECT identification records was insufficient for the actual input. The indicated table (the user data table, zap data table, or translator table) has overflowed for one of two reasons: the table has reached its design limit of 32768 entries, or has reached the maximum number of entries set by the linkage editor.

System action: Linkage editor processing ends.

Application Programmer Response: Probable user error. If the table has reached its design limit, break down the link edit step into a number of smaller link edit steps, with each step performing only part of the necessary function. If the table has reached the maximum number of entries set by the linkage editor, reset the linkage editor’s table space by doing one or both of the following:
- Increase value1 (or decrease value2) of the SIZE parameter (if SIZE is specified in the JCL)
- Increase the region size if necessary.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

IEW0714  ERROR - MEMBER NOT STORED IN LIBRARY - STOW WORKSPACE UNAVAILABLE.

Explanation: The conditional GETMAIN macro instruction issued by the STOW routine to obtain work space in virtual storage was unsuccessful (that is, not enough contiguous virtual storage was available).

System action: The member is not stored in the specified library; linkage editor processing is ended.

Application Programmer Response: Rerun the linkage editor job step. The error may be a temporary one caused by fragmentation of virtual storage. If the problem persists, check for user-written programs or user-written SVC (supervisor call) routines that may be processing concurrently with the linkage editor and causing virtual storage fragmentation, as would occur when a GETMAIN macro is issued without a FREEMAIN in an uncontrolled loop.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Descriptor Code: -

IEW0832  ERROR - INPUT CONTAINS ESD TYPE INCOMPATIBLE WITH SCTR OPTION - ESD TYPE PRINTED.

Explanation: SCTR option was specified, and one of the following was used as link-edit input:
• a nonzero-length unnamed control section
• a common area

System action: The system cannot process the module unless LET is specified. Processing continues.

Application Programmer Response: Correct the incompatibility by removing either the SCTR option or the indicated incorrect input.

Source: DFSMSdfp
Routing Code: Note 11
Descriptor Code: -

IEW0844  ERROR - SYSPRINT BLOCKSIZE EXCEEDS MAXIMUM - LINKEDIT PROCESSING TERMINATED.

Explanation: The block size specified for the SYSPRINT data set cannot be handled by the linkage editor.

System action: The data set is not opened. Linkage editor processing ends.

Application Programmer Response: Probable user error. Either (1) decrease the block size of the data set, or (2) decrease value2 of the SIZE option (if SIZE is specified in the JCL) to allow for a larger SYSPRINT buffer, and if necessary, increase value1 accordingly. Increase the region or partition size correspondingly, if necessary. Rerun the linkage editor step. Run the IEHLIST utility program, using the LISTVTOC statement to print out the data set control block for the SYSPRINT data set.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source: DFSMSdfp
Routing Code: None.

IEW0894  ERROR - OUTPUT LOAD LIBRARY SPECIFIED IS A PDSE. ONLY PDS LIBRARIES ARE SUPPORTED.

Explanation: The Linkage Editor does not support PDSE libraries.

System action: Link fails and processing ends. Output library is not updated.

Application Programmer Response: Rerun the link using a PDS library for output in place of the PDSE library. If PDSE output is desired, then the DFMS/MVS Binder must be used to link.

System programmer response: None.
Source: DFSMSdfp

Chapter 9. IEW messages 315
IEW0994

Descriptor Code: -

IEW0994  ERROR - SYSPRINT DD CARD MISSING - LINKAGE EDITOR PROCESSING TERMINATED.

Explanation: The SYSPRINT data set cannot be opened.

System action: Linkage editor processing ends.

Operator response: Start a generalized trace facility (GTF) trace, and recreate the problem. Reply to message AHL100A with:

```
TRACE=SYS,USR,SLIP
```

On the DD statement for the data set in error, specify:

```
DCB=DIAGNS=TRACE
```

Application Programmer Response: Probable user error. The SYSPRINT DD statement is probably missing. Supply the missing SYSPRINT DD statement, and run the job step again.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Detecting Module: HEWLFINT

Routing Code: 11

Descriptor Code: -

IEW1001 - 1999

IEW1001  WARNING - UNRESOLVED EXTERNAL REFERENCE (NOCALL SPECIFIED).

Explanation: The NCAL, NOCALL, or NORES option or never-call function was specified for the external reference.

System action: The SYSLIB data set is not searched if the NCAL or NOCALL option has been specified. The link pack area queue is not searched if the NORES option has been specified. Neither the SYSLIB data set nor the link pack area queue is searched if the ER is marked 'never-call' from a previous linkage editor run.

Application Programmer Response: Normally, no response is necessary. If you wish the reference resolved, either (1) add the needed module to the SYSLIB input data set; (2) remove the NOCALL, NCAL, or NORES option, if specified; or (3) if an input load module contained a never-call reference, recreate the load module without specifying never-call.

System programmer response: Run the failing job step, using the linkage editor instead of the loader, and save the resulting output.

Source: DFSMSdfp

Detecting Module: HEWLLIBR

Routing Code: Note 11

Descriptor Code: -

IEW1012  ERROR - UNRESOLVED EXTERNAL REFERENCE.

Explanation: The external reference was not found on the SYSLIB-defined data set or in the link pack area.

System action: No attempt is made to run the module unless the LET option is specified.

Application Programmer Response: Probable user error. Make sure that the reference is valid and not the result of a keypunch or programming error. If the reference is valid, add the needed module or alias to either (1) the SYSLIB data set, (2) the link pack area, or (3) the SYSLIN input data set. Make sure the SYSLIB DD statement has been specified if needed. If the needed module is in a SYSLIB or SYSLIN partitioned data set, run the IEHLIST utility program using the LISTPDS statement to print out the data set directory.

System programmer response: Run the failing job step, using the linkage editor instead of the loader, and save the resulting output.

Source: DFSMSdfp

Detecting Module: HEWLLIBR

Routing Code: Note 11

Descriptor Code: -

IEW1024  ERROR - DDNAME CANNOT BE OPENED.

Explanation: The SYSLIN data set cannot be opened. The DD statement defining the data set is missing or incorrect.

System action: Processing ends. The loader returns to the caller with a condition code of 16.

Application Programmer Response: Probable user error. Either (1) supply a missing SYSLIN DD statement, (2) correct erroneous information on the SYSLIN DD statement, or (3) make sure the correct DDNAME has been specified for the SYSLIN data set. If the loader was invoked by a macro instruction such as LINK, rather than through the EXEC statement, make sure that the SYSLIN ddname, if passed, is correct.

System programmer response: If the error recurs and the program is not in error, look at the messages in
the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Either have the output of the SYSGEN of the loader available, or run the AMASPZAP service aid program with the DUMPT IEWLOADR IEWLDDEF statement, and save the resulting dump of the loader default ddnames.

**Descriptor Code:** -

---

**IEW1123**  **ERROR - INVALID RECORD FROM LOAD MODULE.**

**Explanation:** An unrecognizable type record was found while reading a load module.

**System action:** The record is ignored and processing continues.

**Application Programmer Response:** (1) Check that all input data sets are specified correctly on DD statements. (2) If load module input occurs in the SYSLIN data set, rerun the step with the NOCALL option specified. If error message IEW1123 recurs, the incorrect load module is in SYSLIN input. Otherwise, it is in SYSLIB input. (3) Isolate the incorrect load module by running the linkage editor with the NCAL option specified, using the INCLUDE and NAME statements for each suspect load module. When the incorrect load module is isolated, recreate it and rerun the job step.

**System programmer response:** Run the failing step, using the linkage editor instead of the loader, and save the resulting output.

**Source:** DFSMSdfp
IEW1132   ERROR - INVALID ID RECEIVED.

Explanation:  Input contains an incorrect external symbol ID.

This error is the result of the following conditions:
1.  The SD for an ID does not appear in the input module.
2.  Text is received before the external symbol dictionary (ESD) defining it is received.
3.  An RLD is received before the ESDs to which it pertains.
4.  The ID defining the entry point on the END card is not a defined SD, PC, or LR ESD type.

System action:  The incorrect item is ignored.

Application Programmer Response:  (1) Check that input object modules are complete and that assembly or compilation errors did not occur when object modules were generated.  (2) Rerun the step with the NOCALL option specified.  If error message IEW1132 recurs, the incorrect module is in SYSLIN input.  Otherwise, it is in SYSLIB input.  (3) Isolate the incorrect module by running the linkage editor with the NCAL option specified, using the INCLUDE and NAME statements for each suspect module.  When the incorrect module is isolated, recreate it and rerun the step.

System programmer response:  Run the failing step, using the linkage editor instead of the loader, and save the resulting output.  If an incorrect object module was created, have the module and its associated listing available.

Chapter 9. IEW messages  319
IEW1173  ERROR - ENTRY POINT RECEIVED BUT NOT MATCHED.

Explanation: The entry point name specified in the parameter field or on an END card was not matched to an incoming LR, SD, or PC.

System action: The first assigned address is used as the entry point address.

Application Programmer Response: Probable user error. (1) Check to see if the EP= parameter was specified correctly. (2) Check to see if the module containing the entry point is included in either the SYSLIN or SYSLIB input. (3) Check other messages issued for the cause of error (that is, incorrect record).

System programmer response: Rerun the step, using the linkage editor instead of the loader, and save the resulting output.

Source: DFSMSdfp

IEW1182  ERROR - NO END CARD RECEIVED.

Explanation: An END card is missing for an input object module.

System action: Processing continues.

Application Programmer Response: Probable user error. Check input object modules. The last record of each should have a 12-2-9 punch in column 1 and the END identifier in columns 2 through 4. If an END record is missing, recreate the module and rerun.

System programmer response: Rerun the step, using the linkage editor instead of the loader, and save the resulting output. Have object module input available.

Source: DFSMSdfp

IEW1204  ERROR - TOO MANY EXTERNAL NAMES IN INPUT MODULE.

Explanation: The external symbol ID is too large to fit in the translation table.

System action: Processing is ended. The loader returns to the caller with a completion code of 16.

Application Programmer Response: If the program is large and/or complex, either (1) run the step using the linkage editor, or (2) break down the large program module into a number of smaller routines. If the program is not particularly large or complex, check other messages issued for the cause of error. Object module input may be incomplete or mispunched. Recreate the object modules, and rerun the job.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide all printed output and output data sets related to the problem.

Source: DFSMSdfp
IEW1214  ERROR - IDENTIFICATION FAILED - DUPLICATE PROGRAM NAME FOUND.

Explanation:  When trying to identify the loaded program to the system, the IDENTIFY routine found a duplicate program name in the user's region or partition or in the link pack area.

System action:  Processing is ended. The loader returns to the caller with a condition code of 16.

Application Programmer Response:  Probable user error. Specify a unique program name, using the NAME option, or let the loader default the name to **GO. Rerun the job.

System programmer response:  Run the IEBPTPCH utility program to obtain a listing of the SYS1.PARMLIB data set.

If the error recurs and the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source:  DFSMSdfp
Detecting Module:  HEWLIDEN
Routing Code:  Note 11
Descriptor Code:  -

IEW1224  ERROR - IDENTIFICATION FAILED.

Explanation:  The IDENTIFY routine located an error in the parameter list passed to it by the loader. The appropriate IDENTIFY macro instruction support may not be included in the operating system.

System action:  Processing is ended. The loader returns to the caller with a condition code of 16.

Application Programmer Response:  Verify that the appropriate IDENTIFY macro instruction support is included in the system. The release level of the IDENTIFY macro instruction should be the same as the release level of the loader.

System programmer response:  If the error recurs and the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

Source:  DFSMSdfp
Detecting Module:  HEWLIDEN
Routing Code:  Note 11
Descriptor Code:  -

IEW1232  ERROR - COMMON EXCEEDS SIZE OF CSECT WITH SAME NAME.

Explanation:  A named COMMON area has been encountered that is larger than the control section with same name.

System action:  The loader uses the length of the control section. Processing continues.

Application Programmer Response:  Ensure that no named COMMON area is larger than the control section initializing it. FORTRAN programmers should make sure that any named COMMON in a BLOCK DATA subprogram is at least as large as any named COMMON with the same name in any other FORTRAN program or subprogram with which the BLOCK DATA subprogram is to be link edited. To isolate the problem, you can run the step with the NCAL option specified. If the error recurs, the long COMMON occurs in the primary data set. Otherwise, it occurs in a module from the automatic call library. In either case, run the following functions of the service aid program AMBLIST. Run the LISTOBJ function to list all object module symbols, and run the LISTLOAD function with the OUTPUT=XRFF option to list all load module symbols in the appropriate input data sets. Check the listings for all modules that contain the named COMMON in question, and correct the lengths.

Detecting Module:  HEWLRELO
Routing Code:  Note 11
Descriptor Code:  -

IEW1241  WARNING - INVALID AMODE/RMODE COMBINATION FOUND IN PARM FIELD - IGNORED.

Explanation:  An incorrect combination of AMODE and RMODE parameters was specified in the PARM field of the EXEC statement.

System action:  Processing continues, but the PARM field of the EXEC statement is ignored as a source of AMODE/RMODE data for the loaded module.

Application Programmer Response:  Either (1) remove the AMODE and RMODE specification(s) from the PARM field, or (2) correct the PARM field so that the combination of AMODE/RMODE specifications is valid.

System programmer response:  If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL, the SYSOUT output, the program listing, the linkage editor output, and all printed output and output data sets related to the problem.

Source:  DFSMSdfp
IEW1251  WARNING - INVALID AMODE/RMODE COMBINATION IN ESD DATA FOR THE NAMED CSECT - IGNORED.

Explanation: An incorrect AMODE/RMODE combination, 24/ANY, was found in the ESD data.

System action: Processing continues, but the control section is processed as having an AMODE of 24 and an RMODE of 24.

Application Programmer Response: Either (1) correct the ESD data to indicate a valid AMODE/RMODE combination, or (2) recompile/reassemble the source program to obtain an object module without the erroneous AMODE/RMODE indicators, or (3) correct the processor generating the object module to provide only valid AMODE/RMODE indicators.

System programmer response: If the error recurs and the program is not in error, look at the messages in the job log for more information. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL, the SYSOUT output, the program listing, the linkage editor output, and all printed output and output data sets related to the problem.

Source: DFSMSdfp

Detecting Module: HEWLRELO
Routing Code: Note 11
Descriptor Code: -
end, include a SYSUDUMP DD statement for the loaded program and rerun the job.

**System programmer response:** If the error recurs and the program is not in error, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and all printed output and output data sets related to the problem.

### IEW2001 - 2999

All binder messages are in the following format:  
<messagennumber> <internal code> <message text>

The internal codes are not documented because they are used for diagnostic purposes.

The following type codes indicate the severity of the detected error:

- **E** *Error*: Severity 8  
- **I** *Information*: Severity 0  
- **S** *Severe error*: Severity 12  
- **T** *Terminating error*: Severity 16  
- **W** *Attention*: Severity 4

Source: Binder

**Detecting Module:** IEWBACTL

**IEW2012S** ALL TEMPNAMES ARE IN USE. THE MODULE CANNOT BE SAVED.

**Explanation:** No valid member name was available. An attempt was made to save the module under a temporary name, but the target library already contained members with TEMPNAM0 through TEMPNAM9.

**System action:** The module was not saved.

**User response:** Ensure that a member name is specified by using a NAME control statement or providing a member name on the SYSLMOD DD statement.

Source: Binder

**Detecting Module:** IEWBACTL

**IEW2013I** NO MEMBER NAME WAS SPECIFIED. MODULE WAS SAVED USING member-name.

**Explanation:** No valid member name was specified. Module was saved using a temporary name (TEMPNAM0 - TEMPNAM9).

**System action:** Workmod saved using TEMPNAMx as member name.

**User response:** If a temporary name is not acceptable, provide a member name and rerun.

Source: Binder

**Detecting Module:** IEWBACTL

**IEW2090W** IEWBFDAT CALLED WITHOUT VL BIT ON.

**Explanation:** The interface definition requires that calls to IEWBFDAT all have the high order bit set on the pointer to the last parameter passed. A call was made with a parameter list that was either too long, or did not have that bit set.

**System action:** Processing continues assuming that the maximum length valid parameter list was passed. This is done for compatibility with earlier releases which did not check the requirement.

**User response:** Contact the Application Developer, who will need to correct the parameter list.

Source: Program Management Fast Data Application Programming Interface

**Detecting Module:** IEWBQENT

**IEW2091S** IEWBFDAT UNABLE TO GET nnnn MB OF 64-BIT STORAGE, IARV64 CODE xxxx.

**Explanation:** Beginning with z/OS V1R9 IEWBFDAT requires 64-bit storage to hold the program object being inspected. The IARV64 code reported is the second and third byte of the reason code reported by that service. See the IARV64 macro for details. Most codes that are reported in this message reflect environmental constraints; however, code X'0021' indicates that the job is not allowed to use 64-bit storage at all.

**System action:** Processing is aborted with return code X'12', reason code X'1080002F'.

**User response:** Modify the job's MEMLIMIT parameter. If that does not resolve the problem, report the message contents to an installation system programmer.

**Detecting Module:** IEWBDC

---

**IEW2132S** *INCORRECT NUMBER OF PARAMETERS PASSED FOR FUNCTION CALL function name.*

**Explanation:** The number of passed parameters (delimited by the high order bit being on in the last entry) is incorrect for this function and version number.

**System action:** Current request will not be processed.

**User response:** Correct the calling program.

**Source:** Binder

**Detecting Module:** IEWBDC

---

**IEW2133S** *FUNCTION CODE value, OR ITS VERSION NUMBER, IS NOT VALID.*

**Explanation:** The function code passed on a call to IEWBIND is not a code recognized by the binder, or its version level (in the second halfword of the parameter) is not acceptable in combination with the indicated function.

**System action:** Current request will not be processed.

**User response:** Correct the calling program.

**Source:** Binder

**Detecting Module:** IEWBDC

---

**IEW2134S** *token IS NOT A VALID DIALOG TOKEN.*

**Explanation:** The passed token does not designate an existing dialog.

**System action:** Current request will not be processed.

**User response:** Correct the calling program.

**Source:** Binder

**Detecting Module:** IEWBDC

---

**IEW2135S** *token IS NOT A VALID WORKMOD TOKEN.*

**Explanation:** The passed token does not designate an existing workmod.

**System action:** Current request will not be processed.

**User response:** Correct the calling program.

**Source:** Binder

**Detecting Module:** IEWBDC

---

**IEW2136S** *NO VALID TOKEN WAS PASSED.*

**Explanation:** Neither a valid dialog token nor a valid workmod token was passed. This is issued on calls for which there is a choice of tokens.

**System action:** Current request will not be processed.

**User response:** Correct the calling program.

**Source:** Binder

**Detecting Module:** IEWBDC

---
IEW2137S  •  I EW2143S

System action: Current request will not be processed.
User response: Correct the calling program.
Source: Binder

IEW2137S  BINDER MAY NOT BE INVOKED FROM A USER EXIT.

Explanation: IEWBIND was called when a user exit was in control for this dialog. The exit routine must return to the Binder before another call may be issued.

System action: Current request will not be processed.
User response: Correct the calling program.
Source: Binder
Detecting Module: I EWBDCTL

IEW2139I  PASSED ENVIRONMENT VARIABLE:
nnn=vvvv

Explanation: Echo of a binder environment variable. It is printed only if the list option is set to ALL. Call-sequence is a binder generated number incremented after each API call to the binder. Workmod-id is a number which identifies the workmod associated with this call.

System action: Processing continues.
User response: None.
Source: Binder
Detecting Module: I EWBDCTL

IEW2140E  SYMBOL symbol CONTAINS ONE OR MORE INVALID CHARACTERS.

Explanation: The designated symbol contains character(s) not allowed in binder symbol names. The valid character set is X'40' to X'FE' plus X'0E' and X'0F'.

System action: Current request will not be processed.
User response: Correct the input.
Source: Binder
Detecting Module: I EWBDSYM

IEW2141E  symbol-type BEGINNING 'truncated_symbol' IS TOO LONG. IT CONTAINS MORE THAN number CHARACTERS.

Explanation: The symbol whose first 64 characters are truncated_symbol has a length greater than is allowed for that symbol type. number gives the maximum allowed length. The symbol-type will be one of the following:

<table>
<thead>
<tr>
<th>Symbol type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SYMBOL</td>
<td>Any external symbol</td>
</tr>
</tbody>
</table>

System action: Current request will not be processed.
User response: Correct the input.
Source: Binder
Detecting Module: I EWBDSYM

IEW2142E  SYMBOL symbol HAS BEEN TRUNCATED AT THE FIRST EMBEDDED BLANK.

Explanation: The symbol contained an embedded blank in other than the first position.

System action: If the symbol was on a control statement, the Binder will ignore the truncated symbol. Processing continues with the next record if any. If the symbol was passed on an API call, the Binder will use the truncated symbol.
User response: Correct the input.
Source: Binder
Detecting Module: I EWBDSYM

IEW2143S  SPECIFIED ALIAS NAME IS BLANK.

Explanation: An alias name of all blanks (or whose first character is a blank) was passed. It will not be used.

System action: Current request will not be processed.
User response: Correct the input.
Source: Binder
Detecting Module: I EWBDVAL
IEW2144T  DFSMS/MVS AT THE LEVEL REQUIRED BY THE PROGRAM MANAGEMENT BINDER IS NOT AVAILABLE ON THIS SYSTEM.

Explanation: The binder requires DFSMS/MVS release level of 1.1 or later.

User response: Ensure the correct level of DFSMS/MVS is installed on the system.

Source: Binder  
Detecting Module: IEWBDBCAL, IEWBACTL

IEW2145S  BUFFER SIZE TOO SMALL FOR RECORD COUNT.

Explanation: The length in the header of the buffer passed on a PUTD call is too small to hold the number of records being passed. The number of records passed is indicated by the COUNT parameter.

User response: Ensure that the record length and number and buffer size in the buffer header are consistent with the COUNT parameter.

Source: Binder  
Detecting Module: IEWBDBCAL

IEW2146S  CONFLICTING INPUT SPECIFICATIONS ON AN INCLUDE CALL.

Explanation: The parameters specified for INTYPE on an INCLUDE API call are missing or invalid. Specifically, one of the following rules was violated:
1. If INTYPE = NAME, then a DDNAME must be passed.
2. If INTYPE = POINTER, then DCBPTR and DEPTR must be passed.
3. If INTYPE = TOKEN, then EPTOKEN must be passed.

System action: The current request will not be processed.

User response: Correct the input.

Source: Binder  
Detecting Module: IEWBDBCAL

IEW2147S  PARAMETER parameter-name WAS SPECIFIED WITH AN INCORRECT VALUE ON A function-name FUNCTION CALL.

Explanation: The value passed for the indicated parameter was not a valid value.

System action: The current request will not be processed.

User response: Refer to the discussion in [z/OS MVS Program Management: User’s Guide and Reference] on using the binder application programming interface, including the acceptable values for the indicated parameter, and correct the calling program.

Source: Binder  
Detecting Module: IEWBDBCAL

IEW2149S  PARAMETER NUMBER number ( parameter-name ) COULD NOT BE ACCESSED.

Explanation: The ‘number’th parameter was not in accessible storage. The ‘parameter name’ is the corresponding keyword on the IEWBIND macro.

System action: The current request will not be processed.

User response: Correct the calling program to ensure the parameter list contents are all in storage that can be accessed by the binder.

Source: Binder  
Detecting Module: IEWBDBCAL, IEWBDINT

IEW2150E  THE DATA BUFFER IS TOO SMALL.

Explanation: The AREA parameter passed on a GETE or GETD function call is too small to completely contain the first selected record plus its associated names.

System action: The current request for data will not be completed. Any data returned in the buffer is incomplete. COUNT will be set to zero.

User response: Increase the SIZE or BYTES parameter on the IEWBUFF invocation (FUNC=MAPBUFF). As a general rule, the minimum buffer should be large enough to contain one entry of the requested class plus three names of the maximum length in use.

Source: Binder  
Detecting Module: IEWBDBCAL

IEW2154S  BUFFER HEADER CONTAINS INVALID FIELDS.

Explanation: One of the following problems was detected:
1. Class name in the header is invalid, or does not agree with the class name passed in the parameter list.
2. Entry count or entry length is negative.
3. Version number is invalid.
4. Buffer is not large enough to contain the number of records specified in the header.

System action: The current request will not be processed.

User response: Correct the input.
IEW2155S  class-name IS NOT A VALID BINDER CLASS NAME.

Explanation: Class name contains characters not allowed for Binder symbols, or is longer than 16. The valid character set is X'40' to X'FE' plus X'0E' and X'0F'.

System action: The current request will not be processed.

User response: Correct the input.

Source: Binder
Detecting Module:IEWBDCAL

IEW2157S  CURSOR WAS SPECIFIED AS A NEGATIVE NUMBER OTHER THAN -1.

Explanation: The cursor must be greater than or equal to zero, or -1 (-1 is used to imply that data is to be appended in a PUTD call).

System action: The current request will not be processed.

User response: Correct the input.

Source: Binder
Detecting Module:IEWBDCAL

IEW2159S  FUNCTION function-name IS INVALID FOR A WORKMOD WITH INTENT = ACCESS.

Explanation: A Binder API call specifying a function with a workmod token which was created with intent access was issued, but the function is not valid for this workmod.

System action: The current request will not be processed.

User response: Correct the input.

Source: Binder
Detecting Module:IEWBDCAL

IEW2160S  GET REQUESTS ARE INVALID WHEN ISSUED AGAINST AN UNBOUND WORKMOD.

Explanation: An unbound workmod was passed as a token on a GETE, GETD or GETN call.

System action: The current request will not be processed.

User response: Correct the input.

Source: Binder

IEW2166S  OFFSET WAS SPECIFIED AS A NEGATIVE NUMBER OTHER THAN -1.

Explanation: The offset must be greater than or equal to zero, or -1 (-1 is used to imply that offset is not to be used as a selection criterion in a GETE call).

System action: The current request will not be processed.

User response: Correct the input.

Source: Binder
Detecting Module:IEWBDCAL

IEW2171S  SECTION OR SYMBOL NAME name CONTAINS INVALID CHARACTERS.

Explanation: The section name or symbol name passed contains characters whose hexadecimal representation is other than X'0E', X'0F' or X'40' thru X'FE'.

System action: The current request will not be processed.

User response: Correct the input.

Source: Binder
Detecting Module:IEWBDCAL

IEW2172S  name FUNCTION IS INVALID WHILE BUILDING A MODULE WITH PUTD.

Explanation: When INTENT=BIND, once a sequence of PUTD calls is initiated to build new sections in a workmod, the only calls allowed for that workmod are PUTD, RESETW, or DELETEW (until the PUTD sequence is ended by ENDDATA=YES).

System action: The current request will not be processed.

User response: Correct the calling program.

Source: Binder
Detecting Module:IEWBDCAL

IEW2173S  name CANNOT BE USED TO IDENTIFY THE LOADED MODULE, BECAUSE IT IS LONGER THAN 8 CHARACTERS.

Explanation: The LNAME passed on a LOADW call cannot be used, because it is longer than 8 characters and will not be accepted by the IDENTIFY macro.

System action: The current request will not be processed.

User response: Correct the input.

Source: Binder
IEW2174S  A MEMBER NAME OF ALL BLANK CHARACTERS WAS PASSED.
Explanation: Member name on an INCLUDE or SAVEW request may not be all blanks.
System action: The current request will not be processed.
User response: Correct the input.
Source: Binder
Detecting Module: IEWBDVAL

IEW2175S  A SETLIB CALL WITH LIBOPT=CALL DID NOT SPECIFY A CALLIB.
Explanation: A call library is required if LIBOPT=CALL on SETL. The call library may be specified by the CALLIB parameter on SETL or the CALLIB option passed on a SETO or STARTD function call to IEWBIND.
System action: The current SETLIB request will not be processed.
User response: Correct the calling program.
Source: Binder
Detecting Module: IEWBDVAL

IEW2176S  THE REQUIRED PARAMETER parameter-name WAS NOT SPECIFIED ON A function-name FUNCTION CALL.
Explanation: The parameter list passed for the indicated function did not specify a value for the indicated parameter. The function requires a valid value for the parameter.
System action: The current request will not be processed.
User response: Refer to the documentation in the Program Management manual on using the Binder application programming interface for the indicated function call, and correct the calling program.
Source: Binder
Detecting Module: IEWBDVAL

IEW2178S  IDENTIFY=NO SPECIFIED WITHOUT AN EXTENT LIST.
Explanation: On a LOADW function call, an extent list buffer was required, but was not passed (the parameter list entry points to a word of zeros).
System action: The current request will not be processed.
User response: Correct the input.
Source: Binder
Detecting Module: IEWBDVDD

IEW2185S  OFFSET AND SYMBOL MAY NOT BOTH BE SPECIFIED ON A GETE REQUEST.
Explanation: OFFSET and SYMBOL are incompatible selection criteria for a GETE request.
System action: The current request will not be processed.
User response: Correct the input.
Source: Binder
Detecting Module: IEWBDVAL

IEW2186S  INTYPE SPECIFICATION WAS NOT VALID FOR INTENT=BIND.
Explanation: On an INCLUDE which specifies a workmod whose INTENT is BIND, the only allowed INTYPE is N.
System action: The current request will not be processed.
User response: Correct the input.
Source: Binder
Detecting Module: IEWBDVAL

IEW2189E  DDNAME ddname CONTAINS ONE OR MORE INVALID CHARACTERS.
Explanation: The ddname passed on a call to IEWBIND contains a character which is neither alphanumeric nor national or begins with a numeric character.
System action: Current request will not be processed.
User response: Correct the input.
Source: Binder
Detecting Module: IEWBDVDD

IEW2191E  THE DDNAME WHICH BEGINS WITH THE CHARACTERS ddname HAS A LENGTH OF length BYTES, BUT THE LIMIT IS 8.
Explanation: A ddname of more than 8 characters was passed.
System action: Current request will not be processed.
User response: Correct the input.
Source: Binder
Detecting Module: IEWBDVDD
IEW2192E  DDNAME ddname HAS BEEN TRUNCATED AT THE FIRST EMBEDDED BLANK.

Explanation: The ddname passed to the binder via the call interface contained an embedded blank in other than the first position.

System action: If the symbol was on a control statement, the Binder will ignore the truncated symbol. Processing continues with the next record if any. If the symbol was passed on an API call, the Binder will use the truncated symbol.

User response: Check input.

Source: Binder

Detecting Module: IEWBADD

IEW2200W  ALIAS name REPLACED AN EARLIER ALIAS SPECIFICATION FOR THE SAME SYMBOL.

Explanation: The symbol had already been specified as an alias name or was an alias on a module previously included into the workmod with ALIASES=YES.

System action: The new specification replaces the original. Processing continues.

User response: Check input.

Source: Binder

Detecting Module: IEWBADD

IEW2201W  section-name WAS ALREADY ALIGNED.

Explanation: An align request had already been received for this section.

System action: No action. Processing continues.

User response: None.

Source: Binder

Detecting Module: IEWBADD

IEW2202W  DUPLICATE CALL SPECIFICATION FOR symbol. PREVIOUS SPECIFICATION WILL BE DELETED.

Explanation: Directions for resolving the specified external reference had already been given in a previous LIBRARY control statement, or on a SETL TYPE=NEXT Binder call. This directive will replace the previous one.

System action: The previous specification for this symbol will be deleted. The current call specification will be used.

User response: Ensure that input is correct.

Source: Binder

Detecting Module: IEWBADD

IEW2203E  SECTION section-name HAS ALREADY BEEN ORDERED. PREVIOUS REQUEST WILL BE IGNORED.

Explanation: An order request for this section has already been received (and it was not the immediately preceding order request). These requests are contradictory. The current order request takes precedence.

System action: The current request will be used in determining section ordering.

User response: Review input and determine which request is correct.

Source: Binder

Detecting Module: IEWBADD

IEW2205W  SYMBOL symbol-name WAS SPECIFIED IN A PREVIOUS RENAME REQUEST. THIS REQUEST WILL BE IGNORED.

Explanation: A previous rename request specified the indicated symbol name as 'oldsymbol' or 'newsymbol'. Any subsequent rename request cannot reuse a previous symbol name, as this would cause ambiguities during the renaming process. The offending request will be ignored.

System action: The current request will be ignored, but processing will continue.

User response: Verify that the 'newname' or 'oldname' parameter of the rename request is not a duplicate of a previous rename request.

Source: Binder

Detecting Module: IEWBADD

IEW2207E  REQUEST REJECTED. NO MORE REGIONS MAY BE CREATED.

Explanation: An attempt was made to create more than four regions while processing an overlay module.

System action: The new region will not be created.

User response: Correct the input.

Source: Binder

Detecting Module: IEWBADD

IEW2208S  REQUEST REJECTED. NO MORE OVERLAY SEGMENTS MAY BE CREATED.

Explanation: An attempt was made to create more than 255 segments while processing an overlay module. This is the limit for an overlay program.

System action: The segment is not created.

User response: Correct the input.
IEW2209E  DUPLICATE INSERT REQUEST FOR SECTION section-name. PREVIOUS REQUEST WILL BE IGNORED.

Explanation: More than one insert request for the same section has been received. The last one received will be used.

System action: The previous insert request will be discarded, and the current one used.

User response: Review input and determine which insert request is correct.

Source: Binder
Detecting Module: IEWBDADD

IEW2210S  A NEW SECTION MAY NOT BE CREATED WHEN INTENT IS ACCESS.

Explanation: If workmod INTENT is ACCESS, a new section may not be created by PUTD.

System action: The current request is rejected.

User response: Correct the calling program.

Source: Binder
Detecting Module: IEWBDADD

IEW2211S  A SECTION NAME IS REQUIRED, BUT NONE WAS PASSED.

Explanation: A section name is required for PUTD.

System action: The current request is rejected.

User response: Correct the calling program.

Source: Binder
Detecting Module: IEWBDADD

IEW2212S  CANNOT ALTER ESDS OR RLDs WHEN INTENT IS ACCESS.

Explanation: If workmod INTENT is ACCESS, the ESDs and RLDs may not be altered by a PUTD call.

System action: The current request is rejected.

User response: Correct the calling program.

Source: Binder
Detecting Module: IEWBDADD

IEW2213S  CANNOT LENGTHEN TEXT WHEN INTENT IS ACCESS.

Explanation: If workmod INTENT is ACCESS, the length of the text cannot be changed by a PUTD call.

System action: The current request is rejected.

User response: Correct the calling program.

Source: Binder
Detecting Module: IEWBDADD

IEW2214S  CANNOT ALTER BINDER-CREATED SECTIONS WHEN INTENT IS BIND.

Explanation: Sections which were created by the Binder may not be altered by the user using a PUTD call.

System action: The current request is rejected.

User response: Check calling program.

Source: Binder
Detecting Module: IEWBDADD

IEW2215S  MODULE IS IN OVERLAY FORMAT AND CANNOT BE LOADED.

Explanation: A module which has been bound in overlay format cannot be loaded by using the IEWBLDGO, IEWBLOAD, or IEWBLODI batch entry points, or by using the LOADW call.

System action: The module will not be loaded.

User response: Do not set OVLY to YES.

Source: Binder
Detecting Module: IEWBDADD

IEW2216S  CANNOT MERGE ADDITIONAL MODULES WHEN INTENT IS ACCESS.

Explanation: An INCLUDE request was received, but the target workmod has INTENT = ACCESS, and already contained at least one section.

System action: The request is rejected.

User response: Correct the input.

Source: Binder
Detecting Module: IEWBDADD

IEW2217S  BINDER IDENTIFICATION RECORDS MAY NOT BE MODIFIED.

Explanation: A PUTD function specified IDRB as the target class, however IDRB records may not be replaced or altered by the user.

System action: The target workmod is unchanged.
IEW2220S  THE MODE IN THE CURRENT PUT REQUEST DOES NOT AGREE WITH THE MODE IN EFFECT FOR THIS PUT PROCESS.

Explanation: PUT operates in either INPUT mode or EDIT mode. Only certain functions are allowed with each. The requested function is not supported by the currently active mode.

System action: The request is rejected.

User response: Refer to the discussion in the z/OS MVS Program Management: User's Guide and Reference on using the binder application programming interface, including the acceptable values for each mode. Correct the calling program.

Source: Binder
Detecting Module: IEBDPUT

IEW2221S  MODULE BOUND WITH RES OPTION AND THEREFORE CANNOT BE SAVED.

Explanation: A module bound with the RES option may contain adcons resolved to entry points in LPA. The module is not saved.

System action: The module is not saved.

User response: Set RES=NO and rerun.

Source: Binder
Detecting Module: IEBDPUT

IEW2228I  END OF LOAD PROCESSING.

Explanation: Load processing has completed. This message will be given only if LIST=OFF or LIST=STMT.

System action: Processing continues.

User response: None.

Source: Binder
Detecting Module: IEBDPUT

IEW2229E  THE INPUT MODULE BUILT BY PUTD CONTAINED INTERNAL ERRORS, AND HAS BEEN DELETED.

Explanation: Internal errors were found in the module currently being processed.

System action: The module will be discarded (not merged into the target workmod).

User response: Check for other error messages issued during the processing of the module and correct the indicated problems.

Source: Binder
Detecting Module: IEBDPUT

IEW2230S  MODULE HAS NO TEXT.

Explanation: A module which has just been bound contains no text. Either no sections containing text were included, or all sections containing text were deleted.

System action: Processing continues.

User response: Check that all desired modules were included.

Source: Binder
Detecting Module: IEBDPUT

IEW2231I  END OF SAVE PROCESSING.

Explanation: Save processing has completed. This message will be given only if LIST=OFF or LIST=STMT.

System action: Processing continues.

User response: None.

Source: Binder
Detecting Module: IEBDPUT

IEW2232S  MODULE WILL NOT BE SAVED BECAUSE NO TARGET LIBRARY WAS SPECIFIED.

Explanation: The module cannot be saved because no target library was specified.

System action: The module is not saved.

User response: If a batch loader entry point was invoked, remove all NAME control statements. If IEBBIND is being called directly, ensure that a target library is specified via the MODLIB option, or as a parameter on the SAVEW call.

Source: Binder
Detecting Module: IEBDPUT

IEW2234S  DIALOG NOT ENDED BECAUSE ACTIVE WORKMODS EXIST AND PROTECT WAS SPECIFIED.

Explanation: There is at least one non-empty workmod and PROTECT = YES was specified on the ENDD call. Non-empty means that the workmod contains at least one section.

System action: The dialog will not be terminated.

User response: Check for other error messages. Either delete the workmods or set PROTECT to NO to end the dialog.
IEW2235S  WORKMOD NOT DELETED BECAUSE IT HAS BEEN ALTERED AND PROTECT WAS SPECIFIED.
Explanation: If PROTECT is specified, a workmod which has been changed since the last SAVE or LOAD request will not be deleted.
System action: The target workmod is unchanged.
User response: Check for other error messages. Check for a missing or failed SAVE or LOAD request. To force deletion, set PROTECT to NO.
Source: Binder
Detecting Module: IEWBDCAL

IEW2237S  WORKMOD NOT RESET BECAUSE IT HAS BEEN ALTERED AND PROTECT WAS SPECIFIED.
Explanation: If PROTECT is specified, a workmod which has been changed since the last SAVE or LOAD request will not be reset.
System action: The target workmod is unchanged.
User response: Check for other error messages. Check for a missing or failed SAVE or LOAD request. To force reset, set PROTECT to NO.
Source: Binder
Detecting Module: IEWBDCAL

IEW2238W  EXTENT LIST BUFFER IS NOT LARGE ENOUGH TO HOLD ALL EXTENT LIST ENTRIES.
Explanation: The returned extent list from a LOADW request may have either one or two entries. The buffer was not large enough to hold all of them.
System action: As many extent list entries were returned as would fit in the user's buffer. Processing continues.
User response: Increase count in IEWBUFF macro, or in buffer header.
Source: Binder
Detecting Module: IEWBDCAL

IEW2240S  NEWSECT=NO WAS SPECIFIED ON PUTD, BUT SECTION section-name WAS NOT FOUND.
Explanation: NEWSECT=NO implies that the PUTD is for an existing section, but a section of the specified name does not exist in the target workmod.
System action: The PUTD request will not be processed.
User response: Correct section name or change NEWSECT to YES.
Source: Binder
Detecting Module: IEWBDCAL

IEW2241E  ENVIRONMENT VARIABLE xxx HAS A LENGTH GREATER THAN 32767.
Explanation: Length of the value associated with a binder environment variable is greater than 32767.
System action: The environment variable is ignored.
User response: Correct the length of the value for the binder environment variable.
Source: Binder
Detecting Module: IEWBDINT

IEW2250I  REUSABILITY HAS NOT BEEN RESET TO reus_value
Explanation: If the latest form of the REUS options was previously specified, any use of the old form is ignored. This message will indicate which value was ignored. Thus, REUS=xxx,RENT will result in REUS being set to whatever was specified in xxx and RENT will be ignored.
System action: The reus_value specified has been ignored.
User response: If the reus_value is desired, then remove the previous REUS setting, or change the previous REUS setting to reus_value and drop the second old form option.
Source: Binder
Detecting Module: IEWBOUPD

IEW2251S  BINDER PROCESSING HAS ABNORMALLY TERMINATED WITH SYSTEM ABEND CODE abend-code
Explanation: A system abend code has occurred and the binder is terminating.
System action: Processing terminates.
User response: See z/OS MVS System Codes for problem resolution.
Source: Binder
Detecting Module: IEWBDINT
IEW2252W  REUS HAS BEEN SET TO REUS(reus_value).

Explanation: If the latest form of the REUS option was not used, and incompatible values for the previous form were specified, this message will indicate the value that the Binder selected. The REUS option is set to the highest possible value. For instance, if the incompatible values REFR and NORENT are specified simultaneously, the Binder will select REFR, as it is the higher of the two values. Additionally, the Binder will also mark the module as RENT and REUS, since a higher reusability attribute implies positive values for the lower reusability values. In the previous case, the refreshable module is also reentrant and serially reusable.

System action: Processing continues, but the Binder selects the REUS value.

User response: Verify the validity of the specified REUS option values.

Source: Binder

Detecting Module: IEWBDINT

IEWBABMS
IEWBABMT

IEW2253S  PASSED DDNAME LIST CONTAINS THE FOLLOWING INVALID FILE NAME: file-name.

Explanation: The specified file name, passed on a STARTD request, is not one of the standard binder file names.

System action: Processing continues, but a dialog will not be started.

User response: Correct the input.

Source: Binder

Detecting Module: IEWBDINT

IEW2254S  PASSED EXIT LIST CONTAINS THE FOLLOWING INVALID EXIT NAME: exit-name.

Explanation: The exit name is not one of the exit names used by the binder.

System action: Processing continues, but a dialog will not be started.

User response: Correct the input.

Source: Binder

Detecting Module: IEWBDINT

IEW2255S  PASSED OPTION LIST CONTAINS THE FOLLOWING INVALID OPTION COUNT number.

Explanation: Option count is a negative number.

System action: Processing continues, but a dialog will not be started.

User response: Correct the input.

Source: Binder

Detecting Module: IEWBDINT

IEW2256S  print-level WAS SPECIFIED AS THE PRINT LEVEL, BUT PRINT LEVEL MUST BE 0, 4, 8 OR 12.

Explanation: The print level associated with the print exit passed to STARTD has an invalid value.

System action: Processing continues, but the dialog is not started.

User response: Correct the input.

Source: Binder

Detecting Module: IEWBDINT

IEW2257E  THE VALUE SPECIFIED FOR WKSPACE IS NOT VALID.

Explanation: At least one of the subparameters on the WKSPACE option has an invalid value.

System action: Default value will be used for WKSPACE.

User response: Correct the input.

Source: Binder

Detecting Module: IEWBDINT

IEW2258S  PARAMETER NUMBER parameter-number, SPECIFIED IN THE exit-name EXIT, IS INCORRECT.

Explanation: The indicated exit contains a parameter, denoted in the message by its number, which is either unaddressable or represents a value that is not allowed for such exit.

System action: Processing continues, but the dialog will not be started.

User response: Review the binder documentation on user exits for the indicated exit and correct the parameter in point. (Refer to the discussion in z/OS MVS Program Management: Advanced Facilities on using the binder application programming interface.)

Source: Binder

Detecting Module: IEWBDINT
IEW2270E  SPECIFICATION OF OPTION
option-name IS NOT ALLOWED WHEN WORKMOD INTENT IS ACCESS.

Explanation: Certain options may not be specified when INTENT is ACCESS, because the module would need to be rebound to make them effective.

System action: The option value will not be used. Processing continues.

User response: Correct the input.

Source: Binder

Detecting Module: IEWBOVAL

IEW2272E  option-name OPTION HAS AN INVALID VALUE OF value.

Explanation: This is not a valid value for ‘option name’.

System action: Processing continues.

User response: Correct the input.

Source: Binder

Detecting Module: IEWBOVAL

IEW2273E  ONLY ONE SUBPARAMETER WAS GIVEN FOR FETCHOPT.

Explanation: Values for both PACK and PRIME must be specified when setting the FETCHOPT option.

System action: Request will not be processed. Processing continues.

User response: Correct the input.

Source: Binder

Detecting Module: IEWBOVAL

IEW2274E  option-name MAY NOT BE SPECIFIED IN A SETOPT CONTROL STATEMENT OR SETO API CALL.

Explanation: The specified option is an environmental option and may not be altered after the binder is started, whether on a SETOPT control statement or on a SETO function call toIEWBIND.

System action: The option will not be processed.

User response: Correct the input.

Source: Binder

Detecting Module: IEWBOVAL

IEW2275E  option-name MAY ONLY BE SPECIFIED WHEN INVOKING A BINDER BATCH ENTRY POINT

Explanation: The option-name was specified on invocation of the binder using an entry point other than the following valid batch entry points:IEWBLINK, IEWL, LINKEDIT, HEWL, HEWLH096, IEWBLDG, IEWLDG, LOADER, HEWLDG, IEWLOADER, HEWLOADER and IEWLOAD.

System action: The option will not be processed.

User response: Correct the input.

Source: Binder

Detecting Module: IEWBOVAL

IEW2276E  option-name MAY NOT BE SPECIFIED WHEN USING THE BINDER API.

Explanation: The option name is not valid when invoking the binder API (that is, by using entry point IEBBIND).

System action: The option will not be processed.

User response: Correct the input.

Source: Binder

Detecting Module: IEWBOVAL

IEW2277E  option-name MAY NOT BE SPECIFIED WITHIN AN OPTIONS OR IEWPARMS DATA SET.

Explanation: This option name cannot be specified in the OPTIONS or IEWPARMS data set because the option name must be processed by the binder before that data set is opened.

System action: The option will not be processed.

User response: Correct the input.

Source: Binder

Detecting Module: IEWBOLST

IEW2278I INVOC/DD PARAMETERS - parmstring.

Explanation: Displays either the batch parameter string or one record from an options file specified by the OPTIONS option or the IEWPARMS data set. There are four variants of IEB2278I:

- INVOCATION PARAMETERS - parmstring
- OPTDD1 PARAMETERS - parmstring
- IEWPARMS PARAMETERS - parmstring
- INSTALLATION PARAMETERS - parmstring

System action: Processing continues.

User response: None

Source: Binder
IEW2290E  OPTION NAME option-name IS NOT THE NAME OF A VALID OPTION.

Explanation:  The option name is not the name of a valid option. It is ignored.

System action:  Processing continues. An attempt will be made to process the remainder of the options.

User response:  Correct the input.

Source:  Binder

Detecting Module:  IEWBOLST, IEWBOVAL

IEW2291E  ERROR IN OPTION LIST SYNTAX NEAR 'string'.

Explanation:  An error was detected while attempting to process the option specifications in the parameter list. The string in error follows the eight characters identified.

System action:  An attempt is made to process the remainder of the list. Processing continues.

User response:  Correct the input.

Source:  Binder

Detecting Module:  IEWBOLST

IEW2292E  OPTION VALUE MISSING OR INVALID FOR OPTION name.

Explanation:  Either:

- An option name which requires a value was used, but no value was given.
- The option specification used syntax indicating that a value would be supplied, but none was given.
- In the case of a few options whose value is never passed to IEWBIND, the value supplied is invalid for this option. Examples: FETCHOPT or FETCHOPT=() or NOCALL= or OPTIONS(INVALIDDD)
- The option specified is a valid option, but is not valid as an option supplied in the options list in an API call. For this last possibility, the option probably can be supplied in the PARMs parameter.

System action:  The option specification is ignored. Processing continues.

User response:  Correct the input.

Source:  Binder

Detecting Module:  IEWBOLST

IEW2293W  OPTION name IS NOT SUPPORTED.

Explanation:  The option with the specified name is no longer supported.

System action:  The option is ignored. Processing continues.

User response:  Remove option from input stream.

Source:  Binder

Detecting Module:  IEWBOLST

IEW2294E  OPTIONS OPTION ENCOUNTED IN OPTIONS FILE ddname.

Explanation:  The OPTIONS option is not allowed inside an options file.

System action:  The OPTIONS option is ignored. Processing continues.

User response:  Remove embedded OPTIONS option.

Source:  Binder

Detecting Module:  IEWBOLST

IEW2295E  OPTION FILE file-name COULD NOT BE OPENED.

Explanation:  The file specified in the OPTIONS option could not be opened.

System action:  The option specification is ignored. Processing continues.

User response:  Check the data management and JCL specifications for this file.

Source:  Binder

Detecting Module:  IEWBOLST

IEW2296W  LOADED PROGRAM OPTIONS IGNORED.

Explanation:  A '/' marking the start of parameters to be passed to a loaded program was found in an option string passed to the binder, but the binder was not invoked via the IEWBLDGO entry point. Loaded program parameters are accepted only on the IEWBLDGO entry point.

System action:  Characters appearing after the '/' are discarded.

User response:  Check input.

Source:  Binder

Detecting Module:  IEWBOLST

IEW2300S  AN ATTEMPT WAS MADE TO INCLUDE THE FOLLOWING CONTROL STATEMENT INTO A WORKMOD WITH ACCESS INTENT: control-statement.

Explanation:  Control statements may not be included into a workmod whose INTENT is ACCESS.

System action:  The control statement is ignored. Processing continues.

User response:  Correct the input.

Source:  Binder
IEW2301E   **keyword** CONTROL STATEMENT WAS FOUND DURING AUTOCALL AND WAS NOT PROCESSED.

**Explanation:** Certain control statements may not be included as part of autocall processing. INCLUDE, LIBRARY and NAME are only allowed during the primary input phase.

**System action:** Processing continues. The statement is ignored.

**User response:** Remove these control statements from autocall libraries.

**Source:** Binder

**Detecting Module:** IEWBINDL

IEW2302E   THE DATA SET SPECIFIED BY DDNAME ddname COULD NOT BE FOUND, AND THIS HAS NOT BEEN INCLUDED.

**Explanation:** Either no data set has been allocated to the specified ddname or (if the call interface was used) an EPTOKEN was passed but the module was not loaded by the program management loader, or was loaded from linklist.

**System action:** The target workmod is unchanged.

**User response:** Correct the input.

**Source:** Binder

**Detecting Module:** IEWBINDL

IEW2303E   MEMBER member-name OF THE DATA SET SPECIFIED BY ddname COULD NOT BE FOUND.

**Explanation:** The data set associated with the specified ddname did not contain the specified member.

**System action:** The target workmod is unchanged.

**User response:** Correct the input.

**Source:** Binder

**Detecting Module:** IEWBINDL

IEW2304S   AN ATTEMPT WAS MADE TO MERGE MULTIPLE INPUT SOURCES INTO A WORKMOD WITH ACCESS INTENT.

**Explanation:** Only one module may be included into a workmod with INTENT = ACCESS.

**System action:** The workmod is reset to the empty state. Processing continues.

**User response:** Correct the calling program. Ensure that RESETW or DELETEW and CREATEW calls are made before a second INCLUDE request for a target workmod with INTENT = ACCESS.

**Source:** Binder

**Detecting Module:** IEWBINDL, IEWBIMOD

IEW2305E   AN INCLUDE LOOP FOR MEMBER member-name FROM ddname HAS BEEN DETECTED.

**Explanation:** When processing INCLUDE control statements, a request was received to include the same ddname (or same ddname and member) as that specified in an INCLUDE currently being processed. For example, the message would appear if the binder has not completed the processing of the data set specified by B but finds that B itself contains an INCLUDE B control statement.

**System action:** The current INCLUDE will not be processed.

**User response:** Correct control statements in the input stream.

**Source:** Binder

**Detecting Module:** IEWBINDL

IEW2306S   AN ATTEMPT HAS BEEN MADE TO INCLUDE AN OBJECT MODULE INTO A WORKMOD WITH ACCESS INTENT

**Explanation:** Object modules may not be included into a workmod with INTENT=ACCESS.

**System action:** Processing continues.

**User response:** Check that the data set being included is correct.

**Source:** Binder

**Detecting Module:** IEWBINDL

IEW2307E   CURRENT INPUT MODULE NOT INCLUDED BECAUSE OF INVALID DATA.

**Explanation:** An object module, program object, or load module was structured incorrectly or contained one or more data fields with invalid values.

**System action:** The current input module will not be included, but processing continues.

**User response:** Check for previous error messages identifying the specific error.

**Source:** Binder

**Detecting Module:** IEWBINDL, IEWBIMOD
IEW2308I  section-name HAS BEEN MERGED.
Explanation:  The identified section has been included into workmod.
System action:  Processing continues.
User response:  None.
Source:  Binder
Detecting Module:  IEWBIMOD

IEW2309E  THE MODULE SPECIFIED BY DCBPTR dcbptr COULD NOT BE FOUND.
Explanation:  The module associated with the specified DCBPTR and its accompanying DEPTR on an INCLUDE function call could not be found.
System action:  The target workmod is unchanged.
User response:  Check the calling program and ensure that DCBPTR and DEPTR are being passed correctly.
Source:  Binder
Detecting Module:  IEWBINCL

IEW2310E  THE MODULE SPECIFIED BY EPTOKEN eptoken COULD NOT BE FOUND.
Explanation:  An eptoken was passed but either it was not valid or the module was loaded from linklist or was not loaded by the program management loader.
System action:  The target workmod is unchanged.
User response:  Check JCL or calling program and ensure that the EPTOKEN is correct and that the module was loaded by the program management loader and is not in linklist.
Source:  Binder
Detecting Module:  IEWBINCL

IEW2311E  A NAME STATEMENT FOR MEMBER member-name WAS FOUND IN SECONDARY INPUT.
Explanation:  NAME control statements are not valid in files included by an INCLUDE control statement.
System action:  Processing continues. Name statement will not be processed.
User response:  Correct the input.
Source:  Binder
Detecting Module:  IEWBICCQ

IEW2312E  SECTION section-name SYSTEM LE ATTRIBUTE IS NOT COMPATIBLE WITH MODULE CONTENTS.
Explanation:  All sections in a module must have the same LE attribute. The attribute in the section named does not match that of the first non-binder-generated section processed on input.
System action:  The current input module will be discarded.
User response:  Correct source, recompile, and relink.
Source:  Binder
Detecting Module:  IEWBIMOD

IEW2313E  NO TARGET LIBRARY HAS BEEN DEFINED FOR MODULE member-name.
Explanation:  A NAME statement has been found, but no target library (MODLIB) was specified.
System action:  NAME statement will not be processed.
User response:  If using the batch interface, ensure that a NAME control statement is only used with the IEWBLINK entry point. If using the call interface, check that a ddname for MODLIB has been specified.
Source:  Binder
Detecting Module:  IEWBICCQ

IEW2314W  keyword IMMED WAS FOUND DURING AUTOCALL AND WAS NOT PROCESSED.
Explanation:  REPLACE -IMMED and CHANGE -IMMED are not allowed during autocall processing.
Source:  Binder

IEW2315E  IDENTIFY DATA COULD NOT BE ADDED TO section-name BECAUSE THE SECTION DOES NOT EXIST.
Explanation:  The target section of an IDENTIFY control statement is not in workmod. The section must be included into workmod before identify data can be added.
System action:  Workmod is unchanged.
User response:  Check that the correct section was specified on the IDENTIFY statement and, if so, that the statement is positioned after the point at which the section would be included.
Source:  Binder
Detecting Module:  IEWBICCQ
IEW2321E  EXPECTED CONTROL STATEMENT CONTINUATION WAS NOT FOUND.
Explanation: The control statement ended with a comma, but there was no further input, or the next input was a blank line, or the next input was not a control statement.
System action: Control statement will not be processed.
User response: Correct control statement in error.
Source: Binder
Detecting Module: IEWBICCQ

IEW2322I  sequence-number record
Explanation: Display of an included control statement. This message is printed only if the LIST option is set to STMT, SUMMARY or ALL.
System action: Processing continues.
User response: None.
Source: Binder
Detecting Module: IEWBICSI

IEW2325E  UNMATCHED QUOTE IN CURRENT CONTROL STATEMENT STREAM.
Explanation: A quotation mark was found, and the input stream was scanned until non-control statement input or end-of-file was encountered, but no matching quotation mark was found.
System action: Control statement(s) after the unmatched quotation mark will not be processed.
User response: Check control statement input.
Source: Binder
Detecting Module: IEWBICSI

IEW2326E  THE FIRST CHARACTER OF THE FOLLOWING RECORD IS NOT VALID:
record.
Explanation: While processing a data set which is expected to contain only object modules and control statements, a record was found which doesn't begin with either a blank or an asterisk, and is not part of an object module.
System action: Current record is not processed.
User response: Check control statement input.
Source: Binder
Detecting Module: IEWBICSI

IEW2327E  INVALID control-statement-operand VALUE value FOUND IN statement-name CONTROL STATEMENT.
Explanation: The value passed for the indicated operand on a control statement is not valid.
System action: Control statement will not be processed.
User response: Correct control statement.
Source: Binder
Detecting Module: IEWBICPA

IEW2328E  INVALID CONTROL STATEMENT KEYWORD keyword.
Explanation: Specified keyword is not the name of a valid control statement.
System action: Control statement will not be processed.
User response: Correct the input.
Source: Binder
Detecting Module: IEWBICPA

IEW2330W  HIARCHY CONTROL STATEMENT IS NOT SUPPORTED.
Explanation: The HIARCHY control statement is obsolete and will be ignored.
System action: The control statement is ignored. Processing continues.
User response: Remove the HIARCHY control statement.
Source: Binder
Detecting Module: IEWBICPA

IEW2332E  CONTROL STATEMENT SYNTAX ERROR NEAR 'string'.
Explanation: Invalid syntax was found while trying to process a control statement. The type of control statement could not be determined, but the last token processed is indicated in the message.
System action: The current control statement will not be processed.
User response: Correct the input.
Source: Binder
Detecting Module: IEWBICPA
IEW2333E  INVALID SYNTAX IN  keyword CONTROL STATEMENT NEAR 'string'.

Explanation:  A syntax error was found while processing a control statement of the type indicated by 'keyword'. The last characters processed are indicated in 'string'.

System action:  The processing of the current control statement terminates. Processing continues with the next control statement.

User response:  Correct the input.

Source:  Binder

Detecting Module: IEWBICPA

IEW2335E  THE LENGTH OF IDENTIFY DATA BEGINNING 'string' IS GREATER THAN THE MAXIMUM ALLOWED LENGTH.

Explanation:  There were more than 80 bytes of IDENTIFY data beginning with the specified 'string'.

System action:  IDENTIFY data will not be added to workmod.

User response:  Correct the IDENTIFY control statement.

Source:  Binder

Detecting Module: IEWBICPB

IEW2338E  keyword CONTROL STATEMENT CONTAINS A MEMBER OR ALIAS NAME WHOSE FIRST CHARACTER IS A BLANK.

Explanation:  Member or alias name on a control statement (such as INCLUDE or NAME) may not contain blanks.

System action:  Processing of current control statement is terminated.

User response:  Correct the input.

Source:  Binder

Detecting Module: IEWBICPA, IEBWICPB

IEW2339S  THE DATA SET SPECIFIED BY DDNAME ddname IS AN ARCHIVE FILE.

Explanation:  The DDNAME specified on an INCLUDE control statement indicates an archive file. Archive files are only supported for Autocall.

System action:  Processing of control statement is terminated.

User response:  Correct the input.

Source:  Binder

Detecting Module: IEWBINCL

IEW2342E  SOME OF THE PASSED COMPILE UNIT NUMBERS DO NOT EXIST IN THE MODULE. DATA FOR VALID COMPILE UNITS IS RETURNED.

Explanation:  In GETC API, some of the passed compile unit numbers do not exist in the module. The invalid compile unit number is skipped and data for valid compile units is returned.

System action:  Processing continues.

User response:  Check the compile unit list in the GETC call, and remove any compile unit numbers that are not valid. Alternatively, you can omit the compile unit list parameter when calling GETC API. If you omit the compile unit list parameter, one record of each of all compile units will be returned.

Source:  Binder

Detecting Module: IEWBFVER

IEW2343E  SECTION section-name CONTAINS AN INVALID RESIDENT VALUE IN ESD OF TYPE = esdtype.

Explanation:  The ESD resident name is not the same as the section containing the ESD.

System action:  The input load module or program object containing this section will not be added to workmod.

User response:  The input load module or program object containing this section is corrupted. Either obtain a valid copy or recreate the module from the source code.

Source:  Binder

Detecting Module: IEWBFVER

IEW2344E  TEXT BUFFER FOR SECTION section-name AND CLASS class-name ATTEMPTED TO INITIALIZE UNDEFINED PART part-name.

Explanation:  PUTD buffer specified initialization data for an external data item not known to the binder. A PR ESD entry must be received before part initialization can take place.

System action:  Workmod is unchanged. Buffer has been discarded.

User response:  Supply a 'PR' type ESD record for this part within the appropriate section.

Source:  Binder

Detecting Module: IEWBFRIN
IEW2345E  THE MRG CLASS class-name IN
section-name IS NOT DEFINED AS
TEXT.

Explanation:  The current input module contains an
invalid ESD record. An ED ESD record was
encountered which defined the element as external data
(MRG class), which is inconsistent with information in
ESD_BIND_FLAGS or ESD_RECORD_FMT. MRG
classes can only contain text, which must be defined as
byte stream (ESD_RECORD_FMT=1), fixed length and
text.

System action:  The input load module or program
object containing this section will not be added to
the workmod.

User response:  The input module is invalid. Obtain
another copy or recreate the module from the source
code.

Source:  Binder
Detecting Module: IEWBFVER

IEW2346E  THE FORMAT OF PART-INITIALIZATION
DATA FOR CLASS class-name IN
SECTION section-name IS INCORRECT.

Explanation:  An input buffer specified on a PUTD
Binder API call contained initial text for a class
designated as external data (MRG). The text, however,
was not in the varying-length format required for part
initialization data and cannot be used.

System action:  Temporary module is discarded.

User response:  Ensure that initialization data for all
external data classes is in the required varying-length
record format, and that the ENTRY_LENGTH in the
buffer header is set to zero.

Source:  Binder
Detecting Module: IEWBFGRIN

IEW2347E  INITIAL TEXT NOT SUPPORTED FOR
MERGE CLASSES IN THIS RELEASE.

Explanation:  A GOFF module, or an input buffer
specified on a PUTD Binder API call, contained initial
text for a class designated as external data (MRG). This
function is not supported in this release.

System action:  Temporary module is discarded.

User response:  Ensure that initialization data for all
text classes is designated catenate. This is specified in
the ED record in the ESD defining the text class.

Source:  Binder
Detecting Module: IEWBFGRIN,IEWBXGOF

IEW2348W  GETE FOUND NO DATA MEETING
SUPPLIED SELECTION CRITERIA.

Explanation:  No ESD records in workmod met the
selection criteria.

System action:  No data is returned in the buffer.

User response:  Correct invalid options if necessary.

Source:  Binder
Detecting Module: IEWBFESD

IEW2349E  NOT ALL ADCONS WERE
SUCCESSFULLY RELOCATED.

Explanation:  A non-zero value of RELOC was passed
on the GETD API call and references were found to a
load segment for which the binder did not have a
relocation base. The adcons corresponding to these
references could not be relocated.

System action:  The contents of these adcons in the
output data buffer will be set to hexadecimal Fs.

User response:  To avoid the error message, remove
the cross-segment references in the source code from
which the target module was generated.

Source:  Binder
Detecting Module: IEWBFGRG

IEW2350E  SECTION section-name CONTAINS AN
RLD FOR AN ADCON WHOSE
LOCATION IS OUTSIDE THE SECTION.
CLASS NAME = class-name, ELEMENT
OFFSET = adcon-offset.

Explanation:  The designated section contains invalid
data. An RLD entry in the section contains an adcon
offset which is not in the range of the element.

System action:  The input load module or program
object containing this section will not be added to
workmod.

User response:  The input load module or program
object containing this section is corrupted. Either obtain
a valid copy or recreate the module from the source
code.

Source:  Binder
Detecting Module: IEWBFVER

IEW2351E  SECTION section-name CONTAINS A
SYMBOL DEFINITION FOR A SYMBOL
OUTSIDE THE BOUNDS OF THE
ELEMENT. CLASS NAME = class-name,
ELEMENT OFFSET = element offset.

Explanation:  The designated section contains invalid
data. The offset of a symbol within the element is
greater than the length of the symbol’s containing element.

**System action:** The input load module or program object containing this section will not be added to workmod.

**User response:** The input load module or program object containing this section is corrupted. Either obtain a valid copy or recreate the module from the source code.

**Source:** Binder

**Detecting Module:** IEWBFWER

---

**IEW2352E**

**SECTION** section-name **CONTAINS AN ESD RECORD WITH AN INVALID ESD TYPE OF** ESD-type.

**Explanation:** The designated section contains invalid data. An ESD record does not contain a valid ESD type.

**System action:** The input load module or program object containing this section will not be added to workmod.

**User response:** The input load module or program object containing this section is invalid. Either obtain a valid copy or recreate the module from the source code.

**Source:** Binder

**Detecting Module:** IEWBFWER

---

**IEW2353E**

**SECTION** section-name **CONTAINS INVALID DATA. ERROR CODE IS** error-code.

**Explanation:** The Section specified contains invalid data. Error code meanings follow:

- 250001 - Invalid RLD target class (Resident class is initial load and target is deferred load class, or Source and target classes are deferred classes, but not the same class).
- 250002 - Invalid RLD Loader Token. Token must be 8 bytes in length, and RLD class offset must be double-word aligned.
- 250003 - Section contains an ESD record that is not a SD or ED, and its namespace value is greater than the maximum allowed(7).
- 250004 - Invalid ESD PR record. A Part was marked as both a definition and an indirect reference.
- 250005 - Invalid ESD PR record. A Part must not be in namespace 1.
- 250006 - The namespace in an LD record does not match the namespace in its containing ED.
- 250007 - The associated data for an LD record does not designate an ESD record of type ED, LD, or PR.
- 250008 - RLD contains an invalid length field. Supported lengths are 2, 3, 4, and 8, where 8 is allowed only for type loader token.
- 250009 - The namespace in an ED record is not valid. It must be greater than 1 and less than 100.
- 25000A - The alignment field on an ED record is not set to a valid value. Valid values are: unspecified, doubleword, quadword, or page.
- 25000B - The associated data for an LD record was not defined in the module containing the LD.
- 25000C - Part (PR) is marked as being a descriptor, XPLINK, and data.
- 25000D - Target of an XPLINK byname descriptor is not of ESD type LD, ER, or PR.
- 25000E - Alignment of a PR greater than that of containing ED definition and an indirect reference.
- 25000F - An adcon resident in a part extends beyond the end.
- 250010 - The PR or PD ESD record has a negative length.
- 250011 - The ED ESD record has a negative length.
- 250012 - The ER ESD record for an imported symbol indicates that it is a reference to a linkage descriptor, but the PR ESD record that represents the descriptor was not found.

**System action:** The input load module or program object containing this section will not be added to workmod.

**User response:** The input load module or program object containing this section is invalid. Either obtain a valid copy or rebuild the module.

**Source:** Binder

**Detecting Module:** IEWBFWER

---

**IEW2354E**

**SECTION** section-name **DOES NOT CONTAIN AN ESD RECORD OF TYPE SD.**

**Explanation:** There is no section definition ESD record for this section.

**System action:** The input load module or program object containing this section will not be added to workmod.

**User response:** The input load module or program object containing this section is invalid. Either obtain a valid copy or recreate the module from the source code.

**Source:** Binder

**Detecting Module:** IEWBFWER

---

**IEW2355E**

**SECTION** section-name **DOES NOT CONTAIN ANY ESD RECORDS.**

**Explanation:** The designated section contains invalid data. It must contain at least one ESD record (the SD record).

**System action:** The input load module or program...
object containing this section will not be added to workmod.

**User response:** The input load module or program object containing this section is invalid. Either obtain a valid copy or recreate the module from the source code.

**Source:** Binder

**Detecting Module:** IEWBFTER

---

**IEW2356E**

**CLASS** class-name **IN SECTION** section-name **CONTAINS TEXT DATA OUTSIDE THE BOUNDS OF THE ELEMENT.**

**TEXT LENGTH =** text-length,

**ESD TEXT LENGTH =** esd-text-length.

**Explanation:** The TEXT for this section is longer than the section length in the ESD for this section. Note: The ESD length appearing in the message has been rounded up to a multiple of eight bytes.

**System action:** The input load module or program object containing this section will not be added to workmod.

**User response:** The input load module or program object containing this section is invalid. Either obtain a valid copy or recreate the module from the source code.

**Source:** Binder

**Detecting Module:** IEWBFTER

---

**IEW2357E**

**SECTION** section-name **CONTAINS AN RLD RECORD MARKED AS RESOLVED BUT THE TARGET NAME IS NOT DEFINED. THE ADCON IS LOCATED AT OFFSET adcon-offset IN CLASS class-name.

**Explanation:** An RLD indicates that the adcon is resolved, but the target name specifies an unresolved symbol.

**System action:** The input load module or program object containing this section will not be added to workmod.

**User response:** The input load module or program object containing this section is invalid. Either obtain a valid copy or recreate the module from the source code.

**Source:** Binder

**IEW2359E**

**GETE FOUND NO ESD RECORDS IN THE TARGET WORKMOD.

**Explanation:** There are no ESD entries in the target workmod. No data was returned in the user buffer.

**System action:** Processing continues.

**User response:** Ensure that modules were included into the workmod. Check for other error messages.

**Source:** Binder

**Detecting Module:** IEWBFSRD

---

**IEW2360E**

**TEXT CLASS SPECIFIED ON GETE REQUEST DOES NOT EXIST IN MODULE.

**Explanation:** The class specified does not appear in the module.
System action: No records were returned in the user buffer.

User response: Verify the text class name on the function call. Modify the specified class name, if necessary, or define the target class in the ESD.

Source: Binder
Detecting Module: IEWBESD

Explanation: The offset specified is beyond the limits of the element.
System action: No data is returned in the buffer.
User response: Correct the section offset supplied in the call.
Source: Binder
Detecting Module: IEWBESD

IEW2363W THE SPECIFIED GETE OFFSET IS GREATER THAN THE CLASS LENGTH. CLASS LENGTH = class-length.

Explanation: The offset specified is beyond the limits of the class.
System action: No data is returned in the buffer.
User response: Determine why section offset specified is invalid.
Source: Binder
Detecting Module: IEWBESD

IEW2364W GETE COULD NOT FIND THE DEFAULT TEXT CLASS.

Explanation: OFFSET or SYMBOL was specified as a parameter on a GETE API call, but no text class was specified, and the default text class (B_TEXT) did not exist.
System action: No data is returned in the buffer.
User response: Ensure that the text class is specified.
Source: Binder
Detecting Module: IEWBESD

IEW2365W GETE COULD NOT FIND THE SPECIFIED SECTION.

Explanation: User-specified section does not exist in workmod.
System action: No data is returned in the buffer.
User response: Correct section name supplied.
Source: Binder
Detecting Module: IEWBESD

IEW2366W GETE COULD NOT FIND THE SPECIFIED SYMBOL = symbol-name.

Explanation: The specified symbol does not exist in the workmod.
System action: No data is returned in the buffer.
User response: Check section name supplied.
Source: Binder
Detecting Module: IEWBESD

IEW2367W GETE COULD NOT FIND AN ESD RECORD OF THE REQUESTED TYPE AT THE SPECIFIED OFFSET.

Explanation: There is no symbol of the specified type at the user-specified offset.
System action: No data is returned in the buffer.
Source: Binder
Detecting Module: IEWBESD

IEW2368W GETN COULD NOT FIND ANY NAMES IN THE MODULE.

Explanation: The module contains no class names or no section names.
System action: No data is returned in the buffer.
User response: Make sure NTYPE specifies C or S and that is what you want.
Source: Binder
Detecting Module: IEWBGET

IEW2369W THE SPECIFIED GETN CURSOR IS GREATER THAN THE NUMBER OF NAMES IN THE MODULE.

Explanation: The start position specified is beyond the limits of the data.
System action: No data is returned in the buffer.
User response: Ensure start position is in the range of total names in module.
Source: Binder
Detecting Module: IEWBGET
IEW2370W NO DATA EXISTS FOR CLASS =
  class-name AND SECTION =
  section-name.
Explanation: The specified CLASS and SECTION were not found.
System action: No data is returned in the buffer.
User response: Check class/section names to ensure they are specified correctly.
Source: Binder
Detecting Module:IEWBFGIT

IEW2371W GETD FOUND NO DATA FOR CLASS
  class-name.
Explanation: The class specified by the user is empty (contains no data).
System action: No data is returned in the buffer.
User response: Check class name used.
Source: Binder
Detecting Module:IEWBFGIT

IEW2372E name_type BEGINNING name_64
  EXCEEDS ALLOWABLE LENGTH FOR
  EXTERNAL SYMBOLS.
Explanation: The length of a symbol name in a PUTD buffer exceeds the allowable length implied by the COMPAT option.
System action: The data in the buffer will not be added to workmod.
User response: Check if COMPAT option was used. COMPAT options of LKED or PM1 restrict symbols to 64 bytes in length. Also check lengths used in defining names in the call interface buffers.
Source: Binder
Detecting Module:IEWBFRIN

IEW2373E PROGRAM OBJECT CONTAINS DATA
  THAT CANNOT BE RETURNED IN A
  VERSION 1 BUFFER.
Explanation: The module contains data not supported by version 1 buffer formats.
System action: Request not processed. No records were returned in the buffer.
User response: Modify your program to specify version 2 or 3 on all IEWBUFF andIEWBIND macro invocations, if processing version 2 or 3 program objects.
Source: Binder
Detecting Module:IEWBFESD,IEWBFGIT

IEW2374E THE field-name NAME symbol-name
  PASSED TO PUTD WAS NOT VALID.
Explanation: An RLD entry in a buffer passed on a PUTD API call contains invalid data. Either RLD_RESIDENT_CHARS is larger than 32767 or the name pointed to by RLD_RESIDENT_PTR contains invalid characters.
System action: The data from the buffer is not put into the target workmod.
User response: Check PUTD buffer for validity, especially resident name specified.
Source: Binder
Detecting Module:IEWBFRIN

IEW2375S THE CLASS WAS NOT A TEXT CLASS.
Explanation: This condition may occur because the user did not pass text class for adcons relocation.
System action: Relocation processing terminates.
User response: Check the class type in the GETD call. Change the CLASS name parameter to a text class.
Source: Binder
Detecting Module:IEWBFGIT

IEW2376E PUTD BUFFER FOR class-name HAS
  AN INVALID VALUE OF field-contents
  FOR field-name.
Explanation: PUTD buffer contains bad data.
System action: The data from the buffer is not put into the target workmod.
User response: Check PUTD buffer for validity, especially field name specified. 'Field-contents' is the bad value.
Source: Binder
Detecting Module:IEWBFRIN

IEW2377W GETC COULD NOT FIND ANY NAMES
  IN THE MODULE.
Explanation: The module contains no section names.
System action: No data is returned in the buffer.
User response: Ensure the module contains section names.
Source: Binder
Detecting Module:IEWBFGCT
IEW2378W **THE SPECIFIED GETC CURSOR IS GREATER THAN THE NUMBER OF NAMES IN THE MODULE.**

**Explanation:** The start position specified is beyond the limits of the data.

**System action:** No data is returned in the buffer.

**User response:** Ensure start position is in the range of total names in module.

**Source:** Binder

**Detecting Module:**IEWBFGCT

---

IEW2379S **BAD CURSOR FOR B_PARTINIT. PROCESSING STOPPED.**

**Explanation:** Binder encountered a bad cursor for class B_PARTINIT and processing has been stopped.

**Source:** Binder

**Detecting Module:**IEWBFGIT

---

IEW2380E **SECTION section-name HAS NO SECTION DEFINITION ESD ENTRY.**

**Explanation:** The ESD entry corresponding to the section name is not a section definition type (that is, SD, CM, ST, or ET). This is required for a valid section.

**System action:** The current input module will be discarded. It will not be added to the target workmod.

**User response:** Check input module or data buffer. It contains invalid data and may need to be recreated.

**Source:** Binder

**Detecting Module:**IEWBFMOD

---

IEW2381E **SECTION section-name HAS NO ESD ENTRIES.**

**Explanation:** A section in workmod contained no ESD entries. To be valid, each section is required to contain at least a section definition ESD entry.

**System action:** The current input module will be discarded. It will not be added to the target workmod.

**User response:** Check input module or data buffer. It contains invalid data and may need to be recreated.

**Source:** Binder

**Detecting Module:**IEWBFMOD

---

IEW2382E **THE ESD SD NAME IN BUFFER OF PUTD CALL DOES NOT MATCH SECTION NAME section-name2.**

**Explanation:** An ESD record of type SD or CM is in the input buffer, but the section name in the ESD record is not the same as the section name passed on the PUTD call.

**System action:** Workmod is unchanged.

**User response:** Correct the ESD record in the data buffer which was passed to the binder.

**Source:** Binder

**Detecting Module:**IEWBFPUT,IEWBFCFY,IEWBFCP2

---

IEW2383E **SECTION section-name ON PUTD CALL WAS NOT VALID.**

**Explanation:** Section name supplied begins with a X'00'.

**System action:** Workmod is unchanged.

**User response:** Correct the section name in the data buffer which was passed to the binder.

**Source:** Binder

**Detecting Module:**IEWBFPUT

---

IEW2384E **PUTD FOR SECTION section-name CONTAINS A DOUBLY-DEFINED SYMBOL.**

**Explanation:** The section whose name is provided contains an ESD symbol definition entry for a symbol which was already defined.

**System action:** Workmod is unchanged.

**User response:** Correct contents of the data buffer which was passed to the Binder.

**Source:** Binder

**Detecting Module:**IEWBFPUT,IEWBFCPY,IEWBFCP2

---

IEW2385E **PUTD FOR A BLANK SECTION NAME CONTAINS INVALID BUFFER DATA.**

**Explanation:** Either the first data buffer for this section was not of class ESD, or the first entry in the buffer did not have an ESD_TYPE of CM or SD.

**System action:** Workmod is unchanged.

**User response:** Correct contents of the data buffer which was passed to the binder.

**Source:** Binder

**Detecting Module:**IEWBFPUT

---

IEW2386E **PUTD FOR UNDEFINED CLASS class-name WAS REJECTED.**

**Explanation:** Non-binder-defined classes must be described by an 'ED' type ESD record. The specified class was not previously defined.
System action: Workmod is unchanged.
User response: Provide appropriate 'ED' type ESD for failing class.
Source: Binder
Detecting Module: IEWBFPUT, IEWBFRIN

IEW2388E PUTD BUFFER HEADER FOR CLASS class-name CONTAINS ENTRY LENGTH entry-length, BUT RECORD LENGTH IN ESD (ED) RECORD SPECIFIED class-length.

Explanation: Non-binder-defined classes must be described by an 'ED' type ESD record. The record length specified in this record conflicts with the buffer header entry length.
System action: Workmod is unchanged.
User response: Modify either the 'ED' type ESD or the buffer entry length so that they are in agreement.
Source: Binder
Detecting Module: IEWBFPUT, IEWBFRIN

IEW2389E MAP CLASS DATA IMPROPERLY LINKED.

Explanation: Binder map class contains improperly linked records. The error was detected when restoring a module using the program management transport utility, IEWTPORT.
System action: Workmod is unchanged.
User response: Recreate the original module and rerun the transport utility.
Source: Binder
Detecting Module: IEWBFCP2

IEW2390E PART NAME part-name PROVIDED FOR ADCON IN CATENATE CLASS class-name.

Explanation: An RLD entry indicates that the address constant is contained in a part. However, catenate classes do not support parts.
System action: The current input module will be discarded. It will not be added to workmod.
User response: Correct the program creating the RLD record and rerun the job.
Source: Binder
Detecting Module: IEWBFPUT, IEWBFRIN

IEW2391E PART NAME NOT PROVIDED FOR ADCON IN MERGE CLASS class-name.

Explanation: An RLD entry indicates that the address constant is contained in a merge class. However, no part name has been provided.
System action: The current input module will be discarded. It will not be added to the workmod.
User response: Correct the program creating the RLD record and rerun the job.
Source: Binder
Detecting Module: IEWBFPUT, IEWBFRIN

IEW2392E CLASS class-name SPECIFIED ON GETE REQUEST IS NOT A TEXT CLASS.

Explanation: The class specified has not been defined as a text class in the ESD.
System action: No records were returned in the user buffer.
User response: Verify the text class name on the function call. Modify the specified class name, if necessary, or redefine the target class as text.
Source: Binder
Detecting Module: IEWBFPUT, IEWBFRIN

IEW2393E CLASS class-name SPECIFIED OR DEFAULTED ON GETE REQUEST DOES NOT EXIST IN SECTION section-name.

Explanation: The section does not contain the specified or defaulted text class. When no text class is specified a default text class of B_TEXT is used.
System action: No records were returned in the user buffer.
User response: Ensure that the text class name specified on the GETE control statement is present in the section.
Source: Binder
Detecting Module: IEWBFPUT, IEWBFRIN

IEW2394E AN EXPAND REQUEST FOR SECTION section-name AND CLASS class-name COULD NOT BE PROCESSED. THE CLASS DOES NOT EXIST IN THE NAMED SECTION.

Explanation: The class specified has not been defined in the given section. Classes within a section must be defined by an ED ESD record.
System action: The expand request will not be processed.
User response: Check the Binder MAP or run AMBLIST against the input object module to ensure that you have entered the class and section names correctly and that an element exists for the section/class combination.

Source: Binder
Detecting Module: IEWBEEXP

IEW2395E A REQUEST TO CHANGE OR REPLACE SECTION old-section-name TO new-section-name WAS RECEIVED, AND new-section-name WAS AN EXISTING SECTION.

Explanation: There was already a section with the same name as 'new section name'.

System action: Section new name is deleted. Section old name is renamed to new name.

User response: Check that the result of the system action is what was desired.

Source: Binder
Detecting Module: IEWBEREN

IEW2399W A REQUEST TO CHANGE OR REPLACE LABEL old-name TO new-name WAS RECEIVED, AND new-name WAS AN EXISTING SECTION.

Explanation: 'Old name' is defined as a label (entry name). The user requested that the entry name be changed or replaced by 'new name' and 'new name' was already defined as a section name.

System action: The original definition of new name is deleted. Label old name is changed to new name.

User response: Check that the result of the system action is what was desired.

Source: Binder
Detecting Module: IEWBEREN

IEW2400I A REQUEST TO DELETE CSECT OR SYMBOL symbol-name WAS RECEIVED, BUT THE CSECT OR SYMBOL WAS NOT FOUND.

Explanation: The delete request was not processed because the csect or symbol to be deleted did not exist.

System action: Workmod is unchanged.

User response: Check to ensure that the correct csect or symbol was specified.

Source: Binder
Detecting Module: IEWBEDEL

IEW2401W A REQUEST TO CHANGE OR REPLACE SECTION old-section-name TO new-section-name WAS RECEIVED, AND new-section-name WAS AN EXISTING LABEL.

Explanation: A new name in a change request is already defined as a label (entry name).

System action: The entry name is deleted (that is, the
defining LD ESD entry is deleted), and section ‘old name’ is renamed to ‘new name’.

User response: Check that the result is what you wanted. To avoid the attention message, delete new name before requesting the change. If this was an error, alter the change request so that new name is not already a defined symbol.

Source: Binder
Detecting Module: IEWBEREN

IEW2403W A REQUEST TO CHANGE CSECT OR SYMBOL symbol-name WAS RECEIVED, BUT THE OLD CSECT OR SYMBOL WAS NOT FOUND.

Explanation: A symbol or csect which does not exist cannot be changed.

System action: Workmod is unchanged.
User response: Correct the symbol name.
Source: Binder
Detecting Module: IEWBEREN

IEW2404E EXPAND LENGTH REQUESTED MORE THAN MAXIMUM TEXT SIZE OF 1 GB.

Explanation: Expand length is greater than 1 GIG, which is the maximum allowed.

System action: Workmod is unchanged.
User response: Reduce expand length to below 1,073,741,824.
Source: Binder
Detecting Module: IEWBEEXP

IEW2405E AN EXPAND REQUEST SPECIFIED CLASS class-name WHICH DOES NOT EXIST IN THE MODULE.

Explanation: Module does not contain text class specified.

System action: The expand request will not be processed.
User response: Ensure the supplied text class name is correct.
Source: Binder
Detecting Module: IEWBEEXP

IEW2406W A REQUEST TO REPLACE symbol-name WAS RECEIVED, BUT THE OLD SYMBOL WAS NOT FOUND.

Explanation: A symbol which does not exist cannot be replaced.

System action: Processing continues.
User response: Supply a correct symbol name.
Source: Binder
Detecting Module: IEWBERPL

IEW2407E A REQUEST TO EXPAND SECTION section-name WAS RECEIVED, BUT THE SECTION WAS NOT FOUND.

Explanation: An EXPAND request was made for a section which does not exist in the target workmod.

System action: The expand request will not be processed.
User response: Ensure that the supplied ‘section name’ is correct.
Source: Binder
Detecting Module: IEWBEEXP

IEW2408E A REQUEST TO EXPAND SECTION section-name WAS RECEIVED, BUT THE SYMBOL WAS NOT A CSECT NAME OR A COMMON SECTION.

Explanation: The section is a type which cannot be expanded. For example, binder-generated sections may not be expanded by user requests.

System action: The expand request will not be processed.
User response: Ensure that the supplied ‘section name’ is valid and not a label name.
Source: Binder
Detecting Module: IEWBEEXP

IEW2409I SECTION section-name HAS BEEN EXPANDED BY number BYTES AT OFFSET section-offset.

Explanation: EXPAND was successful.
System action: Processing continues.
User response: None.
Source: Binder
Detecting Module: IEWBEEXP

IEW2410W COMMON SECTION section-name EXCEEDED SIZE OF CONTROL SECTION WITH IDENTICAL NAME. COMMON SIZE = section-length, CONTROL SECTION SIZE = section-length.

Explanation: A named common area has been encountered which is larger than a control section with the same name.
System action: Control section in workmod will retain its original length.
User response: None.
Source: Binder
Detecting Module:IEWBMERG

IEW2412W AN ALIAS ENTRY REPLACED AN EXISTING ALIAS OF THE SAME NAME.
ALIAS NAME = alias-name

Explanation: An alias name copied from an included module matched and replaced an alias already in the workmod.

System action: The new specification replaces the original.
User response: None.
Source: Binder
Detecting Module:IEWBMERG

IEW2413I SECTION section-name FROM DATASET dsname IS A DUPLICATE AND HAS NOT BEEN ADDED.

Explanation: The Binder always keeps the first section of a given name and discards any duplicates. In most cases, this message reflects normal processing. For example, if a module is relinked in order to replace a section with a newer version of the same section, this message will be issued.

There are cases in which this message is an indication of incorrect input. For example, two unrelated sections may accidently have been given the same name. Another example is if a WSA data item has multiple definitions. In this case, there will be an input section with the name of the data item for each definition. The first copy seen by the binder will be kept. This may result in erroneous results when the program is executed.

This message is only issued if the LIST=ALL binder option is in effect.

System action: Section not added to module.
User response: Ensure that the message is expected.
Source: Binder
Detecting Module:IEWBMERG

IEW2416W SECTION section-name CONFLICTS WITH AN EXISTING EXTERNAL LABEL OF THE SAME NAME.

Explanation: If a label (entry name) exists, it will not be replaced by a section or common area of the same name.

System action: The section will not be added to workmod.
User response: None.
Source: Binder
Detecting Module:IEWBMOVE

IEW2438E INVALID DESCRIPTOR CLASS.

Explanation: The binder can build linkage descriptors only in classes C_WSA, C_WSA64, or B_DESCR and all descriptors must be in the same class. An input module contained a part (represented by a PR ESD record with the indirect flag) having some other resident class.

System action: No linkage descriptors will be built. Processing continues.
User response: If the source code is in a high-level language, this is likely to be a compiler error. Otherwise, correct the source code by changing the resident class of the part.
Source: Binder
Detecting Module:IEWBBIPT

IEW2439E THE AMODE OF THE REFERENCING ESD symbol-name DOES NOT MATCH THAT SPECIFIED ON THE IMPORT STATEMENT

Explanation: When the side-deck is used as input to the bind, any statement not explicitly specifying CODE64 or DATA64 is interpreted as 31-bit (AMODE=31) DLL. This message is issued when an application uses exported symbols from a DLL that is linked, and the AMODE of the referencing ESD does not match the AMODE on the import statement.

System action: Processing continues.
User response: Ensure that the AMODE of the referencing ESD matches what is specified on the import statement.
Source: Binder
Detecting Module:IEWBBIPT

IEW2441E NO LINKAGE DESCRIPTOR FOUND FOR IMPORTED SYMBOL symbol .

Explanation: An import entry cannot be built for the indicated symbol because no linkage descriptor was requested.

System action: The symbol will not be imported.
User response: If the application is coded in a high level language, this message probably indicates a compiler error. Otherwise, correct the source code by adding an ER ESD entry for the symbol with the indirect bit. This will cause a descriptor to be built.
IEW2440E PART DEFINITIONS WITH UNEQUAL LENGTHS EXIST FOR PART part-name.

Explanation: There are duplicate definitions in the input stream for the part named, and the lengths of the part are not equal.

System action: The part with the longest length will be used.

User response: Correct source, recompile, and relink.

Source: Binder
Detecting Module:IEWBBIE

IEW2441I MANGLED NAMES EXIST - UNABLE TO ACCESS DEMangler

Explanation: Mangled names exist, but the binder is unable to access the demangler.

System action: Processing continues.

User response: None.

Source: Binder
Detecting Module:IEWBCDS

IEW2446I OPTION LISTPRIV HAS BEEN REQUESTED, AND UNAMED SECTION(S) EXIST IN CREATED MODULE

Explanation: Option LISTPRIV(INFORM) was specified and one or more unnamed csect(s) exist in this 3525 bind. See the UNAMED SECTIONS report in SYSPRINT for additional 3526 information.

System action: Processing continues.

User response: Determine if output program object should be used.

Source: Binder
Detecting Module:IEWBPAMX

IEW2447E OPTION LISTPRIV HAS BEEN REQUESTED, AND UNAMED SECTION(S) EXIST IN CREATED MODULE.

Explanation: Option LISTPRIV was specified and a private unnamed csect(s) exists in this bind. See the UNAMED SECTIONS report in SYSPRINT for additional information.

System action: Processing continues.

User response: Determine if output program object should be used.

Source: Binder
Detecting Module:IEWBPAMX

IEW2448W NO MODULE WAS PROVIDED FOR CHANGE, REPLACE, OR DELETE REQUESTS.

Explanation: Unprocessed change, replace, or delete requests (generated by CHANGE or REPLACE control statements, or by a function=ALTERW call to IEBBIND) exist. Such requests are always targeted against the next input module, but either autocall is about to begin, or the Binder has just finished processing a file or data set during autocall. Since the next module to be processed has not been designated by the user, the result of processing the requests would be unpredictable. Therefore the requests have been discarded.

System action: Processing continues.

User response: Check placement of change, replace, or delete requests.

Source: Binder
Detecting Module:IEWBRBA

IEW2449E A REPLACE REQUEST HAS BEEN PROCESSED, BUT THE REPLACEMENT SYMBOL symbol-name REMAINS UNRESOLVED.

Explanation: A REPLACE control statement or an ALTERW function call was processed by the Binder, but the replacement symbol was still unresolved following primary input processing. There was either no attempt to autocall the member, due to a NOCALL specification on a LIBRARY control statement, or an attempt to locate a member of the same name in SYSLIB failed.

System action: Processing continues, but the symbol will be unresolved. If the symbol is the name of an alias or primary point, or if the symbol is referenced during execution, the program will fail.

User response: Correct the REPLACE control statement or ALTERW call or make the symbol known to the Binder as a section or external label.

Source: Binder
Detecting Module:IEWBRBA

IEW2450E ERRORS ENCOUNTERED ATTEMPTING TO INCLUDE MEMBER member-name DURING AUTOCALL.

Explanation: The member was found in SYSLIB or other specified call library, but errors were encountered when attempting to include the module. The module may or may not have been included. This message is issued in conjunction with an error message describing the specific problem.
IEW2451E  SYSTEM ACTION: Processing continues, but the symbol may be unresolved.

USER RESPONSE: Recreate the module in error and rerun the job.

SOURCE: Binder

DETECTING MODULE: IEWBBRBA

IEW2451E  SYMBOL symbol WAS SPECIFIED ON INSERT, BUT IT RESOLVED TO A LABEL.

EXPLANATION: The symbol appeared on an INSERT control statement, but resolved to a label (entry name) rather than a CSECT name. Labels cannot be individually positioned within the module.

SYSTEM ACTION: The INSERT statement is ignored. Processing continues.

USER RESPONSE: Change the INSERT statement or correct the module.

SOURCE: Binder

DETECTING MODULE: IEWBBRBA

IEW2452E  SYMBOL symbol WAS SPECIFIED ON INSERT, BUT IT WAS NOT FOUND IN LIBRARY.

EXPLANATION: A symbol specified on an INSERT control statement could not be resolved by autocall processing.

SYSTEM ACTION: The INSERT statement is ignored. Processing continues.

USER RESPONSE: Remove the INSERT statement, or make the module available to the Binder.

SOURCE: Binder

DETECTING MODULE: IEWBBRBA

IEW2453E  UNABLE TO PROCESS LIBRARY ddbname DURING AUTOCALL PROCESSING.

EXPLANATION: The binder was unable to open or otherwise process the specified autocall library. The binder may have been invoked with a passed 'ddname' associated with a UCB address allocated above the 16MB line with NOCAPTURE. The Binder will not process this dataset.

SYSTEM ACTION: Processing continues.

USER RESPONSE: Correct the problem and rerun the job or remove the NOCAPTURE option from the dynamic allocation in the invoking application program. Contact your system programmer.

SOURCE: Binder

DETECTING MODULE: IEWBBRBA

IEW2454W  SYMBOL symbol UNRESOLVED. NO AUTOCALL (NCAL) SPECIFIED. [name-space]

EXPLANATION: The symbol shown was still unresolved following primary input processing and automatic library call processing was suppressed.

If "NAME SPACE n" appears after the message, then the unresolved reference was in and for a name space other than 1. Possible values for name space are:
1. Normal external references and entry points
2. Pseudoregisters
3. Variables and linkage blocks in merge classes such as the Writable Static Area (WSA)

NOTE: A label or variable in one name space cannot be used to resolve a reference in another.

SYSTEM ACTION: Processing continues.

USER RESPONSE: If 'symbol' must be resolved, provide an appropriate INCLUDE control statement or remove the NCAL option.

SOURCE: Binder

DETECTING MODULE: IEWBBRBA

IEW2455W  SYMBOL symbol UNRESOLVED. NOCALL OR NEVERCALL SPECIFIED.

EXPLANATION: The 'symbol' displayed remains unresolved following autocall processing, but was designated 'restricted no call' or 'never call' on a LIBRARY control statement or SETLIB function call.

SYSTEM ACTION: Processing continues.

USER RESPONSE: None.

SOURCE: Binder

DETECTING MODULE: IEWBBRBA

IEW2456E  SYMBOL symbol UNRESOLVED. MEMBER COULD NOT BE INCLUDED FROM THE DESIGNATED CALL LIBRARY.

EXPLANATION: The 'symbol' displayed is not a member name in SYSLIB or in the designated call library, or errors were encountered when attempting to include the module. The symbol remains unresolved.

SYSTEM ACTION: Processing continues.

USER RESPONSE: Correct the reference or make the missing entry available to the Binder by (1) adding the member to SYSLIB, (2) adding an alias of that name to an existing member, (3) INCLUDEing a module which contains the missing entry point, (4) providing a LIBRARY control statement to direct the Binder to a different library during autocall processing, or (5) correct the source of the INCLUDE error.
Correct the symbol reference in the source program or make the missing entry available to the Binder. Making the entry available can include any of the following:

1. Adding the name as an alias or member to in SYSLIB.
2. Providing an AUTOCALL control statement pointing to a library that can resolve the name.
3. INCLUDEing a module that contains the missing entry point.
4. Providing a LIBRARY control statement to direct the Binder to an additional library during final autocall processing.
5. Correcting an existing INCLUDE, AUTOCALL, or LIBRARY control statement.
6. If you are driving the binder from some other program, such as SMP/E or c89, you might need to correct or extend the library specifications you are providing to that program. If such a program generates AUTOCALL statements, they are applied before final autocall processing, and are not used recursively unless the library names are repeated.

Source: Binder
Detecting Module: IEWBRBA

IEW2457E SYMBOL symbol UNRESOLVED. NO CALL LIBRARY SPECIFIED.

Explanation: The 'symbol' displayed remained unresolved following autocall processing. No call library was provided.

System action: Processing continues.
User response: None.
Source: Binder
Detecting Module: IEWBRBA

IEW2458W SYMBOL symbol UNRESOLVED. ALL REFERENCES MARKED NEVERCALL.

Explanation: The symbol shown remains unresolved at the end of autocall processing. Type ER external references to the symbol exist but have been specified as NEVERCALL.

System action: Processing continues.
User response: None.
Source: Binder
Detecting Module: IEWBRBA

IEW2459W INCLUDED MEMBER member-name FAILED TO RESOLVE REFERENCE.

Explanation: The 'member-name' displayed was included during autocall processing, but did not contain a label (entry name) of the same name.

System action: The symbol remains unresolved. Processing continues.
User response: Ensure that the member name and library are correct and that the member contains a section or label which matches the member name.
Source: Binder
Detecting Module: IEWBBRBA

IEW2460E ADCON IN SECTION section-name AND CLASS NAME class-name IS LOCATED BEYOND THE END OF TEXT.

Explanation: While processing an input module, the binder encountered an RLD entry describing an address constant with an element offset greater than the length of the element containing the adcon.

System action: The module is bypassed. Processing continues.
User response: The input RLD data is in error. Recreate the input source and rerun the job.
Source: Binder
Detecting Module: IEWBBUNB

IEW2461I INTFVAL EXIT MESSAGE: message from exit.

Explanation: The interface exit specified for this binder invocation was called and requested that a message be printed.

System action: Processing continues.
User response: None. This is information only.
Source: Binder
Detecting Module: IEWBRBA

IEW2462S INTFVAL EXIT DETECTED SEVERE ERROR. from exit.

Explanation: The interface exit specified for this binder invocation was called and reported that it detected a severe error.

System action: Autocall processing will be terminated. Save or load processing will treat the module as non-executable unless LET=12 was specified.
User response: Check for a previous IEW2461I message for additional information. Check any documentation supplied for the interface validation exit being used.
IEW2463E  MODULE CONTAINS A MIXTURE OF STATIC AND DYNAMIC RESOLUTION REQUESTS FOR [part_name]

Explanation: Some references to the indicated part requested dynamic resolution while others requested static resolution.

System action: The part will not be imported.

User response: Find the input modules which reference the part name and ensure that they are compiled with consistent DLL options.

Source: Binder

Detecting Module: IEWBBRBA

IEW2464E  OVLY OR RMODE(SPLIT) INCOMPATIBLE WITH COMPAT OPTION.

Explanation: One or both of the following conflicts exist:

1. The OVLY option has been specified and COMPAT does not equal PM1. Only PM1 Program objects support Overlay.
2. RMODE(SPLIT) has been specified and COMPAT=PM1. Multiple text classes are supported only in PM2 program objects or later.

System action: The module will be built in non-overlay format.

User response: Ensure the result is what you want. Remove one of the conflicting options.

Source: Binder

Detecting Module: IEWBCDS

IEW2465E  MODULE HAS MORE THAN ONE SEGMENT, BUT OVLY WAS NOT SPECIFIED.

Explanation: An overlay structure was specified with OVERLAY control statement, or STARTS calls, but the OVLY option was off.

System action: The overlay segment structure is ignored. Processing continues.

User response: Specify OVLY=yes, or remove the segment specifications.

Source: Binder

Detecting Module: IEWBBIND

IEW2466S  SECTION section-name SPECIFIED ATTRIBUTES FOR CLASS class-name WHICH CONFLICT WITH THOSE SPECIFIED BY ANOTHER SECTION.

Explanation: Class attributes in an ED ESD record for the indicated section conflict with those in other ED ESD records for this class.

System action: Data belonging to the specified class will not be saved or loaded. If the module is executed, the results are unpredictable.

User response: Probably an error in the source code. Examine the attributes specified for the class in the source code for the section.

Source: Binder

Detecting Module: IEWBBIND

IEW2467E  SYMBOL symbol-name REMAINS UNRESOLVED.

Explanation: This message is issued in addition to IEW2459W if the indicated symbol is still unresolved at the end of autocall.

System action: The symbol is unresolved. Processing continues.

User response: Refer to IEW2459W.

Source: Binder

Detecting Module: IEWBBRBA

IEW2468E  INVALID DYNAMIC RESOLUTION REQUEST FOR symbol-name.

Explanation: [part-name]. One of the following errors was detected:

- A symbol specified for dynamic linkage did not specify either text or data. This information is necessary to build the linkage descriptor in the proper format.
- References to the same part name specify conflicting name spaces.

If the input was a GOFF object module, it is either corrupted or there was an error in the processor that created it. Attempt

System action: A data descriptor will be built.

User response: Find the input modules which reference the symbol and re-build them from the source.

Source: Binder

Detecting Module: IEWBCDS
### IEW2469E  THE ATTRIBUTES OF A REFERENCE TO symbol-name DO NOT MATCH THE ATTRIBUTES OF THE TARGET SYMBOL. REASON reason.

**Explanation:** The interface attributes as indicated by the signatures stored in the ESDs and RLDs do not match. Either the reference was resolved to an incorrect module (which contained a symbol of the same name as the desired module) or there was an error in the source code. The possible values of the reason field are:

1. The ESD signature fields of the reference and target do not match.
2. The xplink attributes of the reference and target do not match.
3. Either the reference or the target is in amode 64 and the amodes do not match.
4. The reference and target are in different name spaces (such as code vs. data).
5. The reference and target disagree as to catenate vs. merge class.

**System action:** The reference is resolved. If LET=8 is specified, the module will be marked executable.

**User response:** Examine the map and xref output to determine if the symbol was resolved to the expected module. Examine the source code for possible errors.

**Source:** Binder

**Detecting Module:** IEWBBARN, IEWBCAD

### IEW2470E  ORDERED SECTION section-name NOT FOUND IN MODULE.

**Explanation:** The 'section name' displayed appeared on an ORDER control statement or in the ORDERS function call, but does not appear as the name of a control section in the module.

**System action:** Ordering is ignored for the section. Processing continues.

**User response:** Remove the order request, or make the section available to the Binder.

**Source:** Binder

**Detecting Module:** IEWBBARN

### IEW2471E  ALIGNED SECTION section-name NOT FOUND IN MODULE.

**Explanation:** The 'section name' displayed appeared on a PAGE control statement or in the ALIGNT function call, but does not appear as the name of a control section in the module.

**System action:** Alignment is ignored for the symbol. Processing continues.

**User response:** Remove the align request, or make the section available to the Binder.

**Source:** Binder

**Detecting Module:** IEWBBARN

### IEW2472S  OVERLAY FORMAT MODULE HAS A ZERO LENGTH ROOT SEGMENT.

**Explanation:** The root segment of an overlay module has no sections in the root segment, or only zero-length sections.

**System action:** Processing continues. However, the output module will not execute correctly.

**User response:** Do not use OVLY, or change the overlay structure so that the root segment is not empty.

**Source:** Binder

**Detecting Module:** IEWBCAD

### IEW2473E  INVALID THREE BYTE VCON WAS FOUND IN SECTION section-name OF OVERLAY MODULE.

**Explanation:** A V-type address constant of less than four bytes has been found in an overlay structure.

**System action:** The V-type address constant will not be properly relocated. Processing continues.

**User response:** Specify a length of four bytes for all V-type address constants in an overlay program.

**Source:** Binder

**Detecting Module:** IEWBCOV

### IEW2474I  LIBRARY RENAME MODULE module_name COULD NOT BE LOADED OR IS NOT THE CORRECT VERSION.

**Explanation:** The load for the C/C++ library rename module (EDCRNLST) failed. C/C++ library routines will not be renamed.

**System action:** C/C++ library routines will not be renamed. Processing continues, but some references may be unresolved.

**User response:** Ensure that the module named in the message is in STEPLIB or one of the data sets in the system search order for the LOAD SVC.

**Source:** Binder

**Detecting Module:** IEWBBARN

### IEW2475W  THERE IS A VALID EXCLUSIVE CALL FROM section-name TO section-name. XCAL WAS SPECIFIED.

**Explanation:** A valid branch-type reference was made from a segment to a symbol in an exclusive segment. XCAL was specified.
System action: Processing continues.
User response: No response normally necessary.
Source: Binder
Detecting Module: IEWBBCOV

IEW2476E THERE IS AN INVALID EXCLUSIVE CALL FROM section-name TO section-name.

Explanation: An invalid branch-type reference was made from the 'section-name' displayed in one segment to another 'section-name' displayed in an exclusive segment.

System action: The V-type address constant will not be properly relocated. Processing continues.
User response: Either place the sections in the same path, or place a V-type address constant in a common segment.
Source: Binder
Detecting Module: IEWBBCOV

IEW2477W OVERLAY OPTION CANCELLED BECAUSE THE MODULE HAS ONLY ONE SEGMENT.

Explanation: Overlay function has no meaning in this case because the module contains only a root segment. Overlay control structures will not be generated.

System action: Processing continues.
Source: Binder
Detecting Module: IEWBBCOV

IEW2478E THERE IS A VALID EXCLUSIVE CALL FROM section-name TO section-name, BUT XCAL WAS NOT SPECIFIED.

Explanation: A valid branch-type reference was made from 'section-name' in a segment to a symbol in 'section-name', which is in an exclusive segment. XCAL was not specified.

System action: Processing continues.
User response: Check that overlay structure is what was desired. If so, relink with XCAL specified. Otherwise, rearrange the overlay structure so both segments are in the same path.
Source: Binder
Detecting Module: IEWBBCOV

IEW2479E OVERLAY FORMAT MODULE HAS NO CALLS OR BRANCHES FROM THE ROOT SEGMENT.

Explanation: There are no calls or branches from the root segment to a segment lower in the tree structure. Other segments cannot be loaded.

System action: Processing continues.
User response: Make sure the root segment contains a section that refers to at least one other segment in the overlay structure by means of a V-type address constant.
Source: Binder
Detecting Module: IEWBBCOV

IEW2480W EXTERNAL SYMBOL symbol OF TYPE ESD-type WAS ALREADY DEFINED AS A SYMBOL OF TYPE ESD-type IN SECTION section-name.

Explanation: An external symbol, 'symbol', matches the name of a symbol which was already defined.

System action: The current external symbol is removed from workmod. All references to the symbol will be resolved to the previous instance.
User response: Check input source.
Source: Binder
Detecting Module: IEWBNAME

IEW2481E THE INSTRUCTION ADDRESS OR THE TARGET ADDRESS IN CLASS class_name AT OFFSET class_offset IS NOT EVEN.

Explanation: It is a hardware restriction that the target address of a relative-immediate instruction, or the location of any instruction, must be an even address.

System action: The relative-immediate or long-displacement address will not be relocated. Processing continues.
User response: Ensure that the current instruction address or the target address of the current instruction resolves to an even address.
Source: Binder
Detecting Module: IEWBBUPA

IEW2482W THE ORIGINAL DEFINITION WAS IN A MODULE IDENTIFIED BY ddname. THE DUPLICATE DEFINITION IS IN section IN A MODULE IDENTIFIED BY ddname.

Explanation: An external symbol matches the name of a symbol which was already defined. This message is additional information for the condition reported by the
System action: The current external symbol is removed from workmod. All references to the symbol will be resolved to the previous instance.

User response: Check input source.

Source: Binder

Detecting Module: IEWBNAM

IEW2484W  CLASS class-name USABILITY ATTRIBUTE OF usability-attribute-1 IN SECTION section-name CONFLICTS WITH REQUESTED USABILITY OF usability-attribute-2.

Explanation: The reusability for the named element was less than that specified explicitly for reusability on a binder option.

System action: The class is given the reusability attribute specified in the JCL.

User response: Change the reusability option (RENT, REUS, etc.) in the source or on the binder option so that the attributes are consistent.

Source: Binder

Detecting Module: IEWBBIND

IEW2485E  INITIALIZING DATA FOR PART partname IS LONGER THAN PART.

Explanation: The initial data for a part extends beyond the end of the part.

System action: Processing continues. The initializing data will be truncated.

User response: This is probably a compiler error or damaged input module. Rebuild the input from the source or object.

Source: Binder

Detecting Module: IEWBBIPT

IEW2486W  EXTERNAL SYMBOL symbol OF TYPE esd-type WAS ALREADY DEFINED AS A SYMBOL OF TYPE esd-type IN SECTION section-name.

Explanation: The symbol specified as an external symbol, defined in the section currently being processed, had a definition in an earlier input for this bind. This message has additional information following it in IEW2487W.

System action: All references to the symbol will be resolved to the original definition.

User response: Correct source, recompile, and relink.

Source: Binder

Detecting Module: IEWBNAM

IEW2487W  THE ORIGINAL DEFINITION WAS IN A MODULE IDENTIFIED BY DDNAME ddname. THE DUPLICATE DEFINITION IS IN SECTION section-name IN A MODULE IDENTIFIED BY DDNAME ddname.

Explanation: An external symbol, defined in the section currently being processed, had a definition in an earlier input for this bind. This message is additional information for the condition reported by the preceding message IEW2486W.

User response: Correct source, recompile, and relink.

Source: Binder

Detecting Module: IEWBNAM

IEW2488E  EXTERNAL SYMBOL symbol OF TYPE esd-type WAS ALREADY DEFINED AS A SYMBOL OF TYPE esd-type IN SECTION section-name.

Explanation: The symbol specified as an external symbol, defined in the section currently being processed, had a definition in an earlier input for this bind. This message has additional information following it in IEW2489E.

System action: All references to the symbol will be resolved to the original definition.

User response: Correct source, recompile, and relink.

Source: Binder

Detecting Module: IEWBNAM

IEW2489E  THE ORIGINAL DEFINITION WAS IN A MODULE IDENTIFIED BY DDNAME ddname. THE DUPLICATE DEFINITION IS IN SECTION section-name IN A MODULE IDENTIFIED BY DDNAME ddname.

Explanation: An external symbol defined in the section currently being processed, had a definition in an earlier input for this bind. This message is additional information for the condition reported by the preceding message IEW2488E.

System action: All references to the symbol will be resolved to the original definition.

User response: Correct source, recompile, and relink.

Source: Binder

Detecting Module: IEWBNAM
IEW2490E  LINKAGE DESCRIPTORS MAY NOT BE CORRECT. symbol-name IS UNRESOLVED.

Explanation: A routine that may be needed to correctly create some of the linkage descriptors for this program is not available.

System action: Processing continues, but the resulting module may not execute correctly. If LET=8 is specified, the module will be marked executable.

User response: Inspect the binder XREF output for references to the unresolved symbol. Ensure that CALL=YES was used as a processing option and that the correct libraries were specified for autocall.

Source: Binder
Detecting Module: IEWBBIPT

IEW2491E  CLASSES C_WSA AND C_WSA64 ARE BOTH PRESENT IN THE MODULE.

Explanation: Both C_WSA and C_WSA64 are defined classes in the module and are not empty. z/OS Language Environment does not support the presence of classes C_WSA and C_WSA64 in the same program object.

System action: Processing continues but the resulting module will not execute correctly.

User response: The problem is usually caused by a mixture of amode 64 and non-amode 64 LE-enabled input modules. Check that the correct input modules and libraries are specified.

Source: Binder
Detecting Module: IEWBBUPE

IEW2492E  THE OPERAND OF THE INSTRUCTION IN CLASS class_name AT OFFSET class_offset EXCEEDS THE DESTINATION RANGE.

Explanation: The relative immediate instructions provide a 2 byte or 4 byte immediate operand. For 2 byte operands, the instruction provides a destination range that is −64K to 64K from the current instruction. For 4 byte operands, the instruction provides a destination range that is −4G to +4G from the current instruction. For the long-displacement instructions, the final displacement of an offset constant exceeds the field width range (-512K to 512K-1) or has targets in two different load segments.

System action: The relative-immediate or long-displacement address will not be relocated. Processing continues.

User response: Based on the length of the operand or the final displacement of an offset constant, ensure the operand or the final displacement to be within the destination range of the current instruction. For long-displacement instructions, ensure all target symbols are in the same load segment.

Source: Binder
Detecting Module: IEWBBIND

IEW2493E  A RELATIVE REFERENCE WITH MULTIPLE EXTERNAL SYMBOLS WAS ENCOUNTERED AT OFFSET offset IN CLASS class_name, SECTION section_name.

Explanation: A relative immediate instruction with multiple external symbols in their operands was encountered. For relative immediate reference, only one external symbol is supported.

System action: Processing continues.

User response: Do not use more than one external symbol when using relative immediate reference.

Source: Binder
Detecting Module: IEWBBUPE

IEW2494E  A PROBLEM WAS ENCOUNTERED WITH THE SETUP OF THE DIGITAL CERTIFICATES REQUIRED FOR CODE SIGNING. RACF RETURNED SAF RETURN CODE aaaa RACF RETURN CODE bbbb RACF REASON CODE cccc

Explanation: RACF SIGINIT call failed with the indicated reason and return code. The reason and return codes indicate a probable certificate setup error. The codes are documented in the manual z/OS Security Server RACF Callable Services.

System action: Module is built without the signature section. Sign bit not set.

User response: Correct the problem indicated by the RACF reason and return code.

Source: Binder
Detecting Module: IEWBBIND

IEW2500E  ESD TYPE ESD-type FOR ESD NAME ESD-name WITHIN MEMBER member-name IDENTIFIED BY DDNAME ddname IS NOT VALID.

Explanation: An invalid ESD type was found within an object module being included from the data set identified by 'ddname'.

System action: The object module containing the invalid ESD will not be added to workmod.

User response: The object module containing this section is invalid. Either obtain a valid copy or recreate the module from the source code.
Source: Binder
Detecting Module:IEWBBIPT

**IEW2501E**

**XSD INPUT RECORD CAN NOT BE PROCESSED**

**Explanation:** The input object module requires C-style writable static (WSA). Either the module is invalid, or an output format which does not support this function was requested.

**System action:** The object module will not be processed.

**User response:** Ensure that the COMPAT option is defaulted or specified as at least PO3 level, and that the first record of the input module contains @@DOPLNK.

Source: Binder
Detecting Module:IEWBXCOF

**IEW2502E**

**PSEUDO REGISTER ALIGNMENT align-code FOR ESD NAME pseudo-reg-name WITHIN MEMBER member-name IDENTIFIED BY DDNAME ddname IS NOT A VALID VALUE.**

**Explanation:** The specified pseudo register alignment is invalid.

**System action:** The input module containing this invalid section will not be added to workmod.

**User response:** The input module is invalid. Either obtain a valid copy or recreate the module from the source code.

Source: Binder
Detecting Module:IEWBXWRD

**IEW2503E**

**RLD TYPE RLD-type WITHIN MEMBER member-name IDENTIFIED BY DDNAME ddname IS NOT A VALID VALUE. RLD ENTRY NOT ADDED.**

**Explanation:** RLD type is not one of the valid values. They are branch, non-branch, vcon, qcon or cxd.

**System action:** The input module containing this invalid section will not be added to workmod.

**User response:** The input module containing this section is corrupted. Either obtain a valid copy or recreate the module from the source code.

Source: Binder
Detecting Module:IEWBXWRD

IEW2504W

**ESD NAME esd-name WITHIN MEMBER member-name IDENTIFIED BY DDNAME ddname WAS TRUNCATED.**

**Explanation:** The ESD name displayed contains one or more imbedded blanks.

**System action:** Processing continues. The ESD name is truncated at the first blank.

**User response:** References to the name may not be resolved properly. The truncated name may result in duplicate names.

Source: Binder
Detecting Module:IEWBXWRRD,IEWBXCOF

**IEW2505E**

**ESDID number OF THE CURRENT LOAD MODULE HAS A NEGATIVE TEXT LENGTH.**

**Explanation:** The text length in the load module control record is negative. Length is part of the control data in columns 16-255 of the record.

**System action:** The load module is discarded.

**User response:** Check the load module being included to determine if it is in error. If so, it must be recreated.

Source: Binder
Detecting Module:IEWBXCRW

**IEW2506E**

**UNSUPPORTED AMODE FOR ESD NAME symbol WITHIN MEMBER member IDENTIFIED BY DDNAME ddname.**

**Explanation:** The AMODE attribute associated with the indicated ESD entry in the current input module is not supported by the binder. The binder does not support AMODE ANY64.

**System action:** The indicated object module will not be included in the program module being built by the binder.

**User response:** Modify the source program to specify an AMODE supported by the binder.

Source: Binder
Detecting Module:IEWBXGOF,IEWBXWRD

**IEW2507W**

**ONE OR MORE FIELD DESCRIPTORS IN SYM RECORD sym-record-image WITHIN MEMBER member-name IDENTIFIED BY DDNAME ddname ARE NOT VALID. REST OF RECORD IMAGE WAS NOT USED.**

**Explanation:** An invalid SYM field descriptor was encountered when including an object module or load.
module, identified by 'member-name'.

System action: Rest of the record is not used.

User response: Check the object or load module being included.

Source: Binder

Detecting Module: IEWBXWRD

IEW2508S MODULE member-name IDENTIFIED BY DDNAME ddname IS NOT A VALID PROGRAM OBJECT. CODE nn

Explanation: Input module is not a valid program object, despite being identified as such.

The code is primarily intended for service personnel, but code 1 probably indicates that a z/OS UNIX System Services program object has been copied to a PDSE using binary OGET. This is not supported.

System action: The invalid program object will be skipped.

User response: The program object is invalid. Either obtain a valid copy or recreate the module from the source code. If the recreated module has the same problem, open a problem report providing the complete message.

Source: Binder

Detecting Module: IEWBXCLW, IEWBXCPW, IEWBXCRW

IEW2511E TOTAL ESD CONTROL RECORD LENGTH length exceeds CCW LENGTH ccw_length.

Explanation: The total of all text lengths in the load module control records exceeds the value in the load module control record count field. Text length is part of the control data in columns 16-255 of the record.

System action: The load module is discarded.

User response: Check the load module being included. It must be recreated.

Source: Binder

Detecting Module: IEWBXCRW

IEW2512E ESD NAME ESD-type WITHIN MEMBER member-name IDENTIFIED BY DDNAME ddname IS NOT VALID.

Explanation: The object module or load module currently being processed as input contains an invalid name in an ESD record. The name either contains invalid characters or is a duplicate of the name in another ESD record.

System action: The input module containing this ESD will not be added to workmod.

User response: The input module containing this ESD is invalid. Either obtain a valid copy or recreate the module from the source code.

Source: Binder

Detecting Module: IEWBXWRD

IEW2513E FILL CHARACTER FOR SECTION section-name CLASS class-name CONFLICTS WITH AN EARLIER FILL SPECIFICATION FOR THE SAME CLASS.

Explanation: Two input ESD records for a class specify different fill characters.

System action: The first fill character found for this class will be used.

User response: Correct the fill character.

Source: Binder

Detecting Module: IEWBBIND
IEW2515W DIRECTORY ENTRY FOR MEMBER member-name IDENTIFIED BY DDNAME ddname IS NOT MARKED AS LOAD MODULE.

Explanation: The PDS member has RECFM=U but the directory entry indicates that it is not a load module.

System action: Directory information is not available. The load module will be processed as a sequential data set.

User response: Check INCLUDE statements and library content.

Source: Binder
Detecting Module: IEWBXCRW

IEW2516W MODULE ATTRIBUTES REQUESTED FOR MEMBER member-name IDENTIFIED BY DDNAME ddname. DIRECTORY READ ERROR OR DIRECTORY NOT AVAILABLE.

Explanation: The binder could not access the directory of the specified load module because it was not available (probably because it is being processed as a sequential data set) or an I/O error was encountered during access.

System action: Default attributes will be used.

User response: To get other than default attributes, ensure that the data set is opened with DSORG=PO, not PS.

Source: Binder
Detecting Module: IEWBXCRW

IEW2517W ADDITIONAL RECORDS FOUND AFTER THE END OF MODULE IN MEMBER member-name IDENTIFIED BY DDNAME ddname.

Explanation: The member contains additional records after the record which indicated end of load module.

System action: The extraneous records are ignored.

User response: Check load module being included.

Source: Binder
Detecting Module: IEWBXCRW

IEW2518W IDRL IMAGE IDRL-image DOES NOT CONTAIN A VALID ESD IDENTIFIER.

Explanation: Translator identification entry IDRL has an ESD identifier which is not defined in the ESD or CESD for this input module.

System action: The translator identification record is not kept. The load module or program object that is created is executable and may be included for subsequent binds.

User response: Check the IDR data in the input load module or program object.

Source: Binder
Detecting Module: IEWBXCRW

IEW2519W IDRU IMAGE IDRU-image, DOES NOT CONTAIN A VALID ESD IDENTIFIER OR THE DATA LENGTH IS GREATER THAN 46.

Explanation: A user identification entry in an input load module or program object is incorrect. Either the ESD identifier is not defined in the CESD of the input module or the data length is too large.

System action: The user identification record is not kept.

User response: Check the IDR data in the input load module.

Source: Binder
Detecting Module: IEWBXCRW

IEW2520W IDRZ IMAGE IDRZ-image DOES NOT CONTAIN A VALID ESD IDENTIFIER.

Explanation: Zap identification entry contains an ESD identifier which is not defined in the CESD of the input load module.

System action: The zap identification entry is not kept.

User response: Check the zap data in the input load module.

Source: Binder
Detecting Module: IEWBXCRW

IEW2521W THE LENGTH OF SYM RECORD sym-record-image IS NOT A MULTIPLE OF 80.

Explanation: SYM record length can only be 80, 160 or 240.

System action: The load module will not be added to workmod.

User response: Check the sym records in the input load module.

Source: Binder
Detecting Module: IEWBXCRW
IEW2522E  MEMBER member-name IDENTIFIED BY DDNAME ddname WITH CONCATENATION NUMBER number IS NOT A LOAD MODULE.

Explanation: The load module being included has invalid data. The current record is not a valid record type in a load module.

System action: The module cannot be processed. It is not included.

User response: Check specification of data set in JCL. Check for a missing member name in the INCLUDE control statement or in the DD statement, or a missing MEMBER parameter in an INCLUDE call to IEWBIND. If these appear to be correct, the input load module may need to be recreated.

Source: Binder
Detecting Module: IEWBXCRW

IEW2523E  MEMBER member-name IDENTIFIED BY DDNAME ddname IS NOT AN EDITABLE MODULE AND CANNOT BE INCLUDED.

Explanation: The specified input load module or program object was created with the 'not editable' attribute, so it cannot be re-bound or included as part of a bind step.

System action: The load module or program object is not included.

User response: Recreate the input module, allowing EDIT to default to YES.

Source: Binder
Detecting Module: IEWBXCRW, IEWBXCLW, IEWBXCPW

IEW2524E  MEMBER member-name IDENTIFIED BY DDNAME ddname CANNOT BE INCLUDED BECAUSE IT IS NOT EDITABLE AND IS IN SCATTER FORMAT.

Explanation: The specified input module was created with the not-editable and scatter-loadable attributes. This module cannot be processed by the binder. It may not be re-bound or included with INTENT=ACCESS.

System action: The module is not included.

User response: Recreate the input load module, allowing EDIT to default to YES.

Source: Binder
Detecting Module: IEWBXCRW

IEW2525E  END OF MEMBER member-name IDENTIFIED BY DDNAME ddname FOUND BEFORE AN END OF MODULE TEXT CONTROL RECORD.

Explanation: When processing an input load module, end of file was read before the end-of-text control record.

System action: The load module is not included.

User response: Check the load module being included. It appears to be truncated and may need to be recreated.

Source: Binder
Detecting Module: IEWBXCRW

IEW2526E  RECORD IMAGE record-image IN MEMBER member-name IDENTIFIED BY DDNAME ddname, DOES NOT CONTAIN A VALID RECORD TYPE.

Explanation: The first byte of the identified record is not a valid record type for a load module.

System action: The load module is not included.

User response: Check the data set and member being included. The load module may need to be recreated.

Source: Binder
Detecting Module: IEWBXCRW

IEW2527E  DATA SET ddname IS NOT A LIBRARY. ALIASES CANNOT BE RETRIEVED.

Explanation: Since the directory entries are not available, aliases cannot be retrieved from members read in sequentially.

System action: Aliases are not included from the identified load module or program object.

User response: Specify the module as a member of a program library. INCLUDE control statement should read INCLUDE ddname (MEMBER membername). Member name should not appear on the DD statement.

Source: Binder
Detecting Module: IEWBXROO

IEW2528E  DATA SET ddname IS NOT A LIBRARY. ATTRIBUTES CANNOT BE RETRIED.

Explanation: Since the directory entries are not available, attributes cannot be retrieved from members read in sequentially.

System action: Attributes will not be copied from the input load module. Default attributes will be used.

User response: Specify the module as a member of a
program library. INCLUDE control statement should read INCLUDE ddname (MEMBER membername). Member name should not appear on the DD statement.

Source:  Binder
Detecting Module:  IEWBXROO

IEW2529S  THE RECORD LENGTH FOR DDNAME ddname IS NOT VALID.

Explanation:  A fixed length file does not have LRECL of 80. Object modules and/or control statements must have a logical record length of 80.

System action:  The object modules or control statements are not processed.

User response:  Check JCL. Ensure that the correct data set is specified and correct the DCB parameters if necessary.

Source:  Binder
Detecting Module:  IEWBXROO

IEW2530E  MODULE member-name IDENTIFIED BY DDNAME ddname CONTAINS AN LD WHICH REFERENCES AN INVALID SECTION IDENTIFIER esd-id.

Explanation:  An ESD entry for a label (entry name) or associated with text in an input load module or object module contains a reference to a non-existent section.

System action:  Module is not included.

User response:  Check module being included. It contains invalid data, and may need to be recreated.

Source:  Binder
Detecting Module:  IEWBXWRE

IEW2531E  MODULE member-name IDENTIFIED BY DDNAME ddname CONTAINS AN ESD IDENTIFIER esd-id WITH AN INVALID REFERENCE.

Explanation:  An ESD entry in an input load module or object module contains an invalid ESDID.

System action:  Module is not included.

User response:  Check module being included. It contains invalid data and may need to be recreated.

Source:  Binder
Detecting Module:  IEWBXWRE

IEW2532E  MODULE member-name IDENTIFIED BY DDNAME ddname CONTAINS REFERENCES TO SECTION IDENTIFIER esd-id WHICH IS NOT A VALID SECTION.

Explanation:  ESD entries in the input load module or object module contain references to a section which does not exist.

System action:  Module is not included.

User response:  Check module being included. It contains invalid data and may need to be recreated.

Source:  Binder
Detecting Module:  IEWBXWRE

IEW2533S  BINDER HAS ENCOUNTERED A CLOSE OR DIV UNMAP ERROR.

Explanation:  System services for CLOSE or DIV unmapping has returned with a non-zero return code.

System action:  The file involved may be unusable.

User response:  Check other system messages which may indicate files involved and the cause of the failure.

Source:  Binder
Detecting Module:  IEBXR00

IEW2534E  MODULE member-name IDENTIFIED BY DDNAME ddname CONTAINS AN INVALID RLD RESIDENT IDENTIFIER esd-id.

Explanation:  The object module or load module being included contains an RLD entry with an invalid residence id.

System action:  Module is not included.

User response:  Check module being included. It contains invalid data and may need to be recreated.

Source:  Binder
Detecting Module:  IEWBXWRE

IEW2535E  MODULE member-name IDENTIFIED BY DDNAME ddname CONTAINS AN INVALID RLD TARGET IDENTIFIER esd-id.

Explanation:  A load module or object module being included contains an RLD with an invalid target ID.

System action:  Module is not included.

User response:  Check module being included. It contains invalid data and may need to be recreated.

Source:  Binder
Detecting Module:  IEWBXWRE
IEW2537W  MODULE member-name IDENTIFIED BY DDNAME ddname REFERENCES SECTION IDENTIFIER esd-id WHICH DOES NOT CONTAIN A VALID SD.

Explanation: A load module or object module being included contains invalid SYM entries. (They reference a non-existent section).

System action: SYM data will be associated with the module as a whole.

User response: Check module being included. It contains invalid data.

Source: Binder
Detecting Module: IEWBXWRE

IEW2538E  MODULE member-name IDENTIFIED BY DDNAME ddname ATTEMPTED TO ADD TEXT TO SECTION esd-id WHICH DOES NOT EXIST.

Explanation: A load module or object module being included contains text associated with an invalid ESD ID.

System action: The module is not included.

User response: Check module being included. It contains invalid data and may need to be recreated.

Source: Binder
Detecting Module: IEWBXWRE

IEW2539E  MODULE member-name IDENTIFIED BY DDNAME ddname CONTAINS NO VALID ESD RECORDS.

Explanation: A load module or object module being included contains no valid ESD records.

System action: The module is not included.

User response: Check module being included. It contains invalid data and may need to be recreated.

Source: Binder
Detecting Module: IEWBXWRE

IEW2540W  THERE IS NOTERNAL ENTRY FOR ALIAS alias-name AT OFFSET offset. ALIAS WAS NOT INCLUDED.

Explanation: An attempt was made to accept an alias from an included load module. The entry point of the alias did not point to an external symbol.

System action: The alias was not included.

User response: Correct the source so that entry point specification designates a location with a valid external entry name.

Source: Binder

Detecting Module: IEWBXCLW, IEWBXCPW

IEW2541S  MEMBER member-name IDENTIFIED BY DDNAME ddname WITH CONCATENATION NUMBER concatenation CONTAINS A BLOCK OF SIZE block-size WHICH IS LONGER THAN THE DATA SET BLKSIZE.

Explanation: A load module being included contains a block which is longer than the PDS BLKSIZE.

System action: Module is not included.

User response: An override BLKSIZE may be coded on the DD statement. To permanently increase the BLKSIZE of the data set, the override must be used when writing to the data set.

Source: Binder
Detecting Module: IEWBXCRW

IEW2542E  MEMBER member-name IDENTIFIED BY DDNAME ddname CONTAINS A CONTROL/ESD ITEM WHICH REFERENCES SECTION section_name AT A NEGATIVE OFFSET FROM THE ESD DEFINITION.

Explanation: Text was found in an input load module or program object that was positioned before the start of its containing section.

System action: The load module or program object identified by the displayed ddname and member name has been discarded.

User response: The load module or program object was either created in error or has since been corrupted (possibly by a utility program). Contact appropriate support personnel and recreate the load module or program object.

Source: Binder
Detecting Module: IEWBXCLW, IEWBXWRE

IEW2543W  MEMBER member-name IDENTIFIED BY DDNAME ddname WITH CONCATENATION NUMBER concatenation CONTAINS A CONTROL RECORD WITH A COUNT FIELD OF count WHICH IS NOT EQUAL TO THE PHYSICAL RECORD LENGTH record-length IN THE LOAD MODULE.

Explanation: For an included load module, the count field in the CCW of a control record does not equal the length of a succeeding text record in the load module on DASD.

System action: Processing continues.
User response: Check the return and reason codes and correct the problem if user controlled.

Source: Binder

Detecting Module: IEWBXCRW

**IEW2544E** MEMBER member-name IDENTIFIED BY DDNAME ddname WITH CONCATENATION NUMBER concatenation CONTAINS AN IDR RECORD WITH AN INVALID LENGTH.

Explanation: For an included load module, the length field in the IDR must have a value between 6 and 255.

System action: The load module identified has been discarded. The load module was either created in error or has since been corrupted.

User response: Recreate the load module.

Source: Binder

Detecting Module: IEWBXCRW

**IEW2550E** THE END RECORD OF THE CURRENT OBJECT MODULE CONTAINS AN INVALID ENTRY POINT IDENTIFIER.

Explanation: The object module END record is invalid. It contains an ESD ID which is not defined in the ESD records for this module.

System action: The entry point information from the END record is not used in the determination of the module entry point.

User response: Check the object module END record. The object module may need to be rebuilt from the source.

Source: Binder

Detecting Module: IEWBXCOF

**IEW2551E** THE ENTRY NAME symbol ON THE CURRENT OBJECT MODULE END RECORD IS NOT A DEFINED NAME IN THIS MODULE.

Explanation: The object module END record is invalid. It contains an entry name which does not appear in the ESD records for this module.

System action: The entry point information from the END record is not used in the determination of the module entry point.

User response: Check the object module END record. The object module may need to be rebuilt from the source.

Source: Binder

Detecting Module: IEWBXCOF

**IEW2552E** RECORD NUMBER number OF THE CURRENT OBJECT MODULE HAS AN INVALID LENGTH FIELD.

Explanation: The length field in the object module record is invalid. The length field is columns 11 thru 12 of the record.

System action: The ESD or TEXT record will not be included.

User response: Check the object record indicated. The object module is invalid and may need to be rebuilt from source.

Source: Binder

Detecting Module: IEWBXCOF, IEWBXR00

**IEW2553E** RECORD NUMBER number OF THE CURRENT OBJECT MODULE REFERS TO UNKNOWN ESID number.

Explanation: An object record references an ESD ID which has not yet been defined by an ESD entry.

System action: The module will not be included.

User response: Check the object record indicated. Check prior messages for rejected ESDs. The object module is invalid and may need to be rebuilt from source.

Source: Binder

Detecting Module: IEWBXCOF

**IEW2554E** RECORD NUMBER number OF THE CURRENT OBJECT MODULE IS OF AN UNKNOWN TYPE.

Explanation: Object module contains a record whose type identifier is not ESD, SYM, RLD, TXT, or END. This identifier should be in columns 2 thru 4 of the record.

System action: The module will not be included.

User response: Check the object record indicated. It contains invalid data and may need to be recreated from the source.

Source: Binder

Detecting Module: IEWBXCOF

**IEW2555E** END OF OBJECT MODULE FOUND BEFORE END RECORD.

Explanation: End of file encountered before END record for object module.

System action: The object module will not be processed. Workmod is unchanged.

User response: Check the object file. It appears to have been truncated.
IEW2556W  RECORD NUMBER number OF THE CURRENT OBJECT MODULE HAS AN INVALID OBJECT IDENTIFIER IN COLUMN 1.

Explanation:  Object module records are required to have X'02' in column 1.

System action:  The record in error will be skipped.

User response:  Check the object module. Blank records or control statement records inside an object module will result in this error message. Control statements should be positioned before or after the object module.

Source:  Binder

Detecting Module:  IEWBXCOF

IEW2557W  THE LABEL NAME label ON THE ESD RECORD WITH SEQUENCE sequence_number WITHIN MEMBER member_name IDENTIFIED BY DDNAME ddname WAS PREVIOUSLY DEFINED. THE LABEL DEFINITION IS DISCARDED.

Explanation:  The label name is already defined so this label will be discarded.

System action:  The label definition is ignored.

User response:  Check the object module. Control statements should be positioned before or after the object module.

Source:  Binder

Detecting Module:  IEWBXCOF

IEW2558W  THE SECTION NAME section_name ON THE ESD RECORD WITH SEQUENCE sequence_number WITHIN MEMBER member_name IDENTIFIED BY DDNAME ddname WAS PREVIOUSLY DEFINED AS A LABEL. THE SECTION IS DISCARDED.

Explanation:  Section name was defined as a label. It is discarded.

System action:  The section name is discarded.

User response:  Check the object module. Control statements should be positioned before or after the object module.

Source:  Binder

Detecting Module:  IEWBXCOF

IEW2559S  Included program object name is marked as compressed but cannot be decompressed. Reason code

Explanation:  This message will be produced if an existing program object is found to be compressed invalidly, or compressed using an algorithm not supported by the version of the binder that is trying to decompress it. Reason codes are:

20:  Compressed by a newer version of the binder, using an algorithm not recognized by the current binder.
21:  Internal buffer size error.
22:  Internal compression dictionary error
23:  Insufficient storage for decompression, either as a data space or 31-bit storage.
24:  Program object is invalid.

System action:  The program object will not be included, and references to it will remain unresolved.

User response:  Rebind the named file from its components, or obtain a more recent level of the binder for the current bind.

Source:  Binder

Detecting Module:  IEWBXCOF

IEW2603I  Compression requested, but no savings was realizable. Reason code

Explanation:  COMPRESS=YES was specified as an option, but the object could not be compressed for one of the following reasons specified by code:

11:  Compressing the code would not save any space.
12:  Insufficient storage was available to allocate buffers needed for compression.
13:  The compression dictionary in use did not support this particular program object.

System action:  The operation will continue, and the resulting object will be stored in uncompressed format.

User response:  To eliminate the message remove the COMPRESS=YES option.

Source:  Binder

Detecting Module:  IEWBXCOF

IEW2604W  Compression is not supported for a version program object.

Explanation:  This message, with an appropriate version identifier inserted, will be produced when COMPRESS=YES is specified as an option, and one of the following is true:

- An overlay structure is used.
A COMPAT value is specified that will force compatibility with a version earlier than z/OS V2R7.

System action: The operation will continue, and the resulting object will be stored in uncompressed format.

User response: To eliminate the message either remove the COMPRESS=YES option or the specified COMPAT value.

Source: Binder

Detecting Module: IEWBXZIP

IEW2605W SCATTER OPTION INVALID FOR PROGRAM OBJECT.

Explanation: SCTR = YES is not supported for program objects.

System action: The program object will not have the scatter-loadable attribute.

User response: Remove scatter option or specify a PDS program library for SYSLMOD.

Source: Binder

Detecting Module: IEWBXCDL

IEW2606S MODULE INCORPORATES feature_level FEATURES AND CANNOT BE SAVED IN format_level FORMAT.

Explanation: An attempt is being made to save a module in a format that is incompatible with the features being used. Certain characteristics of the module, such as symbol length or special classes, prevent it from being saved in the specified format. In the message text:

feature_level
The "VERSION n PROGRAM OBJECT" or "Z/OS V1Rn PROGRAM OBJECT": The first form is used for features introduced in OS/390 releases, and corresponds to PM numbers as defined by the COMPAT option.

format_level
Can be "LOAD MODULE," "VERSION n PROGRAM OBJECT," or "A Z/OS V1Rn COMPATIBLE PROGRAM OBJECT." A load module is stored in a standard PDS (DSNTYPE=PDS). A program object is stored in a LIBRARY or HFS file. The "VERSION n" form is used as described for feature_level.

System action: The load module or program object cannot be saved.

User response: Correct by (1) changing the target library (for example, SYSLMOD) to be of DSNTYPE=LIBRARY or HFS, and/or (2) removing the COMPAT option or changing it to specify a more recent level.

Source: Binder

Detecting Module: IEWBXCDR

IEW2607E ALIAS NAME alias-name EXCEEDS MAXIMUM LENGTH ALLOWED FOR VERSION 1 PROGRAM OBJECT OR LOAD MODULE.

Explanation: Alias names may not exceed 8 bytes for load modules or 64 bytes for version 1 program object.

System action: Alias not processed.

User response: Change alias control statement or ANAME on ADDA call, or rebind as a program object.

Source: Binder

Detecting Module: IEWBXCDR

IEW2608I ALIAS alias-name REPLACES ALIAS OF THE SAME NAME IN MODULE module-name.

Explanation: The alias added was removed from the other module in the output library.

System action: Processing continues.

User response: None if the result is what is expected.

Source: Binder

Detecting Module: IEWBXCDR

IEW2609W SECTION section-name USABILITY ATTRIBUTE OF usability-option CONFLICTS WITH REQUESTED USABILITY OF usability-option.

Explanation: The usability for the named section was less than that specified by the user option.

System action: The module is created with the usability as specified in option.

User response: Change the usability option (RENT, REUS, etc).

Source: Binder

Detecting Module: IEWBXCEP

IEW2610I ALIAS alias-name IS THE SAME AS THE PRIMARY NAME ASSIGNED TO THE MODULE.

Explanation: An alias name requested matched the primary name to be assigned to the module.

System action: The alias is not added.

User response: Remove the alias request for 'alias-name' or use a different name.

Source: Binder

Detecting Module: IEWBXCDR
**IEW2611E** ALIAS alias-name CANNOT REPLACE MODULE WITH SAME NAME.

**Explanation:** Alias name was not saved. There was an identical primary name in the output library. This message is issued whether the ADD or REPLACE option is selected.

**System action:** The alias is not added.

**User response:** Check the alias name. Either change the alias name or delete the module with the same name.

**Source:** Binder

**Detecting Module:** IEWBXCIL

**IEW2612E** EXTERNAL SYMBOL target_name IS NOT DEFINED FOR ALIAS alias-name.

**Explanation:** When saving a bound module an alias entry could not be saved. The entry had an associated target which did not match any existing external entry name in the module. Aliases and targets are defined by ALIAS control statements, ADDA call, or by INCLUDE with ALIAS=Y.

**System action:** Alias name not saved.

**User response:** Check the alias control statements or the ADDALIAS statement if using the call interface.

**Source:** Binder

**Detecting Module:** IEWBXCDR

**IEW2613I** ENTRY POINT entry-point-name NOT ON HALFWORD BOUNDARY.

**Explanation:** The specified entry name was not defined on a halfword boundary.

**System action:** Processing continues.

**User response:** Check alias entry point to ensure it is defined as intended.

**Source:** Binder

**Detecting Module:** IEWBXCDR

**IEW2614S** ALIAS NAME alias-name EXCEEDS MAXIMUM LENGTH ALLOWED FOR VERSION 1 PROGRAM OBJECT OR LOAD MODULE.

**Explanation:** Alias names may not exceed 8 bytes for load modules or version 1 program object in a non-HFS file.

**System action:** Binder processing ends.

**User response:** Change alias control statement.

**Source:** Binder

**Detecting Module:** IEWBXSDG

**IEW2615E** MODULE NAME nameEXCEEDS THE MAXIMUM NAME LENGTH ALLOWED FOR A MEMBER IN THE SIDE FILE DATA SET.

**Explanation:** The Binder attempted to write the side definition file as a member of a library, but the module name was longer than the maximum length allowed for member names. This happens if the SYSLMOD data set is for an HFS file and its file name is greater than 8 characters. The Binder uses this file name to create the side file member.

**System action:** The side file was not saved.

**User response:** Specify a shorter HFS file name for the module or assign the side file to either an HFS file or a sequential file.

**Source:** Binder

**Detecting Module:** IEWBXSDG

**IEW2616W** IMPORT STATEMENT(S) CREATED WITH LONG DLL NAME dllname.

**Explanation:** In creating the definition side file, the Binder has used the name specified on the NAME control statement or SAVEW API call for the DLLNAME parameter on the generated IMPORT statement(s). However, the name exceeds eight bytes and the module has been saved in a PDS or PDSE program library. Any applications using these IMPORT statements will be unable to dynamically link to this module. Long names should not be used for DLLs unless the DLL will be saved in an HFS file. The loading and linking of PDS- and PDSE-resident DLLs requires MVS supervisor assisted linkage, which limits names to eight bytes. When saving a module with a long name, the Binder will generate an eight-byte member name for the module, but this name is subject to change as the member is copied from library-to-library and has therefore not been used for the IMPORT statements.

**System action:** The side file is saved and processing continues.

**User response:** Re-bind the module, specifying a short (less than or equal to eight bytes) name, or edit the side file, replacing the long DLL name with the eight-byte binder-generated member name.

**Source:** Binder

**Detecting Module:** IEWBXSDG
IEW2617I  DEFINITION SIDE FILE IS EMPTY.
THERE ARE NO SYMBOLS TO BE EXPORTED.

Explanation: The DYNAM(DLL) Binder option was specified, but the input did not contain an IMPORT/EXPORT table. An empty side definition file was created.

System action: Processing continues.

User response: None if result is what is expected.

Source: Binder

Detecting Module: IEWBXSDG

IEW2618E  RMODE 64 ATTRIBUTES HAVE BEEN CHANGED TO RMODE ANY.

Explanation: A module containing ESDs marked is rmode 64 is being saved to a load module. Load modules do not support rmode 64.

System action: The rmode field in the ESDs will be changed from rmode 64 to rmode any.

User response: None.

Source: Binder

Detecting Module: IEWBXCWR

IEW2619W  AMODE 64 IS NOT SUPPORTED FOR EXPORTED SYMBOLS.

Explanation: The generation of a side file has been stopped. It will not contain all the needed import statements and should not be used.

System action: Processing continues.

User response: Avoid use of Amode 64 exported symbols.

Source: Binder

Detecting Module: IEWBXSDG

IEW2621E  EXISTING ALIAS NAME alias-name WITHIN MODULE module-name MATCHES ALIAS BEING ADDED.

Explanation: REPLACE=NO was specified or was the default, but another member with an alias of the same name exists. The indicated alias name will remain as an alias of the existing member.

System action: New alias was not added.

User response: Change alias name or delete existing alias and re-bind.

Source: Binder

Detecting Module: IEWBXCDR

IEW2622E  A SIGNED MODULE IS BEING SAVED TO A MODULE FORMAT WHICH DOES NOT SUPPORT SIGNING.

Explanation: Module containing a signature section is being saved to a PDS or a PM1 or PM2 format program object.

System action: The information will not be used. The module will not be marked as signed.

User response: Do not specify the SIGN option, or specify the COMPAT option with a level of ZOSV1R2 or greater. Ensure that the module is not being saved to a PDS.

Source: Binder

Detecting Module: IEWBXCLW, IEWBXCWP, IEWBXCWR

IEW2623E  UNEXPECTED RETURN CODE FROM RACF yyyy CALL PROGRAM SIGNATURE GENERATION FAILED. RACF FUNCTION xxxx RETURNED SAF RETURN CODE aaaa RACF RETURN CODE bbbb RACF REASON CODE cccc.

Explanation: RACF call failed with the indicated reason and return code. These codes are documented in the manual z/OS Security Server RACF Callable Services.

System action: Module will be built. Signature section might exist but will be empty. The sign bit is not set.

User response: Correct the problem indicated by the RACF reason code returned by the RACF service.

Source: Binder

Detecting Module: IEWBIND, IEWBXSGN

IEW2624E  RACF FUNCTION xxxx RETURNED SAF RETURN CODE aaaa RACF RETURN CODE bbbb RACF REASON CODE cccc.

Explanation: RACF call failed with the indicated reason and return code. These codes are documented in the manual z/OS Security Server RACF Callable Services. This message is currently issued only for the RACF SIGCLEAN callable service.

System action: Processing Continues.

User response: Take recommended actions for any previous binder error messages. Also check the meaning of the RACF reason code in the manual z/OS Security Server RACF Callable Services and correct the error if appropriate.

Source: Binder

Detecting Module: IEWBWDEL, IEWBWRST
IEW2625I EXISTING ALIAS alias-name WILL BE DROPPED FROM MODULE member-name WHEN IT IS REPLACED.

Explanation:  An alias which exists for the member will be dropped when the member is saved because it was not respecified for the output module.

System action:  Processing continues.

User response:  None if result is what is expected.

Source:  Binder

Detecting Module:  IEWBXICIL

IEW2626S DUPLICATE MEMBER member-name IN LIBRARY.

Explanation:  REPLACE was not specified or was defaulted to NO and a member of the same name exists.

System action:  Module not saved.

User response:  Specify replace on the NAME control statement or SAVEW request.

Source:  Binder

Detecting Module:  IEWBXCIL, IEWBXPNM

IEW2627I ALIAS alias-name OF MODULE module-name WAS REPLACED BY THE MODULE BEING SAVED.

Explanation:  An alias name belonging to another module in this library was reassigned to point to the module being saved.

System action:  Existing alias replaced.

User response:  Make sure the replacement of the alias was intentional.

Source:  Binder

Detecting Module:  IEWBXCDR

IEW2628E THE RELATIVE IMMEDIATE REFERENCES ACROSS SEGMENTS AT OFFSET offset IN SECTION section-name AND CLASS class-name CANNOT BE RELOCATED.

Explanation:  A two byte or four byte relative immediate reference across segments were found in a module. For two byte adcons, the relative immediate references across segments are not allowed. For four byte adcons, the relative immediate references across segments cannot be relocated if either segment is RMODE 64.

System action:  The relative immediate references across segments cannot be relocated. Processing continues.

User response:  For two byte relative immediate references, ensure that the references are within a single segment. For four byte relative immediate references across segments, ensure that both segments are not RMODE 64.

Source:  Binder

Detecting Module:  IEWBXICRL

IEW2629W ADCONS OVERLAP FOR SECTION section-name IN TEXT CLASS text_class_name AT MODULE OFFSET offset BUT THEY DO NOT ALIGN.

Explanation:  During save processing, overlapping adcons were found. The end of one address constant overlaps the start of the next address constant.

System action:  Each adcon will be relocated with unpredictable results.

User response:  Check the source code that generated the adcon.

Source:  Binder

Detecting Module:  IEWBXICRL

IEW2630E RLD AT OFFSET offset IN SECTION section AND CLASS class HAS AN INVALID TARGET CLASS.

Explanation:  A relocatable adcon has a deferred load class as its target but it is in a different class or segment. Such an adcon cannot be relocated. For example, this error message would be produced if the source code requested the building of a descriptor in WSA and attempted to reference it with an A-con or V-con from an initial load class.

System action:  Processing continues.

User response:  If the source code is in a high-level language, this is likely to be a compiler error. Otherwise, correct the source code by changing the adcon to a non-relocatable type.

Source:  Binder

Detecting Module:  IEWBXICRL

IEW2632T INSUFFICIENT STORAGE TO CREATE A PROGRAM OBJECT.

Explanation:  Data space storage to create the program object was not available, so the binder attempted to use virtual storage out of the user’s address space, but there was not enough available.

System action:  Processing for the member terminates.

User response:  Ensure that both the region specified and the installation limits for data space size are adequate.
**IEW2633W**  TWO BYTE ADCON DEFINED IN SECTION section-name AT OFFSET offset IN TEXT CLASS target-class CANNOT BE RELOCATED.

**Explanation:** A two byte adcon was found in a program object within the section indicated at the offset indicated. The adcon cannot be relocated.

**System action:** Processing continues, but the RLD cannot be relocated.

**User response:** Check code generating the adcon.

**Source:** Binder

**Detecting Module:** IEWBXCRL

---

**IEW2635I**  THREE BYTE ADCON IN SECTION section-name AT OFFSET offset IN CLASS class-name WITH RMODE=ANY CANNOT BE RELOCATED.

**Explanation:** A three byte adcon was found in a module with RMODE=ANY. The adcon cannot be relocated if the program is loaded above 16 meg.

**System action:** Results of relocation are unpredictable if the module is loaded above the 16 meg line.

**User response:** Check code generating the adcon or ensure that RMODE=24 is specified. Note that in the 'load and go' environment this message is only issued for the first three byte adcon that it finds.

**Source:** Binder

**Detecting Module:** IEWBXCWL, IEWBXCWP, IEWBXCWR, IEWBXCWS

---

**IEW2636S**  MODULE BOUND IN OVERLAY FORMAT MAY NOT BE LOADED FROM AN HFS FILE.

**Explanation:** An HFS file was specified as the target of a SAVE for a workmod bound in overlay format. Although such a module may be stored in an HFS file and used as input to a subsequent invocation of the Binder, it cannot be loaded for execution from the HFS file.

**System action:** Processing continues.

**User response:** Set OVLY to no (or allow it to default), or change the JCL to allocate to a PDS or PDSE data set.

**Source:** Binder

**Detecting Module:** IEWBXCWL, IEWBXCWP, IEWBXPNM, IEWBXCDR

---

**IEW2637E**  TWO-BYTE RELATIVE REFERENCE WAS ENCOUNTERED WITH SCTR REQUEST AT OFFSET offset IN CLASS class_name, SECTION section_name.

**Explanation:** A two byte relative immediate reference and a user request for scatter load option (SCTR) were encountered. For scatter loading, only four byte relative immediate reference is supported.

**System action:** Processing continues.

**User response:** Correct either the SCTR option or use four byte relative immediate reference for scatter loading.

**Source:** Binder

**Detecting Module:** IEWBXCRL, IEWBXCWM

---

**IEW2638S**  AN EXECUTABLE VERSION OF MODULE member EXISTS AND CANNOT BE REPLACED BY THE NON-EXECUTABLE MODULE JUST CREATED.

**Explanation:** An error code greater than the LET option was encountered, so the output module is considered non-executable. It cannot replace an executable module of the same name in the target library unless STORENX is specified. STORENX was not specified so the module will not be saved.

**System action:** Existing module not replaced.

**User response:** Check for other error messages. Either correct the indicated errors, increase the value for LET, or specify STORENX.

**Source:** Binder

**Detecting Module:** IEWBXCWL, IEWBXCWP, IEWBXPNM, IEWBXCDR

---

**IEW2639S**  MODULE NAME CANNOT BE DETERMINED.

**Explanation:** A module name was not provided in JCL for the target data set nor was it provided on the user save request.

**System action:** The module is not saved. However, if the user invoked the binder via the IEWBLINK entry point, or if the save request was generated by a NAME control statement, an attempt will be made to save the module under TEMPNAMn.

**User response:** Specify name to be assigned to output module.

**Source:** Binder

**Detecting Module:** IEWBXCWL, IEWBXCWP, IEWBXPNM, IEWBXCDR
IEW2640E  ONE OR MORE EXTERNAL NAMES EXCEED THE LENGTH LIMITATIONS OF THE TARGET FORMAT.

Explanation: During save processing, an external name longer than that supported by the target of the save was found.

System action: External names will not be saved in the target module and the module will be marked not-editable.

User response: Reduce the name lengths and rerun the job, or change the target library specification. Depending on the value of LET, the module may be saved. However, the module will be marked not editable and cannot be re-bound.

Source: Binder

Detecting Module: IEBXCBWR, IEBXCBWL, IEBXCBWP

IEW2641S  MODULE EXCEEDS THE LENGTH LIMITATIONS OF THE TARGET FORMAT.

Explanation: Text exceeds maximum size supported by the format of the target library.

System action: Module not saved.

User response: Reduce the size of the module or restructure it as several separately loadable pieces or change the target library.

Source: Binder

Detecting Module: IEBXCBWR, IEBXCBWL, IEBXCBWP

IEW2642E  A RELATIVE REFERENCE WAS ENCOUNTERED IN OVERLAY MODULE AT OFFSET offset IN CLASS class_name, SECTION section_name.

Explanation: A relative immediate reference was encountered in overlay module. The overlay is not supported for relative immediate reference in load module.

System action: Processing continues.

User response: Do not use overlay when using relative immediate reference in load module.

Source: Binder

Detecting Module: IEBXCTR

IEW2643E  A QCON EXPRESSION WAS FOUND IN A LOAD MODULE.

Explanation: QCON expressions are not supported in load modules. Although the module may be executable, the Qcon (and the module) cannot be reconstructed.

System action: Module is saved is a PDS load library, but the QCON offset information will not be preserved.

User response: Re-bind module and save it in a PDSE program library.

Source: Binder

Detecting Module: IEBXCBWR

IEW2645W  INCONSISTENT DATA WAS DETECTED IN AN EXTENDED OBJECT MODULE IN MEMBER member-name IDENTIFIED BY DDNAME ddname. ERROR ID = error-id.

Explanation: An error was encountered while processing an Extended Object Module (XOBJ). One of the following has occurred, as indicated by error-id. Note that the terms SD, LD, UR, ER and PR are ESD record types and P-pointer and R-pointer refer to the RLD position and relocation pointers, respectively.

Error-id Description

1540 An XOBJ XSD card has an ESD length greater than zero, but the ESDID for the XSD has no text cards. The ESD type for the XSD can be SD or PR.

1543 An XOBJ END card has an entry point address without an ESDID, or an ESDID without an entry point address. If one is present, they both must be present. If entry point address is present, it will be used.

1544 An XOBJ END card has an entry NAME and either an entry address or an ESDID, or both. If Name is present, and entry point address has not been specified, Name will be used; otherwise Name will be ignored.

System action: Processing continues.

User response: Correct inconsistent data.

Source: Binder

Detecting Module: IEBXXH

IEW2646W  ESD RMODE(24) CONFLICTS WITH USER-SPECIFIED RMODE(ANY) FOR SECTION section-name.

Explanation: The RMODE(24) indicated in the ESD record for the section has been overridden by an RMODE(ANY) specification on a control statement, batch parameter or SETOPTION function call. This may cause the program to fail during execution.

System action: RMODE(ANY) remains as specified. Results are unpredictable.

User response: Ensure that the named section does not contain data, such as data management control blocks, which must be located below 16 Mb. To
eliminate this message in future binds, either recompile
the section with the RMODE(ANY) or change the
override.

**Source:** Binder

**Detecting Module:** IEWBXCWR, IEWBXCWP,
IEWBXCWM, IEWBXCLW

**IEW2647E** CREATED MODULE HAS MORE THAN
32K ESD ENTRIES.

**Explanation:** There are too many ESD entries to be
contained in a load module format. No ESDs are saved
in the output module.

**System action:** Module written is executable but
cannot be used for subsequent bind.

**User response:** Re-bind the module as a program
object and save it in a PDSE program library.

**Source:** Binder

**Detecting Module:** IEWBXCWR

**IEW2648E** ENTRY entry-point-name IS NOT A
CSECT OR AN EXTERNAL NAME IN
THE MODULE.

**Explanation:** The entry name provided by the user on
the bind options or the ENTRY control statement does
not match a valid label in the module.

**System action:** Entry defaults to first section in
module.

**User response:** Correct option or ENTRY control
statement.

**Source:** Binder

**Detecting Module:** IEWBXCWR

**IEW2649E** ENTRY POINT OFFSET IN SECTION
section-name EXCEEDS SECTION
LENGTH.

**Explanation:** The entry offset exceeds the length of
the entry section.

**System action:** Entry defaults to first byte of the first
section in the module which contains text.

**User response:** Correct the offset in the EP option.

**Source:** Binder

**Detecting Module:** IEWBXCWR

**IEW2650I** MODULE ENTRY NOT PROVIDED.
ENTRY DEFAULTS TO SECTION
section-name.

**Explanation:** The module entry point was not provided
by an object module or as an option in the input
parameter string, or as an argument of the SETO
function call when using the call interface. The binder
defaults the entry point to the first section in the module
that is not a common area.

**System action:** Module is saved using the first section
as the module entry point.

**User response:** Rebind requesting the correct entry
point for the module if the result was not desired.

**Source:** Binder

**Detecting Module:** IEWBXCEP

**IEW2651W** ESD AMODE amode-value CONFLICTS
WITH USER-SPECIFIED AMODE
amode-value FOR ENTRY POINT
entry-point-name.

**Explanation:** The AMODE indicated in the ESD record
for the section containing the entry point has been
overridden by an AMODE specification on a control
statement, batch parameter or ADDALIAS or
SETOPTION call, or the system may have changed the
default to AMODE 31. If this was the case, this
message would have been preceded by message
IEW2660. This may cause the program to fail during
execution.

**System action:** AMODE remains as specified. Results
are unpredictable.

**User response:** Ensure that the section in question
does not contain AMODE sensitive macros or address
external storage beyond its addressing range. To
eliminate this message in future binds, either recompile
the section with the correct AMODE or change the
override. For aliases with enames, the alias name can
be determined by referencing aliases which have the
esd amode from the message and the same offset as
the entry point section named in the message.

**Note:** When this message is generated as a result of
adding a true alias, the entry point name in the
message is the name of the alias. The actual
entry section is the module entry point.

When this message is generated as a result of adding
an alias with an ename (target) or when INCLUDEing a
module with ALIAS=Y, the target name is given as the
entry point. When a true alias is INCLUDE’d, the entry
of the module retrieved is treated as the target and is
printed in the message.

**Source:** Binder

**Detecting Module:** IEWBXCEP

---

Chapter 9. IEW messages  377
module END record is not a valid for one of the following reasons:

- the name does not match the name of a section or external symbol.
- the containing section does not have any loadable text.

**System action:** Entry defaults to first section in module.

**User response:** Use the ENTRY control statement or the EP option to specify the desired entry point, or ensure that the object module containing the correct entry point information is processed first.

**Source:** Binder

**Detecting Module:**IEWBXCEP

---

**IEW2654E**  
**User-Specified AMODE(any) and RMODE(any) are incompatible.**

**Explanation:** The specified AMODE and RMODE are incompatible. AMODE(ANY) may result in the program running in 24-bit addressing mode, which cannot address storage above 16 Mb. RMODE(ANY) implies that the program may be loaded above 16 Mb.

**System action:** AMODE and RMODE remains as specified. Results are unpredictable.

**User response:** Change RMODE to 24, or remove the AMODE and RMODE specifications.

**Source:** Binder

**Detecting Module:** IEWBXCEP

---

**IEW2655W**  
**OVERLAY FORMAT CONFLICTS WITH USER-SPECIFIED AMODE amode-value.**

**Explanation:** AMODE(31) or AMODE(ANY) has been specified on a control statement, batch parameter, or ADDALIAS or SETOPTION function call, but the OVLY option specified that the module was to be bound in overlay format. Overlay format modules must be bound with AMODE(24).

**System action:** AMODE will remain as specified. Results are unpredictable.

**User response:** If the module is to be bound in overlay format, do not specify AMODE. It will default to AMODE(24).

**Source:** Binder

**Detecting Module:** IEWBXCEP

---

**IEW2656W**  
**OVERLAY FORMAT CONFLICTS WITH USER-SPECIFIED RMODE mode-value.**

**Explanation:** RMODE(ANY) has been specified on a control statement, batch parameter, or SETOPTION function call, but the OVLY option specified that the module was to be bound in overlay format. Overlay format modules must be bound with RMODE(24).

**System action:** RMODE will remain as specified. Results are unpredictable.

**User response:** Change the AMODE specification to (31), which will set the AMODE for all entry points.

**Note:** AMODE(24) will also work, but will force the module to be loaded below 16 Mb.
Source: Binder
Detecting Module: IEWBXCEP

IEW2660W  RESULTANT AMODE(24) AND USER-SPECIFIED RMODE(ANY) ARE INCOMPATIBLE FOR entry-section.

Explanation:  RMODE(ANY) has been specified on a control statement, batch parameter, or SETO function call. AMODE was not specified, but has resolved to (24) because the ESD record for the section containing the entry point indicated 1) AMODE(24) or 2) either AMODE(MIN) or AMODE(ANY), which resolved to AMODE(24) by MIN processing. This message is produced for the main EP and aliases.

System action: AMODE is changed to (31). Results are unpredictable.

User response: Either remove the RMODE specification or recompile each AMODE(24) section with AMODE(31).

Source: Binder
Detecting Module: IEWBXCEP

IEW2661E  USER REQUEST FOR OVERLAY CONFLICTS WITH USER REQUEST FOR SCATTER.

Explanation: Overlay and scatter options have been requested. These options are incompatible.

System action: Both scatter tables and overlay control blocks will be built. Results when attempting to execute the module are unpredictable.

User response: Remove either the SCTR or OVLY option.

Detecting Module: IEWBXCEP

IEW2662E  USER REQUEST FOR OVERLAY CONFLICTS WITH USER REQUESTED USABILITY OF usability-option.

Explanation: Overlay modules must be non-reusable.

System action: The module is saved with overlay control blocks and with the requested reusability. Results from an attempt to execute the module are unpredictable.

User response: Remove either the reusability or OVLY option.

Source: Binder
Detecting Module: IEWBXCEP

IEW2663E  RMODE 24 MODULE HAS LENGTH GREATER THAN 16M.

Explanation: Either the user requested RMODE of 24 or at least one section had an RMODE of 24 causing default to be set to RMODE 24. This is invalid for program objects greater than 16 meg in length.

System action: The program object is saved.

User response: Specify RMODE(ANY) in parms.

Source: Binder
Detecting Module: IEWBXCEP

IEW2664I  SECTION section-name USABILITY ATTRIBUTE OF reus-value CONFLICTS WITH REQUESTED USABILITY OF reus-value.

Explanation: The usability for the named section was less than that specified by the user option. This message will be issued in place of IEW2609W if COMPAT(LKED) is specified.

System action: The reusability of the module will be lowered to match that of the reusability of the input module.

User response: Check that the resultant usability is that desired.

Source: Binder
Detecting Module: IEWBXCEP

IEW2665S  MODULE modname IS NON-EXECUTABLE AND WAS NOT SAVED BECAUSE STORENX=NEVER.

Explanation: A severity 12 message was issued when a non-executable module was not saved because STORENX=NEVER was specified. Other messages already exist for when non-executable modules are not saved because an executable version exists and cannot be replaced (ex. IEW2638), but in this case there was not an existing executable.

System action: Module is not saved.

User response: Check and use the correct value of STORENX option.

Source: Binder
Detecting Module: IEWBXR00

IEW2666W  IDENTIFY DATA TRUNCATED TO IDRU-text.

Explanation: User data from identify control statement or PUTD call exceeded allowable length for load modules. A section in a load module may have a maximum of 40 bytes of identify data.
System action: Identify information is truncated to 40 bytes.

User response: Rebind and save in a PDSE program library which supports greater than 40 bytes of identify data.

Source: Binder
Detecting Module: IEWBXCWI

IEW2667W SECTION section-name CONTAINS MORE THAN TWO TRANSLATOR IDR RECORDS.

Explanation: A maximum of two language identification records (IDRLs) are allowed for each section.

System action: Processing continues but only the first two IDRLs are kept.

User response: Rebind and save in a PDSE program library, which supports greater than 2 IDRLs.

Source: Binder
Detecting Module: IEWBXCWI

IEW2668W ZAP IDR DATA LENGTH EXCEEDED EIGHT BYTE LIMITATION IN A LOAD MODULE.

Explanation: A maximum of 8 bytes of zap data (IDRZ) are allowed in a single IDRZ entry.

System action: Processing continues. IDRZ data is truncated.

User response: Check AMASPZAP control statements.

Source: Binder
Detecting Module: IEWBXCWI

IEW2669S ddname DD STATEMENT NOT FOUND.

Explanation: During save processing, a DD statement for SYSLMOD (or the ddname specified for the MODLIB option) was not found. The Binder may have been invoked with a passed DDNAME associated with a UCB address allocated above the 16MB line with NOCAPTURE. The Binder will not process this dataset.

System action: Module is not saved.

User response: Provide a DD statement for the target data set, or remove the NOCAPTURE option from the dynamic allocation in the invoking application program. Contact your system programmer.

Source: Binder
Detecting Module: IEWBXCWI

IEW2670S INSUFFICIENT STORAGE TO LOAD A MODULE.

Explanation: There is not enough room in the user region to load the requested program for execution.

System action: Module is not loaded.

User response: Increase the region size on the JCL and rerun the job.

Source: Binder
Detecting Module: IEWBXCWM

IEW2671S CANNOT IDENTIFY MODULE load-name BECAUSE IT IS ALREADY LOADED.
IDENTIFY REASON = reason-code

Explanation: Module being identified was already in storage and was previously identified. See the IDENTIFY macro explanation in the [z/OS MVS Programming: Authorized Assembler Services Reference EDT-IXG] for the definition of the IDENTIFY reason code.

System action: Module is not loaded.

User response: Check job to ensure identified name is unique.

Source: Binder
Detecting Module: IEWBXCWM

IEW2672S ERROR ENCOUNTERED WITH SEVERITY GREATER THAN LET OPTION.

Explanation: An error detected while building the module was greater than the default LET option of 4 (attention) or that specified by the user.

System action: Module was not loaded.

User response: Check for other binder error messages. Either correct the errors, or specify a larger value for the LET option.

Source: Binder
Detecting Module: IEWBXCWM

IEW2673S MODULE ENTRY POINT entry-point-name IS INVALID.

Explanation: A valid entry point could not be determined for the module. This may happen if an overlay module is created with no root segment.

System action: The module will be saved if LET is 12, but the results are unpredictable if an attempt is made to execute it.

User response: Correct the overlay structure or provide a valid entry point for the module.

Source: Binder
Detecting Module: IEWBXCEP

**IEW2674S** THE SAVE EXIT ROUTINE RETURNED AN INVALID MEMBER NAME member-name.

**Explanation:** The SAVE exit routine was called to provide a member name for the module. The name returned was either all blank, of zero length, or exceeded the system limit for name length.

**System action:** Processing for the member terminates.

**User response:** This is a probable logic error in the application’s exit routine.

**Source:** Binder

Detecting Module: IEWBXCDR, IEWBXCIL, IEWBXCL, IEWBXCWR, IEWBXCM, IEWBXSAV

**IEW2675S** SAVEW WAS REQUESTED FOR NULL WORKMOD = token

**Explanation:** A null workmod contains insufficient information to be saved by the Binder. The workmod is considered null if no modules have been successfully included from any source file.

**System action:** The SAVE request will not be processed.

**User response:** Recreate the module(s) in error and rerun the job.

**Source:** Binder

Detecting Module: IEWBXR00

**IEW2676S** AMODE(24) MODULE BOUND TO ELPA-RESIDENT MODULE entry-point-name.

**Explanation:** The module has been loaded with AMODE(24), but the named external reference has been bound to a module in the Link Pack Area above 16 Mb. The program may fail when it attempts to call a subroutine in LPA.

If all specifications are correct and the module should be bound to the LPA-resident module, then mode switching code must be added to the calling program before branching to the subroutine in the ELPA. If such mode switching code is present in the calling module, then no problem exists.

**System action:** AMODE(24) remains. Results are unpredictable.

**User response:** Change AMODE to (31) or prevent the Binder from resolving the symbol to an ELPA-resident module. Resolution to LPA can be prevented by specifically including the module, specifying its name on a LIBRARY control statement or specifying the NORES option. Alternatively, mode switching code can be added to the calling program.

**Source:** Binder

Detecting Module: IEWBXCEP

**IEW2677S** A VALID ENTRY POINT COULD NOT BE DETERMINED.

**Explanation:** A entry point designating executable code could not be found. Either the module had no sections other than those generated by the binder internally, or the module contained no loadable text.

**System action:** The module will be created, but an attempt to execute it will lead to unpredictable results.

**User response:** Check REPLACE and INCLUDE control statements to determine if the intent was to create an empty module.

**Source:** Binder

Detecting Module: IEWBXCEP

**IEW2678S** MODULE CONTAINS DATA CLASSES NOT SUPPORTED BY THE LOAD FUNCTION.

**Explanation:** Module contains one or more deferred classes.

**System action:** The module was not loaded.

**User response:** This program cannot be loaded by the Binder. Re-bind the module saving it in a PDSE program library. The saved module may then be loaded and executed by MVS using conventional invocation methods (EXEC JCL statement or supervisor-assisted linkage).

**Source:** Binder

Detecting Module: IEWBXCEP

**IEW2681E** SECTION section-name DOES NOT HAVE A VALID LABEL DEFINITION FOR VERSION 1 PROGRAM OBJECT OR LOAD MODULE.

**Explanation:** The section does not have a label of the same name defined at offset zero. This is probably due to including a version 2 module (program object or object module) into the workmod.

**System action:** The label will be assigned or reassigned to the first byte of the section. If the LET parameter was set to 8 the module will be marked executable. An attempt to execute will lead to unpredictable results.

**User response:** Modify and recompile the program to create only the standard text class, or allow the module to be saved as a version 2 program object. In the latter case, assign SYSLMOD to a PDSE program library and do not specify COMPAT=LKED or COMPAT=PM1.
IEW2681S  RLD IN SECTION  section-name DOES NOT HAVE A VALID RLD TYPE FOR A module type COMPATIBLE PROGRAM OBJECT.

Explanation: An attempt has been made to create a module in format module type, but the workmod contains RLD types not supported by that format. Module type can be Load Module, version 1 Program Object, version 2 Program Object, version 3 Program Object, zOS V1R3 version 4 Program Object, or zOS V1R5 version 4 Program Object.

System action: The load module or program object cannot be saved.

User response: Correct by (1) changing the target library (for example, SYSLMOD) to a PDSE, and/or (2) changing the COMPAT option to specify a later version of Program Management, or remove it altogether.

Source: Binder

Detecting Module: IEWBXROO

IEW2684S  MODULE NAME  name EXCEEDS EIGHT BYTES. IT IS INCOMPATIBLE WITH VERSION 1 PROGRAM OBJECT OR LOAD MODULE.

Explanation: An attempt has been made to create a version 1 program object or load module which has a long name. Version 1 program objects or load modules have a maximum name length of 8 characters.

System action: Module will not be created.

User response: Modify the name to be less than or equal to 8 characters.

Source: Binder

Detecting Module: IEWBXROO

IEW2685I  SHORT PRIMARY NAME  short-name WAS SUBSTITUTED FOR LONG PRIMARY NAME  long-name.

Explanation: A long primary name (greater than 8 characters) is specified. In order to save the module a short name is generated as the primary name.

System action: Long primary name will be added as an alias, and it will be used as the primary name by the binder.

User response: None

Detecting Module: IEWBXPNM

IEW2686S  MODULE CONTAINED CLASSES NOT SUPPORTED FOR LOAD MODULES OR VERSION 1 PROGRAM OBJECTS.

Explanation: Module contained non-binder defined classes or text classes other than B_TEXT. For load modules or version 1 program objects, classes other than the binder defined classes cannot be saved.

System action: Module will not be created.

User response: Either do not define non-standard classes or allow the module to default to a version 2 program object.

Detecting Module: IEWBXROO

IEW2687E  ESD CLASS NAME  class-name WAS INCOMPATIBLE FOR VERSION 1 PROGRAM OBJECT OR LOAD MODULE.

Explanation: An attempt was made to create a version 1 program object or load module which has an
incompatible class. Version 1 program objects or load modules can have only B_TEXT or B_PRV.

**System action:** The ESD will be dropped from the output module. If the LET parameter was set to 8 the module will be marked executable. An attempt to execute will lead to unpredictable results.

**User response:** Modify and recompile the program to create only the standard text class, or allow the module to be saved as a version 2 program object. In the latter case, assign SYSLMOD to a PDSE program library and do not specify COMPAT=LKED or COMPAT=PM1.

**Source:** Binder

**Detecting Module:** IEWBXCWX

**IEW2690E**

**One or more field descriptors in GOFF record record_number within member member_name identified by ddname ddname are not valid. Error ID = error-id.**

**Explanation:** An error was encountered while processing a Generalized Object File Format (GOFF). One of the following has occurred, as indicated by **error-id.** Note that the terms SD, LD, ER, UR, and PR are ESD record types, and P-pointer and R-pointer refer to the RLD position and relocation pointers, respectively. Note also that any ESD entries referred to in one ESD record must have been defined by another ESD record appearing earlier in the file; otherwise, the ESDID is considered undefined.

**Error-id description**

0001 This record is not a GOFF record; it does not start with X'03'.

0002 ESD type is in error.

0003 The owning ESDID of this record is undefined. The ESDs may be out of sequence.

0004 Name space must be in the range of 1-99.

0005 ESD style does not contain one of the values byte, structured, or unstructured.

0006 See Error-id 0003.

0007 See Error-id 0003.

0008 See Error-id 0003.

0009 See Error-id 0004.

0010 The XATTR ESDID is undefined.

0011 The entry point ESDID in the END record does not identify an ER or ED entry.

0012 The RLD R-pointer does not refer to an ED, PR, ER, or LD.

0013 RLD type is in error.

0014 One or more length specifications are in error. Either the referenced ESD is not an ED, or the ED length does not have the “defer” value (-1).

0015 The record count in the END record does not match the number of logical records, including the module header and END.

0016 The record length specified in the GOFF record exceeds the block size of the file.

0017 The GOFF prefix of the record is in error.

0018 The TEXT style does not contain one of the values byte, structured, or unstructured.

0019 The ESDID in the TEXT record is undefined.

0020 The TEXT record refers to an ESD which is neither ED nor PR.

0021 See Error-id 0004.

0022 The RLD P-pointer contains an undefined ESDID.

0023 The TEXT encode value is in error. Valid values are repeat and no repeat.
IEW2691W • IEW2695W

0024  See Error-id 0023.
0025  The ADATA record is in error. Encode must be repeat or no repeat.
0026  The ESDID nominated in the END record as an entry point is not defined.
0027  See Error-id 0013.
0028  The entry point nominated in the END record refers to an external reference, but the offset is not 0. Offset is not allowed if the entry point is an ER.
0029  The RLD P-pointer does not refer to an ED or PR record.
0030  The ESD scope is in error.
0031  The ESD name length is greater than 32767.
0032  The owner ESDID id is zero.
0033  See Error-id 0032.
0034  See Error-id 0032.
0035  Owner of SD is not zero.
0036  LD in a class with merge attribute.
0037  Unsupported AMODE.
0038  Unsupported version of GOFF.
0039  RECFM=VS is unsupported for GOFF input.
0040  Unsupported RMODE.
0041  PR has no owner (owner is zero).
0042  GOFF record text contains text length > 32K.
0043  Text in by a merge class is not in a part (not owned by a PR or PD ESD record).

System action: Module will be discarded.
User response: Check the input GOFF module.
Source: Binder
Detecting Module: IEBXGOF

IEW2691W  UNABLE TO SAVE CLASS class_name IN OUTPUT MODULE.

Explanation: For load modules or version 1 program objects, classes other than the binder-defined classes cannot be saved.
System action: Module will be created without the class data.
User response: Either do not define non-standard text classes in the source program or use version 2 program objects.
Detecting Module: IEBXCWXX

IEW2692E  UNABLE TO SAVE TEXT CLASS class_name IN OUTPUT MODULE.

Explanation: For load modules or version 1 program objects, text classes other than B_TEXT class cannot be saved.
System action: Module will be created without the text class data.
User response: Either do not define non-standard text classes in the source program or use version 2 program objects.
Detecting Module: IEBXCWXX

IEW2693S  UNABLE TO SAVE ENTRY CLASS class_name IN OUTPUT MODULE.

Explanation: For load modules or version 1 program objects, classes other than the binder-defined classes cannot be saved.
System action: Module will not be created.
User response: Either do not define non-standard text classes in the source program or use version 2 program objects.
Detecting Module: IEBXCWXX

IEW2694E  LABEL label_name IN SECTION section_name IN CLASS class_name WAS INVALID OR MISSING FOR VERSION 1 PROGRAM OBJECT OR LOAD MODULE.

Explanation: The section does not have a label matching the section name defined at offset zero. This is probably due to including a version 2 program object or GOFF module. Version 1 program objects and load modules require that a label exist.
System action: The module will be saved and marked non-editable. If the LET parameter was set to 8 the module will be marked editable. An attempt to execute it will lead to unpredictable results.
User response: Modify and recompile the program to create only the standard text class, or allow the module to be saved as a version 2 program object. In the latter case, assign SYSLMOD to a PDSE program library and do not specify COMPAT=LKED or COMPAT=PM1.
Source: Binder
Detecting Module: IEBXCWXX

IEW2695W  OPTION SPECIFICATION FOR option-name IS NOT VALID FOR VERSION 1 PROGRAM OBJECT OR LOAD MODULE.

Explanation: An option was specified that is invalid for load modules or version 1 program objects. If the option
is HOBSET, it cannot be reversed or undone on a rebind for version 1 program objects or load modules.

**System action:** The option specification is invalid. The module is created, however, any high-order bits in adcons set as a result of HOBSET will remain on in subsequent rebinds.

**User response:** Remove the option or allow the module to be saved as a version 2 program object.

**Source:** Binder

**IEW2696E** An error was detected in an extended object module at record record-number within member member-name identified by DDNAME ddname. ERROR ID = error-id.

**Explanation:** An error was encountered while processing an Extended Object Module (XOBJ). One of the following has occurred, as indicated by error-id. Note that the terms SD, LD, ER, UR and PR are ESD record types and P-pointer and R-pointer refer to the RLD position and relocation pointers, respectively.

**Error-id Description**

0520 The END record in the dummy subfile is in error.
0521 No END record was encountered.
0522 The product identification in the END record is not correct.
0524 The XOBJ record identifier in position 1 is not X'02'.
0525 The XOBJ record type is not one of the valid types SD, LD, PR, UR or ER.
0526 An XSD continuation record is not correct.
0527 The text ESDID does not refer to an SD record.
0528 The P-pointer does not refer to an SD record.
0529 The initialization subfile contained more than one section.
0530 The text ESDID does not refer to an SD record.
0534 The P-pointer does not refer to an SD record.
0535 The R-pointer does not refer to a valid ESD record.
0537 No END record was encountered for the subfile.
0538 An XSD record was encountered with a name length greater than the allowed maximum.

0558 An End-of-File was encountered when an End-of-File was not expected. Input file could be truncated.
0560 Record following END card of @@IPAOBJ is not an ESD.
0561 Record following END card of @@IPAOBJ is an ESD, but not an SD.
0562 Record following SD of @@DOPLNK is not an END record.
0566 IPALINK was not processed yet. Data is valid, but IPALINK must be run before you run the Binder.

**System action:** The module was discarded.

**User response:** Replace the defective XOBJ module.

**Source:** Binder

**Detecting Module:** IEWBXXH

---

**IEW2697E** An error was detected in an extended object module in member member-name identified by DDNAME ddname. ERROR ID = error-id.

**Explanation:** An error was encountered while processing an Extended Object Module (XOBJ). One of the following has occurred, as indicated by error-id. Note that the terms SD, LD, UR, ER and PR are ESD record types and P-pointer and R-pointer refer to the RLD position and relocation pointers, respectively.

**Error-id Description**

1501 The section length of the initialization subfile is zero or is not valid.
1502 The R-pointer in the initialization subfile is not defined. There must be an ESD record of the same name in the definition subfile.
1503 Second RLD record missing for type 8 or 12 recipe card. Recipe cards which initialize address constants must have two RLD records, the first describing the WSA variable being initialized and the second describing the location being used to initialize the variable.
1504,1505 The R-pointer in the initialization subfile is not defined. There must be an ESD record of the same name in the definition subfile.
1531 A P-pointer in the initialization subfile does not refer to the correct SD record.
1532 An LD record in the definition subfile does not have an “owning” SD record.
1533 An ER record was encountered in the initialization subfile but no corresponding LD or ER was found in the definition subfile.
1535 The recipe card in the initialization subfile does not have one of the valid types 0, 4, 8, 12 or 16.

1538 The R-pointer does not refer to a valid ESD record.

1539 The P-pointer does not refer to a valid ESD record.

1542 A UR record was encountered in the input file, but no corresponding LD or SD was found in the definition subfile.

1545 An ESD symbol name has one or more invalid characters. Check if there are any unprintable characters in the symbol name.

System action: This module is discarded.

User response: Replace the defective XOBJ module.

Detecting Module: IEWBXIOP

IEW2709S  WRITE OF DIRECTORY ENTRIES
FAILED FOR DDNAME ddname,
DIRECTORY SERVICES ISSUED
RETURN CODE return-code AND
REASON CODE reason-code.

Explanation: An error occurred while attempting to write the directory entries for the primary name and aliases (if any).

System action: Processing terminates for the specified member.

User response: Refer to Z/OS DFSMS Macro
Instructions for Data Sets or, if not there, Z/OS
DFSMSdfp Diagnosis for an explanation of the return and reason codes for DESERV.

Source: Binder

Detecting Module: IEWBXIPD

IEW2710S  CANNOT READ DSCB FOR DDNAME
ddname, CONCATENATION NUMBER
number, AND DATA SET NAME dsname.
CAMLST ISSUE RETURN CODE
return-code.

Explanation: The data set cannot be found on the volume. For a cataloged data set, it is probable that the data set was deleted without uncataloging the data set. For an uncataloged data set, either the data set name is wrong, the volume serial is wrong, or the data set was never created.

System action: Processing for the data set and all members associated with it terminates.

User response: Check the DD statement for errors. Check the return code.

Source: Binder

Detecting Module: IEWBXIPI

IEW2711S  UNABLE TO POSITION TO MEMBER
member-name FOR DDNAME ddname
AND CONCATENATION NUMBER
number. FIND MACRO ISSUED RETURN
CODE return-code.

Explanation: An error occurred attempting to locate the specified member.

System action: Processing for the specified member terminates.

User response: Refer to Z/OS DFSMS Macro
Instructions for Data Sets or, if not there, Z/OS
DFSMSdfp Diagnosis for an explanation of the return and reason codes for FIND.

Source: Binder

Detecting Module: IEWBXIPI
IEW2712S  BLKSIZE FOR DDNAME  ddname, CONCATENATION NUMBER  number, AND DATA SET NAME  dsname IS INVALID.

Explanation:  There is an error in the DCB parameters for the data set. Either the BLKSIZE parameter for the data set is zero, or RECFM=F and the LRECL parameter is zero, or the BLKSIZE is not a multiple of the LRECL value.

System action:  Processing for the data set terminates.

User response:  Check RDJFCB return codes, and remove the NOCAPTURE option from the dynamic allocation in the invoking application program. Contact your system programmer.

Source:  Binder

Detecting Module:  IEWBXIPI, IEWBXISI, IEWBXIPO

IEW2716S  OPEN FAILED FOR DDNAME  ddname.

Explanation:  The OPEN failed for a PDS or PDSE data set. This may occur if the ddname is deallocated dynamically. The Binder may have been invoked with a passed DDNAME associated with a UCB address allocated above the 16MB line with NOCAPTURE. The Binder will not process this dataset.

System action:  Processing for this data set terminates.

User response:  Check the operating environment, JCL data set specification, setup, etc. for this job, or remove the NOCAPTURE option from the dynamic allocation in the invoking application program. Contact your system programmer.

Source:  Binder

Detecting Module:  IEWBXIPI, IEWBXISI, IEWBXIPO, IEWBRSDM

IEW2717S  SYNCHRONOUS I/O ERROR OCCURRED FOR DDNAME  ddname, CONCATENATION NUMBER  number, DATA SET NAME  dsname, AND MEMBER NAME  member-name. MESSAGES PRODUCED BY SYNADAF FOLLOW:

Explanation:  An I/O error has occurred. Message(s) IEW2718S produced by the SYNADAF facility follow.

System action:  Processing for the data set terminates.

User response:  The data set is probably unusable and will need to be recreated.

Source:  Binder

Detecting Module:  IEWBXIPI

IEW2718S  synad-message

Explanation:  This message contains a line of the system diagnostic message(s) produced after a synchronous input/output error. It is preceded by message IEW2717S or IEW2724S. The format of the message is detailed under the SYNADAF macro in the DFSMS Macro Instructions for Data Sets. The binder may have been invoked with a passed DDNAME associated with a UCB address allocated above the
16MB line with NOCAPTURE. The Binder will not process this dataset.

**System action:** Processing for the data set is terminated.

**User response:** Remove the NOCAPTURE option from the dynamic allocation in the invoking application program. Contact your system programmer.

---

**IEW2719S** DSCB CANNOT BE READ FOR DDNAME ddname AND DATA SET NAME dsname. OBTAIN MACRO ISSUED RETURN CODE return-code.

**Explanation:** The data set cannot be found on the volume. For a cataloged data set, it is probable that the data set was deleted without uncataloging the data set. For an uncataloged data set, either the data set name or volume serial is wrong, or the data set was never created. Check the DD statement for errors.

**System action:** Processing for the data set terminates.

**User response:** Correct the DD statement.

**Source:** Binder

**Detecting Module:** IEWBXIPO

---

**IEW2721S** OUTPUT DATA SET FOR DDNAME ddname AND DATA SET NAME dsname IS NOT A PARTITIONED DATA SET OR PDSE.

**Explanation:** The output data set must be of partitioned organization. The DCB parameter used in creating the data set must specify DSORG=PO.

**System action:** Processing for the data set terminates.

**User response:** Correct the DD statement and ensure that the correct data set was specified.

**Source:** Binder

**Detecting Module:** IEWBXIPO

---

**IEW2723S** UPDATE OF DIRECTORY FAILED FOR DDNAME ddname MEMBER member-name. STOW MACRO ISSUED RETURN CODE return-code AND REASON CODE reason-code.

**Explanation:** A failure occurred while attempting to write a directory entry.

**System action:** Processing for the data set terminates.

**User response:** See z/OS DFSMS Macro Instructions

---

**IEW2724S** SYNCHRONOUS I/O ERROR OCCURRED FOR DDNAME ddname AND DATA SET NAME dsname. SYNADAF MESSAGES FOLLOW.

**Explanation:** An I/O error has occurred. Message(s) IEW2718S produced by the SYNADAF facility follow.

**System action:** Processing for the data set terminates.

**User response:** The data set is probably unusable and will need to be recreated.

**Source:** Binder

**Detecting Module:** IEWBXIPO, IEWBXISI

---

**IEW2726S** TRACK CAPACITY CALCULATIONS FAILED FOR ddname. TRKCALC MACRO FAILED WITH RETURN CODE return-code AND REASON CODE reason-code.

**Explanation:** The TRKCALC routine failed when trying to calculate track capacity.

**System action:** Processing continues, but the load module may occupy more space on DASD than expected.

**User response:** Check the return and reason codes and correct the problem if user controlled.

**Source:** Binder

**Detecting Module:** IEWBXIPO

---

**Explanation:** The binder has detected a failure in input/output processing for the specified data set.

**System action:** Processing for the data set terminates.

**User response:** Check the return and reason codes, and correct the problem if user controlled. If the indicated component is DEBCHK, DIV, SETLOCK, VSMLOCK, TESTART, or ALESERV, the reason and return codes may be found in either the z/OS MVS Programming: Authorized Assembler Services Reference ALE-DYN or z/OS MVS Programming: Authorized Assembler Services Reference.
**Chapter 9. IEW messages**

**IEW2728S**  OPEN FOR OUTPUT OF PDSE WITH DDNAME `ddname` HAS FAILED.
**COMPONENT** `component-name` ISSUED
**RETURN CODE** `return-code` AND
**REASON CODE** `reason-code`. **SERVICE** `service` ISSUED

**Explanation:** The binder has detected a failure in input/output processing for the specified data set.

**System action:** Processing for the specified data set terminates.

**User response:** Check the return and reason codes, and correct the problem if user controlled. If the indicated component is DEBCHK, DIV, SETLOCK, VSMLCK, TESTART, or ALESERV, the reason and return codes may be found in either the [z/OS MVS Programming: Authorized Assembler Services Reference ALE-DYN](#) or [z/OS MVS Programming: Authorized Assembler Services Reference SET-WTO](#).

For other components, contact the IBM Support Center.

**Source:** Binder

**Detecting Module:** IEWBXIPU

**IEW2729S**  BLOCKSIZE IS ZERO OR NOT A MULTIPLE OF LRECL FOR DDNAME `ddname` AND CONCATENATION NUMBER `number`.

**Explanation:** A zero or invalid blocksize was found for a sequential data set. Check the DCB parameter BLKSIZE for the specified data set.

**System action:** Processing for the data set terminates.

**User response:** Correct data set or DD statement.

**Source:** Binder

**Detecting Module:** IEWBXISI

**IEW2730S**  INVALID RECFM FOR DDNAME `ddname` AND CONCATENATION NUMBER `number`.

**Explanation:** A sequential data set was found to have an invalid record format. The DCB must specify either RECFM=F or RECFM=U, or RECFM=V for GOFF modules.

**System action:** Processing for the data set terminates.

**Source:** Binder

**Detecting Module:** IEWBXISI

**IEW2731S**  LRECL FOR DDNAME `ddname`, CONCATENATION NUMBER `number`, AND DATA SET NAME `dsname` IS INVALID.

**Explanation:** A data set was found to have an invalid logical record length (LRECL). A data set for the definition side file must have an LRECL of 80.

**System action:** Processing for the data set terminates.

**User response:** Correct data set or DD statement.

**Source:** Binder

**Detecting Module:** IEWBXIDO

**IEW2735S**  OUTPUT DATA SET FOR DDNAME `ddname` HAS INVALID RECORD FORMAT. RECFM=U IS REQUIRED.

**Explanation:** An attempt was made to write a program to a PDS or PDSE for which a fixed or variable length record format has been specified.

**System action:** Processing for the data set terminates.

**Note:** Prior to z/OS Version 1 Release 9, this error was produced only for PDSE. It is now produced for PDS or PDSE.

**User response:** Correct the DCB options.

**Source:** Binder

**Detecting Module:** IEWBXISO

**IEW2736S**  THERE IS NO SPACE LEFT IN THE DIRECTORY FOR DDNAME `ddname`. STOW OF THE DIRECTORY ENTRY MEMBER NAME `member-name` FAILED.

**Explanation:** The PDS directory entry for the specified primary member name could not be stored because the directory ran out of space.

**System action:** Processing for the data set terminates.

**User response:** Delete members from the PDS or recreate the data set with more directory space, or use a PDSE.

**Source:** Binder

**Detecting Module:** IEWBXISO

[1]: #/zos-mvslibrt/iewbxipu
[2]: #/zos-mvslibrt/iewbxisi
IEW2737S AN I/O ERROR OCCURRED IN WRITING THE DIRECTORY FOR DDNAME ddname MEMBER NAME member-name. STOW RETURNED A REASON CODE OF reason-code.

Explanation: An I/O error occurred when STOW tried to add a new member (that is, a directory entry) to the PDS.

System action: Processing for the data set terminates.

User response: Refer to z/OS DFSMS Macro Instructions for Data Sets or, if not there, z/OS DFSMSdfp Diagnosis for an explanation of the return and reason codes for STOW.

Source: Binder
Detecting Module: IEWBXIPO

IEW2738S INSUFFICIENT VIRTUAL STORAGE TO UPDATE THE DIRECTORY FOR DDNAME ddname MEMBER NAME member-name. STOW OF THE DIRECTORY ENTRY FAILED.

Explanation: The directory entry for the specified primary member name could not be stored because there was insufficient virtual storage available for STOW processing.

System action: Processing for the data set terminates.

User response: Specify a larger REGION size on the JCL.

Source: Binder
Detecting Module: IEWBXIPO

IEW2739S OUTPUT FOR DDNAME ddname, MEMBER member-name FAILED. BINDER MODULE IEWBXIOLO ISSUED RETURN CODE return-code AND REASON CODE reason-code.

Explanation: The binder detected a failure during input/output processing for the data set associated with the specified ddname.

System action: Processing for the specified member is terminated.

User response: Contact the IBM Support Center.

Source: Binder
Detecting Module: IEWBXICL

IEW2740S OUTPUT FOR DDNAME ddname, CONCATENATION NUMBER number, MEMBER member-name FAILED. BINDER MODULE IEWBXIOLO ISSUED RETURN CODE return-code AND REASON CODE reason-code.

Explanation: The binder detected a failure while writing to the data set associated with the specified ddname.

System action: Processing for the member terminates.

User response: Contact the IBM Support Center.

Source: Binder
Detecting Module: IEWBXICL

IEW2741S RETRIEVAL FAILED FOR MEMBER member-name FROM DDNAME ddname, CONCATENATION NUMBER number. BINDER MODULE IEWBXIOLO ISSUED RETURN CODE return-code AND REASON CODE reason-code.

Explanation: The binder detected a failure while reading from the data set associated with the specified ddname.

System action: Processing for the member terminates.

User response: Contact the IBM Support Center.

Source: Binder
Detecting Module: IEWBXIGL

IEW2742S OPEN FOR INPUT FAILED FOR PDSE MEMBER member-name ASSOCIATED WITH DDNAME ddname, CONCATENATION NUMBER number. BINDER MODULE IEWBXIOLO ISSUED RETURN CODE return-code AND REASON CODE reason-code.

Explanation: The binder detected a failure during open processing for input for the data set associated with the specified ddname.

System action: Processing for the member terminates.

User response: Contact the IBM Support Center.

Source: Binder
Detecting Module: IEWBXIOP
IEW2743S  OPEN FOR OUTPUT OF PDSE WITH DDNAME ddname HAS FAILED. 
BINDER MODULE IEWBXILO ISSUED RETURN CODE return-code AND REASON CODE reason-code.

Explanation: The binder detected a failure during open processing for output for the PDSE associated with the specified ddname.

System action: Processing for the specified data set terminates.

User response: Contact the IBM Support Center.

Source: Binder

Detecting Module: IEWBXIPU

IEW2744S  OUTPUT TO PDSE WITH DDNAME ddname HAS FAILED. BINDER MODULE IEWBXILO ISSUED RETURN CODE return-code AND REASON CODE reason-code.

Explanation: The binder detected a failure while writing to the PDSE associated with the specified ddname.

System action: Processing for the data set terminates.

User response: Contact the IBM Support Center.

Source: Binder

Detecting Module: IEWBXIPU

IEW2745S  ABEND abend-code OCCURRED WHILE PROCESSING PARTITIONED DATA SET WITH DDNAME ddname.

Explanation: An ABEND occurred during OPEN/CLOSE or END OF VOLUME processing for the specified PDS or PDSE.

System action: Processing for the data set terminates.

User response: Refer to z/OS MVS System Codes for an explanation of this abend code.

Source: Binder

Detecting Module: IEWBXIPU

IEW2746S  ABEND abend-code OCCURRED WHILE PROCESSING OUTPUT DATA SET WITH DDNAME ddname.

Explanation: An abend occurred during OPEN/CLOSE or END OF VOLUME processing for the specified data set opened for OUTPUT.

System action: Processing for the data set terminates.

User response: Refer to z/OS MVS System Codes for an explanation of this abend code.

Source: Binder

Detecting Module: IEWBXIPD

IEW2747S  ABEND abend-code OCCURRED WHILE PROCESSING OUTPUT DATA SET WITH DDNAME ddname.

Explanation: The binder detected a failure during open processing for output for the PDSE associated with the specified ddname.

System action: Processing for the specified data set terminates.

User response: Contact the IBM Support Center.

Source: Binder

Detecting Module: IEWBXIPD

IEW2748I  DIRECTORY ENTRY directory-name PROCESSED SUCCESSFULLY.

Explanation: An error occurred while writing a directory entry to a PDSE for the specified program object. However, this directory entry was successfully processed.

System action: Processing for the data set terminates.

User response: Contact the IBM Support Center.

Source: Binder

Detecting Module: IEWBXIPD

IEW2749S  DIRECTORY ENTRY directory-name FAILED. DIRECTORY SERVICES ISSUED REASON CODE reason-code.

Explanation: An error occurred while writing a directory entry to a PDSE for the specified program object. This directory entry was not processed.

System action: Processing for the data set terminates.

User response: Refer to z/OS MVS System Codes or, if not there, z/OS DFSMSdfp Diagnosis for an explanation of the return and reason codes.

Source: Binder

Detecting Module: IEWBXIPD
IEW2750S  DIRECTORY ENTRY directory-name
       WAS NOT PROCESSED.

Explanation:  An error occurred while writing a directory entry to a PDSE for the specified program object. This directory entry was not processed.

System action:  Processing for the data set terminates.

User response: IEW2749S will also have been issued. Refer to that message for further information.

Source:  Binder
Detecting Module: IEWBXIPD

IEW2751S  OPEN FOR MODULE member-name
       FROM DDNAME ddname FAILED
       BECAUSE THE MODULE RETRIEVED
       WAS AT A DIFFERENT LEVEL FROM
       THE MODULE IN MAIN STORAGE.

Explanation:  The Binder was asked to retrieve from DASD a module identified by its entry point address in main storage. The module has been updated or the library compressed since the module was loaded to main storage.

System action:  Processing for the data set terminates.

User response:  Rerun the job.

Source:  Binder
Detecting Module: IEWBXIOP

IEW2752S  A MEMBER NAME WAS SPECIFIED
       FOR DDNAME ddname BUT THE DATA
       SET IS NOT A PARTITIONED DATA
       SET.

Explanation:  The specified ddname points to a data set which is not of partitioned organization, but the INCLUDE statement specifies a member name. This error can also occur if the module is called via AUTOCALL and the AUTOCALL library is not a partitioned data set.

System action:  Processing for the data set terminates.

User response:  Correct the INCLUDE statement or the data set name on the DD statement.

Source:  Binder
Detecting Module: IEWBXIPI

IEW2753S  NO MEMBER NAME WAS SPECIFIED
       FOR DDNAME ddname, BUT THE DATA
       SET IS A PARTITIONED DATA SET.

Explanation:  The specified ddname points to a data set which is of partitioned organization, but the

Include statement does not specify a member name.

System action:  Processing for the data set terminates.

User response:  Correct the INCLUDE statement or change the DD statement to include a member name.

Source:  Binder
Detecting Module: IEWBXISI

IEW2754E  THERE IS NO SPACE LEFT IN THE
       DIRECTORY FOR ALIAS NAME
       alias-name IN THE LIBRARY
       IDENTIFIED BY DDNAME ddname.

Explanation:  An attempt was made to store the directory entry for the specified alias, but the directory ran out of space.

System action:  Processing continues, but the alias was not stored.

User response:  Recreate the PDS allocating more directory space.

Source:  Binder
Detecting Module: IEWBXIPO

IEW2755S  MEMBER member-name DIRECTORY
       ENTRY NOT ADDED/UPDATED
       BECAUSE OF I/O ERROR.

Explanation:  The binder encountered an I/O error while trying to add or replace the specified member in a PDS or PDSE.

System action:  Processing for the data set terminates.

User response:  Rerun the job. If error persists contact support personnel for your system.

Source:  Binder
Detecting Module: IEWBXIPI

IEW2756S  SPACE IS NOT AVAILABLE ON DIRECT
       ACCESS STORAGE TO SAVE MEMBER
       member-name.  THIS IS EQUIVALENT
       TO A abend-code ABEND.

Explanation:  The specified program object could not be saved because there was not enough direct access storage available in the PDSE. The equivalent abend code provides more information about the cause of the problem.

System action:  Output processing for the data set terminates. The member is not saved.

User response:  Allocate more space for the output data set. Either it will have to be recreated or the member must be stored in a different PDSE.

Source:  Binder
IEW2757S  UNABLE TO DETERMINE PATH NAME FOR DDNAME ddname. SVC 99 ISSUED RETURN CODE return-code AND REASON CODE reason-code.

Explanation: The binder was unable to determine the path name for an HFS file specified by the specified ddname. The SVC 99 which was issued to determine the name returned the specified reason and return codes.

System action: The file was not opened.

User response: Refer to z/OS MVS Programming, Authorized Assembler Services Guide for an explanation of the SVC 99 reason and return codes.

Source: Binder

Detecting Module: IEWBXIGE

IEW2758S  ACTIVITY AGAINST DDNAME ddname IS NOT SUPPORTED BECAUSE HFS IS NOT AVAILABLE.

Explanation: The binder attempted to access the HFS file for with the specified ddname, but the UNIX System Services service routines were not available. UNIX System Services is either not installed or is not currently active.

System action: The file was not opened.

User response: Contact system support personnel.

System programmer response: Ensure that UNIX System Services MVS is installed and active.

Source: Binder

Detecting Module: IEWBXIXI, IEWBXIXO, IEWBRS DM

IEW2759S  FILE ASSOCIATED WITH DDNAME ddname CANNOT BE OPENED BECAUSE HFS HAS DENIED READ ACCESS TO THE FILE.

Explanation: Either the user does not have read access to the HFS file or there was a problem with the PATHMODE parameter on the DD statement defining the file.

System action: The file was not opened.

User response: Ensure that the owner of the file has granted read access to the file or correct the DD statement creating the file. For further information, refer to the explanation of the EACCESS return code from the open() function in z/OS UNIX System Services Programming: Assembler Callable Services Reference.

Source: Binder

Detecting Module: IEWBXIXI

IEW2760S  FILE ASSOCIATED WITH DDNAME ddname CANNOT BE OPENED FOR INPUT BECAUSE PATHOPTS SPECIFIED WRITE ONLY.

Explanation: PATHOPTS passed to MVS allocation specified WRITEONLY access, but the binder was attempting to open the file for input.

System action: The file was not opened.

User response: Correct the PATHOPT parameter specified on this DD statement.

Application Programmer Response: Refer to the explanation of the ENFILE return code in the z/OS UNIX System Services Programming: Assembler Callable Services Reference.

Source: Binder

Detecting Module: IEWBXIXI

IEW2761S  FILE ASSOCIATED WITH DDNAME ddname CANNOT BE OPENED BECAUSE HFS HAS REACHED THE MAXIMUM NUMBER OF OPEN FILE DESCRIPTORS.

Explanation: There are too many files open for UNIX System Services to handle. The open() function returned ENFILE when the binder attempted to open the files associated with this ddname.

System action: The file was not opened.

User response: Refer to the explanation of the ENFILE return code for the open() function in z/OS UNIX System Services Programming: Assembler Callable Services Reference.

Source: Binder

Detecting Module: IEWBXIXI, IEWBXIXO

IEW2762S  FILE ASSOCIATED WITH DDNAME ddname CANNOT BE OPENED BECAUSE THE PATH NAME OR A COMPONENT OF THE PATH NAME IS TOO LONG.

Explanation: The pathname or a component of a pathname exceeds 1023, the maximum length permitted by the HFS.

System action: The file was not opened.

User response: Correct the pathname. For further information refer to the explanation of the ENAMETOOLONG return code from the open() function in z/OS UNIX System Services Programming: Assembler Callable Services Reference.

Source: Binder

Detecting Module: IEWBXIXI, IEWBXIXO, IEWBXIO P
IEW2763S FILE ASSOCIATED WITH DDNAME ddname CANNOT BE OPENED BECAUSE THE FILE DOES NOT EXIST OR CANNOT BE CREATED.

Explanation: The pathname specified does not correspond to a file known to UNIX System Services.

System action: The file was not opened.

User response: Correct the pathname. For further information refer to the explanation of the ENOENT return code from the open() function in z/OS UNIX System Services Programming: Assembler Callable Services Reference.

Source: Binder
Detecting Module: IEWBXIXI, IEWBIXIO

IEW2764S FILE ASSOCIATED WITH DDNAME ddname CANNOT BE OPENED BECAUSE A COMPONENT OF THE PATH NAME IS NOT A DIRECTORY.

Explanation: An incorrect directory name has been specified as part of the path name.

System action: The file was not opened.

User response: Correct the pathname. For further information, refer to the explanation of the ENOTDIR return code from the open() function in z/OS UNIX System Services Programming: Assembler Callable Services Reference.

Source: Binder
Detecting Module: IEWBXIXI, IEWBIXIO, IEWBXROO, IEWBXIOP

IEW2765S FILE ASSOCIATED WITH DDNAME ddname CANNOT BE OPENED. HFS OPEN ISSUED RETURN CODE return-code AND REASON CODE reason-code.

Explanation: UNIX System Services open failed with the indicated return code.

System action: The file was not opened.

User response: Check the meaning of the indicated return code for the UNIX System Services open() function found in z/OS UNIX System Services Programming: Assembler Callable Services Reference.

Source: Binder
Detecting Module: IEWBXIXI, IEWBIXIO, IEWBXSMD

IEW2766S DDNAME ddname IDENTIFIES AN HFS FILE AS PART OF A DATA SET CONCATENATION. THIS IS NOT SUPPORTED.

Explanation: The first data set in a concatenation is a UNIX System Services file. UNIX System Services files are not supported as part of data set concatenations.

System action: The binder will not attempt to process any members of any data sets or files in the concatenation.

User response: Modify the JCL to remove the UNIX System Services file from the concatenation.

Source: Binder
Detecting Module: IEWBXIO

IEW2767S MEMBER member-name IDENTIFIED BY DDNAME ddname HAS A NAME WHICH EXCEEDS MAXIMUM LENGTH ALLOWED FOR VERSION 1 OR LOAD MODULE.

Explanation: Module names or their associated aliases may not exceed 8 bytes for load modules or version 1 program object in a non-HFS file.

System action: Binder processing ends.

User response: Ensure that the member name specified, or any alias associated with it, is not greater than the maximum allowed.

Source: Binder
Detecting Module: IEWBXIGD

IEW2768S ACTIVITY AGAINST DDNAME ddname CANNOT BE PERFORMED BECAUSE THE FILE DESCRIPTOR IS NO LONGER VALID.

Explanation: The binder attempted to perform I/O against the file associated with the specified ddname, but the UNIX System Services service routines no longer recognized the file.

System action: Processing for the file ends.

User response: Refer to the explanation of the EBADF return code from the read() or write() function in z/OS UNIX System Services Programming: Assembler Callable Services Reference. Check for related error messages in the job log. If problems appear to be a system error, contact the IBM Support Center.

Detecting Module:  IEBXBIXO, IEBXBIXO, IEBWRSDDM

**IEW2770E**  
AN I/O ERROR OCCURRED IN WRITING THE DIRECTORY FOR DDNAME *ddname* ALIAS NAME *alias_name*. STOW RETURNED A REASON CODE OF *reason-code*.  

Explanation:  An I/O error occurred writing the specified alias directory entry.  
System action:  The specified alias is not stowed and processing of remaining aliases for the member is terminated.  
User response:  Rerun job to see if error is permanent. Check SYS1.LOGREC to determine if the I/O device has had a permanent failure. It may be necessary to place the output dataset on a different volume.  
Source:  Binder  
Detecting Module:  IEBXBIXO

**IEW2771E**  
INSUFFICIENT VIRTUAL STORAGE TO UPDATE THE DIRECTORY FOR DDNAME *ddname* ALIAS NAME *alias-name*. STOW OF THE DIRECTORY ENTRY FAILED.  

Explanation:  The directory entry for the alias was not written because of insufficient virtual storage.  
System action:  The specified alias is not stowed and processing of remaining aliases for the member is terminated.  
User response:  Rerun job with a larger region.  
Source:  Binder  
Detecting Module:  IEBXBIXO

**IEW2772E**  
UPDATE OF DIRECTORY FAILED FOR ALIAS *alias-name*. STOW MACRO ISSUED RETURN CODE *return-code* AND REASON CODE *reason-code*.  

Explanation:  STOW failed for the specified alias name.  
System action:  The specified alias is not stowed and processing of remaining aliases for the member is terminated.  
User response:  Refer to *z/OS DFSMS Macro Instructions for Data Sets* for an explanation of the return and reason codes.  
Source:  Binder  
Detecting Module:  IEBBXIPO

**IEW2773S**  
FILE FOR DDNAME *ddname* CANNOT BE READ BECAUSE THE NON-BLOCK OPTION HAS BEEN CHOSEN AND NO DATA IS AVAILABLE TO READ.  

Explanation:  No data could be read from the UNIX System Services file for the given ddname because of the non-block option.  
System action:  Processing for the UNIX System Services file ends.  
User response:  Ensure that the PATHOPTS parameter on the DD statement is correct.  
Source:  Binder  
Detecting Module:  IEBBXI

**IEW2774S**  
FILE FOR DDNAME *ddname* CANNOT BE READ BECAUSE OF AN I/O ERROR.  

Explanation:  An I/O error has occurred or the UNIX System Services file is assigned to the controlling terminal and cannot be read.  
System action:  Processing for the file ends.  
User response:  Refer to the explanation of the EIO return code for the read() function in *z/OS UNIX System Services Programming: Assembler Callable Services Reference*.  
Source:  Binder  
Detecting Module:  IEBBXI

**IEW2775S**  
FILE ASSOCIATED WITH DDNAME *ddname* CANNOT BE READ. HFS ISSUED RETURN CODE *return-code* AND REASON CODE *reason-code*.  

Explanation:  UNIX System Services read failed with the indicated return code.
System action: Nothing was read from the UNIX System Services file.
User response: Refer to the appropriate appendix in z/OS UNIX System Services Messages and Codes for an explanation of the indicated return code for the HFS read() function.
Source: Binder
Detecting Module:IEWBXIXI

IEW2776S MEMBER member-name COULD NOT BE SAVED TO DATA SET IDENTIFIED BY DDNAME ddname BECAUSE THE DATA SET CONTAINS DATA MEMBERS.

Explanation: A PDSE may contain either program objects or data members, but not both. The PDSE type is determined by the first member stored in the PDSE. Thereafter the member type cannot be changed.

System action: The program object is not saved to the PDSE.
User response: Specify a different PDSE to contain the program object.
Source: Binder
Detecting Module:IEWBXIXO

IEW2777S FILE ASSOCIATED WITH DDNAME ddname CANNOT BE WRITTEN BECAUSE HFS HAS DENIED WRITE ACCESS TO THE FILE.

Explanation: The binder attempted to open for output the file associated with the specified ddname, but the UNIX System Services service routines have denied write access to the binder.

System action: The file was not opened.
User response: Ensure that the owner of the file has granted write access to the file, and ensure that the PATHMODE parameter on the DD statement associated with the file is correct.

For additional information, see the explanation of EACCES return code for the write() function in z/OS UNIX System Services Programming: Assembler Callable Services Reference.

Source: Binder
Detecting Module:IEWBXIXO

IEW2778S FILE ASSOCIATED WITH DDNAME ddname CANNOT BE OPENED FOR OUTPUT BECAUSE PATHOPTS SPECIFIED READ ONLY.

Explanation: PATHOPTS passed to MVS allocation specified READONLY access, but the binder was attempting to open the file for output.

System action: The file was not opened.
User response: Correct the PATHOPT parameter specified on this DD statement.
Source: Binder
Detecting Module:IEWBXIXO

IEW2779E DUPLICATE ALIAS NAME alias-name IN HFS.

Explanation: An attempt was made to add an alias with a path name which already exists in the UNIX System Services file system.

System action: The alias is not added.
User response: Correct the input by either removing the request to add this alias or by deleting the existing entry and rerunning the link job.
Source: Binder
Detecting Module:IEWBXIXO

IEW2780E INSUFFICIENT SPACE IN HFS DIRECTORY FOR ALIAS alias-name.

Explanation: An attempt was made to add an alias to an HFS directory which had insufficient space.

System action: The alias is not added.
User response: Allocate additional space and rerun the job or specify a different directory.
Source: Binder
Detecting Module:IEWBXIXO

IEW2781E ALIAS NAME alias-name CANNOT BE ADDED. HFS ISSUED RETURN CODE return-code AND REASON CODE reason-code.

Explanation: An attempt was made unsuccessfully to add an alias to a directory.

System action: The alias is not added.
User response: Refer to the UNIX System Services return codes for the link() function described in the appropriate appendix in z/OS UNIX System Services Messages and Codes.
Source: Binder
Detecting Module:IEWBXIXO

IEW2782S OUTPUT TO DATASET IDENTIFIED BY DDNAME ddname FAILED BECAUSE ENQ OR RESERVE MACRO ISSUED RETURN CODE return-code.

Explanation: An ENQ or RESERVE macro is issued before writing a load module to a PDS. This is done to ensure proper serialization if two or more Binder or
Linkage Editor jobs are attempting to write to the same data set. The ENQ or RESERVE has failed and the Binder cannot proceed for fear of damaging the data set. The binder will only accept return code 0 or 8 from ENQ or RESERVE.

**System action:** The load module is not saved.

**Source:** Binder

**Detecting Module:** IEWBXIOP

---

**IEW2783E**  
**NO HFS PERMISSION TO ACCESS ALIAS alias_name.**

**Explanation:** An attempt was made to add an alias to a directory. The return code indicates either no search permission for the path name or no write permission for the directory.

**System action:** The alias is not added.

**User response:** Check the UNIX System Services use options. Ensure that the pathnames for the specified output directory (usually associated with the SYSLMOD ddname) and for the alias itself are correct.

**Source:** Binder

**Detecting Module:** IEWBXIIXO

---

**IEW2784I**  
**DDNAME ddname WAS FOUND IN THE EXTENDED TIOT AND WAS IGNORED.**

**Explanation:** The Binder may have been invoked with a passed ddname associated with a UCB address allocated above the 16MB line with NOCAPTURE. The Binder will not process this dataset.

**System action:** The alias is not added.

**User response:** Check the module path and the alias name. Ensure that the pathname components specified for the output directory (usually associated with the SYSLMOD ddname) and for the alias itself are correct.

**Source:** Binder

**Detecting Module:** IEWBXIOP, IEWBACTL

---

**IEW2785S**  
**AN ATTEMPT TO OBTAIN FILE STATISTICS FOR PATHNAME pathname FAILED. HFS ISSUED RETURN CODE return-code AND REASON CODE reason-code.**

**Explanation:** UNIX System Services stat failed with the indicated return code.

**System action:** Processing of the data set is terminated.

**User response:** Check the archive file and ensure that it is correct.

**Source:** Binder

**Detecting Module:** IEWBXIIXI
IEW2787E  ALIAS NAME  alias_name EXCEEDS HFS LIMIT.

Explanation:  An attempt was made to add an alias for a Program Object in an HFS file. The alias name concatenated with the module path exceeded the UNIX System Services limit of 1024 characters.

System action:  The alias is not added.

User response:  Check the module path and the alias name. Ensure that the pathname components specified for the output directory (usually associated with the SYSLMOD ddname) and for the alias itself are correct.

Source:  Binder

Detecting Module:  IEWBXIXO

IEW2788S  AN ATTEMPT TO PROCESS ARCHIVE FILE DATA IN PATH pathname FAILED BECAUSE THE FILE DOES NOT CONTAIN VALID DATA. ERROR ID = error-id.

Explanation:  The Binder encountered an error when attempting to process an archive file. One of the following has occurred, as indicated by error-id.

Error-id Description
0201  The first entry is missing a member name of ".__SYMDEF". This member name indicates that the archive file contains valid data (object modules or control cards) to process.
0501  The archive file does not specify any size for the symbol table.
0502  The size of the symbol table specified in the archive file is zero.
0503  Non-numeric data was found in other archive directory header fields (date, UID, GID, or mode).
0504  The archive directory header is not validly terminated. It must end with X'7915'.
0505  The number of symbols specified in the archive directory header is invalid. It must be a positive number less than 16Meg.
0506  The number of names found in the archive directory does not match the number of symbols specified.

System action:  Nothing was processed from the archive file.

User response:  Check the archive file and ensure that it is correct.

Source:  Binder

Detecting Module:  IEWBXIOP, IEWBXIGD

IEW2789I  AN ATTEMPT TO CHANGE THE ATTRIBUTES FOR FILE ASSOCIATED WITH DDNAME ddname FAILED. HFS ISSUED RETURN CODE return-code AND REASON CODE reason-code.

Explanation:  After opening a UNIX System Services file, an attempt to restore file or directory attributes failed. UNIX System Services chattr failed with the indicated return code. One or more of the following attributes could not be restored after OPEN:
1.  Program is considered program controlled.
2.  Program runs APF authorized if linked AC=1. The return and reason codes from the UNIX System Services BPX1CHR call are provided in the message.

System action:  Processing of the data set continues.

User response:  Refer to the appropriate appendix in z/OS UNIX System Services Messages and Codes for an explanation of the indicated return code for the HFS chattr() function.

Source:  Binder

Detecting Module:  IEWBXIXO

IEW2790S  PATHMODE FOR FILE ASSOCIATED WITH DDNAME ddname NOT CHANGED. CHMOD ISSUED RETURN CODE return-code AND REASON CODE reason code.

Explanation:  After writing a UNIX System Services file, an attempt to change the pathmode failed. The return and reason codes from UNIX System Services service call BPX1FCM are provided in the message.

System action:  The request has failed. The output file may or may not have been written.

User response:  Refer to the appropriate appendix in z/OS UNIX System Services Messages and Codes for an explanation of the specified reason and return codes.

Source:  Binder

Detecting Module:  IEWBXIXO

IEW2791S  FILE ASSOCIATED WITH DDNAME ddname CANNOT BE WRITTEN BECAUSE THE NON-BLOCK OPTION HAS BEEN CHOSEN AND DATA CANNOT BE WRITTEN IMMEDIATELY.

Explanation:  The binder attempted to write to the given file but could not because the non-block option had been specified.

System action:  Processing for the file ends.

User response:  Refer to the explanation of the EAGAIN return code for the write() function in the z/OS MVS System Messages, Vol 8 (IEF-IGD).
UNIX System Services Programming: Assembler Callable Services Reference

Also ensure that the PATHOPTS parameter on the DD statement is correct.

Source: Binder

Detecting Module: IEWBXIXO

IEW2792S FILE ASSOCIATED WITH DDNAME 
**ddname** CANNOT BE WRITTEN BECAUSE OF AN I/O ERROR.

**Explanation:** An I/O error has occurred or the HFS file is assigned to the controlling terminal and cannot be written.

**System action:** Processing for the file ends.

**User response:** Ensure that the parameters associated with the specified ddname are correct. Refer to the explanation of the EIO return code for the write() function in the z/OS UNIX System Services Programming: Assembler Callable Services Reference.

Source: Binder

Detecting Module: IEWBXIXO

IEW2793S FILE ASSOCIATED WITH DDNAME 
**ddname** CANNOT BE WRITTEN BECAUSE IT IS TOO BIG.

**Explanation:** The HFS file cannot be written because it exceeds the maximum file size supported by this file system.

**System action:** Processing for the file ends.

**User response:** Break the file up into smaller files, restructure it or store it in a different file system.

Source: Binder

Detecting Module: IEWBXIXO

IEW2794S FILE FOR DDNAME **ddname** CANNOT BE WRITTEN BECAUSE SPACE ON THE OUTPUT DEVICE IS EXHAUSTED.

**Explanation:** The file cannot be written because there was not enough space left on the output device, or the Unix System Services parameter MAXFILESIZE has been exceeded.

**System action:** Processing for the file ends.

**User response:** Refer to the explanation of the ENOSPC return code for write() function in the z/OS UNIX System Services Programming: Assembler Callable Services Reference. Check the existing USS limits by using the USS command 'ulimit', and increase the MAXFILESIZE parameter if needed.

Source: Binder

Detecting Module: IEWBXIXO

IEW2795S FILE ASSOCIATED WITH DDNAME 
**ddname** CANNOT BE WRITTEN BECAUSE PIPING HAS BEEN SPECIFIED AND THERE IS NO OTHER PROCESS OPEN TO READ THE DATA.

**Explanation:** Piping has been specified on the PATHOPTS parameter of the DD statement, but there is no process open to read from the pipe.

**System action:** Processing for the file ends.

Source: Binder

Detecting Module: IEWBXIXO

IEW2796S FILE ASSOCIATED WITH DDNAME 
**ddname** CANNOT BE WRITTEN. HFS WRITE ISSUED RETURN CODE **return-code** AND REASON CODE **reason-code**.

**Explanation:** UNIX System Services write() failed with the indicated return and reason codes.

**System action:** Processing for the file ends.

**User response:** For further information on the write() function reason and return codes, refer to the appropriate appendix in z/OS UNIX System Services Messages and Codes.

Source: Binder

Detecting Module: IEWBXIXO, IEWBRSDM

IEW2797S HFS FILE ASSOCIATED WITH **ddname** HAS INVALID RECORD FORMAT.

**Explanation:** The length of an HFS program object was not a multiple of 4096. Either the file had an incorrect length, or the file was specified as a PIPE, FIFO, or special file and the required amount of data could not be read.

**System action:** Processing for the file ends.

**User response:** Ensure that the pathname associated with the indicated ddname specifies a valid program object.

Source: Binder

Detecting Module: IEWBXIXO

IEW2798S FILE ASSOCIATED WITH DDNAME 
**ddname** WAS IN OBJECT FORMAT, BUT THE FILE FORMAT WAS INVALID.

**Explanation:** The length of an HFS object format file was not a multiple of 80.

**System action:** Processing continues, but the invalid object module is discarded.

**User response:** Recreate a valid object file.
IEW2799S  SPACE IS NOT AVAILABLE ON DIRECT ACCESS STORAGE TO STORE THE DIRECTORY ENTRIES FOR MEMBER member-name. THIS IS EQUIVALENT TO A abend-code ABEND.

Explanation:  The directory entry for a program object could not be saved because there was not enough direct access storage allocated to the PDSE. An equivalent abend code provides more information about the cause of the problem.

System action:  Processing for the data set terminates.

User response:  Allocate more space for the output PDSE data set.

Source:  Binder

Detecting Module:  IEWBXIXO

IEW2800S  THERE WAS NOT ENOUGH VIRTUAL STORAGE AVAILABLE TO READ DIRECTORY ENTRIES FROM DDNAME ddname.

Explanation:  A GETMAIN macro failed in preparation for reading directory entries from the data set referenced by the specified DD statement.

System action:  Processing for the data set terminates.

User response:  Alter the JCL for the job to specify a larger region size.

Source:  Binder

Detecting Module:  IEWBXIPU

IEW2801S  AN I/O ERROR OCCURRED WHILE ATTEMPTING TO READ DIRECTORY ENTRIES FROM DDNAME ddname.

Explanation:  An I/O has occurred while attempting to read directory entries from the data sets referenced by the specified DD statement.

System action:  Processing for the data set terminates.

User response:  Rerun the job. If the error persists, contact system support personnel.

Source:  Binder

Detecting Module:  IEWBXIGD

IEW2802S  CSVQUERY SERVICE ISSUED RETURN CODE return-code WHEN ATTEMPTING TO FIND THE SPECIFIED MODULE LOADED IN MAIN STORAGE.

Explanation:  The binder was called to include a module defined by the entry point token (EPTOKEN) passed as a parameter to the binder. The CSVQUERY service issued a return code when invoked with the specified EPTOKEN.

System action:  Processing for this module terminates. It is not included.

User response:  Correct the input to the binder to pass a valid EPTOKEN.

Source:  Binder

Detecting Module:  IEWBXIOP

IEW2803S  AN I/O ERROR OCCURRED FOR DDNAME ddname, MEMBER member AND CONCATENATION NUMBER concatenation. EXCP ISSUED RETURN CODE return-code.

Explanation:  A I/O error occurred reading from a data set opened for EXCP. The DCB specifying EXCP was opened and passed as a parameter to the BINDER.

System action:  Processing for the data set terminates.

User response:  Return codes from EXCP are documented under “Event Control Block Fields” in DFSMS Using Data Sets.

Source:  Binder

Detecting Module:  IEWBXIPU

IEW2804S  A RECORD LONGER THAN THE BLKSIZE WAS FOUND FOR DDNAME ddname, MEMBER member AND CONCATENATION NUMBER concatenation.

Explanation:  A block which was larger than the BLKSIZE parameter was read from the data set.

System action:  Input processing for the data set terminates.

User response:  Increase the BLKSIZE in the DCB for the data set and rerun the job.

Source:  Binder

Detecting Module:  IEWBXIPU
AN INVALID RECORD TTR WAS FOUND FOR DDNAME ddname, MEMBER member AND CONCATENATION NUMBER concatenation.

Explanation: A TTR was translated into an address that was not contained within the extents of the data set. This can happen if the dataset is opened with DISP=SHR by a concurrent task and is updated to cause the number of extents to be increased.

System action: Processing for the data set terminates.

User response: Ensure that any job updating the data set specifies DISP=OLD.

Source: Binder

Detecting Module: IEWBXIP

THE FILE SPECIFIED BY DDNAME ddname CANNOT BE READ BECAUSE IT HAS BEEN MARKED 'EXECUTE ONLY' BY RACF.

Explanation: The owner of the specified data set has not granted read authority to it.

System action: Input processing for the data set terminates.

User response: Ask the owner of the data set to grant read authority to it.

Source: Binder

Detecting Module: IEWBXIP, IEWBXIOP

READ FAILED FOR PDS MEMBER member FROM DDNAME ddname CONCATENATION NUMBER concatenation number, COMPONENT component ISSUED RETURN CODE return-code AND REASON CODE reason-code. SERVICE service ISSUED RETURN CODE return-code AND REASON CODE reason-code.

Explanation: An error has occurred while reading the data set.

System action: Input processing for the data set terminates.

User response: An internal system service encountered an error. Search problem reporting databases for a fix for the problem. If no fix exists, contact the IBM Support Center to diagnose the problem.

Source: Binder

Detecting Module: IEWBXIP

THE FILE SPECIFIED BY DDNAME ddname CANNOT BE READ BECAUSE IT HAS BEEN MARKED 'EXECUTE ONLY' BY RACF.

Explanation: The owner of the specified data set has not granted read authority to it.

System action: Input processing for the data set terminates.

User response: Ask the owner of the data set to grant read authority to it.

Source: Binder

Detecting Module: IEWBXIP, IEWBXIOP

READ FAILED FOR PDS MEMBER member FROM DDNAME ddname CONCATENATION NUMBER concatenation number, COMPONENT component ISSUED RETURN CODE return-code AND REASON CODE reason-code. SERVICE service ISSUED RETURN CODE return-code AND REASON CODE reason-code.

Explanation: An error has occurred while reading the data set.

System action: Input processing for the data set terminates.

User response: An internal system service encountered an error. Search problem reporting databases for a fix for the problem. If no fix exists, contact the IBM Support Center to diagnose the problem.

Source: Binder

Detecting Module: IEWBXIP

PROGRAM member-name CANNOT BE RETRIEVED BECAUSE CSVQUERY INDICATES MODULE PROVIDER was provider-id INSTEAD OF PROGRAM MANAGEMENT LOADER.

Explanation: Since the Program Management Loader did not load the specified program, the binder does not have access to the provider information for that module.

System action: The specified program can not be accessed.

User response: The program may be in LPA or may have been loaded by the Lookaside Facility (LLF) or other product. Remove the program or library from the linklist or LLF's extended library list.

Detecting Module: IEWBXIP

EPTOKEN eptoken CANNOT BE USED.

Explanation: The binder was called to include a module defined by the entry point token (EPTOKEN) passed as a parameter to the binder. The module was loaded from a private library, OR was loaded from a tasklib and the tasklib does not exist in the forked child.

System action: Processing for this module terminates. It is not included.

User response: Correct the input to the binder to pass a valid EPTOKEN.

Detecting Module: IEWBXIP
IEW2811I  DEFINITION SIDE FILE ALIAS NAME alias_name EXCEEDS HFS LIMIT.

Explanation: An attempt was made to add an alias to a definition side file directory. The alias name concatenated with the definition side file path exceeds the UNIX System Services limit of 1024 characters, or a single component of the name exceeds 255 characters. The Binder generates definition side file aliases from the aliases specified for the SYSLMOD data set.

System action: The alias is not added.

User response: Check the definition side file path and the alias name. Ensure that the pathname components specified for the definition side file directory (usually associated with the SYSDEFSD ddname) and for the alias itself are correct.

Source: Binder
Detecting Module: IEWBXIXO

IEW2812S  NO FILE NAME WAS SPECIFIED FOR DDNAME ddname.

Explanation: The HFS file pointed to by the specified ddname is a directory. It does not specify a file name. Also, for an input ddname, the INCLUDE statement does not specify a file name, or for an output ddname, the NAME statement does not specify a file name.

System action: Processing for the file terminates.

User response: For an input ddname, correct the INCLUDE statement or change the DD statement to include a file name. For an output ddname, correct the NAME statement or change the DD statement to include a file name.

Source: Binder
Detecting Module: IEWBXIXI, IEWBXIXO

IEW2813I  THE MODULE IDENTIFIED BY DDNAME ddname WITHIN MEMBER member MAY CONTAIN FEATURES NOT SUPPORTED BY THE SPECIFIED COMPAT LEVEL.

Explanation: An Extended Object Module (XOBJ) is being processed and the COMPAT option specifies an earlier release of the Binder.

System action: Processing continues.

User response: If additional error messages are produced by the Binder, either remove the COMPAT level specified, or change it to a level compatible with processing the XOBJ.

Source: Binder
Detecting Module: IEWBXR00

IEW2814E  SYMLINK REQUEST FOR symlink FAILED. SYMLINK ISSUED RETURN CODE return-code AND REASON CODE reason-code.

Explanation: A UNIX System Services symlink request issued by the binder failed. The return and reason codes returned by the UNIX System Services subsystem are indicated in the message.

System action: Processing continues.

User response: See the action suggested for the indicated reason and return code in z/OS UNIX System Services Messages and Codes.

Source: Binder
Detecting Module: IEWBXIXO

IEW2815E  READLINK REQUEST FOR symlink RETURNED return-code AND REASON CODE reason-code.

Explanation: A UNIX System Services readlink request issued by the binder failed. The return and reason codes returned by the UNIX System Services subsystem are indicated in the message.

System action: The current symlink request cannot be processed.

User response: See the action suggested for the indicated reason and return codes in z/OS UNIX System Services Messages and Codes.

Source: Binder
Detecting Module: IEWBXIXO

IEW2816E  NO SYMPATH WAS SPECIFIED. SYMBOLIC LINKS CANNOT BE ESTABLISHED.

Explanation: A series of one or more requests to establish symlinks was received, but no sympath specification was received by the start of save processing.

System action: The symlink requests will be ignored. Save processing will continue.

User response: Check control statements in the input stream.

Source: Binder

---

**IEW2820W**  
**EXISTING SYMBOLIC LINK pathname DOES NOT MATCH SYMPATH.**

**Explanation:** There is already a symbolic link file with a matching path, but the contents do no match the requested sympath.

**System action:** The existing symbolic link will not be changed.

**Source:** Binder

**Detecting Module:** IEWBXIXO

---

**IEW2821W**  
**GID groupid NOT PROCESSED. UNIX SYSTEM SERVICES FUNCTION GETGRGID RETURNED REASON CODE reason AND RETURN CODE rc**

**Explanation:** The value specified for GID is not a TSO/E user name or z/OS UNIX user ID known to the system.

**System action:** The binder will not attempt to set GID for SYSLMOD or any associated files (such as SYSDEFS).

**User response:** Ensure that GID was specified correctly.

**Source:** Binder

**Detecting Module:** IEWBXIXO

---

**IEW2822W**  
**UID userid NOT PROCESSED. UNIX SYSTEM SERVICES FUNCTION GETPWUID RETURNED REASON CODE reason AND RETURN CODE rc**

**Explanation:** The value specified for UID is not a TSO/E user name or z/OS UNIX user ID known to the system.

**System action:** The binder will not attempt to set UID for SYSLMOD or any associated files (such as SYSDEFS).

**User response:** Ensure that UID was specified correctly.

**Source:** Binder

**Detecting Module:** IEWBXIXO

---

**IEW2823I**  
**THE TRUE PATH NAME ASSOCIATED WITH DDNAME ddname COULD NOT BE PROCESSED.**

**Explanation:** The side file might contain invalid DLL names since the path name associated with this ddname could not be determined. The reason is that certain file systems (such as NFS) do not completely support very long path names. The path name (starting with a slash) is limited to 63 characters. If the path name does not start with a slash, then a file name is obtained instead of a path name. Also, the file name is limited to 63 characters.

**System action:** None.

**User response:** Shorten path name or file name to be less than or equal to 63 characters long.

**Source:** Binder
IEW2824E DDNAME xxxxx SPECIFIES AN EXECUTE-ONLY DATA SET SO THE BINDER IS UNABLE TO READ IT.

Explanation: The binder attempted to read from a data set associated with the specified DD name, but the system’s authorization tool (RACF or equivalent) would not permit the data to be read.

System action: The INCLUDE or autocall operation being attempted is skipped. This is likely to result in unresolved symbols.

User response: Either replace or remove the data set that cannot be read, or request that it be made read only rather than execute only. If the DD statement defines a concatenation of data sets, you might need to use ISPF or a similar tool to look at the data in each data set in order to determine which one cannot be read.

User response: Check the symptom dump in the JOBLOG messages and other printed output for an indication of the location of the error. Contact the IBM Support Center.

Source: Binder

Detecting Module: IEWB00RX

IEW2971T INSUFFICIENT storage-class STORAGE WAS AVAILABLE TO CONTINUE BINDER PROCESSING.

Explanation: The binder gets its storage from three different places. Storage class 1 refers to storage in the user’s address space below 16 Meg. Storage class 2 refers to storage above the 16 Meg line. Storage class 3 refers to dataspace storage. A binder request for a
block of storage in the class shown could not be satisfied.

If the binder cannot acquire dataspace storage, it will attempt to satisfy the request from primary storage, first from above 16Mb and then from below 16Mb. However, primary storage may have been constrained by the SIZE or WKSPACE binder parameters or the available region. This message indicates that the binder could not satisfy the request from any suitable class of storage.

**System action:** Processing is terminated.

**User response:** If the SIZE parameter was specified, increasing (or removing) the first subparameter will allow the binder to use more class 1 storage. Increasing the WKSPACE parameter for the specified class (or removing the WKSPACE parameter completely) will allow the binder to use more address space storage. If that is not possible to do, or fails to solve problem, then increase REGION size for job step.

If removing the SIZE or WKSPACE parameter and increasing the REGION does not solve the problem, contact your system support representative to determine if there are local constraints on region and dataspace storage.

**Source:** Binder

**Detecting Module:** IEWBSGET

---

**IEW2972W** A REQUEST FOR ADDITIONAL DATA SPACE STORAGE COULD NOT BE HONORED. DSPSERV REASON CODE OF reason-code WAS RETURNED.

**Explanation:** The binder has attempted to create a data space with a DSPSERV CREATE request which has completed with a return code greater then 4. The DSPSERV reason code returned is shown in the message.

**System action:** Processing continues using non-data space storage.

**User response:** Check out the DSPSERV CREATE reason code in the z/OS MVS Programming: Assembler Services Reference ABE-HSF. This condition could cause an out of storage failure later in Binder processing.

**Source:** Binder

**Detecting Module:** IEWBSGET

---

**IEW2974T** REGION TOO SMALL TO ESTABLISH BINDER ENVIRONMENT.

**Explanation:** Minimum storage requirements for binder processing to begin are unavailable.

**System action:** Processing is terminated.

**User response:** Increase REGION parameter in the JCL. The binder needs a minimum of 1 to 2 Meg.

Thereafter storage requirements are directly related to the size of the module being bound.

**Source:** Binder

**Detecting Module:** IEWBSGET

---

**IEW2980E** PRINT EXIT RETURNED INVALID RETURN CODE AND HAS BEEN DISABLED. RC = return-code.

**Explanation:** User print exit returned a return code which was not equal to 0 or 4.

**System action:** Processing continues without print exit.

**User response:** This message comes out on the job log. Check SYSPRINT, SYSTERM or the ensuing job log message to view message that print exit failed on. Review print exit internal code to determine why return code was not 0 or 4.

**Source:** Binder

**Detecting Module:** IEWBRERS

---

**IEW2985W** DDNAME ddname CAN NOT BE ALLOCATED TO AN HFS FILE.

**Explanation:** The system does not support allocation of the indicated ddname to an HFS file.

**System action:** If this was an optional ddname, processing continues without using the specified ddname.

**User response:** Correct JCL to allocate to an MVS data set.

**Source:** Binder

**Detecting Module:** IEWBRCRE, IEWBRSDM

---

**IEW2986E** ddname DD STATEMENT MISSING.

**Explanation:** The DDNAME statement specified was expected, but was missing.

**System action:** Processing continues without using missing file.

**User response:** Correct JCL to provide missing DD statement. If using the Binder Application Programming Interface, the STARTD filelist parameter requires the missing file to be specified. If missing file was SYSTERM, the TERM option was specified.

**Source:** Binder

**Detecting Module:** IEWBRCRE, IEWBRSDM
IEW2987W  **** CANNOT BE A PATHNAME OR OPEN DCB.

Explanation: A path name was specified for diagnostic files TRACE or GOFF, or an open DCB was passed for a file rather than PRINT or TERM.

System action: The file specification is ignored.

User response: Correct the specification.

IEW3000 - 3999

IEW3000I  PROCESSING COMPLETED WITH RETURN CODE  = return-code.

Explanation: PMTPORT processing has completed with the indicated return code.

System action: Processing completed.

User response: None.

Source: PMTPORT

Detecting Module:IEWTPORT

IEW3020E  MEMBER member-name IN SYSUT1 IS AN OVERLAY PROGRAM OBJECT AND CANNOT BE CONVERTED.

Explanation: The indicated member in the input dataset SYSUT1 is an overlay program object. PMTPORT does not support overlay program objects and thus cannot convert them to transportable programs.

System action: Processing ends if the user specified only one member of a program object library in the input dataset SYSUT1 at the invocation of PMTPORT. Processing continues with the next member if the user specified an entire program object library in the input dataset SYSUT1 at the invocation of PMTPORT.

User response: Verify the indicated program object library member. Ensure that the program object you wish to convert to a transportable program is not an overlay program object.

Source: PMTPORT

Detecting Module:IEWTPORT

IEW3025E  MEMBER member-name IN SYSUT1 HAS A PO LEVEL GREATER THAN THAT SUPPORTED AND CANNOT BE CONVERTED.

Explanation: The indicated member in the input dataset SYSUT1 has a PO level greater than PO3.

System action: Processing ends if the user specified only one member of a program object library in the input dataset SYSUT1 at the invocation of PMTPORT. Processing continues with the next member if the user specified an entire program object library in the input dataset SYSUT1 at the invocation of PMTPORT.

User response: Verify the indicated program object library member. Ensure that the program object you wish to convert to a transportable program is not an overlay program object.
PMTPORT does not support program objects beyond PO3 and cannot convert them to transportable programs.

**System action:** Processing ends if the user specified only one member of a program object library in the input dataset SYSUT1 at the invocation of PMTPORT. Processing continues with the next member if the user specified an entire program object library in the input dataset SYSUT1 at the invocation of PMTPORT.

**User response:** Verify the indicated program object library member. Ensure that the program object you wish to convert to a transportable program is not in a format greater than PO3.

</tr>
<tr>
<td>44</td>
<td>I/O error on a virtual dataset</td>
</tr>
<tr>
<td>48</td>
<td>Seek ADDR outside extent</td>
</tr>
</tbody>
</table>

**System action:** An abend will occur unless the program was loaded by a LOAD macro with the ERRET option specified.

**User response:** If the reason code indicates lack of module storage (reason 14), rerun the JOB with a larger region size. If the reason code indicates a TTR conversion error or seek address outside of extent, it is possible that the dataset was opened with DISP=SHR by a concurrent task and was updated to cause the number of extents to be increased. In that case the error will persist until the DCB is closed and reopened to cause the DEB to reflect the new extents.

If the error occurred while fetching a module from the linklist, using the commands available via dynamic linklist services to define and activate a new linklist may create a DCB and DEB for the new LNKLST that encompasses the new extents. A TTR conversion error can also occur if a LINK/LOAD/ATTACH/XCTL macro is coded with the DE and DCB parameters if the directory entry was obtained from a different DCB than the one passed in or if the directory entry is modified by the application program. Otherwise either an I/O error has occurred or the data set has been corrupted or built incorrectly.

**Source:** Loader

**Detecting Module:**IEWLRFMT

**Routing Code:** 11

**Descriptor Code:** -

---

**IEW4007I FIND FOR MODULE program-name FAILED BECAUSE DIRECTORY ENTRY IS NOT VALID FOR A LOAD MODULE.**

**Explanation:** An invalid or incorrect PDS directory entry was detected during processing of the Loader’s FIND function when loading a load module.

**System action:** An abend 806-04 will occur, accompanied by message IEW4007 in the job log when an attempt is made to locate the module.

**User response:** Determine cause of the invalid directory entry, rebuild it and rerun the job. Ensure the specified entry exists in the specified library.

**Source:** Loader

**Detecting Module:** IEWLFINX

**Routing Code:** 11

**Descriptor Code:** -

---

**IEW4008I FETCH FAILED FOR MODULE member_name FROM DDNAME ddname BECAUSE OF AN ERROR IN CONVERTING A TTR.**

**Explanation:** An error occurred in converting relative track address (TTR) to cylinder, head and record address (MBCCHHR).

**System action:** An abend will occur unless the program was loaded by a LOAD macro with the ERRET option specified.

**User response:** It is possible that the dataset was opened with DISP=SHR by a concurrent task and was updated to cause the number of extents to be increased. In that case the error will persist until the

---
DCB is closed and reopened to cause the DEB to reflect the new extents.

To resolve the error, you need to create and activate a LNKLST set that is the same as the LNKLST set that was being used when the error occurred. You can determine which LNKLST set a job was using with the DISPLAY PROG, LNKLST, JOB=jjjjjjjj command. You can create a LNKLST set using SETPROG LNKLST, DEFINE, NAME=nnn, COPYFROM=mmm, where mmm is the name of the LNKLST set shown in the DISPLAY. Then, you can activate the LNKLST set using SETPROG LNKLST, ACTIVATE, NAME=nnn.

Note: This approach only helps if the address space or job begins after doing the activate. If the address space or job has begun prior to the activate, you can consider using the UPDATE function of the SETPROG LNKLST command. You should read about this function and its caveats prior to using it.

A TTR conversion error can also occur if a LINK/LOAD/ATTACH/XCTL macro is coded with the DE and DCB parameters if the directory entry was obtained from a different DCB than the one passed in or if the directory entry is modified by the application program.

IEW4012I FETCH FAILED FOR MODULE
member_name FROM DDNAME ddname
BECAUSE THE MODULE CONTAINED INVALID LOADER DATA. REASON CODE reason-code.

Explanation: Load of the specified program object failed because of invalid or inconsistent control information found in the program object or its directory entry.
System action: An abend will occur unless the program was loaded by a LOAD macro with the ERRET option specified.
User response: Rebuild the program object using the binder.
Source: Loader
Detecting Module: IEWLSFTO, IEWLTRLC
Routing Code: 11
Descriptor Code: -
IEW4013I  FETCH FAILED FOR MODULE member_name FROM DDNAME ddname BECAUSE system_level OR HIGHER is REQUIRED TO FETCH THIS PROGRAM OBJECT.

Explanation: An attempt was made to load a program object on a system_level of DFSMS which does not support that program object. If the message indicates that DFSMS 1.4 is required, then an attempt was made to load a PM3-level program object on a DFSMS 1.2 or DFSMS 1.3 system. PM3-level program objects are created by the DFSMS 1.4 (or higher) Binder and cannot be loaded by down-level DFSMS systems. If the message indicates that DFSMS 1.3 is required, then an attempt was made to load a PM2-level program object on a DFSMS 1.1 or DFSMS 1.2 system. PM2-level program objects are created by the DFSMS 1.3 (or higher) Binder and cannot be loaded by DFSMS 1.1 or DFSMS 1.2.

System action: An abend will occur unless the program was loaded by a LOAD macro with the ERRET option specified.

User response: On a DFSMS 1.3 or DFSMS 1.4 system, in order to create a program object that can be loaded by DFSMS 1.1, DFSMS 1.2, or DFSMS 1.3, the user must specify or default to the Binder option COMPAT(PM1). To create a program object that can be loaded by DFSMS 1.3, the user can specify or default to the Binder option COMPAT(PM2).

Source: IEWLDR00

IEW4014I  FETCH FAILED FOR MODULE member_name FROM DDNAME ddname BECAUSE THE MODULE HAD INVALID LOADER DATA. REASON reason-code.

Explanation: Load of the specified program object failed because of invalid or inconsistent control information found in the program object or its directory entry.

System action: An abend will occur unless the program was loaded by a LOAD macro with the ERRET option specified.

User response: Rebuild the program object using the binder.

Source: Loader
Detecting Module: IEWSFTO, IEWLTRLC
Routing Code: 11
Descriptor Code: -

IEW5000 - 5057

IEW5001  When using the output file option (-o), specify a filename.

Explanation: The -o option requires an option-argument that is the name of an output file to be created by ld. This filename can be a pathname or a data set and member name that begins with two slashes.

User response: Reenter the ld command and specify an output filename to be used with the -o option. For example:
1d -o myprog myprog.o
1d -o "/myload(myprog)" myprog.o
1d -c -o /tmp/myprog.o myprog.o

Source: Binder
Detecting Module: IEWULMAI

IEW5002  When using the library directory option (-L), specify a directory pathname.

Explanation: The -L option requires an option-argument that is the pathname of a directory to be used when ld searches for archive libraries. ld uses that name when searching for library names specified with the -l operand.

System action:
User response: Reenter the ld command and include a library directory pathname after the -L option. For example:
1d -L mylib myprog.o -l mine

Source: Binder
Detecting Module: IEWULMAI

IEW5003  %s is not a valid option.

Explanation: The indicated option is not a valid ld option. To see the valid ld options, enter the ld command without any arguments, or look up the command description in Z/OS UNIX System Services Command Reference.

User response: Reenter the ld command and specify a valid option.

Source: Binder
Detecting Module: IEWULMAI

IEW5005  When using the library operand (-l), specify a library name.

Explanation: The -l operand requires an
option-argument that is the name of a library. ld uses that name when it searches for the corresponding archive file to be used during link-editing.

**User response:** Reenter the ld command and specify a library name to be used with the -l operand. For example:

```
ld myprog.o -l mine
```

**Source:** Binder

**Detecting Module:**IEWULMAI

---

**IEW5006** Specify at least one archive, or object operand to be processed.

**Explanation:** The ld command requires that you specify at least one operand of the object file form. Otherwise, ld has nothing that it can process. A library operand of the -l form alone is not enough input for ld.

**User response:** Reenter the ld command and specify at least one operand of the object file form. For example:

```
ld "//MYPROJ.OBJ(MYPROG)
```

**Source:** Binder

**Detecting Module:**IEWULMAI

---

**IEW5007** You cannot specify a data set as a library directory.

**Explanation:** When using the -L option, you can specify only a path name as a library directory. You cannot specify a data set, because other data sets are not found in directories. If you are trying to specify a C/370™ object library to be used as a library by ld, specify that data set name as an argument on the -l operand. This is analogous to specifying an archive file pathname (for which ld also does not perform a library directory search).

**User response:** Reenter the ld command and specify a library directory path name after the -L option. For example:

```
1d -L mylib myprog.o -l mine
```

Or, specify a data set after the -l operand. For example:

```
1d myprog.o -l "/MYLIB.LIB"
```

**Source:** Binder

**Detecting Module:**IEWULMAI

---

**IEW5011** The data definition name %s cannot be resolved.

**Explanation:** ld tried to allocate the indicated data set name dynamically in order to associate it with the indicated data definition. But the dynamic allocation failed because the indicated data set name was incorrect. Some common errors are:

- More than 8 characters were specified for any qualifier of the data set name.
- More than 44 characters were specified for the data set name.
- An incorrect character was specified as part of the data set name.
- A data set name qualifier began with a number.

Unless you enclose the data set name with single quotation marks, a TSO/E user ID prefix is added to the data set name.

**User response:** Reenter the ld command and specify a valid data set name. For example:

```
ld "//MYPROJ.OBJ(MYPROG1)"
```

**Source:** Binder

**Detecting Module:**IEWULMAI

---

**IEW5012** The data definition name %s cannot be resolved. It does not begin with //ddname at %s.

**Explanation:** ld processed a pseudo-JCL dynamic allocation instruction with incorrect syntax. This is a ld internal parsing error.

**User response:** Reenter the ld command. If the problem persists, contact the IBM service representative responsible for your installation.

**System programmer response:** Reenter the ld command with the -v option, and redirect stdout to a file. Keep this pseudo-JCL file and the ld command specified for problem determination.

**Source:** Binder

**Detecting Module:**IEWULMAI

---

**IEW5013** The data definition name %s cannot be resolved. It does not begin with //ddname DD at %s.

**Explanation:** ld processed a pseudo-JCL dynamic allocation instruction with incorrect syntax. This is a ld internal parsing error.

**User response:** Reenter the ld command. If the problem persists, contact the IBM service representative responsible for your installation.

**System programmer response:** Reenter the ld command with the -v option, and redirect stdout to a file. Keep this pseudo-JCL file and the ld command specified for problem determination.

**Source:** Binder

**Detecting Module:**IEWULMAI

---
IEW5014  The data definition name %s cannot be resolved.

Explanation:  The ld command tried to allocate the indicated data set name dynamically and to associate it with the indicated data definition name. The dynamic allocation failed, probably because the indicated data set member name did not have the correct syntax. Some common syntax errors are:
- More than 8 characters were specified for the member name.
- An incorrect character was specified as part of the member name.
- The member name began with a number.

Unless you enclosed the data set name with single quotation marks, a TSO/E user ID prefix is added to the data set name.

User response:  Reenter the ld command line and specify a valid data set member name. For example:
ld "//myproj.c(myprog1)"

Source:  Binder
Detecting Module: IEWULMAI

IEW5015  The data definition name %s cannot be resolved. Specify balanced parentheses for the data definition at %s.

Explanation:  ld processed a pseudo-JCL dynamic allocation instruction with incorrect syntax. This is a ld internal parsing error.

User response:  Environment variables provide necessary system and operational information to ld. Most likely, the values of one or more of these variables was incorrect. Use the env command to determine which ld environment variables are incorrectly set.

Source:  Binder
Detecting Module: IEWULMAI

IEW5016  The data definition name %s cannot be resolved. Specify a numeric %s subparameter for %s instead of %s.

Explanation:  ld processed a pseudo-JCL dynamic allocation instruction with incorrect syntax. This is a ld internal parsing error. One of the following subparameters had an incorrect value:
- For the DCB parameter, the keyword subparameters are one of the following:
  - LRECL
  - BLKSIZE
- For the SPACE parameter, the positional subparameters are one of the following:
  - BLKLGTH
  - PRIMARY-QTY
  - SECONDARY-QTY
  - DIRECTORY

User response:  Environment variables provide necessary system and operational information to ld. Most likely, the values of one or more of these variables was incorrect. Use the env command to determine which ld environment variables are incorrectly set.

Source:  Binder
Detecting Module: IEWULMAI

IEW5017  The data definition name %s cannot be resolved. Specify a valid %s subparameter for %s instead of %s.

Explanation:  ld processed a pseudo-JCL dynamic allocation instruction with incorrect syntax. This is a ld internal parsing error. One of the following subparameters had an incorrect value:
- For the DISP parameter, the positional subparameters are one of the following:
  - STATUS
  - NORMAL
  - ABNORMAL

User response:  Environment variables provide necessary system and operational information to ld. Most likely, the values of one or more of these variables was incorrect. Use the env command to determine which ld environment variables are incorrectly set.

Source:  Binder
Detecting Module: IEWULMAI
**IEW5019**  The data definition name %s cannot be resolved. Specify a valid parameter instead of %s.

**Explanation:**  The ld command processed a pseudo-JCL dynamic allocation instruction with incorrect syntax. This is a ld internal parsing error.

**User response:**  The ld command is configured by the use of environment variables. Most likely, the value of one or more of these environment variables is incorrect. Use the env command to determine which ld environment variables are incorrectly set. ([z/OS UNIX System Services Command Reference](describes environment variables in the section on the ld command.)

**Source:**  Binder

**Detecting Module:**  IEWULMAI

---

**IEW5020**  The data definition name %s cannot be resolved. Specify a valid %s parameter instead of %s.

**Explanation:**  The ld command processed a pseudo-JCL dynamic allocation instruction with incorrect syntax. This is a ld internal parsing error. One of the following parameters had an incorrect value:

- DSNTYPE
- PATHOPTS
- PATHMODE

**User response:**  The ld command is configured by the use of environment variables. Most likely, the value of one or more of these environment variables is incorrect. Use the env command to determine which ld environment variables are incorrectly set. ([z/OS UNIX System Services Command Reference](describes environment variables in the section on the ld command.)

**Source:**  Binder

**Detecting Module:**  IEWULMAI

---

**IEW5021**  The data definition name %s cannot be resolved. Specify a valid file instead of %s.

**Explanation:**  The ld command tried to allocate for the indicated file pathname dynamically and to associate it with the indicated data definition name. The dynamic allocation failed because the /dev/fdN pathname associated with the file did not have the correct syntax. Normally this cannot be the case because ld validates the character special files /dev/fdN for all pathname dynamic allocations before the actual dynamic allocation.

**User response:**  Reenter the ld command. If the problem persists, contact the IBM service representative responsible for your installation.

**System programmer response:**  Reenter the ld command with the -v option and redirect stdout to a file. Keep this pseudo-JCL file and the ld command specified for problem determination.

You can determine the actual /dev/fdN character special file pathname as follows:

- In the pseudo-JCL, find the statements for the failing step.
- Beginning with N=3, count all the pathname allocations in the order listed. (Ignore the allocations already in the /dev/fdN format, such as 1 and 2.)

**Source:**  Binder

**Detecting Module:**  IEWULMAI

---

**IEW5022**  The data definition name %s cannot be resolved. The data set was not found. Ensure that data set name %s is specified correctly.

**Explanation:**  The ld command tried to dynamically allocate the data set name indicated and to associate it with the indicated data definition name. The dynamic allocation failed, because the data set indicated could not be found. This is probably because the data set does not exist, or is not correctly cataloged (ld can only work with cataloged data sets). Note that for data set names specified on the ld command line, unless the data set name is enclosed in single quotation marks, a TSO/E user ID prefix is added to the data set name.

**User response:**  Reenter the ld command line and specify an existing data set name. For example:

```bash
ld "'myuser.myprog.c'"
```

**Source:**  Binder

**Detecting Module:**  IEWULMAI

---

**IEW5023**  The data definition name %s cannot be resolved. The data set was not found. Ensure that data set and member name %s(%s) are specified correctly.

**Explanation:**  The ld command tried to dynamically allocate the indicated data set and member name and to associate it with the indicated data definition name. But the allocation failed, because the indicated data set and member could not be found. This is probably because the data set does not exist, or is not correctly cataloged (ld can only work with cataloged data sets). Unless you enclose the data set name with single quotation marks, a TSO/E user ID prefix is added to the data set name.

**User response:**  Reenter the ld command and specify an existing data set. For example:
If the source data set and object data set types are not the same, you need to delete (and optionally preallocate) the object data sets so the organizations are the same before reentering the ld command.

Source:  Binder
Detecting Module: IEWULMAI

IEW5026  The data definition name %s cannot be resolved. File %s could not be opened: %s

Explanation:  ld tried to open the indicated file pathname and to associate it with the indicated data definition name. However, the file pathname could not be opened. This is usually because the file does not exist, or you do not have permission to use the file.

The error message from the open function is at the end of the ld message.

User response:  Reenter the ld command and specify an existing filename to which you have permission. For example:

    ld myprog.o

Source:  Binder
Detecting Module: IEWULMAI

IEW5027  The data definition name %s cannot be resolved. An allocation error occurred for %s with return code %s, error code %s hex, and information code %s hex.

Explanation:  A pseudo-JCL dynamic allocation instruction that was processed by ld failed. ld did not recognize the return code, error code, and information code resulting from the dynamic allocation function.

User response:  Reenter the ld command. If the problem persists, contact the IBM service representative responsible for your installation.

System programmer response:  Reenter the ld command with the -v option, redirecting stdout and stderr to a file. Keep this pseudo-JCL file and the ld command specified for problem determination.

You can find the meaning of most dynamic allocation return codes in the chapter on requesting dynamic allocation functions in z/OS MVS Programming: Authorized Assembler Services Guide.

Source:  Binder
Detecting Module: IEWULMAI

IEW5028  The data definition name %s cannot be resolved. Specify only a data set name for sequential data set %s instead of member %s.

Explanation:  The ld command allocated the indicated data set, for which the indicated data set member was

Source:  Binder
Detecting Module: IEWULMAI
specified, and discovered that it is a sequential data set. Sequential data sets do not have members.

For compiler objects, since the name is derived from the source data set name, the source and object data sets must have the same organization (partitioned or sequential).

**User response:** Reenter the `ld` command line and specify the data set name without a member name. For example:

```
ld "//myprog.o"
```

If the source data set and object data set organizations are not the same, you need to delete (and optionally preallocate) the object data set so the organizations are the same before reissuing the `ld` command.

**Source:** Binder

**Detecting Module:** IEWULMAI

---

**IEW5029** The data definition name %s cannot be resolved. Specify only a data set name for partitioned data set %s instead of member %s.

**Explanation:** The `ld` command allocated the indicated data set, for which the indicated data set member was specified. `ld` knows that this should be a reference to a C37OLIB object library data set. C37OLIB object libraries are specified by giving the data set name only, without referring to any of the data set members. The data set members are automatically included by the prelinker, as required, during symbol resolution.

**User response:** Reenter the `ld` command line and specify the C37OLIB object library data set name without a member name. For example:

```
ld "//myproj.c(myprog)" -l"//mylib"
```

**Source:** Binder

**Detecting Module:** IEWULMAI

---

**IEW5030** Could not open %s: %s

**Explanation:** The `ld` command tried to open the indicated temporary system input stream, but the associated data set could not be opened.

The error message from the open function is at the end of the `ld` message.

**User response:** Reenter the `ld` command. If the problem persists, contact the IBM service representative responsible for your installation.

**System programmer response:** Try to correct the problem based on the error message. If that does not work, reenter the `ld` command with the `-v` option and redirect `stdout` and `stderr` to a file. Keep this pseudo-JCL and error file and the `ld` command specified for problem determination.

**Source:** Binder

**Detecting Module:** IEWULMAI

---

**IEW5031** Could not write record %s to %s (%s bytes were written): %s

**Explanation:** The `ld` command tried to write to the indicated temporary system input stream data set that it opened, but the write failed. (That data set is needed for the prelink and link-edit steps.)

The error message from the write function is at the end of the `ld` message.

**User response:** Reenter the `ld` command. If the problem persists, contact the IBM service representative responsible for your installation.

**System programmer response:** Try to correct the problem based on the error message. If you do not succeed, reenter the `ld` command with the `-v` option, and redirect `stdout` and `stderr` to a file. Keep this pseudo-JCL and error file and the `ld` command specified for problem determination.

**Source:** Binder

**Detecting Module:** IEWULMAI

---

**IEW5032** Specify fewer binder options.

**Explanation:** The option list to be passed to the binder is too long. When a program is invoked dynamically under MVS (such as when `ld` calls the binder), the length of the parameter string is architecturally limited. If you specify fewer arguments with the `-b` `ld` option, a shorter parameter string is passed.

**User response:** Shorten the length of the arguments for the binder. Normally, you can accomplish this by removing one or more `-b` arguments. Alternatively, you may be able to use short forms for the binder options.

**Source:** Binder

**Detecting Module:** IEWULMAI

---

**IEW5033** The binder ended with return code %s.

**Explanation:** This does not necessarily mean that you need to take action. Normally, another error message precedes this message. If a positive return code less than or equal to the value of the environment variable `(_ACCEPTABLE_RC)` (or its default value) is returned, the final result of the `ld` command is not affected.

**User response:** If necessary, correct the error indicated by the preceding message or messages, and reenter the `ld` command.

If a preceding message indicates that there is a problem with a `DD:ddname` (such as `DD:SYSLIN`), and it is unclear to which data set or pathname this refers, then reenter the failing `ld` command with the `-v` option to
produce pseudo-JCL. To find out which data set or pathname ld is allocating to that ddname, look at the pseudo-JCL of the failing step for a line beginning with the words "/ddname DD". The beginning of each step is identified by the words "//step EXEC".

Source: Binder
Detecting Module: IEWULMAI

IEW5034 The archive library %s cannot be found.

Explanation: ld tried to find the indicated archive library, first by using the directories specified on all -L options, and then by looking in the directories specified by the _LD_LIBDIRS environment variable or its default (/lib and then /usr/lib). The filename used for the search is the archive library name prefixed with lib and suffixed with a. But the archive library either does not exist, or you do not have permission to read it. Normally, this error occurs when the library name is incorrectly specified.

User response: Reenter the ld command and specify an existing library name to which you have permission. For example:

```bash
ld myprog.o -l m
```
or specify a library directory on the -L option that contains the indicated archive library. For example:

```bash
ld -L mylib myprog.o -l mine
```

Source: Binder
Detecting Module:

IEW5035 The data definition name %s cannot be resolved. Specify the name of a partitioned data set instead of sequential data set %s.

Explanation: The ld command allocated the indicated data set and discovered that it has partitioned data set organization. ld was told that this is a reference to a specified data set that has partitioned organization instead of sequential organization, because of the DSORG subparameter specified on the DCB parameter of the environment variable associated with this data set.

User response: The ld command is configured by the use of environment variables. Most likely, the value of one or more of these environment variables is incorrect. Use the env command to determine which ld environment variables are incorrectly set. (z/OS UNIX System Services Command Reference describes environment variables in the section on the ld command.)

Source: Binder
Detecting Module: IEWULMAI

IEW5036 The data definition name %s cannot be resolved. Specify the name of a sequential data set instead of partitioned data set %s.

Explanation: The ld command allocated the indicated data set and discovered that it has partitioned data set organization. ld was told that this is a reference to a specified data set that has partitioned organization instead of sequential organization, because of the DSORG subparameter specified on the DCB parameter of the environment variable associated with this data set.

User response: Reenter the ld command. If the problem persists, contact the IBM service representative responsible for your installation.

System programmer response: Ensure that the /dev/fdN character special files were correctly created with the mknod command, and that there are enough of them. For more information about creating the /dev/fdN character special files required for ld, refer to z/OS UNIX System Services Planning.

Source: Binder
Detecting Module: IEWULMAI

IEW5037 The data definition name %s cannot be resolved. Information for character special file %s, needed to allocate file %s, cannot be obtained: %s Follow local procedures for reporting problems.

Explanation: The ld command uses the /dev/fdN character special files for all pathname allocations. ld tried to validate the indicated character special file by using the stat function, but that function failed. ld cannot use the indicated file without the indicated character special file.

User response: Reenter the ld command. If the problem persists, contact the IBM service representative responsible for your installation.

System programmer response: Ensure that the /dev/fdN character special files were correctly created with the mknod command, and that there are enough of them. For more information about creating the /dev/fdN character special files required for ld, refer to z/OS UNIX System Services Planning.

Source: Binder
Detecting Module: IEWULMAI

IEW5038 The data definition name %s cannot be resolved. File %s, needed to allocate file %s, is not character special. Follow local procedures for reporting problems.

Explanation: The ld command uses the /dev/fdN character special files for all pathname allocations. ld
validated the indicated character special file, using the `stat` function, and determined that the indicated file is not a character special file. `ld` cannot use the indicated file without the indicated character special file.

**User response:** Reenter the `ld` command. If the problem persists, contact the IBM service representative responsible for your installation.

**System programmer response:** Ensure that the `/dev/fdN` character special files were correctly created with the `mknod` command, and that there are enough of them. For more information about creating the `/dev/fdN` character special files required for `ld`, refer to `z/OS UNIX System Services Planning`.

Source: Binder

**Detecting Module:** IEWULMAI

### IEW5039

The data definition name `%s` cannot be resolved. Character-special file `%s`, needed to allocate file `%s`, is not major 5. Follow local procedures for reporting problems.

**Explanation:** The `ld` command uses the `/dev/fdN` character special files for all pathname allocations. `ld` validated the indicated character special file, using the `stat` function, and determined that the indicated character special file does not have the correct major number. `ld` cannot use the indicated file without the indicated character special file.

**User response:** Reenter the `ld` command. If the problem persists, contact the IBM service representative responsible for your installation.

**System programmer response:** Ensure that the `/dev/fdN` character special files were correctly created with the `mknod` command, and that there are enough of them. For more information about creating the `/dev/fdN` character special files required for `ld`, refer to `z/OS UNIX System Services Planning`.

Source: Binder

**Detecting Module:** IEWULMAI

### IEW5048

When using the entry option `-e`, specify an entry point symbol.

**Explanation:** The `-e` option requires an option-argument that is the name of the entry point symbol, to which control will be given when the output file program is executed. This symbol can be an L-name symbol, or an S-name symbol that begins with two slashes.

**User response:** Reenter the `ld` command and specify an entry point symbol to be used with the `-e` option. For example:

```
ld -e mystart myprog.o
ld -e //MYSTART myprog.o
```

Source: Binder

**Detecting Module:** IEWULMAI

### IEW5049

When using the unresolved option `-u`, specify a symbol to load.

**Explanation:** The `-u` option requires an option-argument that is the name of a symbol which is to be added to the table of unresolved symbols. This symbol can be an L-name symbol, or an S-name symbol that begins with two slashes.

**User response:** Reenter the `ld` command and specify a symbol to load with the `-u` option. For example:

```
ld -u mymain file.a
ld -u //MYMAIN file.a
```

Source: Binder

**Detecting Module:** IEWULMAI
IEW5050  Fork failed: %s
Explanation:  ld attempted to fork, and the fork failed.
The error message from the fork function is at the end of the ld message.
User response:  Reenter the ld command. If the problem persists, contact the IBM service representative responsible for your installation.
System programmer response:  Try to correct the problem based on the specific error message. If you do not succeed, reenter the ld command with the -v option and redirect stdout and stderr to a file. Keep this pseudo-JCL and error file and the ld command specified for problem determination.
Source:  Binder
Detecting Module:  IEWULMAI

IEW5051  Terminated by signal %s.
Explanation:  ld was terminated due to a signal.
Source:  Binder
Detecting Module:  IEWULMAI

IEW5052  Specify a series of binder options, separated by commas, for the -b option.
Explanation:  The -b option requires a series of binder option that will be passed to the binder. For information about binder options and their use, see z/OS MVS Binder Detecting Module:  User's Guide and Reference
User response:  Reenter the ld command and specify a list of binder options with the -b option. For example: ld myprog.o -b XREF,PRINT
Source:  Binder
Detecting Module:  IEWULMAI

IEW5053  When using the file option (-f), specify a file containing a list of input files.
Explanation:  The -f option requires the name of a file that contains a list of file names that will be input to the ld command.
User response:  Reenter the ld command specifying a file name with the -f option. For example: ld -f myfile.list
Source:  Binder
Detecting Module:  IEWULMAI

IEW5054  When using the order option (-O), specify a section name to be ordered to the start of the executable.
Explanation:  The -O option requires the name of a section that is to be ordered to the front of the output file.
User response:  Reenter the ld command specifying a section name with the -O option. For example: ld myprog.o -O mysect
Source:  Binder
Detecting Module:  IEWULMAI

IEW5055  When using the SYSLIB option (-S), specify a data set name to be used in resolving external references.
Explanation:  The -S option requires the name of a data set that will be used in resolving external references during the bind.
User response:  Reenter the ld command specifying a data set name with the -S option. For example: ld myprog.o -S '//MYPROJ.LINKLIB'
Source:  Binder
Detecting Module:  IEWULMAI

IEW5056  When using the side-deck option (-x), specify a file where exported dll symbols will be written.
Explanation:  The -x option requires the name of a file that the binder will use for writing out exported symbols when it processes a dynamic link library (DLL).
User response:  Reenter the ld command specifying a file name with the -x option. For example: ld mydll.o -o mydll -b DLL -x myproj.x
Source:  Binder
Detecting Module:  IEWULMAI

IEW5057  Unable to load binder program %s.
Explanation:  ld was unable to load the binder program into storage. The name of the program is given at the end of the message.
User response:  Reenter the ld command. If the problem persists, contact the IBM service representative responsible for your installation.

Chapter 10. IFA messages

IFA010I

SMF DUMP PARAMETERS

keywd [val] -- orig

Explanation: This message lists the options in effect for the system management facilities (SMF) dump program.

In the message text:

- keywd: The option.
- val: The value of the option.
- orig: The origin of the option, either SYSIN or DEFAULT.

System action: SMF dump processing continues.

Source: System Management Facilities (SMF)

Detecting Module: IEEMB833

Routing Code: -

Descriptor Code: -

IFA011I

SMF SYSIN DATA SET (inddname | outddname) CANNOT BE (OPENED | READ | WRITTEN TO | CLOSED)

SYSTEM ABEND CODE IS cde
REASON/RETURN CODE IS rcode

{JOB TERMINATED | NO FURTHER PROCESSING OF THIS DATA SET}

SMF (inddname) DATASET CONTAINS RECORD(S) IN ERROR

PROCESSING OF THIS DATASET CONTINUES

INVALID TIME OR DATE IN RECORD HEADER

[RETURN CODE = rc
 {FEEDBACK CODE = fc | ERROR CODE = ec}]

Explanation: System management facilities (SMF) dump program was unable to open, read, write to, or close a data set.

The system abend code and reason/return code appear when an ABEND has occurred in the system management facilities (SMF) dump program.

The last line of the message appears when the error occurred while processing a VSAM data set. The return code, feedback code, and error code are from VSAM.

This message might be accompanied by a VSAM error message that further identifies the problem.

In the message text:

- inddname: The ddname in a SYSIN INDD parameter.
- outddname: The ddname in an OUTDD parameter.
- cde: The system abend code.
- rcode: The system abend reason or return code.
- rc: The VSAM record management return code.
- fc: The VSAM RPL feedback code.
- ec: The VSAM OPEN/CLOSE error code.

For explanations of the VSAM codes, see z/OS DFSMS Macro Instructions for Data Sets.

System action: The system ends the SMF dump job, if the CLEAR or ALL option was specified for any VSAM input data set and the error occurred for an output data set. If the error was for inconsistently spanned VSAM input records (feedback code = 0140), or for incorrect time or date values in the record header, the record(s) in error are skipped and counted as errors in the summary activity report. Data set processing continues. In all other cases, dump processing continues, but there is no further processing of the indicated data set. If the indicated data set is an output data set, data is dumped to the output data sets not affected by the error.

System programmer response: Check the JCL for the job. Be sure it includes a DD statement for each input and output ddname specified in the SYSIN parameters as well as a SYSIN DD statement. If DUMPIN or DUMPOUT, the default ddname for the input or output data set, appears in the message, include a DD statement with the same ddname. Check that each DD statement correctly defines the data set.

If the message contains a system abend code, refer to z/OS MVS System Codes for an explanation of this abend code.

If the JCL is correct and the message contains VSAM codes, see z/OS DFSMS Macro Instructions for Data Sets for an explanation of the VSAM codes. Look for other messages about the problem.

Correct the problem. Rerun the SMF dump program, if required.

### IFA016I ERROR DETECTED IN USER EXIT

**exitname. EXIT BYPASSED.**

**SYSTEM ABEND CODE IS cde REASON/RETURN CODE IS rcode**

**Explanation:** The system management facilities (SMF) dump program either:
- Could not load an installation exit routine.
- Detected an error while the exit routine was running.

The system abend code and reason/return code appear when an ABEND has occurred in the system management facilities (SMF) dump program.

Other error messages might precede this message.

In the message text:

- **exitname** The name of the installation exit routine.
- **cde** The system abend code.
- **rcode** The system abend reason or return code.

**System action:** SMF dump processing continues, but bypasses the installation exit routine.

**System programmer response:** If the exit routine could not be loaded, be sure the routine resides in an area that is searched by the system when modules are requested.

If the problem occurred while the exit routine was running, check the exit routine for errors.

If the message contains a system abend code, refer to [z/OS MVS System Codes](https://www.ibm.com/systems/z/os/zos/bkserv/mvs/system-codes) for an explanation of this abend code.

### IFA019I CLEAR OPTIONS IS NOT AUTHORIZED IN THIS ENVIRONMENT

**Explanation:** A CLEAR option of the system management facilities (SMF) dump program was requested. The requester is not APF-authorized. APF authorization is required to invoke the CLEAR function.
Note: APF authorization is not required to invoke the DUMP function or to obtain a summary activity report.

System action: SMF dump processing continues, but no SMF recording data sets are cleared.

System programmer response: The installation might want to allow APF authorization for the SMF dump program in a Time Sharing Options Extended (TSO/E) environment.

Source: System Management Facilities (SMF)

DDname – – Dsname
Explanation: The system management facilities (SMF) dump program issues this message once for each input and output data set.

In the message text:

- DDname
  The ddname.

- Dsname
  The name of the data set.

System action: SMF dump processing continues.

Source: System Management Facilities (SMF)

System programmer response: Refer to z/OS MVS System Codes for an explanation of this abend code.

System action: SMF dump processing continues, but no further processing is performed on the empty SMF recording data.

Operator response: Notify the system programmer.

System programmer response: Check the SMF recording data set specified by the DD name.

System action: SMF dump processing continues, but no further processing is performed on the empty SMF recording data.

Operator response: Notify the system programmer.

System programmer response: Determine if another task or user has SYS1.PARMLIB allocated.

Source: System Management Facilities (SMF)

System action: SMF dump processing continues, but no further processing is performed.

Operator response: Notify the system programmer.

System programmer response: Check the SMF recording data set specified by the DD name.

Source: System Management Facilities (SMF)

Explanation: The system management facilities (SMF) dump program detected more than 500 records in error in the SMF recording data set that was specified on DD
statement inddname. Only the first 500 records in error are printed in the Summary Activity Report. Subsequent records in error are not printed, but are still counted in the total number of records in error.

In the message text:

inddname
  The DD name of the specified SMF recording data set.

System action: SMF dump processing continues, but stops printing records in error in the Summary Activity Report for the SMF recording data set.

Operator response: Notify the system programmer.

System programmer response: If the SMF recording data set contains a large number of user records (for example, 500 records), ensure that the user records are built correctly. For information about records that the SMF dump program does not dump because of errors, see z/OS MVS System Management Facilities (SMF).

Otherwise, the specified SMF recording data set might not be valid. For information about valid data set input to the SMF dump program, see z/OS MVS System Management Facilities (SMF).

* stateownernamefeatnamevv.rr.mm id

In response to a DISPLAY PROD,REGISTERED, DISPLAY PROD,STATE, or DISPLAY PROD,STATUS command, this message displays the products that match the input supplied in the command. An * in a column for DISPLAY PROD,REGISTERED indicates that the value was not provided when the product registered.

In the message text:

**hh.mm.ss**
The time in hours (00-23), minutes (00-59), and seconds (00-59) when the DISPLAY PROD command was issued.

**state**
One of the following, as defined in the enablement policy:

- **E** The product state is enabled.
- **D** The product state is disabled.
- **N** The product is not found; that is, the product does not appear in the enablement policy.

**owner**
The owner of the product.

**name**
The name of the product.

**featname**
The feature name of the product.

**vv** The version of the product.

**rr** The release of the product.

**mm** The modification level of the product.

**id** The product identifier.

**System action:** Processing continues.

**Operator response:** Make sure that the DISPLAY command was entered correctly. If not, correct the product owner or product name and issue the command again. If the command was entered correctly, notify the system programmer.

**System programmer response:** Verify that the product named in the command (explicitly or as a default) is registered (for DISPLAY PROD,REGISTERED) or has its state defined in the product enablement policy (for DISPLAY PROD,STATE or DISPLAY PROD,STATUS).

If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

**Source:** System Measurement Facilities (SMF)
Explanation: The system could not process the DISPLAY PROD command completely because it needed more storage to build the output display. Thus, it is possible that the system could not display all of the entries that match the command.

System action: The system stops processing the command.

Operator response: Enter the DISPLAY PROD command again, using the OWNER, NAME, FEATURENAME, and/or ID parameters to request a smaller set of entries. If the error persists, notify the system programmer.

System programmer response: If the problem persists, search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

Source: System Management Facilities (SMF)

---

Explanation: LICENSE=z/OSe coded in IEASYSxx or specified in response to message IEA101A indicates that the z/OS.e operating system is attempting to run. This system can run only on a z/800 machine type 2066, and in an LPAR named ZOSExxxx. Any other machine and LPAR combination does not allow z/OS.e.

System action: The system enters a non-restartable wait state of 07B, with reason code 17.

Operator response: Notify the system programmer.

System programmer response: Make sure the correct operating system was IPLed.

- If z/OS.e is the correct operating system, update the IEASYSxx parameter to indicate that LICENSE=z/OSe, and re-IPL z/OS.e.
- If some other operating system should be running, correct the LPAR name making sure it is not ZOSExxxx, and re-IPL using the correct operating system.

Source: IEAVNPED

---

Explanation: LICENSE=zNALC was specified or the LPAR name is in the format zNALxxxx, indicating that zNALC pricing has been requested for this IPL. See IFA121I

Source: IFA112I

---

Explanation: LICENSE=z/NALC IS IN EFFECT FOR THIS IPL.

Source: IFA203I

System action:  The system continues processing.

Operator response:  If the zNALC pricing option is intended to be used on this system, then no action is required; otherwise, notify the system programmer.

Application Programmer Response:  If the zNALC pricing option is intended to be used on this system, then no action is required; otherwise, take the following steps:

- If the LPAR name is in the format zNALxxxx, then change the name to one that does not follow that format.
- Have the operator IPL with a LICENSE parameter value other than zNALC.

**Descriptor Code:** -

### IFA327E  

**Explanation:** A duplicate input record has been detected from the SMFDATA DD data set(s).

In the message text:

\[nnnnnn\] The sequence number of the record.

**System action:** The record is dumped to SYSMSGS. The first 10 records with any error are processed this way. If more than 10 records with this error are found, message IFA330I is issued once. The usage report program continues processing but the record is ignored.

**Source:** SMF

**Detecting Module:** IFAURP

**Routing Code:** -

**Descriptor Code:** -

### IFA328S  

**Explanation:** A type 89 SMF record identifies a processor, but there is no entry for this processor in IFAURP’s processor table. Usage values cannot be determined for products running on this processor.

In the message text:

\[nnnnnn\] The number of the record.

\[type\] The type of the processor. This field is defined by the STSI instruction. If the STSI instruction is not available, this field is defined by the STIDP instruction (referred to as the model number).

\[version\] The version of the processor. This field is defined by the STIDP instruction.

\[model\] The model of the processor. This field is defined by the STSI instruction.

There are two reasons why the processor could not be found in IFAURP’s processor table:

1. The processor is a new processor type or model, but the service to update the table has not yet been applied.
2. For certain non-IBM processors, the version number is the same for multiple type and model combinations. As a result, IFAURP cannot positively identify the processor, unless the processor is explicitly identified with type model, and serial number on either the PROCESSOR control statement or the PROCESSOR keyword on the SYSPLEX control statement, both of which provide input to the usage report program.

**System action:** The usage report program processing continues, but no usage related information will be provided for this processor.

**System programmer response:** If the processor is NOT an IBM processor, ensure that a PROCESSOR control statement (or PROCESSOR keyword on the SYSPLEX control statement) has been correctly specified for this processor. If that does not resolve the problem, contact the IBM Support Center.

**IFA333E**  

\[
 \text{START|TESTDATE DATE FOR owner, name, function \{ON PROCESSOR type, model, serial | IN SYSPLEX id\} IGNORED - ALREADY STARTED.}
\]

**Explanation:** The product start date has already been set on a previous run of IFAURP. IFAURP ignores subsequent attempts to specify either TESTDATE or START with a date different than the established start date. The owner, name, and function fields identify the product’s owner, name, and function respectively. If the redundant attempt to set the start date occurred on a stand-alone processor, then type, model, serial identifies the processor's type, model, and serial, respectively. If the attempt occurred on a parallel sysplex, then sysplex id identifies the sysplex.

**System action:** The usage report program continues processing.

**Application Programmer Response:** Remove the SET keyword from the indicated product on the indicated processor or parallel sysplex.

**Source:** SMF  
**Detecting Module:** IFAURP  
**Routing Code:** -  
**Descriptor Code:** -

**IFA334E**  

\[
 \text{PROCESSOR type,model,serial \{ON CLUSTER cluster_type,cluster_model,cluster_serial | IN SYSPLEX sysplex id\} HAS BEEN DUPLICATELY SPECIFIED.}
\]

**Explanation:** The identified processor, cluster, or sysplex is specified more than once. Type, model, serial identifies the processor’s type, model, and serial, respectively. Cluster_type, cluster_model, cluster_serial identifies the cluster’s type, model, and serial, respectively. Sysplex id identifies the sysplex’s name identifier.
This situation occurs under the following circumstances:

- for duplicate processor
  The identified processor is duplicated (specified twice) on:
  1. another PROCESSOR control statement
  2. the PROCESSOR keyword on another SYSPLEX control statement
  3. the PROCESSOR keyword on the same SYSPLEX control statement
  4. another TRANSFER control statement as the "old" processor.

- for duplicate cluster
  The identified cluster is duplicated (specified twice) on:
  1. the CLUSTER keyword on another SYSPLEX control statement
  2. the CLUSTER keyword on the same SYSPLEX control statement.

- for duplicate sysplex
  A sysplex with the same sysplex_id and PLEXDATE value has been specified.

**System action:** The duplicate specification is ignored.

**Application Programmer Response:** Delete the duplicate specification.

**Source:** SMF

**Detecting Module:** IFAURP

**Routing Code:** -

**Descriptor Code:** -

IFA335E PROCESSOR type, model, serial NOT VALID IN SYSPLEX sysplex id.

**Explanation:** A processor that is not capable of being part of a parallel sysplex has been specified as part of parallel sysplex sysplex id. Type, model, serial identifies the processor's type, model, and serial, respectively. SYSPLEX sysplex id indicates the id of the sysplex.

**System action:** The processor is treated as a stand-alone processor and is reported on separately.

**System programmer response:** The reason for this problem could be that the correct type/model was not specified. Ensure that the type/model is correct. If the type/model is already correct, then the processor should be specified by itself outside of the sysplex control statement.

**Source:** SMF

**Detecting Module:** IFAURP

**Routing Code:** -

**Descriptor Code:** -

IFA336S [PROCESSOR type, model, serial]

**Explanation:** The processor identified by type, model, serial or the cluster identified by cluster_type, cluster_model, cluster_serial is not a valid processor or cluster. If a processor, it was specified on one of the following:
  1. a PROCESSOR control statement
  2. the PROCESSOR keyword on a SYSPLEX control statement
  3. a TRANSFER control statement.

If a cluster, it was specified on the CLUSTER keyword of a SYSPLEX control statement.

**System action:** The program is terminated.

**System programmer response:** Ensure the processor or cluster specification is correct. If it is correct, the problem is that the identified processor or cluster is not known to the usage report program. Contact the IBM Support Center.

Descriptor Code: -

IFA700I INCORRECT PREFIX OR NAME OF LOGSTREAM NAME logstream_name

Explanation: During SMF initialization, the system issues this message to indicate that a log stream name that is defined for SMF data in the SMFPRMxx parmlib member is incorrect. The log stream name was either defined without the required prefix of 'IFASMF.', or defined with more than 26 characters.

In the message text:

logstream_name The incorrect log stream name

System action: The system does not complete the SET SMF command.

System programmer response: Correct the name of the log stream in the SMFPRMxx parmlib member; alternatively, specify the name of another available correct log stream to use for SMF data. Next, issue the SET SMF command. For more information, see Setting up a log stream for SMF data in z/OS MVS System Management Facilities (SMF) and Planning for System Logger Applications in z/OS MVS Setting Up a Sysplex.

Source: SMF
Detecting Module: IEEMB832
Routing Code: 2,10
Descriptor Code: 4,5

IFA701I UNEXPECTED ADDITIONAL DEFAULT LOGSTREAM NAME logstream_name IS IGNORED

Explanation: While processing a SET SMF command, the system found that the SMFPRMxx parmlib member contains more than one DEFAULTLSNAME keyword, which is not allowed. You can only specify one default log stream name for SMF data. The system processes only the first DEFAULTLSNAME keyword.

In the message text:

logstream_name The log stream name that was not accepted as the default.

System action: The system processes only the first keyword and completes the SET SMF command.

System programmer response: Ensure that the
SMFPRMxx parmlib member has just one DEFAULTLSNAME keyword.

Source: SMF
Detecting Module: IEEMB832
Routing Code: 2,10
Descriptor Code: 4,5

Explanation: While processing a SET SMF command, the system found that the displayed SMF record types had no log stream assigned to them in the SMFPRMxx parmlib member. Every record type must have a log stream associated with it, either specifically on the LSNAMES parameter, or by default as defined on the DEFAULTLSNAME parameter. The system does not complete the SET SMF command.

In the message text:

n1-nx

The range of SMF record types for which there is no log stream assigned.

System action: The system does not complete the SET SMF command.

System programmer response: Either:
- Define a log stream specifically on an LSNAMES parameter of the SMFPRMxx parmlib member.
- Define a default log stream for your SMF records on the DEFAULTLSNAME parameter of the SMFPRMxx parmlib member.

Source: SMF
Detecting Module: IFALSMOD
Routing Code: 2,10
Descriptor Code: 4,5

Explanation: While processing a SWITCH SMF command, the system found that another SWITCH SMF command was already in progress. The system will not accept a SWITCH SMF command while another one is in progress.

System action: The system rejects the SWITCH SMF command and continues processing.

Operator response: Wait for the first SWITCH SMF command to finish processing and then reissue the second one, if necessary.

Source: SMF
Detecting Module: IFALSMOD
Routing Code: 2,10
Descriptor Code: 4,5

Explanation: In response to a SWITCH or HALT SMF command, SMF has or has not completed writing SMF data from the SMF buffers to specified log streams. If you have an IEFU29L log dump exit set up, SMF passes control to the dump exit in preparation for dumping the log stream data.

In the message text:

command

The SWITCH SMF or HALT SMF command that kicked off writing of SMF data to a log stream or streams.

System action: Processing continues. The system issues accompanying system messages IFA718E, IFA719I, and IFA720I.

Operator response: Look at accompanying messages
**IFA706I • IFA707I**

IFA718E, IFA719I, and IFA720I, for information about the problem and how to resolve it. For example, you might issue the SETSMF command to either:
- Switch to a different log stream
- Switch to data set recording

**System programmer response:** None.

**Source:** SMF

**Detecting Module:** IFALSMOD

**Routing Code:** 2,10

**Descriptor Code:** 4,5

---

### IFA706I

**ENFREQ SERVICE FAILED TO LISTEN FOR EVENT 48. RC=rc.**

**Explanation:** SMF failed to establish listening of ENF type 48 signal. SMF rejected initialization for recording to log stream and switched to recording to data set.

In the message text:

- `rc` The return code returned from the ENFREQ macro.

**System action:** Processing continues

**System programmer response:** Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

**Source:** SMF

**Detecting Module:** IFALSMOD

**Routing Code:** 2,10

**Descriptor Code:** 4,5

---

### IFA707I

**SMF CANNOT CONNECT TO logstream_name REASON=text**

**Explanation:** SMF encountered an error when connecting to the named log stream using the IXGCONN service.

In the message text:

- `logstream_name` The log stream specified in SMFPRMxx or in a SETSMF command.
- `text` is one of the following:
  - LOGSTREAM NOT DEFINED
  - UNEXPECTED ERROR, `rc - rsn`
  - STAGING DATASET ERROR
  - BAD STRUCTURE NAME
  - LOGSTREAM DELETED
  - LOGSTREAM CONNECT LIMIT REACHED
  - BAD MODEL CONNECT
  - SYSTEM LOGGER IS NOT AVAILABLE
  - MAXIMUM WAIT OR RETRIES EXCEEDED, `rc - rsn`

**System action:** If the problem is resolved before SET SMF=xx or SETSMF processing completes, SMF automatically connects to the log stream.

If the problem was not resolved by the time SET SMF=xx or SETSMF processing completed and log stream recording was not activated, SMF continues with data set recording. If no MANx data sets are available, the SMF data is buffered until the buffer is full.

Once the buffer is full, SMF data will be lost until the log stream becomes available or recording is switched to data set.

**Operator response:** Contact the system programmer.

**System programmer response:** Issue the D SMF command to determine if the log stream connection was finally successful. If not, see the reason text below to correct the problem. After that, issue the SET SET SMF=xx or SETSMF to establish the proper log stream recording environment again. If the problem with the log stream cannot be corrected, use the SET SMF=xx or the SETSMF command to ensure that all record types are designated to be written to available log streams, or switch to data set recording.

**LOGSTREAM NOT DEFINED**

Define the log stream (and corresponding coupling facility structure, if required) in the LOGR couple data set using the Administrative Data Utility (IXCMIAPU). See Setting up log streams for SMF data in the [z/OS MVS System Management Facilities (SMF)] and [Planning for System Logger Applications in z/OS MVS](https://www.ibm.com). See Chapter 10. IFA messages 445

**UNEXPECTED ERROR, `rc - rsn`**

The IXGCONN service failed with reason and return code `rc/rsn`. See [IXGCONN return and reason codes](https://www.ibm.com) in [z/OS MVS Programming: Assembler Services Reference IAR-XCT] to look up the IXGCONN return and reason code to determine the response to the problem.

**STAGING DATASET ERROR**

SMF will wait for notification (by the Event Notification Facility) that the log stream is ready and then will automatically try to use the log stream again.

**BAD STRUCTURE NAME**

The coupling facility structure name, defined for the log stream, is not correct. If the structure was not defined, use IXCMIAPU to define it in the CFM coupling data set. If the structure name is incorrect for the log stream definition in the LOGR couple.
LOGSTREAM DELETED
The log stream that SMF is connecting to is in the process of being deleted. Specify a new log stream name in the SMFPRMxx parmlib member.

LOGSTREAM CONNECT LIMIT REACHED
The system has reached the limit for the maximum number of log streams that can be concurrently active. An MVS image may connect to a maximum of 4096 log streams concurrently. Either plan your workload to either consolidate log streams or balance system activity so that fewer log streams are needed in a given time period.

BAD MODEL CONNECT
The log stream specified in the SMFPRMxx parmlib member was defined in the LOGR couple data set as a model log stream (MODEL=YES). A model log stream is just for use as a model for other log stream definitions on the LIKE parameter. Change the log stream name in SMFPRMxx to one that is not defined as a model.

SYSTEM LOGGER IS NOT AVAILABLE
Either the system logger address space is not active, or it is not accepting requests for system logger services at this time.

MAXIMUM WAIT OR RETRIES EXCEEDED, rc - rsn
The IXGCONN service failed with reason and return code rc-rsn. After waiting for the problem to be resolved, SMF retried the operation but the error persisted. For more information about the problem, see IXGCONN return and reason codes in z/OS MVS Programming: Assembler Services Reference IAR-XCT to determine the response to the problem and then retry the SET SMF command.

DATA LOSS, rc - rsn
The IXGCONN service failed with reason and return code rc - rsn. This indicates that there may be log blocks permanently missing from the logstream. This is an unacceptable condition for SMF data recording. SMF disconnected from the logstream so the logstream can be repaired. To recover from this condition, the IXCMIAPU LOGR utility can be used to rename the failing log stream. IXGINVNT or IXCMIAPU can then be used to define a new log stream with the old name. This way, the existing logstream name can be used to start logging again. When the logstream is available again, issue the SET SMF=xx command to reinstate SMF recording to the logstream. The IFASEXIT SMF exit can be used to dump the data from the logstream that is in the “data loss” state.
**Operator response:** Contact the system programmer.

**System programmer response:** Look up the IXGCONN return and reason codes in z/OS MVS Programming: Assembler Services Reference IAR-XCT to determine the response to the problem. Correct the problem, and then try the SET SMF request again.

**Source:** System Management Facilities (SMF)

**Detecting Module:** IFALSMOD

**Routing Code:** 2,10

**Descriptor Code:** 4,5

---

**Explanation:** The system did not successfully complete the SET SMF command. Accompanying messages were issued with more information about the problem. When you resolve the problem, retry the SET SMF command request.

**System action:** The system does not complete the SET SMF command. The system issues an accompanying message IFA707I with more information about the problem. When you resolve the problem, retry the SET SMF command request.

**Operator response:** Contact the system programmer.

**System programmer response:** Look at accompanying messages for more information about the problem and how to resolve it.

**Problem determination:** Use D LOGGER,L,LSN=IFASMF.* and D SMF commands to display the status of available log streams.

**Source:** System Management Facilities (SMF)

**Routing Code:** 2,10

**Descriptor Code:** 4,5

---

**Explanation:** The system rejects a request to write SMF record longer than maximum record size of 32756 bytes.

Segmented records are not supported on the current level of the system.

**System action:** The system continues processing

**Operator response:** None.

**System programmer response:** None.

**Source:** System Management Facilities (SMF)

**Detecting Module:** IFALSMOD

**Routing Code:** 2,10

**Descriptor Code:** 4

---

**Explanation:** SMF data has been lost for one of the reasons in the text variable. In the message text:

```
text
```

*text* shows the following reasons that SMF data has been lost:

**TEMPORARY AREA IS FULL. TIME=hh.mm.ss**
During IPL, there was no SMF data set or log stream available for SMF recording, so the SMF buffer has been filled.

**NO BUFFER SPACE AVAILABLE. TIME=hh.mm.ss FOR LOGSTREAM logstream_name**
SMF has consumed all available SMF buffer space in the SMF address space.

**System action:** The system continues processing

**Operator response:** None.

**System programmer response:** Do one of the following:

**TEMPORARY AREA IS FULL.**
Define either SMF data sets or log streams for SMF recording.

**NO BUFFER SPACE AVAILABLE. TIME=hh.mm.ss FOR LOGSTREAM logstream_name**
The log stream has consumed all the buffer space and records are now being lost. Use the SETSMF command to switch to data set recording or repair the log stream.

**Source:** System Management Facilities (SMF)

**Detecting Module:** IFALSMOD
**Explanation:** In response to the DISPLAY SMF STATUS (D SMF,S) command, the system displays the information about SMF data sets and log streams status. In this situation, text is as follows:

<table>
<thead>
<tr>
<th>LOGSTREAM NAME</th>
<th>BUFFERS</th>
<th>STATUS</th>
</tr>
</thead>
<tbody>
<tr>
<td>s-logstream name</td>
<td>nbytes</td>
<td>lstatus</td>
</tr>
<tr>
<td>NAME</td>
<td>VOLSER</td>
<td>SIZE(BLKS)</td>
</tr>
<tr>
<td>dsname</td>
<td>volser</td>
<td>blk</td>
</tr>
</tbody>
</table>

In response to the DISPLAY SMF (D SMF) command, or when SMF logstream recording is activated as a result of a SET SMF=xx, or following SMF start up during IPL processing, the system displays the information about the SMF lostreams. In this situation, text is as follows:

<table>
<thead>
<tr>
<th>LOGSTREAM NAME</th>
<th>BUFFERS</th>
<th>STATUS</th>
</tr>
</thead>
<tbody>
<tr>
<td>s-logstream name</td>
<td>nbytes</td>
<td>lstatus</td>
</tr>
</tbody>
</table>

In the message text:

- **hh.mm.ss**
  - The time in hours (00-23), minutes (00-59), and seconds (00-59)

- **s**
  - A - The system is actively using (or attempting to use) this log stream.
  - C - The system is no longer using this log stream, but is still cleaning up after removing this log stream from use.

- **logstream name**
  - The name of the log stream being displayed.

- **nbytes**
  - The amount of data collected into a log stream buffer in bytes

- **lstatus**
  - The status for the log stream, which can be one of the following:
    - **Connected**
      - Indicates that SMF is connected to the log stream
    - **Disconnected**
      - Indicates that the log stream is disconnected from SMF

- **volser**
  - The volume serial number of the volume containing the SMF data set.

- **blk**
  - The block size of a data set in blocks.

- **per**
  - The percent full value for the SMF data set.

- **status**
  - The status of the SMF data set, which can be one of the following:
    - **ACTIVE**
      - Indicates that the data set is now being used to record SMF data.
    - **ALTERNATE**
      - Indicates that the data set is available for use in recording SMF data.
    - **DUMP REQUIRED**
      - Indicates that the data set must be dumped before being used to record data.

IFA812I PROGRAMMING ERROR. IFASMFDL REQUEST INCORRECT FOR LOGSTREAM logstream_name. POSSIBLE BAD PARAMETER – BLOCKLEN. RC=rc-reas.

Explanation: The system encountered a problem while dumping SMF data from the named log stream. The MAXBUFSIZE parameter defined for the log stream in the LOGR couple data set is less than the length of the SMF record found when the system issued the IXGBRWSE service during dump processing.
In the message text:
logstream_name
The name of log stream specified in the dump request (exit IEFU29L or IFASMFDL dump program).
rc-reas
The return and reason code from the IXGBRWSE service.
System action: The system does not complete the dump of the log stream SMF data.
Operator response: Contact the system programmer.
System programmer response: Look up the IXGBRWSE return and reason codes in z/OS MVS Programming: Assembler Services Reference IAR-XCT to determine the response to the problem. Correct the problem, and then try the dump request again.
Source: System Management Facilities (SMF)
Detecting Module: IFASMFDL
Routing Code: 11
Descriptor Code: -

IFA814I SYSTEM ERROR. LOGSTREAM logstream_name IS NOT ACCESSIBLE DUE TO LACK OF AUTHORITY OR SYSTEM LIMITS. RC=rc-reas.

Explanation: SMF encountered a problem while connecting to the named structure while processing a dump of SMF data from the log stream. The problem might be:
- Severe dynamic allocation error
- The log stream is in the process of being deleted
System action: The system does not complete the dump of the log stream SMF data.
Operator response: Contact the system programmer.
System programmer response: Look up the IXGBRWSE return and reason codes in z/OS MVS Programming: Assembler Services Reference IAR-XCT to determine the response to the problem. Correct the problem, and then try the dump request again.
Source: System Management Facilities (SMF)
Detecting Module: IFASMFDL
Routing Code: 11
Descriptor Code: -
The system is already connected to the maximum number of log streams
System logger does not have access authority to the coupling facility structure assigned to the log stream
There is no LOGR couple data set available

In the message text:

$logstream_name$
The name of log stream specified in the dump request (exit IEFU29L or IFASMFDL dump program).

$rc$-$reas$
The return and reason code from the IXGBRWSE service.

System action: The system does not complete the dump of the log stream SMF data.

Operator response: Contact the system programmer.

System programmer response: Look up the IXGBRWSE return and reason codes in z/OS MVS Programming: Assembler Services Reference IAR-XCT to determine the response to the problem. Correct the problem, and then try the dump request again.

Source: System Management Facilities (SMF)
logstream_name
    The name of log stream specified in the dump request (exit IEFU29L or IFASMFDL dump program).

rc-reas
    The return and reason code from the IXGBRWSE service.

System action: The system does not complete the dump of the log stream SMF data.

Operator response: Contact the system programmer.

System programmer response: Look up the IXGBRWSE return and reason codes in [z/OS MVS Programming: Assembler Services Reference IAR-XCT] to determine a response to the problem. Make sure that the system is reconnected to the log stream before retrying the dump request.

Descriptor Code: -

**IFA819I** ERROR CAUSED BY AN UNEXPECTED REASON FOR LOGSTREAM logstream_name. RC=rc-reas.

Explanation: SMF encountered an unexpected problem and could not complete processing of a dump of SMF data from the log stream.

In the message text:

logstream_name
    The name of log stream specified in the dump request (exit IEFU29L or IFASMFDL dump program).

rc-reas
    The return and reason code from the IXGBRWSE service.

System action: The system does not complete the dump of the log stream SMF data.

Operator response: Contact the system programmer.

System programmer response: Look up the IXGBRWSE return and reason codes in [z/OS MVS Programming: Assembler Services Reference IAR-XCT] to determine a response to the problem. Make sure that the system is reconnected to the log stream before retrying the dump request.

Source: System Management Facilities (SMF)

Detecting Module: IFASMFDL

Routing Code: 11

Descriptor Code: -

**IFA820I** CLEAR OPTION IS NOT SUPPORTED IN CURRENT VERSION OF IFASMFDL.

Explanation: The request to dump SMF data from a log stream was specified with the CLEAR option. The SMF log stream dump program (IFASMFDL) does not allow the CLEAR option. (The IFASMFDP dump program for data in SMF data sets supports the CLEAR option to delete data from the SMF data sets.)

System action: The system does not complete the dump of the log stream SMF data.

Operator response: Contact the system programmer.

System programmer response: You cannot clear (reset and reformat) a log stream as you can an SMF data set. In order to empty a log stream of data, you must either:

- use the ARCHIVE or DELETE option in IFASMFDL to selectively delete data from the log stream. For more information about the use of the ARCHIVE or DELETE option in IFASMFDL, see [Using the SMF Dump Programs in z/OS MVS System Management Facilities (SMF)]

- delete and then redefine a log stream in the LOGR couple data set. See [Deleting Log Data and Log Data Sets in z/OS MVS Setting Up a Sysplex]

IFA832I INVALID PARAMETER COMBINATION FOR xxxxxx OPTION

Explanation: The system encountered an error when running with the ARCHIVE or DELETE option.

- If the system was running with the ARCHIVE option, the encountered record was not written, and the record did not match any of the criteria of any OUTDD statement.
Correct the RELATIVEDATE statement to specify a valid range of the date and run the job again. For more information about using the RELATIVEDATE parameter in IFASMFDL, see [Using the SMF Dump Programs](https://www.ibm.com/support/knowledgecenter/SSEPGG_7.2.0/com.ibm.zos.v2r10.bks20000/pf_1000.htm) in *z/OS MVS System Management Facilities (SMF)*.

**Source:** System Management Facilities (SMF)  
**Detecting Module:** IFASMFDL  
**Routing Code:** 11  
**Descriptor Code:** -

---

For more information about the ARCHIVE and DELETE options in IFASMFDL, see [Using the SMF Dump Programs](https://www.ibm.com/support/knowledgecenter/SSEPGG_7.2.0/com.ibm.zos.v2r10.bks20000/pf_1000.htm) in *z/OS MVS System Management Facilities (SMF)*.

**Source:** System Management Facilities (SMF)  
**Detecting Module:** IFASMFDL  
**Routing Code:** 11  
**Descriptor Code:** -

---

**Explanation:** The RELATIVEDATE parameter was used and a subparameter value for the RELATIVEDATE option exceeds the maximum allowed.

**System action:** IFASMFDL continues the processing and keeps using the start and end date values that are displayed.

**Operator response:** None.

**System programmer response:** Do not do anything, if the start and end date are what you expected.

If the start and end date are not what is expected, contact the IBM Support Center.

**Source:** System Management Facilities (SMF)  
**Detecting Module:** IFASMFDL  
**Routing Code:** 11  
**Descriptor Code:** -

---

**Explanation:** The incorrect value that exceeds the maximum.

**System action:** The system does not complete the dump of the log stream SMF data.

**Operator response:** Contact the system programmer.

**System programmer response:** One of the following two situations can cause the value overflow:

- The number of units to gather was too large for this unit.
- The number of units to go back was too large for this unit.

---

**Explanation:** The number of units to gather was too large for this unit.

**System action:** IFASMFDL fails execution and can be removed before you run the ARCHIVE function contains records from the entire logstream.

**Operator response:** Contact the system programmer.

**System programmer response:** If the user attempted to ARCHIVE or DELETE the unit.

**Source:** System Management Facilities (SMF)

---

**Explanation:** The number of units to go back was too large for this unit.

**System action:** IFASMFDL fails execution and can be removed before you run the DELETE option, delete any OUTDD statements in your SYSIN.

**Operator response:** Contact the system programmer.

**System programmer response:** If you are running with the DELETE option, delete any OUTDD statements in your SYSIN.

---

**Explanation:** The incorrect value that exceeds the maximum.

**System action:** The system does not complete the dump of the log stream SMF data.

**Operator response:** Contact the system programmer.

**System programmer response:** If you are running with the ARCHIVE option, ensure that no filters that are excluding records exist in the time range from being written to an OUTDD statement. The data set that is created as a result of the ARCHIVE function contains records from the failed execution and can be removed before you run the job again.

---

**Explanation:** The name of the option. It can be ARCHIVE or DELETE.

**System action:** The system does not complete the dump of the log stream SMF data.

**Operator response:** Contact the system programmer.

**System programmer response:** If you are running with the DELETE option, delete any OUTDD statements in your SYSIN.

---

**Explanation:** The name of the subparameter that was in use with the RELATIVEDATE option. The value can be BYDAY, BYWEEK, or BYMONTH.

**System action:** IFASMFDL continues the processing.

**Operator response:** None.

**System programmer response:** None.

**Source:** System Management Facilities (SMF)
Explanation: The usage of the RELATIVEDATE keyword results in the end date of IFASMFDL going past the current date. In the message text:

- yyyy Displays the current year.
- ddd Displays the current Julian date.
- tt:tt Displays the time when IFASMFDL started.

System action: IFASMFDL issues a return code 4 and continues the processing. IFASMFDL stops dumping data using the time value that was specified at the job started execution.

Operator response: None.

System programmer response: None.

Chapter 11. IFB messages

IFB010D  ENTER 'IPL REASON, SUBSYSTEM ID' OR 'U'

Explanation: This message requests the operator to provide one of the following:
- The reason for the initial program load (IPL).
- The device or program (subsystem) responsible for the IPL restart.
- U - to continue operation with default values.

System action: The reliability data extractor (RDE) waits for the operator’s reply.

Application Programmer Response: Enter a reply in the format REPLY id, 'rr,ss' where id is the reply identification, rr is the RDE IPL reason code, and ss is the subsystem ID code.

Source: System Environmental Recording (LOGREC)
Detecting Module: IFBBLD76
Routing Code: 1
Descriptor Code: 2

IFB020I  INVALID REPLY TO IFB010D

Explanation: The reply to message IFB010D is incorrect.

System action: The system writes message IFB010D again to allow the operator to reenter a reply.

Operator response: Either enter the initial program load (IPL) reason code and subsystem ID code in the proper format or reply ‘U’ to select the default values.

Source: System Environmental Recording (LOGREC)
Detecting Module: IFBBLD76
Routing Code: 1
Descriptor Code: 2

IFB080E  LOGREC DATA SET NEAR FULL, DSN=dsname

Explanation: The logrec data set is 90% full.

In the message text:
- dsname The name of the logrec data set.

System action: The system continues processing. Error records will be written to the logrec data set until it is full. Then, message IFB081I will be issued.

System programmer response: Run the Environmental Record Editing and Printing program (EREP) to dump and clear the contents of the logrec data set.

Source: System Environmental Recording (LOGREC)
Detecting Module: IFBSVC76
Routing Code: 1
Descriptor Code: 11

IFB081I  LOGREC DATA SET IS FULL, hh.mm.ss, DSN=dsname

Explanation: The logrec data set is full and cannot hold additional records. At least one record has been lost.

In the message text:
- hh.mm.ss The time in hours (00-23), minutes (00-59), and seconds (00-59).
- dsname The name of the logrec data set.

System action: The system continues processing, but further error records will be lost.

System programmer response: Run the Environmental Record Editing and Printing program (EREP) to dump and clear the contents of the logrec data set.

Source: System Environmental Recording (LOGREC)
Detecting Module: IFBSVC76
Routing Code: 1
Descriptor Code: 11

IFB082I  LOGREC DATA SET I/O ACCESS ERROR, sens,stat, hh.mm.ss, DSN=dsname

Explanation: An uncorrectable I/O error occurred during an attempt to read or write a record to the logrec data set. The most common reason for the issuance of this message is that the size or the location of the SYS1.LOGREC data set has been modified without an IPL. If this is not the cause of this message, then the cause is a probable channel or device error.

In the message text:
- sens The first two sense bytes for the error condition.
- stat The device and subchannel status portions of the Subchannel-Status Word (SCSW).
**LOGREC DATA SET FORMAT ERROR, hh.mm.ss, DSN=dsname**

**Explanation:** The header record of the logrec data set is missing or not valid.

In the message text:

- **hh.mm.ss**: The time in hours (00-23), minutes (00-59), and seconds (00-59).
- **dsname**: The name of the logrec data set.

**System action:** The system continues processing.

**System programmer response:** Run the IFCDIP00 service aid program to rewrite the header record and reinitialize the logrec data set.

**Source:** System Environmental Recording (LOGREC)

**Routing Code:** 1

**Descriptor Code:** 4

---

**LOGREC DATA SET NAME IS dsname**

**Explanation:** This message is issued during system initialization to identify the name of the logrec data set being used for recording environmental information.

In the message text:

- **dsname**: The name of the logrec data set.
**System action:** The system continues system initialization.

**Source:** System Environmental Recording (LOGREC)

**Detecting Module:** IEAVNP76

**Routing Code:** Note 9

**Descriptor Code:** 4

**IFB087I**

**LOGREC=dsname DATA SET NOT CATALOGED - reg15**

**Explanation:** The data set name specified on the logrec system parameter could not be located in the system catalog.

In the message text,

*dsname*  
The value specified as the logrec data set name.

*reg15*  
The value returned from SVC 26 in Register 15.

**System action:** The system issues message IEA341A to prompt the operator to respecify the logrec parameter with a valid data set name.

**Operator response:** Respond to message IEA341A. The response to these messages should contain the LOGREC= parameter and logrec data set name specification for a cataloged data set.

**System programmer response:** Before the next IPL, correct the contents of IEASYSxx to include a valid (cataloged) logrec data set name.

**Source:** System Environmental Recording (LOGREC)

**Detecting Module:** IEAVNP76

**Routing Code:** Note 9

**Descriptor Code:** 4

---

**IFB090I**

**hh.mm.ss LOGREC DISPLAY [id]**

**Explanation:** Where text is:

- **CURRENT MEDIUM=**logrec-recording-medium
- **MEDIUM NAME=**medium-name
- **STATUS=**logstream-status
- **DATASET MEDIUM=[data-set-name | NOT DEFINED]**

An operator entered the DISPLAY LOGREC command to display information about the logrec recording medium that is defined and currently enabled on the system.

In the message text:

*hh.mm.ss*  
The hour, minute, and second at which the system processed the display command. 00.00.00 appears in this field if the time-of-day (TOD) clock is not working.

*id*  
A decimal identifier used with the CONTROL C,D command to cancel status displays that are written on typewriter or printer consoles or displayed inline on a display console. This identifier does not appear when the display appears in a display area on a display console.

If the operator included the CURR option, line 2 appears. Depending on the recording medium setting, lines 3 and/or 4 will also appear. The information displayed provides information about the currently active logrec recording medium being used by the system. If the operator does not enter any options, the CURR option is assumed.

**CURRENT MEDIUM=**logrec-recording-medium  
The current logrec recording medium, as follows:
- **IGNORE**
- **LOGSTREAM**
- **DATASET**

If the installation has set the current medium to IGNORE, no additional lines of the message are applicable and will not be displayed. IGNORE means that logrec error recording will not occur. If the installation has set the current medium to LOGSTREAM or DATASET, line 3 appears.

**MEDIUM NAME=**medium-name  
The 64 character field that identifies the recording medium name. This is applicable to the settings LOGSTREAM and DATASET. If the current setting is LOGSTREAM then the medium name is the log stream name. The log stream name for logrec error recording is SYSPLEX.LOGREC.ALLRECS. If the current setting is DATASET, the medium name is the data set name being used to record logrec error records. The data set can be any name defined by the installation at IPL.

If the installation set the current medium to LOGSTREAM, line 4 appears.

**STATUS=**log-stream-status  
The status of the log stream, which is one of the following:

**CONNECTED**  
The logrec log stream 
(SYSPLEX.LOGREC.ALLRECS) is
connected and active. All logrec error records are being sent to the system logger for management.

**NOT CONNECTED**
The logrec log stream (SYSPLEX.LOGREC.ALLRECS) is not connected. The system logger is not currently available. The system records the logrec error records in an internal buffer until the system logger is available.

**LOGGER DISABLED FOR THIS IPL**
The system logger services will not be available for the life of the current IPL. The system records the logrec error records in an internal buffer. If the recording medium remains LOGSTREAM under these circumstances, an overflow condition will occur. IBM recommends changing the logrec recording medium using the SETLOGRC command.

**Note:** Only a limited amount of logrec error records will be buffered. If the system logger problem is not corrected, logrec error records can be lost.

If the operator included the DSN option, line 5 appears. Line 5 displays information pertaining to a data set recording medium.

**DATASET MEDIUM= [data set name | NOT DEFINED]**
The data set name that was defined for logrec error recording during IPL. The data set might be the current recording medium. The current recording medium can be obtained by entering the DISPLAY command with the CURR option. If a data set was never defined via SYS1.PARMLIB during IPL, then instead of a data set name being displayed, the text NOT DEFINED will be displayed.

The system will not be able to change the recording medium to data set in this case unless a system IPL is performed, defining a data set as the recording medium.

If the operator included the ALL option, lines 1 through 5 appear if the current medium is to a log stream. If the current medium is to a data set then lines 1 through 3 and line 5 appear. And if the current medium is to ignore then lines 1 and 2 appear.

**System action:** The system continues processing.

**IFB091I**  
**subsystem-name** function PARSE ERROR - reason

**Explanation:** A parse error was encountered while logrec was verifying the application's subsystem JCL DD statement.

In the message text:

**subsystem-name**  
The subsystem name on the JCL DD statement.

**function**  
One of two different points in the processing of the JCL statement where this message can be issued, as follows:

CONVERTER  
The error occurred during Converter processing.

ALLOCATION  
The error occurred during Allocation processing.

**reason**  
One of the following:

SEVERE ERROR  
The parser encountered a severe error during its processing.

SYNTAX ERROR  
The statement failed the syntax check.

MUTUAL EXCLUSION FAILURE  
The parser encountered mutually exclusive keywords.

**System action:** The system fails the job with a JCL error.

**Application Programmer Response:** Correct any errors in the SUBSYS portion of the JCL statement.

460 z/OS V1R11.0 MVS System Messages, Vol 8 (IEF-IGD)
The SETLOGRC command encountered a system error. The return and reason code provide more information about type of error and the service in error. The format of the reason code follows:

0001,yyyy

A non-zero return code was returned from the STORAGE macro. The macro return code is yyyy. See z/OS MVS Programming: Assembler Services Reference ABE-HSF for a description of the STORAGE macro return codes.

System action: The system continues processing.

System programmer response: Determine the reason for the failure by checking the return code returned from the STORAGE macro.

Source: System Environmental Recording (Logrec)

Detecting Module: IFBSETLG

Routing Code: 2,10

Descriptor Code: 5

The user entered the SETLOGRC command to set the recording medium to a setting that is already the current setting. No action is taken to change the LOGREC recording medium. This message is issued only when the affected settings are IGNORE or DATASET.

System action: The system continues processing.

Operator response: Check the desired setting on the SETLOGRC command. An erroneous value may have been entered.

Source: System Environmental Recording (Logrec)

Detecting Module: IFBSETLG

Routing Code: 2,10

Descriptor Code: 5

An error occurred while processing the SETLOGRC command. An erroneous value may have been entered.

Source: System Environmental Recording (Logrec)

Detecting Module: IFBSETLG

Routing Code: 2,10

Descriptor Code: 5

The SETLOGRC command was successful in changing the logrec error recording medium.

System action: The system continues processing.

Source: System Environmental Recording (Logrec)

Detecting Module: IFBSETLG

Routing Code: 2,10

Descriptor Code: 5

An error occurred while processing the SETLOGRC command.

LOGGER DISABLED FOR THIS IPL
Indicates that system logger services are unavailable for the life of this IPL.

LOGREC DATA SET NOT DEFINED
Indicates that the DATASET setting was desired, but the system was unsuccessful in changing the logrec recording medium because the data set data set name was not defined to the system at IPL.

System action: The SETLOGRC command did not complete successfully. The logrec recording medium was not changed. The system continues.

Chapter 11. IFB messages 461
IFB100E

Operator response: Notify your system programmer.

System programmer response: If the problem was that system logger services will not be available for the life of the IPL, check your system configuration. It may not be appropriate to go to a log stream under your particular circumstances.

IFB100E LOGREC LOG STREAM ERROR ON SYSTEM sysname - RC=xxxx-yyyy

text

Explanation: Where text is:

(UNABLE TO CONNECT TO LOG STREAM - conreason)
(UNABLE TO WRITE TO LOG STREAM - wrtreason)
(DISCONNECT ERROR - RETURN CODE xxxx-yyyy)
[LOG STREAM NAME: log-stream-name]
[STRUCTURE NAME: structure-name]

An error with the logrec log stream has occurred on a system in the sysplex. Error and environmental records created on that system cannot be written to the logrec log stream.

In the message text:

sysname
The name of the system on which the logrec log stream failure occurred.

xxxx-yyyy
The return and reason codes.

UNABLE TO CONNECT TO LOG STREAM - conreason

Indicates the error occurred after the IXGCONN macro was issued in an attempt to connect to the logrec log stream. See z/OS MVS Programming: Authorized Assembler Services Reference EDT-IXG for a description of the return and reason codes.

conreason identifies the reason for the connect error, which is one of the following:

LOG STREAM NOT DEFINED
The logrec log stream (named SYSPLEX.LOGREC.ALLRECS) has not been defined to the system logger inventory. This error corresponds to IXGCONN return code 8, reason code 863 or 864.

SYSTEM LOGGER NOT AVAILABLE
The system logger services are currently unavailable. This error corresponds to IXGCONN return code 8, reason code 890 or 891.

LOGGER DISABLED FOR THIS IPL
The system logger services are unavailable for the life of this IPL. This error corresponds to IXGCONN return code 8, reason code 814 or 82E.

diagfld1,diagfld2,diagfld3,diagfld4
Contains the system logger answer area diagnostic fields when the return and reason codes cannot be interpreted.

UNABLE TO WRITE TO LOG STREAM - wrtreason

Indicates the error occurred after the IXGWRITE macro was issued in an attempt to write to the logrec log stream. See z/OS MVS Programming: Authorized Assembler Services Reference EDT-IXG for a description of the IXGWRITE return and reason codes.

wrtreason identifies the reason for the write failure, which is one of the following:
STRUCTURE IS FULL
The system logger was unable to process the write request because the structure associated with the logrec log stream is full. This error corresponds to IXGWRITE return code 8, reason code 860.

LOG STREAM IS NOT AVAILABLE
The system logger was unable to access the logrec log stream. The primary reason is because the structure associated with the logrec log stream is being rebuilt. This error corresponds to IXGWRITE return code 8, reason codes 861 through 88F.

LOG STREAM DIRECTORY IS FULL
The system logger was unable to process the write request because the coupling facility structure space allocated for the logrec log stream is full. Attempts to offload the coupling facility data to DASD have failed because the log stream's data set directory is full. No further write requests can be processed until enough log data is deleted from the log stream to free up space in the data set directory. This error corresponds to IXGWRITE return code 8, reason code 85C.

LS DIRECTORY FULL/OFFLOAD FAILED
The system logger was unable to process the write request because the coupling facility structure space that is allocated for the logrec log stream is full. Attempts to offload the coupling facility data to DASD have failed. No further write requests can be processed until enough log data is deleted from the log stream to free up space in the data set directory. This error corresponds to IXGWRITE return code 8, reason code 85D.

SYSTEM LOGGER NOT AVAILABLE
The system logger services are currently unavailable. This error corresponds to IXGWRITE return code 8, reason code 890 or 891.

diagfld1,diagfld2,diagfld3,diagfld4
Contains the system logger answer area diagnostic fields when the return and reason codes cannot be interpreted.

DISCONNECT ERROR - discreason
Indicates the error occurred after the IXGCONN macro was issued in an attempt to disconnect from the logrec log stream.

discreason is the following:

diagfld1,diagfld2,diagfld3,diagfld4
Contains the system logger answer area diagnostic fields when the return and reason codes cannot be interpreted.

LOG STREAM NAME: log-stream-name
Identifies the name of the logrec log stream that had the error.

STRUCTURE NAME: structure-name
Identifies the structure name associated with the logrec log stream that had the error.

System action: No recording will occur in the logrec log stream on the named system until the condition is corrected. The system continues processing.

Operator response: Notify the system programmer. When the problem with the logrec log stream has been resolved, you might need to enter the SETLOGRC LOGSTREAM command to activate it.

If the problem persists, you might wish to change the recording medium to be the logrec data set. For the SETLOGRC DATASET command to be accepted, the logrec data set must have been defined to the system when the system was IPLed. Enter a DISPLAY LOGREC command to determine if there is a logrec data set defined to the system.

System programmer response: Depending on the message text, do one of the following:

LOG STREAM NOT DEFINED
Define the logrec log stream to the system logger inventory using the system logger utility program IXCMIAPU. SYS1.SAMPLIB member IFBLSJCL can be used as an example of how to define the logrec log stream. Enter the SETLOGRC LOGSTREAM command to reactivate the logrec log stream recording.

STRUCTURE NOT DEFINED
Define the structure in the XES policy using the IXCMIAPU utility. Ensure that the structure and logrec log stream are defined in the system logger inventory using the utility program IXCMIAPU. Enter the SETLOGRC LOGSTREAM command to reactivate the logrec log stream recording.

LOG STREAM DIRECTORY IS FULL
Run an EREP job that references the logrec log stream to copy some of the log stream data to a history data set. Then delete the data from the log stream. Enter the SETLOGRC LOGSTREAM command to reactivate the logrec log stream recording.

LOG STREAM DEFINED AS MODEL
Delete the current model definition of the logrec log stream and then define it as not being a model log stream. SYS1.SAMPLIB member IFBLSJCL can be used as an example of how to define the logrec log stream. Enter the SETLOGRC LOGSTREAM command to reactivate the logrec log stream recording.

LOGGER DISABLED FOR THIS IPL
The logrec log stream cannot be used. You should
change the recording medium to be the logrec data set, so enter the SETLOGRC DATASET command to switch mediums.

Otherwise, see [z/OS MVS Programming: Assembler Services Reference ABE-HSF](https://www.ibm.com) for the description of the IXGCONN or IXGWRITE return and reason codes.

**Source:** System Environmental Recording (Logrec)

**Detecting Module:** IFBLOGIN

**Routing Code:** 2,10

**Descriptor Code:** 3

```
IFB101I  LOGGER SUBSYSTEM (ssname) EXIT SYSTEM LOGGER SERVICE ERROR
          DD=ddname EXIT=exitname
          FUNCTION=function SERVICE=ixgservice
          RETCODE=retcode RSNCODE=rsncode
          ANSDIAG=diagfld1, diagfld2, diagfld3, diagfld4
```

**Explanation:** The system logger subsystem exit function for logrec encountered an error condition from the *ixgservice* service.

In the message text:

- **ssname** is the installation defined subsystem name for the system logger.
- **ddname** is the name of the DD JCL statement or the equivalent dynamic allocation DD name with the SUBSYS= specification. The name will be blanks for a concatenated DD.
- **exitname** is the name of the logrec exit (IFBSEXIT).

**OPEN** Indicates that the subsystem Open exit function encountered the error.

**GET** Indicates that the subsystem GET or READ exit access method function encountered the error.

**CLOSE** Indicates that the subsystem Close exit function encountered the error.

**UNALLOCATION** Indicates that the subsystem Unallocation exit function encountered the error.

**ixgservice** The name of the service that failed. For example, this could be IXGBRWSE or IXGCONN.

**retcode** The return code from *ixgservice*.

**rsncode** The reason code from *ixgservice*.

**diagfld1 — diagfld4** The answer area, IXGANSAA, diagnostic fields 1–4.

**System action:** The job terminates for CONVERTER requests. The job step terminates for ALLOCATION requests of JCL DD SUBSYS= statements. Dynamic Allocation requests return with an error and the request is rejected.

**User response:** See [z/OS MVS Programming: Assembler Services Reference IAR-XCT](https://www.ibm.com) for information about the system logger service and the associated return and reason code displayed in this message. Check the SUBSYS= specification and, if necessary, correct it and resubmit the job. If the problem persists, search problem reporting database for a fix for the problem. If no fix is found, contact the IBM support center.

**Operator response:** None.

**Application Programmer Response:** Correct the SUBSYS= specification and resubmit the job or the dynamic allocation request.

**System programmer response:** None.

Chapter 12. IFC messages

IFC001I  D=devtyp  N=x  F=track1*  L=track2*  S=recd**  DIP COMPLETE

Explanation: Produced by the IFCDIP00 program during the initialization of the logrec data set as specified on the SERERDS DD statement, this message describes the limits of the data set.

In the message text:

devtyp The device type containing the Disk Initialization Program (DIP) service aid.
x The hexadecimal representation of the device type code
track1 The address of the first track of the extent
track2 The address of the last track of the extent
recd The starting address of the record entry area within the data set.

The asterisk indicates that hexadecimal representation causes 8-character printout, and two asterisks indicate that hexadecimal representation causes 10-character printout.

Requirement: Perform an IPL to use the new data set. It is not possible for the system to switch from the logrec data set it was using at the last IPL to a different logrec data set.

System action: The system continues processing.

Source: System Environmental Recording (LOGREC)

Detecting Module: IFCDIP00
Routing Code: 1
Descriptor Code: 6

IFC021I  LOGREC DATA SET CANNOT BE OPENED, DSN=dsname

Explanation: The SERERDS DD statement is incorrectly coded. In the message text:

dsname The name of the logrec data set.

System action: The system ends IFCDIP00 processing.

Application Programmer Response: Correct the DD statement. Run the IFCDIP00 program again.

System programmer response: If the error recurs, run the SPZAP service aid program to dump the logrec data set. Specify the name of the logrec data set on the DSN= parameter in the SYSLIB DD statement and include an ABSDUMP control statement, specifying the extents of the data set, after the SYSIN DD statement. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the IFCDIP00 job as well as the output from the SPZAP program.

Descriptor Code: 6

IFC026I  LOGREC DATA SET HEADER WRITE ERROR, DSN=dsname

Explanation: An uncorrectable I/O error occurred as the IFCDIP00 program was writing the logrec data set header record.

dsname The name of the logrec data set.

System action: The system ends IFCDIP00 processing.

System programmer response: If the error recurs, run the SPZAP service aid program to dump the logrec data set. Specify the name of the logrec data set on the DSN= parameter in the SYSLIB DD statement and include an ABSDUMP control statement, specifying the extents of the data set, after the SYSIN DD statement. Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center. Provide the JCL and the program listing for the IFCDIP00 job as well as the output from the SPZAP program.

Chapter 13. IGD messages

IGD001I  hh.mm.ss DEVSERV SMS [id]

Explanation:  After the previous message, a heading appears:

UNIT DTYPE M VOLSER VOLSTAT STORGRP SGSTAT

Then one or more of the following lines appear:

dev dtdtxx m volser volstat sgname sgstat
dev dtdtxx m volser volstat
VOLUME NOT MANAGED BY SMS

Then one or more of the following lines might appear:

DEVICE INFORMATION SERVICES INFORMATION TRUNCATED. RETURN CODE rc
NO OTHER DEVICES MEET SELECTION CRITERIA
NO DEVICES MEET SELECTION CRITERIA

Then the following lines appear:

*************** LEGEND ***************
A = ALLOCATED
M = MOUNT PENDING
O = ONLINE
F = OFFLINE
N = NOT ALLOCATED
P = PENDING OFFLINE

The operator entered a DEVSERV SMS command. The variables in the message text and their meanings are as follows:

hh.mm.ss  The time in hours (00-23), minutes (00-59), and seconds (00-59). If the time of day clock is not working, hh.mm.ss will appear as 00.00.00.

id  A three-digit decimal identification number used with the CONTROL C,D command to cancel status displays that are:
  • being written on typewriter or printer consoles; or
  • being displayed inline (in other words, not in a display area) on a display console.

dev  A device number.

dtdtxx  A device type (dtdt) and optional feature or model (xx).

m  The logical mode of the device, as follows:
  • A - allocated
  • F - offline
  • M - mount pending
  • O - online
  • P - pending offline
  • N - device cannot be allocated, a system component has the device allocated

volser  A volume serial.

volstat  The volume status. If the volume is managed by the storage management subsystem, the values for volstat are as follows:
  • ENABLED
  • QUIESCED

  • QUIESCED/NEW
  • DISABLED
  • DISABLED/NEW

Otherwise, the valid values are (use attribute/mount attribute):
  • PRIV/RESRV
  • PRIV/REMOV
  • PRIV/RSNDNT
  • PUB/RESRV
  • PUB/REMOV
  • PUB/RSNDNT
  • STRG/RESRV
  • STRG/REMOV
  • STRG/RSNDNT

The use attribute may be blank if the volume is offline.

sgname  The storage group that contains the volume.

sgstat  The storage management subsystem status of the storage group. The values for sgstat are:
  • ENABLED
  • QUIESCED
  • QUIESCED/NEW
  • DISABLED
  • DISABLED/NEW

rc  The return code from DEVINFO.

The display line ‘dev,dtdtxx,m,volser,volstat, sgname,sgstat’ appears for every SMS managed volume.

The display line ‘dev,dtdtxx,m,volser,volstat,VOLUME NOT MANAGED BY SMS’ appears for every device that DEVSERV supports, but for volumes that are not SMS managed.

The display line ‘dev,dtdtxx,DEVICE TYPE IS NOT SUPPORTED BY DEVSERV SMS’ appears for every device that is not supported by DEVSERV SMS, with volumes that are not SMS managed.

The display line ‘NO DEVICES MEET SELECTION CRITERIA’ appears when no devices meet the criteria.

The display line ‘DEVICE INFORMATION SERVICES INFORMATION TRUNCATED. RETURN CODE rc’ appears when an error occurred in DEVINFO and caused the device information to be truncated.

The display line ‘NO OTHER DEVICES MEET SELECTION CRITERIA’ appears when an insufficient number of devices meet the criteria.

System action:  The system continues processing.
Operator response: If the display line 'DEVICE INFORMATION SERVICES INFORMATION TRUNCATED. RETURN CODE rc' appears, tell your programming support personnel.

For any other display lines, you are not required to respond.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 5,8,9

IGD002I hh:mm:ss DISPLAY SMS [id]

NO CONFIGURATION DATA AVAILABLE

Explanation: The operator entered the DISPLAY SMS command and there is no active configuration.

In the message text:

hh:mm:ss
The time in hours (00-23), minutes (00-59), and seconds (00-59). If the time of day clock is not working, hh:mm:ss will appear as 00.00.00.

id
A three-digit decimal identification number used with the CONTROL C,D command to cancel status displays that are:
• being written on typewriter or printer consoles; or
• being displayed inline (in other words, not in a display area) on a display console.

If there is an active configuration, the display also includes the following information:

SCDS dsname
The source control data set from which the active configuration was activated.

ACDS dsname
The active control data set (ACDS).

COMMDS dsname
The communications data set (COMMDS).

DINTERVAL int
The decimal number from 1 to 999 that specifies the number of seconds that should pass before SMS attempts to read statistics for 3990 Model 3 or Model 6 control units with SMS-managed volumes attached.

REVERIFY {YES|NO}
An indication of when the storage management subsystem verifies a user’s authority to allocate a new data set, use a storage class, or use a management class.

YES SMS verifies a user’s authority at both interpretation and processing time.

NO SMS verifies a user’s authority at only interpretation time. The default is NO.

ACSDEFAULTS {YES|NO}
An indication of whether the storage management subsystem will retrieve certain ACS routine variables from RACF; the default is NO.

SYSTEM sysname
The systems and system groups in the SMS complex. Up to 32 systems may be displayed.
**CONFIGURATION LEVEL**  
*year*/*mo*/*dy*  
*hh.mm*

The current level of the system configuration. The configuration level is expressed as a date/time stamp of the last configuration update. This update is performed every *nnn* number of seconds. The variables for the date stamp are:

- **year** The year, which can be any number from 1980 to 2155
- **mo** The month, which can be any number from 01 to 12
- **dy** The day, which can be any number from 01 to 31

The variables for the time stamp are the same as those in *hh.mm.ss*, which was described previously.

**INTERVAL SECONDS**  
*nnn*

The INTERVAL value, which is a decimal number from 1 to 999. The INTERVAL value specifies the number of seconds that should elapse before a system attempts to synchronize its configuration with that of the other systems in the complex.

**System action:** The system continues processing.

**Operator response:** None.

---

**IGD002I**  
*hh.mm.ss* DISPLAY SMS [id]

**NO SYSTEMS EXIST**

**Explanation:** The operator entered the DISPLAY SMS,ACTIVE command, and the storage management subsystem (SMS) configuration contains no systems.

In the message text:

- **hh.mm.ss** The time displayed in hours (00-23), minutes (00-59), and seconds (00-59). If the time of day clock is not working, *hh.mm.ss* will appear as 00.00.00.
- **id** A three-digit decimal identification number used with the CONTROL C,D command to cancel status displays that are:
  - being written on typewriter or printer consoles; or
  - being displayed inline (in other words, not in a display area) on a display console.

**System action:** Processing continues.

**System programmer response:** Provide a communications data set. Reenter the command.

**Source:** DFSMSdfp  
**Routing Code:** 2  
**Descriptor Code:** 5,8,9

---

**IGD002I**  
*hh.mm.ss* DISPLAY SMS [id]

**NO COMMUNICATIONS DATA SET**

**Explanation:** The operator entered the DISPLAY SMS,ACTIVE command, and the storage management subsystem (SMS) configuration has no communications data set.

In the message text:

- **hh.mm.ss** The time displayed in hours (00-23), minutes (00-59), and seconds (00-59). If the time of day clock is not working, *hh.mm.ss* will appear as 00.00.00.
- **id** A three-digit decimal identification number used with the CONTROL C,D command to cancel status displays that are:
  - being written on typewriter or printer consoles; or
  - being displayed inline (in other words, not in a display area) on a display console.

**System action:** Processing continues.

**System programmer response:** Provide a communications data set. Reenter the command.

**Source:** DFSMSdfp  
**Routing Code:** 2  
**Descriptor Code:** 5,8,9

---

**IGD002I**  
*hh.mm.ss* DISPLAY SMS [id]

**Explanation:** After the above message, a heading appears:

**SSID DEVS READ WRITE HIT RATIO FW BYPASSES**

Then the following line appears one or more times:

- **ssid** nn rr ww hh% fbb

Then the following lines appear:

**************** LEGEND ****************

**SSID =** SUBSYSTEM IDENTIFIER  
**DEVS =** NUMBER OF MANAGED DEVICES ATTACHED TO SUBSYSTEM
The operator entered a DISPLAY SMS,CACHE command. In response, this message shows the control variables and measured CACHE status for the subsystems that have SMS devices attached.

In the message text:

```
hh.mm.ss
The time in hours (00-23), minutes (00-59), and seconds (00-59). If the time of day clock is not working, hh.mm.ss will appear as 00.00.00.
```

```
id
A three-digit decimal identification number used with the CONTROL C,D command to cancel status displays that are:
• being written on typewriter or printer consoles; or
• being displayed inline (in other words, not in a display area) on a display console.
```

```
ssid
The subsystem identifier for the data that follows.
```

```
nn
The number of SMS-managed devices attached to the subsystem.
```

```
rr
The percentage of SMS data, whose performance requirements do not require the cache to be met, on the devices that will be cached.
```

```
ww
The percentage of SMS data, whose performance requirements do not require the cache to be met, on the devices that will use the fast write feature of the control unit.
```

```
hh
The percentage of read hits for all the devices attached to the subsystem.
```

```
ffbb
The number of DASD fast write bypasses per minute that occur on the subsystem due to an overload of nonvolatile storage.
```

System action: Processing continues.

Source: DFSMSdfp

Routing Code: 2

Descriptor Code: 5,8,9
This command displays the storage management subsystem (SMS) trace parameters. When the operator enters the DISPLAY SMS,OPTIONS command, this message is displayed after message IGD002I, which displays the other PARMLIB parameters.

In the message text:

\[ hh.mm.ss \]

The time in hours (00–23), minutes (00–59), and seconds (00–59). If the time-of-day clock is not working, \( hh.mm.ss \) appears as 00:00:00.

**TRACE \{ON|OFF\}**

Specifies one of the following trace options for SMS is to use. The default trace option is ON.

- **ON**
  - Turn on tracing.
- **OFF**
  - Discontinue all tracing.

**SIZE = \{nnnnnn[K]|nnnM\}**

Specifies the size of the trace table. The default value is 128K. The default unit is kilobytes. You can specify the size of the trace table as follows:

- \( nnnnnn \)
  - The size of the trace table in kilobytes, ranging from 0 to 255000. This value is rounded up to the nearest 4 KB unit.
- \( nnnnnnK \)
  - The size of the trace table in kilobytes, ranging from 0K to 255000K. This value is rounded up to the nearest 4 KB unit.
- \( nnnM \)
  - The size of the trace table in megabytes, ranging from 0M to 255M. This value is stored in kilobytes.

**TYPE = \{ERROR|ALL\}**

Specifies the type of trace entries to be traced. The default value is ERROR. Descriptions of the TYPE values follow:

- **ERROR**
  - Trace error type of trace entries.
- **ALL**
  - Trace all types of trace entries.

**JOBNAME = \{jjj\}**

Specifies the tracing scope in relation to jobs. The default is *. Descriptions of the JOBNAME values follow:

- \( jjj \)
  - Tracing is limited to job \( jjj \).
- *
  - Tracing is performed for all jobs.

**ASID = \{asid\}*\}

Specifies the tracing scope in relation to the address spaces. The default is *. Descriptions of the ASID values follow:

- \( asid \)
  - Tracing is limited to \( asid \), which is the name of an address space.
- *
  - Tracing is performed for all address spaces.

The rest of the display indicates which storage management subsystem events are selected for tracing. If the value of \( stat \) for an event is ON, that event is being traced. If the value is OFF, that event is not being traced. The SMS events and their abbreviations in the message display follow:

- **MODULE = \( stat \)**
  - A module entry or exit.
- **SMSSJF = \( stat \)**
  - The SMS and SJF interfaces.
- **SMSSSI = \( stat \)**
  - The SMS and SSI interfaces.
- **ACSINT = \( stat \)**
  - The ACS services interfaces.
- **OPCMD = \( stat \)**
  - Operator commands.
- **CONF = \( stat \)**
  - Configuration changes.
- **CDSC = \( stat \)**
  - Control data set changes.
- **CONF = \( stat \)**
  - Configuration services.
- **MSG = \( stat \)**
  - Message services.
- **ERR = \( stat \)**
  - Error recovery and recording services.
- **CONFR = \( stat \)**
  - Return data from an active configuration.
- **CONFA = \( stat \)**
  - Activate a new configuration.
- **ACSPRO = \( stat \)**
  - Perform ACS processing.
- **IDAX = \( stat \)**
  - The SMS interpreter and dynamic allocation.
- **DISP = \( stat \)**
  - A disposition processing exit.
- **CATG = \( stat \)**
  - SMS catalog services.
- **VOLREF = \( stat \)**
  - SMS VOLREF services.
- **SCHEDP = \( stat \)**
  - Scheduling services, prelocate catalog orientation.
- **SCHEDS = \( stat \)**
  - Scheduling services, system select.
VTOCL = stat
VTOC and data set services, allocate an existing data set.

VTOCD = stat
VTOC and data set services, delete an existing data set.

VTOCR = stat
VTOC and data set services, rename an existing data set.

VTOCC = stat
VTOC and data set services, create a new data set.

VTOCA = stat
VTOC and data set services, add a volume to a data set.

RCD = stat
SMS recording services or SMS fast VTOC and VVDS access.

DCF = stat
The device control facility.

DPN = stat
The device pool select.

TVR = stat
A tape volume record update.

DSTACK = stat
Data set stacking SSI.

UAFF = stat
Unit affinity.

DEBUG=stat
Debug service.

VOLSELMSG = (ON|OFF, nnnn)
controls the issuance of summarized and detailed volume selection analysis messages where:

ON
turns on the issuance of summarized and detailed analysis messages for volume selection.

OFF
turns off the issuance of summarized and detailed analysis messages for volume selection. This is the default value.

nnnn
is the number of volumes to be included in the detailed analysis messages. The range of this value is 0–65535. The default is 0 which indicates that no detailed analysis messages will be issued.

ALL
indicates that all of the volumes that were used by volume selection are included in the detailed analysis messages.

Note: When VOLSELMSG(ON, nnnn|ALL) is specified, where nnnn is greater than zero and TYPE(ALL) is also specified then one of JOBNAME, ASID, DSNAME, or STEPNAME must also be specified.

TYPE = {ERROR|ALL}
This parameter is described earlier in this message description. It applies to both tracing and the issuance of volume selection messages. It will be displayed here as it applies to the issuance of volume selection messages.

JOBNAME = {jjj*}
This parameter is described earlier in this message description. It applies to both tracing and the issuance of volume selection messages. It will be displayed here as it applies to the issuance of volume selection messages.

ASID = {asid*}
This parameter is described earlier in this message description. It applies to both tracing and the issuance of volume selection messages. It will be displayed here as it applies to the issuance of volume selection messages.

STEPNAME = {stepnamel*}
specifies the scope of the issuance of volume selection analysis messages in relation to a job step.

stepname
limits the scope volume selection analysis messages to the named job step.

* indicates that the scope of volume selection analysis messages will not be limited by job step.

DSNAME = {dsnamel*}
specifies the scope of the issuance of volume selection analysis messages in relation to a data set.

dsname
limits the scope volume selection analysis messages to the named data set.

* indicates that the scope of volume selection analysis messages will not be limited by data set.

FAST_VOLSEL

ON
Fast volume selection function is on.

OFF
Fast volume selection function is off.

System action: System continues processing.

Application Programmer Response: None. This is an informational message only.

System programmer response: Verify the values of the parameters. Take action if needed.

Explanation: The operator entered a DISPLAY SMS,OPTIONS command. This command displays all of the available storage management subsystem (SMS) parameters except trace parameters. The DFSMS Transactional VSAM Services (DFSMStvs) parameters are available only when DFSMStvs is active on the system.

In the message text:
hh.mm.ss
The time in hours (00–23), minutes (00–59), and seconds (00–59). If the time-of-day clock is not working, hh.mm.ss appears as 00:00:00.

id
A three-digit decimal identification number that you can use with the MVS CONTROL C,D command to halt the printing or display of this status information that is in progress on either of these consoles:
- A printer console that is not the printed medium
- A display console that does not have a display area

ACDS = dsname
Specifies the name of the active control data set, dsname.

COMMDS = dsname
Specifies the name of the communications data set, dsname.

INTERVAL = nnn
Specifies the synchronization interval, nnn, which is the number of seconds between system checks of the COMMDS for information about SMS configuration changes from other systems in the SMS complex. The default is 15 seconds.

DINTERVAL = nnn
Specifies the number of seconds, nnn, that SMS waits between reading device statistics from the 3990-3 control unit. The default is 150 seconds.

PDSE_BMFTIME = nnnnn | PDSE1_BMFTIME = nnnnn
Specifies the number of seconds, nnnnn, that SMS waits between recording SMF type 42 subtype 1 records for buffer management facility (BMF) cache use and SMF type 42 subtype 6 interval records in SMSPDSE or SMSPDSE1 address space. The default is 3600 seconds.

CACHETIME = nnnnn
Specifies the number of seconds, nnnnn, that SMS waits between recording SMF records for device cache use. The default is 3600 seconds.

PDSE_LRUTIME = nn | PDSE1_LRUTIME = nn
Specifies the number of seconds, nn, that the buffer management facility (BMF) waits between calls to the BMF data space cache LRU (least recently used) routine in SMSPDSE or SMSPDSE1 address space. The value of nn is in the range of 5-60. The default is 15 seconds.

PDSE_LRUCYCLE = nnn | PDSE1_LRUCYCLE = nnn
Specified the maximum number of times, nnn, that the buffer manager facility (BMF) least Recently used (LRU) routine passes over inactive buffers before making them available for reuse in SMSPDSE or SMSPDSE1 address space. The value of nnn in the range of 5-240. The default is 240 cycles.

SMF_TIME = {YES|NO}
Determines whether DFSMSdfp creates SMF type-42 records at the expiration of the SMF time interval, synchronized with SMF and RMF data intervals. The default value is YES.

YES
DFSMSdfp listens for the SMF event-notification signal and create the specified SMF records.

NO
DFSMSdfp does not create any SMF type-42 records.

CF_TIME = nnnnn
Specifies the interval, in seconds, nnnnn, between recording SMF record 42 (subtypes 15, 16, 17, 18) for use of the coupling facility by the SMSVSAM address space. The SMF_TIME keyword, if set to YES, overrides the CF_TIME keyword. The value of nnnnn is in the range 0–86399. The default value is 3600.

LOCAL_DEADLOCK = nnn
Specifies the length in seconds, nnn, of the local deadlock detection interval. The value of nnn is in the range 1–9999. The default is 15 seconds.

GLOBAL_DEADLOCK = nnn
Specifies the number of local deadlock cycles, nnn, that must expire before global deadlock detection is to be performed. The value of nnn is in the range 1–9999. The default is 4 cycles.

REVERIFY = {YES|NO}
Determines whether SMS verifies a user’s authority to allocate a new data set and use a storage or management class at both job interpretation time and run time or only at job interpretation time. The default value is NO.

YES
SMS verifies a user’s authority at both job interpretation time and run time.

NO
SMS verifies a user’s authority only at interpretation time.

ACSDEFAULTS = {YES|NO}
Determines whether SMS initializes the following automatic class selection (ACS) routine variables from an additional call to RACF, a component of the Security Server for z/OS. The default value is NO.

&APPLIC
&DEF_DATACLAS
&DEF_MGMTCLAS
&DEF_STORCLAS

YES
SMS retrieves these ACS routine variables from RACF.
NO
SMS does not retrieve any ACS routine variables from RACF.

DSNTYPE = {LIBRARY|PDS}
Determines the system default value of the DSNTYPE parameter for new SMS-managed data sets. The default value is PDS.

LIBRARY
A new SMS-managed data set is allocated as a partitioned data set extended (PDSE) if the value of DSNTYPE is not specified in the job control language (JCL) data definition (DD) statement or in the data class.

PDS
A new SMS-managed data set is allocated as a partitioned data set (PDS) if the value of DSNTYPE is not specified in the JCL DD statement or in the data class.

PDSESHARING = {NORMAL|EXTENDED}
Specifies how PDSEs are shared across systems in a sysplex. The default value is NORMAL.

NORMAL
Users share read access to PDSEs across systems in the sysplex.

EXTENDED
Users share read and write access to PDSEs across systems in the sysplex.

OVRD_EXPDT = {YES|NO}
Determines whether an expiration date or retention period for SMS-managed DASD data sets is overridden when deletion is requested through JCL, SVC 99, IEHPROGM, or ISPF or PDF. The default value is NO.

YES
Data sets are deleted whether or not the expiration date or retention period has passed.

NO
Any expiration date or retention period is honored.

SYSTEMS = (8|32)
Specifies the maximum number of unique system names and system group names that you can specify in the SMS configuration.

HSP_SIZE = nnnMB
Specifies the size of the Hiperspace™ that controls the amount of expanded storage that the PDSE allocates. The value of nnn is in the range 0–512. The default is 256 MB.

USE_RESOWNER = {YES|NO}
Specifies whether SMS determines the owner (user or group defined by RACF) of an SMS-managed data set protected by the profile. The default value is YES.

YES
SMS extracts the owner of an SMS-managed data set from the owner profile.

NO
The owner of an SMS-managed data set is the user ID.

RLS_MAX_POOL_SIZE = nnnn MB
Specifies the maximum size in megabytes of the SMVSAM local buffer pool. SMVSAM attempts to limit the size of the buffer pool to this value, but might exceed this storage amount temporarily. Because SMVSAM manages buffer pool space dynamically, this value does not set a static size for the buffer pool.

RLSINIT = {YES|NO}
Determines whether the SMVSAM address space is started, to bring up VSAM record-level sharing (RLS), as part of the system initialization. The default value is NO.

YES
SMVSAM server is initialized at IPL time.

NO
SMVSAM server is not active after IPL.

RLSTMOUT = nnnn
Specifies the maximum time, in seconds, that a VSAM RLS or DFSMStvs request is to wait for a required lock before the request is assumed to be in deadlock and abnormally ended with return code 8 and reason code 22. The value is in the range 0–9999. The default is 0 seconds (no time out).

COMPRESS = {GENERIC|TAILORED}
Specifies the method to compress a SAM data set. The default value is GENERIC.

GENERIC
The compression management service uses the original dictionary-building-block (DBB) solution to compress the data set.

TAILORED
The compression management service uses the tailored dictionaries, which are built by scanning up to 500K of user data. The dictionaries are imbedded in the SAM data set.

LOG_OF_LOGS = logstreamid
Specifies the log stream for DFSMStvs to use as its log of logs. This log contains copies of the tie-up records and file-close records written to forward recovery logs, which forward recovery products use. The default is to use no log of logs. The logstreamid value can be up to 26 characters long.

QTIMEOUT = nnnn
Specifies the quiesce exit timeout value in seconds; that is, the amount of time that the DFSMStvs quiesce exits allow to elapse before concluding that
a quiesce cannot be completed successfully. The value is in the range 60–3600. The default is 300 seconds.

TVSNAME = nnn
Specifies the identifier that uniquely identifies the instance of DFSMSstvs running on the system. The value is in the range 0–255. There is no default value.

AKP = nnn
Specifies the activity-keypoint trigger value, which is the number of logging operations between the taking of keypoints. The value is in the range 200–65535. The default is 1000.

TV_START_TYPE = (WARMICOLD)
Specifies the type of start that DFSMSstvs is to perform. The default is WARM.

WARM
DFSMStvs reads its undo log and processes the information it finds in accordance with the information that resource recovery services (RRS) has about any outstanding units of recovery.

COLD
DFSMStvs deletes any information that remains in the undo log and starts as if the log were empty.

MAXLOCKS = (max,incr)
Specifies two values: the maximum number of locks that a single unit of recovery can hold before the warning message IGW859I is issued to the system console, and an increment value. After the maximum is reached, the warning message is issued every time the number of locks held over and above the maximum is the multiple of the increment. The max and incr values are in the range 0–999999. The default value for both is 0. It is invalid for max to be 0 and incr to be greater than 0.

CICSVR_INIT = {YES|NO}
Determines whether the CICSVR address space is started as part of the system initialization. The default value is NO.

YES
The CICSVR address space is active after IPL.

NO
The CICSVR address space is not active after IPL.

CICSVR_DSNNAME_PREFIX = {user prefix\|DWW.}
Specifies the prefix for all CICSVR data set names that CICSVR creates. The default value is DWW.

CICSVR_RCDS_PREFIX = cicsvr_rcds_prefix
Specifies a prefix of CICSVR Recovery Control Data Set (RCDS) names that CICSVR server address space will use to allocate the RCDSs to the CICSVR server.

CICSVR_GRPNNAME_SUFFIX = cicsvr_grpname_suffix
Specifies the suffix of CICSVR XCF group names that the CICSVR address space use to recreate a unique XCF group name per the sysplex and connect to the sysplex. The specified suffix is activated when the CICSVR server address space is next started.

CICSVR_ZZVALUE_PARM = zzvalue_string
Specifies the ZZVALUE string which is a pair of name and value, or one control ZZVALUE value that specifies an action to take. And this value maintains the ZZVALUE table and the diagnostic data set.

CICSVR_UNDOLOG_CONTROL = undo log string
Specifies the parameters and service functions to control CICSVR UNDO logging. The CICSVR address space will decode the logging control string, and activate the parameters and execute the service function. It is a string of 17 characters long. The default string is a blank string.

CICSVR_UNDOLOG_PREFIX = undo log prefix
Specifies the CICSVR UNDO log name prefix that CICSVR server address space will use to determine the log stream name which should be written to by CICSVR UNDO logging. It is a string of 8 characters long. The default string is DW.

CICSVR_BACKOUT_CONTROL = backout control string
Specifies the parameters and service functions to control CICSVR batch backout logging. The CICSVR address space will decode the logging control string, and activate the parameters and execute the service function. It is a string of 17 characters long. The default string is a blank string.

CICSVR_GENERAL_CONTROL = general control string
Specifies the parameters and service functions that relate to various CICSVR functions. The CICSVR general control string and service functions can be used to invoke a CICSVR scavenger or to display the current setting of all CICSVR control strings. It is a string of 17 characters long. The default string is a blank string.

Rls_DynamicCfCacheReassign = {YES|NO}
Determine whether the dynamic cache can be reassigned during SMSVAM processing. The default value is NO.

Rls_MaxCfFeatureLevel = {cache feature | Z}
Specifies the cache feature level. The default value is Z.

PDSE_MONITOR = (YES | NO,interval,duration) | PDSE1_MONITOR = (YES | NO,interval,duration)
Determine whether SM needs to monitor SMSPDSE or SMSPDSE1 address space. The value of interval is the monitoring interval in seconds in the range 0-1440. The value of duration
is the monitoring duration in seconds in the range of 0-1440. The default value is (YES,0,0).

**PDSE_DIRECTORY_STORAGE = nnnn**
**PDSE1_DIRECTORY_STORAGE = nnnn**
Specifies the size in megabytes or gigabytes of 64-bits virtual storage that is used to cache PDSE directory buffer in the SMSPDSE or SMSPDSE1 address space. The range of the value is 64M to 16G. The default value is 2G.

**PDSE_BUFFER_BEYOND_CLOSE = YES | NO**
**PDSE1_BUFFER_BEYOND_CLOSE = YES | NO**
Specifies whether to keep directory and member data in storage beyond the last close of a PDSE dataset for the SMSPDSE or SMSPDSE1 address space. If NO option is specified, the PDSE’s directory and member data will be purged from the in-memory cache when the last close on this system of the data set occurs. If the YES option is specified, the PDSE’s directory and member data will be retained in the in-memory cache beyond the last close of the data set. The default value is NO.

**GDS_RECLAIM = (YES | NO)**
Determines whether generation data set (GDS) reclaim processing is applied. The default value is YES.

**YES**
GDS reclaim processing is to be done.

**NO**
GDS reclaim processing is not to be done.

**DSSTIMEOUT = nnn**
Specifies the number of seconds that the dss component of DFMSMS will wait during backup processing for quiesce data set requests to complete.

**BLOCKTOKENSIZE = (REQUIRE | NOREQUIRE)**
Specified whether the large format data set is highly restricted. If the value is REQUIRE, the large Format Data Set is highly restricted.

**FAST_VOLSEL = ON | OFF**
Specifies whether the summarized and detail volume selection analysis messages will be issued or not. Nnnn or ALL is the number of volumes or all volumes which are included in the scope of issuance of the detailed volume selection analysis messages. The range is 0-65535. The default values is (OFF,0).

**USEEAV = (YES | NO)**
Displays the value of the keyword that controls the allocation of new data sets on EAVs. Existing data sets on EAVs can still be accessed.

**YES**
Full use of EAVs is allowed.

**NO**
New data sets cannot be allocated on EAVs. Existing data sets on EAVs can be accessed and extended on the EAVs that they reside on, but they cannot be extended to a new EAV. This is the default when SMS is active in the system.

When SMS is not active in the system, USEEAV is not available and the installation must use alternate means to control the usage of EAVs.

**BreakPointValue = (0-65520)**
Sets the value in cylinders that is used in determining whether DADSM will direct an allocation to the cylinder-managed space of an EAV or to the track-managed space. The value is also used by SMS in ranking volumes during the volume selection process. If the value is not specified by the user, then a default value of 10 cylinders is assigned by the system.

When SMS is not active in the system, BreakPointValue has no meaning and the default value of 10 cylinders is assigned by the system.

**TRACE (ON | OFF)**
Specifies one of the following trace options for SMS is to use. The default trace option is OFF.

**ON**
Turn on tracing.

**OFF**
Discontinue all tracing.

**SIZE = {nnnnnn[K] | nnnM}**
Specifies the size of the trace table. The default value is 128K. The default unit is kilobytes. You can specify the size of the trace table as follows:

**nnnnnn**
The size of the trace table in kilobytes, ranging from 0 to 255000. This value is rounded up to the nearest 4 KB unit.

**nnnnnnK**
The size of the trace table in kilobytes, ranging from 0K to 255000K. This value is rounded up to the nearest 4 KB unit.

**nnnM**
The size of the trace table in megabytes, ranging from 0M to 255M. This value is stored in kilobytes.

**TYPE = (ERROR | ALL)**
Specifies the type of trace entries to be traced. The default value is ERROR. Descriptions of the TYPE values follow:

**ERROR**
Trace error type of trace entries.

**ALL**
Trace all types of trace entries.

**JOBNAME = {jjj | *}**
Specifies the tracing scope in relation to jobs. The default is *. Descriptions of the JOBNAME values follow:
Tracing is limited to job jjj.

* Tracing is performed for all jobs.

**ASID = \{asid*\}**

Specifies the tracing scope in relation to the address spaces. The default is *. Descriptions of the ASID values follow:

- \textit{asid} Tracing is limited to \textit{asid}, which is the name of an address space.
- * Tracing is performed for all address spaces.

The rest of the display indicates which storage management subsystem events are selected for tracing. If the value of \textit{stat} for an event is ON, that event is being traced. If the value is OFF, that event is not being traced. The SMS events and their abbreviations in the message display follow:

**MODULE = \textit{stat}**

A module entry or exit.

**SMSSJF = \textit{stat}**

The SMS and SJF interfaces.

**SMSSSI = \textit{stat}**

The SMS and SSI interfaces.

**ACSINT = \textit{stat}**

The ACS services interfaces.

**OPCMD = \textit{stat}**

Operator commands.

**CONFC = \textit{stat}**

Configuration changes.

**CDSC = \textit{stat}**

Control data set changes.

**CONFS = \textit{stat}**

Configuration services.

**MSG = \textit{stat}**

Message services.

**ERR = \textit{stat}**

Error recovery and recording services.

**CONFR = \textit{stat}**

Return data from an active configuration.

**CONFA = \textit{stat}**

Activate a new configuration.

**ACSPRO = \textit{stat}**

Perform ACS processing.

**IDAX = \textit{stat}**

The SMS interpreter and dynamic allocation.

**DISP = \textit{stat}**

A disposition processing exit.

**CATG = \textit{stat}**

SMS catalog services.

**VOLREF = \textit{stat}**

SMS VOLREF services.

**SCHEDP = \textit{stat}**

Scheduling services, prelocate catalog orientation.

**SCHEDS = \textit{stat}**

Scheduling services, system select.

**VTOCL = \textit{stat}**

VTOC and data set services, allocate an existing data set.

**VTOCD = \textit{stat}**

VTOC and data set services, delete an existing data set.

**VTOCR = \textit{stat}**

VTOC and data set services, rename an existing data set.

**VTOCC = \textit{stat}**

VTOC and data set services, create a new data set.

**VTOCA = \textit{stat}**

VTOC and data set services, add a volume to a data set.

**RCD = \textit{stat}**

SMS recording services or SMS fast VTOC and VVDS access.

**DPN = \textit{stat}**

The device pool select.

**TVR = \textit{stat}**

A tape volume record update.

**DSTACK = \textit{stat}**

Data set stacking SSI.

**UAFF = \textit{stat}**

Unit Affinity.

**DEBUG = \textit{stat}**

Debug Service

**VOLSELMSSG = \{\textit{(ON I OFF), nnnn I ALL}\}**

controls the issuance of summarized and detailed volume selection analysis messages where:

- **ON** turns on the issuance of summarized and detailed analysis messages for volume selection.
- **OFF** turns off the issuance of summarized and detailed analysis messages for volume selection.

**nnnn** is the number of volumes to be included in the detailed analysis messages. The range of this value is 0–65535. The default is 0 which indicates that no detailed analysis messages will be issued.

**VOLSELMSG = \{\textit{(ON I OFF), nnnn I ALL}\}**

controls the issuance of summarized and detailed volume selection analysis messages where:

- **ON** turns on the issuance of summarized and detailed analysis messages for volume selection.
- **OFF** turns off the issuance of summarized and detailed analysis messages for volume selection.

**nnnn** is the number of volumes to be included in the detailed analysis messages. The range of this value is 0–65535. The default is 0 which indicates that no detailed analysis messages will be issued.
ALL indicates that all of the volumes that were used by volume selection are included in the detailed analysis messages.

Note: When VOLSELMG(ON,nnnn|ALL) is specified, where nnnn is greater than zero and TYPE(ALL) is also specified then one of JOBNAME, ASID, DSNNAME, or STEPNAME must also be specified.

**TYPE = {ERROR|ALL}**

This parameter is described earlier in this message description. It applies to both tracing and the issuance of volume selection messages. It will be displayed here as it applies to the issuance of volume selection messages.

**JOBNAME = {ij*i}**

This parameter is described earlier in this message description. It applies to both tracing and the issuance of volume selection messages. It will be displayed here as it applies to the issuance of volume selection messages.

**ASID = {asid*i}**

This parameter is described earlier in this message description. It applies to both tracing and the issuance of volume selection messages. It will be displayed here as it applies to the issuance of volume selection messages.

**STEPNAME = {stepnamel*i}**

specifies the scope of the issuance of volume selection analysis messages in relation to a job step.

*stepname*

limits the scope volume selection analysis messages to the named job step.

* indicates that the scope of volume selection analysis messages will not be limited by job step.

**DSNAME = {dsnamel*i}**

specifies the scope of the issuance of volume selection analysis messages in relation to a data set.

*dsname*

limits the scope volume selection analysis messages to the named data set.

* indicates that the scope of volume selection analysis messages will not be limited by data set.

System action: The system continues processing.

Operator response: None

Application Programmer Response: None. This is an informational message only.

System programmer response: Verify the values of the parameters. Take action if needed.

**Problem determination:** None

**Source:** Storage management subsystem (SMS)

D THE STORAGE GROUP OR VOLUME IS DISABLED FOR NEW ALLOCATIONS ONLY

Q THE STORAGE GROUP OR VOLUME IS QUIESCED FOR NEW ALLOCATIONS ONLY

---

The operator entered the DISPLAY SMS, VOLUME command. This message displays status information for the volume, which is in the storage group, with respect to the systems or system groups in the complex. (If the volume serial is not SMS managed, message IGD005I appears instead of this message display.)

In the message text:

**hh.mm.ss**

The time in hours (00-23), minutes (00-59), and seconds (00-59). If the time of day clock is not working, *hh.mm.ss* will appear as 00.00.00.

**id** A three-digit decimal identification number used
with the CONTROL C,D command to cancel status displays that are:

- being written on typewriter or printer consoles; or
- being displayed inline (in other words, not in a display area) on a display console.

The device number on the system or system group where the operator issued the command.

The status with respect to the systems or system groups in the complex, as follows:

- not defined to the system
- enabled
- disabled
* quiesced
D disabled for only new allocations
Q quiesced for only new allocations

The systems or system groups in the SMS complex.

The system continues processing.

The following may appear:

**LISTVOL IS IGNORED FOR OBJECT**  **AND OBJECT BACKUP STORAGE GROUPS**

Then the following lines appear:

```
*************** LEGEND ***************
.
 THE STORAGE GROUP OR VOLUME IS NOT DEFINED TO THE SYSTEM
+
 THE STORAGE GROUP OR VOLUME IS ENABLED
-
 THE STORAGE GROUP OR VOLUME IS DISABLED
*
 THE STORAGE GROUP OR VOLUME IS QUIESCED
D
 THE STORAGE GROUP OR VOLUME IS DISABLED FOR NEW ALLOCATIONS ONLY
Q
 THE STORAGE GROUP OR VOLUME IS QUIESCED FOR NEW ALLOCATIONS ONLY
```

---

The operator entered either the DISPLAY SMS,STORGRP(sname),LISTVOL command or the DISPLAY SMS,STORGRP(ALL),LISTVOL command.

The message displays status information for:

- one storage group sname and all the volumes that are defined to it
- all storage groups and all the volumes that are defined to each storage group

In the message text:

**hh.mm.ss**

The time in hours (00-23), minutes (00-59), and seconds (00-59). If the time of day clock is not working, *hh.mm.ss* will appear as 00.00.00.

**id**

A three-digit decimal identification number. *id* is used with the CONTROL C,D command to cancel status displays that are:

- being written on typewriter or printer consoles
- being displayed inline (in other words, not in a display area) on a display console.

**sname**

A storage group.

**type**

The type of storage group, as follows:

- **OBJECT** object
- **OBJECTB** object backup
- **POOL** pool
- **TAPE** tape

**s**

The status of the storage group with respect to the systems or system groups in the complex. *s* can be:

- not defined to the system
- enabled
- disabled
- quiesced

**D**

disabled for only new allocations

**Q**

quiesced for only new allocations

**Note:** “Quiesced” and “quiesced” for only new allocations are not valid statuses for OBJECT, OBJECTB, and TAPE storage groups.

**volser**

A volume in the specified storage group.

**dev**

The device number of *volser* on the system or system group where the operator issued the command.
The status of the volume with respect to the systems or system groups in the complex. $s$ can be:

- . not defined to the system
- + enabled
- - disabled
- * quiesced
- D disabled for only new allocations
- Q quiesced for only new allocations

`sysname` The systems and system groups in the SMS complex.

If the operator entered the DISPLAY SMS,STORGRP($sgname),LISTVOL command and:

- storage group $sgname$ is not defined to the active configuration, message 'IGD004I COMMAND REJECTED STORAGE GROUP $sgname$ IS NOT DEFINED' appears instead of this message display.
- storage group $sgname$ is defined to the active configuration but contains no volumes, then the display line 'THE ABOVE STORAGE GROUP(S) CONTAIN(S) NO VOLUMES' appears.
- storage group is defined to the active configuration, but is an object or object backup storage group, then the display line 'LISTVOL IS IGNORED FOR OBJECT AND OBJECT BACKUP STORAGE GROUPS' appears.

**System action:** System continues processing.

**Operator response:** If trying to display the optical or tape volumes belonging to a storage group, use the Volume List option under ISMF to display all valid optical and tape volumes.

**Source:** Storage Management Subsystem (SMS)

**Detecting Module:** IGDOPCSV

**Routing Code:** 2

**Descriptor Code:** 5,8,9

---

The operator entered either the DISPLAY SMS,LIBRARY($libname$) command or the DISPLAY SMS,LIBRARY(ALL) command. The message displays status information for library $libname$ or for all libraries with respect to the systems or system groups in the complex.

**Explanation:** The operator entered the DISPLAY SMS,STORGRP($sgname$),LISTVOL command and there are no storage groups defined in the active configuration.

In the message text:

`hh.mm.ss` The time in hours (00-23), minutes (00-59), and seconds (00-59). If the time of day clock is not working, `hh.mm.ss` will appear as 00.00.00.
id  A three-digit decimal identification number. id is used with the CONTROL C,D command to cancel status displays that are:
  • being written on typewriter or printer consoles
  • being displayed inline (in other words, not in a display area) on a display console.

libname  The library.

class  The type of library, as follows:
  OPTICAL  Optical
  TAPE  Tape

s  The status of the library with respect to the system or system group in the complex. s can be:
  • not defined to the system
  • enabled
  • disabled
  P  Pending offline

sysname  The systems or system groups in the SMS complex.

If the operator entered the DISPLAY SMS,LIBRARY(libname),LISTDRI command and libname is the name of a pseudo library, then the message 'IGD004I THE SPECIFIED OPTICAL LIBRARY IS NOT A REAL LIBRARY' appears instead of this message display. No pseudo library can be displayed.

If issuing a DISPLAY SMS,LIBRARY(ALL) command and there is a pseudo library in the configuration, then the message 'libname OPTICAL LIBRARY IS NOT A REAL LIBRARY' appears. No pseudo library can be displayed.

System action:  System continues processing.

The following lines may appear:

**NO DRIVES DEFINED IN SMS ACDS**

Then the following lines appear:

************** LEGEND **************

  .  THE LIBRARY OR DRIVE IS NOT DEFINED TO THE SYSTEM
  +  THE LIBRARY OR DRIVE IS ONLINE
  -  THE LIBRARY OR DRIVE IS OFFLINE
  P  THE LIBRARY IS PENDING OFFLINE

************** LEGEND **************

The operator entered either the DISPLAY SMS,LIBRARY(libname),LISTDRI command or the DISPLAY SMS,LIBRARY(ALL),LISTDRI command. The message displays status information for the following with respect to the systems or system groups in the complex:
  • One library name libname and all the drives that are defined to it
  • All library names and all the drives that are defined to each library name

In the message text:

hh.mm.ss  The time in hours (00-23), minutes (00-59), and seconds (00-59). If the time of day clock is not working, hh.mm.ss will appear as 00.00.00.

id  A three-digit decimal identification number. id is used with the CONTROL C,D command to cancel status displays that are:
  • being written on typewriter or printer consoles
  • being displayed inline (in other words, not in a display area) on a display console.

libname  A library.

class  The type of library, as follows:
**IGD002I**

**OPTICAL**

Optical

**TAPE**

Tape

- \( s \) The status of the library with respect to the systems or system groups in the complex. \( s \) can be:
  - . not defined to the system
  - + enabled
  - - disabled

**libname**

The library in which \( drvname \) resides.

- \( s \) The status of the drive with respect to the systems or system groups in the complex. \( s \) can be:
  - . Not defined to the system
  - + Online
  - - Offline

**sysname**

The systems or system groups in the SMS complex.

If the operator entered either the DISPLAY SMS,LIBRARY(\( \text{libname} \)), LISTDRI or the DISPLAY SMS,LIBRARY(ALL), LISTDRI command and no drives were defined to the library, then 'THE ABOVE LIBRARY(S) CONTAIN(S) NO DRIVES' appears.

If the operator entered either the DISPLAY SMS,LIBRARY(\( \text{libname} \)), LISTDRI or the DISPLAY SMS, LIBRARY(ALL), LISTDRI command and no drives were defined to the active configuration, then 'NO DRIVES DEFINED IN SMS ACDS' appears.

The LISTDRI keyword and processing is ignored for pseudo libraries. If the operator entered the DISPLAY SMS,LIBRARY(ALL), LISTDRI command and there are pseudo libraries in the configuration, then 'LISTDRI IS IGNORED FOR PSEUDO AND TAPE LIBRARIES' will appear.

The LISTDRI keyword and processing is ignored for tape libraries. If the operator entered the DISPLAY SMS,LIBRARY(\( \text{libname} \)), LISTDRI command and \( \text{libname} \) is a tape library, or if the operator entered the DISPLAY SMS,LIBRARY(ALL), LISTDRI command and there are tape libraries in the configuration, then 'LISTDRI IS IGNORED FOR PSEUDO AND TAPE LIBRARIES' appears.

Chapter 13. IGD messages 485
all the parameters related to the issuance of the volume selection analysis messages. Also displayed are some parameters that are shared between SMS Tracing and volume selection analysis messages.

In the message text:

`hh:mm:ss`

The time in hours (00–23), minutes (00–59), and seconds (00–59). If the time-of-day clock is not working, `hh:mm:ss` appears as `00:00:00`.

`id`

A three-digit decimal identification number that you can use with the MVS CONTROL C,D command to halt the printing or display of this status information that is in progress on either of these consoles:
- A printer console that is not the printed medium
- A display console that does not have a display area

`VOLSELMSG = (ON|OFF),{nnnn|ALL})`

Controls the issuance of summarized and detailed analysis messages where:
- **ON** turns on the issuance of the summarized and detailed analysis messages for volume selection
- **OFF** turns off the issuance of the summarized and detailed analysis messages for volume selection. This is the default
- **nnnn** is the number of volumes to be included in the detailed analysis messages. The range of values is 0–65535. The default is 0 which indicates that only summarized analysis will be issued
- **ALL** indicates that all of the volumes that were used by volume selection are included in the detailed analysis messages

**Note:** When VOLSELMSG(ON,nnnn|ALL) is specified, nnnn is greater than zero and TYPE(ALL) parameter is also specified then one of JOBNAME, ASID, DSNAME, or STEPNAME must be specified.

`TYPE = {ERROR|ALL}`

Specifies whether SMS issues volume selection messages on failed allocations only or on both successful and failed allocations and whether SMS traces all events or only errors. The default is ERROR.
- **ERROR** indicates to trace error type of trace entries and issue volume selection analysis messages for failed allocations only.
- **ALL** indicates to trace all trace entries and issue volume selection analysis messages for both successful and failed allocations.

`JOBNAME = {jjj*}`

specifies the scope of both tracing and the issuance of volume selection analysis messages in relation to jobs.
- **jjj** is the name of a job and scope is limited to that job
- * indicates that scope covers all jobs

`ASID = {asid*}`

specifies the scope of both tracing and the issuance of volume selection analysis messages in relation to address space. It is activated by TRACE(ON) or VOLSELMSG(ON). The default is *.
- **asid** is the identifier of an address space and scope is limited to that address space
- * indicates that scope covers all asids

`DSNAME = {dsnamel*}`

specifies the scope of both tracing and the issuance of volume selection analysis messages in relation to data set name.
- **dsname** is the name of a data set and scope is limited to that data set
- * indicates that scope covers all data sets

`STEPNAME = {stepnamel*}`

specifies the scope of both tracing and the issuance of volume selection analysis messages in relation to job step.
- **stepname** is the name of a job step and scope is limited to that step
- * indicates that scope covers all job steps

`TRACE = stat`

specifies one of the following options to enable tracing. The default is ON.
- **ON** switches tracing on
- **OFF** discontinues tracing

`SIZE = nnnK | M`

specifies the size nnn of the trace table. The increment can be specified in either kilobytes (K) or megabytes (M). The default is 128K.
- **nnnK** is the size of the trace table in kilobytes. The value can range from 0K to 255000K. The value is rounded up to the nearest 4K unit
- **nnnM** is the size of the trace table in megabytes. The value can range from 0M to 255M. The value will be stored as kilobytes

---

**IGD017I DFSMS/MVS FEATURE n IS NOT LICENSED FOR USE ON THIS SYSTEM**

**Explanation:** DFSMS/MVS feature, n, is not defined for this system to use SYS1.PARMLIB member IGDDFPKG.

**System action:** The DFSMS/MVS feature n will not execute. The system continues processing.

**Operator response:** Tell the system programmer about this message.

**Application Programmer Response:** If feature n is licensed for use, then update SYS1.PARMLIB member IGDDFPKG as described in [z/OS MVS Initialization and Tuning Reference](https://www.ibm.com) and either re-IPL or start task DFPMSPKG.

**Source:** DFSMSdfp

---

**IGD019I SCDS dsn-1 SUCCESSFULLY COPIED AS ACDS TO dsn-2**

**Explanation:** This message is issued when a SCDS is copied successfully as an ACDS with the SETSMS COPYSCDS command.

In the message text:

*Dsn-1*  
SCDS data set name

*Dsn-2*  
ACDS data set name

**System action:** The system continues processing.

**Source:** DFSMSdfp

---

**IGD020I SMS IS NOW ACTIVE**

**Explanation:** The storage management subsystem successfully started or restarted.

**System action:** The system continues processing.

**Source:** DFSMSdfp

---

**IGD021I SMS START FAILED**

**Explanation:** The system service was unable to perform its function on behalf of the storage management subsystem (SMS).

In the message text:

- **service** The system service, as follows:
  - IEEMB887 (generalized parse routine)
  - IEEMB881 (system address space create routine)
  - IEFJSVEC (subsystem vector table service)
  - ?LXRES (reserve pc linkage index)
  - ?ETCRE (create pc entry table)
  - ?ETOON (connect pc entry table)
- **rc** The return code.
- **rsnc** The reason code.

In the case of IEEMB887, IEEMB881, and IEFJSVEC, the system service returns the return and reason code to indicate the cause of the SMS failure. In the case of ?LXRES, ?ETCRE, and ?ETOON, the system service returns the return code, but the reason code is set by SMS.

**System action:** Jobs that refer to SMS managed data sets will not start or end. Also, data sets cannot be created or unallocated until the SMS address space is restarted.

**Operator response:** Tell the system programmer about this failure and the codes returned by the system service.

**Application Programmer Response:** Refer to the logic manual for *service* for an explanation of the codes returned by that system service. If the return and reason codes indicate that the failure occurred because of a resource shortage, correct that shortage and have the operator issue SET SMS to restart the SMS address space.
IGD022I • IGD025I

space. Otherwise, use the logrec data set and SYS1.DUMPnn to diagnose the problem.

Source: DFSMSdfp
Routing Code: 2,10
Descriptor Code: 4

IGD022I  THE SMS ADDRESS SPACE HAS FAILED AND IS RESTARTING

Explanation:  The SMS address space ended, and the system is attempting to restart it. Until the restart is successful, storage management subsystem services are not available.

System action:  The system is attempting to restart the address space.

Operator response:  If you did not use the FORCE command to cancel the SMS address space, tell the system programmer that the address space failed.

Application Programmer Response:  Use the logrec data set and SYS1.DUMPnn to determine why the SMS address space ended.

Source: DFSMSdfp
Routing Code: 2,10
Descriptor Code: 4

IGD023I  ERROR(S) DETECTED IN SMS ADDRESS SPACE

Explanation:  RETURN CODE rc REASON CODE rsnc

The storage management subsystem has detected an error relating to its address space, and will attempt to repair them by restarting its address space. The return code and the reason code further explain the error.

In the message text:

rc  The return code.
rsnc The reason code.

System action:  The system continues processing.

Operator response:  Tell the system programmer about this message and the codes.

Application Programmer Response:  Use the logrec data set, return code, and reason code to determine the exact nature of the error.

Source: DFSMSdfp
Routing Code: 2,10
Descriptor Code: 4

IGD024I  SMS START IN PROGRESS

UNABLE TO PROCESS SET SMS COMMAND AT THIS TIME

Explanation:  A SET SMS command is issued while the SMS initialization processing has not been completed, or a previous SET SMS command is still in process.

System action:  The system rejects the command and continues processing.

Operator response:  Reissue the SET SMS command after the SMS starts successfully or the previous SET SMS completes its processing.

Source: DFSMSdfp
Routing Code: 2,10
Descriptor Code: 4

IGD025I  SMS START FAILED

UNEXPECTED ERROR IN INITIALIZATION PROCESSING

Explanation:  During SMS initialization processing, an error occurred, and the storage management subsystem was unable to successfully start or restart. Possible errors are an abnormal end, or a failure in the address space start facility. If one of these two errors is the cause of the SMS start failure, IGD025I will be preceded by IGD300I or IGD021I. Other possible errors are that the reserve pc linkage index failed, the create pc entry table failed, the connect pc entry table failed, or there is a control block length error. If a control block length error occurs, IGD025I will be followed by IGD306I, containing the return and reason codes.

System action:  The system does not start or restart the storage management subsystem. Jobs that refer to SMS managed data sets will not start or end. Also, data sets cannot be created; and storage management subsystem data sets cannot be unallocated.

Operator response:  Issue the SET SMS command to start the storage management subsystem. If that fails, then tell the system programmer about this situation.

Application Programmer Response:  If message IGD300I or IGD021I preceded IGD025I, follow the programmer response provided for that message.

**IGD027I**  
**ERROR IN OPERATOR REPLY text**

**Explanation:** There is an error in the operator's reply to message IGD074D, IGD078D, IGD092, IGD083D, IGD084D, or IGD085D. The value of text pinpoints one of the following errors in the operator's reply:

- ERROR IS INVALID KEYWORD : keywd
- ERROR IS REQUIRED KEYWORD keywd IS NOT SPECIFIED
- ERROR IS DUPLICATE KEYWORD : keywd
- ERROR IS CONFLICTING KEYWORD : keywd
- ERROR IS INVALID KEYWORD VALUE FOR KEYWORD keywd : value
- ERROR IS INVALID DELIMITER : delimitr
- ERROR IS INVALID SYNTAX : syntax
- KEYWORD DB2SSID MUST BE SPECIFIED WITH KEYWORD OAMPROC
- TVSNAME MUST BE PROVIDED WHEN OTHER TRANSACTIONAL VSAM PARAMETERS ARE SPECIFIED

In the message text:

- keywd  The specified keyword.
- value  The value for the keyword.
- delimitr  The incorrect delimiter.
- syntax  The incorrect syntax.

**System action:** The system waits for the operator to enter a corrected reply to message IGD074D, IGD078D, IGD082D, IGD083D, IGD084D, or IGD085D.

**Operator response:** Enter a correct reply to IGD074D, IGD078D, IGD082D, IGD083D, IGD084D, or IGD085D.

**System programmer response:** None

**Problem determination:** None

**IGD029I**  
**ERROR FOR cmd COMMAND**

**ERROR IS text**

**Explanation:** There is a syntax error in the command that the operator entered. cmd is one of the following:

- DISPLAY SMS
- DEVSERV SMS
- SETSMS
- VARY SMS
- SET SMS

In the message text:

- keywd  The specified keyword.
- value  The value for the keyword.
- delimitr  The incorrect delimiter.
- syntax  The incorrect syntax.

The variable in text pinpoints the syntax error cmd. The possible values are:

- INVALID KEYWORD : keywd
- REQUIRED KEYWORD keywd IS NOT SPECIFIED
- DUPLICATE KEYWORD : keywd
- CONFLICTING KEYWORD : keywd
- MISSING PARAMETER FOR : keywd
- NO DEVICE NUMBER SPECIFIED
- DEVICE NUMBER RANGE OUT OF BOUNDS
- INVALID DELIMITER : delimitr
- INVALID SYNTAX : syntax
- INVALID KEYWORD VALUE FOR KEYWORD keywd : value
- INVALID KEYWORD VALUE : value
- EMBEDDED BLANKS BETWEEN OPERANDS OF COMMAND
- TOO MANY VALUES SPECIFIED FOR KEYWORD keywd : value

Chapter 13. IGD messages   493
FOLLOWING REQUIRED KEYWORD NOT SPECIFIED: ENABLE, QUIESCE, DISABLE, ONLINE, NEW, NEWSPARSE, or DELETE.

MISSING REQUIRED KEYWORD: DSNAME WHEN keywd KEYWORD IS SPECIFIED

SCDS NAME AND ACDS NAME ARE BOTH dsname

REQUIRED KEYWORD NOT SPECIFIED FOR VOLSELMG(ON, nnnnn|ALL) TYPE(ALL): JOBNAME, ASID, DSNAME, or STEPNAME.

REJECT cmd COMMAND PREVIOUS COMMAND WITH KEYWORD keywd IS STILL IN PROCESS

---

In the message text:

**cmd**

The operator command.

**keywd**

The indicated keyword.

**delimitr**

The incorrect delimiter.

**syntax**

The incorrect syntax.

**value**

The value for the keyword.

**dsname**

The name of a data set.

**nnnnn**

number of volumes to be included in the detailed analysis messages

**System action:** The system rejects the command.

**Operator response:** Correct the syntax error and reissue the command.

**System programmer response:** None

**Problem determination:** None

IGD030I THE SMS PARAMETER RECORD IN MEMBER mem HAS A SYNTAX ERROR.

**ERROR IS text**

**Explanation:** The Storage Management Subsystem record in SYS1.PARMLIB member IGDSMSxx contains a syntax error. The value of text pinpoints the syntax error in the record:

- INVALID KEYWORD: keywd
- REQUIRED KEYWORD keywd IS NOT SPECIFIED
- DUPLICATE KEYWORD: keywd
- CONFLICTING KEYWORD: keywd
- INVALID DELIMITER: delimitr
- INVALID SYNTAX: syntax
- INVALID KEYWORD VALUE FOR KEYWORD keywd : value
- TOO MANY VALUES SPECIFIED ON TVSNAME PARAMETER FOR A SYSTEM
- DUPLICATE IDENTIFIER IN TVSNAME LIST. IDENTIFIERS MUST BE UNIQUE
- TVSNAME MUST BE PROVIDED WHEN OTHER TRANSACTIONAL VSAM PARAMETERS ARE SPECIFIED.
- THE NUMBER OF VALUES SPECIFIED ON keywd PARAMETER DIFFERS FROM THE NUMBER OF VALUES SPECIFIED ON SYSNAME PARAMETER
- REQUIRED KEYWORD NOT SPECIFIED FOR VOLSELMG(ON, nnnnn|ALL) TYPE(ALL): JOBNAME, ASID, DSNAME, or STEPNAME.

REJECT cmd COMMAND PREVIOUS COMMAND WITH KEYWORD keywd IS STILL IN PROCESS

---

In the message text:

**mem**

The member name.

**keywd**

The indicated keyword.

**delimitr**

The incorrect delimiter.

**syntax**

The incorrect syntax.

**value**

The value for the keyword.

**nnnnn**

number of volumes to be included in the detailed analysis messages

**System action:** The system waits for the operator to reply to message IGD074D, IGD078D, IGD083D, IGD084D, or IGD085D. After the problem is corrected, initialization continues.

**Operator response:** Correct the error by replying to message IGD074D, IGD078D, IGD083D, IGD084D, or IGD085D. Then tell the system programmer about this error so that the IGDSMSxx member mem can be corrected.

**System programmer response:** Correct the SMS record in the SYS1.PARMLIB IGDSMSxx member mem.

**Problem determination:** None

Explanation: This message is returned if PROMPT=DISPLAY or PROMPT=YES is specified in the storage management subsystem (SMS) record in the IEFSSNxx member of SYS1.PARMLIB. All the parameters of the IGDSMSxx member of SYS1.PARMLIB are listed in this message. The DFSMS Transactional VSAM Services (DFSMStvs) parameters are available only when DFSMStvs is active on the system.

In the message text:

id A three-digit decimal identification number that you can use with the MVS CONTROL C,D command to halt the printing or display of this status information that is in progress on either of these consoles:
• A printer console that is not the printed medium
• A display console that does not have a display area

ACDS = acdsname
Displays the name of the active control data set.

COMMDS = cmdsnamex
Displays the name of the communications data set.

INTERVAL = nnn
Displays the synchronization interval, nnn, which is the number of seconds between system checks of the COMMDS for information about SMS configuration changes from other systems in the SMS complex. The default is 15 seconds.

DINTERVAL = nnn
Displays the number of seconds, nnn, that SMS waits between reading device statistics from the 3990-3 control unit. The default is 150 seconds.

BMFTIME = nnnnn
Displays the number of seconds, nnnnn, that SMS waits between recording SMF records for buffer management facility (BMF) cache use. The default is 3600 seconds. If SMF_TIME is YES, the BMFTIME parameter is ignored and recording is based solely on the issuance of the SMF ENF signal.

Chapter 13. IGD messages 495
CACHETIME = nnnnn
Displays the number of seconds, nnnnn, that SMS waits between recording SMF records for device cache use. The default is 3600 seconds. If SMF_TIME is YES, the CACHETIME parameter is ignored and recording is based solely on the issuance of the SMF ENF signal.

PDSE_LRU TIME = nn | PDSE1_LRU TIME = nn
Specifies the number of seconds, nn, that the buffer management facility (BMF) waits between calls to the BMF data space cache LRU (least recently used) routine in SMSPDSE or SMSPDSE1 address space. The value of nn is in the range of 5-60. The default is 15 seconds.

PDSE_LRU CYCLE = nnn | PDSE1_LRU CYCLE = nnn
Specifies the maximum number of times, nnn, that the buffer management facility (BMF) least recently used (LRU) routine passes over inactive buffers before making them available for reuse in SMSPDSE or SMSPDSE1 address space. The value of nn in the range of 5-240. The default is 240 cycles.

SMF_TIME = {YES|NO}
Indicates whether DFSMSdfp creates SMF type-42 records at the expiration of the SMF time interval, synchronized with SMF and RMF data intervals. The default value is YES.

YES
DFSMSdfp listens for the SMF event-notification signal and creates the specified SMF records.

NO
DFSMSdfp does not create any SMF type-42 records.

CF_TIME = nnnnn
Displays the interval in seconds, nnnnn, between recording SMF record 42 (subtypes 15, 16, 17, 18) for use of the coupling facility by the SMSVSAM address space. The default is 3600 seconds. If SMF_TIME is YES, the CF_TIME parameter is ignored and recording is based solely on the issuance of the SMF ENF signal.

LOCAL DEADLOCK = nnnn
Displays the length in seconds, nnnn, of the local deadlock detection interval. The default is 15 seconds.

GLOBAL DEADLOCK = nnnn
Displays the number of local deadlock cycles, nnnn, that must expire before global deadlock detection is to be performed. The default is 4 cycles.

REVERIFY = {YES|NO}
Indicates whether SMS verifies a user's authority to allocate a new data set and use a storage or management class at both job interpretation time and run time or only at job interpretation time. The default value is N0.

YES
SMS verifies a user's authority at both job interpretation time and run time.

NO
SMS verifies a user's authority only at interpretation time.

ACSDEFAULTS = {YES|NO}
Indicates whether SMS initializes the following automatic class selection (ACS) routine variables from an additional call to RACF, a component of the Security Server for z/OS. The default value is N0.

&APPLIC
&DEF_DATACLS
&DEF_MGMTCLS
&DEF_STORCLS

YES
SMS retrieves these ACS routine variables from RACF.

NO
SMS does not retrieve any ACS routine variables from RACF.

DSNTYPE = {LIBRARY|PDS}
Indicates whether newly created SMS-managed data sets are to be PDSEs (LIBRARY) or non-PDSE data sets (PDS). The default value is PDS.

LIBRARY
Newly created SMS-managed data sets default to PDSEs.

PDS
Newly created SMS-managed data sets default to non-PDSEs.

USE_RESOWNER = {YES|NO}
Indicates whether SMS determines the owner (user or group defined by RACF) of an SMS-managed data set protected by the profile. The default value is YES.

YES
SMS extracts the owner of an SMS-managed data set from the owner profile.

NO
The owner of an SMS-managed data set is the user ID.

PDSESHARING = {NORMAL|EXTENDED}
Indicates how PDSEs are shared across systems in a sysplex. The default value is NORMAL.

NORMAL
Users share read access to PDSEs across systems in the sysplex.

EXTENDED
Users share read and write access to PDSEs across systems in the sysplex.

OVRD_EXPDT = {YES|NO}
Indicates whether an expiration date or retention
period for SMS-managed DASD data sets is overridden when deletion is requested through job control language (JCL), supervisor call instruction (SVC 99), the IEHPROGM utility, or interactive system productivity facility (ISPF) or PDF. The default value is NO.

YES
Data sets are deleted whether or not the expiration date or retention period has passed.

NO
Any expiration date or retention period is honored.

RLS_MAX_POOL_SIZE = nnnn MB
Displays the maximum size, in megabytes, of the SMSVSAM local buffer pool. SMSVSAM attempts not to use more storage for buffers than this limit. If nnnn is less than 10, the maximum size is 10 MB, and if nnnn is greater than 1500, the maximum size is 9999 MB; otherwise, the actual maximum size is displayed.

SYSTEMS = {8|32}
Displays the maximum number of unique system names and system group names that you can specify in the SMS configuration.

RLSINIT = {YES|NO}
Indicates whether the SMSVSAM address space is started as part of the system initialization. The default value is NO.

YES
SMSVSAM SERVER is initialized at IPL time.

NO
SMSVSAM SERVER is not active after IPL.

PDSE_HSP_SIZE = nnn | PDSE1_HSP_SIZE = nnn
Specifies the size, in megabytes, of the hiperspace passed to BMF initialization. This size controls the amount of expanded storage that a PDSE can use in SMSPDSE or SMSPDSE1 address space. The value ranges from 0 to 512. the default is 256 MB.

COMPRESS = {GENERIC|TAILORED}
Indicates an option for the initial access method compression service. The default value is GENERIC.

GENERIC
Compression management service uses the original dictionary building block (DBB) solution to compress the data set.

TAILORED
Compression management service uses the tailored dictionaries, which are built by scanning up to 500 K of user data. The dictionaries are imbedded in the data set.

LOG_OF_LOGS = logstreamid
Specifies the log stream for DFSMStvs to use as its log of logs. This log contains copies of the tie-up records and file-close records written to forward recovery logs, which forward recovery products use. The default is to use no log of logs. The logstreamid value can be up to 26 characters long.

QTIMEOUT = nnnn
Specifies the quiesce exit timeout value in seconds; that is, the amount of time that the DFSMStvs quiesce exits allow to elapse before concluding that a quiesce cannot be completed successfully. The value is in the range 60–3600. The default is 300 seconds.

RLSTMOUT = nnnn
Displays the lock time in seconds, nnnn, for SMSVSAM. The lock time is the maximum time that a VSAM RLS or DFSMStvs request is to wait for a required lock before the request is assumed to be in deadlock and abnormally terminated with return code 8 and reason code 22. The value is in the range 0–9999. The default is 0, which indicates that requests should not time out.

TVSNAME = nnn
Specifies the identifier that uniquely identifies the instance of DFSMStvs running on the system. The value is in the range 0–255. There is no default value.

AKP = nnn
Specifies the activity-keypoint trigger value, which is the number of logging operations between the taking of keypoints. The value is in the range 200–65535. The default is 1000.

TV_START_TYPE = {WARM | COLD}
Specifies the type of start that DFSMStvs is to perform. The default is WARM.

WARM
DFSMStvs reads its undo log and processes the information it finds in accordance with the information that resource recovery services (RRS) has about any outstanding units of recovery.

COLD
DFSMStvs deletes any information that remains in the undo log and starts as if the log were empty.

MAXLOCKS = (max,incr)
Specifies two values: the maximum number of locks that a single unit of recovery can hold before the warning message IGD859I is issued to the system console, and an increment value. After the maximum is reached, the warning message is issued every time the number of locks held over and above the maximum is the multiple of the increment. The max and incr values are in the range 0–999999. The default value for both is 0. It is invalid for max to be 0 and incr to be greater than 0.
CICSVR_INIT = {YES|NO}
Indicates whether the CICSVR address space is started as part of the system initialization. The default value is NO.
YES
The CICSVR address space is active after IPL.
NO
The CICSVR address space is not active after IPL.
CICSVR_DSNNAME_PREFIX = {user prefix|DWW.}
Displays the prefix for all CICSVR data set names that CICSVR creates. The default value is DWW.
Rls_DynamicCfCacheReassign = {YES|NO}
Indicates whether the dynamic cache can be reassigned during SMSVSAM processing. The default value is NO.
Rls_MaxCfFeatureLevel = {cache feature|Z}
Indicates the cache feature level. The default value is Z.
GDS_RECLAIM = {YES|NO}
Indicates whether generation data set (GDS) reclaim processing is applied. The default value is YES.
YES
GDS reclaim processing is done.
NO
GDS reclaim processing is not done.
DSSTIMEOUT = nnn
Specifies the number of seconds that the dss component of DFMSMS will wait during backup processing for quiesce data set requests to complete.
FAST_VOLSEL = ON | OFF
Specifies whether the summarized and detail volume selection analysis messages will be issued or not. Nnnn or ALL is the number of volumes or all volumes which are included in the scope of issuance of the detailed volume selection analysis messages. The range is 0-65535. The default values is (OFF,0).
CICSVR_RCDS_PREFIX = rcds_prefix I DWW
Specifies a prefix of CICSVR Recovery Control Data Set (RCDS) names that CICSVR server address space will use to allocate the RCDSs to the CICSVR server.
CICSVR_GRPNAME_SUFFIX = cicsvr_grpname_suffix
Specifies the suffix of CICSVR XCF group names that the CICSVR address space use to recreate a unique XCF group name per the sysplex and connect to the sysplex. The specified suffix is activated when the CICSVR server address space is next started.
CICSVR_ZZVALUE_PARM = zzvalue_string
Specifies the ZZVALUE string which is a pair of name and value, or one control ZZVALUE value that specifies an action to take. And this value maintains the ZZVALUE table and the diagnostic data set.
CICSVR_UNDOLOG_CONTROL = undo log string
Specifies the parameters and service functions to control CICSVR UNDO logging. The CICSVR address space will decode the logging control string, and activate the parameters and execute the service function. It is a string of 17 characters long. The default string is a blank string.
CICSVR_UNDOLOG_PREFIX = undolog prefix I DWW
Specifies the CICSVR UNDO log name prefix that CICSVR server address space will use to determine the log stream name which should be written to by CICSVR UNDO logging. It is a string of 8 characters long. The default string is DWW.
CICSVR_BACKOUT_CONTROL = backout control string
Specifies the parameters and service functions to control CICSVR batch backout logging. The CICSVR address space will decode the logging control string, and activate the parameters and execute the service function. It is a string of 17 characters long. The default string is a blank string.
CICSVR_GENERAL_CONTROL = general control string
Specifies the parameters and service functions that relate to various CICSVR functions. The CICSVR general control string and service functions can be used to invoke a CICSVR scavenger or to display the current setting of all CICSVR control strings. It is a string of 17 characters long. The default string is a blank string.
RlsAboveTheBarMaxPoolSize = nnnnnnnnnMB
Specifies the limit on how large the total buffer pool above the bar can be on each system. It is used by VSAM RLS to manage the-above-the-bar buffer pool. The range is 0 or 500MB-20000000MB. The default value is zero.
RlsFixedPoolSize = nnnnnnnnnMB
Specifies the amount of total real storage (above and below the 2 gigabytes bar) is to be permanently fixed on the systems. It is used by VSAM RLS to manage the real storage. The range is 0 or 500MB-20000000MB. The default value is zero.
PDSE_MONITOR = (YESNO,interval,duration) | PDSE1_MONITOR = (YESNO,interval,duration)
Determine whether SM needs to monitor SMSPDSE or SMSPDSE1 address space. The value of interval is the mintoring interval in seconds in the range 0-1440. The value of duration is the monitoring duration in seconds in the range of 0-1440. The default value is (YES,0,0).
PDSE_DIRECTORY_STORAGE = nnnn
PDSE1_DIRECTORY_STORAGE = nnnn

Specifies the size in megabytes or gigabytes of 64-bits virtual storage that is used to cache PDSE directory buffer in the SMSPDSE or SMSPDSE1 address space. The range of the value is 64M to 16G. The default value is 2G.

PDSE_BUFFER_BEYOND_CLOSE = (YES|NO)
PDES1_BUFFER_BEYOND_CLOSE = (YES|NO)

Specifies whether to keep directory and member data in storage beyond the last close of a PDSE dataset for the SMSPDSE or SMSPDSE1 address space. If NO option is specified, the PDSE’s directory and member data will be purged from the in-memory cache when the last close on this system of the data set occurs. If the YES option is specified, the PDSE’s directory and member data will be retained in the in-memory cache beyond the last close of the data set. The default value is NO.

BLOCKTOKENSIZE = (REQUIRE|INOREQUIRE)

Specified whether the large format data set is highly restricted. If the value is REQUIRE, the large Format Data Set is highly restricted.

USEEAV = (YES | NO)

Displays the value of the keyword that controls the allocation of new data sets on EAVs. Existing data sets on EAVs can still be accessed.

YES

Full use of EAVs is allowed.

NO

New data sets cannot be allocated on EAVs. Existing data sets on EAVs can be accessed and extended on the EAVs that they reside on, but they cannot be extended to a new EAV. This is the default when SMS is active in the system.

When SMS is not active in the system, USEEAV is not available and the installation must use alternate means to control the usage of EAVs.

BreakPointValue = (0-65520)

Displays the value in cylinders that is used in determining whether DADSM will direct an allocation to the cylinder-managed space of an EAV or to the track-managed space. The value is also used by SMS in ranking volumes during the volume selection process. If the value is not specified by the user, then a default value of 10 cylinders is assigned by the system.

When SMS is not active in the system, BreakPointValue has no meaning and the default value of 10 cylinders is assigned by the system.

System action: The system continues processing.

Operator response: None

Application Programmer Response: None. This is an informational message only.

System programmer response: Verify the values of the parameters. Take action if needed.

Problem determination: None

TYPE={ERROR | ALL}
JOBNAME={jjj I *}
ASID={asid | *}
STEPNAME={stepname}
DSNAME={dsname}

Explanation: This message appears if PROMPT=DISPLAY or PROMPT=YES is specified in the storage management subsystem (SMS) record in the IEFSSNx member of SYS1.PARMLIB. All the parameters of the IGDSMSxx member of SYS1.PARMLIB are listed in this message.

In the message text:

id A three-digit decimal identification number that you can use with the MVS CONTROL C,D command to halt the printing or display of this status information that is in progress on either of these consoles:
• A printer console that is not the printed medium
• A display console that does not have a display area

TRACE = (ON | OFF)
Displays the trace options that SMS is using. The default value is ON.

ON
Tracing is on.
OFF
   All tracing has been discontinued.

SIZE = \{ \text{n}nnn\text{n}[K] | \text{n}nn\text{M} \}
Displays the size of the trace table. The default value is 128K. The default unit is kilobytes.
Descriptions of the SIZE values follow:

\text{n}nnn
   The size of the trace table in kilobytes, ranging from 0 to 255000. This value is rounded up to
   the nearest 4 KB unit.

\text{n}nnn\text{n}K
   The size of the trace table in kilobytes, ranging from 0K to 255000K. This value is rounded up to
   the nearest 4 KB unit.

\text{n}nn\text{M}
   The size of the trace table in megabytes, ranging from 0M to 255M. This value is stored in
   kilobytes.

TYPE = \{ \text{ERROR} | \text{ALL} \}
Specifies the whether SMS issues volume selection analysis messages on failed allocations only or on both successful
and unsuccessful allocations and whether SMS traces all events or only errors. The default is ERROR. The parameter values are:

ERROR
   Trace error-type trace entries. Issue volume selection analysis messages for failed allocations only.

ALL
   Trace all types of trace entries. Issues volume selection analysis messages for both successful and failed allocations.

JOBNAME = \{ \text{j}\text{i} | \ast \}
Specifies the scope of tracing and the issuance of volume selection analysis messages in relation to jobs. It is activated by TRACE(ON) or
VOLSELMSG(ON). The default is \ast .

\text{j}\text{i}
   Scope is limited to the specified job name.

\ast 
   Scope includes all jobs.

ASID = \{ \text{a}\text{sid} | \ast \}
Specifies the scope of tracing and the issuance of volume selection analysis messages in relation to address space. It is activated by TRACE(ON) or
VOLSELMSG(ON). The default is \ast .

\text{a}\text{sid}
   Scope is limited to the specified address space.

\ast 
   Scope includes all address spaces.

The rest of the display indicates which SMS events are selected for tracing. If the value of \text{stat} for an event is
\ast , that event is being traced. The SMS events and their abbreviations in the message display follow:

\text{MODULE} = \text{stat}
   A module entry or exit.

\text{SMSSJF} = \text{stat}
   The SMS and SJF interfaces.

\text{SMSSSI} = \text{stat}
   The SMS and SSI interfaces.

\text{ACSINT} = \text{stat}
   The ACS services interfaces.

\text{OPCMD} = \text{stat}
   Operator commands.

\text{CONFC} = \text{stat}
   Configuration changes.

\text{CDSC} = \text{stat}
   Control data set changes.

\text{CONFS} = \text{stat}
   Configuration services.

\text{MSG} = \text{stat}
   Message services.

\text{ERR} = \text{stat}
   Error recovery and recording services.

\text{CONFR} = \text{stat}
   Return data from an active configuration.

\text{CONFA} = \text{stat}
   Activate a new configuration.

\text{ACSPRO} = \text{stat}
   Perform ACS processing.

\text{IDAX} = \text{stat}
   The SMS interpreter and dynamic allocation.

\text{DISP} = \text{stat}
   A disposition processing exit.

\text{CATG} = \text{stat}
   SMS catalog services.

\text{VOLREF} = \text{stat}
   SMS VOLREF services.

\text{SCHEDP} = \text{stat}
   Scheduling services, prelocate catalog orientation.

\text{SCHEDS} = \text{stat}
   Scheduling services, system select.

\text{VTOCL} = \text{stat}
   VTOC and data set services, allocate an existing data set.

\text{VTOCD} = \text{stat}
   VTOC and data set services, delete an existing data set.

\text{VTOCR} = \text{stat}
   VTOC and data set services, rename an existing data set.
**VTOCC = stat**
VTOC and data set services, create a new data set.

**VTOCA = stat**
VTOC and data set services, add a volume to a data set.

**RCD = stat**
SMS recording services or SMS fast VTOC and VVDS access.

**DCF = stat**
The device control facility.

**DPN = stat**
The device pool select.

**TVR = stat**
A tape volume record update.

**DSTACK = stat**
Data set stacking SSI.

**UAFF = stat**
Unit affinity.

**DEBUG = stat**
Debug service.

The following will be a display of the parameters in SYS1.PARMLIB member IGDSMSxx at IPL time and SET SMS=xx.

**VOLSELMSG**

**ON** summarized and detailed volume selection analysis messages will be issued.

**OFF** summarized and detailed volume selection analysis messages will not be issued. This is the default value.

**nnnnn** is the number of volumes which are included in the scope of the issuance of detailed volume selection analysis messages. The range of value is 0–65535. The default is 0 which indicates that only summarized volume selection analysis messages will be issued.

**ALL** indicates that detailed volume selection analysis messages will be issued for all volumes that were used by volume selection.

**DSNAME** specifies the scope for volume selection analysis messages in relation to a data set.

**dsname** indicates that scope is limited to the specified data set name.

* indicates that scope covers all data sets.

**STEPNAME**
specifies the scope for volume selection analysis messages in relation to job step.

**stepname** indicates that scope is limited to the specified job step.

* indicates that scope covers all job steps.

**System action:** The system continues processing.

**Application Programmer Response:** None. This is an informational message only.

**System programmer response:** Verify the values of the parameters. Take action if needed.

**Source:** Storage management subsystem (SMS)

**Detecting Module:** IGDSSIP, IGDSSIDI

**Routing Code:** 2

**Descriptor Code:** 5,8,9

---

**IGD032D** THE SMS ADDRESS SPACE HAS RESTARTED nn TIMES. REPLY ‘RESTART’ TO RESTART OR ‘C’ TO CANCEL.

**Explanation:** The SMS address space attempted to restart itself numerous times during this IPL.

In the message text:

**nn** The number of times the address space attempted to restart itself.

**System action:** The system waits for the operator to reply ‘RESTART’ or ‘C’.

**Operator response:** Reply ‘RESTART’ to permit the storage management subsystem to attempt another restart; or reply ‘C’ to cancel the automatic restart attempt, and cause the storage management subsystem to end.

**Application Programmer Response:** Use the logrec data set and SYS1.DUMP data sets to determine why the storage management subsystem is attempting to restart.

**Source:** DFSMSdfp

**Routing Code:** 1

**Descriptor Code:** 2

---

**IGD033I** JOB jobname IS WAITING FOR THE SMS ADDRESS SPACE TO {RESTART|INITIALIZE}

**Explanation:** The job requires a service from the SMS address space, but that service is not available.

In the message text:

**jobname** The job name.
System action: The job waits for the SMS address space to restart or complete initialization.

Operator response: If the SMS address space is initializing, no action is required. If SMS is restarting, just tell the system programmer that this message appeared. However, if the storage management subsystem must restart and does not automatically do so, issue the SET SMS command to manually restart it.

Application Programmer Response: If this message is issued during a restart, then examine the console log to determine why the SMS address space ended.

IGD034I  THE COMMAND IS IGNORED, TRANSACTIONAL VSAM IS NOT AVAILABLE

Explanation: The command cannot be executed because Transaction VSAM is not available.

System action: The command is ignored.

Operator response: Notify the system programmer.

System programmer response: Start Transactional VSAM should be active. This message is only issued for diagnostic purposes.

Source: DFSMSdfp
Detecting Module: IGDOPCDS
Routing Code: 2,10
Descriptor Code: 4

IGD035I  THE SMS INITIALIZATION PARAMETERS ARE IN ERROR

ERROR IS text

Explanation: There is an error in one of the following:
• the SYS1.PARMLIB IEFSSNxx member that contains the SMS definition record
• the operator’s reply to message IGD075D

The variable in text pinpoints the error in the member or reply: text is one of the following:
INVALID KEYWORD: keywd
INVALID KEYWORD VALUE FOR KEYWORD keywd : value
INVALID DELIMITER: delimitr
INVALID SYNTAX: syntax
KEYWORD DB2SSID MUST BE SPECIFIED WITH KEYWORD OAMPROC.

In the message text:
keywd
The indicated keyword.

value
The specified value.
delimitr
The incorrect delimiter.
syntax
The incorrect syntax.

System action: Either SMS initialization does not continue, or the system will not run the operator command.

Operator response: For now, correct the error by replying to message IGD075D. Then tell the system programmer about this error so the IEFSSNxx member can be corrected.

System programmer response: Correct the SYS1.PARMLIB IEFSSNxx member that contains the SMS definition record.

Source: Storage Management Subsystem (SMS)
Detecting Module: IGDSSI02
Routing Code: 2,10
Descriptor Code: 4,12

IGD036I  SMS START FAILED

JES3 IS ACTIVE

Explanation: An attempt was made to start storage management subsystem (SMS) using the SET SMS command when SMS was inactive and JES3 was active.

System action: The system does not start SMS. The system continues processing.

Operator response: Notify the system programmer.

System programmer response: JES3 must be inactive before SMS can be started. Deactivate JES3, then start SMS using the SET SMS command. Restart JES3 using a hot start.

Source: DFSMSdfp

IGD037I  DB2SSID, OAMPROC, OR OAMTASK FOUND IN IEFSSNXX PARMLIB MEMBER KEYWORD VALUE IGNORED

Explanation: The Storage Management Subsystem (SMS) found the DB2SSID, OAMPROC, or OAMTASK keyword while parsing the SMS definition record in the IEFSSNxx member of SYS1.PARMLIB. These keywords must be specified in the IGDSMSyy member rather than the IEFSSNxx member. The system ignores the keyword value specified in the IEFSSNxx member.

System action: The system continues processing.

System programmer response: Remove the keyword(s) from the IEFSSNxx member and place it in the IGDSMSyy member.
IGD038E  SYSTEM sysname IS DEFINED TO SMS VIA SYSTEM GROUP system group

**Explanation:** Use of sysplex name support in a JES3 environment is not valid. Because scheduling is done at a system level, this will result in indeterminate problems scheduling jobs and resources.

In the message text:

sysname  The current system.

system-group  The current system group.

**System action:** The system continues processing but might encounter scheduling problems later.

**Operator response:** Notify the system programmer.

**System programmer response:** Modify the save control data set (SCDS) to define the system in the configuration by its system name rather by a system group name.

**Source:** Storage management subsystem (SMS)

IGD040D  UNABLE TO COMPLETE CONFIGURATION REQUEST: text

- **REPLY ‘U’ TO RETRY OR ‘C’ TO PURGE REQUEST**

**Explanation:** An attempt to update the active configuration failed; the update was text. Refer to the preceding message for a description of the error.

**System action:** The system continues processing, using the current configuration.

**Operator response:** Ask the system programmer to determine what error occurred, and how you should respond to message IGD040D. You will either enter ‘U’ to retry the request, or enter ‘C’ to cancel all update requests that are currently queued.

When message IGD040D is accompanied with message IGD058I, Reason Code 6059, users are recommended to reply ‘U’ (retry) once on each and every system where the IGD040D message is encountered.

When this message is accompanied with message IGD058I containing reason code 6040, this indicates contention for the CDS across the SMS-plex. Allow a short period of time to elapse before replying ‘U’ to retry on each system issuing IGD040D.

**Application Programmer Response:** Use the logrec data set and SYS1.DUMPnn to determine why the request to update the active configuration failed. Then tell the operator which response to enter for this message.

**Source:** DFSMSdfp

IGD041I  PERMANENT I/O ERROR FOR (SCDS|ACDS|COMMDS) dsname

**Explanation:** A permanent I/O error occurred for the data set, which is one of the following storage management subsystem data sets:

- SCDS - SMS source control data set
- ACDS - SMS active control data set
- COMMDS - SMS communication data set

In the message text:

dsname  The data set name.

**System action:** If the error occurred for the SCDS or ACDS, the system issues message IGD040D; for the COMMDS, the system issues either IGD070D or IGD072A.

**Operator response:** Ask the system programmer to determine what error occurred, and how you should respond to message IGD040D, IGD070D, or IGD072A.

**System programmer response:** Use the logrec data set

**Source:** DFSMSdfp
set to determine what I/O error occurred, and tell the
operator which response to use for message IGD040D,
IGD070D, or IGD072A.

Source: DFSMSdfp
Routing Code: 2,10
Descriptor Code: 4

---

**IGD042I**

**COMMDS dsname SUCCESSFULLY REPAIRED**

**Explanation:** Based on the current storage
management subsystem configuration, the damaged
COMMDS data set was successfully rewritten.

In the message text:

*dsname*

The data set name.

**System action:** The system continues processing.

**Operator response:** Tell the system programmer that
the COMMDS data set was rewritten.

**System programmer response:** Use the logrec data
set to determine whether an I/O error occurred. If there
is still a problem with *dsname*, switch to a new
COMMDS.

Source: DFSMSdfp
Routing Code: 2,10
Descriptor Code: 4

---

**IGD043D**

**REPLY 'Y' TO ALLOW ACTIVATION OF A CONFIGURATION BY userid, 'N' TO DENY THE REQUEST**

**Explanation:** A Time Sharing Option/Extensions
(TSO/E) user requested to activate a new configuration;
such a request requires operator authority to complete
the operation.

**System action:** The system waits for the operator to
reply.

**Operator response:** Enter 'Y' or 'N' according to your
installation's policies.

Source: DFSMSdfp
Routing Code: 9
Descriptor Code: 2

---

**IGD044I**

*{SCDS | ACDS | COMMDS} dsname SUPPORTS MORE THAN 8 SYSTEMS AND CANNOT BE ACCESSED ON THIS SYSTEM*

**Explanation:** An attempt was made to access a
configuration or communications data set which has
been converted to support more than eight system or
system group names under one of the following
conditions:
1. The system is running a release of DFSMS/MVS or
DFP prior to 1.3.0.
2. The system is running DFSMS/MVS 1.3.0 but is
running in compatibility mode (SYSTEMS(8) was
specified in the IGDSMSxx member of
SYS1.PARMLIB)

In the message text:

*dsname*

The SCDS, ACDS, or COMMDS being
accessed.

**System action:** Access to the control data set fails.

**User response:** Contact the storage administrator.

**Operator response:** Contact the storage
administrator.

**Application Programmer Response:** The storage
administrator must not attempt to access a configuration
or communications data set which supports more than
eight systems on a down-level DFSMS/MVS or DFP
system or on a DFSMS/MVS 1.3.0 system running in
compatibility mode. Do one of the following:
1. Locate a configuration or communications data set
which has not been converted to support more than
eight systems and activate it
2. If the system is running DFSMS/MVS 1.3.0 and the
configuration must be activated, restart SMS using
the SET SMS command and an IGDSMSxx member
of SYS1.PARMLIB with SYSTEMS(32) specified

Source: Storage Management Subsystem (SMS)

---

**IGD045I**

**ACTIVATE FAILED - {SYSTEM/SYSTEM GROUP} sysname IS DEFINED AS A {SYSTEM GROUP/SYSTEM} IN THE CONFIGURATION**

**Explanation:** One of the following has occurred:

- The specification for *sysname* in the configuration
indicates that it is a system group name; however,
the value found in CVTSNAME indicates that it is a
system name.

- The specification for *sysname* in the configuration
indicates that it is a system name; however, the value
found in ECVTSPLX indicates that it is a system
group name.

In the message text:

*sysname*

The current system or system group.

**System action:** Activation of the configuration fails.

**Operator response:** Notify the system programmer.

**Application Programmer Response:** Modify the save
control data set (SCDS) to correctly define the name as
either a system name or a system group name.
IGD046I • IGD050I

**IGD046I**  REQUEST FOR STATUS CHANGE INVALID, {STORAGE GROUP sgname|VOLUME volser|LIBRARY libname|DRIVE drvname} NOT FOUND IN CONFIGURATION

*Explanation:* The requested storage group, volume serial number, library name, or drive name does not exist in the active configuration.

In the message text:

- `sgname` The storage group name.
- `volser` The volume serial number.
- `libname` The specified library name.
- `drvname` The specified drive name.

*System action:* The system ignores the request.

*Operator response:* Verify the storage group name, volume serial number, library name, or drive name with the person who requested the change. Enter the command again with the correct name.

*Source:* DFSMSdfp

*Routing Code:* 2,10

*Descriptor Code:* 4

**IGD048I**  NULL CONFIGURATION ACTIVATED

*Explanation:* The storage management subsystem (SMS) address space has been activated without a valid configuration. Either the specified ACDS is in error, is empty, or does not exist.

*System action:* The system proceeds without an active configuration.

*Operator response:* Tell the system programmer about this message.

*System programmer response:* Correct the ACDS and activate the proper configuration.

*Source:* DFSMSdfp

*Routing Code:* 2,10

*Descriptor Code:* 4

**IGD049I**  ACTIVATE FAILED - {SCDS|ACDS} dsname IS AN INVALID CONFIGURATION

*Explanation:* An ACTIVATE request attempted to use the storage management subsystem (SMS) data set name, which is either:

- source control data set (SCDS)
- active control data set (ACDS)

If the data set is SCDS, the data set has an incorrect status because the configuration was not validated when it was defined or modified through ISMF. If the data set is ACDS, the data set is one of the following:

- In error
- Empty
- Does not exist

In the message text:

- `dsname` The data set name.

*System action:* The system ignores the request.

*Operator response:* Notify the system programmer.

*System programmer response:* If the data set is a SCDS, validate the data set using ISMF. Reinitiate the ACTIVATE request. If the data set is an ACDS, correct the data set. Reinitiate the ACTIVATE request.

*Source:* DFSMSdfp

*Routing Code:* 2,10

*Descriptor Code:* 4

**IGD050I**  STATUS NOT CHANGED

{STORAGE GROUP sgname | VOLUME volser | LIBRARY libname |
IGD051I • IGD053I

**IGD051I**  DRIVE  **drvname**

**NOT DEFINED TO SYSTEM OR SYSTEM GROUP  sysname**

**Explanation:** Via the VARY SMS command, a request was made to modify the status of the volume, the storage group, the library, or the drive for a system or system group. However, the volume or the storage group was not defined to that system or system group, so the status cannot be changed via the VARY SMS command.

In the message text:

- **volser**  The volume serial number.
- **sgname**  The storage group name.
- **sysname**  The system or system group name.
- **libname**  The specified library name.
- **drvname**  The specified drive name.

**System action:** The system ignores the request.

**Operator response:** Notify the system programmer about this message.

**System programmer response:** Modify the SCDS to define the volume, the storage group the library, or the drive to the system. Then activate the SCDS.

**Source:** Storage management subsystem (SMS)

**Routing Code:** 2,10

**Descriptor Code:** 4

---

**IGD052I**  REQUEST DENIED - NO ACTIVE CONFIGURATION

**Explanation:** A request was made to modify the active configuration in the SMS address space or to save the current active configuration in an alternate active control data set (ACDS). There is, however, no currently active configuration.

**System action:** The system ignores the request.

**Operator response:** Tell the system programmer about this message.

**System programmer response:** Activate a configuration before requesting modifications to it.

**Source:** DFSMSdfp

**Routing Code:** 2,10

**Descriptor Code:** 4

---

**IGD053I**  REQUEST DENIED - SYSTEM OR SYSTEM GROUP **name** NOT DEFINED

**CURRENT SYSTEM = sysname**

**CURRENT SYSPLEX = sysplex**

**Explanation:** A request was made to modify the status of a volume or storage group for a system within the active configuration in the SMS address space. One of the following is true:

- The name is a system name, and the system is defined in the configuration by system group name.
- The specified system or system group name is not defined to the storage management subsystem (SMS).

In the message text:

- **name**  The system or system group for which the command was issued.
- **sysname**  The current system.
- **sysplex**  The sysplex to which the current system belongs (or blank).

**System action:** The system ignores the request.

**Operator response:** Tell the system programmer about this message.

**System programmer response:** If the command is to deactivate. If the return code is note the cause of the problem, use message IGD307I, the logrec data set, and SYS1.DUMPnn to determine why the exit failed.

**Source:** DFSMSdfp

**Routing Code:** 2,10

**Descriptor Code:** 4

---

**IGD051I**  FAILED INSTALLATION EXIT **exitname**  IS NOW DEACTIVATED

**Explanation:** The installation exit failed; and during ACS processing, the storage management subsystem will not re-invoke the exit until the SMS address space is restarted. The SMS address space may be restarted by a re-IPL of the system, or by a restart of the storage management subsystem after six failures.

This message is accompanied by IGD307I, which further indicates the reason for the deactivation.

In the message text:

- **exitname**  The installation exit name.

**System action:** The system bypasses further processing of this exit.

**Operator response:** Tell the system programmer about this message.

**System programmer response:** Make sure **exitname** does not set a return code of anything other than 0, 4 or 16; if **exitname** returns an unexpected code, the exit is deactivated. If the return code is note the cause of the problem, use message IGD307I, the logrec data set, and SYS1.DUMPnn to determine why the exit failed.
work as specified, the storage administrator should
modify the configuration to include the system or system
group name.

**Descriptor Code:** 4

---

**Explanation:** During the SMS configuration services function, an unexpected error occurred for the SMS data set, which is either a storage management subsystem:
- source control data set (SCDS)
- active control data set (ACDS)
- communication data set (COMMDS)

The configuration services function provides the return code, the reason code, and the function codes for diagnostic information.

In the message text:

dsname
   The data set name.
rc
   The return code.
rsrc
   The configuration services reason code. This indicates which of the following services invoked by SMS was involved in the error:
   - SVC 99 (Dynamic Allocation)
   - Data-in-virtual
xxx yyy
   The function codes.
zzz
   The diagnostic information.

**System action:** The system issues either message IGD040D if the error occurred with SCDS or ACDS; or messages IGD070D or IGD072A if the error occurred with COMMDS. IGD040D, IGD070D or IGD072A will not be issued if the error was encountered during the execution of the SETSMS COPYSCDS command.

**Operator response:** Tell the system programmer about this message, and ask how you should respond to the IGD040D, IGD070D, or IGD072A message that follows.

**System programmer response:** Use the codes that the SMS configuration services function provides, the logrec data set, and SYS1.DUMPnn to determine why the unexpected error occurred.

z/OS DFSMSdfp Diagnosis provides explanations for the configuration service return codes, reason codes, and function codes. If the reason code indicates that dynamic allocation was involved in the error, see z/OS MVS Programming: Authorized Assembler Services Guide for an explanation of dynamic allocation return and reason codes. If the reason code indicates that data-in-virtual was involved in the error, see z/OS MVS Programming: Authorized Assembler Services Reference ALE-DYN for an explanation of data-in-virtual return and reason codes.

**Routing Code:** 2,10

**Descriptor Code:** 4

---

**Explanation:** The allocation request for the SMS trace table data area failed due to a resource shortage problem.

**System action:** The system continues processing, but will not trace any storage management subsystem data.

**Operator response:** When the resource becomes available, issue the SETSMS SIZE command to obtain storage for the SMS trace table.

**Source:** DFSMSdfp

**Routing Code:** 2,10

**Descriptor Code:** 4

---

**Explanation:** Due to a resource shortage, the storage management subsystem was unable to allocate an SMS trace table of the requested length of kilobytes. Instead, the storage management subsystem allocated a smaller SMS trace table of length $m$ kilobytes.

In the message text:
nnnnn
   The requested number of kilobytes.
The allocated number of kilobytes.

**System action:** The system continues processing.

**Operator response:** When the resource becomes available, reenter the command to increase the size of the SMS trace table.

**Source:** DFSMSdfp

**Routing Code:** 2,10

**Descriptor Code:** 4

---

**IGD061I** UNABLE TO ALLOCATE ANY STORAGE FOR NEW SMS TRACE TABLE, THE EXISTING TRACE TABLE IS USED

**Explanation:** Due to a resource shortage, the storage management subsystem was unable to allocate storage for a new SMS trace table. Instead, the storage management subsystem uses the existing SMS trace table.

**System action:** The system continues processing.

**Operator response:** When the resource becomes available, reenter the command to change the size of the SMS trace table.

**Routing Code:** 2,10

**Descriptor Code:** 4

---

**IGD062I** REQUEST DENIED - CDS CANNOT BE NAME 'ACTIVE'

**Explanation:** An attempt was made to activate a source control dataset (SCDS) or an active control dataset (ACDS) with a name consisting of the single word 'active'. You cannot activate a control data set (CDS) with the name 'active'.

**System action:** The system rejects the request.

**Operator response:** Correct the SCDS or ACDS name and retry the request.

**Source:** DFSMSdfp

**Routing Code:** 2,10

**Descriptor Code:** 4

---

**IGD063D** UNABLE TO REFRESH ACTIVE CONFIGURATION: ACTIVATE BACKUP ACDS AND REPLY 'C' TO PURGE REQUEST

**Explanation:** An attempt to refresh the active configuration was unsuccessful after an attempt was made to reaccess the data set. Refer to the preceding messages for the cause of the error.

**System action:** The system continues processing, using the in-storage copy of the active configuration.

**Operator response:** Ask the system programmer for the name of the backup ACDS and issue the MVS command SETSMS ACDS(name.of.backup.acds). Then, enter 'C' to cancel the outstanding request to refresh the active configuration.

**Application Programmer Response:** Ensure the backup ACDS is shared among all active SMS systems, and tell the operator the ACDS name. Once the backup ACDS is active, ensure the backup ACDS is active on other systems where SMS is active with the corrupted ACDS. Collect all the SYS1.LOGREC and SYS1.DUMPnn information resulting from this error to determine what occurred.

**Source:** DFSMSdfp

---

**IGD064I** (SCDS | ACDS |COMMDS) dsname SUPPORTS ONLY 8 SYSTEMS

**Explanation:** An attempt was made to access for update a configuration or communications data set which has not been converted to support more than eight system or system group names on a DFSMS/MVS 1.3.0 system where SMS was started with SYSTEMS(32) specified in the IGDSMSxx member of SYS1.PARMLIB. Before it can be used in update mode, it must be converted to support more than eight systems.

In the message text:

```plaintext
dsname
```

The SCDS, ACDS, or COMMDS being accessed

**System action:** The system issue message IGD067D and waits for a reply.

**User response:** Contact the storage administrator.

**Operator response:** Contact the storage administrator.

**Application Programmer Response:** The storage administrator must determine whether or not the configuration or communications data set should be converted to a format which supports more than eight systems, and reply either 'Y' or 'N' to message IGD067D.

**Source:** Storage Management Subsystem (SMS)

---

**IGD065I** ACCESS TO (SCDS | ACDS | COMMDS) dsname DENIED - DATA SET NOT CONVERTED TO SUPPORT MORE THAN 8 SYSTEMS

**Explanation:** This message follows message IGD064I when the reply to message IGD064I is 'N'.

An attempt was made to access a configuration or communication data set which has not been converted to support more than eight system or system group
names on a DFSMS/MVS 1.3.0 system where SMS was started with SYSTEMS(32) specified in the IGDSMSxx member of SYS1.PARMLIB. When queried, the operator indicated that the configuration or communications data set should not be converted at this time.

In the message text:

dname
   The SCDS, ACDS, or COMMDS being accessed

System action: Access to the requested SMS control data set fails. If an activate was in progress, the activation fails.

User response: Contact the storage administrator.

Operator response: Contact the storage administrator.

Application Programmer Response: The storage administrator should do one of the following:
1. reissue the requested operation specifying the name of an SCDS, ACDS, or COMMDS which has already been converted
2. restart SMS using the SET SMS command and an IGDSMSxx member of SYS1.PARMLIB with SYSTEMS(8) specified

Source: Storage Management Subsystem (SMS)

IGD066I (SCDS | ACDS | COMMDS) dsname COULD NOT BE SAVED - DATA SET HAS BEEN CONVERTED TO SUPPORT MORE THAN 8 SYSTEMS

Explanation: SMS attempted to save the specified control data set. SMS is currently running in 8 system mode on this system, and the control data set has been converted to support more than eight systems. The control data set could not be saved.

In the message text:

dname
   The SCDS, ACDS, or COMMDS being saved

System action: The control data set is not saved. The system continues processing, and any in-memory copy of the control data set is not affected.

User response: Contact the storage administrator.

Operator response: Contact the storage administrator.

Application Programmer Response: The storage administrator should do one of the following:
1. reissue the requested operation specifying the name of an SCDS, ACDS, or COMMDS which has already been converted
2. restart SMS using the SET SMS command and an IGDSMSxx member of SYS1.PARMLIB with SYSTEMS(32) specified
3. issue a SETSMS command to tell SMS to use a control data set which is still in 8 system mode.

Source: Storage Management Subsystem (SMS)

IGD067D  REPLY 'Y' TO CONVERT (SCDS | ACDS | COMMDS) TO SUPPORT MORE THAN 8 SYSTEMS OR 'N' TO FAIL THE REQUEST

Explanation: An attempt was made to access for update a configuration or communications data set which has not been converted to support more than eight system or system group names on a DFSMS/MVS 1.3.0 system where SMS was started with SYSTEMS(32) specified in the IGDSMSxx member of SYS1.PARMLIB. For the name of the data set, see the previous IGD064I message. Accessing it for update will cause the following to occur when the data set is saved:
1. the configuration or communications data set written to DASD is reformatted to support more than eight systems
2. the configuration or communications data set written to DASD is made unusable by systems running down-level releases of DFSMS/MVS or DFP
3. the configuration or communications data set written to DASD is made unusable by systems running DFSMS/MVS 1.3.0 in compatibility mode (where SMS was started with SYSTEMS(8) specified in the IGDSMSxx member of SYS1.PARMLIB)

Note: If the data set is not saved (for example, the update operation is cancelled), then the configuration or communications data set is not reformatted.

System action: The system waits for a reply. If the reply is 'Y' access to the SCDS, ACDS, or COMMDS is allowed and processing continues. If the reply is 'N' access to the SCDS, ACDS, or COMMDS is denied and message IGD065I is issued.

User response: Contact the storage administrator.

Operator response: Contact the storage administrator.

Application Programmer Response: The storage administrator must determine whether or not the configuration or communications data set should be converted to a format which supports more than eight systems. If this is allowable, the storage administrator should reply 'Y'. If not, the storage administrator should reply 'N' and do one of the following:
1. reissue the requested operation specifying the name of an SCDS, ACDS, or COMMDS which has already been converted
2. restart SMS using the SET SMS command and an IGDSMSxx member of SYS1.PARMLIB with SYSTEMS(8) specified

Source: Storage Management Subsystem (SMS)
**IGD068I**  
**SCDS | ACDS | COMMDS | NOT ACCESSED - DATA SET IS (A COMMDS | AN SCDS OR ACDS | THE CURRENT COMMDS | THE CURRENT ACDS)**

**Explanation:** A SETSMS or ISMF ACTIVATE command was issued with the specified data set name. The command indicated that the data set was one type of SMS control data set, but when SMS accessed it, SMS determined it to be a different type of control data set.

**System action:** The system fails the request.

**User response:** Contact the storage administrator.

**Operator response:** Reissue the command, either specifying the correct keyword or the correct data set name.

**Application Programmer Response:** Reissue the command, either specifying the correct keyword or the correct data set name.

**Source:** Storage Management Subsystem (SMS)

**IGD069D**  
**PLEASE ENTER NAME OF (ACDS | COMMDS) TO BE USED**

**Explanation:** A SET SMS or SETSMS command was issued which changed the ACDS or COMMDS. Both the ACDS or COMMDS which was specified by the command and the ACDS or COMMDS previously in use are incompatible with the mode in which the system is currently running. Either they support more than eight systems and the system is running in eight name mode (in which case message IGD044I was previously issued) or they support only eight systems and the system is running in 32 name mode (in which case messages IGD064I and IGD067D were previously issued).

**System action:** The system waits for the operator to enter the name of a control data set which can be used with the mode in which the system is running.

**User response:** None.

**Operator response:** Enter the name of an SMS control data set which can be used with the mode in which the system is running.

**Application Programmer Response:** Provide the operator with the name of a control data set which can be used with the mode in which the system is running.

**Source:** Storage Management Subsystem (SMS)

**IGD069D**  
**SYNTAX ERROR DETECTED, PLEASE ENTER A VALID COMMDS NAME**

**Explanation:** A message of IGD0069D (PLEASE ENTER NAME OF COMMDS TO BE USED) was issued previously, and the operator replies with a response that contains a syntax error. This message is issued to prompt the operator for a correction.

**System action:** The system waits for the operator to enter the name of a control data set which can be used with the mode in which the system is running.

**User response:** None.

**Operator response:** Enter the name of an SMS control data set which can be used with the mode in which the system is running.

**Application Programmer Response:** Provide the operator with the name of a control data set which can be used with the mode in which the system is running.

**Source:** Storage Management Subsystem (SMS)
management subsystem complex is suspended until the operator specifies a new COMMDS or INTERVAL via the SETSMS command.

- If the operator specifies 'T' to end, the system ends the intersystem communications task and restarts the SMS address space.

Source: DFSMSdfp
Routing Code: 1
Descriptor Code: 2

**IGD071I** COMMDS dsname IS BEING REFORMATTED

**Explanation:** An attempt was made to read the unformatted SMS communication data set.

In the message text:

```
dsname
```

The data set name.

**System action:** The system reformats the COMMDS and continues processing.

**Operator response:** Tell the system programmer about this message, and ask which reply to enter.

**System programmer response:** Verify that the copy of the COMMDS on direct access storage device (DASD) has not been corrupted.

Source: DFSMSdfp
Routing Code: 2,10
Descriptor Code: 4

**IGD072A** PREVIOUSLY ACTIVE COMMDS COULD NOT BE UPDATED WITH NEW COMMDS, REPLY 'U' WHEN ALL SYSTEMS ARE SYNCHRONIZED

**Explanation:** A new SMS communication data set (COMMDS) has just been specified on the current system, and the current system has successfully switched to the new COMMDS. Ordinarily, the previously active COMMDS is then updated so the other systems in the storage management subsystem complex will also switch to the new COMMDS. However, in this case the previously active COMMDS cannot be updated because of an error indicated by the preceding message, which is either IGD041I, IGD056I, IGD057I, or IGD058I. Therefore, to maintain proper communication between systems, all remaining systems in the storage management subsystem complex must be manually switched to the new COMMDS.

**System action:** The system waits for the operator to reply.

**Operator response:** To manually switch to the new COMMDS and synchronize all systems, issue the SETSMS COMMDS command for each remaining system in the storage management subsystem complex.

Then reply 'U', and tell the system programmer about the preceding message so the previously active COMMDS can be corrected.

**System programmer response:** Use the preceding message to determine why the previously active COMMDS could not be updated, and correct the error.

Source: DFSMSdfp
Routing Code: 1
Descriptor Code: 2

**IGD073I** ANOMALY DETECTED IN COMMDS dsname - REASON CODE rsnc

**Explanation:** An anomaly was detected between the COMMDS data set and the active configuration. The reason code, which is from the intersystem communication subcomponent of the storage management subsystem, further describes the error.

In the message text:

```
dsname
```

The data set name.

```
rsnc
```

The reason code.

**System action:** The system repairs and rewrites the COMMDS based on the active configuration, and then continues processing.

**Operator response:** Tell the system programmer about this message.

**System programmer response:** Use the reason code rsnc from intersystem communication and the logrec data set to determine why the COMMDS contains incorrect information. z/OS DFSMSdfp Diagnosis contains explanations of SMS intersystem communication reason codes.

Source: DFSMSdfp
Routing Code: 2,10
Descriptor Code: 4

**IGD074D** REPLY WITH SMS VALUE, 'KEYWORD(VALUE)', OR REPLY 'D' FOR DEFAULT, 'C' FOR CANCEL, OR 'S' FOR SAVE

**Explanation:** This message gives the operator the opportunity to correct, change, or add to the specified storage management subsystem values. IGD074D appears either during storage management subsystem initialization or in response to the SET SMS command, only if one of the following conditions exists:

- PROMPT=YES is specified in the storage management subsystem record of SYS1.PARMLIB member IEFSSNxx; in this case, message IGD031I also appears.
• An error is detected in the IGDSMSxx SYS1.PARMLIB member, but all of the required keywords have been specified.

In the message text:

keywd  The specified keyword.
value  The keyword value.

System action:  The system waits for the operator to respond to this message before allowing storage management subsystem initialization to continue.

Operator response:  You may enter the following replies:
• ‘keyword(value)’, which will correct, change, or add a storage management subsystem value. Enter only one value per prompt; this message will reappear until you enter either ‘C’ or ‘S’.
• ‘D’, which will default all of the storage management subsystem values except those that are required.
• ‘C’, which will operate differently depending on the circumstances under which you issue it:
  – If you reply ‘C’ during storage management subsystem initialization, the initialization process is cancelled. Therefore, the subsystem is defined but inactive. You may activate the subsystem later via the SET SMS command.
  – If you issue ‘C’ when the storage management subsystem is active and you have issued SET SMS, the SET SMS operation is cancelled. Therefore, the storage management subsystem will continue to operate with the previously specified values.
• ‘S’, which will save all the storage management subsystem values that have been specified up to this point. If any required values are unspecified or incorrect, you must provide or correct them before replying ‘S’.

See z/OS MVS System Commands for information about the SET SMS command.

Source:  DFSMSdfp
Routing Code:  1
Descriptor Code:  2

IGD076D  ACDS dsname IN COMMDS NOT ACTIVE, REPLY ‘U’ TO ACTIVATE OR ‘C’ TO IGNORE

Explanation:  The operator has specified a new SMS communication data set (COMMDS) that describes an SMS active control data set (ACDS) that is not currently active.

In the message text:

dcname  The data set name.

System action:  The system waits for the operator to reply.

Operator response:  Tell the system programmer about this message, and ask how to respond.

Application Programmer Response:  If you want to use the new COMMDS and to synchronize the current system with other systems in the complex, tell the operator to reply ‘U’ to activate the ACDS described in the COMMDS. In response to ‘U’, the system will attempt to activate the ACDS in the new COMMDS, and the COMMDS, ACDS, and the active configuration will change.

If you want to ignore the new COMMDS, tell the operator to reply ‘C’ to continue with the current ACDS and ignore the ACDS found in the COMMDS. In response to ‘C’, the system will treat the new COMMDS as empty, and will reformat it.

Routing Code:  1
**IGD077I**  
**SYS1.PARMLIB MEMBER mem NOT FOUND**

**Explanation:** The IGDSMSxx member of SYS1.PARMLIB does not exist.

In the message text:

*mem*  
The specified member name.

**System action:** If PROMPT=YES was specified in IEFSSNxx, the system will prompt the operator for SMS initialization parameters. Otherwise, storage management subsystem initialization will fail.

**Operator response:** If you are prompted for SMS initialization parameters, enter them. Otherwise, tell the system programmer about this message.

**System programmer response:** Create a new IGDSMSxx member and have the operator issue the SET SMS command, specifying the new IGDSMSxx member.

**Source:** DFSMSdfp

**Routing Code:** 2,10

**Descriptor Code:** 2

---

**IGD078D**  
**REPLY WITH SMS VALUE, 'KEYWORD(VALUE)', OR OTHERWISE 'C' FOR CANCEL**

**Explanation:** This message gives the operator the opportunity to correct, change, or add to the specified storage management subsystem values. IGD078D appears either during storage management subsystem initialization or in response to the SET SMS command, only if required SMS keyword values have not been specified in SYS1.PARMLIB member IGDSMSxx.

In the message text:

*keywd*  
The specified keyword.

*value*  
The keyword value.

**System action:** The system waits for the operator to respond to this message before allowing storage management subsystem initialization to continue. The system issues message IGD030I to describe the error.

**Operator response:** You can enter the following replies:

- A keyword value, which will correct, change, or add a storage management subsystem value. Enter only one value per prompt; this message will reappear until you have entered either 'C' or all required values. Then message IGD074D or IGD078D will appear to prompt you for additional storage management subsystem values.
- 'C', which will operate differently depending on the circumstances under which you issue it:
  - If you reply 'C' during storage management subsystem initialization, the initialization process is cancelled. Therefore, the subsystem is defined but inactive. You may activate the storage management subsystem later via the SET SMS command.
  - If you issue 'C' when the storage management subsystem is active and you have issued SET SMS, the SET SMS operation is cancelled. Therefore, the subsystem will continue to operate with the previously specified values.

See [z/OS MVS System Commands](https://www.ibm.com/support/knowledgcenter/en/SSS7H8_1.10.0/com.ibm.zos.zos.doc/zos/mvs_cmd.html) for information about the SET SMS command.

**IGD080I**  
**SMS DUMP SUPPRESSED FOR CSECT name COMPLETION CODE cde**

**Explanation:** During dump processing, SMS detected an error, and SVC dump indicated that the dump was suppressed. The installation suppressed the dump through one of the following:

- DUMP=NO was specified during IPL.
- A SLIP NODUMP command suppressed the dump.
- DAE suppressed the dump.

In the message text:

*name*  
The failing CSECT.

*cde*  
The abend code in the system diagnostic work area (SDWA) preceded by an S for a system abend or a U for a user abend.

**System action:** SMS does not take the dump. Message IGD300I is issued indicating the abend code and the CSECT that abended.
**Operator response:** Notify the system programmer.

**System programmer response:** Determine why the abend occurred and why the dump was suppressed.

**Source:** DFSMSdfp

---

**Explanation:** An attempt was made to switch to a communications data set (COMMDS) where the current system name or the current sysplex name is not defined. The communications data set cannot be used to switch to a valid COMMDS.

In the message text:

- **dsname**
  The data set name.

- **sysname**
  The current system.

- **sysplex**
  The sysplex to which the current system belongs.

**System action:** The system rejects the request.

**Operator response:** Specify an empty COMMDS or a COMMDS with a system name or sysplex name that exists in response to IGD069D.

**Source:** DFSMSdfp

---

**IGD082D**

**Explanation:** A syntax error was detected in the reply to a previous message for the specified keyword. This message is issued to prompt the operator to correct the error.

In the message text:

- **keyword**
  One of the following keywords:
  - LOG_OF_LOGS
  - QTIMEOUT
  - AKP
  - TV_START_TYPE

- **value**
  A parameter value for a keyword.

**System action:** The system waits for the operator to reply.

**Operator response:** Correct the error by replying with the keyword and value, or reply with D to use the default value; if the reply is one of these, the system continues to process the other DFSMStvs parameter specified in the PARMLIB member. If the reply is C, the system ignores all other DFSMStvs parameters specified in the PARMLIB member and keeps the previous DFSMStvs values. Tell the system programmer about this error.

**System programmer response:** Fix the error in the PARMLIB member.

Detecting Module: IGDSSIPO, IGDSSITV

IGD086I  
DATA SET SEPARATION PROFILE dsn (CANNOT BE ACCESSED. SMS RETURN CODE rc func REASON CODE rsn. I CONTAINED A SYNTAX ERROR ON LINE line POSITION pos.)

Explanation: This message is generated at the time a new SMS source control data set (SCDS) has been activated or an active control data set (ACDS) has been switched. The control data set contains an unsupported data set separation profile that could not be accessed or that failed syntax checking.

In the message text:

dsn
The name of the data set separation profile

rc
The 4-byte return code, in hexadecimal

func
The name of the function that detected the error

System action: Validation processing continues with the data set separation profile.

Operator response: Contact the system programmer.

System programmer response: This message is for informational purpose only. During the validation of the data set separation profile, an unsupported data set separation group was found. This data set separation group is ignored and validation of the data set profile continues. This message is issued only for the first unsupported data set separation group.

Source: Storage Management Subsystem (DFSMS)

Detecting Module: IGDOPST2

IGD089I  
DATA SET SEPARATION PROFILE dsn CONTAINING AN UNSUPPORTED DATA SET SEPARATION GROUP WAS FOUND ON LINE nnn

Explanation: This message is generated at the time a new SMS source control data set (SCDS) has been activated or an active control data set (ACDS) has been switched. The control data set contains an unsupported data set separation group.

In the message text:

dsn
The name of the data set separation profile

nnn
The number of the line in the separation profile that contained the unsupported data set separation group

System action: Processing continues without data set separation support.

Operator response: Contact the system programmer.

System programmer response: Resolve the access error and reactivate the configuration. For profile access failures, make sure that the data set is cataloged and that the SCDS base configuration contains the correct profile data set name. A profile that reports a syntax error or an access error with SMS as the function detecting the error indicates that the profile has been modified without validation. Run SCDS validation and reactivate the configuration. If the error persists after successful validation, contact the IBM Support Center and report the error.

**IGD100I** dev ALLOCATED TO DDNAME ddname DATACLAS dcname STORCLAS scname MGMTCLAS mcname DATACLA blank

**Explanation:** The system either:

- created a new non-SMS-managed data set on a non-SMS-managed DASD or on a non-library-managed tape drive using data class specified on the DDNAME
- created a new data set on a library-managed tape drive using the storage class specified, the management class specified, and the data class specified on the DDNAME
- allocated a data set on a library-managed tape drive
- allocated an old data set on a library-managed tape drive

In the message text:

- dev The device number of the specified device.
- ddname The specified DDNAME.
- scname The specified storage class.
- mcname The specified management class.
- dcname The specified data class.
- blank Blank characters.

**System action:** The system continues processing.

**Source:** Storage management subsystem (SMS)

**Detecting Module:** IGDVTSCR

**Routing Code:** 2

**Descriptor Code:** 4

---

**IGD101I** dev ALLOCATED TO DDNAME ddname DATACLAS dcname

**Explanation:** The system created a new non-SMS data set on a device for a DDNAME using the data class specified.

In the message text:

- dev The device number of the specified device.
- ddname The specified DDNAME.
- dcname The specified data class.

**System action:** The system continues processing.

**Source:** Storage management subsystem (SMS)

**Detecting Module:** IGDVTSCR

**Routing Code:** 2

**Descriptor Code:** 4

---

**IGD100I** dev ALLOCATED TO DDNAME ddname DATACLAS dcname STORCLAS scname MGMTCLAS mcname DATACLA blank

**Explanation:** The system created a new non-SMS-managed data set on a non-SMS-managed DASD or on a non-library-managed tape drive using data class specified on the DDNAME.

In the message text:

- dev The device number of the specified device.
- ddname The specified DDNAME.
- dcname The specified data class.

**System action:** The system continues processing.

**Source:** Storage management subsystem (SMS)

**Detecting Module:** IGDVTSCR

**Routing Code:** 2

**Descriptor Code:** 4

---

**IGD101I** SMS ALLOCATED TO DDNAME ddname DSN dsname STORCLAS scname MGMTCLAS mcname DATACLA blank

**Explanation:** text is one of the following:

- VOLSER NOS= volid{,volid...}
- VOLSER NOS FOR DATA COMPONENT= volid{,volid...}
- VOLSER NOS FOR INDEX COMPONENT= volid{,volid...}

A new SMS managed data set was created for a DDNAME using the storage class specified, management class specified, data class specified, and the volume serial numbers specified.

If the data set associated with DDNAME is a concatenated data set, this message is issued multiple times. The first time, ddname is the DDNAME of the concatenation. The second time and subsequent times this message is issued for this concatenation, ddname is blanks.

In the message text:

- ddname The specified DDNAME.
- dsname The specified data set name.
- scname The specified storage class.
- mcname The specified management class.
- dcname The specified data class.
The specified volume serial number or numbers.

This message displays multiple volume serial numbers in response to a valid, guaranteed space request or when you are using an extended striped data set. All the volumes are allocated at the time of the request.

This message displays only one volume serial number, the first one, in response to a non-guaranteed space request. Other volumes may be allocated at a later time.

System action: The system continues processing.
Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

**IGD103I** SMS ALLOCATED TO DDNAME ddname

Explanation: An existing, SMS managed data set was allocated to the DDNAME.

If the data set associated with DDNAME is a concatenated data set, this message is issued multiple times. The first time, ddname is the DDNAME of the concatenation. The second time and subsequent times this message is issued for this concatenation, ddname is blanks.

In the message text:

\[\text{ddname} \]

The specified DDNAME.

System action: The system continues processing.
Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

**IGD104I** dsname RETAINED, DDNAME=ddname, FILENAME=filename

Explanation: The SMS managed data set or VSAM data set associated with the DDNAME was kept at the end of the step. The system ignores any specification of CATLG or UNCATLG because SMS-managed data sets and VSAM data sets are always cataloged at creation.

When the program being run is an IDCAMS delete, this message will indicate that the DD associated with the data set has been retained. This message should be ignored. The user must check to see if the data set has actually been deleted.

If the data set associated with DDNAME is a concatenated data set, this message is issued multiple times. The first time, ddname is the DDNAME of the concatenation. The second time and subsequent times this message is issued for this concatenation, ddname is blanks.

In the message text:

\[\text{dsname} \]

The data set name.

\[\text{ddname} \]

The specified DDNAME.

System action: The system continues processing.
Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

**IGD105I** dsname DELETED, DDNAME=ddname, FILENAME=filename

Explanation: The SMS-managed or the VSAM-managed data set associated with the DDNAME was deleted at the end of the step.

If the data set associated with DDNAME is a concatenated data set, this message is issued multiple times. The first time, ddname is the DDNAME of the concatenation. The second time and subsequent times this message is issued for this concatenation, ddname is blanks.

In the message text:

\[\text{dsname} \]

The data set name.

\[\text{ddname} \]

The specified DDNAME.

System action: The system continues processing.
Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

**IGD106I** dsname PASSED, DDNAME=ddname

Explanation: The SMS managed data set associated with the DDNAME was passed at the end of the step.

If the data set associated with DDNAME is a concatenated data set, this message is issued multiple times. The first time, ddname is the DDNAME of the concatenation. The second time and subsequent times this message is issued for this concatenation, ddname is blanks.

In the message text:

\[\text{dsname} \]

The data set name.

\[\text{ddname} \]

The specified DDNAME.

System action: The system continues processing.
Source: DFSMSdfp
IGD107I  dsname ROLLED IN, DDNAME=ddname

Explanation:  At the time of the step ending, the SMS managed generation data set associated with the DDNAME became a permanent part of the generation data group (GDG).

If the data set associated with DDNAME is a concatenated data set, this message is issued multiple times. The first time, ddname is the DDNAME of the concatenation. The second time and subsequent times this message is issued for this concatenation, ddname is blanks.

In the message text:

dsname  The data set name.

ddbname  The specified DDNAME.

System action:  The system continues processing.

Source:  DFSMSdfp

Routing Code:  2

Descriptor Code:  4

IGD108I  dsname CATALOGED, DDNAME=ddnamexx VOLUME SERIAL NUMBERS = ser,[ser...]

Explanation:  The system cataloged the data set associated with the DDNAME at the end of the step. This DDNAME resides on one or more SMS-managed mountable volumes.

In the message text:

dsname  The data set name

ddbname  The specified DDNAME

ser  The volume serial number.

System action:  The system continues processing.

Source:  Storage Management Subsystem (SMS)

Detecting Module:  IGDDSP00

Routing Code:  2

Descriptor Code:  4

IGD300I  AN ABEND OCCURRED DURING SMS PROCESSING

ABEND SYSTEM CODE=cde
ASID=asid

Explanation:  An abend occurred during storage management subsystem processing. This message serves as a symptom dump; it provides preliminary information for an abend.

In the message text:

cde  System abend code in the SDWA (system diagnostic work area).

asid  The address space identifier of the address space where the error occurred.

adr1  The address of the load module that was active when the error occurred.

description  The description of the failing CSECT.

name  The failing CSECT.

adr2  The address of the failing CSECT.

offset  The hexadecimal number of bytes between the beginning of the failing CSECT and the PSW at the time of the error.

mmddyy  The assembly date of the failing CSECT (mm is month, dd is day, yy is year).

ptf  The PTF level of the failing CSECT.

pppppppp  The PSW contents at the time of the error, as saved in the SDWA.

adr3  The starting address of the data area around the PSW at the time of the error.

dddddddd  The data area around the PSW (the area starts at address adr3).

gprnn  The content of general purpose register nn at time of the error, as saved in the SDWA.
System action: The request fails.

Operator response: Tell the system programmer about this message.

Application Programmer Response: Examine this message to determine why the abend occurred.

IGD301I  DATA SET ALLOCATION REQUEST FAILED - DATA SET dsname IS NOT ELIGIBLE FOR ALLOCATION ON SMS-MANAGED VOLUME volser

Explanation: You specified an SMS-managed volume, but the system was unable to derive a storage class for your data set. A storage class must be specified to allocate a data set on an SMS-managed volume.

Possible causes for this include:
• The data set is a type that cannot be SMS-managed.
• The storage class ACS routine over-rode the storage class that you specified.
• A logic error in the storage class ACS routine prevented it from assigning a storage class to your data set.

In the message text:
volser The volume serial number.
dsname The data set name.

System action: The allocation fails.

Application Programmer Response: If the data set does not need to be SMS-managed, specify a non-SMS managed volume and resubmit the allocation request.

If the data set is to be SMS-managed, either modify the data set type so that the data set can be managed by SMS, or determine an appropriate storage class and resubmit the allocation request. If the storage class selection routine should have selected a storage class for this data set allocation, it may need to be corrected. Contact your storage administrator for assistance.

If the data set is not eligible to be SMS-managed, specify a non-SMS managed volume, do not code STORCLAS and resubmit the allocation request. Not all data sets can be SMS-managed. The following data sets do NOT qualify:
• Unmovable data sets
• Data sets with absolute track allocations
• Tape data sets, except tape data sets on mountable volumes contained in an automated tape library (ATL) dataserver.

---

Chapter 13. IGD messages 521
In the message text:

dsn1
  The referenced data set.

dsn2
  The referencing data set.

**System action:** Allocation of the data set fails.

**User response:** Do one of the following:

- Modify the VOL=REF specification to reference an SMS-managed data set.
- Remove the VOL=REF specification.
- Contact the storage administrator.

**Storage Administrator Response:** If the non-SMS allocation should be allowed, modify the storage class ACS routine so that it does not assign a storage class to a referencing data set.

**Source:** Storage management subsystem (SMS)

**Detecting Module:** IGDIDMCD, IGDVRFPR

**Routing Code:** 2, Note 28

**Descriptor Code:** 4

---

**IGD304I** DATA SET ALLOCATION REQUEST FAILED - ACS STORAGE GROUP ROUTINE DID NOT ALLOW USE OF THE STORAGE GROUP OF THE REFERENCED DATA SET dsn1 BY THE REFERENCING DATA SET dsn2

**Explanation:** The allocation of data set dsn2 referenced data set dsn1 (using VOL=REF). Referencing data set dsn2 is not permitted to be allocated in the storage group of referenced data set dsn1. When VOL=REF specifies a data set on an SMS-managed tape volume, the two data sets must have at least one volume in common; therefore, they must also reside in the same storage group.

In the message text:

dsn1
  The referenced data set.

dsn2
  The referencing data set.

**System action:** The allocation fails.

**User response:** Do one of the following:

- Remove the VOL=REF specification.
- Contact the storage administrator.

**Storage Administrator Response:** If the VOL=REF specification is used correctly, modify the storage group ACS routine so that it assigns the storage group of the referenced data set to the referencing data set.

**Source:** Storage management subsystem (SMS)

**IGD306I** UNEXPECTED ERROR DURING errmodnm PROCESSING RETURN CODE rc REASON CODE rsnc THE MODULE THAT DETECTED THE ERROR IS callermm SMS MODULE TRACE BACK - mtb [...] mtb] SYMPTOM RECORD CREATED, PROBLEM ID IS probid

**Explanation:** An unexpected error occurred during storage management subsystem processing. This message could also appear for the allocation of existing SMS-managed data sets, if one or more of the volumes to be allocated is pending offline.

In the message text:

errmodnm
  The module that was in control when this unexpected error occurred.

rc
  The return code returned from the error module.

rsnc
  The reason code returned from the error module.

callermm
  The module that detected this error.

mtb
  The sequence of calling modules, starting from the module that detected the problem. The sequence can contain up to 18 modules names.
probid  The problem ID for the symptom record that was recorded in the logrec data set.

System action:  The system ends the request, and writes an error record with problem ID probid to the logrec data set.

Application Programmer Response:  Use the message text and the entry with problem ID probid in the logrec data set for information about the error that occurred. Depending on the ERRMODNM value, the return and reason code can be found in one of the following locations:

- If ERRMODNM begins with or contains any of the following characters, see [z/OS DFSMSdfp Diagnosis] for the return and reason codes:
  - IGD, indicating storage management subsystem (SMS)
  - CBR, indicating optical access method (OAM) or library control system (LCS)
  - AOM, indicating the asynchronous operations manager (AOM)
  - DEVINFO, indicating device information services
  - IGDA, indicating DADSM
  - CVAFFILT, indicating CVAF
- If ERRMODNM is DEQ, DEQUEUE, DIV or DIV, see [z/OS MVS Programming: Authorized Assembler Services Reference ALE-DYM] for the return and reason codes.
- If ERRMODNM is ENQ, ENQUEUE, or GETMAIN, see [z/OS MVS Programming: Authorized Assembler Services Reference EDT-IXG] for the return and reason codes.
- If ERRMODNM is UCBLOOK, ?UCBLOOK, SETLOCKO, or SETLOCKR, see [z/OS MVS Programming: Authorized Assembler Services Reference SET-WTO] for the return and reason codes.
- If ERRMODNM is IOSCAPU, see [z/OS MVS Programming: Authorized Assembler Services Reference LLA-SDU] for the return and reason codes.
- If ERRMODNM is WTO and the return code is 12, a non-zero return code was set by WTO. The WTO return code is displayed as rsnc. See [z/OS MVS Programming: Authorized Assembler Services Reference SET-WTO] for an explanation of the WTO return code.

**IGD308I**  DATA SET ALLOCATION REQUEST FAILED - *text*

Explanation:  *text* is one of the following:

- DATA SET OWNER userid IS NOT AUTHORIZED TO CREATE DATA SET dsname WITH (STORAGE CLASS scname|MANAGEMENT CLASS mcname)
- RACF FUNCTION func DATA SET dsname WITH RETURN CODE rc REASON CODE rsnc

One of the following errors occurred:

- The storage class or management class was derived for a data set, but the owner is not authorized to use the specified storage or management class.
- The specified resource access control facility (RACF) function failed with the indicated return and reason codes.

In the message text:

- scname  The storage class.
- mcname  The management class.
- dsname  The data set name.
- userid  The user identification.
- func  The specified RACF function.
- rc  The return code.
- rsnc  The reason code.

System action:  The allocation fails.

Application Programmer Response:  Either obtain authorization to use the storage class or the management class or use a different storage or management class that you are already authorized to
IGD309I • IGD311I

use. For RACF errors, ensure that you are authorized to create the data set. The RACF function, return code, and reason code are described in z/OS Security Server RACROUTE Macro Reference.

Routing Code: 2
Descriptor Code: 4

IGD309I DATA SET ALLOCATION REQUEST FAILED - CREATION OF SMS-MANAGED DATA SET dsname IS NOT ALLOWED WITHIN THE SCOPE OF A JOBCAT/STEPPCAT. STORAGE CLASS scname WAS (EXPLICITLY SPECIFIED|INSTALLATION DERIVED)

Explanation: The creation of SMS managed data sets is not allowed within the scope of a JOBCAT or STEPCAT.

In the message text:

dsname
The data set name.

scname
The storage class.

System action: The allocation fails.

Application Programmer Response: If the storage class was explicitly specified, remove the JOBCAT, STEPCAT, or storage class specification to ensure that the data set is not SMS managed. Then resubmit the allocation request.

If the JOBCAT or STEPCAT is required and the storage class was installation derived, use a data set specification that will not create an SMS managed data set when resubmitting the allocation request.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD311I UNEXPECTED ERROR DURING errmodnm PROCESSING. RETURN CODE rc1 REASON CODE rsnc1. THE MODULE THAT DETECTED THE ERROR IS callemnm. SMS MODULE TRACE BACK - mtb [...mtb]. ERROR DETECTED DURING SYMPTOM RECORD CREATION. RETURN CODE rc2 REASON CODE rsnc2. PROBLEM ID IS probid.

Explanation: An unexpected error occurred during storage management subsystem processing, and another error occurred during symptom record creation.

In the message text:

ermodnm
The module that was in control when this unexpected error occurred.

rc1
The return code returned from the error module.

rsnc1
The reason code returned from the error module.

callemnm
The module that detected this error.

mtb
The sequence of calling modules, starting from the module that detected the problem. The sequence can contain up to 18 module names.

rc2
The return code for symptom record creation error.

rsnc2
The reason code for symptom record creation error.

probid
The problem ID for the symptom record that was built but not recorded in the logrec data set.

The error information for symptom record creation and the symptom record itself were recorded in the SMS trace table.

mcname
The management class.

dsname
The data set name.

System action: The allocation fails.

Application Programmer Response: If the data set does not have to be SMS managed, resubmit the allocation request without using the STORCLAS and MGMTCLAS parameters. If the data set should be SMS managed, modify that data set so that it becomes eligible to be SMS managed.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4
System action: The system ends the request, and writes a record to the SMS trace table.

Application Programmer Response: Use the information in the SMS trace table and the return and reason codes to determine why these errors occurred.

Descriptor Code: 4

IGD312I AN ABEND OCCURRED DURING SMS PROCESSING

Explanation: NO SDWA AVAILABLE

An abend occurred during storage management subsystem processing, and no SDWA was available when the SMS recovery routine received control. No SMS error recovery took place.

System action: The request fails.

Source: DFSMSdfp
Routing Code: 2,10
Descriptor Code: 4

IGD313I DATA SET ALLOCATION REQUEST FAILED - 'PIPE' VALUE OF THE 'DSNTYPE' KEY WORD MAY NOT BE SPECIFIED FOR NON-SMS-MANAGED DATA SET dsname

Explanation: A storage class was not derived or specified for the data set. Therefore, the data set is not SMS-managed. The PIPE value cannot be specified for the DSNTYPE key word for a non-SMS-managed data set.

In the message text:

dsname

The data set name.

System action: The job or allocation fails.

Application Programmer Response: If the data set is not to be SMS-managed, remove the DSNTYPE key word specification. If the data set is to be SMS-managed, determine an appropriate storage class. The storage class selection routine may be in error if it should have selected a storage class for this data set.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD314I DATA SET ALLOCATION REQUEST FAILED - 'DATACLAS' dcname FOR DATA SET dsname CONTAINS 'DSNTYPE' ATTRIBUTE THAT IS NOT SUPPORTED

Explanation: The data class that was derived or specified for the data set contains a DSNTYPE attribute that is not supported with the current level of the operating system.

In the message text:

dcname

The data class.

dsname

The data set name.

System action: The allocation fails.

Application Programmer Response: If the data class was explicitly specified, it should be removed from the request. The data class selection routine may be in error if it should have selected a different data class for this data set.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD315I DATA SET ALLOCATION REQUEST FAILED - LABEL=(',,IN) SPECIFIED FOR NEW SMS MANAGED MOUNTABLE

Explanation: A read request was attempted from a new SMS-managed mountable tape volume. Read requests are not allowed from new SMS-managed mountable tape volumes.

System action: The allocation fails.

Operator response: Update JCL and resubmit the job.

Source: Storage Management Subsystem (SMS)
Detecting Module: IGDIDMCD

IGD316I DATA SET ALLOCATION FAILED - DATA SET 'dsn' NAMED IN QUOTES, IS NOT ELIGIBLE TO BE SMS-MANAGED

Explanation: Data set allocation failed. The named data set, dsn, is not eligible to be SMS-managed.

System action: The allocation fails.

Operator response: Update JCL and resubmit the job.

Source: DFSMSdfp
IGD317I  DATA SET ALLOCATION REQUEST FAILED - 'PIPE' VALUE OF THE 'DSNTYPE' KEYWORD MAY BE SPECIFIED ONLY WHEN THE 'PATH' KEYWORD IS SPECIFIED

Explanation: A DSNTYPE of PIPE implies that the user wants to process an HFS file. HFS files must be SMS-managed.

System action: The allocation fails.

Operator response: Update JCL and resubmit the job.

Source: Storage Management Subsystem (SMS)

Detecting Module: IGDIDMRM

Routing Code: 2

Descriptor Code: 4

IGD318I  DATA SET ALLOCATION REQUEST FAILED - NO POOL OR VIO STORAGE GROUPS SELECTED FOR DATA SET dsn1 WHICH REFERENCES DATA SET dsn2

Explanation: An allocation for a new data set specified a VOL=REF that referenced the specified SMS-managed data set. Because VOL=REF was specified, the two data sets must reside in compatible types of storage groups. The storage group ACS routine did not assign a storage group of the specified type to the referencing data set.

In the message text:

dsn1  The referencing data set.

dsn2  The referenced data set.

System action: Allocation of the data set fails.

User response: Do one of the following:

- Remove the VOL=REF specification.
- Contact the storage administrator.

Storage Administrator Response: If the VOL=REF specification is used correctly, modify the storage group ACS routine so that it assigns storage groups of the appropriate type or types to the referencing data set.

REPLY 'U' TO RETRY, 'C' TO CANCEL, 'S' TO SUSPEND, 'T' TO TERMINATE, OR 'F' TO FORCE  

An error was detected by the read statistics task. If the error was due to an abend, a dump has been taken. Otherwise, the error occurred due to one of the following AOMSERV request types:  
- OBTAIN SSSCB  
- READ STATISTICS  
- UPDATE SSSCB  

**System action:**  
The system waits for the operator to reply.  

**Operator response:**  
Contact the system programmer to determine the appropriate response.  

**Application Programmer Response:**  
Examine any preceding messages to determine the reason for the error. Then, have the operator do one of the following:  
- Enter 'U' to retry that particular AOMSERV request.  
- Enter 'C' to cancel that particular AOMSERV request.  
- Enter 'S' to suspend the read statistics task. This causes the task to go into an infinite wait. The task will not be restarted until the SMS address space restarts.  
- Enter 'F' to force the specified SSID off. The cache maintenance task will discontinue attempts to turn on subsystem and device options until an ACTIVATE or VARY is performed. At this point, the system will generate message IGD705D. This message prompts the operator to determine whether this subsystem should be eligible for future processing by the cache maintenance and read statistics tasks.  

**Source:**  
DFSMSdfp  

**Routing Code:** 2,10  

**Descriptor Code:** 2  

---  

**IGD704D**  
**SMS CACHE MAINTENANCE ERROR.**

**Explanation:**  
_text is one of the following:  
REPLY 'U' TO RETRY, 'C' TO CANCEL, OR 'T' TO TERMINATE  
REPLY 'U' TO RETRY, 'C' TO CANCEL, 'T' TO TERMINATE, OR 'F' TO FORCE  

An error was detected by the cache maintenance task. If the error was due to an abend, a dump has been taken. Otherwise, the error occurred due to one of the following AOMSERV request types:  
- OBTAIN SSSCP  
- SUBSYSTEM CACHING  
- CACHE FAST WRITE  
- NONVOLATILE STORAGE  
- DEVICE CACHING  
- DASD FAST WRITE  

**System action:**  
The system waits for the operator to reply.  

**Operator response:**  
Contact the system programmer to determine the appropriate response.  

**Application Programmer Response:**  
Examine any preceding messages to determine the reason for the error. Then, have the operator do one of the following:  
- Enter 'U' to retry that particular AOMSERV request.  
- Enter 'C' to cancel that particular AOMSERV request.  
- Enter 'T' to end the cache maintenance task. This causes the task to go into an infinite wait. The task will not be restarted until the SMS address space restarts.  
- Enter 'F' to force the specified SSID off. The cache maintenance task will discontinue attempts to turn on subsystem and device options until an ACTIVATE or VARY is performed. At this point, the system will generate message IGD705D. This message prompts the operator to determine whether this subsystem should be eligible for future processing by the cache maintenance and read statistics tasks.  

In the message text:  
_id The subsystem identifier.  

**Source:**  
DFSMSdfp  

**Routing Code:** 2,10  

**Descriptor Code:** 2  

---  

**IGD705D**  
SSID id HAS BEEN FORCED OFF.  
REPLY 'Y' TO INITIALIZE, OR 'N' TO NOT INITIALIZE  

**Explanation:**  
The cache maintenance task has determined that this subsystem, specified by the subsystem identifier, has been turned off. The operator is prompted to determine whether this subsystem should be eligible for future processing by the cache maintenance and read statistics tasks.  

In the message text:  
_id The subsystem identifier.  

**System action:**  
The system waits for the operator to reply.  

**Operator response:**  
Contact the system programmer to determine the appropriate response.  

**Application Programmer Response:**  
Have the operator do one of the following:  
- Enter 'Y' to make the subsystem eligible for future processing by the cache maintenance and read statistics tasks.  
- Enter 'N' to keep the subsystem ineligible for future processing by the cache maintenance and read statistics tasks.  

If the subsystem is still having hardware problems, respond appropriately.  

**Source:**  
DFSMSdfp
An error was detected by the record statistics task. If the error was due to an abend, a dump has been taken. Otherwise, the error occurred due to one of the following AOMSERV request types:

- Obtain SSSCB
- Update SSSCB
- Read Statistics

System action: The system waits for the operator to reply.

Operator response: Contact the system programmer to determine the appropriate response.

Application programmer response: Examine any preceding messages to determine the reason for the error. Then have the operator do one of the following:

- Enter 'U' to retry the particular AOMSERV request.
- Enter 'C' to cancel the particular AOMSERV request.
- Enter 'S' to suspend the record SMF statistics task. The task will wait for the operator to enter the SETSMS CACHETIME command. The message will be repeated every xx minutes depending on what INTVAL(xx) value was set in the SMFPRMxx member.
- Enter 'T' to end the record SMF statistics task. This causes the task to go into an infinite wait state. The task will not be restarted until the SMS address space is restarted.
- Enter 'F' to force the specified SSID off. The record SMF statistics task will no longer attempt to obtain statistics for this subsystem.

**DATA SET ALLOCATION REQUEST FAILED - ACS**  
{DATACLASS|STORCLASS|MGMTCLASS}  
{ROUTINE|INSTALLATION EXIT}  
RETURN CODE rc  
REASON CODE rsnc

**Explanation:** Either an ACS routine or ACS installation exit failed the data set allocation with the return code specified and the reason code specified. If an ACS routine failed the allocation request, the reason code is the value that was in the ‘EXIT CODE’ statement of that ACS routine. If an ACS installation exit failed the allocation request, then the reason code is the contents of GPR 0, which were returned by that installation exit.

In the message text:

- `rc`  
  The return code.

- `rsnc`  
  The reason code.

**System action:** The request fails.

**Application Programmer Response:** Using the return and reason codes, determine whether the ACS routine or installation exit should have failed the request. If the request should not have failed, you might have to correct an error in the routine or exit.

**IGD01008I**  
*text*

**Explanation:** The storage class ACS routine issued the message.

**System action:** The system continues processing.

**Application Programmer Response:** If the text is in error, correct the message text in the storage class ACS routine.

**Source:** DFSMSdfp

**Routing Code:** 11

**Descriptor Code:** 4
IGD01009I  DATA SET ALLOCATION REQUEST FAILED - THE MANAGEMENT CLASS ACS ROUTINE ISSUED THE MESSAGE.

Explanation: The management class ACS routine issued the message.

System action: The system continues processing.

Application Programmer Response: If the text is in error, correct the message text in the management class ACS routine.

Source: DFSMSdfp
Routing Code: 11
Descriptor Code: 4

IGD01012I  DATA SET ALLOCATION REQUEST FAILED - THE ACS STORAGE GROUP ROUTINE ASSIGNED A NON-TEMPORARY OR VSAM DATA SET TO A STORAGE GROUP WHICH IS NOT OF TYPE POOL

Explanation: The storage group ACS routine assigned a non-temporary or VSAM data set to a VIO storage group. This type of assignment is not allowed.

System action: The request fails.

Application Programmer Response: Modify the storage group ACS routine to include at least one POOL type storage group in the list of storage groups for non-temporary and VSAM data sets.

Source: DFSMSdfp
Routing Code: 11
Descriptor Code: 4

IGD01011I  DATA SET ALLOCATION REQUEST FAILED - THE ACS STORAGE GROUP ROUTINE DID NOT ASSIGN A STORAGE GROUP

Explanation: The storage group ACS routine did not assign a storage group, but the routine is required to do so.

System action: The request fails.

Application Programmer Response: Modify the storage group ACS routine to assign from one to 15 storage groups for all cases.

Source: DFSMSdfp
Routing Code: 11
Descriptor Code: 4

IGD01014I  DATA SET ALLOCATION REQUEST FAILED - SPECIFIED DATA CLASS, STORAGE CLASS, OR MANAGEMENT CLASS DOES NOT EXIST

Explanation: An allocation request explicitly specified a data class, a storage class, or a management class that does not exist in the active storage management subsystem configuration.

In the message text:
- \textit{dcname}
  - The data class.
- \textit{scname}
  - The storage class.
- \textit{mcname}
  - The management class.

System action: The request fails.

Application Programmer Response: Modify the ACS routine or installation exit to return an SMS data class, storage class, or management class that exists. For an ACS routine, verify the use of and values for RACF defaults.

Source: DFSMSdfp
Routing Code: 11
Descriptor Code: 4
Application Programmer Response: Use ISMF to display the valid data classes, storage classes or management classes; then resubmit the request with a valid class.

Source: DFSMSdip
Routing Code: 11
Descriptor Code: 4

IGD01015I DATA SET ALLOCATION REQUEST FAILED -

THE ACS STORAGE GROUP ROUTINE ASSIGNED A DSNTYPE=LIBRARY DATA SET TO A NON POOL TYPE STORAGE GROUP

Explanation: The storage group ACS routine assigned a PDSE data set to the following types of storage groups: OBJECT, OBJECT BACKUP, VIO, or TAPE. These types of assignment are not allowed.

System action: The request is failed.

Application Programmer Response: Contact your storage administrator.

System programmer response: Modify your storage group ACS routine to ensure that the list of storage groups contains at least one POOL type storage group.

Source: Storage Management Subsystem (SMS)
Detecting Module: IGDACS01
Routing Code: 11
Descriptor Code: 4

IGD01016I OSMI OR OSMC REQUEST FAILED -

THE ACS STORAGE GROUP ROUTINE ASSIGNED AN OBJECT TO A STORAGE GROUP WHICH IS NOT OF TYPE OBJECT OR OBJECT BACKUP

Explanation: The storage group ACS routine derived a storage group or a list of storage groups containing only non-OBJECT or non-OBJECT BACKUP type storage groups for an object. The system does not permit this type of assignment.

System action: The system fails the request.

Application Programmer Response: Modify the storage group ACS routine to ensure that the list of storage groups contains storage groups of type OBJECT or OBJECT BACKUP only.

Source: DFSMSdip
Routing Code: 11
Descriptor Code: 4

IGD01017I TAPE AND POOL TYPE OF STORAGE GROUPS DERIVED, ONLY POOL TYPE IS ASSIGNED

Explanation: A mixture of TAPE and POOL type of storage groups derived from an installation's automatic class selection (ACS) routine. The POOL type of storage group is selected, dataset is allocated to Storage Management Subsystem (SMS) managed DASD volumes.

System action: The system continues processing.

System programmer response: Make sure that the ACS routine is correct. This is not an error condition.

Source: Storage Management Subsystem (SMS)
Detecting Module: IGDACS01
Routing Code: 11
Descriptor Code: 4

IGD01018I DATA SET dsname text

Explanation: The specified data set does not have a standard data set name, and DFSMS expects to be able to catalog the name if the data set is to be managed.

In the message text:

dsname The specified data set name.

text Text will be one of the following:

HAS A NONSTANDARD DATASET NAME, AND IS NOT ELIGIBLE TO BE SMS-MANAGED.

This text will appear when 2 adjacent periods found between data set name qualifiers or the length of a qualifier exceeds the maximum allowed.

HAS AN INVALID DATASET NAME.

This text will appear when an unresolved first qualifier, such as a quotation mark, is found. For additional information about syntax, see Data Set Names in z/OS DFSMS Using Data Sets.

System action: The system continues processing.

Application Programmer Response: Verify that the data set name is the expected data set name.

Source: DFSMSdip

IGD01019I SPACE SPECIFIED EXCEEDS MAXIMUM ALLOWABLE VALUE BY ALLOCATION

Explanation: ACS read-only variable &SIZE exceeded the maximum allowable value of 2147483647 in
kilobytes that can be stored in a fixed 31-bit field.

System action: The system fails the allocation.

User response: Specify a smaller primary space quantity.

534  z/OS V1R11.0 MVS System Messages, Vol 8 (IEF-IGD)
**IGD03112I**  A RIGHT PARENTHESIS WAS EXPECTED BUT NOT FOUND

***Explanation***: A right parenthesis is missing from the statement. The number of right parentheses specified does not match the number of left parentheses specified.

***System action***: The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

***Application Programmer Response***: Correct the ACS routine source statement so that the number of left parentheses is the same as the number of right parentheses.

***Source***: DFSMSdfp

---

**IGD03115I**  LITERAL CONTINUATION CHARACTER OR SINGLE QUOTE EXPECTED BUT NOT FOUND

***Explanation***: A line in the ACS routine is missing either a closing quotation mark for a literal, or a continuation character.

***System action***: The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

***Application Programmer Response***: Either add the closing single quotation mark to finish the literal, or add a continuation character to continue the literal on the next line.

***Source***: DFSMSdfp

---

**IGD03116I**  UNEXPECTED STATEMENT TYPE *keywd* ENCOUNTERED - SUBSEQUENT STATEMENTS MAY BE IGNORED

***Explanation***: The keyword is not a valid statement type. A keyword may be misspelled or a delimiter may be missing.

In the message text:

*keywd* The specified keyword.

***System action***: The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

***Application Programmer Response***: Correct the ACS routine source statement so the keyword is correctly spelled or a delimiter is present.

***Source***: DFSMSdfp

---

**IGD03117I**  INTEGER OR INTEGER TYPE *nnn* IS GREATER THAN THE MAXIMUM 2147483647 THAT IS ALLOWED

***Explanation***: The maximum allowable integer value is 2147483647.

In the message text:

*nnn* The integer value.

***System action***: The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.
ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Correct the ACS routine source statement so that the integer value is within the required range.

**Source:** DFSMSdfp  
**Routing Code:** 2  
**Descriptor Code:** 4

**IGD03118I**  
**MISSING CONTINUATION CHARACTER OR END OF LITERAL - BLANK LINE FOUND INSTEAD**

**Explanation:** In the ACS routine, a blank source statement was found after a statement that ended with a continuation character. The blank statement should contain another continuation character or a literal end.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Either  
- finish the literal by adding a closing quotation mark to the source statement that precedes the blank statement; or  
- continue the literal by placing a continuation character on the blank source statement.

**Source:** DFSMSdfp  
**Routing Code:** 2  
**Descriptor Code:** 4

**IGD03119I**  
**END OF PROCEDURE BEFORE END OF LITERAL**

**Explanation:** A closing quotation mark for a literal is missing and was not found by the end of the ACS routine.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Add a closing quotation mark to delimit the literal before the end of the ACS routine.

**Source:** DFSMSdfp  
**Routing Code:** 2  
**Descriptor Code:** 4

**IGD03120I**  
**MEGABYTE VALUE nnn IS GREATER THAN THE MAXIMUM 2097151 THAT IS ALLOWED**

**Explanation:** The maximum allowable integer value for megabytes is 2097151.

In the message text:

- \( nnn \) The megabyte value.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Correct the ACS routine source statement so that the integer value is within the required range.

**Source:** DFSMSdfp  
**Routing Code:** 2  
**Descriptor Code:** 4

**IGD03121I**  
**MISSING COMMA OR RIGHT PARENTHESIS IN FILTLIST DEFINITION STATEMENT**

**Explanation:** A FILTLIST statement either contains filter literals that are not separated by commas, or does not end with a right parenthesis.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Correct the FILTLIST definition statement in the ACS routine source.

**Source:** DFSMSdfp  
**Routing Code:** 2  
**Descriptor Code:** 4
**Explanation:** The name attached to the FILTLIST is not valid in an ACS routine. The valid characters in a FILTLIST name are the alphanumeric characters (A-Z, 0-9, $, @, #) and the underscore character '_'.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Rename the FILTLIST so that it follows the correct naming conventions.

**Source:** DFSMSdfp
**Routing Code:** 2
**Descriptor Code:** 4

**Explanation:** The maximum number of characters allowed in a FILTLIST name is 32. The name specified is longer than 32 characters.

In the message text:

```
name The specified name.
```

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Change the FILTLIST name to 32 characters or less.

**Source:** DFSMSdfp
**Routing Code:** 2
**Descriptor Code:** 4

**Explanation:** In an ACS routine, the maximum number of filter literals, simple masks, and data set masks allowed in a FILTLIST INCLUDE or EXCLUDE is 255.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Rewrite the FILTLIST statement so there are 255 or fewer filter literals for each INCLUDE and EXCLUDE.

**Source:** DFSMSdfp
**Routing Code:** 2
**Descriptor Code:** 4

**Explanation:** In an ACS routine, only the equal (= or EQ) and not equal (¬= or NE) relational operators are allowed in a relational expression involving either a FILTLIST name or a mask, for example TSO*.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Rewrite the relational expression using only the valid relational operators.

**Source:** DFSMSdfp
**Routing Code:** 2
**Descriptor Code:** 4

**Explanation:** A FILTLIST name may be defined only once in an ACS routine.

In the message text:

```
name The specified FILTLIST name.
```

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Rename the FILTLIST so there are no duplicate FILTLIST names.

**Source:** DFSMSdfp
**Routing Code:** 2
**Descriptor Code:** 4

**Explanation:** The FILTLIST statement does not specify an INCLUDE or an EXCLUDE list. At least one must be specified in the ACS routine.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Add the appropriate INCLUDE or EXCLUDE lists to the ACS routine source.

**Source:** DFSMSdfp
**Routing Code:** 2
Descriptor Code: 4

IGD03138I INVALID SPECIFICATION FOR INCLUDE OR EXCLUDE LIST

Explanation: In an ACS routine, the INCLUDE or EXCLUDE list either contains incorrect filter literals or contains no filter literals at all. Literals must be enclosed in quotes; numeric masks (for example 33*) are not allowed. Refer to the z/OS DFSMS OAM Planning, Installation, and Storage Administration Guide for Tape Libraries for valid filter literals.

System action: The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

Application Programmer Response: Correct the specification for the filter literal inside the INCLUDE or EXCLUDE list.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD03139I INVALID SUBSCRIPTED READ/ONLY VARIABLE

Explanation: In an ACS routine, the read/only variable cannot be indexed; therefore, no subscripting is allowed.

System action: The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

Application Programmer Response: Delete the subscript for the read/only variable used in the ACS routine source.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD03140I SUBSCRIPT nnn EXCEEDS ALLOWABLE RANGE OF mmm

Explanation: In an ACS routine, the subscript used with the read/only variable is greater than the allowed maximum. For example, data set name (25) would cause this error because data set name can use only subscript values up to and including 22.

In the message text:

nnn The specified subscript.
mmm The allowable range.

System action: The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

Application Programmer Response: Correct the subscript for the read/only variable. Refer to the z/OS DFSMS OAM Planning, Installation, and Storage Administration Guide for Tape Libraries for maximum subscript values.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD03142I INVALID USE OF SPECIAL CHARACTERS IN MASK value

Explanation: In an ACS routine, the mask value uses more than one asterisk in a row; more than one in a row is an incorrect use of that special character.

In the message text:

value The specified mask value.

System action: The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

Application Programmer Response: Correct the mask in the ACS routine source.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD03143I INVALID USE OF SPECIAL CHARACTERS IN DATA SET MASK value

Explanation: In an ACS routine, the mask value uses special characters incorrectly, in one of the following ways:

- The mask contains three or more asterisks in a row.
A qualifier in the mask uses two asterisks in a row.
The mask ends in a period.

In the message text:
value The specified mask value.

System action: The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

Application Programmer Response: Correct the mask in the ACS routine source.
Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD03150I NESTING LIMIT EXCEEDED
Explanation: In an ACS routine, the nesting of DO, IF-THEN-ELSE, and SELECT-WHEN statements has exceeded the nesting limit.

System action: The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

Application Programmer Response: Correct the excessive nesting in the ACS routine source statements.
Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD03151I RELATIONAL OPERATOR MISSING OR INVALID
Explanation: In an ACS routine, a relational operator is either missing or not valid. Valid operators are:
- > < ~ = ^= ^=
- GT LT NG NL EQ NE GE LE

System action: The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

Application Programmer Response: Add or correct the relational operators in the ACS routine source statement.
Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD03152I INVALID COMPARISON BETWEEN OPERANDS
Explanation: The comparison is not a valid ACS routine comparison. The following are examples of incorrect comparisons:
- A character compared to a number.
- Two constants compared to each other.
- The storage group variable used in a comparison.

System action: The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

Application Programmer Response: Refer to the z/OS DFSMS OAM Planning, Installation, and Storage Administration Guide for Tape Libraries for rules regarding valid comparisons between operands, then correct the statement. Make sure that one operand is a read/only variable or a read/write variable.
Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD03155I FILTLIST value REFERENCED BUT NOT DEFINED
Explanation: A FILTLIST value was used before it was defined in an ACS routine.

In the message text:
value The specified FILTLIST value.

System action: The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

Application Programmer Response: Check the spelling of a defined FILTLIST, or add the missing FILTLIST definition to the ACS routine source.
Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD03156I EXCESSIVE USE OF BOOLEAN OPERATORS
Explanation: An expression is too complex because it contains too many Boolean operators within a parenthetical grouping.

System action: The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

Application Programmer Response: Simplify the expression in the ACS routine source. Using an
additional IF or SELECT structure may help relieve the complexity.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

---

**IGD03157I** INVALID OPERAND ENCOUNTERED IN A COMPARISON

**Explanation:** A comparison uses an operand that is incorrect; for example, the comparison may contain:
- a literal value that does not have single quotation marks to open and close it; or
- a reference to a FILTLIST that is not preceded by the required ampersand.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Check the operand involved in the comparison and correct the source statement.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

---

**IGD03161I** INVALID COMPARISON - LENGTHS OF OPERANDS CONFLICT

**Explanation:** A comparison between a literal string and a read/write variable is incorrect because the length of the literal exceeds the maximum length allowed for the variable. Refer to the z/OS DFSMS OAM Planning, Installation, and Storage Administration Guide for Tape Libraries for maximum lengths of read/write variables.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Check the length of the literal in the comparison, and correct the ACS routine source statement.

**Descriptor Code:** 4

**IGD03200I**  PROC STATEMENT MISSING OR INVALID

**Explanation:** This ACS routine does not start with a PROC statement.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Add a PROC statement to the ACS routine source.

**Source:** DFSMSdfp

**Routing Code:** 2

**Descriptor Code:** 4

**IGD03200I**  TEXT OF WRITE STATEMENT MISSING OR INVALID

**Explanation:** In an ACS routine, a WRITE statement is missing text, or contains an incorrect substitution variable. Refer to the [z/OS DFSMS OAM Planning, Installation, and Storage Administration Guide for Tape Libraries](z/OS DFSMS OAM Planning, Installation, and Storage Administration Guide for Tape Libraries) for valid substitution variables.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Correct the WRITE statement in the ACS routine so the text is less than 110 characters long, or the quotation mark has a matching end quotation mark.

**Source:** DFSMSdfp

**Routing Code:** 2

**Descriptor Code:** 4

**IGD03211I**  READ/WRITE VARIABLE NAME MISSING OR INVALID ON PROC STATEMENT

**Explanation:** In an ACS routine, the PROC statement does not contain a read/write variable name; the variable name is either missing or incorrect.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Add or correct the variable name in the ACS routine's PROC statement.

**Source:** DFSMSdfp

**Routing Code:** 2

**Descriptor Code:** 4

**IGD03212I**  MISSING END KEYWORD FOR THE ACS ROUTINE

**Explanation:** The PROC statement in the ACS routine does not have a matching END keyword.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Add the missing END keyword to the ACS routine source.

**Source:** DFSMSdfp

**Routing Code:** 2

**Descriptor Code:** 4

**IGD03202I**  INVALID USE OF SUBSCRIPTED READ/ONLY VARIABLE ON WRITE STATEMENT

**Explanation:** In an ACS routine, a WRITE statement contains a subscripted read/only variable; such variables cannot be subscripted.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Correct the WRITE statement in the ACS routine source.

**Source:** DFSMSdfp

**Routing Code:** 2

**Descriptor Code:** 4
**Explanation:** In an ACS routine, statements appeared after the END keyword for the PROC statement.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Check the placement of the END keyword for the PROC statement.

**Source:** DFSMSdfp

**Routing Code:** 2

**Descriptor Code:** 4

---

**Explanation:** This ACS routine contains more than one PROC statement.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Remove the extra PROC statement.

**Source:** DFSMSdfp

**Routing Code:** 2

**Descriptor Code:** 4

---

**Explanation:** In an ACS routine, statements appeared before the PROC statement.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Place the PROC statement at the beginning of the ACS routine.

**Source:** DFSMSdfp

**Routing Code:** 2

**Descriptor Code:** 4

---

**Explanation:** In an ACS routine, the SET statement is specified incorrectly; that statement is probably missing the EQ or = operator.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Correct the syntax of the SET statement in the ACS routine.

**Source:** DFSMSdfp

**Routing Code:** 2

**Descriptor Code:** 4

---

**Explanation:** The read/write variable in the SET statement is incorrect for one of the following reasons:

1. The read/write variable in the SET statement is not the correct read/write variable for this ACS routine. A read/write variable can be set only if it appears as a parameter on the PROC statement of the ACS routine.

2. The variable being set is a read/only variable. Read/only variables can only be tested for a specific value; they cannot be altered by the SET command.

3. The variable being set is neither a read/write nor a read/only variable.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Make sure the read/write variable in the SET statement matches the variable on the PROC statement. If not, check the PROC statement for a misspelled read/write variable, or for a read/write variable that is missing its ampersand.

**Source:** DFSMSdfp

**Routing Code:** 2

**Descriptor Code:** 4

---

**Explanation:** In an ACS routine, the SET statement does not contain a valid literal on the right hand side of the = or EQ operator.

**System action:** The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:** Correct the SET statement so it contains a valid literal.

**Source:** DFSMSdfp

**Routing Code:** 2
**IGD03223I**  INVALID LIST ASSIGNMENT

**Explanation:**  In an ACS routine, a list of values was specified on the right hand side of the = or EQ operator. The read/write variable cannot be assigned a list of values.

**System action:**  The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:**  Change the SET statement so that only 15 values are assigned.

**Source:**  DFSMSdfp
**Routing Code:**  2
**Descriptor Code:**  4

**IGD03224I**  INVALID READ/ONLY VARIABLE keywd ASSIGNED ON SET STATEMENT

**Explanation:**  In an ACS routine, the read/only variable appears on the right side of a SET statement; however, the keyword is not one of the read/only variables that can be the source of a SET statement. Refer to the z/OS DFSMS OAM Planning, Installation, and Storage Administration Guide for Tape Libraries for the valid assignment values on a SET statement.

In the message text:

keywd  The specified keyword.

**System action:**  The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:**  Change the SET statement so that only 15 values are assigned.

**Source:**  DFSMSdfp
**Routing Code:**  2
**Descriptor Code:**  4

**IGD03225I**  LIST OF VALUES ASSIGNED TO STORAGE GROUP GREATER THAN 15

**Explanation:**  In an ACS routine, storage group is assigned a list of values that exceeds the maximum of 15 values.

**System action:**  The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:**  Change the SET statement so that only 15 values are assigned.

**Source:**  DFSMSdfp
**Routing Code:**  2
**Descriptor Code:**  4

**IGD03226I**  VALUE SPECIFIED ON SET EXCEEDED ALLOWABLE LENGTH

**Explanation:**  In an ACS routine, a read/write variable is set to a value greater than 8 characters.

**System action:**  The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:**  Change the SET statement so that the value for the read/write variable is 8 characters or less in length.

**Source:**  DFSMSdfp
**Routing Code:**  2
**Descriptor Code:**  4

**IGD03227I**  SET STATEMENT NOT ENCOUNTERED IN ACS ROUTINE

**Explanation:**  A SET statement does not appear in the ACS routine.

**System action:**  The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:**  Add a SET statement to the ACS routine source.

**Source:**  DFSMSdfp
**Routing Code:**  2
**Descriptor Code:**  4

**IGD03228I**  INVALID SETTING OF STORAGE GROUP - CANNOT BE NULL

**Explanation:**  In an ACS routine, storage group is assigned a null value.

**System action:**  The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

**Application Programmer Response:**  Change the assignment of storage group so it is no longer null.

**Source:**  DFSMSdfp
**Routing Code:**  2
**Descriptor Code:**  4
Explanation: In an ACS routine, a read/only variable is subscripted in a SET statement; read/only variables cannot be subscripted. Refer to the z/OS DFSMS OAM Planning, Installation, and Storage Administration Guide for Tape Libraries for valid assignment values for the SET statement.

System action: The system notes the error in the output listing, and continues checking the syntax of the ACS routine. However, the system will not produce the object table, so the translation will fail.

Application Programmer Response: Correct the assignment on the SET statement in the ACS routine source.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

Explanation: An unexpected error occurred in catalog processing while attempting to locate a data set. The error may have occurred if an attempt was made to create a control volume (CVOL) environment as DYNAMIC or to access an existing CVOL as DYNAMIC.

In the message text:

dname
The data set name.

System action: The system ends the request.

Application Programmer Response: Do one of the following:

• If there is no need for the JOBCAT and/or STEPCAT DD statement(s), remove them and resubmit the job.
• If a JOBCAT DD statement is specified, remove it and insert STEPCAT DD statements only on the required steps. Then resubmit the job.
• If a STEPCAT DD statement is necessary, then divide the step into several steps so the steps that do reference SMS managed data sets do not contain a STEPCAT DD statement. Then resubmit the job.
• Make sure all referenced ICF catalogs are connected to the system master catalog.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

Explanation: The catalog entry indicates that a data set is not SMS-managed, but an SMS managed volume serial was specified.

In the message text:

dname
The data set name.

System action: The system ends the request.

Application Programmer Response: Do one of the following:

• Remove the VOL=SER in your JCL, and resubmit the job.
• Specify the correct VOL=SER in your JCL, and resubmit the job.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

Explanation: The data set is an SMS managed data set that is referenced in either:
• a step containing a STEPCAT;
• both a job containing a JOBCAT and a step containing a STEPCAT.

In the message text:

dname
The data set name.

System action: The system ends the request.

Application Programmer Response: Do one of the following:

• Remove the VOL=SER in your JCL, and resubmit the job.
• Specify the correct VOL=SER in your JCL, and resubmit the job.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

Explanation: The system attempted to allocate a data
set on a DASD volume and on a tape volume that resides in a system-managed tape library. Mixed media types are not allowed for a single data set. If more than two volumes are involved, the system issues a message only for the first error that is detected.

In the message text:

\[ \text{ser1} \quad \text{A volume serial specified for the data set} \]
\[ \text{ser2} \quad \text{A volume serial specified for the data set} \]
\[ \text{dsname} \quad \text{The data set name} \]

**System action:** The system fails the job.

**Application Programmer Response:** If the volume serials are specified incorrectly, then correct the specification. If the volume serials are correct, then contact the tape librarian to eject the tape volume(s) from the system-managed tape library.

**Source:** Storage Management Subsystem (SMS)

**Detecting Module:** IGDCAT01

**Routing Code:** 2

**Descriptor Code:** 4

---

\[ \text{IGD04008I} \quad \text{VOLUME ser1 IS DASD AND VOLUME ser2 IS NOT FOR DATA SET dsname} \]

**Explanation:** The system attempted to allocate a data set on a DASD volume and on a volume that is either offline or non-DASD (neither DASD nor a library resident tape volume). Offline volumes cannot be allocated, and mixed media types are not allowed for a single data set. If more than two volumes are involved, the system issues a message only for the first error that is detected.

In the message text:

\[ \text{ser1} \quad \text{A volume serial specified for the data set} \]
\[ \text{ser2} \quad \text{A volume serial specified for the data set} \]
\[ \text{dsname} \quad \text{The data set name} \]

**System action:** The system fails the job.

**Application Programmer Response:** If the volume serials are specified incorrectly, then correct the specification. If the volume serials are correct, then contact the tape librarian to eject the tape volume(s) from the system-managed tape library.

**Source:** Storage Management Subsystem (SMS)

**Detecting Module:** IGDCAT01

**Routing Code:** 2

**Descriptor Code:** 4

---

\[ \text{IGD04009I} \quad \text{VOLUME ser1 IS IN A TAPE LIBRARY AND VOLUME ser2 IS NOT FOR DATA SET dsname} \]

**Explanation:** The system attempted to allocate a data set on one volume that is a library resident tape and one volume that is not a library resident tape. If the first volume in the list is in a tape library, then this message is issued as an attention only. The system allows the allocation to proceed and invokes the Volume not in Library installation exit to resolve the inconsistency.

If the first volume is not in a tape library and a subsequent volume is found to reside in a tape library, this is an error condition and the system fails the allocation.

In the message text:

\[ \text{ser1} \quad \text{A volume serial specified for the data set} \]
\[ \text{ser2} \quad \text{A volume serial specified for the data set} \]
\[ \text{dsname} \quad \text{The data set name} \]

**System action:** If the first volume is in a tape library, the allocation might be successful, if the Volume not in Library installation exit can resolve the inconsistency. Otherwise, the system fails the allocation.

**User response:** If the allocation is successful, ignore the message. Otherwise, if the volume serials are specified incorrectly, then correct the specification. If the volume serials are correct, then contact the tape librarian to either eject the library resident tape volume(s) from the library or enter the non-library resident volume(s) in the library.

**Source:** Storage Management Subsystem (SMS)

**Detecting Module:** IGDCAT01

**Routing Code:** 2

**Descriptor Code:** 4

---

\[ \text{IGD04010I} \quad \text{VOLUME ser1 IS SMS-MANAGED AND VOLUME ser2 IS NOT FOR DATA SET dsname. THE TWO CANNOT BE MIXED} \]

**Explanation:** The system attempted to allocate a data set on a Storage Management Subsystem (SMS)-managed DASD volume and on a non-SMS-managed DASD volume. A mixture of SMS-managed and non-SMS-managed volumes is not allowed for a single data set. If more than two volumes are involved, the system issues a message only for the first error that is detected.

In the message text:

\[ \text{ser1} \quad \text{A volume serial specified for the data set} \]

**Source:** Storage Management Subsystem (SMS)

**Detecting Module:** IGDCAT01

**Routing Code:** 2

**Descriptor Code:** 4
A volume serial specified for the data set

The data set name

System action: The system fails the job.

Application Programmer Response: If the volume
serials are specified incorrectly, then correct the
specification. If the volume serials are correct, then
contact your storage administrator to make all the
volumes either SMS-managed or non-SMS-managed.

System programmer response: Same as
Programmer Response.

IGD06030I THE STORAGE GROUP ACS ROUTINE SETS A DUPLICATE VALUE nnn

Explanation: Duplicate storage group name detected in Storage Group name list set by the ACS routine.

In the message text:

nnn The duplicate construct name.

System action: The CDS validation fails.

Application Programmer Response: Correct the storage group ACS routine and re-validate.

Source: Data Facility Product (DFSMS)
Detecting Module: IGDCSVAL
IGD06031I  DATA SET SEPARATION PROFILE dsn  
(COULD NOT BE ACCESSED. SMS 
RETURN CODE rc  func  REASON CODE  
rsn.  I CONTAINED A SYNTAX ERROR 
ON LINE line  POSITION pos.)

Explanation:  This message is generated during SMS 
source control data set (SCDS) validation. The control 
data set specified a data set separation profile that 
could not be accessed or that failed syntax checking.

In the message text:

dsn  The name of the data set separation 
profile
rc  The 4-byte return code, in hexadecimal
func  The name of the function that detected the error
rsn  The 4-byte function reason code, in hexadecimal
line  The number of the line in the 
separation profile that contained the 
syntax error
pos  The character position within the line 
where the syntax error was detected

System action:  The configuration is marked not valid.

Operator response:  None

System programmer response:  Correct the condition 
and revalidate the configuration. For profile access 
failures, make sure that the data set is cataloged and 
that the SCDS base configuration contains the correct 
data set profile name. A profile that reports a syntax 
error or an access error with SMS as the function 
detecting the error indicates that the profile has been 
modified without validation. Run SCDS validation and 
reactivate the configuration. If the error persists after 
successful validation, contact the IBM Support Center 
and report the error.

IGD06121I  THE SPECIFIED DEFAULT 
MANAGEMENT CLASS mcname DOES 
NOT EXIST IN THE CONFIGURATION

Explanation:  The default management class was 
specified in the base configuration information, but does 
not exist in the configuration.

In the message text:

mcname  The default management class.

System action:  The system continues processing.

Application Programmer Response:  Define the 
indicated management class, or specify an existing 
management class as the default management class.

Source:  DFSMSdfp
Routing Code:  2
Descriptor Code:  4

IGD06122I  STORAGE GROUP sgname HAS NO 
VOLUMES

Explanation:  There are no volumes in the 
configuration that belong to the POOL or DUMMY type 
storage group. However, every POOL or DUMMY type 
storage group defined in the configuration must have at 
least one volume.

In the message text:

sgname  The storage group name.

System action:  The system continues processing.

Application Programmer Response:  Do one of the 
following:

- Add to the configuration volumes that belong to 
sgname.
- Change the storage group of an existing volume 
already in the configuration.
- Change the storage group type to VIO.
- Delete the storage group.

Source:  DFSMSdfp
Routing Code:  2
Descriptor Code:  4

IGD06124I  STORAGE GROUP sgname POINTS TO 
AN UNDEFINED LIBRARY libname

Explanation:  The definition of the specified storage 
group contains a library name that is not associated 
with any of the library definitions in the source control 
data set (SCDS).

sgname  The specified object, object backup or tape 
storage group name.

libname  The undefined library name.
The specified optical or system-managed tape library name.

**System action:** The system marks the CDS as invalid. This CDS cannot be

**Operator response:** Contact the storage administrator.

**Application Programmer Response:** Contact the storage administrator.

**System programmer response:** The storage administrator should do the following.
1. If the specified library should be in the storage group, then add the library to the SCDS through the ISMF panels.
2. If the specified library should not be associated with the storage group, then use Interactive Storage Management Facility (ISMF) panels to delete the library from the storage group.

---

**IGD06125I** STORAGE GROUP **sgname** CANNOT HAVE BOTH REAL AND PSEUDO LIBRARIES

**Explanation:** A storage group **sgname** is associated with both real and pseudo libraries. The specified storage group can be associated with either real libraries or a pseudo library, but not both.

In the message text:

**sgname** The specified storage group name.

**System action:** The system marks the control data set (CDS) as incorrect. This CDS cannot be activated until the problem is corrected.

**Operator response:** Contact the storage administrator.

**Application Programmer Response:** The storage administrator should do one of the following:

- If the specified storage group was meant to be connected only to real libraries, then use the interactive storage management facility (ISMF) panels to delete the pseudo library from that storage group.
- If the pseudo library does not belong in the save control data set (SCDS), then delete the pseudo library definition from that storage group.
- If the specified storage group was meant to be connected only to the pseudo library, then delete the real libraries from that storage group.
- If one or more of the real libraries does not belong in the SCDS, then delete the real library definition(s).

IGD06135I  ONLY ONE OBJECT BACKUP STORAGE GROUP IS ALLOWED PER SYSTEM

Explanation: The control data set (CDS) being validated contains a base configuration with a system to which there is attached more than one object backup storage group.

System action: The system marks the CDS as incorrect. This CDS cannot be activated until the problem is corrected.

Operator response: Contact the storage administrator.

Application Programmer Response: The storage administrator should do the following:
1. Identify the object backup storage groups in the CDS, and identify which system each one is attached to.
2. Identify which object backup storage groups are attached to the same system.
3. Alter the system connectivity of these storage groups so that each object backup storage group is connected only to a single system.
4. Delete extra object backup storage groups, if necessary.

Chapter 13. IGD messages 553
IGD06138I  AN OBJECT OR OBJECT BACKUP STORAGE GROUP sname CANNOT REFERENCE A TAPE LIBRARY libname

Explanation:  An object or object backup storage group referenced a system-managed tape library, but it can only reference an optical library. The system issued a validation CDS error.

-sname
   The specified storage group name.

-libname
   The specified system-managed tape library name.

System action:  The system marks the CDS as not valid. You must correct the problem before this CDS can be activated.

Operator response:  Contact the storage administrator.

System programmer response:  The storage administrator should do the following if the specified tape library is in a object or object backup storage group:
1.  Delete the tape library from the configuration.
2.  Add an optical library to configuration to associate with the object or object backup storage group.

**IGD06202I**  
**STORAGE GROUP** `sgname1`  
**INCORRECTLY SPECIFIES EXTEND STORAGE GROUP NAME** `sgname2`  

**Explanation:** This message is generated during SMS source control data set (SCDS) validation. Either the referenced storage group `sgname2` does not exist in the configuration, or one of the storage groups (`sgname1` or `sgname2`) is not a pool storage group.

In the message text:

- `sgname1` The name of the storage group that contains the reference
- `sgname2` The referenced storage group name

**System action:** The configuration is marked not valid.

**Operator response:** None

**System programmer response:** Verify that `sgname2` is defined in the configuration and that both `sgname1` and `sgname2` are pool storage groups. Correct the condition and revalidate the configuration.

**Source:** Storage Management Subsystem (DFSMS)

---

**IGD06203I**  
**STORAGE GROUP** `sg1`  
**INCORRECTLY SPECIFIES COPY POOL BACKUP STORAGE GROUP NAME** `sg2`  

**Explanation:** The storage management subsystem (SMS) issues this message during validation of its source control data set (SCDS). A pool storage group incorrectly references a copy pool backup storage group, as follows:

- The referenced copy pool backup storage group was not found.
- The referenced copy pool backup storage group is not defined as a copy pool backup storage group type.

In the message text:

- `sg1` The name of the pool storage group that contains the error.
- `sg2` The name of the referenced storage group.

**System action:** The SCDS is invalid. Processing continues.

**Operator response:** None

**Application Programmer Response:** Correct the name of the copy pool backup storage group in the failing pool storage group and revalidate the SMS SCDS.

**System programmer response:** None

**Problem determination:** None

**Source:** Storage management subsystem (SMS)

**Detecting Module:** IGDCSVAL

System 25 = sysname System 26 = sysname System 27 = sysname
System 28 = sysname System 29 = sysname System 30 = sysname
System 31 = sysname System 32 = sysname

The storage management subsystem determined that no system could run the job because the SMS managed resources that the job requires are not all defined to one common system.

In the message text:

- **lin** A line number.
- **sysname** A system in the current active configuration. Up to 32 systems may appear in the display, each represented by its own system name.
- **volser** The volume serial of an SMS managed volume that contains a resource required by the job. There is one volume serial entry for each SMS managed volume required by the job. Each volume serial entry is preceded by ‘VOL’ in the TYPE column.
- **sgname** A storage group required by the job to allocate a new data set. If the job requires a storage group that is not part of a storage group candidate list (SGCL), the storage group name entry for that storage group is preceded by ‘SG’ in the TYPE column.

However, if the job requires one storage group that is part of an SGCL, that SGCL appears in the display. The first storage group name entry for the SGCL is preceded by ‘SGCL’ in the TYPE column. A total of 15 storage group name entries may appear for an SGCL; on the line after the last entry, ‘SGCLE’ appears in the TYPE column.

- **c** An indication of whether a system can access the SMS managed resource, as follows:
  - ‘E’ if the system is eligible to access the SMS managed resource. In this case, the resource is defined to the system, and has a storage management subsystem status of ‘ENABLE’, ‘QUIESCED’, ‘QUIESCE (NEW)’, ‘DISABLE’, or ‘DISABLE (NEW)’.
  - ‘N’ if the system is not eligible to access the SMS managed resource. In this case, the resource is not defined to the system.

If the job requires one storage group in a storage group candidate list, check the display line with the ‘SGCLE’ for that candidate list. If a system has an ‘E’ on that line, it has access to the required storage group.

**System action:** The system ends the job.

**Application Programmer Response:** Make sure that all the storage groups required by the job are defined to at least one of the systems in the active configuration. Then you can resubmit the job.

**Source:** DFSMSdfp

---

**IGD16002I** REFERENCING DATA SET dsname IS NOT CATALOGED

**Explanation:** The referencing data set should be an existing SMS managed data set because it refers to an SMS managed data set. All existing SMS managed data sets must be cataloged, but the indicated data set is not.

In the message text:

- **dsname** The data set name.

**System action:** The allocation fails.
**Application Programmer Response:** If you don't need to refer to a storage management subsystem data set, then refer to a non-SMS data set when you resubmit the allocation. Otherwise, determine why `dsnname` is not cataloged, and catalog it before resubmitting the allocation.

**Source:** DFSMSdfp  
**Routing Code:** 2  
**Descriptor Code:** 4

---

**IGD16003I**  
**Non-SMS managed data set `dsn1` referenced SMS managed data set `dsn2`**

**Explanation:** Non-SMS managed data sets cannot refer to SMS managed data sets. However, `dsn1` referred to SMS managed `dsn2`.

**System action:** The allocation fails.

**Application Programmer Response:** If you don't need to refer to an SMS managed data set, then refer to a non-SMS managed data set when you resubmit the allocation. Otherwise, if you want to refer to `dsn2`, change `dsn1` to an SMS managed data set before you resubmit the allocation.

**Routing Code:** 2  
**Descriptor Code:** 4

---

**IGD17001I**  
**Duplicate data set name on volume `volser` for data set `dsnname`**

**Explanation:** The data set could not be created on the specified volume because a data set with the same name already exists on that volume. Duplicate data set names cannot exist on a single volume, whether it is SMS managed or not SMS managed.

In the message text:

- `volser` The volume serial number.
- `dsnname` The data set name.

**System action:** If the `volser` is not SMS managed, the allocation fails. If a non-SMS data set is to be created with UNIT=SYSDA and no specified VOLSER, and there is multiple DASD mounted STORAGE with at least volume containing a non-cataloged version of the data set, the system will then choose another volume and allocation will not fail. If the `volser` is SMS managed, although `volser` was not selected, the allocation continues.

**Application Programmer Response:** Determine why the data set already exists on the volume. Then either delete the data set from that volume, or change the name of the data set. If the volume is not SMS managed, you may also select a different volume.

**Source:** DFSMSdfp  
**Routing Code:** 2  
**Descriptor Code:** 4

**IGD17002I**  
**No room in VTOC or VTOC index on volume `volser` for data set `dsnname`**

**Explanation:** While trying to create a data set, DADSM indicated to SMS VTOC data set services that the VTOC or VTOC index on the volume is full.

In the message text:

- `volser` The volume serial number.
- `dsnname` The data set name.

**System action:** Although the volume was not selected, volume selection continues.

**Application Programmer Response:** Reorganize the VTOC or VTOC index on the indicated volume.

**Source:** DFSMSdfp  
**Routing Code:** 2  
**Descriptor Code:** 4
IGD17003I  PERMANENT I/O ERROR ON VOLUME volser FOR DATA SET dsn HISTORIC RETURN CODE IS rc DADSM DIAGNOSTIC INFORMATION IS cde

Explanation: An I/O error occurred on a volume while the data set was being deleted or renamed.

In the message text:

volser  The volume serial number.
dsn     The data set name.
rc      The return code.
cde     Diagnostic information.

System action: The delete or rename request fails, and the system writes a record describing the error to the logrec data set.

Application Programmer Response: Use the record in the logrec data set, the return code, and the diagnostic information to determine the error. Use z/OS DFSMSdfp Diagnosis to determine the meaning of the DADSM historic return code and the diagnostic information.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD17004I  NOT ENOUGH SPACE FOR PDS DIRECTORY ON VOLUME vol FOR DATA SET dsn

Explanation: The volume listed in the message did not have enough space in the first extent to contain the directory. The problem was probably caused by extensive fragmentation. The system will select another volume and will retry the allocation request.

In the message text:

vol    The volume serial number.
dsn    The data set name.
rc     The return code.
cde    Diagnostic information.

System action: Processing continues.

Application Programmer Response: This is an informational message only. No action is required.

System programmer response: The volume listed in the message is probably heavily fragmented. You may wish to defrag this volume.

IGD17006I  AVERAGE RECORD LENGTH VALUE EXCEEDS 65535 BYTES FOR DATA SET dsn

Explanation: The average record length specified for the space allocation of the data set exceeds the allowable maximum, which is 65535 bytes.

In the message text:

dsn     The data set name.

System action: The define request for dsn fails.

Application Programmer Response: Correct the average block length that you specified in either the JCL or the data class. Then resubmit the request.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD17012I  USER NOT AUTHORIZED TO DEFINE DATA SET dsn DADSM HISTORIC RETURN CODE IS rc DADSM DIAGNOSTIC INFORMATION IS cde

Explanation: DADSM determined one of the following:

• The user is not authorized to create the data set specified.
• The data set requires a discreet RACF profile, but RACF is not active.

In the message text:

dsn     The data set name.
rc      The return code.
cde     Diagnostic information.

System action: The define request fails.

Application Programmer Response: Use z/OS DFSMSdfp Diagnosis to determine the meaning of the DADSM historic return code and the DADSM diagnostic information. If the return code and the diagnostic information indicate that the user is unauthorized to create the data set, then alter the user's RACF profile to grant authorization. Otherwise, remove the automatic data set protection characteristic from the user's profile.

**Descriptor Code:** 4
IGD17051I ALLOCATION FAILED FOR DATA SET 
dsname, PRIMARY SPACE EXCEEDS 65535 TRKS

Explanation: During allocation of the specified data set, the primary space allocation exceeded the maximum, which is 65,535 tracks.

Note: Some types of data sets are limited to 65,535 total tracks allocated on any one volume. For such data sets, if more than 65,535 total tracks on the target DASD device are required to satisfy the primary space request, the data set creation will fail.

If a secondary space allocation would result in more than 65,535 total tracks allocated on this volume for such a data set the secondary allocation will fail on this volume, and the system will try on another volume if the volume count in the data class or on the DD statement allows another volume.

Types of data sets which are not limited to 65,535 total tracks allocated on any one volume are:
• Extended format sequential
• HFS
• PDSE
• VSAM

In the message text:

dsname The specified data set name.

System action: The SMS VTOC Data Set Services request fails.

User response: Specify a smaller primary space quantity.

Application Programmer Response: Reduce the amount of primary space and resubmit the job.

DATA SET *dsname* IS ELIGIBLE FOR COMPRESSION

Explanation: SMS VTOC data set services has determined that the data set *dsname* is eligible for compression.

**System action:** The system continues processing.

**Source:** Storage management subsystem (SMS)

Routing Code: 2

Descriptor Code: 4

---

**IGD17162I**

RETURN CODE (rc) REASON CODE (rsnc) RECEIVED FROM COMPRESSION SERVICES WHILE PROCESSING DATA SET *dsname*, COMPRESSION REQUEST NOT HONORED BECAUSE DATA SET CHARACTERISTICS DO NOT MEET COMPRESSION CRITERIA, ALLOCATION CONTINUES

Explanation: During creation of SMS-managed data set *dsname*, SMS VTOC data set services called compression services to determine whether the compression attribute is warranted. Compression services indicated that the data set characteristics did not satisfy compression criteria.

In the message text:

**rc** The compression services return code.

**rsnc** The compression services reason code.

**dsname** The specified data set.

**System action:** The system ignores the compression request and continues processing.

**Application Programmer Response:** Correct the data set so that the characteristics match those required for compression.

**Source:** Storage management subsystem (SMS)

Routing Code: 2

Descriptor Code: 4

---

**IGD17163I**

COMPRESSION REQUEST NOT HONORED FOR DATA SET *dsname* BECAUSE DATA SET CHARACTERISTICS DO NOT MEET COMPRESSION CRITERIA, ALLOCATION CONTINUES

Explanation: During creation of data set *dsname*, SMS VTOC data set services determines that data set *dsname* does not meet compression criteria and becomes ineligible for compression. Note that this determination was not made by compression services but by SMS for one of the following reasons:

- The data set is not in extended format, which is required for compression
- The data set is a VSAM extend format data set, but not in key-sequenced
- The data set is an AIX, which cannot be compressed
- The data set is a temporary data set
- The data set is an uncataloged data set

**System action:** The system ignores the compression request and continues processing.

**Application Programmer Response:** If the data set does not need to be compressed, no action is
necessary. If the data set must be compressed, then ensure that the data set characteristics meet compression criteria, delete the allocated data set and resubmit the request.

**Source:** Storage management subsystem (SMS)

**Routing Code:** 2

**Descriptor Code:** 4

---

**IGD17164I**  
COMPRESSION REQUEST NOT HONORED BY CATALOG FOR DATA SET dsname, CATALOG RETURN CODE IS (rc) REASON CODE IS (rsnc), ALLOCATION CONTINUES

**Explanation:** During creation of data set dsname, catalog management determined that the data set is not eligible for compression.

In the message text:

- **dsname** The specified data set.
- **rc** The catalog management return code.
- **rsnc** The catalog management reason code.

**System action:** The system ignores the compression request and continues processing.

**Application Programmer Response:** If the data set does not need to be compression, no action is required. If the data set must be compressed, then ensure that the data set characteristics meet compression criteria, delete the allocated data set and resubmit the request.

**IGD17201I**

```
{DATA CLASS dcname|MANAGEMENT CLASS mcname|STORAGE CLASS scname|STORAGE GROUP sname|VOLUME volser|CNSPL}
DEFINITION NOT FOUND FOR DSN SET dsn
```

Explanation: SMS construct access services indicated that one of the following constructs for the data set does not exist in the active configuration or the active configuration is a null configuration. When migrating to a new release for the first time, make sure the SCDS is not null by activating a valid SCDS via the SETSMS command or via ISMF option.

- data class dcname
- management class mcname
- storage class scname
- storage group sname

In the message text:

- `dcname` The data class.
- `mcname` The management class.
- `scname` The storage class.
- `sname` The storage group name.
- `volser` The volume serial number.
- `dsn` The data set name.

System action: The SMS VTOC data set services request fails. Also, the system writes a record describing the error to the logrec data set.

Application Programmer Response: If you explicitly specified the construct, make sure your specification is correct and resubmit the job. Otherwise, if the construct was supplied by the ACS routines, you may have to modify those routines.

```
UNEXPECTED RETURN CODE FROM CONSTRUCT ACCESS SERVICES FOR DATA SET dsn RETURN CODE IS rc
```

Explanation: While processing a request involving the data set, SMS construct access services returned an unexpected return code to SMS VTOC data set services.

In the message text:

- `dsn` The data set name.
- `rc` The return code.

System action: The SMS VTOC data set services request fails. Also, the system writes a record describing the error to the logrec data set.

Application Programmer Response: Use the information in the logrec data set to determine the error. Refer to [z/OS DFSMSdtp Diagnosis] for the meaning of the construct access services return code.

Source: DFSMSdtp
Routing Code: 2
Descriptor Code: 4
IGD17204I UNABLE TO ENQUEUE ON DATA SET
dsname ENQUEUE RETURN CODE IS rc
ENQUEUE REASON CODE IS rsnc

Explanation: SMS VTOC data set services is attempting to convert a VIO data set to a real data set. The functions required for this conversion include updating the DSENQ table and issuing an ENQ for the data set. These functions cannot be completed for the reason indicated by the return and reason codes.

In the message text:

dsname  The data set name.
rc     The return code.
rsnc   The reason code.

System action: The SMS VTOC data set services allocation request fails. Also, the system writes to the logrec data set a record describing the error.

Application Programmer Response: Use the logrec data set, the return code and the reason code to determine the error. The ENQ macro is documented in z/OS MVS Programming: Authorized Assembler Services Reference EDT-IXG If you still cannot fix the error, contact your programming support personnel.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD17205I VOLUMES SPECIFIED ARE NOT IN THE SAME STORAGE GROUP FOR A GUARANTEED SPACE REQUEST FOR DATA SET dsname

Explanation: In a guaranteed space request for a data set, the caller selected specific volumes, and selected a storage class with the guaranteed space attribute; therefore, the specific volumes must be honored. However, not all of the specified volumes are in the same storage group.

In the message text:

dsname  The data set name.

System action: The SMS VTOC data set services request fails.

Application Programmer Response: Change the request so that all volumes specified are in the same storage group; then rerun the job.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD17206I VOLUME SELECTION HAS FAILED - THERE ARE NOT ENOUGH VOLUMES WITH SUFFICIENT SPACE FOR DATA SET dsname

Explanation: A space request for a data set failed because:
- No accessible volumes had sufficient space to satisfy the single-volume request.
- Not enough accessible volumes had sufficient space to satisfy the multi-volume request.
- In the guaranteed space request for data set dsname, the specified volume does not belong to any of the storage groups that the storage class mapped.
- No duplex volumes were available.

A volume is accessible if all of the following are true:
- The storage group that contains the volume is enabled to the system;
- The volume itself is enabled to SMS; and
- The volume itself is online to MVS.

In the message text:

dsname  The data set name.

System action: The request fails.

Application Programmer Response: Resubmit the request, specifying less space than before. If you still get this error message, then determine which storage class and storage group were used for the request, and check the amount of available space on all volumes in the storage group. Then either force the selection of another storage class, or make more space available on the volumes within the selected storage group.

If the problem cannot be determined, run the job again and request a dump immediately after the failure. Contact the IBM Support Center and provide the dump.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD17207I VOLUME SELECTION HAS FAILED - THERE ARE NO ACCESSIBLE VOLUMES FOR DATA SET dsname

Explanation: There are no volumes for which all of the following are true:
- The storage group that contains the volume is enabled to the system;
- The volume itself is enabled to SMS; and
- The volume itself is online to MVS.

In the message text:

dsname  The data set name.

System action: The request fails.
Application Programmer Response: Determine the status of all storage groups and volumes used for this request. You may need to enable some storage groups or bring some volumes online.

*dsname*  
The data set name

**System action:** The SMS VTOC Data Set Services request fails.

**Application Programmer Response:** One reason for the request to fail could be that the volume being allocated was offline. Contact your system programmer for assistance.

**Source:** Data Facility Product (DFSMS)

**Routing Code:** 2  
**Descriptor Code:** 4

---

**IGD17235I**  THE VSAM EOV DELETE VOLUME REQUEST FOR DATA SET *(dsname COULD NOT BE COMPLETED BECAUSE THE VOLUME (volser) PROVIDED TO SMS WAS INCONSISTENT WITH THE JFCB SUPPLIED)*

**Explanation:** The volume to be deleted must be the last volser in the JFCB or JFCB extension.

In the message text:

*dsname*  
The data set name

*volser*  
The volume serial number

**System action:** The SMS VTOC Data Set Services request fails.

**Application Programmer Response:** This is a system error. Contact your system programmer.

**Source:** Data Facility Product (DFSMS)

**Routing Code:** 2  
**Descriptor Code:** 4
THE VSAM EOV DELETE VOLUME REQUEST FOR DATA SET (dsname) COULD NOT BE COMPLETED BECAUSE THE VOLUME DEALLOCATION FAILED

**Explanation:** SMS called MVS Allocation to deallocate the volume provided by the caller. This deallocation request failed. This message will be accompanied by another message that will explain in greater detail why the volume deallocation failed.

In the message text:

*dsname*  
The data set name

**System action:** The SMS VTOC Data Set Services request fails.

**Application Programmer Response:** This is a system error. Contact your system programmer.

**Source:** Data Facility Product (DFSMS)

---

THE VSAM EOV SYNCHRONIZATION REQUEST FOR DATA SET (dsname) COMPLETED SUCCESSFULLY WITH NO ACTION TAKEN BECAUSE THE DATA SET WAS ALREADY SYNCHRONIZED.

**Explanation:** There was no need for SMS to take any action since the BCS entry for this data set and the JFCB/TIOT reflect the same information pertaining to the volumes that this data set occupies.

In the message text:

*dsname*  
The data set name

**System action:** Processing continues. This is an informational message.

**Application Programmer Response:** No action required.

**Source:** Data Facility Product (DFSMS)

---

THE VSAM EOV DELETE VOLUME REQUEST FOR DATA SET (dsname) COULD NOT BE COMPLETED BECAUSE THE CALL TO ALLOCATION TO UPDATE THE TIOT FAILED

**Explanation:** SMS called MVS Allocation to update the last real UCB entry in the TIOT. This call failed. This message will be accompanied by another message that will explain in greater detail why the call to MVS failed.

In the message text:

*dsname*  
The data set name

**System action:** The SMS VTOC Data Set Services request fails.

**Application Programmer Response:** This is a system error. Contact your system programmer.

**Source:** Data Facility Product (DFSMS)

---

THE VSAM EOV SYNCHRONIZATION REQUEST FOR DATA SET (dsname) COULD NOT BE COMPLETED BECAUSE THE CALL TO ALLOCATION TO UPDATE THE TIOT FAILED

**Explanation:** SMS called MVS Allocation to update the first dummy UCB entry in the TIOT. This call failed. This message will be accompanied by another message that will explain in greater detail why the call to MVS failed.

In the message text:

*dsname*  
The data set name

**System action:** The SMS VTOC Data Set Services request fails.

**Application Programmer Response:** This is a system error. Contact your system programmer.

**Source:** Data Facility Product (DFSMS)

---

THE VSAM EOV DELETE VOLUME REQUEST FOR DATA SET (dsname) COULD NOT BE COMPLETED BECAUSE THE CALL TO ALLOCATION TO COUNT THE NUMBER OF REAL UCB ENTRIES IN THE TIOT FAILED

**Explanation:** SMS called MVS Allocation to return a count of the number of real UCBs in the associated TIOT. This all failed. This message will be accompanied by another message that will explain in greater detail why the call to MVS failed.

**System action:** The SMS VTOC Data Set Services request fails.

**Application Programmer Response:** This is a system error. Contact your system programmer.

**Source:** Data Facility Product (DFSMS)

---

THE VSAM EOV EXTEND REQUEST FOR DATA SET (DSN) FAILED BECAUSE A VOLUME (VOLSER) WAS PROVIDED TO SMS FOR NON-GUARANTEED SPACE REQUEST

**Explanation:**

**System action:** The SMS VTOC Data Set Services request fails.

**Application Programmer Response:** This is a system error. Contact your system programmer.

**Source:** Data Facility Product (DFSMS)
Explanation: The VSAM EOV extend request should not provide a specific volume when the storage class associated with the data set does not have the guaranteed space attribute specified.

In the message text:

dsname  
The data set name
volser  
The volume serial number

System action: The SMS VTOC Data Set Services request fails.

Application Programmer Response: Remove the specific candidate volumes of the data set and then use the AMS ALTER ADDVOL command to add the non-specific volumes.

Source: Data Facility Product (DFSMs)

---

IGD17250I  THE VSAM EOV SYNCHRONIZATION/DELETE REQUEST FOR DATA SET (dsn) COULD NOT BE COMPLETED BECAUSE AN ERROR WAS ENCOUNTERED IN ATTEMPTING TO GET THE JFCB

Explanation: SMS VTOC data set service was unable to get the JFCB when processing the VSAM EOV synchronization or delete request.

In the message text:

dsname  
The data set name

System action: The SMS VTOC Data Set Services request fails.

Application Programmer Response: This is a system error. Contact your system programmer.

Source: Data Facility Product (DFSMs)

---

IGD17261I  DATA SET dsname NOT ALLOCATED BECAUSE {STORAGE GROUP sgnamel/VOLUME volser} NOT ENABLED

Explanation: An attempt to allocate an SMS managed data set failed because:

- The volume that the data set resides on is not enabled to the storage management subsystem on the system from which the request was made.
- The storage group that contains the data set's volume is not enabled to SMS.

In the message text:

dsname  
The data set name.
sgname  
The storage group name.
volser  
The volume serial number.

System action: The allocation fails.

Application Programmer Response: Determine whether the volume or the storage group needs to be enabled; you can enable either by using the VARY SMS command. Then try to allocate the data set again.

Source: DFSMSdfp

Routing Code: 2
Descriptor Code: 4

---

IGD17262I  VOLUME volser COULD NOT BE ALLOCATED FOR DATA SET dsn

ALLOCATION RETURN CODE IS rc
ALLOCATION REASON CODE IS rsnc

Explanation: While trying to allocate the device associated with the volume, SMS VTOC data set services received an unexpected return code from scheduler allocation.

In the message text:

volser  
The volume serial number.
dname  
The data set name.
sname  
The storage group name.
rc  
The return code.
rsnc  
The reason code.
The defined return codes, in decimal, are as follows:

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Request successful.</td>
</tr>
<tr>
<td>4</td>
<td>Error in input parameter list.</td>
</tr>
<tr>
<td>8</td>
<td>Error in UCB address.</td>
</tr>
<tr>
<td>12</td>
<td>ESTAE routine error.</td>
</tr>
<tr>
<td>16</td>
<td>Unable to set up ESTAE.</td>
</tr>
<tr>
<td>20</td>
<td>Authorization error (Unit Eligibility Service only).</td>
</tr>
</tbody>
</table>

Unit Eligibility Service reason codes, in decimal:

<table>
<thead>
<tr>
<th>Reason Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>UCB is eligible.</td>
</tr>
<tr>
<td>4</td>
<td>UCB is pending offline but would otherwise meet eligibility requirements.</td>
</tr>
<tr>
<td>8</td>
<td>UCB is not eligible.</td>
</tr>
<tr>
<td>12</td>
<td>UCN address is not valid.</td>
</tr>
</tbody>
</table>

Unit Allocation/Unallocation Interface Service reason codes:

<table>
<thead>
<tr>
<th>Reason Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Function performed successfully</td>
</tr>
<tr>
<td>*0</td>
<td>Any appropriate dynamic allocation error reason code.</td>
</tr>
</tbody>
</table>

**System action:** The SMS VTOC data set services create request fails. Also, the system writes a record describing the error to the logrec data set.

**Application Programmer Response:** Use the logrec data set, the return code and the reason code to determine the error.

**Source:** DFSMSdfp

**Routing Code:** 2

**Descriptor Code:** 4

---

**IGD17263I** INVALID VOLUME INCLUDE LIST SPECIFIED FOR CREATE OF DATA SET dsname

**Explanation:** SMS VTOC data set services was not able to allocate the data set because one of the volume serial numbers in the data set’s volume serial list is either blanks or null.

**System action:** The allocation of the data set fails.

**System programmer response:** Search problem reporting data bases for a fix for the problem. If no fix exists, contact the IBM Support Center.

**Source:** DFSMSdfp

---

**IGD17264I** VOLUME (vol) and UCB DO NOT MATCH FOR DATA SET dsname

**Explanation:** This message can only be issued during the allocation of an existing SMS-managed data set. Generally it indicates that the user has varied a volume offline and possibly re-initialized the volid and varied the device online. In a multi-system configuration this can result in a mismatch between the system UCB and the information in the SMS configuration.

**System action:** The SMS VTOC Data Set Services request fails.

**Application Programmer Response:** Correct the situation and resubmit the job.

**Source:** Data Facility Product (DFSMS)

---

**IGD17267I** THE FOLLOWING n CANDIDATE STORAGE GROUPS WERE INELIGIBLE FOR PREFERRED FAST REPLICATION BECAUSE THEY DID NOT HAVE A SUFFICIENT NUMBER (x) OF ELIGIBLE FAST REPLICATION VOLUMES: sg1,sg2,...

**Explanation:** This is a diagnostic message that is issued by SMS at the end of a successful allocation. The caller specified 'preferred' fast replication, but SMS was unable to satisfy fast replication requirement. This message provides a list of Storage Groups that were candidates for this allocation request, but did not have a sufficient number of eligible volumes to meet the number of requested volumes for fast replication.

**System action:** Processing continues.

**Application Programmer Response:** None. This is an informational message only.

**System programmer response:** This message may provide some information as to why this data set could not be allocated on fast replication volumes. You may need to modify the ACS routines or take other action to
make additional fast replication volumes available.

Source: Data Facility Product (DFSMS)

Explanation: This is an informational message that is issued, in conjunction with the IGD17269I message, in that very specific instance when the allocation request specified that fast replication was preferred, but this could not be honored because enough space could not be obtained on available fast replication volumes. The allocation was successful, but fast replication could not be satisfied. This message may be issued more than once for each request, depending on the 'reasons' for which volumes that are eligible for selection were not used for fast replication. It is to be used as a diagnostic tool to help determine why the fast replication request could not be honored. Refer to the ANTRQST section in z/OS DFSMS Advanced Copy Services for information on the QFRVOLS volume reason texts and volume reason code.

In the message text:

- **n**: The number of volumes
- **text**: Blank or RF-ELIGIBLE

**reason1**
Reason why these *n* volumes were rejected. The possible reasons are:
- THE SMS VOLUME STATUS WAS DISABLED
- THEY WERE NOT ONLINE
- THE UCB WAS NOT AVAILABLE
- OF (volume reason texts from ANTRQST QFRVOLS) - ANTRQST QFRVOLS VOLUME RSN (xxx)
- STORAGE GROUP HAS INSUFFICIENT FAST REPLICATION VOLUMES
- OF DADSM FAILURE (diagdata)
- THEY DID NOT SUPPORT THE AVAILABILITY REQUIREMENT
- THEY DID NOT SUPPORT THE ACCESSIBILITY REQUIREMENT
- THEY WERE NOT SPECIFIED ON A SPECIFIC GUARANTEED SPACE REQUEST
- THEY DID NOT SUPPORT THE EXTENDED FORMAT REQUIREMENT
- THEY DID NOT SUPPORT THE REQUEST FOR FIXED DASD (IART=0)
- THEY DID NOT HAVE SUFFICIENT SPACE (diagdata)

**reason2**
Reason why these *n* fast replication eligible volumes were not preferred. The possible reasons are:
- WERE ABOVE THRESHOLD AND LESS PREFERRED
- WERE IN QUIESCED STATUS AND LESS PREFERRED
- WERE IN OVERFLOW SG AND LESS PREFERRED
- DID NOT MEET PREFERRED SEPARATION CRITERIA
- WERE IN TIERED STORAGE GROUP SELECTION
- WERE SPACE EFFICIENT VOLUMES AND LESS PREFERRED

**reason3**
Reason why these *n* volumes were rejected. The possible reason is:
- OF (volume reason texts from ANTRQST QFRVOLS) - ANTRQST QFRVOLS VOLUME RSN (xxx)

Where xxx is the error reason code returned by ANTRQST.
Where:

diagdata
is the DADSM diagnostic code or OTHERS after 10 diagnostic codes have been displayed for a failure reason.

System action:  Processing continues.

Application Programmer Response:  None. This is an informational message only.

System programmer response:  This message may provide some information as to why this data set could not be allocated on fast replication volumes. You may need to modify the ACS routines or take other action to make additional fast replication volumes available.

Source:  Data Facility Product (DFSMS)

IGD17269I  (n) VOLUMES WERE REJECTED BECAUSE (reason)

Explanation:  This is an informational message that is issued, in conjunction with the IGD17268I message, in that very specific instance when the allocation request specified that fast replication was preferred, but this could not be honored because enough space could not be obtained on available fast replication volumes. The allocation was successful, but fast replication could not be satisfied. This message may be issued more than once for each request, depending on the 'reasons' for which volumes were rejected. This message is also issued in summarized volume selection analysis messages when creation or extension of an SMS-managed data set is successful.

In the message text:

n  The number of volumes

reason  Reason why these (n) volumes were rejected. The possible reasons are:

- OF DADSM FAILURE (diagdata)
- THE SMS VOLUME STATUS WAS DISABLED
- THE SMS STORAGE GROUP STATUS WAS DISABLED
- THEY WERE NOT ONLINE
- THEY DID NOT SUPPORT THE AVAILABILITY REQUIREMENT
- THEY DID NOT SUPPORT THE ACCESSIBILITY REQUIREMENT
- THEY WERE NOT SPECIFIED ON A SPECIFIC GUARANTEED SPACE REQUEST
- THEY DID NOT SUPPORT THE EXTENDED FORMAT REQUIREMENT
- THEY DID NOT SUPPORT THE REQUEST FOR FIXED DASD (IART=0)
- THEY DID NOT HAVE SUFFICIENT SPACE (diagdata)

Where:

diagdata
is the DADSM diagnostic code or OTHERS after 10 diagnostic codes have been displayed for a failure reason.

System action:  Processing continues.

Application Programmer Response:  None. This is an informational message only.

System programmer response:  This message may provide some information as to why this data set could not be allocated on fast replication volumes. You may need to modify the ACS routines or take other action to make additional fast replication volumes available. This message is issued in summarized volume selection analysis messages when creation or extension of an SMS-managed data set is successful.

Source:  Data Facility Product (DFSMS)
IGD17271I  ALLOCATION HAS BEEN ALLOWED TO PROCEED FOR DATA SET dsname 
ALTHOUGH VOLUME COUNT REQUIREMENTS COULD NOT BE MET

Explanation: A request was made to allocate a SMS-managed, non-virtual storage access method (VSAM), non-guaranteed-space data set. The volume count specified (or derived from the data class) is greater than the number of available online volumes in any of the storage groups that were selected.

In the message text:

dsname
The specified data set.

System action: The system continues the allocation process.

Application Programmer Response: If a multi-volume data set is required, either request that volumes be added to the storage group to which this volume belongs, or re-allocate this data set such that the storage group selected has a sufficient number of available online volumes.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD17272I  VOLUME SELECTION HAS FAILED FOR INSUFFICIENT SPACE FOR

DATA SET dsn
JOBNAME (jobname)
STEPNAME (stepname)
PROGNAME (progname)
DDNAME (ddname)
REQUESTED SPACE QUANTITY = nnnn (KB|MB)
STORCLAS (storage class)
MGMTCLAS (management class)
DATACLAS (data class)
STORGRPS (sg1 sg2 sg3 ... )

Explanation: At the time that SMS failed the allocation, this message was generated because one or more of the candidate volumes were rejected for not having enough space.

In the message text:

dsn
The data set name
jobname
The job name
stepname
The step name
progname
The program name
ddname
The data definition name
nnnn
The requested quantity of space, in kilobytes or megabytes
storage class
The assigned storage class
management class
The assigned management class
data class
The assigned data class

IGD17273I  ALLOCATION HAS FAILED FOR ALL VOLUMES SELECTED FOR DATA SET dsname

Explanation: In an SMS VTOC data set services request involving the data set, one or more volumes were specified, but could not be selected. Then volume selection was reentered until all eligible volumes were tried. DADSM may not have found enough space or the volume might not have been initialized as an SMS volume; otherwise, the reason for the error is indicated in a preceding message.

In the message text:

dsname
The data set name.

System action: The SMS VTOC data set services request fails. DADSM may reject the volume because it was not initialized or because there was not enough space.

Application Programmer Response: If DADSM could not find enough space, put additional volumes online in one of the eligible storage groups, and resubmit the request. Otherwise, refer to any preceding messages to determine the error.

If the problem cannot be determined, run the job again and request a dump immediately after the failure. Contact the IBM Support Center and provide the dump.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD17274I  VOLUMES SPECIFIED FOR A GUARANTEED SPACE REQUEST DO NOT BELONG TO AN ELIGIBLE STORAGE GROUP ALLOCATION FOR DATA SET dsname FAILED

Explanation: In the guaranteed space request for the data set, the specified volumes do not belong to any of the storage groups to which the storage class, assigned to the data set, mapped.
In the message text:

dsname
   The data set name.

System action:  The SMS VTOC data set services request fails.

Application Programmer Response:  Do one of the following:
• Specify another volume when you resubmit the request.
• Determine which storage group contains the volumes, and which storage classes that map that storage group. Then force the selection of one of those storage classes when you resubmit the request.

Source:  DFSMSdfp
Routing Code:  2
Descriptor Code:  4

**IGD17275I**  NO ELIGIBLE STORAGE GROUP HAS ENOUGH SPACE FOR BEST FIT REQUEST - ALLOCATION FOR DATA SET *dsname* FAILED

Explanation:  In a ‘best fit’ request for a data set, none of the selected storage groups have enough space.

In the message text:

dsname
   The data set name.

System action:  The SMS VTOC data set services request fails.

Application Programmer Response:  Do one of the following:
• Reduce the primary space requirement, and resubmit the request.
• Determine the amount of space required to satisfy the ‘best fit’ request, and which storage groups have that much space. Then force the selection of one of those storage groups when you resubmit the request.

Source:  DFSMSdfp
Routing Code:  2
Descriptor Code:  4

**IGD17276I**  THE DISP=MOD REQUEST BEING PROCESSED WILL INCREASE THE VOLUME COUNT TO MORE THAN 59 VOLUMES ALLOCATION FOR *dsname* FAILED

Explanation:  The DISP=MOD request being processed will result in a count of more than 59 volumes for a data set. The volume count for a data set cannot exceed the maximum of 59.

In the message text:

dsname
   The data set name.

System action:  The request fails. The volume count for *dsname* remains the same as it was prior to the processing of this request.

Application Programmer Response:  Check the JCL DD statement or the data class to make sure no more than 59 volumes are allocated to the data set when you resubmit the request. If you require more volumes, delete the data set and re-allocate it with corrected JCL.

Source:  DFSMSdfp
Routing Code:  2
Descriptor Code:  4

**IGD17277I**  THERE ARE (*w*) CANDIDATE VOLUMES OF WHICH (*x*) ARE ENABLED OR QUIESCED

Explanation:  This message indicates how many candidate volumes there were for a failing request, and the status of those volumes. The message appears in conjunction with message IGD17206I, IGD17207I, or IGD17273I.

In the message text:

* *w*  The number of volumes in all the storage groups that were selected by the ACS routines for the request.

*x*  The number of those volumes that are either enabled or quiesced, and therefore are eligible for selection.

System action:  The system continues processing.

Application Programmer Response:  Refer to message IGD17206I, IGD17207I, or IGD17273I to determine why the request failed.

Source:  DFSMSdfp
Routing Code:  2
Descriptor Code:  4

**IGD17278I**  UNEXPECTED RETURN CODE FROM DEVICE INFORMATION SERVICES WHILE PROCESSING DATA SET *dsname* RETURN CODE IS *rc* REASON CODE IS *rsnc*

Explanation:  While creating a data set, SMS VTOC data set services called device information services to get device characteristics. Device information services returned an unexpected return code.

In the message text:

*dsname*  The data set name.

*rc*  The return code.
IGD17279I

rsnc  The reason code.

System action:  The SMS VTOC data set services create request fails. Also, the system writes a record describing the error to the logrec data set.

Application Programmer Response:  Use the logrec data set, the return code and the reason code to determine the error.

Source:  DFSMSdfp
Routing Code:  2
Descriptor Code:  4

IGD17279I  (n) VOLUMES WERE REJECTED BECAUSE reason

Explanation:  SMS failed the allocation because volume(s) could not be selected. This message may be issued more than once for each volume selection failure, depending on the 'reasons' for which volumes were rejected. See the ANTRQST section in DFSMS Advanced Copy Services for information on the QFRVOLS volume reason texts and volume reason code.

In the message text:

n  The number of volumes
reason  One of the following reasons that the volume or volumes were rejected:
• OF DADSM FAILURE (diagdata)
• THE SMS VOLUME STATUS WAS DISABLED
• THE SMS STORAGE GROUP STATUS WAS DISABLED
• THEY WERE NOT ONLINE
• THE VOLUME WAS NOT AVAILABLE TO Asynchronous Operations Manager (AOM)
• THEY DID NOT SUPPORT THE AVAILABILITY REQUIREMENT
• THEY DID NOT SUPPORT DATA SET SEPARATION
• THEY DID NOT SUPPORT THE ACCESSIBILITY REQUIREMENT
• THEY WERE NOT SPECIFIED ON A SPECIFIC GUARANTEED SPACE REQUEST
• THEY DID NOT SUPPORT THE EXTENDED FORMAT REQUIREMENT
• THEY DID NOT SUPPORT THE REQUEST FOR FIXED DASD (IART=0)
• THEY DID NOT SUPPORT THE PAV REQUIREMENT
• THEY DID NOT HAVE SUFFICIENT SPACE (diagdata)
• THEY WERE NOT ON THE INCLUDE LIST
• THEY WERE ON THE EXCLUDE LIST
• THEY COULD NOT BE SUCCESSFULLY ALLOCATED
• THE UCB WAS OF THE WRONG TYPE
• THEY DID NOT HAVE ENOUGH SPACE FOR STRIPING
• THE DPCT WAS NOT AVAILABLE
• THEY DID NOT SUPPORT THE PAV REQUIREMENT
• OF DUPLICATE DATA SET NAME (diagdata)
• OF NO ROOM IN VTOC OR INDEX (diagdata)
• OF PERMANENT I/O OR CVAF ERROR (diagdata)
• THEY WERE REJECTED BY INSTALLATION EXIT (diagdata)
• THEY WERE NOT INITIALIZED (diagdata)
• OF EOF MARK WRITE FAILED (diagdata)
• OF (volume reason texts from ANTRQST QFRVOLS) FOR A REQUIRED FAST REPLICATION. ANTRQST QFRVOLS VOLUME RSN(xx)
• OF INSUFFICIENT SPACE FOR BEST-FIT
• OF INSUFF TOTAL SPACE
• OF INSUFF FREE SPACE FOR FAST VOLUME SELECTION
• OF THE USEEAV(NO) SPECIFICATION
• THEY WERE SPACE EFFICIENT VOLUMES
• OF (volume reason texts from ANTRQST QFRVOLS) FOR A REQUIRED PRESERVE MIRROR. ANTRQST QFRVOLS PRESERVE MIRROR VOLUME RSN (xxx)

Where:

diagdata  is the DADSM diagnostic code or OTHERS after 10 diagnostic codes have been displayed for a failure reason.

System action:  Processing stops.
Operator response:  None
Application Programmer Response:  See reason and responses below.
System programmer response:  Correct the problem indicated by the reason in the message and resubmit the request.

Reason  Response
OF A DADSM FAILURE  Correct the DADSM condition.
THE SMS VOLUME STATUS WAS DISABLED
Enable the requested volumes.

THE SMS STORAGE GROUP STATUS WAS DISABLED
Enable the requested storage group or groups.

THEY WERE NOT ONLINE
Vary the volume online.

THE VOLUME WAS NOT AVAILABLE TO
Asynchronous Operations Manager (AOM)
Vary the volume online.

THEY DID NOT SUPPORT THE AVAILABILITY REQUIREMENT
Refer to the SMS storage class.

THEY DID NOT SUPPORT DATA SET SEPARATION
Refer to the installation data set separation profile, or make another physical control unit available for allocation.

THEY DID NOT SUPPORT THE ACCESSIBILITY REQUIREMENT
Refer to the SMS storage class.

THEY DID NOT SUPPORT THE PAV REQUIREMENT
Refer to the SMS storage class.

THEY WERE NOT SPECIFIED ON A SPECIFIC GUARANTEED SPACE REQUEST
Specify additional volumes on the guaranteed space request.

THEY DID NOT SUPPORT THE EXTENDED FORMAT REQUIREMENT
Refer to the SMS data class.

THEY DID NOT SUPPORT THE REQUEST FOR FIXED DASD (IART=0)
Refer to the SMS storage class.

THEY DID NOT HAVE SUFFICIENT SPACE
Refer to installation procedures.

THEY WERE NOT ON THE INCLUDE LIST
Refer to DFSMSdss policy.

THEY WERE ON THE EXCLUDE LIST
The volumes were already in use by this data set.

THEY COULD NOT BE SUCCESSFULLY ALLOCATED
Vary the volumes online if they are offline, or make them available if they are otherwise unavailable.

THE UCB WAS OF THE WRONG TYPE
The device geometry was incompatible for data set extend. The volume that will be used for the extend must have the same geometry (that is, 3380 versus 3390) as the first volume of the data.

THEY DID NOT HAVE ENOUGH SPACE FOR STRIPING
Refer to installation procedures.

THE DPCT WAS NOT AVAILABLE
The volume was not available to IOS.

THE UCB WAS NOT AVAILABLE
The volume was not available to IOS.

OF INSUFF TOTAL SPACE
The primary quantity requested was larger than the total capacity of the largest available volume. See [Z/OS DFSMSdfp Storage Administration](https://www.ibm.com/support/knowledgecenter/SSGUGG_1.3.0/com.ibm.zos.zos.doc/dfsmsdfp_storage_administration.html) for a detailed explanation.

OF INSUFF FREE SPACE FOR FAST VOLUME SELECTION
See [Z/OS DFSMSdfp Storage Administration](https://www.ibm.com/support/knowledgecenter/SSGUGG_1.3.0/com.ibm.zos.zos.doc/dfsmsdfp_storage_administration.html) for a detailed explanation.

OF THE USEEAV(NO) SPECIFICATION
All candidate EAVs were rejected because USEEAV(NO) was specified in SYS1.PARMLIB.

THEY WERE SPACE EFFICIENT VOLUMES
Space efficient volumes cannot be used for striped data sets.

Source: Storage Management Subsystem (DFSMS)
Detecting Module: IGDVTSC2
IGD17280I  NO VOLUME SERIAL PROVIDED FOR CREATION OF ALTERNATE INDEX dsn

Explanation: No volume serial was provided in the parameter list to SMS for the creation of an alternate index.

In the message text:

dsn The data set name.

System action: The SMS VTOC data set services request fails.

System programmer response: If the define was due to a DFDSS copy, specify the SPHERE keyword or include the base cluster in the copy operation. Otherwise, determine the caller of SMS and then determine why a volume serial was not provided.

Source: Data Facility Product (DFSMS)

IGD17281I  ALLOCATION FOR DATA SET dname FAILED, VOLUME (vol) WAS EXPLICITLY SPECIFIED FOR A GUARANTEED SPACE REQUEST BUT WAS REJECTED

Explanation: Volume(s) were explicitly specified for a guaranteed space request but one or more of these volumes was rejected. There may be another message that indicates which volume was rejected and for what reason. No message is issued if the reason for rejection was lack of space.

In the message text:

dsn The data set name.
vol The volume serial number that was rejected.

System action: The SMS VTOC Data Set Services request fails.

Application Programmer Response: Replace the rejected volume with another volume and rerun the job.

Source: Data Facility Product (DFSMS)

IGD17282I  ALLOCATION FOR DATA SET dname FAILED, VOLUMES WERE EXPLICITLY SPECIFIED FOR A GUARANTEED SPACE REQUEST BUT BELONG TO A DISABLED STORAGE GROUP

Explanation: Volume(s) were explicitly specified for a guaranteed space request but belong to a Storage Group that has been disabled or quiesced for new allocations.

In the message text:

dsn The data set name.

System action: The SMS VTOC Data Set Services request fails.

Application Programmer Response: Application Programmer Response: Correcting this situation may require that the ACS routines be modified to select an appropriate Storage Group, in other words, one that meets the track size criterion.

Source: Data Facility Product (DFSMS)

IGD17283I  STORAGE GROUP sg REJECTED, TRACK SIZE IS NOT LARGE ENOUGH FOR THE NO-CONVERT INTERFACE, ALLOCATION CONTINUES FOR DATA SET dname

Explanation: The no-convert interface is a special interface, used primarily by DFDSS that requires that the track size of the selected volume be equal to or greater than the track size specified on the allocation request. All Storage Groups that do not meet this criteria are rejected and the allocation continues with any other Storage Groups that may have been selected. If there are no other Storage Groups, the allocation fails.

In the message text:

sg The rejected storage group.

dsn The data set name.

System action: The SMS VTOC Data Set Services request fails.

Application Programmer Response: Correcting this situation may require that the ACS routines be modified to select an appropriate Storage Group, in other words, one that meets the track size criterion.

Source: Data Facility Product (DFSMS)

IGD17284I  ALLOCATION ON STORAGE GROUP sg WAS ATTEMPTED BUT ENOUGH SPACE COULD NOT BE OBTAINED, PROCESSING CONTINUES FOR DATA SET dname

Explanation: In a ‘best-fit’ request for allocation of a data set, this particular Storage Group was tried but did not have enough space. Allocation will be attempted on another Storage Group or, if there is no other selected Storage Group, the allocation will fail.

In the message text:

sg The rejected storage group.

dsn The data set name.

System action: The SMS VTOC Data Set Services request fails.

Application Programmer Response: Application Programmer Response: Correcting this situation may require that the ACS routines be modified to select
different Storage Groups or make more space available on the Storage Groups that were selected.

Source: Data Facility Product (DFSMS)

**IGD17285I  ALLOCATION FOR DATA SET dsname FAILED, VOLUMES WERE EXPLICITLY SPECIFIED FOR A GUARANTEED SPACE REQUEST BUT FAILED ONE OR MORE REQUIREMENTS**

Explanation: Volumes were explicitly specified for a guaranteed space allocation but were rejected for one or more reasons:

- Volser does not meet the Extended Format specification in the data class.
- Volser does not meet the Availability or Accessibility specification in the storage class.

In the message text:

*dsname*  
The data set name

**System action:** The SMS VTOC Data Set Services request fails.

**Application Programmer Response:** Change the volumes specified or change the Storage Class selected to one that does not specify guaranteed space.

**Source:** Data Facility Product (DFSMS)

**IGD17286I  SPACE CONSTRAINT RELIEF WAS USED TO ALLOCATE DATA SET dsname, var1, var2, var3,**

Explanation: Space could not be allocated for the data set in the normal manner. One or more of the following actions had to be taken:

- the data set was spread over more than one volume
- the requested primary space amount was reduced by the percentage specified in the DATA CLASS
- more than 5 extents were used to allocate the requested space

The text corresponding to *var1*, *var2*, and *var3* is shown below and depending on the actions taken by SMS, one or more of these variants will be printed out on the second line of this message.

In the message text:

*dsname*  
The data set name

*var1*  
DATA WAS SPREAD OVER MULTIPLE VOLUME

*var2*  
THE 5 EXTENT LIMIT WAS RELAXED

**IGD17288I  DATA SET dsname COULD NOT BE ALLOCATED NORMALLY, SPACE CONSTRAINT RELIEF (MULTIPLE VOLUMES) WILL BE ATTEMPTED**

Explanation: This message is generated at the time that SMS has failed to allocate space in the normal manner. SMS has determined that this is a data set that may exist on more than one volume; therefore, it will attempt to satisfy the allocation with more than one volume, up to the volume amount specified on the allocation request.

**Note:** That the allocation may still fail.

In the message text:

*dsname*  
The data set name

**System action:** Processing continues

**Application Programmer Response:** This is an informational message. No action is required.

**Source:** Data Facility Product (DFSMS)

**IGD17288I  DATA SET dsname COULD NOT BE ALLOCATED NORMALLY AND IS NOT ELIGIBLE FOR SPACE CONSTRAINT RELIEF (MULTI VOLUME) BECAUSE IT IS A *var1*. SPACE CONSTRAINT RELIEF (SPACE REDUCTION AND/OR 5 EXTENT LIMIT RELIEF) WILL BE ATTEMPTED**

Explanation: This message is generated at the time that SMS has failed to allocate space for a data set. However, because of the reason mentioned in *var1*, it cannot be allocated as a multi-volume data set. Space reduction (if specified in the DATA CLASS) and/or 5 extent limit relief will be tried.

**Note:** The allocation may still fail, in which case a volume selection failure message will be generated by SMS.

In the message text:

*dsname*  
The data set name

*var1*  
SINGLE VOLUME DATA SET, or GUARANTEED
**IGD17289I**  DATA SET, or PARTITIONED DATA SET, or KSDS WITH IMBED ATTRIBUTE

*System action:* Processing continues

*Application Programmer Response:* This is an informational message. No action is required.

*Source:* Data Facility Product (DFSMS)

---

**IGD17289I**  DATA SET dsname COULD NOT BE ALLOCATED WITH SPACE CONSTRAINT RELIEF (MULTIPLE VOLUMES). SPACE REDUCTION AND/OR 5 EXTENT LIMIT RELIEF WILL BE ATTEMPTED

*Explanation:* This message is generated at the time that SMS was already in the space constraint relief path and was attempting to fit the allocation request on more than one volume. This attempt still failed and SMS will now retry the allocation with reduced space (of specified in the DATA CLASS) and with the 5 extent limit removed.

*Note:* The allocation may still fail, and in that case, this message will be followed by an allocation failure message.

In the message text:

*dsname*  
The data set name

*System action:* Processing continues

*Application Programmer Response:* This is an informational message. No action is required.

*Source:* Data Facility Product (DFSMS)

---

**IGD17290I**  THERE WERE n CANDIDATE STORAGE GROUPS OF WHICH THE FIRST y WERE ELIGIBLE FOR VOLUME SELECTION. sg1,sg2...

*Explanation:* This message will only be issued when volume selection has failed as an aid to problem determination. It lists all the Storage Groups that were selected by the ACS routines. The first y Storage Groups are eligible for volume selection and (y-n) Storage Groups have been disabled or quiesced for new allocations.

In the message text:

*n*  
The total number of storage groups selected

*y*  
The total number of eligible storage groups

*sg1,sg2*  
The list of storage groups. Up to 4 lines will be printed.

*System action:* The SMS VTOC Data Set Services request fails.

*Application Programmer Response:* This is an informational message. It will generally be followed by a volume selection failure message. No specific action is required.

*Source:* Data Facility Product (DFSMS)

---

**IGD17292I**  DATA SET dsname IS NOT ELIGIBLE FOR SPACE CONSTRAINT RELIEF BECAUSE IT IS A var1.

*Explanation:* This message is generated at the time that SMS has failed to allocate space. The DATA CLASS specifies space constraint relief, but the attributes of this data set prevent SMS from providing this relief.

In the message text:

*dsname*  
The data set name

*var1*  
KEYRANGE DATA SET, or MULTI-STRIPE DATA SET, or NON-SMS DATA SET

*System action:* Processing continues

*Application Programmer Response:* This is an informational message. It will generally be followed by a volume selection failure message. No specific action is required.

*Source:* Data Facility Product (DFSMS)
**IGD17293I** DATA SET dsname HAS PARTITIONED ORGANIZATION AND IS NOT ELIGIBLE TO BE A MULTI-VOLUME DATA SET, ALLOCATION FAILED

**Explanation:** This message is generated at the time that SMS determines that the data set has partitioned organization and volume count is greater than 1.

In the message text:

*dsname*  
The data set name

**System action:** The job fails.

**Application Programmer Response:** Change the JCL and resubmit the job.

**Source:** Data Facility Product (DFSMS)

---

**IGD17294I** FAST VOLUME SELECTION IS USED TO ALLOCATE DATA SET dsn

**Explanation:** This is an informational message that is issued by SMS during creation of a new SMS-managed data set or extension of an existing SMS-managed data set to a new volume. This message indicates that 'fast' volume selection approach is used by SMS to allocate the data set. 'Fast' volume selection is requested via FAST_VOLSEL parameter. For striping allocations, 'fast' volume selection is automatically activated regardless of the specification of the FAST_VOLSEL parameter. When 'fast' volume selection is used, SMS will first select volumes normally until 100 volumes have been rejected for insufficient free space. At this time, SMS issues this message and excludes volumes that do not have sufficient free space in SMS volume statistics from further selection.

In the message text:

*dsn*  
The data set Name

**System action:** Processing continues.

**Application Programmer Response:** Determine if the data set is allocated or extended as expected, and use volume selection failure reasons to determine why the data set is not allocated or extended as expected.

**System programmer response:** Determine if the data set is allocated or extended as expected, and use volume selection failure reasons to determine why the data set is not allocated or extended as expected. Use SETSMS FAST_VOLSEL(OFF) command to turn off fast volume selection function if normal volume selection is desired.

**Source:** Storage Management Subsystem (SMS)

---

**IGD17295I** DATA SET dsname HAS PARTITIONED ORGANIZATION AND CANNOT HAVE A DATA CLASS WITH A DYNAMIC VOLUME COUNT GREATER THAN ONE, ALLOCATION FAILED

**Explanation:** Partitioned organization data sets are single volume data sets.

In the message text:

*dsname*  
The data set name

**System action:** The allocation request fails.

**Application Programmer Response:** Same as above.

**User response:** Ensure that the DATA CLASS selected for this allocation request does not specify a Dynamic Volume Count greater than 1.

**Application Programmer Response:** Same as above.

**Source:** Storage Management System (SMS)

---

**IGD17301I** VOLUME(S) NOT ENABLED AND/OR ONLINE TO DELETE/RENAME DATA SET dsname

**Explanation:** The volume (or volumes) on which the data set resides is either not online, or not enabled to the storage management subsystem at the time of a delete or rename request.

In the message text:

*dsname*  
The data set name.

**System action:** The delete or rename request fails.

**Application Programmer Response:** If the volume is offline, then have the operator vary them online. If the volumes are disabled, then either enable them, or deny the delete or rename request.

**Source:** DFSMSdfp

**Routing Code:** 2

**Descriptor Code:** 4

---

**IGD17302I** UNABLE TO EXTRACT DDNAME FOR DELETE OF DATA SET dsname DYNAMIC ALLOCATION INFORMATION RETRIEVAL RETURN CODE IS rc REASON CODE IS rsnc

**Explanation:** During deletion of a data set, SMS VTOC data set services delete processing received an unexpected return code from dynamic allocation information retrieval.
In the message text:

dsname
   The data set name.
rc
   The return code.
rsnc
   The reason code.

System action:  The SMS VTOC data set services
delete request fails. Also, the system writes a
record describing the error to the logrec data set.

Application Programmer Response:  Use the logrec
data set, the return code and the reason code to
determine the error.

Source:  DFSMSdfp
Routing Code:  2
Descriptor Code:  4

IGD17303I  VOLUMES FOR DATA SET dsname ARE
COMBINATION OF SMS-MANAGED
AND NON-SMS-MANAGED

Explanation:  The volume definitions for the data set
indicate that the data set resides on both SMS and
non-SMS volumes. If any piece of a multi-volume data
set resides on an SMS managed volume, then all
volumes on which the data set resides must be defined
to the same storage group, and therefore be defined to
SMS.

In the message text:
dsname
   The data set name.
rc
   The return code.
rsnc
   The reason code.

System action:  The SMS VTOC data set services
delete or rename request fails. Also, the system writes a
record describing the error to the logrec data set.

Application Programmer Response:  Define all
volumes on which the data set resides to the same
storage group, and retry the delete or rename request.

Source:  DFSMSdfp
Routing Code:  2
Descriptor Code:  4

IGD17304I  NON-SMS-MANAGED DATA SET
dsname ON SMS-MANAGED
VOLUME(S)

Explanation:  SMS VTOC data set services delete or
rename processing was not able to delete the catalog
entry for the data set; the data set is non-SMS
managed, and resides on one or more SMS managed
volumes that are not in initial status.

In the message text:
dsname
   The data set name.
rc
   The return code.
rsnc
   The reason code.

System action:  The SMS VTOC data set services
delete request fails. Also, the system writes a
record describing the error to the logrec data set.

Application Programmer Response:  Use the logrec
data set, return code, and historic return code to
determine the error.

**Descriptor Code:** 4

**IGD17311I**  SMS-MANAGED VOLUMES SPECIFIED FOR DELETE/RENAME OF NON-SMS-MANAGED DATA SET *dsname*

**Explanation:** SMS VTOC data set services was called to delete or rename a data set and received a list of SMS-managed volumes. However, the data set is a non-SMS managed data set, and does not reside on the SMS managed volumes listed.

In the message text:

*dsname*  
The data set name.

**System action:** The SMS VTOC data set services delete or rename request fails.

**Application Programmer Response:** Correct the volume list for the data set and retry the delete or rename request.

**Source:** DFSMSdfp

**Routing Code:** 2

**Descriptor Code:** 4

**IGD17313I**  INPUT ERROR FOR FAST REPLICATION. (reason). ALLOCATION FAILED FOR DATA SET *(dsn)*.

**Explanation:** This is a failure message that is issued by SMS during the allocation of a data set. SMS failed the allocation because the input parameters provided by the caller are not valid for fast replication.

In the message text:

*dsn*  
The name of the data set being allocated.
reason Reason why input parameters were in error. The possible reasons are:

- THE CALLER REQUESTED BOTH SNAPSHOT OPERATION AND FAST REPLICATION OPERATION
- REQUIRED STRIPING WAS REQUESTED BUT THE SOURCE STRIPE COUNT IS ZERO
- THE SOURCE STRIPE COUNT IS NON-ZERO BUT STRIPING WAS NOT REQUESTED
- THE TARGET DATA SET COULD NOT BE SMS MANAGED

System action: Processing stops.

Application Programmer Response: None.

System programmer response: Determine why the input parameters are not valid. Search problem reporting databases for a fix for the problem. If no fix exists, contact the IBM Support Center.

Source: Data Facility Product (DFSMS)

**Explanation:**

This is an informational message that is issued by SMS during the allocation of a data set that is intended to be the target of a fast replication operation. The caller indicated that selection of fast replication eligible volumes was 'preferred'. Since ANTRQST QFRVOLS detected an error, SMS will continue the allocation request while ignoring the fast replication preference. Refer to the ANTRQST section in [DFSMS Advanced Copy Services](https://www.ibm.com) for information on the QFRVOLS return code, reason code and RETINFO.

In the message text:

- dsn The name of the data set being allocated
- rc Return code from ANTRQST QFRVOLS
- rsn Reason code from ANTRQST QFRVOLS
- retinfo Retinfo from ANTRQST QFRVOLS

**System action:** Processing continues.

**Application Programmer Response:** None.

**System programmer response:** None.

**Source:** Data Facility Product (DFSMS)

**Explanation:**

This is an informational message that is issued by SMS during the creation of a new data set that is SMS-managed and striped. This message indicates that the stripes for the data set had to be allocated entirely in the cylinder-managed space. Consequently, the total allocated space will be larger than the requested amount.

In the message text:

- dsn The name of the data set being allocated

**System action:** The processing continues.

**Operator response:** None.

**System programmer response:** None.

**Source:** Storage Management Subsystem (SMS)
**IGD17329I**  
*DATASET dsname WAS ALLOCATED ON VOLUME(S) WHICH ARE NOT ELIGIBLE FOR PRESERVE MIRROR. PREFERRED PRESERVE MIRROR WAS SPECIFIED BY THE CALLER.*

**Explanation:** This is an informational message that is issued by SMS at the end of a successful allocation. The COPY operation requested fast replication. Additionally, it requested that volume selection prefer volumes that supported preserve mirror. All volumes selected support fast replication, but the preserve mirror condition could not be met. This message is followed by one or more IGD17268I messages providing a breakdown of why fast replication and preserve mirror eligible volumes could not be selected. IGD17269I messages might also be generated to provide a breakdown of why volumes were rejected.

In the message text:

- **dsn** The name of the data set being allocated.

**System action:** The processing continues.

**Operator response:** None.

**System programmer response:** Determine why preserve mirror eligible volumes could not be selected, and take action to rectify the situation.

**Source:** Data Facility Product (DFSMS)

---

**IGD17330I**  
*DATASET (dsn) WAS ALLOCATED ON VOLUME(S) WHICH ARE NOT ELIGIBLE FOR FAST REPLICATION. PREFERRED FAST REPLICATION WAS SPECIFIED BY THE CALLER.*

**Explanation:** This is an informational message that is issued by SMS at the end of a successful allocation. The copy operation requested that volume selection either require or give preference to target volumes that were eligible to fast replicate the source data set. However, volume selection failed. This message will be followed by one or more IGD17268I messages providing a breakdown of why volumes could not be selected.

In the message text:

- **dsn** The name of the data set being allocated.
- **variable text** REQUIRED/PREFERRED

**System action:** Processing continues.

**Application Programmer Response:** Determine why fast replication eligible volumes could not be selected and take action to rectify the situation. You may either ensure that fast replication volumes are available or modify the copy request to ‘not require’ fast replication.

**System programmer response:** Determine why fast replication eligible volumes could not be selected and take action to rectify the situation.

**Source:** Data Facility Product (DFSMS)

---

**IGD17331I**  
*DATASET (dsn) COULD NOT BE ALLOCATED. (variable text) FAST REPLICATION WAS SPECIFIED BY THE CALLER.*

**Explanation:** This is a failure message that is issued by SMS. The copy operation requested that volume selection either require or give preference to target volumes that were eligible to fast replicate the source data set. However, volume selection failed. This message will be followed by one or more IGD17279I messages, which provide a breakdown of why volumes could not be selected.

In the message text:

- **dsn** The name of the data set being allocated.
- **variable text** REQUIRED/PREFERRED

**System action:** Processing stops.

**Application Programmer Response:** Determine why fast replication eligible volumes could not be selected and take action to rectify the situation. You may either ensure that fast replication volumes are available or modify the copy request to ‘not require’ fast replication.

**System programmer response:** Determine why fast replication eligible volumes could not be selected and take action to rectify the situation.

**Source:** Data Facility Product (DFSMS)
**IGD17333I**  
**DATA SET (dsn) COULD NOT BE ALLOCATED BECAUSE ITS OPTIMUM STRIPE COUNT (var1) WAS LESS THAN THE STRIPE COUNT (var2) OF THE SOURCE FOR REQUIRED FAST REPLICATION.**

**Explanation:** This is a failure message issued by SMS. The copy operation specified 'required' fast replication, but this conflicted with the 'optimum stripe count' requirement. The 'optimum stripe count' is determined from the Sustained Data Rate in the storage class for the non-guaranteed space request, the volume count for the guaranteed space request, and the largest possible stripe count can be allocated for the data set. Note that, in general, if the stripe count of the target data set is different from the stripe count of the source data set, then this represents a fundamental conflict between striping requirements and fast replication requirements. In situations where this occurs, fast replication will not be possible. Allocation was failed.

In the message text:

- `dsn`  
  Data set name

- `var1`  
  Stripe count computed by SMS for the data set being allocated

- `var2`  
  Stripe count of the source data set passed in by the caller

**System action:** Processing continues.

**Application Programmer Response:** More than one option is available. You may change the copy request from 'require' fast replication to 'prefer' fast replication. If 'fast replication' is necessary, then you must ensure that the 'sustained data rate' in the selected Storage Class is such that the computed 'optimum stripe count' matches the stripe count of the source and the candidate storage groups have sufficient volumes for fast replication.

**System programmer response:** If 'fast replication' is necessary, then you must ensure that the candidate Storage Groups have an exact number of eligible fast replication volumes to match the stripe count of the source data set.

**Source:** Data Facility Product (DFSMS)

---

**IGD17335I**  
**THE ALLOCATED STRIPE COUNT (var1) DID NOT MATCH THE STRIPE COUNT (var2) OF THE SOURCE FOR PREFERRED FAST REPLICATION. ALLOCATION CONTINUES FOR DATA SET (dsn).**

**Explanation:** This is an informational message issued by SMS. The copy operation specified 'preferred' fast replication, but SMS was not able to match the stripe count of the target data set with the stripe count of the source. Note that, in general, if the stripe count of the target data set is different than the stripe count of the source data set, then this represents a fundamental conflict between striping requirements and fast replication requirements. In situations where this occurs, fast replication will not be possible. Allocation was failed.

In the message text:

- `var1`  
  Stripe count computed by SMS for the data set being allocated

- `var2`  
  Stripe count of the source data set passed in by the caller

- `dsn`  
  Data set name

**System action:** Processing continues.
Application Programmer Response: Determine why allocated stripe count did not match the source and take action to rectify the situation. If ‘fast replication’ is desired, then you must ensure that the candidate Storage Groups have an exact number of eligible fast replication volumes to match the stripe count of the source data set.

System programmer response: If ‘fast replication’ is desired, then you must ensure that the candidate Storage Groups have an exact number of eligible fast replication volumes to match the stripe count of the source data set.

Chapter 13. IGD messages 601
The data set name.
The SMS VTOC data set services request fails.

Make sure that all volumes specified on the define request are non-SMS managed volumes; then resubmit the request.

The SMS VTOC data set services received an unexpected return code from automatic class selection (ACS) services.

Use the logrec data set, the return code and the reason code to determine the error.

A deferred roll-in generation data set (GDS) was successfully reclaimed.

An attempt to reclaim a deferred roll-in generation data set (GDS) failed. Preceding messages indicate the reason for the failure.

Refer to any preceding messages to determine the cause of the failure, and the appropriate actions to correct the error.

DFSMSdfp issues this message when an attempt to create a new generation of a GDS fails because a generation with the same name exists but has not been rolled in. The failure occurs because the user specified GDS_RECLAIM=NO in the IGDSMSxx member of SYS1.PARMLIB or used the SETSMS command to specify GDS_RECLAIM=NO.

If the user specified GDS_RECLAIM=NO erroneously, reset it to YES.
Application Programmer Response: If the user specified GDS_RECLAIM=NO erroneously, then contact the system operator to reset it to YES. Otherwise, take steps either to roll the data set that is causing this problem into the GDS or to rename or delete the data set.

System programmer response: Refer to the application programmer response.

**IGD17371I**

VIO UNIT unit IS NOT DEFINED TO THE SYSTEM FOR DATA SET dsname

**Explanation:** During allocation of the referenced data set, the system determined that the named unit for the selected virtual input output (VIO) storage group was not defined.

In the message text:

- **unit**
  The VIO unit.
- **dsname**
  The data set name.

**System action:** The system fails the SMS VTOC data set services allocation request.

**System programmer response:** Either disable the VIO storage group to the selected system or change the unit name in the VIO storage group to match a unit defined to the system.

**IGD17372I**

JOBNAME jobname PROGRAM NAME proname STEPNAME stepname DDNAME ddn. DATA SET SEPARATION BY (sep_level) COULD NOT BE PROVIDED FOR DATA SET dsn. DATA SET SEPARATION PROFILE profile.

**Explanation:** SMS could not separate the data set being allocated from other data sets listed in the installation data set separation profile by the specified separation types.

In the message text:

- **jobname**
  The name of the allocating job
- **proname**
  The program name
- **stepname**
  The name of the allocating step
- **ddn**
  The data definition name
- **sep_level**
  Separation level, PCU or VOL, or both
- **dsn**
  The name of the data set being allocated
- **profile**
  The name of the data set separation profile

**System action:** Processing continues without data set separation for the specified data set. This message appears in both the job log and the hardcopy log.

**Operator response:** None

**System programmer response:** For separating allocated data sets, refer to your established operational procedures.

**Source:** Storage Management Subsystem (DFSMS)

**Detecting Module:** IGDVTSC2
DDNAME ddn. {ASYNCHRONOUS OPERATION MGR. | COMMON FILTER SERVICES | CATALOG SERVICES} RETURNED AN UNEXPECTED RETURN CODE WHILE PROCESSING DATA SET SEPARATION FOR DATA SET dsn. DATA SET SEPARATION PROFILE profile. RETURN CODE rc REASON CODE rsn DIAG INFO mm {ALLOCATION CONTINUES | ALLOCATION FAILED}.

Explanation: This message was generated during allocation of an SMS-managed data set for which data set separation was requested. The specified service was unable to complete the SMS request.

In the message text:
jobname The name of the allocating job
proname The program name
stepname The name of the allocating step
ddn The data definition name
dsn The name of the data set being allocated
profile The name of the data set separation profile requesting separation
rc The 4-byte return code, in hexadecimal
rsn The 4-byte reason code, in hexadecimal
mm The 2-byte catalog module identifier

System action: Depending on the action specified in the data set separation profile, the allocation is either failed or allowed to continue without regard to data set separation.

Operator response: Notify the system programmer.

Application Programmer Response: None

System programmer response: Determine if you need to relieve the space utilization in the storage group to prevent space failures from happening.

IGD17395I  DATA SET dsn WAS NOT ALLOCATED IN THE SAME STORAGE FACILITY IMAGE BECAUSE (text)

[MODID(modid) RC(rc) RSN(rsn)]

Explanation: While creating a new SMS-managed multi-volume data set or extension of an existing SMS-managed data set to a new volume, SMS was not able to allocate all volumes of the data set in the same storage facility image (SFI). (The accessibility parameter in the storage class for the data set contains a value of CONTINUOUS or CONTINUOUS PREFERRED indicating that the data set is preferred to be allocated in the same SFI.)

Module id, return code and reason code are included in the message when Catalog Search Interface or AOM services received a non-zero return code.

In the message text:

dsn
This is the data set name.

text
This is the failure reason text.

modid
This is the module id.

rc
This is the return code.

rsn
This is the reason code.

System action: Processing continues.

Application Programmer Response: Determine if the data set is allocated or extended as expected, and use failure reason text, return code and reason code to determine why the data set is not allocated or extended in the same storage facility image.

System programmer response: Take actions in the application programmer response section of this message. If you cannot determine why the data set is not allocated or extended in the same storage facility image, search problem reporting databases for a fix for the problem. If no fix exists, contact the IBM Support Center.

Source: Storage Management Subsystem (SMS)

IGD17400I  REFERENCED DATA SET dsname NOT CATALOGUED

Explanation: SMS VTOC data set services like processing could not find the data set in the catalog. The data set was specified in a LIKE= reference, but either was not cataloged, or included a PDS member name or a generation data group (GDG) relative generation number.

In the message text:

dsname
The data set name.
System action: The SMS VTOC data set services request fails.

Application Programmer Response: Specify another data set in the LIKE= reference, and resubmit the request.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD17401I UNEXPECTED RETURN CODE FROM OBTAIN FOR REFERENCED DATA SET dsn OBTAIN RETURN CODE IS rc

Explanation: SMS VTOC data set services like processing received an unexpected return code from obtain; obtain was not able to read the DSCB for a non-VSAM data set. When the referenced data set is a non-VSAM data set, SMS VTOC data set services picks up the data set properties from the Format 1 DSCB.

In the message text:

dsn The data set name.
rc The return code.

System action: The SMS VTOC data set services request fails. Also, the system writes a record describing the error to the logrec data set.

Application Programmer Response: Use the logrec data set and the return code to determine the error.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD17403I UNABLE TO ENQUEUE ON REFERENCED DATA SET dsn ENQUEUE RETURN CODE IS rc

Explanation: SMS VTOC data set services like processing was unable to enqueue on a data set that was specified in a LIKE= reference. SMS VTOC data set services was trying to enqueue on the data set to count the number of directory blocks.

In the message text:

dsn The data set name.
rc The return code.

System action: The SMS VTOC data set services request fails. Also, the system writes a record describing the error to the logrec data set.

Application Programmer Response: Use the logrec data set and the return code to determine the error.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD17406I UNABLE TO DEQUEUE REFERENCED DATA SET dsn DEQUEUE RETURN CODE IS rc

Explanation: While trying to dequeue on a data set, SMS VTOC data set services like processing encountered an unexpected error.

In the message text:

dsn The data set name.
rc The return code.

System action: The SMS VTOC data set services request fails. Also, the system writes a record describing the error to the logrec data set.

Application Programmer Response: Use the information in the logrec data set to determine the error.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD17407I CATALOG ERROR ATTEMPTING TO LOCATE REFERENCED DATA SET dsn

Explanation: While trying to locate data set properties for the data set indicated, SMS VTOC data set services like processing received an unexpected return code from the SMS VTOC data set services catalog interface module.

In the message text:

dsn The data set name.
The data set name.

System action: The SMS VTOC data set services request fails.

Application Programmer Response: Refer to any additional SMS VTOC data set services messages in the job log to determine the catalog error.

Source: DFSMSdftp
Routing Code: 2
Descriptor Code: 4

IGD17409I  FAILURE OCCURRED IN DATA SET PROPERTIES MERGE WHILE ATTEMPTING TO DEFINE DATA SET dsname

Explanation: While trying to define a data set, the SMS VTOC data set services data properties merge module encountered an error. Preceding SMS VTOC data set services messages indicate the error.

In the message text:

dsname  The data set name.

System action: The SMS VTOC data set services request fails.

Application Programmer Response: Refer to any additional SMS VTOC data set services messages in the job log to determine the catalog error.

Source: DFSMSdftp
Routing Code: 2
Descriptor Code: 4

IGD17430I  A VSAM DATA SET IS REFERENCED BY LIKE= WHILE ATTEMPTING TO DEFINE TAPE DATA SET (dsname).

Explanation: This message is issued when the data set referenced by the LIKE= is a VSAM data set. The data set referenced by LIKE= must be a non-VSAM data set since you are creating a tape data set.

In the message text:

dsname  The data set name.

System action: The SMS VTOC data set services request fails.

Application Programmer Response: Correct the reference or remove the LIKE= parameter.

Source: DFSMSdftp
Routing Code: 2
Descriptor Code: 4

IGD17431I  UNABLE TO DETERMINE DIRECTORY BLOCKS DURING DEFINE OF DATA SET dsname

Explanation: An attempt was made to create a partitioned data set (PDS) by specifying DSNTYPE=PDS. The system could not determine the directory blocks quantity from any of the following:

- The directory blocks from the JCL
- The data class
- A model data set referenced by the LIKE keyword.

Note: The directory block quantity cannot be picked up from a model data set that is a PDSE.

In the message text:

dsname  The specified data set.

System action: The PDS is not created.

System programmer response: Specify the directory blocks quantity by one of the specified means. Run the job again.

Source: DFSMSdftp

IGD17432I  INCONSISTENT DATA SET STRUCTURE FOR: dsname JFCB INDICATES VSAM BUT RECORG NOT SPECIFIED.

Explanation: The system issues this message when all of the following conditions are met:

- A new SMS or non-SMS managed data set is being created.
- The JFCORGAM bit is set in the JFCB. This generally occurs when AMP=AMORG is specified on the JCL or the DCB parameter points to a VSAM data set.

Chapter 13. IGD messages 611
AMP=AMORG is specified on a JCL statement.

No RECORG is available from either the JCL, the data class assigned to the data set, or the data set referenced by the LIKE parameter.

In the message text:

dname  The specified data set name.

**System action:** The allocation of the data set is failed.

**Application Programmer Response:** Specify RECORG in one of the following ways:

- Explicitly on the JCL.
- Via a data class assigned to the data set. This may require modification of the data class ACS routines. Contact your storage administrator.
- Via the LIKE keyword by referencing a VSAM data set.

If the AMP=AMORG parameter is required but a RECORG cannot be provided at allocation, force this data set to be non-SMS managed. This may require modification of ACS routines.

**Storage Administrator Response:** If necessary, modify the data class ACS routine to assign an appropriate data class to the data set.

**Source:** DFSMSdfp

**Routing Code:** 0

**Descriptor Code:** 4

---

**Explanation:** During allocation of a new tape data set, the system determined that the LIKE = parameter referenced a data set that was migrated to tape.

In the message text:

dname  The data set being allocated.

**System action:** The system fails the SMS VTOC data set services allocation request.

**System programmer response:** Recall the data set that is referenced by the LIKE = parameter and rerun the job.

In the message text:

- **fn** Functions: GET STATUS FOR, CHANGE ATTRIBUTES OF, and DELETE
- **rc** The return code
- **rsn** The reason code
- **filename** The file name

**System action:** The SMS VTOC Data Set Services request fails.

**Application Programmer Response:** Determine the cause of the error as indicated by the return and reason code and resubmit the job after correcting the error.

**Source:** Data Facility Product (DFSMs)

**Explanation:** The DSNTYPE keyword with a value of PIPE when the PATH= keyword is specified on the DD statement.

In the message text:

- **ddname** The data set name

**System action:** The SMS VTOC Data Set Services request fails.

**Application Programmer Response:** Correct the JCL and resubmit the job.

**Source:** Data Facility Product (DFSMs)

**Explanation:** SMS construct access services indicated that one of the following constructs for the data set does not exist in the active configuration:

- Data class **dcname**
- Management class **mcname**
- Storage class **scname**
- Storage group **sgname**

**System action:** The SMS VTOC data set services request fails.

**Application Programmer Response:** If you explicitly specified the construct, make sure your specification is correct and resubmit the job. Otherwise, if the construct was supplied by the ACS routines, you may have to modify those routines.

**Source:** DFSMSdfp

---

Chapter 13. IGD messages  613
IGD17802I VOLUMES SPECIFIED BY THE CALLER ARE NOT IN THE SAME STORAGE GROUP FOR A GUARANTEED SPACE REQUEST, DATA SET IS dsname

Explanation: In a guaranteed space request for a data set, the caller selected specific volumes, and selected a storage class with the guaranteed space attribute; therefore, the specific volumes must be honored. However, not all of the specified volumes are in the same storage group.

In the message text:

dsname

The data set name.

System action: The SMS VTOC data set services request fails.

Application Programmer Response: Change the request so that all volumes specified are in the same storage group; then rerun the job.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD17803I VOLUME SELECTION HAS FAILED. THERE ARE ACCESSIBLE VOLUME(S) BUT NOT ENOUGH WITH SUFFICIENT SPACE FOR DATA SET dsname

Explanation: A space request for a data set failed because:

- No accessible volumes had sufficient space to satisfy the single-volume request; or
- Not enough accessible volumes had sufficient space to satisfy the multi-volume request.

A volume is accessible if all of the following are true:

- The storage group that contains the volume is enabled to the system;
- The volume itself is enabled to SMS; and
- The volume itself is online to MVS.

In the message text:

dsname

The data set name.

System action: The request fails.

Application Programmer Response: Determine the status of all storage groups and volumes used for this request. You may need to enable some storage groups or bring some volumes online.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4

IGD17804I ALLOCATION HAS FAILED FOR ALL VOLUMES SELECTED FOR DATA SET dsname

Explanation: In an SMS VTOC data set services request involving the data set, one or more volumes were specified, but could not be selected. Then volume selection was reentered until all eligible volumes could not be selected. DADSM may not have found enough space; otherwise, the reason for the error is indicated in a preceding message.

In the message text:

dsname

The data set name.

System action: The SMS VTOC data set services request fails.

Application Programmer Response: Resubmit the request, specifying less space than before. If you still get this error message, then determine which storage class and storage group were used for the request, and check the amount of available space on all volumes in the storage group. Then either force the selection of another storage class, or make more space available on the volumes within the selected storage group.

If the problem cannot be determined, run the job again and request a dump immediately after the failure.

Source: DFSMSdfp

Contact the IBM Support Center and provide the dump.

Source: DFSMSdfp
Routing Code: 2
Descriptor Code: 4
IGD17807I THERE ARE \( w \) CANDIDATE VOLUMES OF WHICH \( x \) ARE ENABLED OR QUIESCED

**Explanation:** This message indicates how many candidate volumes there were for a failing request, and the status of those volumes. The message appears in conjunction with message IGD17206I, IGD17207I, or IGD17273I.

In the message text:

- \( w \) The number of volumes in all the storage groups that were selected by the ACS routines for the request.
- \( x \) The number of those volumes that are either enabled or quiesced, and therefore are eligible for selection.
- \( y \) The number of eligible volumes that appear to have enough space, based on the space data provided in their volume definitions. Because of fragmentation, DADSM may not be able to allocate space on those volumes that appear to have enough space.

**System action:** The system continues processing.

**Application Programmer Response:** Refer to message IGD17206I, IGD17207I, or IGD17273I to determine why the request failed.

**Source:** DFSMSdfp

---

IGD21002I UNABLE TO CHANGE THE VOLUME USE ATTRIBUTE FOR TAPE VOLUME volser DUE TO CBRLUXCA INSTALLATION EXIT CBRLXCS RETURN CODE IS \( rc \) CBRLXCS REASON CODE IS \( rs \)

**Explanation:** Following the successful open of a data set on tape, one of the following conditions was detected during the system’s attempt to change the volume use attribute of the volume from scratch to private.

In the message text:

- \( volser \) The tape volume on which data set is open for output
- \( rc \) failing CBRLXCS return code
- \( rs \) The failing CBRLXCS reason code

**System action:** The request failed because change use attribute processing is disabled. Due to a previous CBRLUXCA installation exit error, change use attribute processing has been disabled until the error is fixed.

**Source:** Storage Management Subsystem (SMS)

---

IGD17808I GUARANTEED SPACE RULES HAVE BEEN RELAXED FOR DATA SET dsname

**Explanation:** In a guaranteed space request for the specified data set, the caller provided specific volumes, but also instructed SMS VDSS to allocate the data set as a non-guaranteed space request if these specific volumes were not in the same storage group. SMS VDSS determines that this data set will be allocated as a non-guaranteed space request because not all the specific volumes are in the same storage group.

In the message text:

- \( dsname \) The specified data set.

**System action:** The system ignores the guaranteed space request and continues processing.

**Source:** Storage management subsystem (SMS)
rc = 12, rs = 7
CBRXCUA installation exit vetoed the update of the change use attribute from scratch to private. This veto might cause the loss of the new data set because it is contained on a scratch volume. To prevent data loss, the veto will not be honored and the job will fail.

rc = 12, rs = 82
CBRXCUA installation exit abended.

rc = 12, rs = 83
CBRXCUA installation exit returned bad data.

System action: The tape volume record for volser is not updated. The system halts the job. Expect an ABEND613-20 or ABEND637-58 to accompany this message.

System programmer response: Determine if the Change Use Attribute installation exit (CBRXCUA) has an error. If so, correct the error and use the LIBRARY RESET command to reactivate the change use attribute processing. Refer to the CBRXLCS section of the z/OS DFSMSdfp Diagnosis for an explanation of the reason and return codes given in the message text.

Source: Storage Management Subsystem (SMS)
Detecting Module: IGDTVR00
Routing Code: 11
Descriptor Code: 6

IGD21003I Tape subsystems limit exceeded for DSN dsn

Explanation: Greater than 253 tape subsystems are returned by OAM. Maximum 253 tape subsystems are supported and the subsystems beyond 253 are ignored. See the z/OS DFSMS OAM Planning, Installation, and Storage Administration Guide for Tape Libraries for additional details about the tape subsystem limitations during scratch allocation.

In the message text:

dsn
Data set name

System action: The first 253 tape subsystems are used.

Operator response: N/A.

System programmer response: None.

Source: Storage Management Subsystem (SMS)

IGD23100I DATA SET ALLOCATION REQUEST FAILED - THE ACS ROUTINES ASSIGNED A STORAGE CLASS TO DATA SET dsn1 WHICH IS STACKED ON NON-SMS DATA SET dsn2

Explanation: The system detected data set stacking because the data set being allocated had a data set sequence number greater than one and had specific volume serials in common with another data set. The other data set, dsn2, is a non-SMS data set. The ACS routines attempted to make the new data set, dsn1, SMS-managed, but the system does not support the attempt when data set stacking is used.

In the message text:

dsn1
The new data set being allocated using data set stacking.

dsn2
The data set on which the new data is to be stacked.

System action: Allocation of the new data set fails.

User response: Do one of the following:

- Remove the data set sequence number or assign a sequence number of one.
- Remove the specific volume serial or modify the volume serial so that the two data sets have no common volume serials.
- Contact the storage administrator.

Storage Administrator Response: If the non-SMS allocation should be allowed, modify the storage class ACS routine so that it does not assign a storage class to the new data set.

Source: Storage management subsystem (SMS)
Detecting Module: IGDDSTPR
Routing Code: 2,Note 28
Descriptor Code: 4

IGD23101I DATA SET ALLOCATION REQUEST FAILED - NO POOL OR VIO STORAGE GROUPS SELECTED FOR DATA SET dsn1 WHICH IS STACKED ON DATA SET dsn2

Explanation: The system detected data set stacking because the data set being allocated had a data set sequence number greater than one and had specific volume serials in common with another data set. The other data set, dsn2, is SMS-managed and resides in either a POOL or VIO storage group. The ACS routines did not assign any storage groups of the specified types to the new data set, dsn1. When data set stacking is used, the data sets must reside in compatible types of storage groups.
In the message text:

dsn1
The new data set being allocated using data set stacking.

dsn2
The data set on which the new data set is to be stacked.

System action: Allocation of the new data set fails.

User response: Do one of the following:

- Remove the data set sequence number or assign a sequence number of one.
- Remove the specific volume serial or modify the volume serial so that the two data sets have no common volume serials.
- Contact the storage administrator.

Storage Administrator Response: If data set stacking is being used correctly, modify the storage group ACS routine so that it assigns storage groups of the appropriate type to the new data set.

Source: Storage management subsystem (SMS)

Detecting Module: IGDDSTSG

Routing Code: 2, Note 28

Descriptor Code: 4

IGD23102I DATA SET ALLOCATION REQUEST FAILED - ACS STORAGE GROUP ROUTINE DID NOT ALLOW THE USE OF THE STORAGE GROUP OF DATA SET dsn1 BY DATA SET dsn2

Explanation: The system detected data set stacking because a data set being allocated had a data set sequence number greater than one and had specific volume serials in common with another data set. The other data set, dsn2, resides on one or more SMS-managed tape volumes.

The ACS routines did not allow the new data set, dsn1 to be allocated in the storage group of the data set on which it is being stacked. When data set stacking is used with data sets on SMS-managed tape volumes, the two data sets must have at least one volume in common and must also reside in the same storage group.

In the message text:

dsn1
The new data set being allocated using data set stacking.

dsn2
The data set on which the new data set is to be stacked.

System action: Allocation of the data set fails.
Appendix. Accessibility

Accessibility features help a user who has a physical disability, such as restricted mobility or limited vision, to use software products successfully. The major accessibility features in z/OS enable users to:

- Use assistive technologies such as screen readers and screen magnifier software
- Operate specific or equivalent features using only the keyboard
- Customize display attributes such as color, contrast, and font size

Using assistive technologies

Assistive technology products, such as screen readers, function with the user interfaces found in z/OS. Consult the assistive technology documentation for specific information when using such products to access z/OS interfaces.

Keyboard navigation of the user interface

Users can access z/OS user interfaces using TSO/E or ISPF. Refer to z/OS TSO/E Primer, z/OS TSO/E User’s Guide, and z/OS ISPF User’s Guide Vol I for information about accessing TSO/E and ISPF interfaces. These guides describe how to use TSO/E and ISPF, including the use of keyboard shortcuts or function keys (PF keys). Each guide includes the default settings for the PF keys and explains how to modify their functions.

z/OS information

z/OS information is accessible using screen readers with the BookServer/Library Server versions of z/OS books in the Internet library at:

Policy for unsupported hardware

Various z/OS elements, such as DFSMS, HCD, JES2, JES3, and MVS, contain code that supports specific hardware servers or devices. In some cases, this device-related element support remains in the product even after the hardware devices pass their announced End of Service date. z/OS may continue to service element code; however, it will not provide service related to unsupported hardware devices. Software problems related to these devices will not be accepted for service, and current service activity will cease if a problem is determined to be associated with out-of-support devices. In such cases, fixes will not be issued.

Trademarks

IBM, the IBM logo, and ibm.com are trademarks or registered trademarks of International Business Machines Corp., registered in many jurisdictions worldwide. Other product and service names might be trademarks of IBM or other companies. A current list of IBM trademarks is available on the Web at "Copyright and trademark information" at [www.ibm.com/legal/copytrade.shtml](http://www.ibm.com/legal/copytrade.shtml).
